INSCRIBE, from *inscribo*. 1. To draw a figure within another, so that all the angles of the figure *inscribed* track the angles, sides, or planes of the *circumscribing* figure.—2. An *inscribed hyperbola*

is one which lies wholly within the angles of its asymptotes, as does the common or conical hyperbola.

INSECT, Lat. *insecta*, from *in* and *seco*, to cut. A class of articulated animals with articulated legs, breathing by lateral tracheæ extending parallel to each other, throughout the whole length of the body, and furnished with two antennæ and a distinct head. The name seems first to have been given to bees, and analogous insects, whose bodies appear as if almost divided or *insected*; but Linnaeus extended the name to crustaceans and arachnides. Cuvier distributes the insects into twelve orders: (1.) Myriopoda. (2.) Thysanoura. (3.) Parasita. (4.) Suctoria. (5.) Coleoptera. (6.) Orthoptera. (7.) Hemiptera. (8.) Neuroptera. (9.) Hymenoptera. (10.) Lepidoptera. (11.) Rhipiptera. (12.) Diptera. Most insects pass through three stages of metamorphoses; the larva, the chrysalis, and perfect insect. See **ENTOMOLOGY**.

INSECTIVORA, a family of carnarian mammalia. They lead a nocturnal or subterranean life, and live chiefly on insects: whence the name from *insect* and *voro*, to eat. The hedgehog, tenebris, shrew, desman, and mole, are examples. Epithet *insectivorous*.

INSERTED COLUMN. In *architecture*, a column standing, or apparently standing, partly in a wall.

INSIST, from *insisto*, to stand on. In *geometry*, an angle is said to *insist upon* the arc of the circle intercepted between the two lines which contain the angle.

IN SITU (Lat.), remaining in the original position.

INSOLATION, from *in* and *sol*, the sun; exposing to the action of the sun's rays. Chemical action is often promoted by insolation.

INSOLVENT LAW, or *act of insolvency*, a law which liberates a debtor from imprisonment, or exempts him from liability to arrest and imprisonment on account of any debt previously contracted.—These terms may be regarded as generic, comprehending all bankrupt laws which protect a man's future acquisitions from his creditors; but in a limited sense, as the words are now generally used, an insolvent law extends only to protect the person of the debtor from imprisonment, on account of debts previously contracted.

INSTALLATION, from Ital. *installare*, to place. The putting in possession of an office, rank, or order, with the customary ceremonies. To *install* a clergyman, is to place over a particular church one who has been already ordained.

INSTALLMENT. In *commerce*, a part of a sum of money to be paid at a particular time. In constituting a capital stock by subscriptions of individuals, it is custom-

ary to afford facilities to subscribers by dividing the sum subscribed into *instalments*, or portions, payable at distinct periods. In large contracts also, it is usual to agree that the money shall be paid by *instalments*, and a bankrupt who has obtained a settlement with his creditors, pays his composition by *instalments*.

IN'STANCE COURT, a branch of the Court of Admiralty.

INSTANT, contracted *inst.*, is used in correspondence, &c., for the current month. The distinction between *inst.* and *curr.* is this: *inst.* denotes that the day of the month named is past, and *curr.* that it is not yet arrived: e.g. I received your letter of the 3rd *inst.*, and shall transmit the draft on the 12th *curr.*

INSTANT'ER, a Latin word for *instantly*. A term in law for signifying that something is to be done at the present time or without delay.

IN STA'TU QUO (Lat.), in the state in which it was.

INSTAURA'TA TER'RA (Lat.), land ready stocked.

INSTAURUM ECCLE'SIÆ (Lat.), utensils of a church.

IN'STITUTE, Lat. *institutum*. 1. A maxim, precept, principle, or established law. In this sense the term is used in the plural, as the title of a book containing the elements or principles of the Roman law.—2. In *Scots law*, when a number of persons in succession hold an estate in tail, the first is called the *institute*, and the others *substitutes*.—3. Societies established according to certain laws or regulations for the furtherance of some particular object, such as colleges, or seminaries for the cultivation of the sciences, are termed *institutes*, sometimes *institutions*. Thus we have Mechanics' Institutes, Literary Institutes, &c.

IN'SULATE, from *insula*, an isle. 1. To free from all combination. Some acids, as the fulminic, have not been *insulated*.

—2. To detach from connexion with surrounding objects. A column which stands alone, and a body which is surrounded by non-conductors of electricity, are said to be *insulated*.

INSULATION, a term applied chiefly in electrical experiments to denote the state of a body surrounded by non-conductors. The common *insulators* are glass, lac, silk, &c.

INSUR'ANCE, or ASSUR'ANCE, a contract by which one or more persons called *insurers* or *assurers*, for a stipulated premium, engage to make good any loss which another may sustain by fire, shipwreck, or other cause, specified in the *policy* of insurance. When the insurance is made against risk at sea, it is distinguished by the name of *Marine Insurance*, and the insurer is called an *underwriter*. Policies

for lives constitute another description of insurance, whereby a person, for a certain annuity, insures to his heirs a certain sum payable at his decease. Insurances of this kind are often made for a specified number of years, and instead of an annual premium, a single sum may be paid, depending in amount upon the age of the party upon whose life the insurance is made.

INTAGLIO, Ital. from *intagliare*, to carve; anything with figures in relief on it. Antique gems are frequently engraved in *intaglio*, and are hence called *intaglios*.

IN'TEGER (Lat.), the whole of anything. In *arithmetic*, whole numbers are called *integers*, in contradistinction to *fractions*.

IN'TEGRA' CALCULUS. See CALCULUS.

IN'TEGRANT, making part of an *integer* or whole. The *integrant particles* of a body are those into which it is reducible by mechanical division or solution: distinct from *elementary particles*.

INTEGUMENT, Lat. *integumentum*, that which covers, from *intego*, to cover. Chiefly used in anatomy for any covering which invests a body or particular part. The skins of seeds are also termed *integuments*, as are also the coats of the eye, &c.

INTENDANT, Fr. from Lat. *intendo*. One who has charge or management of some public business. *Intendant* has the same signification in France, that *superintendent* has in England.

INTENDMENT, Fr. *intendement*, intention or true meaning. In the application of statutes, &c., the *intendment* of the same is to be ascertained, i.e. the true intention of the legislator.

INTERCALARY, Lat. *intercalarius*, something inserted, from *inter* and *calo*, to call or proclaim. The 29th day of February in leap year is an *intercalary day*, and it was common in adjusting the old calendars to make *intercalary lunations*. These *intercalations* were declared and ordered by proclamation.

INTERCEPTED AXES. In *conic sections* (see *ABSCISSA*).

INTERCELLULAR PASSAGES. In *botany*, the spaces between the cells, tubes, or vessels, of which the tissue consists.

INTERCOLUMNIATION, from *inter* and *column*. The space between two columns, measured from the place where they are of equal thickness. Vitruvius enumerates five different properties of intercolumniation, by the names of Pycnostyle, Systyle, Diastyle, Araeostyle, and Eustyle.

INTERDICT, from *inter* and *dicere*, to speak. A prohibition forbidding the performance of some act, originally a sort of ecclesiastical censure, by which the Pope forbade the performance of divine service in a kingdom, province, town, &c. England was placed under *interdict* by Pope Alexander III.

INTEREST. In *commerce*, the allowance made for the loan or forbearance of a sum of money which is lent for, or becomes due, at a certain time. It is always in regular transactions so much per cent., and is either *simple* or *compound*. It is simple when it arises upon the principal only for the whole time of the loan, and compound when the interest as it becomes due remains unpaid and is perpetually accumulating, as stock bearing interest like the original principal. In *arithmetic*, the rule by which interest is computed.

INTERFERENCE. In *optics*, a term employed by Dr. Young to express certain phenomena resulting from the mutual action of the rays of light.

INTERIM (Latin), in the mean time.

INTERLOCUTOR, Lat. *interloquor*. In *Scottish law*, a judgment of a court on some intermediate question, before the final judgment is passed. In *literature*, a person who takes part in a dialogue.

INTERLUDE, from *inter* and *ludus*, play. An entertainment exhibited on the stage between the acts of a play, or between the play and the afterpiece, to amuse the audience while the actors take breath, shift their dresses, &c.

INTERLUNARY, from *inter* and *luna*, the moon. An epithet for the time when the moon about its change is invisible; called *interlunium* by the old astronomers.

INTERMEDE or **INTERMEZZO**. Nearly the same as interlude. A short musical piece, generally burlesque.

INTERMEDIATE. In *chemistry*, a substance which is the *intermedium* or means of chemical affinity, as an alkali, which renders oil combinable with water.

INTERMODILLION, the space in architecture between two modillions.

INTERNUNCIO, from *inter* and *nuncius*, a messenger. A messenger between parties.

INTEROSSEOUS MUSCLES, small muscles between the bones of the hand and foot, for moving the fingers and toes.

INTERPILASTER. In *architecture*, the space between two pilasters.

INTERPLEADER. In *law*, a bill of interpleader in chancery is where a person owes a debt or rent to one of the parties in suit, but till the determination of it he knows not to which, and he desires that they may *interplead* or settle their claims between themselves, that he may be safe in the payment.

INTERPOLATION, from *inter* and *polio*. Something put into the original matter. The term is used in mathematical analysis for the methods by which any intermediate term in a series may be found, its place from the first term being given.

INTERREGNUM, Lat. from *inter* and *regnum*, reign. The time during which a throne is vacant between the death or abdication of a sovereign and the acces-

sion of his successor. In strictness an interregnum can only happen in governments where the sovereign is elective; for in hereditary kingdoms, the reign of the successor commences at the moment of his predecessor's death. The term has, however, been used somewhat loosely.

INTER-REX, a person appointed to discharge the royal functions during a vacancy of the throne.

INTERRUPTED, Lat. *interruptus*, divided. Applied to compound leaves when the principal leaflets are divided by intervals of smaller ones; also to spikes of flowers where the larger spikes are divided by a series of smaller ones. A stem is sometimes interrupted by the intervention of leaves or smaller sets of flowers.

INTERSCENDENT, Lat. *inter* and *scando*, I climb. In *algebra*, quantities, the exponents of whose powers are irrational. They are a mean as it were between algebraic and transcendental quantities, whence the name.

INTER-TIES, short pieces of timber used in roofing, to bind upright posts together in roof partitions, in lath and plaster work, and in walls with timber frame-work.

INTERTRANSVERSALS. In *anatomy*, four small bundles of muscular fibres which fill up the spaces between the transverse processes of the vertebræ of the loins, and serve to draw them towards each other.

INTERVAL, from *inter* and *vallum*, a wall; a void space between two objects. The term is technically applied in music to the difference between the number of vibrations produced by one sonorous body of a certain texture and magnitude, and of those produced by another of a different texture and magnitude in the same time. The ancients divided the intervals into simple or uncomposite, which they called *diastems*, and composite intervals, which they called *systems*. Modern musicians consider the *semitone* as a simple interval, and only call those composite which consist of two or more semitones.

INTERVERTEBRAL, situated between the vertebræ. Thus the *intervertebral muscles* hold the vertebræ together.

INTESTINE, Lat. *intestinus*, from *intus*, within. Internal. The *intestines* are the convoluted canal or tube extending from the right orifice of the stomach to the anus. The whole length of this tube in the human subject is about six times that of the body. The *small intestine* comprises the upper four-fifths of the tube, and the *large intestine* the remaining fifth. The parts in their order downwards, are the *duodenum*, the *jejunum*, the *ileum*, the *cæcum*, the *colon*, and the *rectum*.

INTONATION, from *in* and *tono*, to sound. A term in music for the action of sounding the notes of the scale with the voice,

or any other given order of musical tones.
—2. The manner of sounding the notes of a musical scale. In this sense the word is always accompanied by an epithet, as sharp, flat, &c.

INTRAFOLIA'CEOUS, Lat. *intrafoliaceus*, without the leaves. Applied to stipulæ which are above the footstalk of plants, and internal with respect to the leaf.

INTRA'DOS (Italian). The internal curve of the arch of a bridge.

INTRAN'SITIVE, Lat. *intransitivus*, from *in* and *transeo*, to pass over. An epithet in grammar for a verb that expresses action that does not *pass over* to the object, but is limited to the agent.

IN TRAN'SITU (Latin). In the act of passing or of transition.

INTRENCH'MENT, properly a trench only; but as the earth thrown out of a trench forms a part, and often the most necessary and useful part of a fortification, the term is generally used to signify a ditch and parapet, and frequently fascines covered with earth, gabions, bags filled with earth and other materials collected to cover men from an enemy's fire.

INTROSUSCEP'TION, from *intro*, within, and *suscipio*, to receive. The slipping of one portion of intestine within another. This accident gives rise to *iliac passion*.

INTROIT, Lat. *introitus*, entry. In ecclesiastical history, the verses chanted at the entry of the congregation into the church.

INTUIT'ION, from *intuitus*, immediate knowledge. Knowledge not obtained by deductive reasoning; also the act whereby the mind perceives the agreement or disagreement of two ideas immediately by themselves without the intervention of any other, in which case the mind perceives the truth as the eye does the light, only by being directed towards it.

INTUS-SUSCEP'TION, from *intus*, within, and *suscipio*, to receive. 1. Introsusception (q. v.).—2. Nutrition, the interstitial deposition of particles, by which the existence of living bodies is sustained, and their waste supplied.

IN'ULA, a genus of syngenesious plants, mostly hardy perennials. Order *Polygamia superflua*. Name contracted from *helenium* (*ἑλένιον*), fabled to have sprung from the tears of Helen. The elecampane, flea-bane, and golden samphire, are British types. There are 26 exotic species known.

IN'ULINE, a substance first extracted from the root of the *Inula helenium*, or elecampane. It is white and pulverulent like starch, and differs from this substance chiefly because its solution, when it cools, lets fall the inuline unchanged, in powder, whereas starch remains dissolved in the cold as a jelly or paste.

IN VACUO, in a vacuum, a void or empty space. See VACUUM.

INVERSE, Lat. *inversus*, inverted: opposed to direct. Inverse proportion or ratio is when the effect or result of any operation is less in proportion as the cause is greater, or greater in proportion as the cause is less. Thus the time in which a quantity of work can be performed, will be less in proportion as the number of workmen is greater, and *vice versa*. Also, in the case of light and heat flowing from a luminous body, the light and heat are less in proportion as the distance is great: the intensities are *inversely* as the square of the distance. The inverse method of fluxions is the method of finding the fluents of given fluxional expressions. It is the same as the integral calculus.

INVER'SION, from *in* and *verto*, to turn; change of order, so that the first comes last and the last first. Thus by inversion the antecedents of a proportion become the consequents and the consequents the antecedents; e.g., if $a : b :: c : d$, then by inversion $b : a :: d : c$. In music, a change of position, either of a subject or of a chord, constitutes an *inversion*; and in grammar, the same term is used to denote any change in the natural order of the words of a sentence.

INVER'TEBRAL ANIMALS. Animals destitute of a skull and vertebral column, for the protection of the brain and the spinal marrow.

INVERT'ED ARCH, an arch having its intrados below the centre, axis, or spring line. Inverted arches are much employed in the foundations of buildings, and are turned between piers, &c., to connect the whole together.

INVESTITURE, from *invest*. A term in law for the open delivery of seisin or possession, anciently accompanied with a great variety of ceremonies.

INVOLUCEL'UM, Lat. In botany, the secondary involucre surrounding one of the umbellules of an umbelliferous plant, or the florets of a capitulum.

INVOLU'CRUM (Lat.), a wrapper. 1. In botany, a leafy calyx or row of small leaves remote from the flower: applied chiefly to umbelliferous plants. It is *universal*, when at the base of the whole umbel, and *partial* when at the base of each partial stalk of the umbel.—2. In anatomy, a membrane which covers any part; also a name of the pericardium.

INVOLUTE. In geometry, a curve conceived to be described by the extremity of a string unwinding itself from another curve about which it is lapped.

INVOLU'TION, from *in* and *volvo*, to roll; the infolding of parts. 1. In algebra, the raising of a quantity from its root to any given power. Powers are found from roots by *involution*, and roots from powers

by evolution.—2. In grammar, the insertion of one or more clauses or members of a sentence between the agent or subject and the verb.

IODIC ACID, an acid formed by the oxygenation of iodine. It is white and semi-transparent, of a strong acid and astringent taste, and destitute of smell. Its combinations are termed iodates.

IODINE, from *ἰωδης*, violet-coloured. A simple body accidentally discovered in 1812, by De Courtois, a manufacturer of saltpetre at Paris, in the mother-waters of that salt. Its affinities for other substances are so powerful as to prevent it from existing in an insulated state. It occurs, combined with potassium and sodium, in many mineral waters, and strongly saline springs. This combination exists sparingly in sea-water, abundantly in many species of *fucus* or sea-weed, and in kelp made from them; in springs, in several marine molluscs, such as the doris and oyster; in several polyparies and sea-plants; particularly in the mother-waters of the salt-works upon the Mediterranean sea, and it has been found in combination with silver in some ores brought from the neighbourhood of Mexico. It is economically procured from the mother-water of kelp, as furnished by those manufacturers of soap who employ this crude alkali. By pouring an excess of sulphuric acid upon that liquid, and exposing the mixture to heat in a retort, iodine rises in violet vapours, and condenses in the receiver into black, brilliant, soft, scaly crystals, resembling graphite or plumbago.

iodo-NITRIC ACID,
iodo-PHOSPHORIC ACID,
iodo-SULPHURIC ACID, } When sulphuric acid is dropped into a concentrated and hot aqueous solution of iodic acid, there immediately results a precipitate of iodosulphuric acid, possessed of peculiar properties. Analogous acids are produced by the action of the nitric and phosphoric acid on iodine. These acids act powerfully on the metals, and dissolve gold and platinum.

IODOUS ACID, an acid readily obtained by distilling equal parts of chlorate of potash and iodine. It contains less oxygen than the iodic acid.

IONIC ORDER. In architecture, an order invented by the Ionians as a medium between the masculine strength of the Doric and the feminine slenderness of the Corinthian. The capital has two spirals peculiar to this order, in imitation of ringlets of hair, and the cymation indicates locks hanging over the forehead, and the mouldings of the base represent the turn and shape of shoes worn by females when the order was invented. The body of the column is usually channelled

with 24 gutters, and its length, with the capital and bases, is 25 modules.

IPECACUAN'HA, *Ipecacuan*. According to Decandolle, the term *ipeacacuanha* implies in South America *coming root*; and therefore it is applied to the roots of very different species of plants. The genera which chiefly afford it are *Viola*, *Cynanchum*, *Asclepias*, *Euphorbia*, *Dorstenia*, and *Ruellia*. The medicinal virtues of *ipeacacuanha* depend on the quantity of hematine it contains.

IR'ISE DIX'IT (Lat.), he himself says.

IR'SO FAC'TO (Lat.), by the deed itself.

IRIDES'ENCE, exhibition of colours like those of the rainbow (*iris*).

IRID'UM, a new metal procured from crude platinum, along with osmium, and thus named from *iris*, a rainbow, on account of the variety of colours which its solutions exhibit. Iridium is the most refractory of all the metals, and appears as a grey metallic powder.

IRON, Sax. *iren*, Scot. *irne*. The most useful and the most plentiful of all the metals. Its tenacity exceeds that of any other metal known, and it is the hardest of those which are malleable and ductile. Its ores are found in all parts of the world, in every mineral formation, and in every soil. Mineralogists enumerate 19 species or varieties, of which 10 are worked either for the sake of the iron which they contain, for use in a native state, or for extracting some principles from them useful in arts and manufactures; such are arsenical iron, sulphate of iron, sulphure of iron, and chromate of iron. Iron in a state of carburet forms *plumbago*, *cast-iron*, and *steel*. It is reduced from its ores by the process of *smelting*, and run out of the furnace into sand-moulds of the pattern required, or simply into furrows made in sand: the large mass in the main furrow is termed by the workmen a *sove*, and the less masses *pigs*, and hence the general name of *pig for crude iron*. *Wrought iron* is again prepared from the pig-iron, by remelting and hammering, and this, heated in contact with a *cement* of ground charcoal and common salt, forms *steel*. The common iron ores of this country are carbonates of iron, principally found in the coal measures in connection with coal and limestone, both of which are necessary in the process of smelting.

IRON-CLAY, a basaltic mineral usually vesicular and of a reddish-brown colour.

IRON-FLINT, a silicate of iron found both massive and crystallised in six-sided prisms.

IRON LIQUOR, acetate of iron used as mordant by dyers, &c.

IRON-WOOD. In botany, a name common to all the species of the genus *Sideroxylon* (q. v.) The wood is of a reddish colour, and remarkable for its great spe-

cific gravity and hardness, in both of which it exceeds ebony. The species generally inhabit the southern parts of Africa: one occurs in New Holland.

IRRADIATION. In *physics* and *astronomy*, the apparent enlargement of an object strongly illuminated.

IRRATIONAL. In *algebra* and *arithmetic* applied to numbers or qualities, the roots of which are incommensurable with unity, and therefore cannot be accurately extracted. Thus $\sqrt{2}$ is irrational, as it cannot be expressed by a finite number.

IRREGULAR CADENCE. In *music*, one which does not end upon the essential chord of the mode in which a piece is composed.

IRRITABILITY, from *irrito*, to provoke. A property peculiar to muscles, by which they contract upon the application of certain stimuli, without a consciousness of action. Even when the body is dead, and the nervous sensibility gone, the irritability of the muscles remains till the organisation begins to be dissolved. This muscular irritability descends even to the vegetable kingdom, and gives a peculiarity to what are called *sensitive plants*. The muscular parts of the body have all the irritability of the system, with but little feeling, and that little owing to the nerves which enter into their substance, while nerves have all the sensibility of the system with no motion.

IS'AGON, from *isos*, equal, and *gonia*, an angle. A figure whose angles are equal.

IS'ATIS. 1. In *botany*, a genus of herbaceous plants. *Tetradynamia*—*Siliculosa*. The *I. tinctoria*, an indigenous biennial, affords the dye-stuff called *woad*, now well nigh being superseded by indigo.—2. In *zoology*, the arctic fox or *Canis lagopus*, Lin.

ISERAN'IKI. In *ecclesiastical history*, a name of the Russian sect of Raskolniks.

ISCHIA'ORA, Lat. from *ischion*, the haunch, and *αρχα*, a seizure. A name for hip-gout, and also for neuralgia of the sacro-sciatic nerve.

IS'CHIAS, *ισχιας*, from *ισχιον*, the hip. A rheumatic affection of the hip-joint; the hip-gout.

IS'CHIUM, Lat. from *ισχis*, the loin. A bone of the pelvis of the fœtus, and a part of the os innominatum of the adult. See **INNOMINATUM**, Os.

ISCH'URX, from *ισχον*, to retain, and *ουρος*, the urine. A retention of the urine; distinct from *dysury*.

I'SINGLASS, for *ice-glass*, fish-glue. A manufacture almost peculiar to Russia. It is gelatine, nearly pure. Prepared from the air-bladders, or sounds of sturgeons, especially the great sturgeon 'Ac-

cipenser pusa, Lin.) fished on the shores of the Caspian Sea, and in the rivers which flow into it, almost entirely for the sake of its swim-bladder. The best is that made into little ringlets, &c.; the second is laid together like the leaves of a book; the third put up without care.

IS'LAMIS, } A term used by Mohammed-
IS'LAMISM, } dans to signify the *true faith*: Mohammedanism.

ISMAE'LIANS, a Mohammedan sect, from whom the famous assassins sprung in the 10th century.

ISOCHET'MAL, from *isos*, equal, and *χαιμα*, winter. Of the same winter temperature. *Isocheimal lines* are those drawn through places having the same winter temperature.

ISOCHROMA'TIC, *isos*, and *χρωμα*, colour. Having the same colours.

ISOCH'RONAL, } from *isos*, equal, and
ISOCH'RONOUS, } *χρονος*, time. Equal

time, performed in equal times. The vibrations of a pendulum are *isochronal*.

ISOD'OMUM, *isos* and *δομν*, structure.

In *ancient architecture*, a species of walling, in which all the courses were of the same height.

ISOGEOTHER'MAL, from *isos*, equal, *γη*, the earth, and *θεμος*, warmth. Of equal terrestrial temperature. *Isogeothermal lines* are those divisions in the earth's crust which have an equal degree of mean annual temperature.

IS'OLATED, } from Ital. *isola*, an isle.

IN'SULATED, } An isolated harbour, is one of refuge built independently of the coast, and connected to it by a bridge, under which the shingle is allowed to pass.

ISON'ERISM, *isos*, equal, and *μερος*, part. The condition of compounds which contain the same elements in the same proportion, and yet possess distinct chemical qualities. They are said to be *isomeric*.

ISOMOR'PHISM, from *isos*, like, and *μορφη*, form. That quality of certain bodies, by which they are capable of replacing each other in compounds, without change of the primitive form.

ISOPERIM'ETRY, from *isos*, equal, *περι*, about, and *μετρον*, measure. A branch of the higher geometry, which treats of the properties of *isoperimetrical figures*, i.e. surfaces contained under equal perimeters or boundaries.

ISOP'ODA, *isopoda*. An order of Crustaceans characterised by having uniformly fourteen equal feet (*isos*, equal, and *πους*, a foot), unguiculated, and without any vesicular appendage at their base. Most isopods are aquatic, and those which are terrestrial require a certain degree of humidity to enable them to breathe. Linnaeus comprises them all in his genus *Oniscus*.

ISOSCELES, *ισοσκελης*, equal-legged; from *ισος*, equal, and *σκελος*, a leg. An

isosceles triangle is one which has two equal sides; such is the triangle *ABC*. The angles at the base of such a triangle are equal, and if the legs be produced, the angles under the base are also equal.

ISOTHERAL, from *ισος*, equal, and *θερος*, summer. Having the same summer temperature. *Isothermal lines* are those drawn on a map through places having the same summer temperature.

ISOTHERMAL, from *ισος*, equal, and *θεμα*, heat. Having equal temperature. *Isothermal lines* are those drawn on a map through places having the same annual mean temperature. *Isothermal zones*. To avoid the confusion arising from the multiplicity of isothermal lines, geographers have grouped them into zones or bands. Thus the northern hemisphere is divided into six isothermal zones by Humboldt.

ISOTONIC, from *ισος*, equal, and *τονος*, tone. Having equal tones. In *music*, the *isotonic system* consists of intervals in which each concord is alike tempered, and in which there are twelve equal semitones.

ISTHMIAN GAMES, one of the four great national festivals of Greece, so called from being celebrated on the Isthmus of Corinth.

ISUANT, an epithet in heraldry for any beast issuing out of the bottom line of any chief or fess.

ISSE, *Fr. issue*, *Ital. uscio*, a door. A term extensively applied both as a substantive and verb. Thus bankers *issue* paper-money, and regulate the amount of their *issues* by the circumstances of trade. A cause *issues* to the court, and finally *issues* in demurrer. Profits of land or other property, the legitimate offspring of parents, the point of matter depending in suit, &c., are all *issues* in legal phraseology. Surgical *issues* are little ulcers made designedly in various parts of the body, and kept open by the patient for some specific object.

ITALICS, letters or characters first used in Italy, and which stand inclined, as those in which this clause is printed. They are often used, by way of distinction from Roman letter, to mark emphasis, antithesis, &c. To *italicise*, is to write or print in italic characters.

ITALIC SCHOOL OF PHILOSOPHY. The Pythagorean and Eleatic systems.

ITE. In *chemistry*, acids whose names terminate in *ous*, produce salts different from those whose names end in *ic*; and to indicate that a saline compound is formed by an acid ending *ous*, the termination *ite* is used; whereas *ate* is used when the acid terminates with *ic*. Thus the *sulphites* are formed by sulphurous acids with bases, and the *sulphates* by the sulphuric acid with the same bases. See **ACID**.

ITIHASAS. The two great heroic poems of the Hindoos, the *Ramayana* and *Maha Bharata*: they are of great antiquity.

ITIS. This termination, added to the Greek name of an organ, implies *inflammation* of that organ; thus, *gastritis*, inflammation of the stomach.

ITNERITE. A rare mineral, which occurs massive, and in rhombic dodecahedrons, of a gray or bluish tint. It consists principally of silica, alumina, soda, and hydrosulphuret.

I'VA, a genus of plants. *Syngenesia—Poly. necessaria*. The *I. frutescens* affords the Mexican quinquina, much celebrated in its native country as a febrifuge. This is a shrubby plant, but all the other species are annuals. Warm parts of America.

IVORY, *Fr. ivoire*. The name given to the tusks of the elephant and the walrus, and to the horn of the narwhal. It is an intermediate substance between bone and horn, containing about twenty-four per cent of gelatine. The hardest, toughest, and most translucent ivory is reckoned the best. It is readily distinguished from bone by its peculiar rhombohedral network, shown when the ivory is cut transversely.

IVORY BLACK, an animal charcoal, prepared by the calcination of ivory dust, used as the basis of the finer black pigments, ink for copperplate printing, &c.

IVY-GUM, a resinous juice which exudes from the stem of the ivy-tree, *Hedera helix*, in warm climates. It is imported from the East Indies, in compact reddish-brown masses.

IXODES, the name given by Latreille to a sub-genus of acari found in thickets, and fastening on dogs, oxen, horses, and other quadrupeds, from which they can only be detached by tearing out the part to which they adhere by their suckers, which they bury completely in the flesh. They are vernacularly named *ticks*, and are exceedingly plentiful in warm and dry seasons.

J.

J. A letter added to the English alphabet in modern days, and ranked as the tenth, being written in words where I was formerly used, and before *vv* and

when *g* soft is required, as in *jet*, to distinguish from *get*.

JACANAS, a genus of birds. Order *Grallatorice*. Distinguished by having four very long toes, separated down to their root, the nails of which are extremely long and pointed, a circumstance which has procured for them the vernacular name of *surgeons*. They are noisy and quarrelsome birds, and inhabit marshes in hot climates, where they walk with great facility, by means of their long toes.

JACA-TREE, a name of the bread-fruit-tree of the East Indies.

See **ARTOCARPUS**.

JA'CINTH, } See **HY-**
JACINTHUS. } **ACINTH**
and **HYACINTHUS**.

JACK. 1. In *mechanics*, an instrument in common use for raising great weights, being a powerful combination of teeth and pinions, and the whole inclosed in a box. The power is applied by a winch or handle. The figure represents the machine without the frame.—The *kitchen-jack* is a machine in which the descent of a weight is made to turn a spit. The common *worm-jack* is shown in the figure. The

JACK.

KITCHEN-JACK.

smoke-jack is another contrivance for the same purpose as the common worm or kitchen-jack, but acting, not by a weight, but by means of the smoke passing up the chimney, which striking against a set of oblique vanes, fixed to a vertical spindle, causes it to revolve with great rapidity. This motion is conveyed to the spit by means of a small wheel, which works into another small wheel placed on the end of

a horizontal spindle, having a pulley at the other end, over which passes the chain

SMOKE-JACK.

which works the spit. The name *jack* is very commonly applied to vibrating levers in various kinds of machinery, as in stocking-frames, &c.—2. In *navigation*, a sort of flag or colours displayed from the bowsprit. In the navy the jack is a small union flag, but in merchant ships the union is bordered with red.—3. In *ichthyology*, the young pike, *Esox lucius*.—4. In *botany*, the *Jajaca*, a species of bread-fruit-tree.

JACK'AL, corrupted from *chacal*, a canine animal, the *Canis aureus*, Lin., found in the Indies, and the environs of the Caspian Sea, and as far as in Guinea.

JACK ARCH, an arch of the thickness of only one brick.

JACK'-BACK, the largest jack of the brewer.

JACK'BLOCK, a block attached to the top-gallant-tie of a ship, to swing up or to strike the sail.

JACK'DAW. In *ornithology*, the *Corvus monedula*, Lin., is the jackdaw, a well-known bird; and the *Gracula guiscala* is named, from its colour, the purple jackdaw.

JACK'FLAG, a flag hoisted at the spirit-sail top-mast-head.

JACK-IN-THE-BOX, 1. A large wooden solid screw, turning in a hollow one, which forms the upper part of a strong wooden box, shaped like the frustum of a pyramid. It is wrought by means of levers passing through holes in it, as a press in packing, &c.—2. The popular name of a genus of arborescent plants.

JACK-OF-HILTON, a vulgar name for an aeolipyle.

JACK-OF-THE-CLOCK-HOUSE, a figure of a little man, which strikes the quarters in some clocks.

JACK-OF-THE-LANTERN, Will-of-the-Wisp. Vulgar names for the *ignis fatuus*.

JACK-PLANE, a plane of about 18 inches long, to prepare wood for the trying-plane.

JACK-RAFTERS. In *joinery*, the jack-timbers which are fastened to the high rafters and the wall-plates.

JACK-RIBS. In *joinery*, the jack-timbers which are fastened to the angle-ribs, and rest upon the wall-plates in groined or domed ceilings.

JACKS. Wooden wedges used in coal-mines.

JACK-SINKERS. Parts of a stocking-frame.

JACK-TIMBER. In *joinery*, a short timber fastened at the ends of two timbers which are not parallel, or to two timbers which actually meet in a point, as to the wall-plate and hip-rafter of a roof, the wall-plate and hip of a groin, &c.

JACOBINS. In *French history*, a political club, which bore a well-known part in the first Revolution. In *ecclesiastical history*, the French appellation of the religious order of St. Dominic.

JACOBITES. 1. In *English history*, the adherents of James II., after his abdication.—2. In *church history*, certain Syrian Christians, who hold that Christ had but one nature, and practise both circumcision and baptism.

JACOB'S LADDER. In *naval affairs*, a rope-ladder with wooden spokes.

JACOB'S STAFF, a mathematical instrument for taking heights and distances. A kind of astrolabe, or cross-staff, much used in the middle ages.

JACOBUS, Lat. for *James*. A gold coin of the reign of James I.; value 25s.

JACONET, a muslin fabric finer than *causey*, and coarser than *lawn*.

JACQUARD LOOM, a peculiar and most ingenious mechanism, invented by M. Jacquart, of Lyons, in 1800, to be adapted to a silk or muslin loom, to supersede the use of drawboys in weaving figured goods. It has of late been extensively applied in the weaving of carpets.

JACQUERIE. In *French history*, the name given to a revolt of the peasantry against the nobility, in 1356.

JACTITATION, from *jactito*. A term, in *canon law*, for a false pretension to marriage.

JADE, a hard magnesian mineral, called also nephrite, nephritic stone, and axestone. See *AXESTONE*. In consequence of its tenacity it has been wrought into chains and other delicate works. The name has been supposed to originate from *igida*, the Indian name of the stone.

JAGUAR. In *commerce*, a Bengalese name for a species of coarse sugar in an impure state.

JAGHIRE, an East Indian word, denoting an assignment of the government share of the produce of a portion of land to an individual, either personal, or for the support of a public establishment, particularly of a military nature. The holder of a jaghire is styled a *jaghire dar*.

JAGUAR. In *zoology*, the tiger of the Brazils. It is about the size of a wolf, very fierce and destructive among the larger quadrupeds, as oxen, horses, sheep, &c.

JALAP or **JALOP**, the root of the *Convolvulus jalapa*, an herbaceous twining vine; so named from Xalapa, in Mexico, from which it is chiefly imported. The root is only used in medicine.

JALAPINE or **JALAPPIN**, resin of jalap. The active principle of jalap, obtained by digesting that root in alcohol. Herberger considers it an alkaloid, but its alkaline properties are not well established.

JAMACI'NA, a vegeto-alkaline principle discovered in 1824 by M. Hütterschmidt in the bark of the *Geoffroya jamaicensis*, or cabbage-bark tree. It crystallised from its aqueous solutions.

JAMAICA BARK, the bark of the *Cinchona Caribaea*, or Caribbean bark-tree, which grows in Jamaica, where it is called the sea-side beech.

JAMAICA PEPPER, the fruit of the *Myrtus pimenta*, or allspice tree. See *PIMENTO*.

JAMB, Fr. *jambe*, a leg. 1. Among *miners*, a thick bed of stone which hinders them in pursuing a vein.—2. In *architecture*, a supporter. Door-posts, upright posts at the ends of window-frames, the upright sides of a fire-place from the hearth to the mantle-piece, are all termed *jamb*s; the uprights on the sides of doorways are more particularly called *jamb-posts*, and the side-work attached is termed *jamb-lining*.—3. A sea term; to squeeze tight.

JAMES, ORDER OF THE SWORD OF SAINT, an ancient military order in Spain and Portugal.

JAMES'S PILLS, pills made of equal parts of James's powder, ammoniacum, and the aloes and myrrh pill, beat up with tincture of castor.

JAMES'S POWDER, an antimonial medicine invented by Dr. James, and termed by him fever powder, being used by him extensively in fever cases. It still retains much of its reputation.

JANITOR (Lat.). 1. A door or gate-keeper, from *janua*, a gate.—2. In *anatomy*, the *pylorus*, situated at the entrance of the intestine.

JANE. 1. A coin of Genoa.—2. A sort of fustian.

JANIZARIES, corrupted from the Turkish *Yeniskeri*, new troops. A name for the Turkish infantry; reputed the Grand Seignor's guards. Now abolished.

JAN'SENISTS, a sect of Christians who followed the opinions of Jansenius, bishop of Ypres, in Flanders, in regard to free will and grace.

JANUARY, Lat. *Januarius*. The first month of the year according to the present computation. The name is supposed to be taken from Janus, whom the Romans believed to preside over the beginning of all business.

JAPAN-ALLSPICE, a shrubby plant; the *Chimonanthus fragrans* of Japan, the fruit of which resembles that of the allspice tree.

JAPAN-EARTH, *Terra Japonica*. Catechu (q. v.).

JAPAN'NING, a kind of varnishing or lacquering learned of the Japanese, and practised chiefly on white iron and papier mâché, but all articles, the substance of which is firm, may be japanned. Japanned articles are often richly ornamented with figures in gold and various colours.

JAPAN-VARNISH, varnish used in japanning. The base is seed-lac dissolved in spirit of wine. To this is added the colour required.

JAN'GON, a mineral, the mock-diamond, a variety of Zircon.

JARL, a Scandinavian term signifying noble.

JAS'MINUM, the *Jasmine* or *Jessamine*: an extensive genus of permanent plants. *Diandria—Monogynia*. The species are valued chiefly for their beautiful flowers. Temperate and warm climates. The name is Arabic, *jasmen*.

JAS'PER, a subspecies of rhombohedral quartz, usually occurring massive, but sometimes crystallised. Prof. Jameson enumerates five varieties. Jaspers owe their colours to oxides of iron. They all admit of a good polish, and are used for various ornamental purposes.

JAS'PONYX, the purest horn-coloured onyx: it has beautiful green zones. It is simply striped, or ribbon jasper.

JAT'ROPHA, the *physic-nut*: a genus of permanent plants. *Monoclea—Monadelphia*. Name from *ιατρον*, to heal, and *σπερμα*, to nourish. The species inhabit South America and the West Indies. The seeds of the *J. curcas* afford an oil resembling castor-oil, and used for the same purpose; those of the *J. multifida* are the physic or purging nuts; the juice of the *J. elastica* is an elastic gum; the *J. manihot*, Willd., is the *Manihot Cannabina*, Donn. See MANIHOT.

JAUN'DICE, Fr. *jaunisse*, from *jaune*, yellow. A disease characterised by yellowness of the skin and eyes, the proximate cause of which is bile in the blood. When the colour is very intense, and the disease long protracted, it becomes *green jaundice*, when still more concentrated,

black jaundice. Chlorosis has also been named *white jaundice*. Physicians distinguish many species of the disease.

JAV'ELIN (Fr.). A species of missile, anciently used by the soldiery. It was a rod five feet long, with a barbed head of iron.

J. D. An abbreviation of *Jurum Doctor*, doctor of laws.

JEEL. An E. Indian term for a shallow lake or morass.

JEERS. A sea word. Strong tackle for swaying up the lower yards.

JELU'NUM, Lat. from *jejunus*, empty. The second portion of the small intestines, generally found empty in the dead body.

JEL'LY. *Vegetable jelly* of unripe currants and other berries is a compound of mucilage and acid, which loses its gelatinising power by long boiling. For *Animal jelly*, see GELATINE, GLUE, and ISINGLASS.

JEM'IDAR. A black officer in the E. I. Company's Service, having the same rank as a lieutenant.

JER'KIN-HEAD. A term used to express a peculiar feature in roofs, when the gable is carried higher than the side walls.

JES'SES. In *falconry*, straps with which bells are attached to the legs of hawks, represented in heraldry usually of a different tincture.

JES'UATES, of Saint Jerome. A religious order, founded in 1363, of very ascetic habits.

JES'UITS. A religious order of Romish clergy, forming the *Society of Jesus*, founded by Ignatius Loyola, a Spanish soldier, about 1534. Unlike other communities of monks, the duties of this were to be performed in active life, the object being universal empire.

JES'UITS' BARK. A name of Peruvian bark, introduced into Europe by Cardinal de Lugo, a Jesuit.

JES'UITS' DRUGS. A nostrum composed of gualiac, Peruvian balsam, and sarsaparilla.

JET. 1. In *mineralogy*, black amber; a species of pitch coal, or glance-coal, of a beautiful compact texture, and susceptible of a fine polish, in consequence of which it was formerly manufactured into a vast variety of ornamental articles, as buttons, rosaries, crosses, necklaces, eardrops, bracelets, &c. It is still sometimes manufactured into snuff-boxes, and the like; but the greater portion of the articles which used to be manufactured of it are now made of black glass, which is harder, and therefore not so apt to lose its polish. The name is, Fr. *jaïet*.—2. In *hydraulics*, a spout. See *JET D'EAU*.

JET D'EAU. A French name for a fountain, which throws up water to some height in the air; (*jeter* to throw, and *eau* water). See FOUNTAIN.

JET'SAM,
JET'SON,
JET'TISON. } See FLOTSAM.

JETTE'. The border made round the stilts under a pier in certain old bridges, being the same with starling, consisting of a strong framing of timber, filled with stones, &c., to preserve the foundations of the piers from injury.

JET'TY-HEAD. A name given in the royal dockyards to that part of a wharf which projects beyond the rest; but more particularly the front of a wharf, whose side forms one of the cheeks of a dock.

JEW'EL-BLOCKS. In a ship, two small blocks which are suspended at the extremity of the main and fore-top-sail yards, to retain the top-mast studding sails beyond the sheets of the top-sails.

JEW'S-HARP. A musical instrument of a very imperfect kind; by some called the *jaw's harp*, because held between the teeth when played. It consists of an elastic steel spring, riveted at one end to a frame of brass or iron, and having the other bent and free to be struck by the finger in playing. It is also called the *Jew's-trump*, and often simply a *trump*.

JE'ZIDS, or DAYASIN. A religious sect, long settled near Mosul, the followers of Yezid Ben Anisa, a Mohammedan doctor.

JIB. 1. The foremost sail of a ship. It is a large staysail extended from the outer end of the bowsprit, prolonged by the jib-boom towards the fore-topmast head.—2. The projecting frame of a crane from which the weight or goods are suspended.

JIB-BOOM. In a ship, a continuation of the bowsprit forward, being run out from its extremity in a similar manner to a top-mast on a lower mast. There is also the *flying jib-boom*, which extends still beyond the jib-boom.

JIB-DOOR. In architecture, a door which stands flush with the wall outside, so as to appear as part of the wall.

JIG'GER. In a ship, a machine, consisting of a piece of rope about five feet long, with a block at one end and a sheave at the other, used to hold on the cable when it is heaved into the ship by the revolution of the windlass.

JIG'GER-TACKLE. In ships, a small light tackle, consisting of a double and single block, used on many occasions.

JOB'BER. A person who undertakes jobs or small pieces of work; also one who buys and sells for others: equivalent to *broker*. Hence *jobbing*, the business of a jobber. *Stock-jobbing* denotes the practice of trafficking in the public funds, or the buying and selling of stock, with a view to its rise or fall.

JOG'GLE. A term applied to a particular description of joint; thus to the joint

connecting two stones or other bodies in

such a manner that they cannot slip away without tearing the joint or

joggle asunder. The separate part securing the joint is more commonly called the *joggle*.

JOG'GLE-POST. In carpentry, a strut post for fixing the lower ends of the struts.

JOHN BULL. The well-known collective name of the English nation, first used in Arbuthnot's Satire, the *History of John Bull*.

JOHN DORY, a fish, the Dory (*Zeus Faber*, Cuv., Yarr.) common in the Mediterranean. Among the superstitious, the Dory disputes with the Haddock the honour of having been the fish out of whose mouth St. Peter took the tribute money, on which occasion he is said to have left the mark of his finger and thumb on their sides. Both fishes are similarly marked; but, according to another legend, the marks upon the Dory, are those of the finger and thumb of St. Christopher, who on occasion waded through an arm of the sea, and caught a Dory during his passage! Quin, the actor, and prince of epicures, established the edible reputation of the Dory, and gave it the national name of John, as a mark of high distinction.

JOIN'ER. } The joiner's occupation is to

JOIN'ERY. } construct things by joining pieces of wood. The finer wood-work in the finishing of buildings is done by joiners, as the ponderous parts are done by carpenters. The art in the one case is *joinery*, and in the other *carpentry*, but the distinction is not always observed.

JOINT, from *join*. 1. In anatomy, an articulation.—2. In botany, a knot or internode.—3. In joinery, &c., the juncture of two pieces of wood, &c.—4. A limb of an animal cut up by the butcher.—5. In stone-work, the name joint is applied to the vertical joinings, those situated horizontally being called *beds*.

JOINT-CHAIR. On railways, a chair which secures the jointure of two bars.

JOIN'TER, jointing-plane. The name given by joiners to their largest plane. Bricklayers give the name *jointer* to a piece of iron bent in two opposite directions, sometimes used in securing the joints of a wall when much strength is required.

JOINTING RULE, a rule used by bricklayers to secure a straight face to their work.

JOINT LIVES, a phrase in insurance and annuities, when the calculation is founded on the contingency of one life dropping

before another. Thus assurances are made for the benefit of survivors, by paying an annual premium during the continuance of two *joint lives*, the sum insured to be paid to the surviving party when either of the lives shall drop.

JOINT STOCK, a stock or fund formed by the union of several shares from different persons. In this way *Joint Stock Companies* are formed for commercial purposes. Banking in Scotland is mainly carried on by such companies.

JOINT-TENANCY, a tenure of estate by unity of interest, title, time and possession.

JOINTURE, a settlement on a woman in consideration of marriage, and which she is to enjoy after her husband's death.

JOIST, Scot. *jeist*. One of the cross or secondary timbers on which the boards of the floor of a house rest. Joists are placed with their edges uppermost, and are framed into the girders and summers. If cross pieces are fixed to the beams underneath, to sustain the lath and plaster, these are called *ceiling joists*. The *bridging joists* are those to which the boards are nailed; the *binding-joists* are those into which the bridging-joists are mortised.

JOLLY-BOAT. The same as **YAWL**, which see.

JONQUIL'. In *botany*, a species of narcissus or daffodil, the *N. jonquilla* of Spain. The *N. calathinus*, is called the great jonquil. The name is Fr. *jonquille*, from Lat. *juncus*, a rush; hence the plant is sometimes called the rush-headed daffodil.

JOUR'NAL (French). A sort of diary, from Lat. *diurnum*, through the Ital. *giornale*, from *giorno*, a day. Journals are made up of accounts of daily transactions. Navigators give the name *journal* to their register of the ship's course and distance, the winds, weather, &c., and merchants use the same term as the title of a book wherein their transactions are entered from the waste-book or blotter. Some daily newspapers are also appropriately called *journals*; and we have various *journals* published at stated intervals, containing accounts of inventions, discoveries, and improvements in the arts and sciences.

—2. In *mechanics*, the name *journal* is given to that portion of a shaft which revolves on a support situated between the power applied and the resistance.

JOURNEYMAN, strictly, a man employed to work by the day (*journée*, a day or day's work); but now applied to any mechanic who is hired to work for another, whether by the month, year, or other term. The term is restricted to mechanics in their own trades.

JUBILEE, Fr. *jubilé*, from Lat. *jubilum*, from *jubilo*, to shout for joy. A term of public and solemn festivity. The jubilee of the ancient Hebrews occurred every

fiftieth year, and began with the autumnal equinox. At this time all slaves were liberated, all debts annihilated, and all lands, &c., however alienated, were restored to their first owners. All agriculture for the whole year was also suspended, and the poor had the benefit of the harvest, vintage, and other productions of the earth. In imitation of the Jewish jubilee, Pope Boniface VIII. instituted jubilees at Rome, during which, plenary indulgence was granted to sinners, or to as many as should visit the churches of St. Peter and St. Paul at Rome.

JUDGE, from *judez*, compounded of *jus* and *dico*. A civil officer, who is invested with authority to hear and determine causes, civil or criminal, between parties according to his commission. In British polity, the title *judge* is retained where that of *president* would more truly express the functions of the officer who bears it. In Chancery, in the ecclesiastical courts, and in the Court of Admiralty, the judge really *judges*, but in the courts of law, civil and criminal, the jurors are the actual judges. There the business of the judge, as he is denominated, is to put the evidence and pleadings in a compendious point of view, but he submits the question of judgment to the jury.

JUDGMENT. 1. In *metaphysics*, a faculty or rather act of the mind whereby it compares ideas, and perceives their agreement and disagreement.—2. In *law*, the sentence pronounced by a court upon any cause civil or criminal. Judgments are either interlocutory or final.—3. In the *fine arts*, the faculty of making the most suitable selection.

JUDGMENT OF GOD. Formerly this term was applied to extraordinary trials of secret crimes, as by arms and single combat, ordeal, red-hot ploughshares, &c., it being understood that God would work miracles to vindicate innocence.

JUGERUM, a Roman acre, being to the English acre as 10,000 to 16,097.

JUGLANS, the walnut-tree. A genus of four species. *Monœcia*—*Polyandria*. Name *quasi Jovis glans*, Jupiter's nut, from the excellence of the fruit. Temperate climates.

JUGULAR, belonging to the *jugulum* or throat, as the *jugular veins* which run from the head down the sides of the neck.

JUJUBE, a plant, the *Rhamnus zizyphus*; also the fruit of this plant, which nearly resembles a small plum. In the southern parts of Europe jujubes are a common article of food in their recent state; they are brought into this country as a half-dried fruit, and were formerly much used in pectoral decoctions. The name is Arabic, *jujubak*.

JULIAN CALENDAR. The civil calendar

introduced at Rome by Julius Cæsar, and used by all the Christian countries of Europe till 1582, when it was reformed by Pope Gregory XIII.

JULIAN EPOCH. The commencement of the Julian Calendar, on the 1st of January of the 46th year before Christ, and 708th of Rome.

JULIAN PERIOD, a cycle of 7980 years, being the product of the three cycles; viz., that of the sun 28, that of the moon 19, and that of the indiction 15; and thus named after Julius Cæsar Scaliger, the inventor of it. This period, though but feigned, is of great use as the standard and receptacle of all other epochas, as that every year within the period is distinguishable by a certain peculiar character; for the sun, moon, and indiction will not be the same again until the whole 7980 years be revolved. When the Christian æra commenced, 4713 years of the Julian Period were run, consequently, to find the year of the period answering to any given year, it is only necessary to add 4713 to it.

JULIAN YEAR, the year of 365 days, 6 hours, instituted by Julius Cæsar, who caused the Roman Calendar to be reformed. See YEAR.

JULUS, Lat. from *joules*. 1. In botany, a catkin or inflorescence consisting of chaffy scales, arranged along a stalk.—2. In entomology, a genus of apterous insects of many species.

JULY, the seventh month of the year, named from Julius Cæsar, who was born in this month. Before that time, this month was called *Quintilis*, or the fifth month, March being the first.

JUMP. In mining, one of the numerous appellations which the dislocations of the strata have received from the practical miners of different districts.

JUMPER. In mining, a long iron tool, with a steel chisel-like point, used for drilling holes for the lodgment of powder in rocks which are to be blasted; called also a *borer*.

JUN'EERS, a Christian sect, well known in Wales, and remarkable for their eccentricities.

JUN'CUS, the rush. An extensive genus of perennial plants. *Hexandria—Monogynia*. Name *juncus*, from *jungo*, to join, the rush being used anciently as cordage is at present. There are nineteen British species, and twenty-four in all, according to Donn.

JUN'OLE, a Persian word, used in the East Indies to denote land covered with forest-trees, thick impenetrable brushwood, creeping plants, and coarse rank vegetation.

JUN'IPER, juniper-tree. The *Juniperus communis*, a shrub which yields the concrete resin called *com-juniper*, and whose

fruit is the *juniper-berries*, so much valued, both in medicine and the manufacture of gin.

JUNIP'ERUS, the juniper. A genus of cruciferous plants of many species. *Diccia—Monadelphia*. Name from *juvenis*, young, and *pario*, to bring forth, because it produces its young berries while the old ones are ripening. The common juniper and savin-trees are the most important species.

JUNK. 1. From *juncus*, a bulrush, of which ropes were made in early ages. Old pieces of cable, cordage, &c. used for making points, gaskets, mats, &c.; and when untwisted and picked to pieces, it forms oakum for filling the seams of ships.

—2. An oriental name of a sort of small ship, common among the Chinese, in the East Indies, &c., about the size of a fly-boat. The sails are frequently made of mats, and the anchors of wood.

JUNO. 1. In mythology, the wife of Jupiter, and goddess of all power and empire, represented sitting on a throne, with a diadem on her head, and a peacock by her side.—2. In astronomy, the name of a small planet or asteroid, discovered in 1804, by Mr. Harding of Lilienthal. It has the appearance of a star of the eighth magnitude, and is situated between the orbits of Mars and Jupiter. It revolves round the sun in 4 years and 128 days.

JUN'TO, } A select council in Spain and
JUN'TA, } Portugal, for taking cognizance of important matters in politics, commerce, &c.

JUP'ITER, Jovis pater. In mythology, the son of Saturn and Ops, and chief of the gods. His usual attributes are the eagle and thunderbolts, and sometimes a figure of victory, and a spear.—2. In astronomy, one of the superior planets. Its diameter is 89,170 miles, which is more than eleven times that of our earth, yet revolves about its axis in 9h. 55m. 37s., and performs its circuit about the sun in 11 years and 318 days. Next to Venus, it is the most brilliant of the planets, has four satellites, and its surface is marked by zones or belts of various shades, concerning which there are various opinions. Distance from the sun 493,000,000 miles. Its polar and equatorial diameters are to each other as 12 to 13.

JU'RATS, jurati. Magistrates, in the nature of aldermen, for the government of several corporations, as Jersey, Maidstone, Rye, &c.

JU'RE DIVI'NO (Lat.). By divine right.

JURISCON'SULT, juris consultus. A person learned in jurisprudence, and fit to be consulted on the interpretation of the laws.

JU'RY, Fr. juré, sworn. A number of persons, selected in the manner prescribed by law, empanelled and sworn to inquire

into and try any manner of fact, and to declare the truth on the evidence given them in the case. Juries are of several kinds; as *grand* and *petty* juries in criminal cases, and *common* and *special* juries in civil cases. The grand jury tries matters alleged in indictments; the petty jury tries the matters of fact in cases where a true bill is found by the grand jury. Special juries consist of individuals fitted by their kind of knowledge to try particular cases.

JURYMAST, the name given by seamen to whatever they set up in the room of a mast lost in a battle or storm, from *Fr. jour*, a day, quasi *jouré*, temporary, or from *Lat. juvare*.

JUS (Lat.), law. *Jus civile*, civil law. *Jus coronæ*, the right of the crown. *Jus gentium*, the law of nations. *Jus gladii*, the right of the sword. *Jus scriptum*, the written law.

JUSTICE, *Lat. justitia*, from *justus*, just. 1. Equity and the application of equity.

—2. Low *Lat. justiciarius*. One deputed by the sovereign to do right by way of judgment among the subjects. The *Justice of the Queen's Bench* is a lord by his office, and chief of the rest: his business is to determine all pleas of the crown.—The *Justice of the Common Pleas* determines all causes at common law, that is, all causes between common persons.—The *Justices of Assize* are such as were wont to be sent, by special commission, into various counties to take assizes.—The *Justices in Eyre* were in ancient times sent into divers counties, to hear pleas of the crown for the ease of the subjects, who must else have gone to the king's bench.—The *Justices of Gaol delivery* are such as are sent to determine all causes, pertaining to such as for any offence are cast into gaol.—The *Justices of Nisi Prius* are now the same as the justices of assize.—The *Justices of the peace* are appointed by commission to attend to the peace of the county where they dwell.

JUSTICIARY, *Court of Justiciary*. In Scotland, a court of supreme jurisdiction in all criminal cases.

JUSTICES. In law, a special writ empowering the sheriff of a county to hold plea of an action in his court.

JUSTIFICATION. In law, the showing good reason in a court for doing something for which he is called to answer. From *justus*, just, and *facio*, to make.—In theology, men are justified when accounted righteous in the sight of God.

JUXTAPOSITION, from *juxta* and *positio*, apposition. The term is used in physiology to denote that species of growth which is performed by the apposition of new matter to the surface or outside of the old in opposition to *intus-position*.

K.

K, the eleventh letter of the English alphabet, borrowed from the Greek *kappa*. As a numeral it stands for 250, and with a stroke over it, thus \bar{K} , for 250,000.

KAL'AND (Ger.), a lay fraternity instituted in Germany in the 13th century, for the purpose of doing honour to deceased friends.

KALEIDOSCOPE, from *καλος*, beautiful, *ειδος*, form, and *σκοπειν*, to see. An optical instrument, which presents to the eye symmetrical and beautiful combinations of images, by a particular arrangement of mirrors adjusted in a tube. This instrument, the invention of Sir D. Brewster, consists in its most simple form of a tin tube containing two reflecting surfaces, inclined to each other at any angle which is an aliquot part of 360°. The reflecting surfaces may be two slips of glass silverized on the exterior sides, and from five to ten inches in length; one end of the tube is fitted with another short tube, in which are adjusted two circular discs of glass, between which are the little objects (bits of coloured glass, &c.) which are to form the images. The instrument being thus prepared, and the eye placed at the open end, a brilliant circle of light will be observed divided into as many sectors as the number of times that the angle of the reflectors is contained in 360°, and showing some symmetrical and pleasing figure which may be changed into something else by simply turning round the tube. This instrument may be constructed with three or more reflecting planes, and then may be arranged in various ways.

KALENDERS (Arab.), wandering dervises.

KALI, the name given by the Arabians to an annual plant, the *salsola soda*, which grows near the sea shore, and from the ashes of which they obtained their *alkalis* for making soap. The Germans use the name *kali* to denote caustic potash, and *kaliu* to denote its metallic basis.

KALIPHOR'GAN, a musical instrument, played as a piano, and producing an effect equivalent to a violin, tenor, violoncello, and double bass, in concert.

KAL'MIA, a genus of beautiful shrubby plants. *Decandria—Monogynia*. North America. Some of the species, as the laurel, ivy-bush, calico-bush, &c., are much in request in our gardens, from the beauty of their flowers and foliage.

KAMI, certain spirits, the belief in which is the foundation of the Japanese religion.

KAM'SIN, a hot and dry southerly wind, which prevails in Egypt at certain seasons of the year: named also *simoon* and *samiel*.

KANGAROO, } An animal peculiar to
KANGUR'OO. } New Holland. The kangaroos form the genus *Macropus*, Shaw, and *Halmaturus*, Illiger. The *M. major*, Shaw, sometimes six feet in height, is the largest of the New Holland animals. It was discovered in 1779 by Cooke, and is now bred in Europe.

KANGAROO RAT, the potoroo of New-Holland.

KA'OLIN, the porcelain earth of the Chinese, analogous to the clay produced from the felspar of decomposed granite. Besides kaolin, the Chinese use *petunse* in the manufacture of their porcelain.—Kaolin is essentially composed of siliceous and alumine; the proportions are variable, but the siliceous usually predominates. When pure kaolin is employed in the manufacture of porcelain, some ingredient must be added as a flux, as when pure it is infusible. There is satisfactory evidence that kaolin has in most cases, if not in all, originated from the decomposition of rocks abounding in felspar, more particularly from graphic granite, which consists almost entirely of quartz and felspar.

KARA, a Tartar word, signifying *black*: frequently used as a prefix to geographical names.

KARMA'ATHIANS or KARMATIANS, a Mohammedan sect, which arose in Irak during the 9th century A.D.

KA'VA, the name given among oriental tribes to the juice of a root of the pepper family (the *Piper methysticum*), diluted with water. The juice is extracted by chewing.

KEB'LAH, the name given by Mohammedans to that point of the compass where the temple of Mecca stands. See CAABA.

KECK'LING. Among *seamen*, the operation of twining small ropes about a cable or bolt rope, to preserve its surface from being fretted by friction against a rocky bottom, ice, &c.

KEDGE, } Among *seamen*, a small an-

KEDGER. } chor, used to keep a ship steady when riding in a river, &c., and particularly at the turn of the tide to keep her clear of her bower anchor; also to remove her from one part of a harbour to another, being carried out in a boat and let go, a process called *kedging*. The term is also used when a vessel is brought up or down a narrow river (stern foremost, and dragging the anchor), by the force of the tide, although the wind be contrary.

KEEL, Sax. *cæle*, Germ. and Dut. *kiel*. 1. The principal timber of a ship, extending from stem to stern at the bottom, and supporting the whole frame. Sometimes a *false-keel* is put under the first or *main keel*, and bolted to it to preserve it from injury. *Keel* is also the name of a description of small vessel, used for carrying

coal on the river Tyne, from Newcastle, for loading the colliers.—2. In *botany*, the lower petals of a papilionaceous corol, inclosing the stamens and pistil.

KEELHA'UL, to haul under the keel of a ship. *Keelhauling* is a punishment inflicted in the Dutch navy for certain offences. The offender is suspended by a rope from one yard-arm with weights to his legs, and a rope fastened to him, leading under the ship's bottom to the opposite yard-arm, and being let fall into the water, he is drawn under the ship's bottom and raised on the other side.

KEEL'SON, } a piece of timber forming
KELSON, } the interior or counterpart of the keel of a ship, being laid upon the middle of the floor timbers, immediately over the keel, fastened with long bolts and clinched, and thus serving to bind the floor timbers upon the keel.

KEEP. In *old castles*, a strong tower into which the besieged retreated in cases of extremity.

KEEPER. The *keeper of the great seal* is a lord by his office, and a member of the privy council. He is constituted lord-keeper by the delivery of the great seal. The *keeper of the privy seal* is also a lord by his office, and a member of the privy council.

KEEPING. In *painting*, a term denoting the representation of objects in the same manner that they appear to the eye, at different distances from it. For this the painter has recourse to the rules of perspective.

KEESH. In *metallurgy*, a name for the flakes of carburet of iron which sometimes cover the surface of the bars of pig-iron.

KELP, the crude alkaline matter produced by incinerating various species of fuel or sea-weed. It yields about five per cent. of soda.

KE'LSON (of a ship), see KEELSON.

KENT'LEDGE, the name sometimes given to the iron pigs cast in a particular form for ballasting ships, and employed for that purpose.

KEP'LER'S LAWS, certain analogies between the distances of the planetary bodies and their times of periodic revolution; as also between the rate of motion of any revolving body, whether primary or secondary, and its distance from the central body about which it revolves: first discussed by John Kepler of Wirtemberg, the celebrated astronomer and mathematician.

KEP'LER'S PROBLEM, the determining of the true from the mean anomaly of a planet, or the determining its place in the elliptic orbit, answering to any given time, first proposed by Kepler.

KERI-CHETIB (Heb.), what is read and written. In *philology*, the various readings in the Hebrew Bible.

KER'MES INSECT, the *Coccus ilicis*, Linn., found upon the leaves of a species of oak, the *Quercus ilex*, which grows in the south of Europe. This insect is of the same species as the true Mexican cochineal, and before the discovery of America was the most esteemed drug for dyeing scarlet. The name is a corruption of the Arabic *kirmirān*.

KER'MES MINERAL, a hydro-sulphuretted oxide of antimony, so named from its resemblance in colour to the insect of that name.

KETCH, a description of vessel equipped with two masts, rigged with sails, like the main and mizen mast of a ship. Ketches are generally used as yachts, or as bomb-vessels; hence the latter are called *bomb-ketches*.

KETCH'UP. In *cookery*, a sauce obtained by sprinkling mushrooms with salt, and letting them stand until great part is resolved into a brown liquor, which is then boiled up with spices.

KETTLE-DRUM, an instrument of martial music composed of two basins of brass or copper round at the bottom, and covered with vellum or goat's-skin.

KEY'EL. In *ships*, a piece or frame of timber serving to belay the sheets or great ropes by which the bottoms of the main-sail and fore-sail are extended.

KEY'EL-HEADS. In *ships*, the ends of the top timbers which, rising above the gunwale, serve to belay the ropes or take a round turn to hold on.

KEY, in a general sense, a fastener; as, 1. In *mechanics*, a wedge-shaped piece of iron or wood, driven firmly into a mortise, to tighten together the parts of any framing, as A.B. Also an instrument by which the bolt of a lock is pushed, and by which a nut is screwed home upon its bolt, &c.

—2. In *music*, the *key* or *keynote* is the fundamental note or tone, to which the whole piece is accommodated, and with which it usually begins and ends. There are two keys, one of the major and one of the minor mode. *Key* also sometimes denotes a scale or system of intervals, and the same name is used to designate the little levers or pieces in the forepart of an organ or harpsichord, by which the instrument is fingered, which together are termed the *key-board*. The small spring levers attached to flutes, &c., are also called *keys*.—3. In *hydrography*, a ledge or lay of sunken rock. The name is more especially applied to certain rocks in the West Indies, the tops of which

rise nearly to the surface of the water; these are collectively called the *Keys*.—

4. A wharf, more commonly written *quay* (q. v.).

KEYSTONE (of an arch). The last stone placed on the top thereof, and which being wedge-shaped, locks all the rest together.

KHAN, an Asiatic governor. In Persia the word denotes the governor of a province; among the Tartars it is equivalent to king or prince. The word has been erroneously written *Cham*, *Kan*, &c.

KHELAU'T, the robe of honour with which Asiatic princes confer dignity.

KHOOT'EA. In *Mohammedan rituals*, the particular part of the mosque service in which the sovereign of the country is prayed for.

KHOH, Pers. *bold*. A prefix to many geographical terms.

KID'NEYS. In *anatomy*, these are two in number, one on each side, the right under the liver, the left under the spleen. Their use is to separate the urine from the blood.

KIE'FEKIL, a species of clay found in a large fissure in grey calcareous earth, near Koniah, in Natolia, and chiefly used in forming the bowls of Turkish tobacco-pipes. It is of a yellowish colour, and when first dug it is of the consistency of wax. Constituents, 50-50 silica, 50 lime, 17-25 magnesia, 5 carbonic acid, and 25 water.

KIKEKUNEM'ALO, a pure resin similar to copal, but of a more beautiful whiteness and transparency; brought from America. It forms the most beautiful of all varnishes.

KIL'DERKIN, an old liquid measure equal to 18 gallons beer, and 16 gallons ale, measure.

KIL'KENNY MARBLE, a species of black marble, full of shells and coralloid bodies.

KIL'LADAR. In the *East Indies*, the governor of a castle.

KIL'LAS, a provincial name, adopted by geologists, for an argillaceous schist or slate. The best designation of the *killas* rock in this situation (Cornwall) is that of a minutely grained and highly indurated gneiss that has lost its schistous character.

KIL'GRAMME, from *χίλις*, 1000, and *gramme*. A French weight equivalent to 2 lbs. 3 oz. 5 gr. 13 gr. avoirdupois, or 1000 grams.

KILOM'ETER, from *χίλις*, 1000, and *metre*. A French measure of length equal to 1000 metres.

KINA, kina; Cinchona (q. v.)

KIND, in technical language, answers to *genus*.

KING, a sovereign; Sax. *cyng*, Ger *könig*, Dut. *koning*, Dan. *konge*, Wel. *cin*. Kings are absolute monarchs when they

possess the powers of government without control; *limited* monarchs when their power is restricted by fixed laws. They are *hereditary* sovereigns when they hold the government by right of birth, and *elective* when raised to the throne by the choice of the people.—A card having the picture of a king on it; also the chief piece in the game of chess.—The sacred books of the Chinese.

KING-AT-ARMS, an officer in England of great antiquity, and formerly of great authority, whose business is to direct the heralds, preside at their chapters, and have the jurisdiction of armoury. There are three kings-at-arms, viz., garter, clarenceux and norroy.

KING-POST, the middle post of a truss frame, for suspending the tie-beam at the middle and lower ends of the struts.

KINGSTON, the angel-fish. *Squatina angelus*.

KINGS'-EVIL, a scrofulous disease in which the glands are ulcerated. The gift of curing this disease was formerly attributed to the kings and queens of England, and had its origin in the time of Edward the Confessor.

KING'S YEL'LOW, a yellow pigment composed chiefly of orpiment.

KINIC ACID, a peculiar vegetable acid found in all the species of the genus *Cinchona*, and therefore called cinchonic acid, and kinic acid from *kina*, a name for cinchona. The acid is obtained from the cinchona bark. It forms salts called *kinates*, but they are hardly known.

KINK, a spontaneous twist of a rope, &c.; when hard twisted it endeavours to untwist itself. This is also the vernacular name in Scotland for the paroxysm in chin-cough.

KI'NO, an Indian word. An extractive matter obtained from various trees, which grow in the East and West Indies, Africa, Botany Bay, &c. The kino now found in the shops is brought from the East Indies, and is obtained from a shrubby plant, the *Nauclea gamba*, by simply bruising and boiling the branches and twigs in water, and evaporating the decoction till it acquires the consistence of an extract, which is kino.

KIOSK, a Turkish word. A kind of summer-house with a tent-shaped roof supported on pillars, introduced from Persia and Turkey into European gardens, &c.

KIP'PER, a term applied to salmon when unfit to be taken, and to the time when salmon are so considered.

KIRCHWAS'SER. 1. An alcoholic liquor distilled in Germany and Switzerland, from the Machaleb cherry, called *kirchen* or *kiraschen* in Germany.

KIRK. In Scotland, (1.) A church. (2.) The Church of Scotland, as distinguished

from dissenting churches. The word is the Sax. *circ* or *civic*, related to *κυριακη*, from *κυριος*, lord.

KIRK-SESSION. A church court, composed of the minister of the parish and the elders. It examines cases of scandal, poor's funds, &c.

KIT-KAT, the denomination of a club in London, to which Addison and Steele belonged, and so named from Christopher Kat, the cook who served the club with mutton-pies! The word has now become a common name for a portrait three-fourths less than half-length, a portrait of this size having been placed in the club-room.

KITE. 1. An ignoble bird of prey, the *Falco milvus*, Lín. See **MILVUS**.—2. An artificial bird, consisting of a slight wooden frame covered with paper, used chiefly as a juvenile plaything by boys. It has of late been applied to some useful purposes.

KNECK, the twisting of a rope or cable as it is veered out.

KNEE. 1. In *anatomy*, the articulation of the thigh and leg bones.—2. In *carpentry*, a piece of timber somewhat in the shape of the human knee when bent, having two branches or arms, and used to connect the beams of a ship, for instance, with her sides or timbers.

KNIGHT, originally a young man after he was admitted to the privilege of bearing arms. This privilege was conferred on youths of family and fortune, and hence sprung the honourable title of knight in modern usage, which ranks next to baronet, and entitles the person on whom it is conferred to be styled Sir, and his wife Lady. The *knight of a shire* is a representative of a county in parliament, originally a knight, but now any gentleman having an estate in land of 600*l.* a year is qualified.

KNIGHT-ERRANT, a wandering-knight. One, who in the enthusiasm of chivalry, set out attended by his esquire or shield-bearer, with the design of exposing his life wherever wrong was to be redressed. Knight-errants were, however, not exactly the amiable creatures which poetry represents them.

KNIGHT-HEADS. In *ships*, bollard-timbers; two timbers rising just without the stem, one on each side of the bowsprit, to secure its inner end; also two strong frames of timber which inclose and support the ends of the windlass.

KNIGHTHOOD, a military order, honour, or degree of ancient nobility, conferred as a reward of valour or merit. It is of four kinds; military, regular, honorary, or social.

KNIGHT-MAN'SHAL, an officer of the royal household, who has cognizance of

offences committed within the same, and of all contracts made therein.

KNIGHT'S FEE. Formerly, a portion of land held by custom, sufficient to maintain a knight, to do service for the king.

KNIGHT-SERVICE, a tenure of lands, originally consisting in investiture of lands, upon express condition that the person so invested shall serve in the wars of his lord.

KNOT. 1. In nautical language, a division of the log-line, which answers to half-a-minute, as a mile does to an hour.—2. In ornithology, a fen bird, a species of *Tringa*.

KNOUT, a punishment in Russia, inflicted with a whip.

KNOX'S POWDER consists of eight parts of common salt, and three of chloride of lime.

KO'BOLD, Germ., spirit. Corresponding to the English goblin. Supposed, in Germany, to preside over all domestic operations. From this word the name of the metal *cobalt* is derived.

KOL'LYRITE, a variety of very pure clay (silica 14, alumina 45, water 42). It becomes transparent in water, and falls to pieces.

KO'RAN, the Mohammedan book of faith. See *ALCORAN*.

KO'RIN, a species of antelope remarkable for its slender horns.

KOS, a Jewish measure of capacity, containing about 4 cubic inches. The *kos* was the cup of blessing, out of which they drank when they gave thanks after solemn meals.

KORH, a name given by the Spaniards to an earthy slimy substance ejected from the volcanoes of South America.

KOU'MISS, the name of a liquor which the Tartars make by fermenting mare's milk, and from which they distil their favourite intoxicating spirit called *rack*.

KRAAL, a name among the Hottentots for a village or collection of huts.

KRA'KEN, an immense sea-serpent, said to be seen occasionally on the coasts of Norway, and of late years on the North American coasts. The accounts of these monsters are so grossly overcharged, and their dimensions so exaggerated, that it is common to treat the whole as fable; yet some of the more recent accounts seem to claim the attention of naturalists.

KU'FIC LETTERS, the ancient letters of the Arabic, thus denominated from Kufa on the Euphrates.

KUF'ERNICKEL. *False copper.* A sulphuret of nickel, and the most common ore of that metal.

KYAN'S PATENT PREPARATION, a process for preserving timber from the dry rot, recently invented by Mr. Kyan, consisting of a solution of corrosive sublimate (*perchloride of mercury*) in which the tim-

ber is immersed, whereby the primary element of fermentation is neutralised, and the fibre of the wood rendered indestructible.

KYE'IE, the first word of every mass in music, implying "O Lord," and joined with *eleison* signifies "O Lord have mercy on us."

L

L, the twelfth letter of the English alphabet, is employed as a numeral to denote 50, and with a dash over it, 50,000.

LA. In music, the syllable by which Guido denotes the last sound of each hexachord. When it begins in C, it answers to one A: when in G, to E: and when in F, to D.

LAB'ADISTS, a heretical sect, founded by Jean de Labadie, who held that God can and does deceive men, that the observance of the Sabbath is not required, &c.

LABARRA'QUE'S DISINFECTING LIQUID. A solution of carbonate of soda impregnated with chlorine.

LAB'ARUM, the imperial standard, upon which Constantine, after his conversion, blazoned the monogram of Christ. The Roman-labrum was a rich purple streamer supported on a spear, and always borne before the emperors.

LAB'DANUM, or **LADANUM**, an unctuous resin, found besmearing the twigs and leaves of the *cistus creticus*, a shrub which grows in the Grecian Islands, and in Syria: used chiefly in surgery for making plasters. The best is in dark-coloured masses, almost black; but the impurities of the best kinds amount to about $\frac{1}{4}$ of the whole.

LA'BEL, from *Wel. llab*, a strip. 1. A narrow strip or slip of paper or parchment, containing a name or title, and affixed to anything, as an apothecary's bottle, a deed in writing, &c.—2. A long brass rule, with a small sight at one end of it, and a centre hole at the other, commonly used with a tangent line on the edge of a circumferentor to take altitudes, &c.—3. In *heraldry*, a fillet with pendants or points, usually three in number. It is commonly an addition to the arms of a second brother, and is esteemed the most honourable of differences.

LABEL'LUM (Lat.), a little lip. A term in botany for one of the three pieces forming the corolla in orchideous plants. It differs in size and form from the other two, and is often spurred.

LA'BIA, the lips: plural of *labium*, a lip.—2. Corollas of plants are often distinguished by their *labia*.

LA'BIALS, *lip-letters*. A name for such letters as are pronounced chiefly by means of the lips (*labia*.)

LABIA'TE, a natural order of plants

which have labiate corollæ, as mint, thyme, rosemary, &c.

LA'BIA TE, Lat. *labiatum*, lipped. Applied to the corols of plants, as those of mint, sage, &c., which resemble the lips of an animal.

LA'B IUM (Lat.), a lip (See *Labia*). 1. In *entomology*, the lower lip of insects, the upper being the *labrum*.—2. In *conchology*, the inner lip of the shell, the outer lip being the *labrum*.

LA'BOUR. At sea, when the action of a ship in a heavy sea is *uneasy*, or *jerks*.

LA'BOURED. In the *fine arts*, the appearance of constraint in execution, opposed to *easy* or *free*.

LA'B RADOR FEL'SPAR, } A mineral, form-
LA'B RADOR STONE, } erly called La-
LA'B RADORITE. } brador Horn-
blende. It is found on the coast of Labrador, particularly on the island of St. Paul; also in some parts of Europe. It is a variety of opaline felspar, distinguished by its reflecting very beautiful colours when the light falls upon it in certain directions.

LA'BYRINTH, Lat. *labyrinthus*, from *λαβυρινθος*. 1. Among the ancients, an edifice or place formed with winding passages which rendered it difficult to find the way from the interior to the entrance. The most remarkable of these were the Egyptian and Cretan labyrinths.—2. In *anatomy*, that part of the external ear which is behind the cavity of the tympanum, consisting of the cochlea vestibulum and semicircular canal.—3. In *metallurgy*, a series of canals distributed in a stamping-mill, through which water is transmitted for suspending, carrying off, and depositing, at different distances, the ground ores.

LAC (Latin). 1. Milk.—2. A peculiar substance produced by the puncture of an insect (the female of the *Ooccus lacca* or *ficus*), upon the branches of several trees, as the bihar-tree (*Croton lacciferum*), the pepel (*Butea frondosa*), sacred fig (*Ficus religiosa*), jujube (*Rhamnus jujuba*), bottle-tree, coosim-tree, &c. It yields a fine red dye, which is said to be more permanent, though not so bright, as the Mexican cochineal, and a resinous part, used in the manufacture of sealing-wax and hats, and as a varnish. The twigs encrusted with the lac constitute the *stick-lac* of commerce: and the *lac-dye*, *lac-lake*, or *lake-lac* consists of the colouring matter extracted from the stick-lac. When the colouring matter is extracted by the dyer from the stick-lac, as far as can be conveniently done by water, there remains a resinous yellow powder, which is *seed-lac*. This liquefied by heat forms *lump-lac*, when the whole mass is allowed to cool, but the part which passes through a cotton bag, and is allowed to cool in thin sheets

or plates of an amber colour, is known by the name of *shellac* or *shell-lac*.

LAC'CIC ACID, a peculiar acid of a w. ne-yellow colour, obtained from stick-lac. See *Lac*.

LAC'CINE, that portion of shell-lac which is insoluble in boiling alcohol.

LACE, a delicate and beautiful net-work, tastefully composed of many threads of gold, silver, silk, flax, or cotton. The name is said to be a contraction of Lat. *lacinia*, the fringe of a garment. There are many varieties of this beautiful fabric.

LACER'NA (Lat.), an ancient Roman military cloak, so made that either side might be worn out.

LACERTIN'IDA, lacertians. A family of reptiles, distinguished by the tongue, which is thin, extensible, and terminates in two threads, like that of the coluber and viper. Cuvier divides them into two great genera, *Monitor* and *Lacerta*. They are oviparous, and provided with feet.

LA'CHES. In *law*, slackness or negligence. The term is Norm. *lachesse*, from *lache*, from Lat. *laxus*, lax.

LACH'R YMA, Δάκρυμα, a tear. The *lachrymal apparatus* are those parts which secrete and conduct the tears. The *lachrymal gland* is a glomerate gland, situated above the external angle of the orbit, in a depression of the frontal bone. Its use is to secrete the tears. The *lachryma duct* is the excretory duct of the lachryma gland. A branch of the ophthalmic nerve is also sometimes called the *lachrymal nerve*.

LACH'R YMATORY, a vessel found in ancient sepulchres, in which it has been supposed that the tears (*lachrymæ*) of a deceased person's friends were collected and preserved with the ashes and urn. It was a small glass vessel or phial, with a very long neck.

LAC'INIA, a fringe; *lacinate*, fringe-like. Applied to leaves, petals, &c., when jagged or torn, as it were, on the edges.

LACK, Sanscrit *lacsha*. An East Indian word signifying 100,000; as a *lack of rupees*.

LAC'KER, } A solution of lac in alcohol,
LAC'QUER. } used as a varnish for tin, brass, &c. It is commonly tinged with saffron, anatto, or some other colouring matter.—2. Among *pottery*, a mixture of soft soap and tallow, made by boiling in water over a clear fire, and used for coating the surface of moulds to prevent adhesion.

LACRIMO'SO. In *music*, an Italian term, implying a plaintive movement, as if weeping.

LAC'TATES, salts formed by the combination of the lactic acid with bases.

LAC'TEALS, from *lac*, milk. Numerous minute tubes, commencing by open and very minute orifices from the inner sur-

face of the intestines, and uniting successively into larger vessels, till they form trunks of considerable magnitude. Their office is to take up the chyle, and transmit it to the heart; and this substance, in the higher order of animals, often containing a multitude of globules, which give it a milky appearance, gives name to the vessels which contain it.

LACTEA VIA. The milky-way.

LACTIC ACID, acid of milk. It exists in large quantity in butter-milk, and also in fresh milk in small quantity. Scheele first obtained the acid from the sour whey of clotted milk.

LACTOMETER, from *lac*, milk, and *μετρον*, measure. An instrument for estimating the quality of milk; called also a *galactometer*. The most convenient form is a graduated glass tube, into which the milk is poured, and the cream allowed to separate.

LACTUCA, the lettuce. A genus of herbaceous plants. *Syngenesis*—*Poly. æqualis*. Name from *lac*, milk, in allusion to the milky juice which exudes from it when it is wounded. The garden lettuce, *L. sativa*, is a native of India. There are, however, three indigenous species.

LACUNÆ (Lat.), defects. 1. In *anatomy*, small cavities in some of the mucous membranes, in which a secretion of mucus is carried on.—2. In *botany*, the opening of a glandiform body.

LACUNARS. In *architecture*, panels or coffers on the ceilings of apartments, and sometimes in the soffits of the corona of the Ionic, Corinthian, and Composite orders.

LACUNOSE, Lat. *lacunosus*, dotted or pitted. Applied to leaves having the surface marked with furrows, pits, or depressions.

LADY. Applied to the daughters of all peers above the rank of a viscount, and extended by courtesy to the wives of knights.

LADY CHAPEL, the name given to a small chapel, generally found in ancient cathedrals, behind the screen of the high altar. It is usually dedicated to the Virgin Mary, by Catholics called *Our Lady*.

LADY-DAY, the 25th of March, so called because it is the day of the Annunciation of the Virgin Mary.

LÆMEDIPODA, from *λαμῆς*, the throat, and *πους*, a foot; an order of throat-footed malacostracians with sessile eyes. They are the only crustaceans in which the anterior feet, that correspond to the second foot-jaws, form part of the head. The læmedipods are all comprehended in the genus *Cyamus*, Latreille, and are all marine.

LAGOON, } Ital. *laguna*. A salt-water
LAGUNE, } lake, fen, or marsh.

LAC'OPHTHALMY, from *λαγος*, a hare, and *οφθαλμος*, an eye; the hare's-eye. A disease in which the eye cannot be shut, but remains open like that of the hare, even when the individual is asleep.

LAC'OTHRIX, the name given by Geoffrey to a subgenus of *Quadrupana*, from *λαγος*, a hare, and *θριξ*, hair. The Caparo, the Grison, the Sajou, the Capuchin, the Horned-sajou, &c., from South America are species. They are named *weeping-monkeys*, from their soft plaintive voice. They are said to be remarkable gluttons.

LAIRD, from Sax. *hlaford*, lord. In Scotland, the proprietor of a manor.

LAKE, 1. Lat. *lacus*. An extensive collection of inland water, having no direct communication with the ocean.—2. *Fr. lac*. A name which comprehends all those colours which consist of vegetable dye combined by precipitation with a white earthy basis, usually alumina. Thus if a solution of alum be added to a solution of madder, a precipitate falls, consisting of alumina and the colouring matter of the madder. The precipitation is assisted by an alkali. In this way the *yellow lakes* are obtained from Persian or French berries, the *red lakes* (of which the finest is *carmine*), from cochineal, kermes, &c., the *blue lakes* from indigo. Prussian blue, cobalt blue, and ultramarine, serve all the purposes of the blue lakes, and *green lakes* are made by mixing the yellow lakes with the blue pigments. Lakes are much used in painting in water colours.

LALLATION, that species of vicious pronunciation in which the letter *l* is substituted for *r*.

LAMA. There are two species of this animal, the *Camelus llacma*, Lin., and the *Camelus vicugna*, Lin. The first is the Lama, or Llama, properly so called, and was the only beast of burden in Peru at the time of the conquest; the second is called the Paco, and affords a fine wool, extremely soft, and highly valued for manufacturing in fine fabrics.—2. A title bestowed upon Mongolian priests of every degree; and among the Calmucks restricted to the higher classes of priests only.

LAMBDOYDAL, from *λαμβδα* and *ἴδιος*, an epithet for one of the sutures of the cranium, from its supposed resemblance in form to the Greek letter λ.

LAMELLA (Lat.), a thin plate or scale: used generally in the plural *lamellæ*. Hence *lamellated*, composed of thin plates, layers, or scales; and *lamellar*, foliated.

LAMELLICORNES, the sixth family of Pentamerous Coleoptera, distinguished by their foliated or lamellar horns (*cornu*, a horn). Cuvier divides these insects into two tribes; the *Scarabæides* and the *Lucanides*.

AMELLIFEROUS, from *lamella*, a scale, *ad fero*, to bear; bearing scales.—2. Having a foliated structure.

LAMELLOSTES, the fourth family of Palmipedes in the arrangement of Cuvier, so named because the edges of the bill (*rostrum*) which is usually thick, are furnished with *lamellæ*, arranged like teeth placed transversely. The goose, swan, merganser, &c., are examples.

LAMIA'RIA, a tribe of Tetramerous Coleoptera, belonging to the family of *Longicornes*, and distinguished by their vertical head and filiform palpi. The *Cayenne Harlequin* is an example.

LAM'INA (Lat.), a thin plate, scale, layer or stratum: used commonly in the plural *laminæ*. Hence also *laminated*, disposed in layers, scales or plates; and *lamination*, arrangement in layers.

LAM'NUM, the Nettle, a genus of herbaceous plants; *Didynamia*—*Gymnospermia*, named from a mountain in Ionia. There are four indigenous species.

LAM'MAS-DAY, the first day of August. A festival in memory of St. Peter's imprisonment.

LAMMAS'MEN. When the Salmon-trout (*Salmo trutta*, Yarr.) is returning to the sea in the months of January and February, numbers of it are taken in the Forth and Tay, and sent to the Edinburgh market under this name.

LAMPADOPH'RIA, Gr. *carrying torches*. A torch race, exhibited at certain Athenian festivals.

LAMP'-BLACK, a fine soot formed by the condensation of the smoke of burning pitch, or other resinous substance.

LAMP'IC ACID. When the cotton wick of a spirit of wine lamp is surmounted by a spiral coil of platinum wire; and when, having been some time lighted, the flame is blown out, the coil still continues ignited, and a current of hot vapour continues to rise as long as the spirit lasts. This vapour is *lampic acid*, and may be condensed into a liquid by cold. It is probably a mixture of the formic and the acetic acid, in which the carbon and hydrogen are not fully oxidated.

LAMPY'RIDES, a tribe of Pentamerous Coleoptera, of which the genus *Lampyris* is the type. The insects of this tribe are distinguished by being phosphorescent, whence they are termed *glow-worms*, *fire-flies*, &c. The species are very numerous.

LAMP'YRIS, the Fire-fly, a genus of Pentamerous Coleoptera, placed among the *Serricornes* by Cuvier. See **LAMPYRIDES**.

LANA PHILOSOPH'ORUM, *Philosophers' Wool*: **LANA PHILOSOPH'ICA**, *Philosophical Wool*, old names for flowers of zinc: the snowy flakes of oxide which result from the combustion of zinc.

LA'NATE, Lat. *lanatus*, woolly Applied

to the stems, leaves, &c. of plants when covered with woolly matter.

LAN'CEOLATE, Lat. *lanceolatus*, lance or spear-shaped. Applied to leaves, petals, seeds, &c., of a narrow oblong form, tapering towards each end. Applied also similarly in entomology and conchology.

LAN'CIFORM, lanceolate or spear-shaped.

LAND. In nautical language this word makes part of several compound terms, viz. 1. To *lay the land*, is to lose sight of land by sailing away from it.—2. To *make the land*, is to discover land from sea as the ship approaches it.—3. To *set the land*, is to see by the compass how it bears from the ship.—4. A *land-fall*, is the first land discovered after a sea-voyage, and is good or bad according as it is near to or distant from the place to which the course was directed.

LAN'DAMMAN, the president of the Helvetic republic.

LANDAU', a sort of coach or carriage, the top of which parts and may be thrown back, so as to form an open carriage; so called from a town in Germany, where it was first used.

LAND'-BREEZE, a current of air which, in many parts within the tropics, particularly in the West Indies, regularly sets from the land towards the sea during the night, and this even on opposite points of the coast. It depends on the relative temperatures of the land and water.

LAND'GRAVE (Ger. *landgraf* from *graf*, an earl), a title in Germany corresponding to earl in England, and count in France. It is now a title of certain princes who possess estates or territories called *landgraviates*.

LANDREEVE, an assistant to the steward of an estate.

LAND'LOCKED, is said of a harbour which is environed by land on all sides, so as to exclude the prospect of the sea, unless over some intervening land.

LAND' REMAINS, those remains of terrestrial animals and vegetables found everywhere on digging in the earth, mostly interchanged with strata containing marine remains. See **FOSSIL**.

LAND' OFFICE, an office in most colonies in which the sales of new lands are registered, and warrants issued for the location of land, and where other business respecting unsettled land is transacted.

LAND'SLIP, a portion of land which has been separated from the main body, usually on the side of a hill, in consequence of long continued rains, or other cause, and has slipped to a lower situation. Landslips are often attended, like the fall of avalanches, with fatal effects.

LAND SPRINGS, sources of water which are in action only after heavy rains, dis-

tinguished from *constant springs*, which flow throughout the year.

LAND STEWARD, one who superintends a landed estate.

LAND' WALTER, an officer of the Custom-house, whose duty is, upon the landing of any merchandise, to examine the same, and take due account thereof.

LAN'DWEHR, Ger. *land-guard*, the militia of Prussia and Austria.

LAN'GREL, LAN'GRACE, a particular kind of shot, used at sea for tearing sails and destroying rigging. It is formed of bolts, nails, and other pieces of iron tied together, and is seldom used except by privateers and merchantmen.

LAN'GUED. In *heraldry*, an epithet for an animal whose tongue projects from its mouth, and is represented in coat armour of a different tincture from the rest of the body.

LANGUENTE (It.) In *music*, signifies to be performed softly or languishingly.

LANGUETTE, a French name for the tongue of a jack in a harpsichord or spinet. The valve which opens or shuts the windchest in an organ, to let the air into the pipes when a key is pressed down.

LAN'IARD, a short piece of rope or line fastened to several things in a ship, to secure them in their places or to manage them more conveniently, as the *laniards* of the gun-ports, of the buoy, of the cat-hook, &c. The name is, however, given more especially to those used to extend the shrouds and stays of the masts by their communication with the dead-eyes, &c.

LA'NIUS, the shrike or butcher-bird (q. v.). A genus of passerine birds belonging to the family *Dentirostres*, Cuv. Name from *lanio*, to tear in pieces. The genus is variously subdivided.

LAN'SQUENETS. The German infantry raised by Maximilian to oppose the Swiss, in the 15th century.

LANTERN, Fr. *lanterne*. A well-known machine, of which there are many used aboard ships, as poop-lanterns, top-lanterns, signal-lanterns, store-room lanterns, powder-room lanterns, &c.—1. In *architecture*, a little dome or turret raised on the roof of a building to give light and serve as a crowning. The term is also used for a square cage of carpentry placed over the ridge of a corridor or gallery, between two rows of shops, to illumine them, as in the Royal Exchange, London.—2. A *dark lantern* is one with only a single opening, which may also be shut up when the light is wished to be entirely hidden.

LAN'TERN-FLY, an insect common in South America. It is a species of *Fulgora*, and emits a strong phosphorescent light from the head or lantern.

LANU'GINOSE, } Lat. *lanuginosus*, having
LANU'GINOUS, } soft wool or down, *lanugo*: applied in natural history.

LANU'GO (Latin), down or soft wool, as that which grows on some leaves, fruits, &c.

LAN'YARD. In a *ship*, certain lashings whether fixed or temporary.

LAPI'DARY, from *lapis*, a stone. One who polishes and engraves gems. The *lapidary style* signifies the style proper for monumental and other inscriptions.

LAPIDIFICA'TION, from *lapis*, stone and *fit*, to become. The conversion into stone of some other substance.

LAP'SANA, the *ripple-wort*. A genus of herbaceous plants *Syngenesia*—*Poly. æqualis*. Temperate climates. There are two British species, called also *dock-cresses*.

LAPSE. In *ecclesiastical law*, the omission of a patron to present to a benefice within six months.

LAP-SIDED, the state of a ship when built in such a manner as to have one of the sides heavier than the other; and by consequence to retain a constant heel or inclination to the heavier side.

LAP'WING. In *ornithology*, the lapwings form the genus *Vanellus*, Bechstein, and the genus *Tringa*, Linnæus. The common lapwing is the *Tringa vanellus*, Lin. The lapwing plovers constitute the genus *Squatarola*, Cuv. These birds are common in Europe.

LAR'ARIUM. In *ancient architecture*, the apartment in which the household gods were deposited.

LAR'BOARD (of a ship). The left-hand side when the face is turned to the stem or head: opposite the *starboard* (q. v.). *Larboard tack* is when the ship is close-hauled with the wind blowing on her larboard-side. *Larboard-watch* is the division of a ship's company on duty when the other is relieved from it.

LAR'BOWLINES, a cant term used by the boatswain's mates, implying the larboard-watch.

LAR'CENY, Norm. *larcim*; Celtic *lladron*, thieves. Petty theft. The stealing of anything below the value of 12d. is *petty larceny*, above that value, *grand larceny*.

LARCH. In *botany*, a name corrupted from *larix*. The common larch is the *pinus larix* of Europe; the black larch is the *pinus pendula* of North America; the red larch is the *pinus microcarpa* of North America.

LA'RES, the household gods of the Romans.

LARGE. 1. In *nautical language*, a term applied to a wind when it crosses the line of a ship's course in a favourable direction, particularly on the beam or quarter.—2. In *music*, the greatest measure equal to two *longs*.

LARGHET'to (It.) In *music*, a little quicker than *largo*.

LAR'GO. In *music*, an Italian term for a slow movement, one degree quicker than *adagio*.

LARK'SPUR. In *botany*. See **DELPHINIUM**. The British species is the *L. consolida*, an annual.

LAR'MIER, a French term, used in architecture synonymously with *corona*, the upper member of a cornice. In the Gothic architecture it is a sort of plinth, the upper surface of which is inclined, and the inferior part hollowed in a round canal, to throw the water from the wall.

LAR'US, the gull. A genus of birds. Order *Palmipedes*; Family *Longipennes*, Cuv. The gulls are voracious and cowardly birds; they swarm about the seashore and feed on fish, dead bodies, &c. They have been divided into *goelands*, which embrace the great black gull, *L. marinus* and *L. glaucus*, and *mauves* or *mouettes*, which embrace the smaller species. The common gull is the *L. cyano-rhynchus*, Meyer. It feeds on shell-fish.

LAR'VA, Lat. *larva*, a mask. An insect in the caterpillar state. The adjective *larval* is applied to a larva, and also to a disease of the skin, a species of *porrigo*.

LAR'VATE, Lat. *larvatus*, masked; applied in entomology.

LARVIF'ARA, Lat. *larva* and *pario*, I bring forth. Those insects are so called which bring forth larvae instead of eggs.

LARYNGEAL, appertaining to the **LARYNX**, as the laryngeal nerves and arteries.

LARYNGIS'MUS, a genus of disease formed by Dr. M. Good to include the affection commonly called spasmodic croup, which he, in connection with most others, regards as depending on spasm of the muscles which close the larynx.

LARYNGE'ITIS, inflammation of the larynx, a dangerous disease.

LARYNGOPH'ONY, from *larynx*, and *φωνη*, the voice. The sound of the voice as heard through the stethoscope applied over the larynx.

LARYNGOTOMY, from *larynx*, and *τομή*, to cut. The same as *bronchotomy* (q. v.).

LAR'YNX, λαρυγξ. A cartilaginous cavity, situated behind the tongue, in the anterior part of the fauces. It is the organ of voice.

LAS'CAR, in the *East Indies*, a camp-follower. The term is employed by Europeans to designate native seamen.

LASERPI'TIUM, a genus of perennial plants. *Pentandria—Dignia*. *Hercules'-all-heal*, or wound-wort, heart-wort, or sermountain, the white gentian, &c., are species, and by some the popular name *laser-wort* is applied to all the species. Europe.

LAST, a load; hence a certain weight or

measure. The last, however, varies with respect to different articles. Thus a *last* of codfish, white herrings, meal and ashes, is 12 barrels, a *last* of corn is 10 quarters, of gunpowder, 24 barrels, of red herrings, 20 cades, of hides, 12 dozen, of leather, 20 dickers, of pitch and tar, 14 barrels, of wool, 12 sacks of flax, and feathers, 1700 lbs.

LATEEN. A *lateen sail* is a triangular sail, extended by a *lateen yard*, which is slung about a quarter the distance from the lower end, which is brought down at the tack while the other end is elevated at an angle of 45°: used in zebecs, polacres, and setees, in the Mediterranean.

LAT'ENT, Lat. *latens*, hidden. When any body is in equilibrium with the bodies which surround it with respect to its heat, that quantity which it contains is not perceptible by any external sign, and is therefore termed combined caloric or *latent heat*. See **HEAT** and **CALORIC**.

LATERAL OPERATION. A surgical term applied to one of the methods of cutting for the stone.

LAT'ERAN COUNCILS, those councils held in the basilica of the Latin Church at Rome.

LAT'ERE. A legate *à latere* is a pope's legate or envoy: so called, because sent from his *side* from among his assistants and counsellors.

LATERIFOLI'OUS, from *latus*, a side, and *folium*, a leaf. An epithet for flowers which grow on the side of a leaf at the base.

LATH. 1. From Celtic, *llath*, a rod. A thin narrow slip of wood nailed to the rafters of a roof, &c., to receive the plaster. Runners used to support tiles are also called *laths*. *Sap* and *deal* laths are used for the former purpose, *heart-of-oak* laths for the latter.—2. From Sax. *lew*, from *lewian*, to call together; a part or division of a country. According to the laws of Edward the Confessor, the *lath* in some countries, answered to the *trithing* or third part in others.

LATH-BRICKS, a peculiar sort of bricks made in some parts of England of 22 inches in length and 6 inches in breadth. They are used in place of laths or spars, supported by pillars in oasts, for the drying of malt, and are vastly superior to wood.

LATHE, a very useful engine or machine for the turning of wood, ivory, iron, &c.

LATH-FLOATED and **SET-FAIR**. In architecture, three-coat plaster work. The first is called *pricking up*, the second, *floating*, the third or finishing is done with fine stuff.

LATH-LAID and **SET**, two-coat plaster work. The first coat is called *laying*.

LATH-PLASTERED, **SET**, and **COLOURED**. The same as *lath-laid*, *set*, and *coloured*.

LATH-FRICKED UP, **FLOATED**, and **SET**

FOR PAPER. The same as lath-floated and set fair.

LATH'YRUS, the *vetch*; an extensive genus of herbaceous plants. *Diadelphia—Decandria*. Name adopted from Theophrastus, whose *λαθυγος* appears like ears to be something of the pea or vetch kind. There are seven indigenous species.

LAT'ICLAVE, Lat. *laticlavium*. The ornament of dress worn by the Roman senators: from *latus*, broad, and *clavus*, a stud. It is supposed to have been a broad stripe of purple on the forepart of the tunic, set with knobs or studs.

LATH'OLiate, from *latus*, broad, and

LATH'OLIOUS, *folium*, a leaf. Broad-leaved: applied to plants.

LATIS'SIMUS DORSI. A broad muscle of the back which acts upon the os humeri.

LAT'ITAT. In *law*, a writ which presupposes that the defendant lurks (*latitat*), and cannot be found in the county of Middlesex, but is gone to some other county to the sheriff whereof the writ is directed.

LAT'ITUDE, breadth, from *latus*, broad.

1. In *geography*, the distance of any place on the globe north or south of the equator; a particular degree reckoned from the equator either north or south. The small circles parallel to the equator are hence called *parallels of latitude*, and show the latitude of places by their intersections with the meridians. The *difference of latitude* is an arc of the meridian, or the nearest distance between the parallels of latitude of two places.—2. In *astronomy*, the latitude of a star is its distance from the ecliptic, being an arc of latitude of a circle of the same, reckoned from the ecliptic towards the poles, either north or south. The *circle of latitude* is a great circle passing through the poles of the ecliptic, and consequently perpendicular to it. *Latitude of the moon*: this is called *north ascending* when she proceeds from the ascending node towards her northern limit or greatest elongation; and *north descending* when she returns from her northern limits towards the descending node. It is similarly called *south descending* when she proceeds from her descending node towards her southern limit; and *south ascending* when she returns from her southern limit towards her ascending node. The same is applicable to the planets. The *heliocentric latitude* of a planet is its distance from the ecliptic, such as it would appear from the sun, in contradistinction to its *geocentric latitude*, which is its latitude as seen from the earth.

LATITUDINARIANS. In *ecclesiastical history*, a sect of divines in the time of Charles II., opposed equally to high churchmen and dissenters. It is now applied to those who do not adopt the more

rigid interpretation of Scripture, or merely as a party term.

LAT'RIA. Among *Catholics*, the higher worship, or that paid to God, as distinguished from *dulia*, which is paid to saints.

LAT'TEN, Fr. *leton*, or *laiton*. A name sometimes given to tin-plates, that is, thin plates of iron tinned over. See **TIN**.

LAT'TEN-BRASS, plates of milled brass, reduced to different thicknesses, according to the uses they are intended for.

LAT'TER-MATH. In *agriculture*, the second math or mowing.

LAT'US RECTUM. In *conic sections*, the parameter. *Latus transversum*, the transverse axis.

LAUD'ANUM, Lat., from *laudare*, to praise. A pharmaceutical preparation, thus named on account of its valuable properties. It is simply a spirituous tincture of opium.

LAUDS, Lat. *laudes*, praise. In *Roman Catholicism*, the prayers formerly used at day-break. They are now confounded with *matins*.

LAUNCE. In *ichthyology*, a name common to two species of *ammodytes*, or sand-eels. (1.) The *A. lancea*, Yarr., called also the riggle, or small-mouthed lance. (2.) The *A. tobianus*, Yarr., called also hornor, or wide-mouthed lance. These inhabit the British coasts, in sandy localities. They are much valued by fishermen for bait.

LAUNCH. 1. A particular kind of long-boat.—2. The movement by which a ship or boat descends from the stocks into the water: hence to *launch*.

LAUNCH HO, the order to let go the top-rope when the top-mast is fiddled.

LAUNDER, a name given in metallurgy to a long shallow trough, which receives the powdered ore after it comes out of the stamping-mill.

LAU'REATE, Lat. *laureatus*, laurelled. The poet-laureate was formerly an officer of the royal household, whose business was to compose a birth-day ode for the monarch, and another for the new-year; but these obligations are now dispensed with. The title was conferred by Edward IV.

LAUREA'TION, the act of taking a degree in a university. The symbol used to be a wreath of laurel, and the grand distinction, *excellence* in writing verse!

LAU'RIn, a peculiar acid and bitter vegetable principle, obtained from the berries of the *Laurus nobilis*, a beautiful evergreen shrub, a native of Italy, but much cultivated in the shrubberies of this country. Laurin is insoluble in water, and but slightly soluble in alcohol. It crystallises in needles resembling asbestos.

LAURUS, the laurel or bay tree. A genus of trees of about twenty species. *Un-*

andria—*Monogynia*. Name from *laus*, praise, it being the custom to crown the heads of eminent men with wreaths of laurel. The logwood of Jamaica, the benjamin-tree of Virginia, the sassafras-tree of North America, the alligator-pear of the West Indies, and the sweet-bay of Europe, are the most interesting species. The cinnamon and camphor trees are now referred to the genus *Cinnamomum* (q.v.).

LAURUSTINE, a fine evergreen shrub, the *Viburnum tinus*, a native of the South of Europe.

LA'VA, the matter which flows in a melted state from a volcano. Kirwan derives the word from Gothic *lopa*, but it seems more probably to be an Italian word from Lat. *lavo*, to purge, or wash away. Felspar usually composes half the mass of modern lavas, and when this is in great excess they are said to be trachytic. On the other hand, when augite prevails, they are basaltic. Lava is distinguished, according to the circumstances which accompany its consolidation, into compact, cellular, and cavernous lava. In issuing from the crater, it has commonly the consistence of honey, but it is sometimes so liquid as to penetrate the fibre of wood. It is a bad conductor of heat, and therefore retains its heat, when in masses, for an astonishing length of time.

LAVAN'DULA, } *Lavender*, a genus of
LAVEN'DULA, } plants, *Didynamia*—*Gymnospermia*. Name from *lavo*, to wash, because, on account of its fragrance, it was wont to be used in baths. The common lavender, *L. spica*, cultivated in our gardens, is a native of the South of Europe. The essential oil, called *lavender*, is obtained from its flowers by distillation, and possesses all their fragrance.

LAV'ENDER. 1. In *botany*, see *LAVANDULA*.

—2. An essential oil, obtained from the flowers of the *Lavandula spica*. The alcoholic solution of this oil is sold under the name of *lavender-water*.

LA'VER, Fr. *lavoir*, from *laver*, to wash. 1. In *antiquity*, a basin placed in the court of the Jewish tabernacle, where the officiating priests washed their hands, and the entrails of victims.—2. In *botany*, the brook-lime, *Veronica beccabunga*; also a species of ulva, eaten as a delicacy.

LA'VERBREAD, a sort of food made of a marine plant, otherwise called *oyster-green* and *sea-liverwort*.

LAW, Sax. *laga* or *lak*, from *lægan*, Goth. *laggan*, to lay, set, or fix. 1. An established rule, prescribed by the supreme power of a state to its subjects, for regulating their actions, particularly their social actions. Laws are of four kinds—*declaratory* or *permissive*, when they simply declare what may be done without incurring a penalty; *prohibitory* or *penal*, when they forbid certain things to be done or

omitted; *imperative* or *mandatory*, when they command what is to be done; and *remedial*, when their object is to redress some injury done, or remove some inconvenience. *Municipal* or *civil laws* are rules of conduct established by decrees, edicts, or ordinances enacted by the supreme power of the state; *natural law* comprehends those rules of conduct arising out of the natural relations of human beings, established by the Creator, and existing prior to, and independent of, any positive precept. The *laws of nations* regulate the mutual intercourse of nations, and depend on natural law, or the principles of justice, which spring from the social state. *Written law* is that promulgated and recorded in statutes, &c. *Common law* is that established by use and wont, but which can be traced to no positive statute. *Ecclesiastical law* has for its object the government of a church, otherwise called *canon law*. The code of laws prescribed by Moses to the Jews is denominated the *Mosaic law*, and that part of the Mosaic institutions which prescribes the ceremonies to be observed, is termed the *ceremonial law*. There are also *martial laws* for the government of an army; *marine laws* for the regulation of the commercial intercourse of nations; *moral laws* prescribing to men their religious and social duties.—2. *Physical laws*, or *laws of nature*. The invariable tendency or determination of any species of matter to a particular form, with definite properties, and the determination of a body to certain motions, changes, and relations, which uniformly take place in the same circumstances, is called a *physical law*. These tendencies or determinations, whether called laws or affections of matter, have been established by the Creator, not by enumerating all individual contingencies, and laying down particular laws, but by enduing the elements of the material universe with certain fixed qualities and powers, of which all their subsequent relations shall be inevitable consequences.

LAW LANGUAGE, the language used in legal writings, particularly the Norman dialect, or old French, which was used in England in judicial proceedings, from the days of William the Conqueror to the 36th year of Edward III.

LAWN, Fr. and Ger. *linon*, from *lin*, flax. In Celtic, *llan*. A sort of clear or open linen fabric, formerly only manufactured in France and Flanders, but now extensively manufactured in Scotland and the north of Ireland. The name is also given to an imitation fabric of cotton.—2. In *gardening*, a surface of turf in pleasure grounds kept smoothly mown.

LAXA'TOR, from *laxo*, to loosen. A name applied to muscles, &c., the office of which

is to relax parts into which they are inserted.

LAY, an epithet in ecclesiastical law for whatever relates to the laity or people. In *agriculture*, see **LEA**.

LAY-BROTHERS. Persons received into convents of monks under the three vows, but not in holy orders.

LAY-CLERK, a vocal officiate in a cathedral.

LAY ELDERS. In *Presbyterian churches*, persons who assist the pastor of each congregation, but not ordained as clergymen.

LAY'ER. 1. A stratum.—2. In *horticulture*, a twig or shoot of a plant bent down and covered with mould for growth or propagation.

LAY'ING. In *architecture*, the first coat on lath of plasterers' two-coat work.

LAY'MAN, LA'IZES. 1. The appellation by which the people are distinguished from the clergy.—2. In *painting*, a small statue (called also lay figure), with flexible joints, to be put into any attitude for the purpose of adjusting the drapery.

LAZARETTO, Ital. from *Lazarus*. A pest-house or establishment to facilitate the performance of quarantine, and particularly the purification of goods.

LAZARISTS. In *ecclesiastical history*, a body of missionaries founded by St. Vincent de Paul, in 1632, named after their head-quarters in the priory of St. Lazarus, at Paris.

LAZARUS, ORDER OF SAINT. A military order of religious persons for the purpose of maintaining lepers, &c. in hospitals.

LAZULITE, a mineral of a light blue colour, supposed to be a sub-species of lapis lazuli. The name is used by some mineralogists for the lapis lazuli itself.

LAZZARO'NI, the poorer classes at Naples, named after the hospital of St. Lazarus, where Lazars went for refuge.

LEA, arable land which has remained for two or more years out of crop or in pasture. The word is Saxon, and signifies a field.

LEAD, Sax. *laed*. A well-known metal of a bluish grey colour, with considerable lustre, but soon tarnished by exposure to the atmosphere. Sp. gr. 11.35; fuses at 612° F. It is found in considerable quantities in many parts of the earth, in different states, but rarely in the metallic state. It is found in that of oxide, *red lead ore*, mixed with iron and some earths; in the state of carbonate forming *sparry lead ore*, and lastly mineralised with sulphur forming *galena*, which is by far the most abundant ore. Its protoxide precipitated by potash, when simply dried, is *massicot*, but when somewhat vitrified it constitutes *litharge*, and combined with carbonic acid, *ceruse*, or *white lead*. *Massicot* exposed for about 48 hours to the flame of a reverberatory furnace becomes

red lead or *minium*. The oxides and salts of lead are poisonous.—2. In *hydrography*, the *lead* is an instrument for discovering the depth of water. It consists of a large piece of lead attached to a long line called the *lead-line*, which is marked off into fathoms. The *deep-sea lead* differs in nothing except its size and the greater length of its line from the common lead.

LEADING NOTE. In *music*, the sharp seventh of the scale.

LEA'DING WIND, a free or fair wind, in distinction to a scant wind.

LEADS, OR SPACE LINES. In *composing*, pieces of type metal employed to fill up the blank spaces in a page of type.

LEAF-BRIDGE. *Hoist Bridge*. A description of draw-bridge consisting of two opening leaves, now little used.

LEAGUE, a measure of length containing more or fewer geometrical paces according to the usages of different countries. A league at sea is 2000 geometrical paces = 3 English miles. The French league varies from 3000 to 3500 paces; the mean or common league consists of 2400 paces, and the little league of 2000 paces; 17 Spanish leagues make a degree. The Dutch and German leagues are the same, and measure four geographical miles. The term is of Celtic origin, and primarily meant a stone erected on the public roads in the manner of the modern mile-stones.

—2. In *politics*, from *ligo*, to bind; a confederacy between states for their mutual aid and defence: a national contract or compact. A league may be *offensive*, as when the parties unite in attacking a common enemy, or *defensive*, as when the parties agree to defend each other against a common enemy; or it may be both.

LEAK'AGE, the quantity which runs out of a cask through a leak.—2. An allowance in the customs granted to importers of wines, &c., for the waste and damage supposed to be incurred by keeping.

LEAN-TO. In *architecture*, a small building whose side-walls and roof project from the wall of a larger building.

LEAP-YEAR. *Bissextile*. Every fourth year is so called, from its *leaping* a day more than in common years. In leap-year February has 29 days instead of 28. See **BISEXILE**.

LEASE, from Fr. *laisser*. A demise or letting of lands, tenements, or hereditaments, to another for life, for a term of years or at will, for a rent or compensation reserved; also the contract for such letting. The party letting the lands, &c. is called the *lessor*, and the party to whom they are let, the *lessee*.

LEAS'ING-MAKING. In *Scottish law*, verbal sedition: the uttering of words tending to excite discord between the sovereign and the people.

LEAT, Sax. *laet*. An artificial channel

for conducting water for the working of waterwheels and other purposes.

LEATHER, Ger. and Dut. *leder*. The skin of animals, so modified by chemical means as to remain unaltered in circumstances where it would be decomposed if in its natural state. The chemical process employed is tanning; and tanning consists in bringing tannin to act upon the gelatinous substance of the skin with which it forms really a compound, and in some measure a new substance, and this substance is leather.

LECTINARY, from *lectio*, a reading; the Romish service-book.

LECTISTERNIUM, Lat. *lectus*, a couch, and *sternere*, to prepare. A religious ceremony among the ancient Romans, celebrated in times of public calamity.

LECTOR. In the early church, one who read the Bible and other religious writings to the people.

LEDGE, **LEDGE-MENT**, a longitudinal projection from a plane.—2. A small piece of timber placed athwart ships under the deck between the beams.—3. A ridge of rocks near the surface of the sea.

LEDGER 1. From *leger* (q.v.), the principal book of accounts kept by merchants and tradesmen, wherein each person's account is placed by itself, from the journal.—2. In *architecture*, &c., the horizontal pieces fastened to the standard poles or timbers of scaffolding, raised around buildings during their erection, are termed, *ledgers*; and those which rest upon the ledgers are called *putlogs*; and on these the boards for working upon are laid.—3. In music, *ledger-lines*, (from the Dutch, *legger*, to lie,) are short lines placed above or below the staff, to indicate the higher and lower notes.

LEDUM, a genus of shrubby plants. *Decandria—Monogynia*. The Labrador tea (*L. latifolium*) is a species; and the marsh ledum (*L. palustre*) is extensively used in Prussia to tan the skins of goats, calves, and sheep, into a reddish leather of an agreeable smell; also in the preparation of the oil of birch, for making Russia leather. The species are all hardy.

LEE. In *nautical language*, the side opposite to the wind. The *lee-shore* is that on which the wind blows. A *lee-tide* runs in the same direction that the wind blows.

LEE-BEARD, a frame of timber fixed to the side of a flat-bottomed vessel, to prevent it from falling to leeward when close hauled.

LEET. *Court Leet*. A court of record ordained for punishing offences against the Crown, and said to be the oldest in the land.

LEEWARD, in the direction towards which the wind blows.

LEEWAY, the lateral movement of a ship

to the leeward of her course, or the angle which the line of her way makes with her keel.

LEGACY (Lat. *legatum*, from *lego*, to bequeath); a bequest or gift by will. The person bequeathing is the *testator*; and he to whom the effects are bequeathed is the *legatee*. When no time is specified, legacies are payable one year after the death of the testator.

LEGALIS HO'MO (Lat.), a lawful man, or one who stands *rectus in curia*, not outlawed, excommunicated, or infamous.

LEGATE (Lat. *legatus*, from *lego*, to send); a kind of spiritual ambassador from the pope.

LEGATION (Lat. *legatio*, from *lego*, to send); an embassy or deputation.

LEGATO. In *music*, an Italian word, used in an opposite sense to *staccato*, and implying that the notes of a movement or passage, to which it is affixed, are to be performed in a close, smooth, and gliding manner.

LEGEND (Lat. *legenda*), primarily, a chronicle or register of the lives of saints, formerly read at matins and at the refectories of religious houses. Hence any extravagant story or unauthentic narrative.—2. In *numismatics*, &c., that which is written round the field of a medal, the inscription being written across.

LEGER (Dut. *legger*); anything that lies in a place. Thus *leger ambassador* is a resident one. A *leger-line* in music is a line added to the staff of five lines, when more are wanted to designate notes either ascending or descending. A *leger-book* is now usually called a *ledger* (q.v.).

LEGGERS, men employed in conveying a barge through a canal tunnel, by means of pushing with their legs against the side walls.

LEGGIADRO. In *music*, an Italian term signifying lively, gaily, &c.

LEGION OF HONOUR. An order instituted for merit, both civil and military, by Napoleon, when first consul of France.

LEGION. In *Roman antiquity*, a body of infantry, consisting of different numbers of men at different periods, from 3000 to 5000. Each legion consisted of 10 cohorts, each cohort of 3 maniples, and each manipulus of 2 centuries.

LEGISLATURE, the supreme power of a state. The legislature of Great Britain consists of the Lords and House of Commons, with the Sovereign, whose sanction is necessary to every bill before it becomes a law.

LEGUME, (Lat. *legumen*, from *lego*, to gather); seeds not reaped but gathered by the hand: in general all large seeds. The term is used by botanists to denote a peculiar solitary kind of fructification, formed by two oblong valves, without any longitudinal partition, and bearing

the seeds along one of its margins only. It is the pod proper to the pea or papilionaceous tribe of plants, thence named *leguminous*, and constitutes a natural order called *Leguminosæ* (q.v.).

LEO'UMINE, a principle extracted from dry peas, somewhat like starch, but differing in being insoluble in boiling water.

LEGUMINO'Æ. *Leguminous plants*. See LEGUME.

LEM'MA. Λήμμα. A proposition previously assumed.—2. In *geometry*, a previous proposition demonstrated for the purpose of being employed in the demonstration of some other proposition.

LEM'MING. In *zoology*, the popular name of a genus of gnawers, the *Georychus*, Illiger. The Lemming, properly so called (*G. lemmus*), is a northern species as large as a rat, with black and yellow fur, celebrated for its occasional migrations in innumerable bodies. At these periods they are said to march in a straight line, regardless of rivers and mountains; and while no obstacle can impede their course, they devastate the country through which they pass. Their usual residence appears to be the shores of the Arctic Ocean. The Lemming of Hudson's Bay (*G. Hudsonius* or *Mus Hudsonius*, Gm.) is of a light pearly ash colour, without tail or external ears, of the size of a rat, and lives under ground, in North America.

LEM'NIAN EARTH. *Sphragide*. A mineral found in the island of Lemnos, in the Egean Sea. Colour reddish yellow; fracture fine, earthy, adheres slightly to the tongue, and has a soapy feel. Constituents, 66 silica; 14.5 alumina; 3.5 soda; 6 oxide of iron; 8.5 water, with slight portions of lime and magnesia.

LEM'ON, the fruit of the lemon-tree (*Citrus medica*). A native of Persia, &c., but now cultivated in Europe. Lemons are brought into this country from Spain, Portugal, and the Azores, packed in chests, each lemon being separately rolled in paper.

LEMONADE, water to which a little lemon-juice and sugar are added. It is much improved by being charged with carbonic acid.

LEM'ONS, ESSENTIAL SALT OF. The bin-oxalate of potash is frequently sold under this name. Its use is to remove mould and stains from linen.

LEM'UR. In *zoology*, a genus of the order *Quadrumanæ*. The *L. makis* are active animals, which from their pointed heads have been called *fox-nosed monkeys*. Their food is fruit. Their species are very numerous, but only met with in the island of Madagascar, where they replace the monkeys, none of which it is said are to be found there.

LEM'URUS. In *antiquity*, restless ghosts of departed persons, who returned to ter-

rify and torment the living; the same with the *larvæ*.

LENS, Lat. *lens*, a lentil. A piece of glass or other transparent substance, having its two surfaces so formed that the rays of light, in passing through it, have their direction changed, and made to converge or diverge. Lenses receive particular denominations according to their form. Thus A is a *plano-convex* lens, one

side being plane and the other convex; B is a *convexo-convex* lens, or *double convex* lens, both sides being convex; C is a *plano-concave* lens, one side being plane and the other concave, and D is *concavo-concave*, both sides being concave. When one side is concave and the other convex, as E, the lens is called a *meniscus*.—2. In *anatomy*, an important part of the eye. See EYE.

LENTIC'ULAR, shaped like a lens: applied in botany, conchology, anatomy, &c., to round bodies, having the opposite sides convex and meeting in a sharp edge.

LEN'TISK, the mastic-tree (*Pistacia lentiscus*), common in the south of Europe, Named from *lentesco*, to become sticky, in allusion to the gumminess of its juice.

LEN'TO. In *music*, an Italian word meaning "slow," and used to denote a movement between *largo* and *grave*.

LEO, the Lion. In *astronomy*, the fifth sign in the order of the zodiac, and the second of the summer signs, marked ♌.

The chief star is *Regulus*, situated on the ecliptic, and sometimes called *Cory Leonis*, the lion's heart. In the tail of the lion is *Denebola*, also a star of the first magnitude. *Leo minor*, or the little lion, is said to owe its place in the heavens to the fable of Hercules killing the Nemean lion. The constellation is composed of the *stellæ informes* of the ancients.

LE'ONINE VERSE, a sort of Latin verse consisting of hexameters and pentameters, of which the final and middle syllables rhyme, as—

"Gloria factum, temer concessitur horum."

Some attribute the invention to Pope Leo I., and others to Leonius, a poet of the 12th century.

LEON'ODON, the dandelion. A genus of perennial plants. *Syngenesia*—*Poly. æqualis*. Name from *λεων*, the lion, and *οδους*, a tooth, from its supposed resemblance. The pissabed (*L. taraxacum*) and the marsh dandelion (*L. lividus*) are British species. All the species are hardy.

LEOPARD. In *zoology*, the *Felis leopardus*, Lin., from Africa. Similar to the panther, but has ten rows of smaller spots. It is also smaller than the panther, but larger than the ounce.

LEPADITES, the goose-barnacle; subgenus of Cirripedes, the species of which are distinguished by a tendinous and contractile tube, fixed by its base to some solid marine substance, supporting a compressed shell, consisting of valves united to each other by membrane.

LEPAS, a genus of multivalve marine shells, inhabited by a triton, known popularly by the name of barnacles. Name *λεπας*, a limpet. The genus is subdivided into *balanites*, or acorn-barnacles, and *Lepadites* or goose barnacles. Thirty-two species are described.

LEPIDIUM, the *Dittander* or *Peppervort*: a genus of herbaceous plants. *Tetradynamia—Siliculosa*. Name from *λεπτις*, a scale, in allusion to its supposed usefulness in cleansing the skin from scales and impurities. Most of the species are hardy.

LEPIDOIDS, a family of extinct fishes found in the oolitic series, remarkable for their large rhomboidal bony scales, which were of great thickness, and covered with enamel: hence the name from *λεπτις*, a scale, and *ειδος*, like. The scales appear to have been fitted together like roofing tiles.

LEPIDOPTERA, from *λεπτις*, a scale, and *πτερον*, a wing; scaly-winged insects. The tenth order of insects in Cuvier's arrangement, comprising butterflies, moths, and sphinxes. The scales are attached so slightly to the wings, that they are removed by the slightest touch of the finger, to which they adhere like farinaceous dust. Epithet *Lepidopterous*.

LEPISMA, a genus of apterous insects of the order *Thysanoura*, Cuv., and the type of the family *Lepismene*, Latr. Subgenera, *Machilis*, Lat., and *Lepisma*, Lin. Several of the species conceal themselves in cracks and in the framework of windows, wardrobes, &c. Name from *λεπτις*, a scale, the body being covered with small shining scales.

LEPROSY, from *λεπρος*, scaly. This name has been given to several diseases, but is now restricted to a common form of cutaneous disease, characterised by scaly patches, generally of a circular form.

LEPTOCEPHALIDE, *Leptocephalus* the type. A family of fishes remarkable for the smallness of the head.

LEPTOCEPHALUS, a genus of anguilliform fishes, the *L. morio*, Gm., inhabits the coast of France and England, but all the other known species inhabit the seas of hot climates, and are all thin as paper and transparent as glass, so that even the skeleton is not visible. Name from *λεπρος*,

slender, and *κεφαλος*, head, the head being in particular remarkably small.

LEPUS, the *hare*. 1. In *zoology*, a genus of *Mammalia*; order *Rodentia*. The genus comprehends the hares and rabbits.—

2. In *astronomy*, a constellation of the southern hemisphere.

L'ERMITE (*OISEAU*), a constellation formed by M. Monnier under the southern scale of the celestial balance.

LE ROI LE VEUT, Fr. the sovereign assents. The form of royal assent to the passing of bills in parliament, pronounced by the clerk.

LESE-MAJESTY. Any crime committed against the sovereign power in a state.

LES'TRIS, a genus of birds separated from the gulls of Illiger, and named from *ληστρος*, a robber, because they pursue the small gulls with singular ferocity to rob them of their food. See *LARUS*.

LE'THE, *ληθη*, oblivion; a mythological name of one of the rivers of hell. Its waters, according to the fictions of the poets, make those who drink it entirely forget whatever is past.

LETTER, Lat. *litera*. 1. A mark or character written, printed, or engraved; used as the representative of a sound or articulation of the human organs of speech. Hence a letter is the first element of written language, as a simple sound is the first element of spoken language. Sounds are addressed to the ear, letters to the eye.—2. A written communication from one person to another at a distance: the medium of epistolary correspondence.—3. A type, or collectively, types.

LETTER OF ATTORNEY, a document or writing, whereby a person constitutes another to do a lawful act in his stead, as to receive debts, &c.

LETTER OF CREDIT, a letter written by a merchant or banker to his correspondent abroad, requesting him to credit the bearer to a certain specified amount.

LETTER OF LICENCE, an instrument or writing granted by a person's creditors, allowing him a certain time for the payment of his debts, by which means he is enabled to prosecute his business without legal molestation.

LETTER OF MARQUE, an extraordinary commission granted to commanders of merchant-ships, or so commissioned, is called a *letter of marque*.

LETTER MISSIVE, a letter sent out of Chancery in a process of law against a peer.

LETTERS-PATENT (*overt or open*), writings sealed with the Great Seal of England, and so called because they are open with the great seal affixed to them. Letters-patent are granted to authorize a man to do some act or enjoy some right. See **PATENT**

LEV'CADENDRON, the silver-tree. A genus of trees. *Diœcia*—*Pentandria*. Name from λευκος, white, and δένδρον, a tree, in allusion to the silvery foliage of some species.

LEV'CE, from λευκος, white, and αἶμα, black. An albino, or white man of a black race.

LEV'CE, from λευκος, white. A disease characterised by white patches on the skin, on which the hairs turn white and silky. It is peculiar to warm climates, as the East Indies.

LEV'cite, from λευκος, white. A mineral of a white colour, found in volcanic rocks. It is a silicate of ammonia and potash, and occurs regularly crystallised in granular concretions, and in roundish grains.

LEUCO'MA (Lat.), from λευκος, white. A white opacity of the cornea of the eye; often synonymous with *albigo*.

LEUCOPETRIANS. In ecclesiastical history, a sect of fanatics who sprung up in the twelfth century, and spent their whole time in prayer.

LEUCOPHLEGMA'SIA (Lat.), from λευκος, white, and φλεγμα, phlegm. A state of the body in which there is a redundancy of serum in the blood, symptomatic of dropsy.

LEV'THRITE, } A mineral of a grayish
LEV'TRITE, } white colour, tinged in places with an ochreous brown; thus named from its being found at Leuthra or Leuttra in Saxony. It is a recomposed rock.

LEVAN'TINE. 1. An epithet for things pertaining to the Levant.—2. The name of a particular kind of silk manufacture.

LEVA'TION, Lat., from *levo*, to lift up. A term common to several muscles, the office of which is to elevate the parts into which they are inserted.

LEVA'RI FA'CIAS. In *law*, a writ directed to the sheriff, to levy money upon the estate of a person who has forfeited his recognizance.

LEV'EE (Fr.), from *lever*, to raise. 1. A bank, especially along a river, to prevent inundation.—2. A concourse of gentlemen, paying their respects to some great personage in the morning. A similar visit of ladies, or ladies and gentlemen, is called a *drawing-room*.

LEV'EE-EN-MASSE, a military expression for the patriotic rising of a whole people to oppose an enemy: called in Germany the *landsturm*, in distinction from the *landwehr*, or militia.

LEV'EL. The term *level* is applied primarily to designate a horizontal plane or line, and hence a canal, or any particular portion of one, a tract of low marshy land or morass, a gallery in a coal-mine, &c.

are, by analogy, termed *levels*. There are also various instruments called *levels*, for finding a horizontal line. A *spirit level* consists essentially of

a glass tube, hermetically sealed at both ends, and

nearly full of some liquid, as spirit of wine: it contains a bubble of air, which, when the tube is exactly horizontal, remains at the middle of the tube, but, under all other circumstances, is found at the higher end. This is fitted into a *stock*, adjusted with great care, and the instrument is then complete for the purposes of the mechanic. But for the purposes of the surveyor it is affixed to a telescope, with micrometer

screws to adjust it, and the whole instrument, so fitted up, is termed a *level*. The *Y level* is the oldest instrument of this sort; *Troughton's improved* is the same somewhat improved; and *Gravatt's level*, the favourite instrument among civil engineers, has some advantages over the others. The *plumb-level* is used by ma-

sons, &c., and shows the horizontal line, by means of another line perpendicular to that described by a plummet. The principle is, that, as all bodies gravitate towards the centre of the earth, the plumb-line being a truly vertical line, any line perpendicular to it must be a truly horizontal line. These lines are, in fact, the radii of a sphere.

LEV'ELLING, the finding of a line parallel to the horizon, at one or more stations, to determine the height or depth of one

place with respect to another; usually performed by means of an instrument called a *level*, with levelling-staffs, &c. The line parallel with the horizon is called *datum line*, and is generally on a level with the high-water spring tides, low-water spring tides, or some other fixed mark.

LEVELLING-STAFF, a graduated rod or staff, advanced alternately with the spirit-level, denoting the gradations bisected by the latter, the rise or fall between any two points.

LEVER. In *mechanics*, a bar of metal, wood, or other inflexible substance, turning on a fulcrum, or prop, and usually regarded as one of the simple mechanical powers. The lever is of three kinds: (1.) When the fulcrum is between the weight and the power, as the crowbar. (2.) When the weight is between the power and the fulcrum, as nut-crackers. (3.) When the power is between the weight and the fulcrum. The forearm is a lever of this kind, as, indeed, are all the limbs of animals.

LEVIGATION, from *levigo*, to make smooth. The reduction of a hard substance, by trituration, to an impalpable powder.

LEVITES. In *scripture*, the tribe of Levi, the hereditary priests of the Jews.

LEVITICUS, the third book of the Pentateuch; so called from its containing the laws and regulations relating to the priests, Levites, and sacrifices. These duties and ceremonies constitute what is termed the *Levitical law*.

LEWIS, a sort of shears used in cropping woollen cloth.

LEX, the Latin word for *law*. Hence *lex mercatoria*, commercial law; *lex non scripta*, the common or unwritten law; *lex scripta*, the written law; *lex talionis*, the law of like for like; *lex terræ*, the law of the land, or common law, as distinguished from civil law.

LEXICOL'OGY, from *λεξιων*, a lexicon, and *λογος*, discourse. The science of words, their meaning and just application.

LEXICON. *Λεξιων*. A Dictionary. A very useful tool when well made.

LEY, Lat. *lixivium*, the liquor in which saline and soluble particles of the residues of distillation and combustion are dissolved. The solution made by levigating ashes which contain alkali.

LEYDEN JAR.

LEYDEN JAR, } A glass jar or phial,
LEYDEN PHIAL, } employed in electri-

cal experiments. It is coated inside and outside, usually with tin-foil, to within one third of the top, so that it may be readily charged and discharged by means of a metallic rod, which is in connection with the interior coating. It is the invention of M. Vankleigh of Leyden.

LI, an itinerary measure of China, equal to 1897 English feet.

Lias, a provincial name, adopted by geologists, to designate a bluish coloured clayey limestone, which, with its associate beds, forms a group of the secondary series. When the *lias* beds, (says Bakewell,) are fully developed with their associate beds of clay, they form a mass of stratified limestone and clay, several hundred feet in thickness, which rests upon the red marl.

LIBAVIUS, (liquor of;) the bichloride of tin, prepared by dissolving that metal in *aqua regia*, with the aid of heat. This preparation is used in calico-printing; but the proper fuming liquor of Libavius is prepared by mixing four parts of corrosive sublimate with one part of tin, previously amalgamated with just so much mercury as renders it pulverisable, and distilling with a gentle heat when a colourless liquid comes over.

LIBEL (Lat. *libellus*, a little book.) A defamatory writing, *libellus famosus*, and, the epithet being omitted, *libel* expresses the same thing. Any book, pamphlet, writing, or picture, containing representations, maliciously made or published, tending to bring a person into contempt, or expose him to public hatred and derision. It is immaterial, with respect to the essence of a libel, whether the matter of it be true or false, since the provocation and not the falsity is the thing to be published *criminally*. But in a *civil* action, a libel must appear to be false as well as scandalous.—2. In *civil law*, a charge in writing, exhibited in court, particularly in a court of admiralty, against a ship or goods for violation of laws of trade or of revenue.

LIBEL'ULA, the *Dragon-fly*. A genus of neuropterous insects, characterised by their light and graceful figure, beautiful and variegated colours, large wings resembling lustrous gauze, and the velocity with which they pursue the flies, &c., which constitute their food. Cuvier places them among the subulicorns.

LIBERAL ARTS. Such as are fit for gentlemen and scholars. The *liberal arts* are distinguished from the *mechanical arts*; the first being more especially depending on exertion of the mind; the latter depending on manual dexterity. Grammar, rhetoric, painting, sculpture, architecture, music, &c., are liberal arts.

LIBER, a Latin word. 1. The inner

bark of a tree.—2. A book, originally made of bark.—3. In *mythology*, a surname of Bacchus.

LIE'RI, LIBER'RI. In *law*, the *liberi* were freemen born; the *liberti* such as were made free by manumission.

LIBERTY, Lat. *libertas*, freedom. *Natural liberty* consists in the power of acting as one thinks fit. *Civil liberty* is that which exempts a man from the arbitrary will of others, which exemption is secured by established laws. Hence the restraints of law are necessary to civil liberty. *Political liberty* designates the liberty of a nation, as civil liberty does that of an individual, and is secured by the laws of nations. *Religious liberty* is the freedom of adopting and enjoying opinions on religious subjects without external control. The *liberty of the press* consists in the free power of publishing what one pleases, subject, however, to punishment for publishing what is mischievous to the public morals, or injurious to individuals. The *cap of liberty* is used in England as a symbol of the constitutional liberty of the nation. It is blue with a white border, and is sometimes borne by Britannia on the point of a spear.

LI'BERTINES. In *ecclesiastical history*, the early anabaptists in England, in the 16th century.

LI'برا (Lat.), the balance. In *astronomy*, the seventh sign of the zodiac; thus named because when the sun is in this sign, at the autumnal equinox, the days and nights are equal. Symbol ♎

—2. The Roman pound, equal to 5040 troy grains; also a Roman gold coin, equal to 20 denarii.

LIBRA'TION, from *libra*, a balance; a state of equipoise. The *libration of the earth* is that motion whereby the earth is so retained within its orbit as that its axis continues constantly parallel to the axis of the world. The *libration of the moon* is an apparent irregular libratory motion of that body about its own axis, whereby we see a little more than one-half of the lunar disc; or, rather, it is in consequence of our seeing a little more than one-half of the disc that the moon appears to have such a motion.

LI'CE'NSE, } Fr. from Lat. *licentia*; per-
LI'CE'NCE, } mission. A license may be verbal or written; when *written*, the paper containing the authority is called a *license*. A license cannot be transferred.

LICEN'TIATE, from *licentia*, a license. One who has a license to practise any art or faculty.

LICH'EN, λικην, a roughness of the skin. 1. In *pathology*, the lichen, a disease characterised by an extensive eruption of papule affecting adults, connected with internal disorder, usually terminating in

scurf. It is not contagious.—2. In *botany*, an extensive genus of cryptogamic plants; order *algæ*. The name was applied by the Romans to a plant, supposed by them to cure the lichen or tetter. The Iceland moss or liverwort, the tree liverwort, the tree lung-wort, oak-lungs, or hazel croteles, the cup-moss and canary, or herb archil, are species. This last yields archil and litmus.

LICKS, the name of sandy tracts in North America, on which common salt effloresces, which is licked by graminivorous animals.

LIC'TORS, officers among the Romans, who carried the fasces before the chief magistrates when they appeared in public. The licitors were also the public executioners in beheading, scourging, &c.

LIEGE, Lat. *legius*. 1. In *law*, a vassal bound by feudal tenure. By *liege homage* a vassal was bound to serve his lord against all, not excepting his sovereign.—2. The word has been falsely used in the sense of superior, probably by transferring the word from the vassal to the lord, the lord of *liege men* being thereby termed *liege lord*.

LI'EN, Fr. lien, bond. In *law*, the right of a creditor to retain the property of a debtor until the debt be paid.

LI'ENTERY, from *λιος*, soft, and *εντερων*, the intestine; diarrhoea.

LIEUTEN'ANT, Fr. from *lieu*, place, and *tenant*. An officer who supplies the place of a superior in his absence. Officers of this kind are civil, as the *lord-lieutenant* of a county, and military, as a *lieutenant-colonel*.—2. In the *navy* and *army*, the officer next in rank to the captain.

LIFE, a term used to denote (1.) The aggregate phenomena resulting from the activities of an organised body. (2.) The cause of these activities; the vital principle or unknown cause of life. Many theories of life have been advanced by physiologists, but none of a satisfactory nature.

LIFE ANNUITIES, are such periodical payments as depend on the continuance of some particular life or lives. See **ANNUITY**.

LIFE-BOAT, a boat constructed expressly to save shipwrecked persons. There are various contrivances of this kind, usually of the form of a boat, rendered highly buoyant by means of cork-wood, air-tight tubes, &c.

LIFE-BUOY, a buoy, with a mast, to render it conspicuous, thrown into the sea upon a man's falling overboard.

LIFE-ESTATES, are such as are not in inheritance, but continue only during the lives of the possessors.

LIFE-LINE. In a *ship*, any rope stretched along for the safety of the men in bad weather.

LIFE-PRESERVER. Scheffer's life-preserver is a hollow cylindrical ring formed without a seam, and perfectly air-tight. It is distended with air, and is therefore well adapted to the place which it occupies, being placed under the arms.

LIFE-RENT. In *Scottish law*, the right of enjoyment of an heritage or sum of money for life.

LIFTS. In a *ship*, certain ropes at the yard-arms, used to make the yards hang higher or lower as wanted.

LIFT-WALL, the cross-wall of a lock chamber.

LIG'AMENT. In *anatomy*, a strong elastic and compact substance, serving to join two moveable bones together: hence the term *ligamentum*, from *ligo*, to bind. The ligaments are harder than membrane, and softer than cartilage.

LIG'ATURE, a thread, *ligatura*, from *ligo*, to bind; anything which binds. In *music*, a line connecting notes. In *printing*, a double character or type consisting of two letters, as *fl*, *ß*, &c.

LIGHT, Sax. *leoht*, that which renders bodies perceptible to our sense of seeing. Some regard light as a substance, or fluid *per se*; others consider it merely as a principle, and attribute it to a sort of undulation or vibration, propagated from the luminous body through a subtle ethereal medium. The great source of light is the sun, from which it radiates with a velocity of 164,000 miles in a second of time.—2. In *painting*, those parts of a piece which are illuminated, or that lie open to the luminary by which the picture is supposed to be enlightened, and which for this reason are painted in bright colours, are termed *lights*. In this sense the term is opposed to *shadow*.

LIGHT'ER, a large and flat-bottomed boat, used in loading and unloading ships. A *covered* or *close lighter* is one furnished with a deck. A *ballast lighter* is a vessel fitted up to heave ballast from the bottom of a river or harbour, and carry it to and from ships.

LIGHT-HOUSE, a certain erection, usually in the form of a tower, built upon or adjacent to dangerous rocks, for the purpose of warning ships of their situation; or along the sea-coast as landmarks, lights of various descriptions being introduced upon the top at night. There are also *floating lights*, or lights placed on board vessels moored in certain situations, and intended for the same purposes as those on shore. *Harbour lights* are such as are placed at the extremity of one of the arms forming the entrance to a harbour, for the purpose of guiding vessels in and out during the night, &c.

LIGHTNESS, Teut. *leicht*. In the *fine arts*, a quality indicating freedom from weight or clumsiness.

LIGHT'NING, a sudden discharge of electricity from a cloud to the earth, or *vice versa*, or from one cloud to another, producing a vivid flash of light, and frequently the report called *thunder*.

LIGHT'ROOM. In a *ship of war*, a small apartment having double glass windows towards the magazine, and containing lights by which the gunner fills cartridges, &c.

LIGNIFICATION, from *lignum*, wood, and *facio*, to make. The process of being converted into wood.

LIG'NIN, the name given by chemists to the fibrous portion of wood freed by digestion in water, alcohol, ether, hydrochloric acid, alkaline ley, and chlorine, from everything which these reagents are capable of taking up. Lignin constitutes the skeleton of the trunk and branches of trees. Dressed flax is nearly pure lignin. Constituents, carbon 50, oxygen 44.45, hydrogen 5.55.

LIG'NITE, from *lignum*, wood; wood-coal. One of the most recent geological formations, being the carbonised remains of forest trees, &c. The lignites mostly burn with flame, but they neither cake nor smell like coal.

LIG'NUM-VITÆ, wood of life. The guaiacum or pockwood (*see THUJA*). The common *lignum-vitæ* tree is a native of the warm latitudes of America. It is a large tree, and the wood is hard, ponderous, very resinous, of a blackish-yellow colour in the middle, and of a hot aromatic taste.

LIG'ULA, a strap. The name given by Bloch to a genus of Entozoa. Order *Parenchymata*: family *Cestoidea*. The body resembles a long ribbon, and no external organ whatever is perceptible. The species inhabit certain birds and fresh water fishes, enveloping and constricting the intestines to such a degree, as to cause death.

LIG'URITE, a mineral of an apple green colour which occurs in oblique rhombic prisms. It ranks as a gem. It takes its name from Liguria in Italy.

LIGUS'TRUM, the privet. A genus of permanent plants. *Diandria—Monogynia*. Name from *ligo*, to bind, on account of its use in making bands. There are two species, Europe and China.

LILIA'CEE, a natural order of plants consisting of such as have liliaceous corollæ.

LILIA'CEOUS, Lat. *liliaceus*, from *lilium*, a lily. Resembling the lily; an epithet for plants of the lily tribe.

LIL'LIUM, the lily. A genus of perennial plants. *Hexandria—Monogynia*. There are 21 species, mostly hardy.

LILY EN'CRINITE. The *encrinites moniliformis*, so called because the arms when folded resemble the head of a lily. It is one of the most beautiful of the fossil

crinnoidea. Its position is the muschelkalk of the new red sand-stone group.

LIMACINA, a genus of mollusca separated from the *Clio*, Lin., by Cuvier. The animal uses its shell as a boat, and its wings as oars whenever it wishes to navigate the surface of the deep arctic seas.

LIMAX, the slug. A genus of terrestrial pulmonea, having no apparent shell. This genus in the system of Linnæus comprises the *Limax*, *Arion*, *Limna*, *Vaginulus*, *Testacella*, and *Parmacella* of Cuvier. Name *limax*, a snail, so called from its slowness.

LIMB, Lat. *limbus*. An edge or border, as the sun's limb. — 2. The graduated edge of a quadrant, astrolabe, &c. — 3. The upper spreading part of a monopetalous corolla. — 4. An extremity of the body, as an arm or leg.

LIMBAT, a cooling periodical wind in the island of Cyprus, which blows from the north-west from 8 o'clock a.m. till noon.

LIMBERS. *Limber holes* are square holes cut through the lower part of a ship's floor timbers, very near the keel, forming a channel for water, and communicating with the pump-well through the whole length of the floor. *Limber boards*, short pieces of plank which form a part of the lining of a ship's floor close to the keelson and immediately above the timbers, for the convenience of keeping a clear passage to the well. *Limber rope*, a long rope frequently retained in the limber holes of a ship, in order to clear them by pulling the rope backwards and forwards. *Limber carriage*, a sort of advanced train joined to the carriage of a cannon while on march, having boxes for ammunition.

LIMBO, Lat. *limbus*, a hem or edge. The purgatory of the Romanists, supposed to lie on the edge or neighbourhood of hell.

LIMEUS, that portion of petals of flowers which is supported by the unguis.

LIME. 1. In *mineralogy*, the oxide of calcium, one of the primitive earths, much used in building and for other purposes, being the most essential ingredient in all cements. It is never found native or in a state of purity, but is always combined with acids, particularly in the state of carbonate, as marble, limestone, and chalk, from which it may be obtained nearly pure by simple calcination. When any carbonate of lime is properly calcined, the result is *quick lime* and this slacked with water forms *hydrate of lime* or *slack lime*. Lime is also found combined with sulphuric acid, forming *gypsum* and *anhydrite*, and with the fluorine forming *Derbyshire spar*. It likewise combines with phosphoric acid, and forms bones and shells. — 2. In *botany*, a fruit like a small lemon, that of the *Citrus li-*

metta, which grows abundantly in the West India Islands, and in other warm climates.

LIMESTONE. *Calcareous stone*. A genus of mineral, comprehending, according to Jameson, four species:—(1). Rhomb-spar; (2). Dolomite; (3). Arragonite; (4). Limestone. The same mineralogist divides this last into 12 sub-species:—(1). Foliated limestone, comprehending calcareous spar and marbles; (2). Compact limestone, comprehending the common compact limestone (usually burned to produce lime), blue Vesuvian limestone and roestone; (3). Chalk; (4). Agaric mineral or rockmilk; (5). Fibrous limestone, comprehending satin-spar and calc-spar; (6). Calc-tuff; (7). Pea-stone; (8). Slate-spar; (9). Aphrite; (10). Lucullite, comprehending the *Nero antico* of the Italians, slinkstone or swinstone, and madreporite; (11). Marl; (12). Bituminous marl-slate.

LIME-TREE, the *Tilia europea*, called also the linden-tree. See *TILIA*. The lime-tree of the West Indies is the *Citrus americana*.

LIME-WATER, an aqueous solution of lime. Lime is very slightly soluble in water, and less so in hot than in cold water.

LIM'IT, from *limes*, border. In *mathematics*, a determinate quantity, to which a variable one continually approaches. Thus a circle is the limit of all its inscribed and circumscribed polygons.

LIMNE'US, a genus of Mollusca, inhabiting stagnant water in great numbers; placed by Cuvier, order *Pulmonea*, and class *Gastropoda*; and by Lamarck in the family *Limnæa*. The shell is a turreted univalve, with an oblong spire, and of a light amber colour. It abounds as a fossil in calcareous strata.

LIMO'EA, the godwit. A genus of birds. Order *Grallatoræ*, family *Longirostres*. Their form is more slender, and their legs are longer, than those of the snipes; they frequent salt-marshes and the sea-shore.

LIMO'SIS, a genus of diseases characterised by depraved, excessive, or defective appetite.

LIM'ULUS, the Mollucca crab. A genus of Crustaceans. Order *Pacilopoda*, family *Xyphosura*. The limuli are sometimes found two feet in length; they inhabit the seas of hot climates, and most frequently their shores. The *L. cyclops* is found in France, and is commonly called *casse-rolle*, from its shape. It is the *king-crab* or *horse-shoe* of our fishermen.

LINA'RIA. 1. In *botany*, the toad-flax, from *linum*, flax, so named from the resemblance of its leaves to those of flax. — 2. In *ornithology*, a sub-genus of the sparrow-tribe of birds, comprehending the linnets and canary-bird.

LINCH-PIN, the small pin which is put

at the end of the axle-tree of carts, &c. to confine the wheels on them. *Linch* is the Sax. *lynis*, an axle-tree.

LIN'DEN-TREE, the European lime-tree, *Tilia Europea*.

LINE, Lat. *linea*. 1. In geometry, a quantity extended in length without breadth or thickness, and is either curved or straight.—2. A measure of length, the twelfth part of an inch.—3. In fortification, whatever is drawn upon the ground of the field, as a trench.—4. In geography, another name for the equator.

—5. In military affairs, regular troops, in contradistinction to militia, volunteers, yeomanry, &c.—6. A ship of the line is any vessel of war large enough to be drawn up in the line of battle.—7. *Line of battle*, the disposition of an army in battle.—8. In geology, &c., strata almost always form some angle with the horizon, declining at one point, and rising towards the opposite point: a line drawn through these points is called the *line of dip*, and their longitudinal direction is called their *line of bearing*.—9. In ships, a general name for small ropes. The *concluding line* is a small rope, which is hitched to the middle of every step of a stern ladder. The *knave-line* is a rope fastened to the cross-trees, under the main-foretop, brought down to the ship's side, and then hauled up taut to the rails. The *naval-line* is a rope depending from the heads of the main and fore masts, and fastened to the middle of the truss. The *spilling-lines* are ropes occasionally fixed to the square-sails, for convenience in reefing and furling them. A *white line* is one which has not been tarred. A *mar-line* is composed of two strands very little twisted. There are also *deep-sea-lines* and *hand-lines*, marked at different distances, for taking soundings. There are also *hauling-lines*, *fishing-lines*, and *life-lines*, extended in situations for persons to lay hold of, to prevent their falling.—10. The term *line* is also used figuratively, as a *line of ancestors*, a *line of business*. Printers and poets make *lines*, and receive *lines* by the post.

LIN'EAR, Lat. *linearis*, strap-shaped. 1. In botany, &c. narrow and of equal breadth throughout the length, as a *linear leaf*.—2. In conchology, &c. for *lineate* (q. v.).

LIN'EAR EQUATIONS, in the integral calculus, are those in which the unknown quantity is only of the first degree.

LINEAR PERSPECTIVE is that which regards only the positions, magnitudes, and forms of objects.

LIN'EATE, Lat. *lineatus*, streaked.

LIN'EN, from *linum*, flax. A species of cloth made of thread, flax, or hemp. *Fossil-linen*, an old name for amianthus.

LINES (OF GROWTH). Those concentric

lines or markings in a shell, trunk of a tree, &c., which mark the growth of the individual, are thus named.

LING. 1. In ichthyology, the *Gadus molea*, Lin., the *Lota molea*, Yarr., a fish which is common on the English, Irish, and Scottish coasts, and, like the cod and hake, forms a considerable article of commerce.—2. In botany, a species of bent-grass.

LIN'GUA FRAN'CA, the mixed dialect. A species of corrupt Italian, spoken chiefly along the coasts of the Mediterranean.

LIN'GUAL, from *lingua*, the tongue. Appertaining to the tongue, as the lingual arteries, veins, muscles, &c.

LIN'GUIFORM, from *lingua*, the tongue, and *forma*, form, tongue-shaped.

LIN'GULATE, Lat. *lingulatus*, tongue-shaped, from *lingua*, the tongue.

LIN'IMENT, from *lin*, to anoint. A medicament of a mediate consistence between an ointment and an oil, used to rub upon diseased parts.

LIN'ING. In architecture, any covering of an interior surface.

LINK, a certain portion of a chain; e.g. Gunter's chain consists of 100 links, each measuring 72.92 inches.

LIN'NET, a small singing-bird of the finch tribe, the *Fringilla linota*, Lin. According to Cuvier's arrangement, the linnets, including the canary-bird, make the sub-genus *Linaria*.

LIN'SEED, lint-seed. The seed of the common flax, *Linum usitatissimum*. It yields *linseed-oil* by expression. The cake which remains after expression of the oil is called *oil-cake*. The seeds are also ground into *linseed-meal*. Much used in medicine.

LIN'SEY-WOOL'SEY, cloth made of lint and wool; the warp being lint, and the weft wool.

LIN'STICK. Lint-stock. A staff of wood, with a fork at one end, to hold a lighted match. Used by gunners in firing cannon.

LINT. 1. In botany, another name for flax; but sometimes applied especially to dressed flax.—2. In surgery, linen scraped into a soft woolly substance, fit for applying to wounds.

LIN'TEL, the horizontal or head-piece which covers the opening of a door or window: the part of the frame which lies on the side pieces. The term is Spanish *lintel for dentel*.

LINUM. The Flax. A genus of herbaceous plants. *Pentandria*—*Pentagynia*. Name, *Λινον*, anciently applied generally to all stuffs fit to be woven. The *L. usitatissimum* is the species commonly cultivated in this country; but there are other indigenous species, among which is the purging flax, or mill-mountain (*L. catharticum*). See FLAX.

LINT'PHIA. The name given by La-

treille to a sub-genus of Arachnides, characterised by the disposition of their eyes; four in the middle form a trapezium. See ARANEA.

L'ION. The *Felis leo*, Lin. Reckoned the strongest and most courageous of all the beasts of prey. The lion is now confined to Africa, and the neighbouring parts of Asia.

LION OF ENGLAND. A lion passant regardant, being the bearing of England, is frequently so termed in heraldry.

LION-ANT. In *entomology*, the *Formica leo*, or Myrmeleon.

L'ONCEL. In *heraldry*, a small lion; the name by which lions are emblazoned when there are several to one escutcheon.

LIP, the border or edge of the mouth of anything, as a shell.

LIP'OGRAM, from *λυω*, to leave, and *γραμμα*, a letter. A writing (poem, &c.) in which some particular letter is entirely omitted.

LIQUA'TION, from *liguo*, to melt; the process of melting.—2. The process of weating out, by a regular heat, an easily fusible metal from the interstices of a metal of difficult fusion, with which it had been previously melted.

LIQUEFAC'TION, from *liquidus*, liquid, and *facio*, to make. Conversion of a solid into a liquid. The word is sometimes synonymous with *fusion*, sometimes with *deliquescence*, and frequently with *solution*. The first is the common signification.

LIQUEUR, the French name for any liquor. Applied most commonly to medicated and aromatised liquors.

LIC'UID, a non-elastic fluid, as water. See FLUID.—2. In *grammar*, a letter which has a smooth flowing sound, or which flows smoothly after a mute, as *l* in *la*, and *r* in *dra*.

L'QUIDAM'BAR, the *liquid-amber*, or *sweet-gum*. A genus of trees. *Monœcia*—*Polyandria*. Name from *liquidum*, fluid, and *ambar*, a fragrant substance, alluding to the liquid gum which distils from the *L. styraciflua*, by wounding the bark. This tree grows in the warm parts of North America; but the *L. imberbe* is a native of the Levant.

LIQUID-AMBER. 1. The juice of the *L. styraciflua*, an American tree. It is transparent, of an amber colour, an agreeable and powerful smell, and an aromatic taste. It contains benzoic acid, which effloresces when the liquid amber hardens by keeping.—2. In *botany*. See LIQUID-AMBAR.

LIC'VORICE (Ital. *liquirizia*.) 1. Roots of the *Glycyrrhiza glabra*, a perennial plant, common in the south of Europe.—2. A name common to all the plants of the genus *Glycyrrhiza*, (q.v.)

LIC'VORICE JUICE, popularly *black-sugar*. The inspissated juice of the liquorice-root.

LI'QUOR SILLICUM. The *liquor of flints*. A solution of silica in alkaline lixivium.

LIRIODEN'DRON. The *Tulip-tree*. A genus of coadunate plants. *Polyandria*—*Polygynia*. The species, North America. Name from *λilivon*, a lily, and *δενδρον*, a tree. The tree often attains a great height.

LIS (Sax. *list*.), a border, as the selvage of cloth, the line inclosing a field of combat.—2. A catalogue of names, articles, &c. The *civil list* comprehends the names of the civil officers of government, as judges, ambassadors, secretaries, &c. Hence the term *civil list* is used for the appropriations of public money for the payment of the civil officers.

LIS, LIS'TEL. In *architecture*, a little square moulding, serving to crown or accompany a larger one; also termed a *fillet*.

LIS'TING. In *joinery*, the cutting the sapwood out from both edges of a board.

LIT'ANY, λιτανεια, supplication. A form of supplicatory prayer in the church rituals.

LITERA'TI. Among the *ancients*, individuals branded with certain letters by way of ignominy.—2. In *modern usage*, men of learning.

LITERATES. In *church matters*, individuals admitted to ordination by the bishop without having taken a university degree.

LIT'ERATURE (Lat. *literatura*, from *littera*, a letter); the whole amount of written knowledge of some specified period or country, or of some particular science. Thus we speak of the literature of the middle ages, of British literature, of medical literature, &c.

LITH'AGOGUE, from λιθος, a stone, and αγω, to drive away. Having the power to expel calculi from the kidneys or bladder, formerly applied to many medicines.

LITH'ANTHRAX, pit-coal, in distinction from *zylanthrax* or wood-coal, as *bovey-coal*.

LITH'ARGE, an oxide of lead in an imperfect state of vitrification, named from λιθος, stone, and αργυρος, silver; because when silver is refined by cupellation with lead, this latter metal is scorified, and causes the scorification of the other imperfect metals alloyed with the silver. Litharge is more or less white or red, according to the metals with which the silver is alloyed: the white is called *litharge of silver*, the red, *litharge of gold*.

LITH'IA, from λιθος, stone. An alkali discovered in 1818 by Arfwedson in the mineral called *petalite*. Like soda and potash it is a metallic oxide: base, *lithium*.

LITHIASIS, from λιθος, a stone. A disease of the eyelids in which their margins are beset with small hard tumours.

—2. In *pathology*, the formation of stone or gravel.

LITHIC ACID. A peculiar acid, which constitutes great part of all human calculi, and is likewise present in urine, whence it has obtained the name of *uric acid*.

LITHOCHROMATICS, from *λίθος*, stone, and *χρῶμα*, colour. The art of painting in oil upon stone, and taking impressions on canvas: the invention of a French artist.

LITHODENDRON from *λίθος*, stone, and *δένδρον*, a tree. Coral, from its resemblance to petrified wood.

LITHODERMIS. The name given by Cuvier to a genus of zoophytes, from *λίθος*, stone, and *δερμα*, the skin; because the surface has the appearance of being covered with a layer of stony granules, which form an extremely indurated crust. Class *Echinodermata*: order *Apoda*.

LITHODOMUS, a cylindrical marine equi-valve shell fixed by byssus to rocks, which it ultimately penetrates, and remains always after in the cavity; hence the name from *λίθος*, stone, and *δομος*, a house. The lithodomi are littoral molluscs found to depths of ten fathoms.

LITHOGLYPHIC, from *λίθος*, stone, and *γλυφω*, to engrave. A fossil which presents the appearance of being engraved or shaped by art.

LITHOGRAPHY, from *λίθος*, stone, and *γραφω*, to write. The art of taking impressions upon paper, from stone, of writing and figures previously traced upon the stone. The stone used for this process is a fine-grained and hard limestone; (the best are obtained from the quarry of Solenhofen, near Munich). The ink with which the lines are traced on the stone is essentially composed of some fatty matter, usually wax, tallow-soap, lac and lamp-black. It firmly adheres to the smoothly-polished surface of the stone, and attracts the printing-ink from the inking roller, as it is passed with some force over the surface of the stone. The stone during the operation of printing is constantly kept in a damp or moist state, which prevents the adhesion of the ink to those parts of the surface of the stone which are not impregnated with the encaustic ink.

LITHOMANCY, from *λίθος*, and *μαντεια*, prophecy. Divination by stones—a foolery practised by the ancients.

LITHOMARGE, from *λίθος*, stone, and *marga*, marl. Stone-marrow: a variety of talc. It has an unctuous feel, adheres to the tongue, and in water falls to a powder, but does not form a paste.

LITHONTRIPIC, from *λίθος*, a stone, and

τρίβω, to wear away. A term formerly applied to various medicines, supposed to have the power of dissolving calculi; but as it is now thought that there is no such medicine, the term has been transferred to such as have a power of obviating the calculous diathesis.

LITHONTRITOR, *λίθος*, and *θρυπτω*, to break. An instrument for breaking calculi in the bladder, so as to allow them to pass with the urine.

LITHOPHAGI, from *λίθος*, a stone, and *φαγω*, to eat. Molluscs which eat holes into stones and rocks, formed into a family by Lamarck, under the name of *Lithophagidæ*.

LITHOPHILA. A genus of plants, thus named from *λίθος*, a stone, and *φιλειω*, to love, because they grow in barren stony places.

LITHOTOMY, from *λίθος*, a stone, and *τεμνω*, to cut. The operation of cutting into the bladder, in order to extract a stone; a most delicate operation in surgery.

LITHOTRITY, from *λίθος*, a stone, and *τρο*, to break. The operation of breaking and comminuting a vesical calculus, so that its fragments may be discharged by the urine.

LITMUS. A blue colouring matter, obtained from the *Lichen roccella*, or canary archil. The plant, gathered in quantities, is thoroughly ground between stones, so as to bruise, but not to grind it to powder; it is then moistened with strong spirit of urine (urine mixed with quicklime): in a few days it acquires a purplish red, and at length a blue colour; in the first state it is called *archil*, and in the latter *lacmus* or *litmus*. Litmus is not affected by alkalies, but is immediately converted to a beautiful red by acids: hence chemists use it as one of their most delicate tests for the presence of free acid. It has with much impropriety been called *tincture of turnsole*.

LITOTES, *λιτοτης*. In *rhetoric*, a figure in which an affirmation is expressed by the negative of the contrary.

LITRE. A French measure of capacity, equal to 1 thirty-fifth of an English bushel.

LIT'LE, Sax. *lifel*. In the *fine arts*, a condemnatory word implying that a work is void of qualities that tend to raise the feelings of a spectator.

LIT'EROY, from *λιτος*, public, and *εργον*, work. In a general sense, all public ceremonies that belong to divine service; hence, in a restricted sense, among the Romanists the mass, and among Protestants the common prayer, or the formulary of public prayers.

LIT'US. 1. A military musical instrument of the Romans; also a crooked staff

made use of by augurs in quartering the heavens.—2. A genus of chambered shells, supposed to resemble the ancient lituus in form.—3. In *geometry*, the name of a spiral, in which the squares of any two radii vectores are reciprocally as the angles which they make with a certain straight line (an asymptote), given in position.

LIVER, Sax. *lifer*. In *anatomy*, a large abdominal viscus, of a deep red colour, situated under the diaphragm, in the right hypochondrium: its use is to secrete the bile. Epithet, *hepatic*.

LIV'ERSTONE. A native sulphuret of barium, so named from its similarity to liver of sulphur.

LIVER OF SULPHUR. Sulphuret of potash, or other alkaline sulphuret.

LIV'ERYMEN (of London). A number of men chosen from among the freemen of each company. Out of this body the common council, sheriff, and other superior officers, are elected.

LIVERY OF SEISM. In *law*, a delivery of possessions to one that has a right to them.

LIXIVIA'TION, from *lix*. The process employed for dissolving, by means of warm water, the saline and soluble particles of cinders, the residues of combustion and dry distillation, coals, ores, and earths: salts thus obtained are termed *lixivial salts*.

LIXIV'IUM. A ley, from *lix*, wood-ash; the liquor obtained by lixiviation.

LIZ'ARD, corrupted from *Lacerta* (q. v.).

LL.D., Legum Doctor. Doctor of laws.

LOYD'S. *Lloyd's List* is a London periodical, in which the shipping news received at *Lloyd's Coffee-house*, London, are regularly published. At this coffee-house there is a subscription room, under the management of a committee, for the convenience of underwriters and other subscribers interested in shipping. Agents, commonly styled *Lloyd's agents*, are appointed to all the principal ports of the world, who forward regularly to Lloyd's, accounts of the departures from and arrivals at their ports, as well as of losses and other casualties, and all such information as may be supposed of importance towards guiding the judgments of the underwriters.

LOACH, *Beardie*. A small river fish, the *Cobitis barbatula*, Yarr., Lin., occasionally prepared in the same manner as Anchovies, and considered superior in flavour and richness.

LOADS'MAN. In *marine affairs*, a person who conducts vessels into or out of port: a pilot.

LOAD'STONE, corruption of *lode-stone* (see *LODE*), magnetic iron stone. An ore of iron containing protoxide and peroxide of iron in a state of combination. According to Haüy, the ores in which the iron is

combined with the least oxygen, without being engaged in other combinations, form natural magnets. These he terms *oxidulated iron*, and they are found in considerable masses in most countries of the Old World. Their colour is gray, with a metallic lustre; primitive form, the regular octahedron; insoluble in nitric acid, attract iron, and have all the other properties of the artificial magnet in small degree.

LOAM, Sax. *lam*. A natural mixture of clay, quartz-sand, and iron ochre, usually with some carbonate of lime; when this last preponderates, the mixture is usually termed *marl*. Any soil, which does not cohere so strongly as clay, but more strongly than chalk, is designated *loam*: a mixture of sand and clay.

LO'BATE, } Lat. *lobatus*. Having lobes;

LOBED, } from *lobus*, a lobe. Applied to leaves, &c., when the margins of the segments are rounded.

LOE'BY, Germ. *laube*. 1. An open space before a room, or surrounding a range of chambers, or seats in a theatre; also a small hall or waiting-room.—2. A confined place, for cattle formed by hedges or other fencing, near the yard of a farm.

LOBE, Lat. *lobus*, from *loqes*. 1. A rounded portion of certain bodies, as the lobes of the brain, the lungs, the liver, a leaf, &c.—2. The cotyledon of a seed. Epithet, *lobed* or *lobate*.

LOBE'LLA. The cardinal's-flower: an extensive genus of herbaceous (mostly) plants. *Pentandria—Monogynia*. Named in honour of Lobel, a celebrated botanist. The species are found in almost all parts of the world: the water-gladiolus is the British type. Some of the species are highly poisonous.

LOE'STER. A crustaceous fish, the *cancer gammarus*, Lin., found on the rocky coasts of England, and considered a delicate article of food. The animal is said to change its shell annually, and only to increase in size while in a soft state.

LO'CAL, Lat. *localis*. Relating to a limited portion, and not the whole, as a *local disease*, custom, &c. *Local colours* are such as are natural and proper for particular portions of a picture. *Local medicines* are designed to act on particular parts. *Local actions* must be brought in a particular county, where the cause arises. *Local militia* are exercised within prescribed limits of the country. *Local problems* admit of innumerable solutions.

LOCK. The Scotch name for lake.

LOCK, Sax. *loc*. 1. In a primary sense, anything that fastens, but now appropriated to the well-known instrument consisting of a spring, wards, and a bolt of iron, used to fasten doors, chests, &c., and by analogy to that part of a musket, &c., by which fire is produced for the discharge

of the piece — 2. The barrier or works of a canal, which confine the water where a change of level takes place, and for passing the boats from one level to another. Canal locks are provided with gates at each end, and are made sufficiently large to receive the largest boats navigating the canal upon which they are constructed. The upper portion of the canal is generally termed the *upper pond*, and the other the *lower pond*; the difference between the levels is the *lift of the lock*; the portion of the lock inclosed by the gates is the *lock-chamber*; the recesses into which the leaves of the gates turn are termed *gate-chambers*; the gate-post hung in the hollow quoin is called the *quoin* or *heel-post*, and the other the *mitre-post*; the bottom framings against which the gates shut are termed *mitre-sills*, and are either *upper* or *lower*; the *bays* are the portions of a lock at each extremity of the lock-chamber: they are either *fore* or *tail bays* accordingly.

LOCK'ER. A kind of strong-box or chest made along the side of a ship, to stow anything in.

LOCK-GATES. The framed gates employed on rivers and canals, for penning back the water and forming locks. They consist commonly of two leaves, and are opened either by means of balance-beams, situated on the top of the gates, or by boat-hooks; a large gate, running upon wheels, is opened by means of a windlass and chain. They are termed *upper* and *lower gates*, according to their situation.

LOCK-PADDLE. A small sluice, by which an empty lock is filled.

LOCK-SILL. An angular piece of timber at the bottom of a lock, against which the gates shut. See **LOCK**.

LOCK-WEIR, paddle-weir. 1. An overfall behind the upper lock-gates, by which the waste water of the upper pond is let down through the paddle-holes into the lock-chamber. — 2. A weir furnished with a lock.

LO'CO'CO'S. The designation of the ultra-democratical party in America, since 1834.

LOCOMOTIVE ENGINE. A motive steam-engine, usually constructed on the high-pressure principle, employed in land-carriage, chiefly of railways.

LOCOMOTIVE POWER is any power applied directly to the transport of goods, in distinction from stationary power.

LOC'ULAMENT, Lat. loculamentum. A lodgment. A term, in *botany*, for the cell of a pericarp in which the seed is lodged.

LOCULICIDAL. In *botany*, a particular kind of dehiscence. Some fruits open by the dividing of each carpellum at its midrib, so that the dissepiments stick together, and to two halves of contiguous carpella: this is called *locuicidai dehiscence*.

LO'CUM TENENS. One who *holds the place* of another; a deputy.

LO'CUS, a place. *Locus in quo*, the place where anything is alleged to be done in legal pleadings, &c. *Locus partibus*, a division made between two counties, &c. to make trial where the place in question lies.

LO'CUST. 1. In *botany*, a name applied to the spikelet of grasses. — 2. In *entomology*, see **CICADA** and **ACRYDIUM**.

LO'CUST-TREE. The pseud-acacia, or common robinia, a tree of North America.

LODE. In *mining*, a vein of ore, from Sax. *lædan*, to lead. The term is used to signify a regular vein or course, whether metallic or not; but most commonly it is applied to a metallic vein. The lodes are said to be *alive* when the ores are good, and *dead*, when the gangue is the only material found.

LODGE, Fr. logis. In *architecture*, a small house in a park or domain, subordinate to the mansion; also, the cottage at the gate of the avenue.

LODGED. In *heraldry*, a term for a buck, hart, &c., when lying on the ground; answering to *couchant*, which is applied to beasts of prey, as a lion.

LOD'GMENT. In *fortification*, a work raised with earth, gabions, fascines, &c., to cover the besiegers from the enemy's fire, and enable them the better to hold a position which they have taken.

LOESS. A German word, used by geologists to designate an alluvial tertiary deposit, consisting of calcareous loam. It is exemplified between Cologne and Basle.

LOG. A machine for measuring the rate of a ship's velocity through the water. The common log is a piece of board, forming the quadrant of a circle, about six inches radius, balanced by a small plate of lead, nailed on the circular part, so as to swim perpendicularly in the water, with the greater part immersed. To this is attached a *log-line*, which, when the log is "heaved," is unwound from its reel by the log, which remains stationary in the water, while the ship moves away: the number of "knots" run off in half-a-minute, denotes the number of miles which the ship is making per hour. The observations are marked on the *log-board*. The log-board consists of two boards, shutting together like a book, and is divided into columns, containing the hours of the day and night, the directions of the winds, the courses of the ship, and whatever material occurrences happen during the twenty-four hours. The contents of the log-board, being written with chalk, are wiped out at noon, having been first transcribed into the *log-book*, which is duly signed by the commanding-officer.

LOG'ARITHM, from *λογος*, ratio, and *αριθμος*, number. Ratio of numbers. **Lo-**

garithms are a series of numbers in arithmetical progression, answering to another series of numbers in geometrical progression; or, more strictly, they are the indices of the powers of a certain radix, which, when involved by the power denoted by the index, is equal to the given number. Thus, if $rs = a$, $ry = b$, $rz = c$, then is s the logarithm of a , y of b , z of c , and r is the radix of the system, and may be any number except 1.

LOGARITHMIC OR LOGISTIC CURVE. In geometry, a curve line, of which the abscissæ are proportional to the logarithms of the corresponding ordinates.

LOGARITHMIC OR LOGISTIC SPIRAL. In geometry, a spiral curve, such that the radiants, or distances from the centre of points in the curve, which make equal angles with each other, are continual proportions.

LOGGERS, kittle-pins. A game prohibited by Stat. 33 Henry VIII.

LOGIC, Lat. *logica*, from *λογίζην*, from *λογω*, to speak. The art of thinking and reasoning justly.

LOGISTIC SPIRAL. *Logarithmic spiral.* A curve constructed thus: divide the quadrant of a circle into any number of equal parts in the points A, B, C, D, &c.,

and from the radii CA, CB, CC, CD, &c., cut off Ca, Cb, Cc, Cd, &c., continually proportional; then the curve passing through the points a, b, c, d, &c. will be the logarithmic spiral. The several areas are as the logarithms of the ordinates.

LOGOGRAPHY, from *λογος*, a word, and *γραφω*, to write. A method of printing, in which a type represents a word, instead of forming a letter.

LOGOMETRIC, from *λογος*, ratio, and *μετρος*, measure, ratio of equivalents. Wollaston's scale of chemical equivalents has been termed a *logometric scale*.

LOGWOOD. The wood of the *Hæmatoxylin Campechianum*, a native tree of central America, but grown in Jamaica since the beginning of the last century. It affords a valuable tincture by decoction, extensively used in dyeing and calico-printing.

LOLIUM. The *Darnel-grass*. A genus.—*Triandria—Digynia*. The *L. perenne*, a perennial, of which there are no less than 14 varieties, is the grass usually known among farmers by the name of *Rye-grass*. The other species are annuals, and considered weeds.

LOU'LAARDS. A sect of early reformers in England and Germany; followers of Wickliffe.

LOM'BARDS. The old name for bankers, because the people of Lombardy first followed that branch of trade. Hence also the name *Lombard Street*, long famous for its banking-houses.

LO'MENT, Lat. *lomentum*. 1. The meal of beans.—2. Bean-meal bread.—3. The name of a pigment now forgotten.—4. In botany, an elongated bivalve pericarp, divided into cells by very small partitions, never lateral like those of the legume.

LOMENTA'CEE. The name of the 33rd natural order of plants in Linnæus' Fragments, consisting of plants furnished with lomenta, as the cassia, ceretonia, mimosa, &c., and not papilionaceous corols. Epithet *Lomentaceus*.

LONDON CLAY. A bluish or blackish clay, lying immediately over the plastic clay and sand: varying from 1 to more than 500 feet in thickness. It belongs to the eocene period, and abounds with fossil remains, especially of testaceans, reptiles and fish. It is the *calcaire grossier* of the French.

LONG. A musical character, equal to four semibreves.

LONGICOR'NES, from *longus*, long, and *cornu*, a horn. A family of coleopterous insects in Cuvier's arrangement, so named from the length of their antennæ, which are filiform or setaceous, and most commonly at least as long as the body.

LONGIPEN'NES, from *longus*, long, and *penna*, a wing. A family of birds in Cuvier's arrangement, including those palmipeds of the high seas, which, from their immense length of wing, are to be met with in every latitude; as the petrels, puffins, albatross, gulls, noddies and skimmers.

LONGIROSTRES, from *longus*, long and *rostrum*, a bill. A family of birds of the order *Grallatoris*, Cuv., composed of a multitude of waders, characterised by a long, slender, and feeble bill, the use of which is restricted to searching in the mud for worms and insects; as the ibis, curlews, snipes, &c.

LONGISSIMUS DORSI, a muscle of the back, which assists others in keeping the spine erect.

LONGITUDE, Lat. *longitudo*, from *longus*, long; properly, length. The *longitude* of a celestial body is its angular distance from the vernal equinoctial point; that is, if a great circle pass through a star perpe-

dicular to the ecliptic, the arc of the ecliptic intercepted between the intersection of it with this circle and the vernal equinoctial point will be the longitude of the star. In *geography and navigation*, longitude is the measure of the angle included between the meridian of any place, the longitude of which is required, and a certain fixed meridian, from which the longitude is reckoned; or it is the number of degrees, minutes, &c., intercepted between a certain fixed point of the equator and the intersection of the meridian of the place with the same circle: thus degrees of longitude vary with the parallels of latitude, being everywhere as the cosine of the latitude.

LONGITUDE STARS. Those fixed stars which have been selected for the purpose of finding the longitude by lunar observations, as α *Arietis*, *Aldebaran*, α *Pegasi*, &c.

LONG-PRIMER. The name of a printing type of a size between bourgeois and small-pica.

LONGUS COLLIS. A pair of muscles of the neck.

LONICERA. The *Honeysuckle*, or *Woodbine*.

LOOF. The after part of a ship's bow. This term is also sometimes used for *luff* (q.v.)

LOOL. A vessel used to receive the washings of metallic ores.

LOOM. A frame of wood or metal, by which the process of weaving is performed.—2. To *loom* is to appear larger than the real dimensions, and indistinctly. Thus, the ship *looms* large, and the land *looms* high, are phrases applicable to similar phenomena to what is otherwise called *mirage*.

LOOM-GALE. A gentle gale of wind, in which a ship can carry her topsails a-trip.

LOOK'ING. The indistinct, magnified appearance of objects seen in particular states of the atmosphere.

LOOP. A noose through which a lace or cord may be run for fastening.—2. In *iron-works*, the part of a row or block of cast-iron, melted off for the forge or hammer. *Looping* is also used to express the running together of the matter of an ore in the roasting.

LOOP-HOLES. Certain small apertures formed in the bulk-heads and other parts of a merchant-ship, through which small arms may be fired on an enemy who boards her.

LOPHIODON. A fossil genus of animals allied to the tapir, rhinoceros and hippopotamus, and closely connected with the paleotherium; named from *λοφία* and *όδων*, in allusion to certain points or eminences on the teeth. Fifteen species have been discovered, mixed with the remains of the anoplotherium and paleotherium.

LOPHIUS. A genus of Acanthopterygious fishes, comprehending the sea-devils or fishing frogs, pig-fish, toad-fish, &c. The *L. piscatorius*, Cuv., Yarr., is a common fish all round the British coasts; it is sometimes taken of the length of five feet, and is remarkable for its voracity.

LOPHOBAN'CHIL. An order of fishes in Cuvier's arrangement, thus named from *λοφος*, a tuft, and *βανγχος*, a gill, being eminently distinguished by the gills, which, instead of resembling as usual the teeth of a comb, are divided into small round tufts, arranged in pairs along the bronchial arches. They are generally small, and almost without flesh. The whole are comprehended in the single genus *Syngnathus*, Lin.

LORD. A title of courtesy given to all British and Irish noblemen, from the baron upward to all sons of marquesses and dukes, and to the eldest sons of earls; and, as an honorary title to certain official characters, as the *lord* mayor of London, the *lord* chief justice, the *lord* chancellor, &c. Archbishops and bishops, as members of the House of Lords, are lords of parliament: thus we speak of *lords* temporal and spiritual. The title is from Sax. *hleford*, usually derived from *hlaf*, loaf, and *ford*, or *afford*, to give; and hence *lord* is interpreted a *bread-giver*. A *lord* in law is one who possesses a fee or manor, and it was in right of their fiefs that lords came to sit in parliament. In scripture language *Lord* is a name for the Supreme Being; and in the old testament, when printed in capital letters, it is a translation of the name *JEHOVAH*.

LORDS, HOUSE OF. One of the three estates of parliament, and composed of the lords spiritual and temporal.

LORE, Lat. *lorum*, strap. In *ornithology*, the space between the bill and the eye.

LORICA (Lat.). A coat of mail.—2. A lute of clay, &c., for coating retorts and other chemical vessels which are to be subjected to a high heat: hence *lorication*, the application of such lute or lorica to vessels.

LORICA'RIA. A genus of fishes; order *Abdominales*. Name from *lorica*, a coat of mail, the body being covered by plates of mail.

LORIMER. An old name for a bridle-maker: one who made such articles as were required for the furniture of war-horses. The term is Fr. *lormier*, from Lat. *lorum* a thong.

LORIS. A subgenus of Lemurs, comprehending the slow loris or sloth of Bengal (*Lemur tardigradus*, Lin.) and the slender loris (*Lemur gracilis*, Cuv.), also from India.

LO'RY. A bird of the parrot tribe, the *Psittacus Loryus*, Lin.

LOTE TREE. In *Hindoo mythology*, the symbol of creation.

LOTTERY, from *lot*, a share. A game of hazard at which small sums are advanced in the hope of gaining a larger. The state lotteries were abolished in 1826.

LOTUS. The bird's foot trefoil. 1. An extensive genus of plants. *Diadelphia—Decandria*. There are three British species, all perennials; but several of the exotic species are shrubby, some biennial, others annual. The name *lotus*, *λωτος*, has been variously applied to a small herb, a species of trefoil.—2. Some species of aquatic plants of the water-lily tribe, as the *sacred lotus* of the Egyptians, known at present in India under the name of *Tamara*.—3. To several trees or rather shrubs, as that at present known by the vernacular name of *jujube*, and some tree, the fruit of which was said to be so delicious as to make those who tasted it forsake all other desires, hence the proverb, *λωτον εφαγον, lotum gustavi*, I have tasted lotus. This name is also said to be from the nymph *Lotis*, who was changed into this tree.

LOUCH. The first is the Irish, and the *Loch*. } second the Scotch, term for lake.

LOUIS-D'OR. A French gold coin, first struck under Louis XIII. It was reckoned worth 24 livres, or 1*l.* sterling, by which, however, it was under-rated in respect to silver. The new *Louis* is worth 20 francs.

LOUIS (Knights of St.). The name of a military order instituted in France by Louis XIV. in 1693.

LOVE-APPLE. In *botany*, a species of nightshade, the *Solanum lycopersicum*, an annual plant of South America.—2. The fruit of this plant.

LOVE, FAMILY OF. A sect of fanatics in the 16th century, resembling the early anabaptists.

LOVE FEASTS. A religious festival held quarterly by the Methodists.

LOVE-LIES-BLEEDING. In *botany*, a species of amaranth, the *Amaranthus caudatus*, an annual plant. East Indies.

LOW'ER AND UP'ER. In *geology*, the chalk formation or series is generally divided into six members, named the *lower green sand*; the *gault*; the chalk without flints, called the *lower chalk*; the chalk with flints, called the *upper chalk*; and the *Maestricht beds*.

LOW PRESSURE ENGINE, condensing engine. A steam-engine, in the cylinder of which a vacuum is formed whereby the pistons are worked, being forced to descend by the pressure of the atmosphere.

LOW SUNDAY. The Sunday next after Easter.

ΛΟΧΟΥΡΟΜΥ, from λοχος, oblique, and δεξιμος, course. A *oxodromic curve* or

spiral, or a line which a ship makes in sailing on the same point of the compass, thereby cutting all the meridians at the same angle.

LOZENGE, Fr. losange. A figure with four equal sides, having two acute and two obtuse angles. In *geometry* this figure is usually called a *rhomb*, and a similar figure, having the sides unequal, is a *rhomboid*.—2. In *heraldry*, a lozenge is a figure resembling a pane of glass in old casements. All single ladies must place their arms on lozenges.—3. In *pharmacy* and *confectionary*, a small preparation originally in the form of a lozenge: he figure is now departed from.

LOZENGE'E. In *heraldry*, divided lozenge-wise.

LUBBER'S-HOLE. In a ship, the vacant space between the head of the lower mast and the edge of the top: it is so named from a supposition, that a lubber or landsman, not caring to trust himself up the futtock shrouds, will prefer that way of getting into the top.

LUCA'NUS. A genus of pentamerous coleoptera, placed among the *Lamellicornes* by Cuvier. The stag-beetle (*L. cervus*, Lin.) is perhaps the best known species. The larva, which inhabits the interior of the oak for several years previous to its final metamorphosis, is considered as the *cosinus* of the Romans, regarded by them as a delicious article of food.

LU'CERES (Lat.). In *Roman antiquity*, a body of horse composed of Roman knights.

LUCERNA'RIA. The name given by Muller to a genus of polypi; order *Carnosi*. They fix themselves to fuci, and other marine bodies, by a slender pedicle, and their superior portion dilates like a parasol, in the centre of which is the mouth.

LU' CERNE. A species of moon-trefoil, the *Medicago sativa*, a perennial cultivated like clover. It is the *medica* of the ancients, and supposed originally from Media.

LU'CIFER, from *lux*, light, and *fero*, to bring. A name of the planet Venus, so called from its brightness; or more strictly, when she appears in the morning before sunrise: called, when she appears as an evening star, *Hesperus*.—2. Satan, "the prince of darkness."—3. Matches tipped with a mixture of chlorate of potash and sulphuretted of antimony: inflamed by friction on emery paper.

LUCIFER' IANS. A religious sect, the followers of Lucifer, bishop of Cagliari, in the 4th century. The sect held the carnal nature of the soul, and that there is no place of repentance for those who fall.

LUCIM'ETER, from *lux*, light, and *μετρον, measure*. An apparatus for measuring the intensity of light proceeding from different bodies.

LUCUL'ITE. A subspecies of rhomboidal

limestone, named after the consul Lucullus, who admired the compact variety of it so much as to honour it with his name. There are three varieties, the compact, prismatic, and foliated. The compact again is divided into the common or black marble and stinkstone.

LU'ES. A plague or poison, from *lues*, to dissolve, because it produces dissolution.

LUFF. 1. In nautical language, a luff (Arm. *loff*), a weather-gage or part towards the wind.—2. To luff (Arm. *loff*), to turn the head of the ship towards the wind. Hence, in the imperative luff is the order of the helmsman to put the tiller towards the lee-side of the ship, in order to make the ship sail nearer the wind. Luff round, or luff a-lee, is the extreme of the movement intended to throw the ship's head into the wind. A ship springs her luff when she yields to the helm by sailing nearer the wind.

LUFFER BOARDING, Fr. *louvre*. In architecture, a series of inclined boards for filling an aperture in a wall, which admit air, while they exclude rain.

LUFF-TACKLE. A large tackle, not destined for any particular place in a ship, but is moveable at pleasure.

LUO'GER, Dut. *loger*. A vessel carrying

three masts, with a running bowsprit and long sails.

LUO'-SAIL. A small square sail, bent upon a yard that hangs obliquely to the mast at one third its length.

LUMACHEL', Ital. *lumachella*, shell-marble. A variety of common compact limestone, which abounds in the sandstone and coal formations in England and Scotland, and in Ireland, wherever claystone and sandstone occur. Great part of it is made up of shells and corals conglomerated; its predominant coloured delineations are red; whence it is also called *fire marble*.

LUMBA'GO, from *lumbi*, the loins A

troublesome fixed pain about the loins and ligaments of the back.

LUM'BAR. Appertaining to the loins (*lumbi*), as the *lumbar-region*: the loins.

LUMBRICAL, Lat. *lumbricalis*, resembling the earth-worm (*lumbricus*), an epithet of certain muscles, as the small flexors of the fingers and toes.

LUMBRICUS. A genus of worms, comprising the common earth-worms (*L. terrestris*, Lin.). Class *Articulata*; order *Abranchiata*, Cuv. Named *lubricate*, from its slipperiness.

LUMPFERS. Labourers employed to load and unload merchant ships when in harbour.

LUMF'FISH, *Lumpsucker*. A fish, the *Cyclopterus Lumpus*, Yarr., called also sea-owl. The male fish, called *cock-paddle*, is much smaller than the female or *hen-paddle*.

LU'NA. In astronomy, the moon. In alchemy, silver.

LU'NA COR'NEA, horn-silver. Chloride of silver.

LU'NAR, from *luna* (q.v.). 1. Relating to the moon, as the *lunar orbit*.—2. Relating to silver, as *lunar caustic*, or nitrate of silver.—3. *Lunar bone*, one of the wrist bones.—4. *Lunar cycle*, the period of time after which the new moons return on the same days of the year.—5. *Lunar distance* is the distance of the moon from the sun, or from a fixed star or planet, employed at sea in finding the longitude of a ship: this is called the *lunar method*.—6. A *lunar month* is the time in which the moon revolves about the earth.—7. A *lunar year* is 12 lunar months, or 354 days, 8 hours, 48 min., 34 sec.

LU'NA'RE, Os. One of the bones of the carpus; so named from its shape.

LU'NATE, Lat. *lunatus*, crescent-shaped. Formed like a half-moon.

LU'NATIC. 1. In law, a person who is sometimes of a sound mind, and at other times is not: these paroxysms being supposed to be regulated by the moon (*luna*).—2. Applied adjectively to any disease supposed to be regulated by the changes of the moon.

LU'NA'TION, from *luna*, the moon. The space of time between one new moon and another, named also the *synodical month*. It consists of 29 days, 12 hours, 44 min., 3 sec.

LUNETTE', Fr. from *lune*, the moon. 1. In fortification, an enveloped counter-guard, or elevation of earth, made beyond the second ditch, opposite to the place of arms. Lunettes consist of two faces, forming an angle inwards, and differ from a ravelin only in their situation.—2. In optics, a description of glasses or spectacles are called *lunettes*.—3. In architecture, an aperture for the admission of light in a concave ceiling

LUNGS. The organs of respiration in warm-blooded animals. There are two of these organs, each of which occupies its cavity in the thorax. Their substance is of four kinds—vesicular, vascular, bronchial, and parenchymatous. The vesicular substance is composed of air-cells. The vascular invests those cells like a net-work. The bronchial is formed by the ramifications of the bronchia throughout the lungs, having the air-cells at the extremities: and the spongy substance which connects those parts is termed the parenchyma.

LUNISO'LAR, from *luna*, the moon, and *solaris*, from *sol*, the sun; compounded of the revolutions of the sun and moon. Thus, the *lunisolar year* is equal to 532 common years, found by multiplying the cycle of the sun by that of the moon.

LUN'NISTIC, from *luna*, the moon, and *sto*, to stand. The furthest point of the moon's northing and southing in its monthly revolutions.

LUN'ULAR, Lat. *lunularis*, { Crescent-
LUN'ULATE, Lat. *lunulatus*. { shaped, or half-moon-like. Applied, in *botany*, to leaves, pods, &c.

LUP'IA. A genus of diseases, including encysted tumours, the contents of which are of a pulaceous-like consistency: from *λυπια*, to molest.

LUP'INOSE, lupin-like. An epithet for a cutaneous disease, a species of porrigo.

LUP'INUS, the lupine. A genus of leguminous plants of many species. *Diadelphia—Decandria*. Name, according to Martin, from *lupus*, a wolf, because plants of this genus ravage the ground by over-running it. Lupines are cultivated in this country chiefly as a manure.

LUP'ULINE. The bitter principle of the hop (*Humulus lupulus*, Lín.), is thus named by Dr. Ives. It is an impalpable yellow powder, obtained by beating and sifting the hops used in brewing.

LUP'ULUS. An old name for the hop-plant, from *λυπη*, on account of its bitterness. See **HUMULUS**.

LUPUS. 1. In *zoology*, the wolf, a species of the genus *Canis*.—2. In *astronomy*, the wolf, a southern constellation.—3. In *nosology*, a disease of the face, otherwise called *noli-me-tangere*, touch-me-not.

LURCH'ER. A poacher; a dog more used by poachers than sportsmen. The body is slender, the legs strong, tall straight, and the hair long and rough.

LUR'IDÆ, from *luridus*, livid, ghastly. A natural order of plants, the twenty-eighth in the natural method of Linnæus, consisting of such as are highly poisonous, as the datura, atropa, &c.

LUSTRA'TION, from *lustrō*, to purify, a purifying. The lustration was a ceremony of purification, which the Romans per-

formed on their cities, fields, armies, and people, on various occasions, but especially after the numbering of the people by the censors, every fifth year. See **LUSTRUM**.

LUST'RE. In *mineralogy*, lustre is of five kinds. (1.) *Splendent*, when the lustre can be seen at a great distance. (2.) *Shining*, when the reflected light is weak. (3.) *Glistening*, when observed only at a short distance. (4.) *Glimmering*, when the surface presents only luminous points. (5.) *Dull*, when the surface has no lustre.

LUST'RUM, Lat. from *lustrō*, to purify. A term, among the Romans, for the space of five years, at the end of which the people paid the census or tribute, and were sprinkled and purified from all prior defilements. See **LUSTRATION**.

LUTE. In *music*, a stringed instrument, containing at first only five rows of strings, to which were afterwards added six more, with nine or ten stops.

LUTE, } from *lutum*, clay. A compo-
LUTING, } sition of clay, or other tenacious matter, for stopping the junctures of chemical apparatus, to prevent the escape or entrance of gas or air.

LUTE'OLINE. The yellow colouring matter of weld (*luteola*). When sublimed it crystallises in needles.

LUT'HERAN. In *architecture*, a kind of window over the cornice, in the roof of a building, to admit light into the upper story.

LUT'HERANISM. The doctrines of Martin Luther, an Augustine friar, who separated from the church of Rome about 1516, and took the lead in what is now called the Reformation.

LUT'RA. A genus of carnivorous animals of the digitigrade tribe, comprising the otters, of which there are many species. The European, American, and sea otters are the best known. Name from Lat. *lutra* or *lytra*, probably derived from *lutum*, mud.

LYCAN'THROPY, Gr., from *lykos*, a wolf, and *anthropos*, a man. 1. A superstitious belief that men were sometimes changed into wolves.—2. A species of madness so called.

LYC'EUM, *λυκαιον*. A celebrated school at Athens, where Aristotle taught.

LYCH'NIS. A genus of hardy perennial plants. *Decandria—Pentagynia*. Europe. The Ragged Robin is a British species. The Greek name *λυχνος*, a torch, was common to several plants.

LYCH'NITES, *λυχνες*. An ancient name of marble, its quarries being worked by lamp-light.

LYCOPER'DON, the puff-ball. A genus of fungi of many species, as the mollipuf, deerball, truffle, &c. Name from *λυκος*, a wolf, and *παιδω*, pedo.

LYCOPODIA'CEA. The club-mosses. A natural tribe of cryptogamic plants, of which the genus *lycopodium* is the type.

LYCOPODIUM. The club moss. A genus of cryptogamic plants. Order, *Musci*. Name from *λυκος*, a wolf, and *πους*, a foot, in allusion to the shape of one of the species. The *L. clavatum*, or wolf's claw, the seed of which is remarkable for its combustibility, &c., is used in theatres to imitate lightning.

LYCO'SA. The name given by Latreille to a genus of arachnides. The lycosæ are extremely voracious. A species of this genus, the *Tarentula*, so called from *Tarentum*, a city of Italy, in the environs of which it is common, is highly celebrated. The poisonous nature of its bite is thought to produce the most serious consequences, being frequently followed by death or *tarentism*, results which can only be avoided by the aid of music and dancing.

LYDIAN STONE. The *Lydius Lapis*. A flint-slate, used by the Greeks and Romans for the trial of gold and silver.

LYING PANELS. In *architecture*, those in which the grain of the wood runs horizontally.

LYING-TO. In *navigation*, the situation of a ship when she is retarded in her course, by arranging the sails in such a manner as to counteract each other with nearly equal effect.

LYMPH. The liquid contained in the lymphatic vessels of the body. It is transparent and colourless.

LYMPHATIC. 1. Of the nature of lymph. —2. The name of an absorbent vessel, which carries the lymph into the thoracic duct, where it mixes with the chyle. The lymphatics of the body are small and transparent, originate from all the cavities of the body, and form with the lacteals of the intestines the *absorbent system*.

LYNCH-LAW. The irregular and revengeful species of justice which was administered by the populace in some parts of the United States, owing to the difficulty of enforcing regular law. It is named after a Virginian farmer, of the name of Lynch, who took the law into his own hands in flogging a thief.

LYNX. A sub-genus of *felis*, of which there are four or five species, or rather varieties, known in commerce by the qualities and colours of their fur. The most beautiful is the *F. cervaria*, emm., as large as a wolf, and which is found in Asia: the fur is reddish-grey, finely spotted with black. Those of Canada and Sweden (*F. borealis*, Temm.) are ash-coloured grey with few spots. The Bay Lynx (*F. ruffa*, Guld.) of North America is reddish fawn, mottled with brown. The Caracal (*F. caracal*, Lin.) from Persia, Turkey, &c., is the true lynx of the ancients.

LYRA The harp. A constellation of the northern hemisphere, which owes its name to the lyre which Apollo gave to Orpheus.

LY'RATE, from *lyra*; lyre-shaped. Applied to leaves divided transversely into several segments, the segments gradually increasing in size towards the extremity of the leaf.

LYSIMACHIA. The loose-strife. A genus of herbaceous plants. *Pentandria—Monogynia*. Temperate and cold climates. Named after Lysimachus. There are four British species, among which is the common loose-strife, and money-wort, both perennials, the latter very common in our ditches.

LYSIMACHIE. A natural family of plants, of which the genus *Lysimachia* is the type.

LY'SA, *λυσσα*. Hydrophobia.

M.

M, the thirteenth letter of the alphabet, as a numeral stands for 1000, and with a dash over it, *M*, it stands for a thousand times a thousand, or 1,000,000. In *astronomical tables*, &c., *M* stands for meridional, meridian, mid-day, &c. In *law*, *M* is the brand or stigma of a person convicted of manslaughter and admitted to benefit of clergy. In *medical prescriptions*, it is used to denote a handful (*manipulus*), as of herbs, flowers, &c.; and sometimes it is a contraction of *misc*: thus *m. f. haust.* mix and let a draught be made. *M* is also an abbreviation of many Roman names, as Marcus, Martius, &c. *M. A. Magister Artium*, Master of Arts.

MAC, } A Scotch prefix to surnames
Mc, } signifying *son*, as McDonald, for Donaldson; synonymous with the English *Fitz*, and the Irish *O*.

MACA'CUS, } A genus of mammiferous
MACA'QUES, } animals. Order *Quadrumana*. The maned Macaque (*Simia Silenus* and *Conina*, Lin.) from Ceylon, and the Pig-tailed Baboon (*M. rhesus*), from Bengal, are species. The Inui of Cuvier are also macaques without tails.

MACAD'AMIZING. A method of making roads, first publicly introduced by Mr. Macadam. It consists in breaking the stones small, that they may bind with the earthy and pulverised matters of a common road into a firm and smooth mass.

MACANDOU'. The name given by the natives to a tree of Malacca, the fruit of which is roasted and eaten as a cure for dysenteries, cholera morbus, and other similar complaints.

MACARO'NI, } A kind of biscuit made of
MACCARO'NI, } flour, eggs, sugar and almonds, highly prized as an article of luxury by the Italians. In commerce, it is known by the name of Genoese paste

and is usually made up in long tubes of the thickness of a goose-quill.

MACARON'IC, } An epithet for a bur-
MACARON'IAN. } lesque species of poetry, made up of a jumble of Latin modernized, or of native words with Latin terminations.

MACAS'SAR POISON, *Ippo*. The gum of a tree which grows in the isle of Celebes, in the Indian ocean, with which the Malaysians anoint their arrows to make the wound fatal.

MACAW. A name common to those parrots which have a long cuneiform tail. See PSITTACUS.

MACE, Lat. *macis*, a spice; the middle bark of the nutmeg. 1. A thick, tough, reticulated, unctuous membrane, of a lively reddish yellow colour, which envelopes the shell of the nutmeg.—2. *Fr. masse*, a club. An ensign of authority borne before some official persons by a *mace-bearer*. Originally the mace was a club or instrument of war, made of iron, and used by cavalry.

MACEDO'NIANS. In ecclesiastical history, a sect of Christians who sprung up in the 4th century, denominated after a bishop of Constantinople, who denied the existence of the Holy Ghost.

MACERATION, from *macer*, thin. The process of soaking bodies in water or other fluid, in order to extract their virtues. It differs little from *digestion*.

MACHETTES. The *Ruffs*, a genus of birds; order *Grallatorie*, family *Lingirostris*, Cuv. One species only is known, the *Tringa pugnax*, Lin., somewhat smaller than a snipe.

MACH'IAVELISM. The principles inculcated by Machiavelli, an Italian writer, secretary, and historiographer to the republic of Florence. Political cunning and artifice intended to favour arbitrary power. Hence *Machiavelian*, one who adopts the principles of Machiavel. This word is also used adjectively.

MACHICOLATED. In *ancient architecture*, a building whose parapets project beyond the faces of the walls, and are supported by arches springing from large corbels.

MACHINE, Lat. *machina*. An instrument employed to regulate motion, or to increase either its velocity or its force. The term is therefore more particularly significant of the contrivance interposed between the natural force and that employed in fulfilling the end desired, as to a water-wheel, which is situated between the water and the apparatus for grinding corn or pumping water, as the case may be. The tackle connected with most contrivances are also known by the general name of *machinery*.—Machines are classed under different denominations, according to the agents by which they are put in motion, the purposes they are intended

to effect, or the art in which they are employed, as hydraulic, pneumatic, magnetic, carding, spinning machines, &c. They are simple or complex, according to the number of their parts.

MACHIN'ERY. A general term for combinations of mechanical elements. The word conveys a more extended idea than *machine*, which is a particular piece of machinery, applied to a special purpose.

MACR'EREL, } Dut. *mackreel*, Ger. *mack-*
MACKAREL, } *rele*, Ir. *mackreil*, Wel.
macrell. A fish, the *Scomber Scomber*, Yarr., *S. vulgaris*, Flem., very common on the English coasts, at various periods of the year. The mackerel is easily taken by a variety of baits, particularly so during a gentle breeze of wind, hence termed a *mackerel-breeze* or *mackerel-gale*. The fish is highly esteemed as an article of food. When alive, it possesses great symmetry of form, and much brilliancy of colours.

MA'CLE. In *mineralogy*, the hohi spath of Werner, and hollow spar of Jameson. Macle occurs only in crystals, the form of which is a four-sided prism. It is opaque, sometimes translucent; colours white or gray, often shaded with yellow, green, red, &c. Sp. gr. 2.94. Found in black argillaceous slate.

MACMIL'LANITES. A religious sect in Scotland, descended from the Covenanters in the 17th century. They are more generally known as Cameronians, from their founder, Richard Cameron. The name of Macmillanites they derived from the first preacher of their doctrine in the west of Scotland, whose name was Macmillan: it is confined to Glasgow and its vicinity.

MA'CROSCOM, from *μακρος*, great, and *κοσμος*, the world. The universe or visible system, in distinction to *microscum*, or world of man.

MACRODACT'YLE. A family of birds; order *Grallatorie*, Cuv. Name from *μακρος*, long, and *δακτυλος*, a finger, the family being furnished with very long toes fitted for walking on the grass of marshes, and even for swimming. The jacanas, rails, coots, sheath-bills and flamingos, are examples.

MACROM'ETER, from *μακρος*, great, and *μετρον*, measure. A mathematical instrument contrived to measure inaccessible objects, by means of two reflectors on a common sextant.

MAC'ROPS. The name given by Shaw to a genus of Marsupialia, comprehending the kangaroos, from *μακρος*, long, and *πους*, a foot.

MACROSCEL'IDES. An insectivorous mammal, which inhabits the rocky mountains of the western part of the district of Algiers, recently observed by M. Wagner.

MAC'ULA (Lat.), a spot; hence *maculated*, spotted; marked with small spots. *Maculae*. 1. In *nosology*, a detached efflorescence of the skin, or discoloured patches. —2. In *astronomy*, spots in the luminous faces of the sun and moon.

MAD APPLE. The fruit of the *Solanum melongena*, of an oblong egg-shape. It is boiled in soups and sauces in countries where it grows, and is accounted very nutritive.

MAD'DER. The root of the *Rubia tinctorum*, extensively used in dyeing red. The colour which it imparts is less bright than that from cochineal, but it has the advantage of being cheaper and more durable. The plant is a native of the south of Europe, Asia Minor, and India, but it is now extensively cultivated in Holland, Alsace, Provence, &c.

MADON'NA, Ital. for my lady. An Italian term applied to the Virgin Mary. Pictures representing the Virgin are called *Madonnas*.

MAD'REPORES, from Fr. *madré*, spotted, and *pore*, a small cavity. Stony polyypi with concentric laminae resembling stars. In a living state, the stony matter is covered with a skin of living gelatinous matter, fringed with little bunches of tentacula; these are the polyypi. *Madrepores* are sometimes united and sometimes detached; where the laminae take a serpentine direction, they are called *meandrina* or brain-stones.

MADREP'ORITE. A variety of limestone, so called because it is composed of numerous small prismatic concretions, resembling the stars of *madrepores*. It contains 13 silex, 10 alumina, and oxide of iron, 16.

MAD'DRIER. 1. A flat beam of wood placed at the bottom of a moat, to support a wall. —2. A thick plank used for the platform of batteries, and to support the earth in the galleries and chambers of mines, &c. —3. A plank of wood, covered with some incombustible material, as a defence against fire.

MAD'RIGAL. A sort of short amorous poem, containing a certain number of free unequal verses, not confined to the scrupulous exactness of a sonnet, or the subtilty of the epigram, but containing some delicate and simple thought, suitably expressed. The term is common to the French, Spanish, Portuguese, and Italian languages, but its origin is not ascertained.

MENU'RA. The name given by Shaw to a genus of passerine birds, placed by Cuvier among the *Dentirostres*. The *M. lyra*, distinguished by the great tail of the male, inhabits the rocky districts of New Holland. It is somewhat less than a pheasant.

MAE'STO. } An Italian word signifying
MAESTO'SO. } majestic, and used in music as a direction to play the part with force and grandeur.

MAESTR'ICHT BEDS. In *geology*, the name given to the uppermost member of the cretaceous group, from Maestricht, a town of the Netherlands. These beds are marine and calcareous, with masses of chert and calcedony, with ammonites and other allied shells.

MAG'AZINE, from Arab. *grazana*, to store. A store of arms, ammunition, provisions, &c., also the building or place so appropriated. —2. A periodical publication, containing miscellaneous papers or compositions, the first of which in England was the *Gentleman's Magazine*, commenced in 1731, under the name of *Sylvanus Urban*, by Edward Cave. It still exists.

MAGEL'LANIC CLOUDS. In *astronomy*, three permanent whitish appearances, like clouds, seen among the southern constellations, and having the same apparent motion as the stars, first described by Magelhaens, the circumnavigator.

MAGGIO'RE. An Italian epithet used in music, and signifying greater.

MA'GI, } Wise men or philosophers of
MA'GIANS. } the East, whose skill was magic. The magi of Persia and neighbouring countries maintained the existence of a good and evil principle, abominated the adoration of images, worshipped God only by fire, which they looked upon as the sole appropriate symbol of deity. This was the religion which Zoroaster reformed. The magicians were the depositories of all the learning of their age, and were hence able to produce effects so astonishing to the ignorant as to be thought supernatural. Hence magic came, in process of time, to signify skill acquired by intercourse with demons, and astrology (in its later sense), enchantments, and witchcraft, sprung up as branches of this fanciful science. Now, magic and jugglery mean the same thing, and instead of being the most accomplished intellects of the age, magi are the most contemptible and opprobrious members of the quack tribe. The sect of magi still exists in Persia under the name of *gaurs*.

MA'GIC. Originally signified a knowledge of the more sublime parts of philosophy, but latterly a diabolical kind of science, acquired by the assistance of the devil and departed souls. See *Magi*.

MA'GIC SQUARE. A square divided into cells, in which the natural numbers, from 1 to the proposed square, are so posited that the sum of each row, whether taken horizontally, vertically, or diagonally, is equal to a given number. Thus the sum in the following square is 175.

22	47	16	41	10	35	4
5	23	48	17	42	11	29
30	6	24	49	18	36	12
13	31	7	25	43	19	37
38	14	32	1	26	44	20
21	39	8	33	2	27	45
46	15	40	9	34	3	28

The *magic square of squares*, invented by Dr. Franklin, is an extension of the above, and the *magic circle of circles* is founded on the same principle. The latter consists of eight concentric circles, with eight radii, in the circumferences of which all the natural numbers, from 12 to 75, are so posited, that the sum of the numbers in each circumference, together with the central number 12, is equal to 360; and the numbers in each radius, including always the central number, is also equal to 360.

MAGIC LANTERN. An optical machine, whereby little painted images are represented so much magnified as to be regarded as magical by those unacquainted with optical science. It consists of a common lantern, with a lamp and reflector in it; opposite the lamp and reflector are two lenses, fitted into a tube: one lens throws the light upon the object, and the other one magnifies the image which is received upon a transparent screen.

MAG'LIF. A gelatinous substance used by painters for conveying thin colours, consisting of a mixture of linseed oil and mastic varnish.

MAGILUS. A genus of molluscs: order *Tubulibranchiata*. The shell is spiral at first, and then extends itself in a tube more or less straight. The animal is not known.

MAGISTER, the Latin word for *master*: used in *law* to denote a person who has attained to a degree in science. Doctors were formerly called *magistri*. A *Magister Equitum* was an officer among the Romans, subordinate to the Dictator.

MAGISTERY, Lat. *magisterium*. The term used by old chemists to denote what is now called a *precipitate*.—2. Used also to denote a peculiar and secret method of making some chemical preparation, as it were by a masterly process.

MAG'MA, from *μασσω*, to blend. 1. A thick ointment.—2. The feces of anything when the thinner parts are poured off.—3. A confection.—4. Any crude

mixture of mineral or organic matters in a thin pasty state.

MAG'NA CHARTA. The Great Charter of Liberties, obtained by the English Barons from King John in 1215. It has been rectified by various subsequent kings.

MAGNAN'IER. The name given, in the Southern Departments of France to the proprietor or manager of a nursery in which silk-worms are reared upon a great scale. The term is formed from *magnans*, a vernacular name for silk-worms.

MAG'NATES. In Hungary, the title of the noble estate in the national representation.

MAGNE'SIA. A country in Lydia. The old chemists gave this name to such substances as they conceived to have the power of attracting something from the air, or which became heavier by exposure to the air; but in the language of modern chemistry, the name is restricted to one of the primitive earths, proved by Sir H. Davy to be an oxide of *magnesium*. It is a fine white powder, without taste or smell, very slightly soluble in water. It changes the purple infusion of red cabbage to a bright green. It is readily obtained, by precipitation with soda or potash, from its sulphate (Epsom salts), but is usually procured by calcining the artificial or natural carbonate. It is rarely found native.

MAGNE'SIAN LIME'STONE. A mineral which crystallises in the rhombohedral system. It consists of 1 prime equivalent of carbonate of lime = 50, associated with 1 of carbonate of magnesia = 42. The massive magnesian limestone is a marine deposit, found in England in vast masses. It is an excellent building stone, but is not reckoned good as a manure, except for some particular soils. It belongs to the new red sandstone group. It is usually of a yellow or yellowish brown colour, and is distinctly stratified.

MAGNE'SIUM. The metallic basis of magnesia. This earth consists of 61.21 magnesium and 38.79 oxygen.

MAG'NET. The native *magnet*, or *loadstone*, is a mineral consisting of protoxide and peroxide of iron in equivalent proportions. It possesses the peculiar property of attracting metallic iron; of assuming a determinate position with regard to the axis of the earth, when freely suspended; and of communicating these properties to iron by contact. A bar of steel to which these properties have been communicated is a *permanent artificial magnet*; the position which it assumes with regard to the axis of the earth, when suspended freely, is the *magnetic meridian*, and an apparatus fitted at all times to show this meridian constitutes a *compass*, the principal part of which is the *magnetic needle*. The term *magnet* is said to be derived from *Μαγνης*, *Μαγνητης*, the name of a Greek shepherd, who first ob-

served, on Mount Ida, the attractive power which the loadstone exercised upon his iron crook. The most probable supposition, however, is that it took its name from *Magnesia*, a country of Lydia, where it was first discovered; and this conjecture is confirmed by the fact, that the magnet was often called by the ancients *Lapis Heracleus*, from *Heraclea*, the capital of *Magnesia*.

MAGNETIC COMPENSATOR. A contrivance by Mr. Barlow, for eliminating the influence of a ship's guns and other iron-work, in deranging the bearings of the compass.

MAGNETIC NEEDLE. A slender piece of steel, suspended on its centre, and magnetised, which is free to turn, and always settles in the magnetic meridian.

MAGNETIC PYRITES. Native black sulphate of iron. It attracts the needle.

MAGNETISM. The power of the magnet.

—2. That branch of physics which has for its object the investigation of all magnetic phenomena (whether natural, like the loadstone, or artificial, like bars of steel to which magnetism has been permanently communicated), of their reciprocal action upon each other, of the laws of the forces which they develop, of the methods of making artificial magnets, and other magnetic phenomena exhibited by the globe which we inhabit. For **ANIMAL MAGNETISM**, see **MESMERISM**. For **TERRESTRIAL MAGNETISM**, see **TERRESTRIAL MAGNETISM**.

MAGNETO-ELECTRICITY. Electricity produced by magnetism. The phenomena of electro-magnetism are produced by electricity in motion: accumulated electricity, when not in motion, exerts no magnetic effects. Dr. Faraday early felt convinced that as every electric current is accompanied by a corresponding intensity of magnetic action at right angles to the current, good conductors of electricity, when placed within the sphere of this action, should have a current induced through them, or some sensible effect produced, equivalent in force to such a current. These considerations, with their consequence, the hope of obtaining electricity from ordinary magnetism, stimulated him to investigate the subject experimentally, and he was rewarded by an affirmative answer to the question proposed. Dr. Faraday not only succeeded in obtaining galvanometrical indications of an electric current, but by a modified apparatus, in which the electric current was induced by an electro-magnet, he actually succeeded in obtaining the electric spark. The electric spark was afterwards obtained from a common magnet, by Nobili and Antinori, and in this country by Professor Forbes.

MAGNETOMETER. An instrument for

measuring the intensity of electrical magnetism.

MAGNETOMOTOR. A term applied to a voltaic series, which, producing a great quantity of electricity of low tension, beautifully exhibits the phenomena of electro-magnetism.

MAGNIFICO. The title given by courtesy to a nobleman of Venice.

MAGNIFIER, } A convexo-convex

MAGNIFYING-GLASS. Lens, which increases the apparent size or magnitude of any body seen through it, by increasing the angle under which it is seen. *Magnifying power* is the amount of apparent enlargement of an object, by means of such magnifier, or other optical instrument, as the microscope. *Magnify*, from *magnus*, great, and *facio*, to make.

MAGNITUDE denotes the extension of anything—whether it be in one direction, as a line; in two directions, as a surface; or in three directions, which constitute a solid. *Geometrical magnitudes* may be conceived to be generated by motion, as a line by the motion of a point; a surface, by the motion of a line; and a solid, by the motion of a surface.—2. *Apparent magnitude* is the angular space under which a body appears when viewed from a distance. The term is used chiefly in *astronomy* and *optics*.

MAGNOLIA. The laurel-leaved tulip-tree, a magnificent genus of trees and shrubs. *Polyandria—Polygynia*. There are 17 species; but the *M. grandifolia* of the warm parts of N. America is that most prized. It is remarkable for its large evergreen leaves and splendid white flowers. Several of the other species are also cultivated for ornament: as the *M. glauca*, or beaver-wood of America; the *M. macrophylla*, also of America; and the *M. conspicua*, or youlan, a greenhouse shrub from China.

MAHA'BARATA. One of the great Indian epic poems.

MA'HALEB. (1.) A species of cherry cultivated in our gardens. (2.) The fruit of this shrub affords a violet dye, as well as a fermented liquor like kirschwasser.

MAHOO'ANT. The wood of the *Sويتenia mahogani*, a large tree which grows in the West Indies and Central America. The principal importations of mahogany into Great Britain are made from Honduras and Campeachy.

MAHOM'ETANS, see **MOHAMMEDANS**.

MAIDEN. An instrument formerly used in Scotland for beheading criminals. It was the prototype of the French guillotine.

MAIDEN ASSIZE. In *law*, an assize in which no person is condemned to die.

MAIDENHAIR-TREE. The *Oingko biloba*, a tree of China and Japan. Its fruit, about the size of a damask plum, contains a

kernel resembling that of our apricot, much used as a dessert at all public feasts. It is said to promote digestion.

MAL'HEM. } *Maim.* In *law*, a wound by
MAL'HEM. } which a person loses the use
of some member that might have been a
defence to him. The term is from Norm.
mahemer, or *mahaigner*, to maim.

MAIL. Fr. *maille*. A coat of steel network, formerly worn for defending the body against swords, poniards, &c. It was of two kinds, chain and plate mail: the former consisting of iron rings, each having four others inserted into it; the latter consisting of small laminae of metal, laid over one another, like the scales of a fish, and sewed down to a strong linen or leathern jacket.—2. In *ships*, a square machine, composed of rings interwoven like net-work; used for rubbing off the loose hemp from lines and white cordage.

MAILED. 1. In *heraldry*, speckled, as the feathers of hawks, partridges, &c.—2. In *natural history*, protected by hard and strong scales.

MAILS. } In *Scottish law*, the rents of
MAILLS. } an estate.

MAIN'OR, from Norm. *meinoetre*, from Lat. *à manu*, in the work. An old law-term, denoting the being taken with the thing stolen in possession.

MAIN'PERNOR, from Norm. *main*, and *pernon*, *pernez*, for *prenon*, *prenex*. A surety for a prisoner's appearance in court at a day. *Mainpernors* differ from *bail* in that a man's *bail* may imprison or surrender him before the stipulated day of appearance; *mainpernors* can do neither. They are bound to produce the prisoner to answer all charges whatsoever.

MAIN'PRIZE, from Norm. *main*, and *pris*. A writ directed to the sheriff, commanding him to take sureties for the prisoner's appearance; these sureties are called *mainpernors*.

MAIN-SHEET. The sheet that extends and fastens the main-sail.

MAIN'TENANCE. In *law*, an officious intermeddling in a suit in which the person has no interest, by assisting either party with money or means to prosecute or defend it.—2. A *cap of maintenance* is a cap of dignity, formerly belonging to the rank of a duke; also the name of the lord-mayor's fur-cap.

MAIN-TOP. The top of the main-mast of ship or brig.

MAIN-YARD. That on which the main-sail is extended.

MAIZE, Indian corn. One of the cereal grasses, the *Zea mays*, the only species of corn cultivated in America previous to its discovery. There are numerous varieties, but the ear in general consists of about 600 grains set closely together in rows, to the number of eight, ten, or twelve. The grain, as a bread-corn, is liked by some;

it contains much mucilage but little gluten, and is therefore inferior to wheat, and even rye. In the Lettish and Livonic languages, *mayse* is bread; in Irish *maise* is the word for food.

MAJESTY. A title of emperors, kings, and queens; Lat. *majestas*, from the root of *magis*, *major*, more, greater. The title was substituted for *highness*, in the reign of Henry VIII.

MAJOR, Lat. for greater. In *music*, an epithet for the modes, in which the third is four semitones above the key-note, and to intervals consisting of four semitones. *Major* and *minor* are terms which apply to concords which differ from each other by a semitone. The difference between the fifth and fourth is a *major tone*; the difference between the major fourth and third is a *major semitone*. The major tone surpasses the minor by a comma.—2. In *military affairs*, an officer next in rank above a captain, and below a lieutenant-colonel; the lowest field-officer. The *drum-major* is the first drummer in a regiment. A *serjeant-major* is a non-commissioned officer subordinate to the adjutant. For *major-general* and *brigade-major*, see *GENERAL* and *BRIGADE*.—3. In *logic*, the first proposition of a regular syllogism, containing the principal term.—4. In *law*, a person of full age to manage his own affairs. A man is major at 21, and a woman at 18, years of age.

MAJORAT. In *law*, the right of succession to property according to age.

MAJOR DO'MO. An Italian term used to signify a steward, or master of the household.

MAJOR TERM. In *logic*, is, in a syllogism, the predicate of the conclusion. The major premise is that which contains the major term. In hypothetical syllogisms, the hypothetical premise is called the major.

MAJUSCULE or **CAPITALES LITERÆ.** In *diplomatics*, capital letters.

MAKING-UP. With *distillers*, the reducing of spirits to a standard of strength, usually called proof.

MA'LA. In *law*, evils; *Mala in se*, evils in themselves. A phrase denoting unlawful acts, as theft, murder, &c.; as distinguished from *mala prohibita*, evils prohibited by positive written law.

MA'LABAR PLUM. In *botany*, the *Eugenia jambos*, also its fruit. The tree grows plentifully on the coast of Malabar, and the fruit is much esteemed.

MALABATH'RUM, Indian leaf. The leaf of the *Laurus cassia*, so named from Malabar, in India, whence it is brought, and *betre*, a leaf.

MALAC'CA BEAN. The fruit of the *Anacardium Indicum* or *Orientalis*. It very closely resembles the cashew nut.

MALAC'CA ROOT. The root of the *Sagitta*

ria alexipharmaca, or *Arundo Indica*, cultivated with great care in the West Indies for that part of the plant, which is considered an antidote to several poisons.

MAL'ACHITE, from *μαλαχη*, mountain-green. A native green carbonate of copper, thus named from its colour. It occurs in veins, and in beds of gneiss, mica-slate, red sandstone, &c.

MALACOL'OGY, *μαλαχια*, and *λογος*, discourse. The science of the molluscs.

MALACOPTERY'GII, from *μαλακος*, soft, and *πτερυξ*, a fin; soft-finned fishes. These form the second division of common fishes in the system of Cuvier, and are divided into three orders, characterised by the position of the ventrals, or by their absence. 1. The *M. abdominales*, form an order in which the ventrals are suspended to the under part of the abdomen and behind the pectorals. This order comprehends most of the fresh-water fishes.—2. The *M. subbranchiati*, form an order characterised by the ventrals being inserted under the pectorals.—3. The *M. apodes* form but a single natural family, that of the *Anguilliformes*. Epithet, *malacopterygius*.

MALACOSTEON, from *μαλακος*, soft, and *οστειον*, a bone; a softness of the bones. A rare disease of the bones, wherein they can be bent without fracturing them. The causes are not known, and all the cases on record have proved fatal.

MALACOSTOMI, from *μαλακος*, soft, and *στομα*, a mouth. An order of fishes destitute of teeth in the jaws, vulgarly called leather-mouthed. The carp and bream are examples.

MALACOSTRAC'A, from *μαλακος*, soft, and *οστρεακον*, a shell; soft-shelled-insects. In the system of Cuvier the malacostracans form the first section of the crustaceans. They are distinguished by having sessile eyes, solid teguments of a calcareous nature, and ten to fourteen feet, generally unguiculated. They are divided into five orders: the Decapoda, Stomapoda, Læmodipoda, Amphipoda, and the Isopoda. The first four embrace the genus *Cancer*, Lin., and the last, the genus *Oniscus*, Lin.

MAL'ANDERS, from Fr. *mal*, ill, and *andre*, to go. A disease to which horses are liable, consisting of ulcerous chaps on the inside of the fore-legs, which void a red acrid matter.

MALAPTERU'RUS. The name given by Lacépède to a genus of abdominal malacopterygii, of which only one species is known, the *M. electricus*, the *Rasch* or *Thunder* of the Arabs, celebrated like the Torpedo and Gymnotus for its faculty of communicating an electric shock. Name from *μαλακος*, soft, *πτερον*, a fin, and

ουρα, a tail. The fish being distinguished from the Silurus by the radiated fin on the back being replaced by a small adipose one on the tail, and the softness of the pectoral rays. From the Nile and the Senegal.

MAL'CONA. The name given by Vaillant to a genus of climbing birds (*Scansoria*, Cuv.) of Ceylon. There are several species, said to live chiefly on fruit.

MALCO'MIA, the *Sea-rocket*. A genus of herbaceous plants. *Tetradynamia*—*Siliquosa*. Temperate climates.

MALE. 1. In botany, a male flower is one which bears stamens only. *Male fern*, a name of the *Aspidium filix mas*, or polypody. *Male orchis*, a species of orchis called also satyrium and dog's-stone. *Male speedwell*, a name of the *Veronica officinalis*.—2. In mechanics, a screw which has the thread on the outside of a cylinder is called a male screw; that which has the thread in the inside of a hollow cylinder being termed a female screw.

MALIC ACID. An acid which may be procured from the juice of many unripe fruits, but named thus from its having been first obtained from that of the apple (*malus*). It is often associated with the citric, tartaric, and oxalic acid in green fruits. It crystallises, and by distillation affords *pyromalic acid*.

MALLEABIL'ITY. A property belonging to certain metals of being extended into thin plates by hammering (*malleus*, a hammer). Gold-leaf is the best example of this property. Malleability is directly opposed to *brittleness*, and differs from ductility (q.v.).

MALLEATION, from *malleus*, a hammer. A form of chorea in which the person affected has a convulsed action of one or both hands, and strikes the knees as if with a hammer.

MALLEOLUS. In anatomy, dim. of *malleus*, a hammer. The termination of the tibia at the ankle is called *malleolus internus*; and the corresponding part of the fibula *malleolus externus*.

MAL'LEUS. A hammer. 1. A bone of the ear is thus named from its shape.—2. The name given by Lamarck to a genus of irregular and inequivalve shells, placed among the ostracea by Cuvier. The *ostrea malleus*, Lin., is the best known species. It ranks among the rare shells. It has two ends of the hinge extended, forming something like the head of a hammer, of which the valves, elongated in a transverse direction, represent the handle. From the archipelago of India.

MAL'LUM. The public assembly of the people according to the usage of the old Teutonic nations.

MALT, Sax. *mealt*. Grain (chiefly barley) which has become sweet by the con-

version of its starch into sugar, by an incipient growth or germination artificially induced, called malting. The grain is first steeped in water until it germinates to a certain extent, when it is stopped by the application of heat in a *malt-kiln*. The quantity of grain malted in Great Britain and Ireland is about $4\frac{1}{2}$ million quarters yearly.

MAL'THA. *Mineral pitch.* A soft glutinous substance, which smells like pitch, and dissolves in alcohol. It seems to be inspissated petroleum.

MA'LUS, μαλον, the apple-tree. See **PYRUS**.

MAL'VA. *The Mallow.* An extensive genus of plants. *Monadelphia*—*Polyandria*. There are three or four herbaceous species natives of Britain; but many of the exotic species are permanent plants. *Malva* is a Latin corruption of *malache*, the *μαλαχη* of Pliny, from *μαλακος*, soft, in allusion to the softness of the leaf.

MALVA'CEÆ. A natural order of plants, consisting of mallows, hollyhock, &c., equivalent to the columnifera of Linnaeus. Type, the *malva*.

MAM'ALUKES, } The former military force
MAM'ELUKES, } of Egypt. The Mamelukes were originally Turkish and Circassian slaves, but afterwards masters of the country. Their power was annihilated by Mehemet Ali, in 1811, by destroying the Beys.

MAM'MALIA, } A great division of the
MAM'MALS, } animal kingdom, comprising animals which have *mammæ* and suckle their young. Epithets *mammalian* and *mammiferous*. The mammalia are placed at the head of the animal kingdom, not only because it is the class to which Man himself belongs, but also because it is that which enjoys the most numerous faculties, the most delicate sensations, the most varied powers of motion, and in which all the different qualities seem combined in order to produce a more perfect degree of intelligence—the one most fertile in resources, most susceptible of perception, and least the slave of instinct.

MAMMAL'OGY, *mamma*, teat, and *logos*, discourse. The science of Mammals.

MAM'MARY. Pertaining to the *mammæ*, as the mammary glands, &c.

MAM'MEA. *The mammee-tree:* a genus. *Polyandria*—*Monogynia*. One species, a tree of Jamaica which affords a delicious fruit, also called *mammea*. It is named from its vernacular appellation in the West Indies, *mamei*, retained by Linnaeus, because of the resemblance of the fruit in shape to *mammæ*. It is sometimes called the West Indian apricot.

MAM'MIFER, from *manmma*, a breast, and *fero*, to bear. An animal having breasts and which suckles its young. The *mammifers* form the class *mammalia* (q. v.).

MAM'MILLATED. Having little protuberances like *mammæ*. Thus flint containing chalcedony is generally mammillated, and shells are said to be mammillated when the apex is rounded like a teat.

MAM'MOTH. An extinct genus of animals allied to the elephant. See **MASTODON**.—The origin of the word *mammoth* is not agreed upon. Some state it to be a Russian word, *mamant*; others that it is a Siberian word, signifying "animal of the earth." It is also derived from *Behemoth*, an Arabic word for elephant.

MANA'TI, } A genus of herbivorous ce-
MANA'TUS, } tacea, the *Lamantins*, which from their manner of living are termed *sea-cows*, *mermaids*, &c. The *manati* are found near the mouths of rivers in the hottest parts of the Atlantic ocean, and grow to the length of 15 feet. Those of the American rivers differ specifically from those of the African. They employ their fins with great dexterity in carrying their young and in creeping: hence the comparison of these organs with hands, and the name *manatus* (handed) applied to the animal, of which *lamantin* is a corruption.

MANCHIN'E'EL. *Hippomane*. A tree of the West Indies, which grows to the size of a large oak. The fruit is poisonous, and the sap corrosive, but the wood is much valued by cabinet-makers.

MAN'CIPLE, Lat. *maniceps*, a clerk of the kitchen, or caterer. The steward of the Inner Temple was formerly so called, and the name and office are still retained in colleges in some universities.

MANDA'MUS. In *law*, a writ issued by the Court of Queen's Bench, commanding the performance of something; and so named from the initial word of the writ.

MANDARINS'. Magistrates and governors of provinces in China. They are chosen out of the most learned men, and their government is always at a great distance from the place of their birth.

MAN'DIBLE, from *mandibulum*, a jaw. The instrument of manducation. The upper jaws of insects are called *mandibles*, and the under jaws *maxillæ*; but both the upper and under parts of the bill of a bird are termed *mandibles*. The mandibles of insects are two strong corneous hooks, which move horizontally, and cut objects by crossing their edges like the blades of a pair of scissors.

MANDIS'ULATA. A grand section of insects, including all those which preserve their organs of mastication in their last stage of metamorphosis.

MAN'DIOL. The American name of *cas-sara*, which is extensively cultivated in America for the sake of the nutritive fœcula in its stems.

MAN'DOLINE. A musical instrument resembling the lute and guitar; round like

the first, but smaller than either, and held in the left hand.

MAN'DORE. A sort of lute, usually with four strings.

MAN'DRAKE. A plant, the *Atropa Mandragora*, the root of which is said to bear a resemblance to the human form. The fruit is a globose berry, called by the ancients the apple of love, and they named Venus after it, *Mandragoritis*. It had numerous absurd properties ascribed to it.

MAN'DREL. An instrument for confining in a lathe the article to be turned. There are *flat mandrels* for turning flat boards on; *pin mandrels* which have a long shank to fit into a round hole made in the work to be turned; *hollow mandrels* which are hollow of themselves, and are used for turning hollow work; *screw mandrels* for turning screws, &c.

MAN'DRILL. The *Simia maimon* and *mormon*, Lin. The mandrills, of all the monkeys, have the longest muzzle (30°); their tail is very short, and they are brutal and ferocious. It is difficult to imagine a more hideous or extraordinary animal than the mandrill of Guinea. It attains to the size of a man, and is the terror of the negroes.

MAN'GE. A school for teaching horsemanship and for training horses. The term is from the French *manège*, Italian *maneggio*, according to some à *manu agendo*, acting with the hand.

MANGANESE, } A grayish white metal,

MANGANE'SIUM, } very hard and brittle, and of a fine grained fracture, with considerable lustre. By exposure to the air it speedily oxidises and falls into powder. Sp. gr. 8, melting point 160° Wedgwood. It is susceptible of five degrees of oxygenation. The *protoxide*, is a pale green powder, prepared artificially; the *deutoxide* exists native in the mineral called *braunite*, and as a hydrate in *manganite*; the *peroxide* exists abundantly in nature. As a hydrate it constitutes *black wadd*. The other combinations of the metal with oxygen are the *manganic* and *permanganic acids*. The ores of manganese are common in Devonshire, Somersetshire, Derbyshire, &c. The black oxide is the *magnesia nigra* of the ancients. Epithet *manganesian*.

MANGANE'SIC ACID. The manganic acid of Maïsscherlich. An acid consisting of three equivalents of oxygen to one of manganese, and therefore isomorphous with sulphuric and selenic acid. It forms green coloured salts, but has not yet been insulated from its bases. The *permanganic acid* forms red-coloured salts. The change of the manganic acid into the permanganic, is the cause of the change of colour from green to red of solutions of *chameleon mineral*.

MAN'GEL WUR'ZEL. Field beet. A variety of beet, between the red and white, much

cultivated on the continent, partly as food for cattle, and partly to be used in distillation, and in the extraction of sugar. It has as yet been only partially cultivated in Britain.

MAN'GER. 1. In a *ship of war*, a small space extending athwart the deck, immediately within the hawse-holes, and separated on the after-part from the other part of the deck by the *manger-board*, a strong bulk-head built as high, and serving to stop the water which sometimes rushes in at the hawse-holes, and would otherwise run aft on the deck.—2. The trough which holds the corn or other short food given to live stock, especially horses.

MAN'GLE. A valuable domestic machine, employed for the purpose of smoothing such linen as cannot be conveniently ironed. It is simply a calender upon a small scale.

MAN'GO. The fruit of the *mangifera indica* or mango-tree, cultivated all over Asia. Mangoes, when ripe, are juicy, of a good flavour, and so fragrant as to perfume the air to a considerable distance. When unripe they are pickled in the soured milk of the cocoa-nut, with salt, capsicum, and garlic. From the expressed juice of the ripe mango is prepared a sort of wine, and the remainder of the kernel can be reduced to a fine bread-flour.

MAN'GO-FISH (of the Ganges). The *poly-nemus paradiseus*, so named because it comes in season about the same time with the mangoes. It rarely exceeds fifteen inches in length, and in point of delicacy and flavour excels every other fish.

MANGOSTEEN. A tree, the *Garcinia mangostana*, of the East Indies. It produces a highly valued fruit, about the size of a small orange.

MAN'GOOSE. A carnivorous animal, of which there are several species, or rather varieties. The most celebrated is the *mangousta* of Egypt, or *ichneumon* of the ancients.

MAN'GROVE. In *botany*, see RHIZOPHORA.

MANICHE'Y. A sect of Christian heretics of the third century, the followers of *Manes*, who taught that there are two eternal and independent principles, one of good and one of evil.

MAN'IFEST. An inventory of the whole cargo of a merchant-ship.

MAN'IFESTO. A public declaration made by a prince or sovereign, of his intentions, opinions, or motives, as a *manifesto*, declaring the necessity of a war, the reasons for its being undertaken, and the motives by which he is induced to it.

MAN'IHOT, } A genus of permanent
MAN'IOC, } plants. *Monacina*—*Monadelphica*. Don enumerates nine species, all natives of hot climates. The word

manioc is the Indian name of the nutritious matter of the *Manihot cannabina*, Lin., or *Jatropha manihot*, Willd., of South America, &c., and from the root of which *cassava* and *tapioca* are procured. The juice of the plant is highly poisonous.

MANIL'LES. Large brass rings, formed like bracelets, exchanged by the Europeans with the negroes on the coasts of Africa for slaves. They are worn on the small of the leg, and on the arm above the elbow.

MAN'IPLE, Lat. *manipulus*, a handful. See **M.**

MAN'IPULUS, Lat. *manus*, hand. In Roman antiquities, a subdivision of the cohort, so called from the handful of grass or straw which formed its standard.

MAN'IS. The pangolin or scaly lizard or anteater. A genus of mammiferous animals, ranked by Cuvier among the ordinary Edentata. They live on ants and termites; their tongue is very extensible, and their body, limbs, and tail, are covered with large treuchant scales, arranged like tiles, but which they elevate in rolling themselves into a ball, when they wish to defend themselves from an enemy. They are confined to the eastern continent.

MAN'ITRUNK. In entomology, a term applied to the anterior segment of the trunk on which the head turns.

MAN'NA. 1. A substance with which the children of Israel were fed in the wilderness, and which appears to have been a kind of honey-dew. The term is Hebrew *mahn*, allied to the Arabic *manna*, to provide.—2. A peculiar saccharine matter, which exudes from many plants—but especially the concrete juice of a species of ash, the *fraxinus ornus*, which grows in the southern parts of Europe. It has a sweet but not agreeable taste, a slight peculiar odour, and a pale yellow colour. From Sicily and Calabria.

MAN'NER. In painting, the particular habit of a painter in managing colours, lights and shades. The best painter is he who has no manner.

MAN-OF-WAR. 1. The albatross (*diomedea exulans*).—2. A ship-of-war.

MANOM'ETER, from *manos*, rare, and *metron*, measure. An instrument intended to measure the rarefaction or alterations of density of elastic fluids, whether caused by variations of temperature, or mechanical compression, or vice versâ.

MAN'OR, Norm. *manoir*, a habitation. A district of ground held by a lord or nobleman in his own possession, for the direct use of his family; his other lands being distributed among his tenants. It has been suggested that the term originally meant the jurisdiction and royalty incorporeal, rather than the land or site. If so, this meaning is long since forgotten.

MANSARD ROOF: so named after the inventor. In architecture, the same as *curb roof*, which see.

MAN'TELETS. Moveable parapets, made of planks, nailed over one another, to the height of six feet, and driven before the pioneers as blinds to shelter them.

MAN'TIS. The *Soothayer*. A genus of orthopterous insects placed in the family *Cursoria* by Cuvier. The species inhabit warm climates, and some are held in high veneration in their particular localities. Name *mantris*, a prophet, from the position of the arms, which resembles that of supplication.

MANTIS'SA. The decimal part of a logarithm; the integral part being named the *characteristic*.

MAN'TLE. } A term in architecture, **MAN'TLE-TREE.** } for the lower part of the chimney, which sustains the compartments of the chimney-piece.

MAN'TLE. } A term in heraldry for **MAN'TLING.** } that appearance of folding of cloth, flourishing, or drapery, which in any achievement is drawn about a coat of arms.

MAN'UFACTURE, from *manus*, the hand, and *facio*, to make. 1. The operation of reducing raw materials of any kind into a form suitable for use, either by the hands or machinery.—2. Any commodity made from the natural produce of a country, as cloths from wool, and cotton and silk goods from cotton and silk, iron from ores, leather from hides, &c. Places where goods are manufactured are called *manufactories*, (in some cases *factories*), and those whose business it is to manufacture articles, or who employ workmen and machinery for that purpose, are *manufacturers*.

MANUMIS'SION, from *manus*, the hand, and *mitto*, to send. A solemn ceremony among the Romans, by which a slave was emancipated or liberated from personal bondage.

MAN'USCRIPT, Lat. *manuscriptum*. A book or paper written with the hand (*manus* and *scriptum*) as opposed to one printed: contracted MS., and plural MSS.

MAP. A delineation of the earth's surface, or of a portion of it. A map is properly a representation of land, as distinguished from a *chart*, which represents sea and sea-coasts, position of islands, rocks, &c.

MARANA'THA (Syr.). A form of anathematising among the Jews, signifying "the Lord will come," i. e. to take vengeance.

MARAN'TA. A genus of perennial plants. *Monandria—Monogynia*. The starch called arrow-root is extracted from the roots of the *M. arundinacea*, which is cultivated in gardens and provision grounds of the West Indies; and the roots of the *M.*

galanga constitute the smaller galangal of the pharmacopœia. All the species are natives of hot climates.

MAR'BLE, Lat. *marmor*, from *μαρμαρον*, a shining stone. A name common to all limestones of a compact texture, and possessing sufficient hardness to take a polish. The varieties are numerous, and greatly diversified in colour, from pure white to jet black. Marble effervesces with acids; affords quick-lime by calcination; has a conchoidal scaly fracture; is translucent only on the very edges; is easily scratched by the knife; has a sp. gr. of 2.7; admits of being sawn into slabs; and receives a brilliant polish. These qualities occur united in only three principal varieties of limestone; (1.) In the saccharoid limestone, so called from its fine granular texture, resembling that of loaf sugar, and which constitutes modern statuary marble, like that of Carrara; (2.) In the foliated limestone, consisting of a multitude of small facets, formed of little plates applied to one another in every possible direction, constituting the ancient statuary marble, like that of Paros; (3.) In many of the transition, or carboniferous, or *enerinitic* limestones subordinate to the coal formation.

MAR'BLING. The method of preparing and colouring the *marble paper*. There are several kinds of marble paper; but the method of managing the process is the same for all the sorts. It consists in dipping the paper into a solution of gum dragon (gum tragacanth), over which the colours, previously prepared with ox-gall and spirit of wine, are first spread and dispersed, by means of a sort of comb, into the kind of figures wanted. The paper is afterwards polished.

MAR'CASITE. A name of Arabic origin, which, without any definite meaning, has been applied to all sorts of crude metallic substances. It is now restricted to a variety of iron pyrites.

MARCH. 1. The third month of the year according to the modern calendar, but the first according to the ancient Roman computation; named in honour of Mars, the god of war, and father of Romulus.—2. In *music*, a military air, to regulate the steps of the soldiers.—3. In *military language*, the motion of a body of troops from one place to another. It has three measures: (1.) Ordinary time; (2.) Quick time; (3.) The quickest or wheeling time.

MARCHERS. Lord Marchers. Noblemen who formerly dwelt near the borders of Wales and Scotland, and protected the *marches* or borders. *March*, in this sense, is radically the same word as *mark*.

MAR'CIONITES. The followers of Marcion, a heretic of the second century.

MARCO'SIANS. A sect of Christian heretics, the followers of Marcus, who

taught, in the second century, that the Deity consists of a quaternity: the Ineffable, Silence, the Father, and Truth.

MAR'ECANITE. A variety of obsidian, in the form of little grains like peas, pearly-white, consisting of very thin concentric layers, found in Marcan, in the Gulf of Kamschatka.

MAR'GARIC ACID. A fat acid, obtained by saponifying tallow with an alkali, and decomposing the soap with a dilute acid. It is thus named from its appearing in pearly-looking scales (*margarita*, a pearl), and is more fusible than the stearic acid, melting at 140° F.

MAR'GARINE. The name given by Chevreul to the substance afterwards called margaric acid.

MAR'GARITIC ACID. One of the fatty acids which result from saponification.

MAR'GIN, Fr. *marge*. 1. In *printing*, the border of white paper round the page of a book.—2. In *architecture*, the *margin of a course*, that part of the upper side of a course of slates, uncovered by the next superior course.

MARGINEI'LA. A univalve shell, with a short spire, found recent in sand and sandy mud, and fossil in the *calcaire grossier*.

MAR'GRAVE, Ger. *markgraf*, from *mark*, a march or border, and *graff*, a count or earl. Originally a keeper of the marches, now a title of nobility in Germany, &c. The jurisdiction of a margrave is termed a *margraviate*.

MARI'A THERE'SA, ORDER OF. A military order of Austria, founded in 1757.

MAR'IGOLD. In *botany*, a name common to all the species of the genus *Calendula*. The *marsh-marigold* is the *Caltha palustris*. The *African marigold* belongs to the genus *Tagetes*. The *corn marigold* to the genus *Chrysanthemum*. *Fig marigold* to the genus *Mesembryanthemum*. The name is often written *marygold*.

MARIN'Z. Belonging to the sea (*marinus*, from *mare*, the sea), as marine shells. *Marine acid* is an old name for the muriatic or hydrochloric acid. *Marine salt* is the salt obtained by the evaporation of sea-water, as distinct from *rock-salt*. The word *marine*, used substantively, is a general name for the navy of a kingdom or state, and the whole economy of naval affairs.

MARINE CHAIR. A machine invented for viewing steadily the satellites of Jupiter at sea.

MARINE SURVEYOR. A machine contrived for measuring the way of a ship at sea, and for registering the same on a sort of dial-plate.

MARINE'S. A body of forces employed in the sea-service, under the direction of the lords of the Admiralty.

MARIOTTE'S LAW. In *pneumatics*, a ge

neral property of elastic fluids, discovered by Mariotte, that the pressure is directly proportional to the density.

MARITIME. Pertaining to the sea or ocean (*maritimus*, from *mare*, the sea), as a maritime town. *Maritime laws* are those which relate to harbours, ships, and seamen. Though *maritime* and *marine* are radically the same words, they are used distinctly. Thus, there are *maritime* powers, but no *maritime* officers, leagues, engagements, or productions.

MARJORAM. In *botany*, see **ORIGANUM**. The *Spanish marjoram* belongs to the genus *Urtica*.

MARK, Fr. marc. A weight used in several parts of Europe for various commodities, especially gold and silver. In France and Holland the mark equalled eight ounces. — 2. *Mark* is sometimes used with us for a money of account, and in some other countries for a coin. The *English mark* is 13s. 4d. sterling. The *Scotch mark* is two-thirds of a pound Scotch. The *mark Lubs.* or *Lubeck mark* is a money of account at Hamburg, equal to 144d. sterling.

MARK, ORDER OF SAINT. A Venetian order of knighthood.

MARKING INK. An indelible ink for marking linen. A good marking ink is prepared by dissolving a drachm of fused nitrate of silver in half an ounce of distilled water, and colouring it by sap-green. A previous application of *liquid pounce* is necessary, which is made by dissolving two drachms of carbonate of soda, and ten of gum arabic, in four ounces of water.

MARKING NUT. In *botany*, the seed of the *Semecarpus anacardium*, a tropical tree, so called from its juice having the property of staining linen.

MARL (Welsh). A mixed earthy substance, consisting of calcareous earth, clay, and siliceous sand, in very variable proportions. According to the preponderance of the one or other of the three principal ingredients, marls are calcareous, clayey, or sandy. Epithet *marly*, or *marlaceous*.

MARLINE, Sp. mariin. A small line, composed of two strands little twisted, and either tarred or white. Used for winding round ropes and cables, to prevent their being fretted.

MARLINE-SPIKE. A small iron, like a large spike, used to open the bolt-rope, when the sail is to be sewed to it.

MARLING. Winding of marline round a rope or cable, to prevent its being galled. See **MARLINE**.

MARMO (Italian), marble. 1. *Verde-antico*, or Greek antique marble, is a sort of breccia, whose paste is a mixture of talc and limestone, the best specimens of which are grass-green with very dark

green or black spots of noble serpentine. Some fine specimens are preserved at Parma. The *Marmo-Greco*, or the Greek white marble, was obtained from several islands of the Archipelago. The *Marmo Verde-Pagliocco* is a variety of antique marble, of a yellowish green colour, found in the ruins of ancient Rome. The *Marmo Statuario*, or the statuary marble of the Italians, closely resembles the Parian marble.

MARMORA'TUM. In *architecture*, a cement formed of pounded marble and lime well beaten together.

MAR'MOT. A name common to all the animals of the genus *Arctomys*, Gm. See **ARCTOMYS**.

MAR'ONITES. The followers of Maro, in Syria, who adopted the opinions of the Monothelites, in the seventh century.

MAROO'NS. The name given to revolted negroes in the West Indies, and in some parts of South America.

MARQUE' (LETTERS OF). A power, license, or extraordinary commission, granted by a state to its subjects, to make reprisals on the subjects of another, for damages sustained at sea. *Marque* is a French word, said to be from the same root as *march*, a limit, literally denoting a license to pass the limits of a jurisdiction on land, for the purpose of obtaining satisfaction for theft, by seizing the property of the subjects of a foreign nation. — 2. The ship commissioned for making reprisals is also called a *letter of marque*.

MARQUETRY, Fr. marqueterie, from *marqueter*, to spot. Inlaid work. A peculiar sort of cabinet work, in which the surface is variegated with inlaid pieces of various forms and colours. Gold, silver, copper, tortoise-shell, mother-of-pearl, ivory, horn, coloured woods, &c. are used by the *marqueteur* for his work.

MAR'QUIS,) A title of honour in Great Britain, next in dignity to that of duke; first conferred on the wardens of the marches. The title was not known in England, till Richard II., in 1337, created his favourite, Robert de Vere, then Earl of Oxford, Marquis of Dublin. The eldest son of a marquis is by courtesy called earl or lord of —; but the younger sons are simply lord John, lord Robert, &c. The wife is a *marquioness*.

MAR'ROW. The animal fat found in the cavities of long bones. The spinal cord is sometimes termed the *spinal marrow*.

MARRUBIUM. Horehound. A genus of plants. *Didymamia*—*Gymnospermia*. Name from *marob*, a bitter juice. The common horehound, *M. vulgare*, is a native of Britain.

MARS. 1. The mythological god of war, and hence applied by the alchemists as a name for iron, because warlike instru-

ments were made of it.—2. In *astronomy*, a planet of our system, the fourth in order from the sun, and consequently the next above our earth; thus named from its red (herce) colour. Its symbol is ♂, intended to represent a man holding a spear. Mean diameter 4298 miles; mean distance from the sun 142,000,000 miles; period of revolution round the sun 686d. 23h. 30' 39", or 1'881 years; period of rotation, 1d. 0h. 39' 21" 5."

MARSEILLAISE HYMN. The popular name, erroneously applied, of the national anthem of France.

MARSHAL. Originally one who had charge of horses, from Teutonic, *marc*, a horse, and *sealk* or *schalk*, a servant. The word is now a title of certain officers who have very different employments; as the *Earl Marshal* (q.v.) of England, &c.; the *Marshal of the Queen's Bench*, who has the keeping of the Queen's Bench prison in Southwark; the *Marshal of the Exchequer*, to whom the court commits the queen's debtors. In some countries of Europe, a *marshal* is a military officer of the highest rank. In America, marshals are appointed by the President and Senate of the United States, and answer to our sheriffs of counties.

MARSHALLING. 1. In *heraldry*, the disposing of several coats of arms, belonging to distinct families, in the same escutcheon.—2. The disposing of persons at public solemnities in their proper places, according to their ranks, &c.

MARSHALSEA. A prison in Southwark, belonging to the marshal of the queen's household. The *Marshalsea Court* was originally instituted to hear and determine causes between the servants of the royal household and others within the verge of the court, which extends twelve miles round Whitehall. It sits every week, and the judges are the steward of the household and knight-marshal for the time being.

MARSH MIAS'MA. Infectious vapours arising from certain marshes and marshy soils.

MARSUPIAL, Lat. *marsupialis*, purse-shaped. Applied, 1. To animals of the order *Marsupialia*.—2. To parts, as muscles, for their shape.

MARSUPIALIA. An order of mammiferous animals, having external abdominal pouches for their young (*marsupium*, a pouch). The opossums, phalangera, potorooos, and kangaroos are examples. Epithet *marsupial*. A distinguishing peculiarity of the *Marsupialia* is the premature production of their young, whose state of development at birth is extremely small. Incapable of motion, and hardly exhibiting the germs of limbs and other external organs, these diminutive beings

attach themselves to the mammae of the mother, and there remain fixed until they have acquired a degree of development similar to that in which other animals are born. The skin of the abdomen is almost always so arranged about the mammae as to form a pouch, in which these imperfect little animals are preserved as in a second uterus, and to which, long after they can walk, they always flee for shelter.

MAR'SUPITE, from *marsupium*, a purse.

The name given by Dr. Mantell to a genus of *Crenolæda* found in the chalk of Sussex, Wiltshire, and Yorkshire, and bearing some resemblance in shape to a purse. The individuals are called *clusterstones* by the quarrymen of Sussex, which, in fact, conveys a pretty correct idea of their general appearance.

MARTELLO TOWERS. Circular buildings of masonry erected along the British coast, intended as a defence against the meditated invasion of Napoleon.

MARTEN. A name common to several animals of the weasel tribe, but especially applied to the *mustela martes*, Lin. There are several martens common in North America, and distinguished by the names *Pekan*, *Vision*, *Mink*, &c.

MARTIN, } The house swallow (*Hir-*
MART'LET. } *undo urbica*, Lin.), called in France *martinet*, and in Spain *martinete*. The Germans call it *mauer-schwalbe*, wall-swallow.

MARTINETTS. 1. In *ships*, small lines fastened to the leech of a sail to bring it close to the yard when the sail is furled.

—2. A cant phrase for severe military disciplinarians, derived from a Colonel Martinet in the French army, who devised a peculiar whip for military punishment.

MARTINGAL, Fr. *martingale*. 1. A strap of leather fastened to the girth under a horse's belly, and at the other end to the musroll, passing between the forelegs.—2. In *ships*, a rope extending from the jib-boom, to the end of a bumpkin under the cap of the bowsprit.

MART'LET. A martin (q.v.). Martlets in *heraldry* are little birds without feet, used to make a distinction in the escutcheons of younger brothers.

MAS'CLE. In *heraldry*, a bearing in the form of a perforated lozenge.

MASH, Ger. *meischen*, to mix. 1. To *mash* is to beat into a confused mass. With brewers, to mix malt and water together in a *mash-tub* preparatory to brewing and distillation. This process is called *mashing*.—2. A *mash* is a sort of warm drink for a horse, made by pouring hot water on malt.

MA'SON, Fr. *maçon*. A person employed under the direction of an architect in the raising of a stone building. The *free* and *accepted masons* form a very ancient society, so called because the founders of

the fraternity were persons of that craft or occupation, being incorporated by the pope, and endowed with certain important privileges. The society professes to be founded on the practice of social and moral virtue, and inculcates "brotherly love, relief, and truth;" but it has long been nothing more than a wreck of the original institution.

MASONRY. A term comprehending all works built with stone, and is of three sorts: (1.) *Cut masonry*, or plane ashlar, consisting of fair cut stones, as in the faces of the superior kinds of buildings. (2.) *Hammer-dressed masonry*, in which the stones are squared and picked by the hammer. (3.) *Rubble masonry*, composed of stones merely axed on the face, and placed according to circumstances.

MAS'ORA. A Jewish book containing critiques upon the Hebrew text of the Bible.

MASORITES. Hebrew rabbins, who interpreted the Scriptures by tradition, and invented the Hebrew points to fix the true reading and pronunciation. Hence these points are often termed *Masoretic points*; and the expository work of the Masorites is termed the *Masora*.

MASQUE, French for *mask*. 1. A cover for the face.—2. A sort of theatrical drama, or rather histrionic spectacle, much patronised during the 16th and 17th centuries, and in which the actors (originally) appeared with masks.—3. In *architecture*, a grotesque piece of sculpture serving to fill up some vacant space.

MASS, Sax. *maesse*. 1. The service of the Romish Church in the celebration of the eucharist.—2. The quantity of matter of which any body is composed.—3. In the *fine arts*, a large quantity of matter of light or shade.

MAS'BETER, from *massa* *mas*, to chew. A short thick muscle of the lower jaw, situated on the side of the face, and which assists in masticating, by raising the jaw.

MAS'SICOT (Fr.). The yellow oxide of lead, used as a pigment. It is easily prepared by calcination of white lead; by further calcination it becomes red lead or minium.

MAS'SIVE. In *mineralogy*; in mass: not having a regular form.

MAST, Sax. *maest*, the mast of a ship. 1. Masts are of several kinds, as the main-mast, fore-mast, mizen-mast, lower-mast, top-mast, top-gallant-mast, top-gallant-royal-mast. The *main-mast* is the principal mast of the ship; the *fore-mast* is that which stands near the stem, and is next in size to the main-mast; the *mizen-mast* is the smallest mast, and stands half way between the main mast and the stern; a *lower-mast* is the lower part of a mast,

which is composed of more than one piece; a *top-mast* is raised on the head or top of a lower mast; the *top gallant-mast* is again raised on the top of the top-mast, and the *royal top-gallant-mast* surmounts the top-gallant-mast; a *pole-mast* is one formed of one piece of timber; a *masted-mast* consists of several pieces.—2. Sax. *maeste*, acorns. The fruit of the oak and beech.

MAS'TER. A word found in all European languages with slight modifications of orthography, and signifying a chief director. *Masters in Chancery* are assistants to the Lord Chancellor and Master of the Rolls. *Master of the Faculties* is an officer under the Archbishop of Canterbury, who grants licenses and dispensations. *Master of the Horse* is an officer of the crown, who has charge of the royal stud. The *Master of the Armoury* has charge of the royal armour, and the *Master of the Wardrobe* has the care of the royal robes under the Lord Chamberlain. *Master of the Rolls*, a patent officer for life, who has custody of the rolls of Parliament, and patents which pass under the Great Seal, and of the records of Chancery, commissioners, deeds, &c., and who, in absence of the Lord Chancellor, sits as judge in the Court of Chancery. *Master of a ship*, the same as *captain* in a merchantman, but in a man-of-war he is an officer who takes rank immediately after the lieutenants, and navigates the ship under the direction of the captain. *Master at Arms*, an officer in a ship of war who has charge of the small arms, exercises the petty officers, and observes the directions of the lieutenant at arms, &c. *Master of Arts*, an academical degree—the second at Oxford and Cambridge, but the first at the foreign universities, and for the most in those of Scotland.

MAS'TERSIN'GERS. A class of poets who flourished in Germany in the 15th and 16th centuries.

MASTIC, } 1. A resin obtained by making

MASTICH. } incisions in the *Pistacia lentiscus*, a tree cultivated in the Levant, and chiefly in the island of Chios. It is yellowish, brittle, and transparent; has a bitterish taste, and aromatic smell. It consists of two resins, one soluble in dilute alcohol, and both in strong alcohol. In this country mastic is used in the composition of the tougher kinds of varnishes: on the continent, it constitutes an ingredient in plasters: and in Turkey, it is used in great quantities by the ladies as a masticatory—from which circumstance it is said to take its name.—2. In *botany*. See **MASTICH-HERB**.

MAS'TICH-HERB. *Herb-mastich*. The *Thymus mastichina*, a low shrubby plant, a native of Spain. It has a strong agreeable smell like mastic.

MASTIC-WOOD. The wood of the mastic-

tree (the *Pistacia lentiscus*), a tincture from which is used in medicine.

Masticine. When mastic is digested in dilute alcohol, it does not dissolve completely: a soft elastic substance separates during the solution. This amounts to about a fifth of the mastic employed, and has, while moist, all the characters of caoutchouc, but becomes brittle when dried. It therefore appears to be a peculiar principle, and has accordingly been named *masticine*.

Mastiff, Lat. *masticus*. The bull-dog. A variety of the *canis familiaris*, Lin., distinguished by its large head, pendent lips and ears, strength and courage. The English mastiffs were, in old times, held in such high estimation at Rome, that an officer was appointed to breed and train them for the sports of the amphitheatre.

Mastodon, from *μαστός*, the breast, and *δόνς*, a tooth. The name given by Audin to an extinct genus of mammiferous animals, in allusion to certain remarkable mamillary processes on the teeth: order *Pachydermata*: family *Proboscidea*. Two species have been found. The Great Mastodon (*M. giganteum*) or Mammoth is the most celebrated species. It equalled the elephant in size; but with still heavier proportions. Its remains are found in a high degree of preservation, and in great abundance, throughout all parts of North America. The *M. angustidens* was a third less than the Great Mastodon, and much lower on its legs. Its remains are found in Europe and South America. Not only the bones, but portions of the flesh and skin, and even whole carcases, of the Great Mastodon have been found in icebergs and frozen gravel, especially in Siberia. Towards the end of the last century, an entire carcase, perfectly fresh, was exposed, and at length fell to the ground, from a cliff of ice and gravel on the banks of the river Lena.

Mastoid, from *μαστός*, the breast, and *ειδος*, likeness; nipple-shaped. Applied in anatomy to parts from their shape, as the *mastoid process* of the temporal bone, *mastoid foramen*, &c.

Matt, Eng. Dut. Wel. Russ. *matt*: Ger. *matte*: Lat. Sp. Ir. *matta*. A texture of sedge, rushes, straw, rope-yarn, or other coarse material, used for covering floors, for packing fruits, and other purposes. Mats are principally manufactured in Russia, partly from flags, but chiefly from the inner bark of the lime or linden tree. These latter are known in this country as *bast mats*.

Match, Fr. *mèche*. 1. Some combustible substance used for catching fire from a spark, as hemp, flax, cotton, &c.—2. A

sort of hempen rope, composed of three strands, slightly twisted together, and again covered with tow, and boiled in the lees of old wine, so that when lighted, it retains the fire, but burns slowly till wholly consumed. It is used in firing artillery, mines, fireworks, &c.—3. See **MATCHING**.

MATCH'ING OF WINE CASKS. A method of preparing casks for wines, &c., to preserve the liquor from becoming vapid. It is done thus:—Slips of coarse linen cloth, &c. are dipped into melted sulphur to form *matches*; one of these matches is set on fire and immediately plunged in the bung-hole of the cask; the cask is thereby filled with sulphurous acid fumes, which are allowed to remain some hours with the bung tightly driven home, and the cask is then *matched*, and is ready to be filled.

MATE. In a ship, a deputy of the master in a man-of-war, selected from the midshipmen. The boatswain, gunner, carpenter, &c., have also each their mates, taken from the crew. In merchantmen the mate is second in command; but the law does not recognise him otherwise than as a mariner. In large ships there are often two or more mates.

MATE'. The Paraguayan name for the *Ilex paraguensis*, used in that country as tea is here.

MATE'R, Lat. for *mother*. Two membranes of the brain are thus named, from an old notion, that all the other membranes of the body were derived from them, or from their protecting the brain.

MATERIALISM, from *materia*, matter. The doctrine of *materialists*: the opinion of those who maintain that the soul of man is not a spiritual substance, distinct from matter, but that it is the result or effect of the organisation of matter in the body. The materialist holds that the phenomenon of thought is a function of the brain, just as the secretion of bile is a function of the liver; and denies the distinct existence of the incorporeal being called the *soul*.

MATE'RIA MED'ICA. A term including all those substances selected from the animal, vegetable, and mineral kingdoms, which are used in the cure of diseases: a catalogue of remedies.

MATHEMAT'ICS, Lat. *mathematica*, from *μαθηματικη*. The science of quantity, or that science which considers magnitudes as measurable and computable. This science is divided into *pure* or *speculative*, which considers quantity abstractly, without relation to matter; and *mixed*, which treats of magnitude as subsisting in material bodies, and is consequently interwoven with physical considerations. Arithmetic, Geometry, Algebra, Trigonometry, and Conic Sections, are branches

of mathematics, all necessary for the purposes of astronomy, optics, hydrostatics, mechanics, navigation, fortification, &c.

MAT'INS. In the *Romish Church*, the first part of the daily service. *Fr. matin*, morning.

MAT'RESS, Fr. matras. A chemical vessel, having an oval-shaped body and a long neck, much used for digestions.

MATRICARIA. A genus of herbaceous plants. *Synonymia*—*Poly. superflua*. Name from *matrix*, the womb, because of its uses in diseases of the womb. The common wild corn or dog's chamomile, is a British species. The fever-few (improperly *featherfew*), is also a species (*M. parthenium*.)

MATRICULATION, from *matricula*, a register. Registration of a name in admission to membership, as in the universities. Members are hence said to be *matriculated*.

MAT'RIX, Lat. for womb, from mater, mother. A place where anything is generated or formed. The matrix of a mineral or metallic ore is the substance in which it is immediately imbedded, or through which it is disseminated.

MATROSS. In the *artillery*, a soldier next in degree to a gunner, whom he assists in loading, &c.

MAT'IE. A crude black copper, reduced but not refined, from sulphur and other extraneous matters.

MAT'IER, Lat. Sp. and Ital. materia, that which is produced. The substance of which bodies are composed, usually divided by philosophical writers into four kinds, *solid, liquid, aeriform*, and *imponderable*. *Solid* substances are those whose parts firmly cohere and resist impression; *liquids* yield readily to impression; *aeriform* bodies are elastic fluids, comprehending vapours and gases; *imponderables* are destitute of weight, as light, caloric, electricity, and magnetism.

MATTH'OLA. Stock. A genus of plants, mostly herbaceous. *Tetradynamia*—*Siliquosa*. The gillyflower (*M. incana*) is a native of England.

MAUND. A weight used in the East Indies. It varies in different provinces, but the factory maund is about 80 lbs. avoird.

MAT'NDRIE. In *coal mines*, a pick with two shanks.

MAUNDY-THURSDAY. Mandate-Thurs-day. The Thursday before Good Friday; the day of command on which the Saviour gave his great mandate, that we should love one another.

MAUR, CONGREGATION OF SAINT. A learned religious body of the Benedictine order, named after the place of their residence, and established in 1618.

MAURESQUE. In *architecture*, the style of building peculiar to the Moors and Arabs.

MAUSOLEUM. A Latin term, from *Mau-*

solus, king of Caria, to whom Artemisia, his widow, erected a stately monument, one of the wonders of the world, and hence used to denote any very sumptuous sepulchral monument.

MAW'-WORM. The *Ascaris vermicularis*, a species of entozoa found in the stomach.

MAXIL'LA. 1. The jaw, both upper and under, from *maxillatus*, to chew. The lower jaw is called the *maxilla inferior*; and the upper jaw the *maxilla superior*.—2. The lower jaws only of insects are called *maxillæ*: they are placed behind the mandibles, and are principally employed in holding the substance on which the grinding apparatus of the mandible is exerted.

MAX'ILLARY, Lat. maxillaris. Appertaining to the jaw (*maxilla*).

MAX'IMA ET MIN'IMA. In *analysis and geometry*, the greatest and least values of a variable quantity. The method of finding these values is termed *Methodus de maximis et minimis*.

MAX'IMUM. 1. In *mathematics*, the greatest quantity attainable in a given case.—2. The greatest extreme as distinguished from *minimum*.

MAY. The fifth month of the year, reckoning from January. Named from *Maia*, the mother of Mercury, to whom sacrifices were offered by the Romans on the first day of this month.

MAY'OR. The chief magistrate of a city: in London and York he is called *lord-mayor*. The title is of doubtful origin. We have *Fr. maire*, Norm. *maeur*, *mair*, *meyre*; Wel. *maer*, one who guards; *maer y biscal*, a land-steward; *maeron*, a dairy farmer; *maeres*, a female who superintends the dairy-women; *maeroni*, superintendency, a keeper. A mayor, then, seems to have been originally an overseer, and among country gentlemen a steward or kind of domestic bailiff, rendered in the writings of the middle ages, *villicus*.

MAYORAZ'GO (Span). The right of the eldest born, in noble families, to inherit certain property on condition of transmitting it entire to those possessed of the same right on his decease.

M.D. Medicinæ Doctor. Doctor of medicine.

MEAD. Metheglin. A liquor made by boiling with water the honey-combs from which the honey has been drained out, and fermenting: it was long the favourite drink of the northern nations, but is now little used. It takes its name from the northern word for honey.

MEAL, Ger. mehl, Dutch meal. The edible part of grain and pulse, ground into a species of coarse flour. The varieties are characterised by prefixing the name of the grain; as *oat-meal, barley-meal*, &c.

MEAN. The middle between two extremes. An *arithmetical mean* is half the sum of the two extremes. Thus if the

extremes are 2 and 6, the arithmetical mean is $\frac{2+6}{2} = 4$. A *geometrical mean* is the square root of the product of the two extremes. Thus, the extremes being 2 and 8, the geometrical mean is $\sqrt{2 \times 8} = 4$. A *harmonical mean* is the reciprocal of the arithmetical mean between the reciprocals of the given extremes.

MEANDRI'NA. Brain-stone, brain-coral. Madreporæ, in which the laminae assume a meandering direction. These are large hemispherical corals, having their surface covered with serpentine ridges and depressions, resembling the convolutions of the brain, from which circumstance they have been called brain-stone.

MEASE. The quantity of 500.

MEAS'LES, rubella. A disease known by inflammatory fever, hoarseness, dry cough, sneezing, drowsiness, during the first three days, when an eruption of small spots, discernible by the touch, appears, and ends in mealy desquamation.

MEAS'URE. That by which extent or dimension is known. 1. The standard measure of length is a yard, and of liquids a gallon.—2. Any quantity assumed, as one or unity, and by which the quantities of other similar things are expressed. Thus the measure of a line is some other assumed line, as an inch, a foot, a yard, &c. In music, the interval or space of time between the rising and falling of the hand or foot of him who beats time, is termed *measure*, as it regulates the time of dwelling on each note. In *poetry*, the manner of combining the quantities, or the long and short syllables, is termed *measure*, and is of different kinds; as hexameter, pentameter, iambics, &c. In *geology*, synonymous with beds or strata; as *coal measures*.

MEAT'US, Lat., from *meo*, to flow. A passage, as that leading to the ear, called the *meatus auditorius*, and is either external or internal.

MECHAN'ICAL. 1. Relating to mechanics. Thus, the force produced by any machine, for the accomplishment of any particular purpose, is called *mechanical power*; and those simple agents employed in producing mechanical power, and of which all machines are essentially composed, are termed *mechanical powers*, and their application constitutes the science of *mechanics*. The *mechanical powers* are usually divided into six classes; the lever, the wheel and axle, the pulley, the inclined plane, the wedge, and the screw; but all these are reducible to two, the lever and the inclined plane. Some, however, regard the pulley as a distinct mechanical power.—2. *Mechanical philosophy* is that which explains the phenomena of nature, and the operations of corporeal things on the principles

of mechanics; viz. motion, gravity, arrangement, disposition, magnitude of the parts which compose bodies; called by some *corpuscular philosophy*.—3. In *mathematics*, the term *mechanical* is employed to denote a construction of a problem by the assistance of instruments, as the duplication of the cube and quadrature of the circle. A *mechanical solution* is a solution of a problem, effected either by repeated trials, or by using lines in the solution which are not truly geometrical, or by organical construction. A *mechanical curve* is one which, according to Descartes, cannot be defined by any algebraical equation. Leibnitz and others call these curves *transcendental*.

MECHAN'ICS, from μηχανή, a machine. A branch of practical mathematics which treats of motion and moving powers, their nature and laws, and their effects in machines. The term is equally applied to the doctrine of equilibrium of powers, more properly called *statics*; and to that science which treats of the generation and communication of motions, which constitutes *dynamics*, or mechanics strictly so called. The science is further divided into *practical mechanics*, which treats of the mechanical powers; and *rational mechanics*, which treats of the theory of motion.

MECHAN'ICS' INSTITUTES. The name given to the means by which instruction is communicated to tradesmen and mechanics, in large towns; originally put in operation by Dr. Birkbeck, in 1800.

MECH'ANISM. 1. Construction of parts depending on each other in any complicated machine designed for a purpose.—2. Action of a machine according to the laws of mechanics.

MECH'ANISTS. Those philosophers who refer all the changes in the universe to the operation of mechanical forces.

MECHLO'IC ACID. An acid formed by passing a current of chlorine over meconine in fusion.

MECHO'ACAN. White Jalap. The root of the *Convolvulus mechoacanna*, brought from Mechoacan in Mexico. It is a slow purgative, but safe.

MECON'IC ACID. An acid obtained from opium (*meconium*). It crystallises in white transparent scales, yields *pyromeconic acid* by distillation, and is converted into oxalic acid by dilute nitric acid.

MECONINE. A peculiar principle constituting about $\frac{1}{3000}$ of opium (*meconium*). It is soluble in water, alcohol, and ether, and crystallises, from its solutions, in six-sided prisms, with dihedral summits. It was called by M. Couerbe, who discovered it, *hypopitromeconic acid*.

MECO'NIUM. 1. Opium. The inspissated

juice of the poppy, *μυκων*.—2. The faces of an infant.

MED'AL, Fr. *medaille*. A piece of metal usually in the form of a coin, and impressed with some particular stamp, intended to commemorate some particular person, action, or event.

MEDAL'ION, Fr. from *medal*. 1. In *numismatics*, a large antique stamp or medal.—2. In *architecture*, any circular tablet on which are embossed figures or busts.

MED'LEVAL. Relating to the middle ages.

MED'IAL, *μεδαι*, middle. The three letters *b*, *g*, and *d*, in the Greek alphabet are so called, as being between their tenues *p*, *c*, *t*, and aspirates *ph*, *ch*, *th*.

MED'IAN, Lat. *medianus*. An epithet applied by anatomists to parts, from their situation between other parts.

MED'IA NT, from *medius*. A name in music for the third above the key-note, because it divides the interval between the tonic and dominant into two-thirds.

MEDIASTINUM. In *anatomy*, the membranous septum formed by the duplication of the pleura, that divides the cavity of the chest into two parts: *quasi in medio stans* as being in the middle.

MEDIATISAT'ION. The annexation of the smaller German sovereignties to larger states, which took place in 1806.

MED'ICINE, Lat. *medicina*, from *medico*, to heal. The science and art which relate to the preservation of health, and the alleviation or cure of disease. Medicine admits of numerous divisions, of which the most general are *Physiology*, which teaches the healthy functions of the body; *Pathology*, which teaches its morbid conditions; *Semiotics*, which teaches the symptoms of disease; *Hygiene*, which teaches how to preserve health; *Therapeutics*, which teaches how to treat diseases, and includes *physic*, *surgery*, and *obstetrics*; and *Pharmacy*, which teaches the nature and virtues of drugs, and the mode of preparing and administering them.

MEDI'ETAS LIN'OUX. In law, a jury, one half of which are natives, and the other half foreigners, impanelled in cases where the party to be tried is a foreigner.

MEDIUM. The Latin word for *middle*. Anything intervening. In *physic*, that space or region through which a body in motion passes to any point; thus, air is the *medium* through which bodies move near the surface of the earth; water is the *medium* through which fishes move; glass is a *medium* through which light passes, and we speak of resisting *media*, refracting *media*, &c. In *logic*, the middle term of a syllogism is called the *media*, being the argument or reason why the greater extreme is affirmed or denied of the less. *Medium* also denotes the means

or instrument by which anything is accomplished. Thus, money is our *medium* of commerce; and news are communicated through the *medium* of the press.

MEDUL'LA. 1. The marrow; *quasi in medio ossis*.—2. The pith or pulp of vegetables.—3. The white substance of the brain, of which the *medulla spinalis* or spinal marrow is a continuation.

MEDUL'LARY SHEATH. In *botany*, a thin layer of vessels, surrounding the pulp of exogenous plants.

MEDUL'LIN. The pith of the sun-flower (*Helianthus annuus*) which, on distillation, affords ammonia, leaving a charcoal of a metallic appearance, and a colour similar to that of bronze. *Medulin* is found in a few other vegetables.

MEDUSÆ, from *μεδουσα*. 1. A genus of *Zoophytes*, furnished superiorly with a disk more or less convex, resembling the head of a mushroom, called the *umbella*, the alternate contractions and dilatations of which assist the locomotion of the animal: order *Simplicia*, Cuv. The *Medusæ* approach nearly to the fluid state, appearing like a soft and transparent jelly, which, by spontaneous decomposition after death, or by the application of heat, is resolved into an almost limpid watery fluid.—2. In *mythology*, the chief of the Gorgons.

MEE'RSCHAUM, Germ. for *Sea-froth*. A white mineral, of an earthy appearance, always soft, but dry to the touch. It consists, according to Klaproth, of silica 41.5; magnesia 18.25; water and carbonic acid 39. When first dug it is soft and greasy, and lathers like soap, on which account the Tartars use it for washing linen. The Turkey tobacco-pipes are made of it.

MEGALÆSIAN GAMES, from *μείγας*, great. A magnificent Roman exhibition of the circus, in honour of Cybele.

MEGALO'NTX, from *μείγας*, great, and *ὄντις*, a claw. A huge fossil mammiferous animal, so named from the great size of its claw bones: order *Edentata*, Cuv. It has been found in the floor of a cavern in the limestone of Virginia, in America.

MEGALOSAU'RUS, from *μείγας*, great, and *σαῦρος*, a lizard. A genus of fossil amphibious animals, of great size, belonging to the Saurian tribe. According to Cuvier the *Megalosaurus* must have measured from 50 to 70 feet in length; and its structure partook of the crocodile and monitor. Its remains have been found in the oolite and the wealden.

MEGANTCTERANS, from *μείγας*, and *νυκτερις*, great bats. The first division of the order *Chiroptera*. They inhabit the tropical parts of Asia, Africa, and Polynesia; but are not found in America.

MEGA'RIAN SCHOOL OF PHILOSOPHY. Founded at Megara by the disciples of Socrates.

MEGASCOPE, μέγας, and σκοπία, I view. An optical instrument for the examination of bodies of considerable dimensions.

MEGATHERIUM, from μέγας, great, and θηρίον, a wild beast. An extinct mammiferous animal, of great size, belonging to the order *Edentata*, Cuv. Fossil remains of this huge animal have been discovered in the alluvial deposits of the Pampas of South America. It appears to have lived on roots, and to have been covered with a bony coat of armour, to defend it against the claws of beasts of prey. Its length appears to have been about 12 feet, and its height between 7 and 8 feet.

ME'GRIM. A species of cephalalgia or head-ache, arising from the state of the stomach. The term is synonymous with *hemicrania*, from which it is probably derived through the medium of the French *migraine*.

MELALEU'CA. An extensive genus of plants, mostly shrubs—*Polyadelphia*—*Icosandria*. Named from μέλας, black, and λευκός, white, by Linnæus, for some reason not known, unless it be a mistranslation of the Malay name of the then only known species, the *Coju-puti* (white-tree), and that which is said to afford the cajuput oil. All the species except this (*M. leucandendron*) are natives of New Holland.

MELAMPO'DIUM. A genus of annual plants. *Syngenesia*—*Poly. necessaria*. Hot climates. *Melampodium* is also the old name of the black hellebore, from *Melampus*, the shepherd who first used it.

MEL'ANCHOLY, from μέλας, black, and χολή, bile. A well-known form of insanity, thus named from its having been anciently supposed to proceed from redundancy of black bile.

MELANIA. The name given by Lamarck to a genus of molluscs. Order *Pectinibranchiata*: family *Trochoida*, Cuv. The melania inhabit rivers; the shell is thick and spiral, and the animal is furnished with long tentacula.

MEL'ANITE, from μέλας, black. The black garnet; a mineral of the gem order, found in the basalt of Bohemia, and in a rock at Frascati, near Rome. Its colour is velvety black.

MELANO'SIS, from μέλας, black. A species of morbid deposit of black matter, chiefly attacking the cellular and adipose textures of the body, giving rise to *black cancer*, a malignant and incurable disease. It more commonly attacks horses than men, and especially white horses.

MELAN'TERITE, μέλας. Native sulphate of iron.

ME'LAS, μέλας. A disease endemial in Arabia; it consists in the formation of dark spots on the skin.

ME'LASM, from μέλας, black. A disease, which sometimes appears upon the tibia of aged persons, in the form of a livid black spot, but which speedily degenerates into a foul ulcer.

MELAS'OMA. A family of unmixed black or cinerous-coloured coleopterous insects, whence the name from μέλας, black. They are mostly apterous; their antennæ entirely or partly granose. The mandibles are bifid, and the eyes oblong and prominent. They generally live in the ground, either in sand or under stones, and frequently in cellars and other dark places.

MELAS'SES, from μέλας, black. The sirup which drains from *Muscovado* sugar: treacle.

MELCHISEDECIANS. In ecclesiastical history, a name applied to several sects of early heretics, from their peculiar opinions concerning Melchisedec.

MELEA'GRIS. A genus of gallinaceous birds, of which the common turkey (*M. gallopavo*, Lln.), introduced into Europe from America, was for a long time the only species known; but a second species, the *M. ocellata*, Cuv., from the Bay of Honduras, has lately been described: it is almost equal to the peacock in the brilliancy of its colours, particularly in the sapphire-coloured spots, surrounded with circles of gold and ruby, which decorate the tail. *Meleagris* is the Greek name of the Guinea-hen, erroneously applied by Linnæus to the turkey.

ME'LES. A genus of carnivorous mammalia: the *badgers*, placed by Linnæus with the raccoons in the genus *Ursus*. There are two species, the European badger and the American badger.

MELE'TIANS. In ecclesiastical history, the partisans of Meletius, bishop of Lycopolis, in Egypt, who was charged with sacrificing to idols.

MEL'ICA. The *melic-grass*: a genus of perennials. *Triandria*—*Digynia*. The name was anciently given to a species of millet. All the species are hardy, and two are indigenous to Britain.

MELILO'TES, } An extensive genus of
MELILO'T. } herbaceous plants. *Didelphia*—*Decandria*. Name from *mel*, honey, and *lotus* (q. v.). All the species are hardy, and one is indigenous to Britain.

MELIS'SA. *Balm*. A genus of plants mostly perennials. *Didynamia*—*Gynnospermia*. Name from μέλισσα, a bee, because bees gather honey from it. The greater and lesser calamint are the only

British species. The official balm is a native of the south of Europe, but is now common in our gardens.

MELITEA. In zoology, a genus of beautiful corals; also a genus of butterflies.

MELIPHAGANS, from *μέλι* and *φαγεῖν*, I eat. Birds which feed on the nectar of flowers.

MELITE. Honey-stone. A mineral of a yellowish colour like honey (*mel*), and resinous aspect, found at Artern in Thuringia. It is a mellate of alumina.

MELLITIC ACID. An acid which is found associated with alumina in the mineral called melilite. It crystallises in small colourless needles; has no smell, but a strong acid taste; is permanent in the air, and soluble in water and alcohol. It is, according to Liebig and Pelouze, C_4O_4H , but is not resolvable into $C_4O_3 + O H$, without decomposition.

MEL'ION. A new compound of carbon and nitrogen, discovered by Liebig, by heating bi-sulphocyanide of mercury. The mellon remains at the bottom of the retort in the form of a yellow powder.

MEL'ODRAME, from *μέλος*, song and *ΜΕΛΟΔΡΑΜΑ*, drama (q.v.). A dramatic performance in which music is intermixed. It differs from the opera in this, that the actors do not sing but declaim, the music only filling up the pauses with strains suitable to the subject. Melodramas are commonly romantic.

MELODY, *μελωδία*, a song. A succession of notes so modulated as to please the ear. It is the effect of a single voice or instrument, in which respect it differs from harmony.

MEL'OE. The name of a genus of heterogeneous Coleoptera, belonging to Cuvier's family of Trachelides and tribe of Cantharidae. In some districts of Spain, meloes are employed in place of cantharides, or are mixed with them. They are also employed by farriers, and they were formerly regarded as a specific in hydrophobia. They answer to the *Buprestes* of the ancients; insects which were believed to kill such cattle as swallowed them while grazing. The oil-beetle is the best known species of meloes, properly so called; but the genus *meloe*, Lin., comprehends also the genus *Cantharis*, Geoff, or *Lytta*, Fab.

MELOLON'THA. A division of the genus *Scarabæus*, or beetle.

MEL'ON, from *μέλον*, an apple. A name of certain plants and their fruit. The melon, properly so called (*Cucumis melo*), is an annual, of which several varieties are cultivated. It is a native of warm climates. The water-melon (*Cucurbita citrullus*), is also an annual, a native of the South of Europe, &c. The muskmelon (*Cucurbita moschata*), is likewise

an annual, a native of the West Indies. These plants are much valued for their fruit, which is sweet and delicious, but only matured by exposure to a hot sun. The melon-thistle is a species of cactus.

MELOTHRIA. A genus of plants. *Triandria—Monogynia*. Name borrowed from the *μελαθρον* of Dioscorides. The best known species is the American Bryony (*M. pendula*), the berries of which are pickled and used as capers in the West Indies, &c.

MELPO'MENE, *μελπομένη*, I sing. The muse who presides over tragedy.

MEMBRA'NA TYMPANI. The drum of the ear.

MEMBRANACEOUS, Lat. *membranaceus*, of the nature of membrane. Applied in anatomy and botany to ligaments, tunics, &c.; and to leaves, pods, &c., of a thin and pliable texture.

MEMBRANE, Lat. *membrana*. A thin and expanded substance, composed of cellular texture, the elastic fibres of which are so arranged and woven together as to allow of great pliability. The membranes of animals consist of concrete gelatine, and, like skin, are convertible into leather by tanning. The term is also extended by analogy to parts of vegetables of a membranaceous texture.

MEMBRANOLOG'Y, from *membrana* and *λογος*, discourse. A hybrid term, used to designate that branch of anatomy which treats of the membranes of the body.

MEMOIR, from Fr. *memoire*, memory. 1. A species of history describing transactions and events, in which some particular person had a principal share, written either by the person himself, or by a different person.—2. The recorded proceedings of a scientific society.

MEMO'RIAL. In diplomacy, a species of informal state paper, much used in negotiations.

MEMO'RIA TECH'NICA. Technical or artificial memory. A name for any contrivance for assisting the memory.

MEN'ORY, Lat. *memini*, I remember. The power of having what was once perceived recalled to the mind, accompanied by a consciousness of past existence.

MENACHANITE. An ore of titanium, found in the bed of a rivulet, which flows into the valley of Menacan, in Cornwall. It occurs in very flat angular grains of a greyish black colour, and a semi-metallic lustre. Sp. gr. 4.4. It contains 51 oxide of iron, and 45.5 of oxide of titanium, associated with 3.5 of silica. It tinges borax of a greenish colour.

MEN'DICANTS. Beggars. Several orders of monks, who live on alms, are so named.

MEN'ZE. A Chaldean word, signifying "he has numbered," or "he has counted."

MEN'IDES, a family of Acanthopterygious fishes, distinguished by the extreme ex-

tensibility and retractility of their upper jaw.

MENINGEAL. Relating to the *meninges* or membranes of the brain. See **MENINX**.

MENINGITIS. Inflammation of the *meninges*, or membranes of the brain or spinal cord.

MENINX, *μηνίγξ*. A name formerly common to all the membranes of the body, but now appropriated to those of the brain. Plural, *meninges*.

MENISCUS, Lat. from *μηνισκος*, a little moon. A lens convex on one side, and concave on the other. See **LENS**.

MENISPERMIC ACID. An acid obtained from the berries of the *Menispermum cocculeus*, a shrub which grows in the East Indies. It is an insipid crystalline substance, little soluble in water, and forms with the alkalies and some other bases crystallizable compounds or *menispermates*. Little is known of this acid, or of the salts which it forms.

MENISPERMUM. Moon-seed. A genus of shrubby plants. *Diacia*—*Dodecandria*. Named from *μηνή*, the moon, and *σπέρμα*, seed, in allusion to the crescent form of the seeds. The berries of the *M. cocculeus* are highly poisonous and inebriating, and are supposed to impart that power to most of the London porter.

MENIVER. A small white animal of Russia; also its fur, which is much valued.

MENONITES. A title of the Anabaptists of Holland, derived from their leader, Menno.

MENOBRAUCHUS. The name given by Harlan to a genus of Batrachians, closely allied to the Tritons or Aquatic Salamanders. The species most known is the *M. lateralis*, Harl., or *Triton lateralis*, Say. It inhabits the great lakes of North America, and attains a length of between two and three feet.

MENOSOMA. The name given by Harlan to a genus of Batrachians, closely allied to the Salamanders. The Hellbender (*Salamandra gigantea*, Barton), is the best known species. It inhabits the lakes and rivers of the interior of North America. The reptile is about 18 inches long, and of a blackish blue colour.

MENSTRUUM. *Solvent.* All liquids are so called, which are used as dissolvents, infusions, decoctions, &c. The most common is water. The term *menstruum* is derived from *mensis*, a month, and its use is supposed to have originated in some notion of the old chemists, about the influence of the moon in the preparation of dissolvents.

MENSURATION, from *mensura*, measure. A branch of mathematics which treats of the measurement of the extensions, capacities, solidities, &c. of bodies.—2. The result of measuring.

MEN'THA. *Mint.* An extensive genus of perennial plants. *Didynamia*—*Gymnospermia*. Name from *Minthe*, who was changed into this herb. Of 41 species, 23 are natives of Britain. Among these are the spear-mint, the marsh-mint, the pepper-mint, the bergamot, the water, corn, field, meadow, fen, and brook-mint, and the penny-royal or pudding-grass.

MEN'TUM (Lat.), chin. In *mammology*, the anterior and inferior margin of the lower jaw.

MENU', INSTITUTES OF. The most celebrated code of Indian law, civil and religious; so termed from its author Menu, Menou, or M.

MENYANTHES. Buckbean or water-trefoil. A genus of one species. *Pentandria*—*Monogynia*. Named from *μην*, a month, and *ανθος*, a flower, because it keeps in flower about a month. Europe.

MENYNGES, *μηνίγξ*, membrane. The membranes which cover the brain.

MEPHITIC, from *mephitis*, an ill smell. Offensive to the smell; noxious. Formerly carbonic acid was termed *mephitic acid* and nitrogen, *mephitic air*.

MEPHITIS, a genus of carnivorous mammalia of the digitigrade tribe—the *Skunks*, remarkable for their horrible foetid exhalations: whence the name *mephitis*, an ill smell. The most common species is the American skunk (*M. putorius*) somewhat resembling the badger.

MERCATOR'S CHART. A chart in which the parallels of latitude and the meridians are represented by straight lines, invented by Gerard Mercator.

MERCURIALIS. Mercury. A genus of plants. *Diccia*—*Enneandria*. Named after *Mercurius*, the discoverer of it. There are five species, natives of Europe; two are British.

MERCURY, Lat. *Mercurius*. 1. The god of eloquence and commerce; his name is said to be formed from *merces* or *mercor*. —2. Quicksilver: a metal which remains fluid at ordinary temperatures, but becomes solid, ductile, and malleable when its temperature is reduced 40 degrees below zero of Fahrenheit's thermometer. It boils at 656° F., and distils off in an elastic vapour, which, being condensed by cold, forms purified mercury, sp. gr. 13·6, at 60°. Its colour is that of pure silver; it has no taste or smell, combines readily with certain metals, as gold, silver, zinc, tin, and bismuth, forming mercurial alloys or *amalgams*. It is this property which makes it so extensively useful in the extraction of gold and silver from their ores, in gilding, plating, silvering looking-glasses, &c. It occurs, (1.) *Native*, adhering in small globules to the surface of cinnabar: (2.) In union with silver in the *native amalgam* of sil-

ver, which occurs in Hungary, Sweden, Spain, and some other places; (3.) In combination with sulphur forming cinabar; (4.) Combined with chlorine, forming horn-mercury. It is obtained from its ores by distillation. Mercury is used in barometers and thermometers, and very extensively in medicine, in the forms of blue pill, calomel, and corrosive sublimate. It is also used as a pigment in vermilion.—3. In *astronomy*, the smallest of the primary planets, and the nearest to the sun, for which reason, though it emits a bright light, it is seldom seen. Diameter 3180 miles; distance from the sun, 36,841,468 miles; sidereal revolution, 88 days, 23 hours, 15', 44"; rotation on its axis, 1d. 0h. 5', 28". Light compared with that at the earth about 7 times. Character ♀. Named from its apparent quick motions, after Mercury, the messenger of the gods.—4. In *botany*. See MERCURIALIS.

MERCY-SEAT. In *scripture antiquities*, the propitiatory: a covering of the ark of the covenant. It was of gold, and its ends were fixed to two cherubim, whose wings extended forward, and formed a kind of throne for the Almighty.

MERGER, from *mergo*, to merge. A term in law for the merging or drowning of a less estate in a greater.

MERGUS, a diver. The Latin name of some aquatic bird: applied by Linnæus as the generic name of the *goosander*, and by Brisson as the generic name of the *diver*, of which Illiger forms the genus *Endytes* (q. v.). The genus *Mergus*, Lin., comprehends all those *palmipedes* of the Lamellirostrine family, in which the bill is thinner and more cylindrical than that of the ducks; armed along its edges with small pointed teeth, like those of a saw, and having the upper mandible hooked. They live on lakes and ponds, where they are very destructive to fish. The goosander (*M. merganser*, Lin.), is well known.

MERIDIAN, from *meridies* for *medies*, mid-day; noon.—2. In *astronomy* and *geography*, a great circle supposed to pass through the poles, zenith, and nadir, of any given place, intersecting the equinoctial and equator at right angles. Every place has its *meridian*, and when the sun arrives at this circle, it is noon or mid-day, whence the name. The *first meridian* is that from which longitudes are reckoned. The choice is entirely arbitrary. In British works the longitude is reckoned from Greenwich.—3. The *meridian of a globe* is the brazen circle in which it turns, and by which it is supported. The *magnetic meridian* is a great circle passing through the magnetic poles. The *meridian altitude* of a heavenly body, is its altitude when on the meridian. The

meridian line, (1.) On a dial, is the same as the 12 o'clock hour line; (2.) On Gunter's scale a line divided unequally towards 87°, corresponding to the meridian in Mercator's chart.

MERIDIONAL. In *navigation*. (1.) By *meridional distance* is meant the distance between the meridians of two places: otherwise called *departure* (q. v.). (2.) *Meridional parts*, are the parts of the increased meridians, according to Mercator's chart, which increase in proportion to the cosines of the latitudes to radius, or simply as the secants, the radius being constant.

MERINO. The Spanish sheep: a variety remarkable for the fineness of their fleece.

MERRONES. A genus of rodent mammalia, separated from the Gerbils by F. Cuvier. The most known species is the jumping mouse (*Mus canadensis*, Penn.) of North America. It much resembles our mouse, but its colour is lighter, and it is more active in summer, and spends the winter in a state of lethargy, shut up in its burrow.

MERLIN (French). A species of hawk. It is the smallest bird of the hawk-tribe.

MERLON (French). That part of a parapet which lies between two embrasures.

MERMAID. *Maid of the Sea*. A fabulous creature, described as having the head and body of a woman with the tail of a fish. Some doubted the existence of *mermen*, who thoroughly believed in the existence of mermaids! The prototype of the fables about mermaids is the *Dugong* (q. v.).

MEROPS. The name given by Linnæus to a genus of passerine birds—the *Bees-eaters*, of the Tenuirostrine family. Their flight is similar to that of the swallows; and they pursue insects in great flocks, but especially bees and wasps: by which they are never stung. Name *μεροψ*, from *μερος* and *ψ*?

MEROS (Gr.). In *architecture*, the plane face between the channels in the triglyphs of the Doric order.

MESEMBRYANTHEMUM. *Fig-marigold*. A genus of plants, of which 228 species are enumerated by Don: class *Icosandria*: order *Pentogynia*. Name from *μερος*, middle, *εμβρυον*, embryo, and *ανθος*, a flower. The species are all natives of warm climates, and mostly of the C. G. Hope.

MESENTERY, from *μερος*, middle, and *εντερον*, an intestine. A membrane placed in the middle of the intestines, and to which they are attached, to prevent them from becoming entangled with each other by convolutions. It is formed by a du-

plicature of the peritoneum. Epithets *mesenteric* and *meseric*.

MESLIN, from Fr. *mesler*, *mêler*, to mix. A mixture of various sorts of grain: especially a mixture of wheat and rye.

MESNE. An old French term (pron. *meen*), and signifying *middle* or *intervening*, as a *mesne* lord, that is, a lord who holds land of a superior, but grants it to another person.

MESNE PROCESS is that part of the proceedings of suit which intervenes between the original process or writ and the final issue, and which issues, pending the suit, on the collateral matter.

MESOCOLON. That part of the mesentery to which the colon is attached.

MESOLABE, from *μεσος*, and *λαμβανα*, I take. An instrument for finding two mean proportionals between two given lines, required in the duplication of the cube.

MESOTHYLLUM, *μεσος* and *φυλλον*, leaf. The tissue forming the fleshy part of a leaf, between the upper and lower integuments.

MESOTHE'NAR, from *μεσος*, middle, and *ἄναγ*, the palm. The muscular mass forming the palm of the hand, consisting of the abductor and part of the short flexor of the thumb.

MESOTHORAX, *μεσος* and *θώραξ*, chest. The posterior segment of the alltrunk of insects, bearing the posterior wings and legs.

MESOTYPE, from *μεσος*, middle, and *τυπος*, form; prismatic zeolite. A simple mineral, which occurs regularly crystallised in drusy cavities, or in veins in secondary trap-rocks. Colours white, red, yellow, and brown. Sp. gr. 2.3.

MESSENGER. One who executes a message.—2. In *Scotland*, a bailiff.—3. In a *ship*, a small cable of 60 fathoms in length, wound round the capstan, and having its two ends lashed together. It is used in pulling anchor.

MES'UAGE. In *law*, a dwelling-house and adjoining land, appropriated to the use of the household. The term is from the old French *meson*, *mesonage*, a house or house-room. The French now write *maison*.

MESTIN'S. In *Spanish America*, the child of a Spaniard, or creole, and a native Indian.

METACARPUS, from *μετα*, beyond, and *καρπος*, the wrist. That part of the hand which is between the wrist and the fingers.

METABO'LIANS. Insects which undergo a metamorphosis, and which are usually fitted with wings in their final state: from *μεταβαλλω*, to change.

METACHRONISM, from *μετα*, beyond, and *χρονος*, time. An error in chronology by placing an event after its real time.

METAL (Dan. and Fr. *metal*; Germ. and Sw. *metall*; Lat. *metallum*; Gr. *μεταλλον*). Metals are distinguished by the following general characters:—(1.) They possess a peculiar lustre, which continues in the streak and in their smallest fragments; (2.) They are fusible by heat, and in fusion retain their lustre and opacity; (3.) They are all, except selenium, excellent conductors of electricity and caloric; (4.) Many of them may be extended under the hammer, and are called malleable; or under the rolling press, and are called laminable; or drawn into wire, and are called ductile; (5.) When exposed to the action of oxygen, chlorine, or iodine, at an elevated temperature, they generally take fire, and combining with one or other of these three elementary dissolvents in definite proportion, are converted into earthy-looking bodies, devoid of metallic lustre, called oxides, chlorides, and iodides; (6.) They are capable of combining in their melted state with each other, in almost every proportion, constituting the important order of metallic alloys, in which the characteristic lustre and tenacity are preserved.—From a consideration of these properties metals may be divided into many classes; but the most modern classification is formed from a consideration of their chemical properties. Thus, seven form with oxygen bodies possessed of alkaline properties; viz., potassium, sodium, lithium, barium, strontium, calcium, and magnesium. Other five with oxygen form the earths proper; viz., aluminum, zirconium, yttrium, glucinum, thorium. The others may be named in alphabetical order: antimony, arsenic, bismuth, cadmium, cerium, chromium, cobalt, copper, gold, iridium, iron, lead, manganese, mercury, molybdenum, nickel, osmium, palladium, platinum, rhodium, silver, tantalum (columbium), tellurium, tin, titanium, tungsten, vanadium, uranium, zinc. The only metals known to the ancients were gold, silver, mercury, copper, lead, tin, and iron. In the annexed table, arranged according to the date of their discovery, with the names of the chemists by whom they were discovered, their specific gravities, melting points, equivalent weights, and abbreviated symbols, a more satisfactory information, may, however, be obtained.

METALEPSIS. *Μεταληψις*, participation. In *rhetoric*, a continuation of a trope in one word through a succession of significations, or the union of two or more tropes of different kinds in one word.

TABLE OF METALS.

Names.	Authors, and Dates of their Discovery.	Specific Grav. ty.	Melting Points.	Equi- valent Weights	Abb. Symbols
			Fahr.		
1. Gold . . .	Known to the ancients, and represented by the preceding planetary symbols, with which they were supposed to have a mysterious con- nexion.	19.25	2016	197	Au.
2. Silver . . .		10.47	1873	108	Ag.
3. Iron . . .		7.78	2800 ? s. f.*	56	Fe.
4. Copper . . .		8.89	1966	63	Cu.
5. Mercury . . .		13.56	30	200	Hg.
6. Lead . . .		11.45	612	207	Pb.
7. Tin . . .		7.29	442	118	Sn.

44. Didymium . . .	" . . . 1839			96	D.
45. Ruthenium . . .	" . . . 1839	11.30		82	Ru.
46. Rubidium . . .	Bunsen & Kirchhoff 1860			85	Rb.
47. Cesium . . .	" . . . 1861			133	Cs.
48. Thallium . . .	Crookes . . . 1861	11.9		204	Tl.
49. Gallium . . .	Lecoq . . . Dec., 18 5				Ga.

* Smith's forge.

† Oxyhydrogen blowpipe.

METAL/LIC. Resembling or pertaining to metal.

MET'ALLING. A term applied to the covering of roads generally, and to the filling in material above, below, and between the several stone blocks and sleepers upon rail-ways, &c.

METAL/LOID. A name formerly given to the metallic bases of the alkalies and earths.

MET'ALLURGY comprehends the whole art of working metals from the ore to the utensil; but, technically, only the operations followed in separating metals from their ores.

METAMORPHIC, from *μεταμορφω*, to alter. 1. Transformed.—2. An epithet for such rocks as are altered by stratifica-

tion. The primary stratified rocks are all metamorphic.

METAMORPHOSIS, μεταμορφωσις. 1. Transformation.—2. A term for the change which some insects undergo previously to their arriving at their state of perfection.

METAPHOR, from μεταφερω, to transfer. A short similitude expressed by a single word, without comparison; as when a hero is called a *lion*, a shrewd individual a *fox*, &c.

METAPHRASIS, μεταφρασις. A literal translation out of one language into another.

METAPHYSICS, from μετα, beyond and φυσικη, physics. The science of mind: thus named, the science of natural bodies or physics being regarded as the first in the order of studies; and the science of mind, or intelligence, to be the second. Metaphysics comprehends *ontology*, or the science which treats of the nature, essence, and qualities or attributes of being; *cosmology*, the science of the world, which treats of the nature and laws of matter and motion; *anthroposophy*, which treats of man and the motions by which life is produced; *psychology*, which treats of the intellectual soul; *pneumatology*, the science of spirits. *Metaphysical theology* treats of the existence of God, his essence, and attributes; called by Leibnitz and others *theodicy*. These divisions of metaphysics are now little regarded. The natural division of things that exist is into body and mind, things material and immaterial: the former belong to physics, the latter to metaphysics.

METAPLASM, μεταπλασμος. Transformation. A term in grammar for any change made in a word, by transposing or retrenching a syllable or letter.

METASTASIS, μεταστασις. Translation. Transition of a disease from one part of the body to another.

METATAR'SUS, from μετα, beyond, and ταρσος, the tarsus. That part of the foot between the tarsus and the toes.

METATOME, from μετα, change, and τεινω, I cut. A space, in architecture, between one dentil and the next.

METAYER. In *France* and *Italy*, a farmer holding land on condition of yielding half the produce to the proprietor, who furnishes tools and stock.

METEMPSYCHOSIS, μεταμψυχωσις. Transmigration. The passing of the soul of man, after death, into some other animal; a doctrine which still prevails in some parts of Asia.

METEMPTOSIS, μετιμπτωσις, from μετα, after, and πτω, to fall. A term in chronology for the equation necessary

to prevent the new moon from happening a day too late, or the suppression of the bissextile once in 134 years. The opposite is the *proemptosis*, or the addition of one day every 300 years, and another every 2400 years.

METEOR, from μεταωρος, sublime. A term used by some to comprehend all the visible phenomena of meteorology; but commonly restricted to such luminous bodies as appear suddenly at uncertain times, and with more or less motion in the atmosphere. These are reducible to three classes; (1.) *Igneous* or *fiery* meteors, including fire-balls, falling stars, &c. (2.) *Luminous* meteors, as the aurora borealis, zodiacal light, parhelia, &c. (3.) *Aqueous* meteors.

METEORIC STONES. Aërolites. Peculiar solid compounds of earthy and metallic matters, of singular aspect and composition, which occasionally descend from the atmosphere, usually from a luminous meteor. Aërolites are of various sizes from a few ounces to several cwts. Their composition is remarkably uniform, consisting of oxide of iron, metallic iron, pyrites, chromium, nickel, magnesia, and silex; and they are uniformly covered with a deep black crust, without gloss, and roughened with small asperities. The origin of these stones is not ascertained.

METEOROLITES. Meteoric stones, from meteor, and λιθος, a stone. See **METEORIC STONES**.

METEOROLOGY, from μεταωροια, a meteor, and λογος, science. The science which treats of the atmosphere, and its phenomena, particularly in its relation to heat and moisture, and its changes with respect to weight and electricity, giving rise to winds, rains, snow, hail, dew, and variation of season, thunder, &c.

METEOROMANCY, from μεταωροια, meteor, and μαντια, divination. Divination by meteors, especially by thunder and lightning: held in high estimation by the Romans.

METEOROSCOPY, from μεταωρος, lofty, and σκοπια, to view. That part of astronomy which treats of the distance of the fixed stars, &c.

METH'GLIN, Welch meddyglyn. A drink prepared from honey by fermentation.

METH'OD, from μετα, beyond, and οδος, a way; literally a path from one object to another. The first idea of *method* is a *progressive transition* from one step in any course to another; and, when the word *method* is used with reference to many such transitions in continuity, it necessarily implies a principle of *unity* with *progression*.—2. Arrangement of natural bodies according to their common characteristics. In natural arrangements, a

distinction is sometimes made between *method* and *system*. This last is an arrangement, founded throughout all its parts on some one principle; whereas *method* is an arrangement less fixed and determined, and founded on more general relations.

METHODISTS. Sects of Christians founded by John and Charles Wesley, and the Rev. George Whitfield: hence called Whitfieldian and Wesleyan Methodists. The former are Calvinists; the latter, so far as regards free-will, are Arminians. They were named Methodists from the exact regularity of their lives, and the strictness of their principles and rules; or rather, because they pretended to reduce religion to exact rules and axioms, in which they were compared to the methodical physicians at Rome, of which Themison was the head. These endeavoured to reduce medicine to strict rules, and supposed that all diseases arose from rigidity of the fibres of the body. There were also a sect of polemical doctors of the 17th century called Methodists. They distinguished themselves by their zeal and dexterity in defending the Romish Church against the attacks of the Protestants.

METOCHE. In *architecture*, the space between two dentils.

METACI, μεταχει. The resident aliens in Athens.

METONIC CYCLE. The period of nineteen years, in which the lunations return to the same days of the month. Discovered by, and named after, Meton, a celebrated mathematician at Athens, who flourished about 430 years before Christ.

METONYMY, μεταonymia, from *μετα*, beyond, and *ονομα*, name. A rhetorical trope, in which one word is put for another. Thus we say a man has a clear head, where the word head is put by metonymy for *understanding* or *intellect*.

METOPÆ, μετοπαι, from *μετα* and *οπαι*, an aperture. A name in architecture for the space between the triglyphs of the Doric frieze, which used to be painted or adorned with carved work.

METRE, Fr. from *μετρον*, measure. 1. In *French measures*, the metre is the ten-millionth part of a quadrant of the meridian, which is adopted as the unit of length. It is equal to 36'9413 Fr. inches, or 39'3702 Eng. inches.—2. In *poetry*, a system of feet of just length. The different metres are the different manners of ordering and combining the quantities, or the long and short syllables. See *MEASURE*.—3. Metre is a general name for a description of machine fitted with clock-work, so adjusted as to indicate the quantity of fluid which passes through it: The *gas-metre* is the best known of these machines.

METROMA'NIA, from *metre* and *mania*. 1. A disease, by no means uncommon, in which the patient is seized with a desire for composing verses.—2. A term synonymous with *nymphomania*, in which case it is derived from *metra*, the womb; and *mania*, madness.

METRONOME, μετρον and νομος, law. An instrument for measuring time in music.

METROSIDE'ROS. A genus of trees. *Icosandria—Monogynia*. Warm climates. The Botany Bay willow, and the ironwood of India, are the best known species.

ME'UM and TU'UM. *Mine* and *thine* Latin words used in law for the proper guides of right.

MEZ'NEON. The spurge olive or widow-wail (*Daphne mezereum*); also the root of that plant used in medicine.

MEZ'ZANINE, from Ital. *mezzo*, half. A low window, less in height than in breadth.

MEZ'ZO. In *music*, an Italian word, signifying *half*. Thus *mezzo-forte*, *mezzo-piano*, *mezzo-voce*, imply a middle degree of piano, or soft. By *mezzo soprano* is understood a pitch of voice between the soprano and treble, and counter-tenor.

MEZZOTIN'TO, Ital. from *mezzo*, half, and *tinto*, Lat. *tinctus*, painted. A particular manner of engraving in imitation of painting in Indian Ink. It is done by furrowing the surface of the plate all over with an instrument for the purpose; till the whole is of a regular roughness, so that were an impression to be taken from the plate at this stage, it would be black all over. The design is then drawn, and where deepest shades are, the plate is left untouched; but where the shades are lighter, the rough surface is scraped down in proportion to the highness of the shade required; so that when the paper is to be left perfectly white, the plate is thoroughly burnished. By disposing the different parts of a figure on different plates, *mezzotintos* are printed in colours, so as in some measure to represent actual paintings.

Mi'ASM, } μιασμα, from μίωμι, to in-
MIAS'MA, } fect. A Greek word, importing pollution or corruption, and used to designate any effluvia, and used to its application to the human system is capable of exciting disease. Miasmata are principally regarded as excitants of intermittent, remittent, and yellow fevers, dysentery and typhus. That of the last is commonly considered to be generated in the human body, and is sometimes called the *typhoid fomes*. The other miasmata are produced from moist vegetable or animal matter, in some unknown state of decomposition, and are conveyed through the medium of the atmosphere. Little is known of the chemical nature of

these effluvia, but it is generally admitted that their base is hydrogen; whence the use of chlorine in fumigation.

MICA, from *mico*, to glisten. A mineral which appears to be always the result of crystallisation, though rarely found in regular well-defined crystals, but in their flexible laminæ, having a high polish and a shining surface. "These laminæ," says Mr. Humble, "have sometimes an extent of many square inches, and from this gradually diminish till they become mere spangles, discoverable indeed by their lustre, but otherwise scarcely perceptible to the naked eye. Its colours vary from silver white to black. Sp. gr. 2.5 to 2.9. Fuses before the blowpipe into a grey or black enamel. It is one of the component parts of granite, gneiss, and mica-slate; it occurs also in syenite porphyry and other primitive rocks." The large sheets of mica used instead of glass in stoves, lanterns, &c., are brought from Siberia, where this mineral serves all the purposes of glass in windows, &c. Jameson enumerates ten subspecies, viz.: mica, pinite, lepidolite, chlorite, green-earth, talc, nacrite, potstone, steatite, and figure-stone.

MICAËOUS IRON-ORE. A variety of iron-ore which occurs in amorphous masses, composed of six-sided laminæ, like black mica. Its lustre is metallic and opaque. Feel, greasy. Sp. gr. 4.5 to 5.7. Yields nearly 70 per cent. of iron.

MICA SCHIST, } A metamorphic rock

MICA SLATE, } composed of mica and quartz. Its texture is slaty, and it passes by insensible gradations into clay slate.

MICHAEL, SAINT. A French order of knighthood, instituted in 1469.

MICROCOSMIC SALT. A triple salt, a phosphate of soda and ammonia, obtained originally from urine, and so named because man was regarded by the alchemists as a miniature of the world. It is now

prepared by mixing equal parts of the phosphate of soda and phosphate of ammonia together in solution, and then crystallising. It is much used in assays by the blowpipe.

MICROCOSM, the little world; from *μικρος*, little, and *κοσμος*, the world. The term is used of man, supposed to be an epitome of the universe or great world.

MICROMETER, from *μικρος*, small, and *μετρον*, measure. 1. Any instrument for measuring small spaces is a micrometer.

—2. An instrument, by the help of which, the apparent magnitude of objects viewed through the telescope is measured with great exactness. There are various forms of the instrument, but the principle of operation is the same. It moves a fine wire parallel to itself in the plane of the picture of the object, formed in the focus of the telescope, and with such accuracy as to measure with great precision its perpendicular distance from a fixed wire in the same plane, by which means the apparent diameters of the planets and other small angles are exactly determined. The micrometer (especially that of microscopes), is sometimes simply an accurately and finely divided object-glass.

MICROPHONE, from *μικρος*, small, and *φωνη*, sound. The science of magnifying small sounds: whence *microphone*, an instrument for magnifying small sounds.

MICROSCOPE, from *μικρος*, small, and *σκοπεω*, to view. An optical instrument contrived to give to the eye an enlarged image of objects which are too minute to be examined without such aid. There are several sorts of microscopes, as single, compound, reflecting, and solar. The *single* or *simple microscope* consists of a single lens. *Double* or *compound microscopes* have at least two, but generally three or more lenses. The *solar microscope*

consists of a common microscope connected with a reflector AB, and condenser CD, the first being used to throw the sun's light on the latter, by which it is condensed upon the object placed in its focus. This object is also situated in the focus of a microscopic lens on the other

side, which transmits a magnified image upon a screen or wall, in a dark room. The *lucernal microscope* differs from the solar microscope only in this, that it is illuminated by a lamp instead of the sun.

MIDDLE AGES. The period from the 8th to the 15th century of the Christian era.

MID'DLE LATITUDE. Half the sum of two given latitudes of the same hemisphere, or half their difference when they are in different hemispheres. In the latter case it is always of the same name as the greater.

MID'DLE RAIL. In architecture, the rail of a door level with the hand, on which the lock is usually fixed.

MID'DLE TERM (of a syllogism). That with which the extremes of the conclusion are compared.

MID'SHIPMAN. A naval cadet, whose business is to second the orders of the superior officers, and assist in the necessary business of the ship, particularly in managing the sails, that he may be trained to a knowledge of the machinery, discipline, and operations of ships of war, and qualified for naval service.

MID'SHIPS, properly *amidships*. In the middle of a ship.

MIGNONETTE (Fr.). An annual flowering plant, the *Reseda odorata*. Egypt.

MIL'DEW, Sax. *mildeaw*, honey dew, from Lat. *mel*, honey. 1. A thick, clammy, sweet juice found on the leaves of plants. It is said to injure the plants by impeding their respiration.—2. Spots on paper, cloth, &c., caused by moisture.

MILE. A measure of length, 1760 yards. From Lat. *mille passus*, a thousand paces, *passus* being dropped in common usage. The Roman mile was 1000 geometrical paces. The Scottish and Irish mile = 2200 yards, exactly double a Russian mile, the half of a Polish mile, and the quarter of a Hungarian mile. The Italian mile is 1467 yards, the Spanish, 5028 yards, that of Sweden and Denmark is 7233 yards, and the German is 5866 yards.*

MILIA'RIA. *Miliary fever*. An eruptive disease, characterised by intermittent fever, and so named from the small vesicles upon the skin resembling millet-seed (*milium*, millet).

MILIO'LA. A genus of microscopic multilocular univalve shells, many specimens of which are obtained from fucii, taken up near the island of Corsica: named from their minute size, *miliolum*, dim. of *milium*, millet-seed.—2. Little tumours which grow on the eyelids.

MIL'OLITES. Fossil miliola, which form the principal part of the masses of stone in some of the quarries near Paris.

MILIT'IA, Lat. from *miles*, a soldier. A body of soldiers regularly enrolled and trained, though not in constant service in time of peace, and thereby distinguished from regular troops.

MIL'IUM. *Millet-grass*. A genus of perennial grasses. *Triandria—Digynia*. There are several species, all hardy; the common (*M. effusum*) is a native of Britain. Name from *mille*, a thousand, in allusion to the great number of its seeds.—2. Millet,

the seed of the *Panicum miliaceum*. It is used for puddings, &c.

MILK', Sax. *melce*. The white fluid secreted by peculiar glands in female animals, of the class mammalia, for the nourishment of their young. It differs greatly in different animals, but it has in all the property of separating spontaneously into cream, cheese, and serum. When distilled to dryness it gives out insipid water, and leaves a whitish brown substance called *extract of milk*, which, being dissolved in water, makes a milk of less value. When fresh milk is strongly agitated for some time in a warm place, it by degrees goes into vinous fermentation, so that alcohol may be drawn off by distillation, which is named *spirit of milk*.

MILK'-FEVER. A febrile state sometimes induced when the milk begins to be secreted.

MILK' TREE. So called from its trunk yielding a milky fluid when wounded.

MILK' VESSELS. In plants, the anastomosing tubes lying in the bark, in which a white fluid is secreted.

MILK'-WAY. See GALAXY.

MILL'. A machine employed in pulverising any substance, as grain, whereby it is formed into flour, which is effected by rubbing it between two hard substances, consisting generally of stone, and termed *millstones*. These are driven by means of machinery. The original purpose of mills was to comminute grain for food; but the term *mill* is now extended to many other engines and machines moved by water, wind, or steam, for carrying on very different operations; thus we have saw-mills, cotton-mills, flax-mills, silk-mills, flint-mills, oil-mills, slitting-mills, fulling-mills, bark-mills, coffee-mills, cider-mills, &c.; and now a mill for grain is very often denominated a *grist-mill*. All sorts of wheel-work, larger than clock-work, are moreover known by the general name of *mill-work*.

MILLEN'NIUM, Lat. from *mille*, a thousand, and *annus*, a year. A thousand years. The word is now used to denote the thousand years mentioned in Revelations XX., during which Satan shall be bound, and Christ shall reign on earth with his saints. Those who maintain that literal sense of millennium here given, are denominated *Millenarians*.

MIL'LEFEDE. A name common to several insects from the great number of their feet: *mille*, a thousand, and *pes*, a foot. These are: (1.) The *Porcellio scaber*, or sc Slater; (2.) The *Armadillo vulgaris* or of *feinialis*; (3.) The *Oniscus asellus*, or common wood-louse. These insects were formerly used in medicine.

MIL'LEPORE, from *mille*, a thousand, and *porus*, a pore. A genus of Lithophytes of various forms, having the surface per-

forated with numerous small pores; often, however, so small as not to be visible to the naked eye. The millepores do not exhibit any star-like radiations like the *madrepores*, and their cells are more minute.

MIL'LEPORITES. Fossil millepores.

MIL'LET, Fr. *millet* or *mil*; Sax. *mil*; Lat. *milium*. The *Panicum miliaceum*, an annual plant of India, and also the seed considered as grain, and sometimes employed to feed poultry, and as a substitute for rice.

MIL'LIGRAMME. A French measure of weight, the thousandth part of a gramme: *mille*, a thousand, and *gramme* (q. v.).

MIL'LILITRE. A French measure of capacity, containing the thousandth part of a litre: *mille*, a thousand, and *litre* (q. v.).

MILLI'METRE. A French measure of length, equal to the thousandth part of a metre: *mille*, a thousand, and *metre* (q. v.).

MILLING. 1. The process otherwise called fulling, performed by means of the fulling-mill.—2. A process in *coining*, which consists in stamping the coin by the help of a machine called a *mill*, in lieu of making the stamp by the blows of a hammer, which was formerly the mode. By aid of the coining apparatus of Messrs. Boulton and Wat, about 20,000 pieces of money can be struck in an hour; the machine acting at the same time as a register, keeping an unerring account of the number of pieces which have been struck. The work is done by eight presses. The term *milling* had originally reference only to the dressing of the edges of the coins; but, as they are now stamped and *milled* at the same instant, the term *milling* is taken to signify the whole process.

MILL'STONE. A stone used for grinding grain (see *MILL*).—2. In *mineralogy*, *burrrhstone* (q. v.), of great use for making into millstones. *Millstone grit* is a siliceous conglomerate, composed of the detritus of primary rocks, and forming a bed of considerable thickness (300 or 400 feet) in some situations. It is thus named from some of the strata having been worked for millstones.

MILREE. A coin of Portugal equal to 1000 rees (*mille*, a thousand). The milree valued in gold = 5s. 7½d. sterling, and in silver = 5s.

MIM', from *minus*, an actor. One who acted in the ancient comedy by mere gesture, and hence denominated *pantomime*.

MIM'OSA. A genus of Lomentaceous plants. *Polygania*—*Monacia*. Name from *minus*, an actor, in allusion to the motions of the plant, which mimic the sensibility of animal life. There are about 30 species, but the sensitive plant (*M. sensitiva*) of Brazil, and the Humbleplant (*M. pudica*) of the West Indies, are

those best known. All the species inhabit hot climates.

MINA, μίνα. A money of account in ancient Greece, equal to 100 drachms, about 2½ lrs. There was also a lesser mina, valued at seventy-five drachmas.—The Hebrew *mina*, *min*, or *maneh*, which is mentioned in the Old Testament, was valued at sixty shekels, above £54 in gold, and in silver nearly £7. In *old English law*, mina was a corn measure. The quantity of which varied with the different things measured by it. The toll or duty paid for selling corn by this measure was called *minage*.

MIN'ARET. A circular turret in Saracenic architecture, rising by different stages or divisions, each of which has a balcony. Minarets are commonly erected over the mosques in Mohammedan countries. The word is said to be Turkish.

MIND, Lat. *mens*, from *μενος*. A term which, like *life*, is used in two acceptations. In the one it signifies the phenomena arising from the exercise of the power of thinking; in the other it signifies the thinking power or principle itself. See *MATERIALISM*.

MINE, Fr. *mine*, a mine or ore. A general name for excavations, when made for the purpose of obtaining metallic ores and other minerals. There are lead-mines, copper-mines, gold-mines, coal-mines, &c. In *fortification*, a chamber for containing materials for blowing up any place.

MIN'ERAL, from *mine*. A body destitute of organization, and which naturally exists in the earth, and may be extracted by *mining*: distinct from *fossils*, which are mineralised organic matters, as shells, wood, bones, &c. The study of minerals constitutes *mineralogy*. The term *mineral* is also used adjectively, as in (1.) *Mineral adipocire*, a fatty bituminous substance, which occurs in the argillaceous iron ore of Merthyr, in Wales. It fuses at 160° F. (2.) *Mineral caoutchouc*, a variety of bitumen which much resembles Indian rubber in softness and elasticity, and like that removes pencil traces from paper. Found near Castleton in Derbyshire. (3.) *Mineral charcoal*, a fibrous variety of non-bituminous mineral coal. (4.) *Mineral waters*, waters impregnated with mineral substances. (5.) *Mineral kingdom*. That department of nature which includes minerals or inorganic bodies, and of which mineralogy is the science. (6.) *Mineral acids*. The sulphuric, nitric, and hydrochloric acids have been so called, but the name would be more appropriately applied to chromic, tungstic, molybdic, &c. acids, which are really peculiar to the mineral kingdom. (7.) *Mineral salts*. Salts found native, being formed by the

mineral acids with bases. (8.) *Mineral green*, carbonate of copper. (9.) *Mineral yellow*, a compound of oxide and chloride of lead, obtained by digesting powdered litharge in a solution of common salt. (10.) *Mineral pitch*, bitumen. (11.) *Mineral oil*, petroleum. (12.) *Mineral chameleon*, see CHAMELEON MINERAL.

MINERALIZER. That which converts a substance into a mineral. Thus oxygen, sulphur, &c. combine with metals, and form with them the mineral compounds, called ores: in this state the metals are said to be *mineralized*, and the oxygen or sulphur is termed the *mineralizer*. The process is further termed *mineralization*.

MINERALOGY, from *mineral*, and *logos*, science. The science which treats of minerals, or which teaches to recognise, describe, and classify all inorganic substances found in the earth, or on its surface, which treats of their properties as objects of philosophical inquiry, and their application to the useful arts, and the embellishments of life: distinct from *geology*, which treats of the mineral masses of which the earth is composed, and their relations in *position* to one another. Dr. Thomas Thomson, one of the latest authors on this subject, has adopted an arrangement founded upon the chemical composition of minerals, observing very justly, "that, if mineralogy were to be confined to mere crystallised bodies, it would be divested of the greatest part of its utility; for a very great proportion of these minerals that are of the greatest utility to man, and which, therefore, it is peculiarly important to be able to distinguish from others, are seldom found in the state of regular crystals. How often do the ores of copper, tin, lead, and iron, occur in an amorphous state! And were a mineralogist incapable of distinguishing them from each other, and from other minerals, except in the rare cases when they assume a regularly crystallised form, his knowledge would be useless, as far as the important arts of mining and metallurgy are concerned." He divides minerals, therefore, into three classes, *Acid*, *Alkaline*, and *Neutral*; thus—

CLASS I.—Acid Bases, or those Bodies which become Acids when combined with Oxygen.

Genus I. CARBON, 11 species.—II. BORON, 1.—III. SILICON, 7.—IV. PHOSPHORUS, 2.—V. SULPHUR, 1.—VI. SELENIUM, 1.—VII. TELLURIUM, 1.—VIII. ARSENIC, 5.—IX. ANTIMONY, 5.—X. CHROMIUM, 1.—XI. MOLYBDENUM, 1.—XII. TUNGSTEN, 1.—XIII. COLUMBIUM.—XIV. TITANIUM.—XV. VANADIUM.

CLASS II.—Alkaline Bases.

Genus I. AMMONIA, 2 species.—II. POTASSIUM, 1.—III. SODIUM, 7.—IV. LITHIUM.

—V. BARIUM, 5.—VI. STRONTIUM, 6.—VII. CALCIUM, 30.—VIII. MAGNESIUM, 37.—IX. ALUMINUM. (1.) Pure, or combined with bases, 7: (2.) Simple salts, 24: (3.) Double anhydrous salts, 39: (4.) Double hydrous salts soluble in water, 3: (5.) Double, insoluble in water, and phosphates, 4: (6.) Double hydrous aluminous silicates, or zeolites, 39: (7.) Treble aluminous salts, 15: (8.) Quadruple aluminous salts, 12.—X. GLUCINUM, 4.—XI. YTTRIUM, 6.—XII. CERIUM, 8.—XIII. ZIRCONIUM, 5.—XIV. THORIUM, 1.—XV. IRON. (1.) Uncombined, or united to a simple substance, 13: (2.) Oxygen salts of iron, 22; Double do. 19; Triple do. 6: (3.) Sulphur salts of iron, 2.—XVI. MANGANESE. (1.) Combined with simple bodies, 11: (2.) Simple oxygen salts, 5: (3.) Double oxygen salts, 5: (4.) Triple oxygen salts, 1.—XVII. NICKEL. (1.) Combined with simple bodies, 5: (2.) Oxygen salts, 1: (3.) Sulphur salts, 2.—XVIII. COBALT. (1.) Combined with simple bodies, 5: (2.) Oxygen salts, 2: (3.) Sulphur salts, 1.—XIX. ZINC. (1.) United to simple bodies, 4: (2.) Oxygen salts, 6: (3.) Sulphur salts, 1.—XX. LEAD. (1.) Native, or united to simple bodies, 7: (2.) Oxygen salts of lead, 7; a, Simple, 10; b, Double, 2; c, Triple, 5: (3.) Sulphur salts, 2.—XXI. TIN, 2.—XXII. BISMUTH. (1.) Native, or combined with simple bodies, 6: (2.) Oxygen salts, 2: (3.) Sulphur salts, 1.—XXIII. COPPER. (1.) Native, or combined with simple bodies, 6: (2.) Oxygen salts, 19: (3.) Chlorine salts, 1: (4.) Sulphur salts, 5: (5.) Selenium salts, 1.—XXIV. MERCURY, 5.—XXV. SILVER. (1.) Native, or combined with simple bodies, 10: (2.) Oxygen salts, 1: (3.) Sulphur salts, 6.—XXVI. URANIUM, 5.—XXVII. PALLADIUM, 2.

CLASS III.—Neutral Bodies.

Genus I. GOLD, 3.—II. PLATINUM, 1.—III. IRIIDIUM, 1.

The above may suffice as a specimen of a chemical mineralogical arrangement; and, in order still farther to facilitate the study of this science, it has been thought proper to give a tabular view of the distinct constituents of the various species, from the work of the late Mr. William Phillips, edited by Mr. Robert Allan, and published at London, in 1837, to which simple but eminently useful treatise the student is referred for farther information.

The order of arrangement is therefore as follows:—Earthy Minerals, Alkaline Earthy Minerals, Acids, Acidiferous Earthy Minerals, Acidiferous Alkaline Minerals, Acidiferous Alkalino-earthy Minerals, Native Metals and Metalliferous Minerals, Combustibles.

In the following tables, the proportions are indicated by figures: when doubtful, they are marked thus —

EARTHY MINERALS.

SILICA.	Silica.	Alumina.	Lime.	Water.	Iron.	
Quartz	100	
Opal	—	
Flint	98	2	.	.	.	
Calcedony	84	16	.	.	.	
Jasper	—	—	.	.	.	
Hornstone	74	16	.	.	10

NOTE.—For further particulars as to minerals, see under the several names and others throughout the work and Supplement.

MIN'IM, from *minimum*, least. 1. A note in music equal to half a semibreve.—2. The one-sixtieth of a fluid drachm, answering to the old *drop*, taking water as the standard.

MIN'IMA. In *mathematics*, see **MAXIMA ET MINIMA**.

MIN'IMS. An order of Franciscans at Minimi, founded by St. Francis de Paula.

MIN'IMUM. 1. The least, as distinguished from *maximum*, the greatest.—2. In *pharmacy*, a *minim*.

MIN'ION. A small description of printing type, a size larger than nonpareil. The term is from French *menu*, small, not *mignon*, a favourite.

MIN'ISTER (Latin). Persons to whom the sovereign intrusts the administration of government are termed *ministers of state*, and the chief is the *prime minister*.

MIN'ITUM. Red oxide of lead, or *red-lead*.

MINK. An amphibious quadruped, the *Mustela lutcola*, Pall., much esteemed for its fur. It frequents the banks of rivers, &c. in the north and east of Europe, from the Arctic Ocean to the Black Sea, and lives on frogs and crabs. It is also found in America.

MINNEHÖFE (Germ.). Courts of love; the German name of the *cours d'amour*, so famous in the history of chivalry.

MINNESINGERS. The most ancient school of German poets, whose name is derived from the word *minne*, love.

MINOR'ITY. Used in opposition to *majority*. From *minor*, less, smaller. Used chiefly of persons of an assembly (as in parliament) voting upon some question. Also, the period during which the sovereign is incapable of exercising his authority, being under age. In *law*, it is simi-

larly the state of an individual of either sex, who is under the age at which civil rights can be exercised.

MINOR TERM, OF A **SYLLOGISM**, is the subject of the conclusion; the minor premise contains the minor term. In hypothetical syllogisms, the categorical premise is called the minor.

MIN'STERLS, Germ. *minne*, love. A class of men, in the middle ages, who subsisted by the arts of poetry and music.

MINT, Sax. *mynet*, stamped coin. The place where money is coined by public authority. Formerly there were several mints in Great Britain; but coining being now regarded as a royal prerogative, the whole business has been transferred to an establishment on Tower Hill, where there are eight coining presses, capable of striking about 20,000 pieces an hour, almost constantly at work. See **MILLING**.

MINUET, Fr. from *menu*, small. 1. A slow graceful dance, consisting of a couple, a high step, and a balance.—2. The tune or air played to regulate the movements in the minuet.

MIN'UTE, Lat. *minutum*. A small portion (1.) of *time*, the sixtieth part of an hour, and comprehends sixty seconds. (2.) Of an *arc*, the sixtieth part of a degree, mark', and comprehending sixty seconds. 3. In *architecture*, the sixtieth part of the diameter of a column.

MIN'UTE GUNS. At sea, guns fired every minute as a signal of distress from a vessel. Also, in mourning for great persons.

MINX. A name of the *Mustela leuteocephala*, Harl. A North American animal, known to furriers by the name of *white vision*.

MIocene, from *minor*, less, and *zoeon*,

recent. The name given by Lyell to a subdivision of the tertiary. See Eocene.

MIS'ULETS. A species of partisan troops raised in the north of Spain.

MIR'RA. A singular star in the neck of Cetus: it appears and disappears periodically seven times in six years, whence the name. At its greatest brilliancy it is a star of the third magnitude.

MIRA'GE. The name given by the French to an optical deception produced by refraction, and in which a distant ship appears as if transferred to the sky, and a village in the desert as if built in a lake.

MIR'ROIR. A looking-glass, from Lat. *miror*, to admire. Any polished body impervious to the rays of light, and which reflects them equally, is a mirror. Mirrors were anciently made of metal, but at present they are generally smooth plates of glass, tinned or silvered on the back; and are either plane, convex, or concave. The first sort reflect the rays in a direction similar to that by which they fall upon it, and therefore represent bodies of their natural size; but the convex ones make the rays diverge, and therefore diminish the images of those objects which they exhibit; while again the concave ones, by collecting the rays into a focus, not only magnify the objects which they show, but serve the same purposes as burning-glasses do when exposed to the rays of the sun, and the body to be ignited is placed in their foci; hence they are commonly known by the name of *burning-mirrors*.

MIRZA. The common style of honour in Persia, when it precedes the surname of an individual; when appended it signifies a prince.

MISCH'NA. } A part of the Jewish Tal-
MISH'NA. } mud, being a digest of traditions and explanations of scripture.

MISDEMEA'NOR. In law, an offence which does not amount to a crime. Crimes and misdemeanors are synonymous terms, though in common usage the word crime is made to denote such offences as are of a more atrocious kind, while smaller faults, and omissions of less consequence, are comprised under the gentler name of misdemeanors.

MISE. A Norman-French term, used in law books in various senses. (1.) An issue to be tried at the grand assize. (2.) Expense; in this sense commonly used in entering judgments in actions personal. (3.) In *Wales*, an honorary gift by the people to a new prince of Wales. (4.) A tribute paid in the county palatine of Chester, at the charge of the owner of the earldoms.

MISERICOR'DIA. In law, an arbitrary fine imposed for an offence; so called because the amercement ought to be less

than that required by Magna Charta. When a person is outrageously amerced in a court that is not of record, the writ called *moderata misericordia* lies for moderating the amercement, according to the nature of the fault.

MISFEA'SANCE. In law, a trespass; from Fr. *mes*, wrong, and *faisance*, from *faire*, to do.

MIS'TLETOE, Sax. *mistlella*. A parasitical plant, the *Viscum album*, which always grows on trees, and was held sacred by the Druids, especially when found on the oak, their sacred tree. It is the $\mu\epsilon\tau\epsilon$ of the Greeks, and was by them thought to possess many medicinal virtues. See VISCUM.

MISNO'MER. 1. In law, a misnaming or mistaking of a person's name.—2. An indictment or other act vacated by a wrong name. From old Fr. *mes*, wrong, and *nommer*, to name.

MISPRIS'ION. In law, any high offence under the degree of capital, but approaching thereto; from Fr. *mépris*; from *mes*, wrong, and *prendre*, to take. Misprisions are *negative* and *positive*: they are negative when they consist in the concealment of something which ought to have been revealed, and positive when they consist in the commission of something which ought not to have been done.

MIS'SAL. The mass-book of the Romish Church; from *mass* (q. v.)

MIST, Sax. *mist*. Water in minute but solid drops, descending from the atmosphere. See Fog.

MITCH'EL. Purbeck stones of 15 inches by two feet, when squared for building, are thus named by the workmen.

MITE, Sax. *mite*. 1. In entomology. See ACARUS.—2. A small coin, formerly current, equal to about the third of a farthing. Also a small weight, used by moneyers, equal to about the twentieth part of a grain, and divided into 24 doits.

MITH'RAS. The grand Deity of the Persians.

MITHRIDATE. A pharmaceutical preparation named after Mithridates, king of Pontus and Bithynia, who took a dose of it every morning to protect him against poison. In those days it consisted of rue, walnuts, figs, and salt; but its ingredients were afterwards increased in number to 61. At present it is simply an aromatic opiate, and is little used.

MI'TRAL VALVE. The valve of the orifice of the left ventricle of the heart; so named from its resemblance to a mitre.

MI'TRE, Fr. from Lat. *mitra*, a cap worn by the Roman ladies. 1. A sacerdotal ornament worn on the head by bishops and some other ecclesiastics on solemn occasions; being a sort of cap pointed and cleft at the top.—2. A diagonal juncture of two pieces of wood, stone,

&c., by the formation of an indenture in each, corresponding to one another, so that the two surfaces coincide when brought together. This mode is sometimes employed to hide a dovetail, and is called lap-and-mitre joint.

MITRE-BOX. A block or frame for cutting mitres.

MITRE-DRAINS. *Cross mitre drains.* The drains laid within the metalling of roads, to convey the water to the side drains.

MITIMUS. In law, a precept or command in writing, under the name and seal of a justice of the peace, or other proper officer, directed to the gaoler or keeper of a prison for the safe keeping of an offender until he be delivered by due course of law. The term is Latin for we send.

MIZZEN, from Ital. *mezzo*, half. The foremost of the fixed sails of a ship, extended sometimes by a gaff, and sometimes by a yard, which crosses the mast obliquely. The mizzen-mast supports the after sails, and stands nearest to the stern. See **MAST**.

MNEMONICS, from *μνημονικός*, from *μνησθαι*, to remember: the art of memory. Precepts and rules intended to teach the method of assisting the memory.

MOCHA STONE. Translucent calcedony, containing dark outlines of arborisation, like vegetable filaments, so named from Mocha in Arabia, where it is chiefly found.

MOCK'ING-BIRD. The *Turdus polyglottus*, Lin., of North America, celebrated for the astonishing facility with which it imitates the notes of other birds, and even all kinds of sounds.

MODE, Lat. *modus*. Manner of existing or being. In logic, a proper disposition of the several parts of a syllogism in respect to quantity and quality: called also *sylogistic mood*. In grammar, a particular manner of conjugating verbs, to express manner of action or being, as affirmation, command, condition, and the like: often written *mood*. In music, a regular disposition of the air and accompaniments, relative to certain principal sounds, on which the piece is formed, and which are called the essential sounds of the mode. In metaphysics, a mode is that which cannot subsist in and of itself, but is esteemed as belonging to and subsisting by the help of some substance, which, for that reason, is called its subject. (*Watts*). Those modes are simple which are only combinations of the same idea, as a *dozen*, which consists of so many units added together; and those are *mixed* which are compounded of simple ideas of several kinds, as *beauty*, which is compounded of colour and form.

MOD'EL, from *modulus*, dim. of *modus*, mode. 1. A form in miniature of something to be made on a larger scale, as a model of a building.—2. An imitation in miniature of something already made on a large scale, as a model of a mountain, showing its geological structure, &c.

MOD'ELLING. In the *fine arts*, the art of making a mould, from which works in plaster are to be cast.—Also, forming in clay the design itself.

MODERATO: An Italian word, meaning moderately, implying in music a time neither quick nor slow; rather quicker than *andante*.

MODERATOR. A person who presides at a public assembly, to propose questions, preserve order, regulate the proceedings and declare votes. From *modus*, a limit.

MODIL'ION, Fr. *modillon*, from Lat. *modiolus*. 1. An ornament in the cornice under the corona in the Ionic, Corinthian, and Composite orders of architecture, resembling a bracket, supporting the projecture of the larmier or drip. *Cantilever* is sometimes used synonymously with modillion.—2. The trochites or single joints of the rays of a fossil star-fish are sometimes termed *modioli*.

MOD'ULUS, Lat. dim. of *modius*. A measure. In anatomy, the central pillar of the cochlea of the ear.

MO'DIUS. An ancient Roman measure for dry grain, nearly equal to an imperial peck.

MO'DO ET FOR'MA. In manner and form. A phrase frequently used in legal pleadings.

MODULA'TION. In music, the manner of ascertaining and managing the modes, or generally the art of conducting harmony.

MOD'ULE, Fr. from Lat. *modulus*. A term in architecture, for a certain measure taken at pleasure for regulating the proportion of columns, and the disposition and symmetry of the whole building. The module of a column is usually its semidiameter at the base, equal to 30 minutes.

MOD'ULUS. In analysis, the constant multiplier in a function of a variable quantity, by means of which the function is accommodated to a particular system.

MO'DUS. A compensation for tithes: a moderate equivalent in money, given by the owner of land in lieu of tithes. The whole phrase is *modus decimandi*, but *modus* alone is commonly used.

MO'DUS OPERAN'DI. Mode of operating. **MOGRA'BIAHS.** Formerly a species of Turkish infantry, composed of the peasants of the north of Africa.

MO'GUL, GREAT. The chief of the empire of Mogul. The empire is now extinct.

MO'HAIR' Ger. *mohr*. The hair of a

variety of the common goat, peculiar to the vicinity of Angora, in Asia Minor. It is manufactured into camlets and other expensive stuffs.

MOHAIR'-SHELL. A species of voluta, resembling stuff of mohair on the surface.

MOHAMMEDANS. Followers of the religion of Mohammed, the founder of Mohammedanism, the doctrines and precepts of which are contained in the Koran.

MOIDO'RE. A Portuguese coin worth twenty-seven shillings sterling.

MOIN'EAU (Fr.). A small flat bastion, raised in front of an intended fortification, to defend it from the approaches by means of small arms.

MOIRE'S METAL/LIQUE. Crystallised tin-plate: a variegated appearance produced upon the surface of tin-plate, by wetting its surface, when in a heated state, with nitro-hydrochloric acid (aqua regia), washing it with water, and finally coating it with lacquer. The figures vary, according to the strength of the acid employed and the degree of heat to which the plate is raised.

MO'LAR-TEETH. *Molares Dentes.* The grinding teeth. From *molaris*, a grindstone.

MO'LAR-GLANDS. *Molares Glandulae.* Two salivary glands situated on each side of the mouth, the excretory ducts of which open near the last *dens molaris*.

MOLAS'SE, from *mollis*, soft. A soft sandstone of the tertiary strata, employed by the Swiss under this name, for building.

MOLE. 1. Lat. *moles*, a mound. A massive work of large stones erected for the purposes of protecting the entrances to harbours. See **BREAKWATER**.—2. Sax. *mæl*, a mark. A small permanent protuberance on the human body, from which usually issue one or more hairs.—3. Lat. *mola*. A general name with some authors for all those fleshy substances otherwise called polypi, and with others for every coagulum of blood which continues so long in the uterus as to assume somewhat of an organised form.—4. Dut. *mol*. A well-known subterranean animal. See **TALPA**.

MO'LECULE, Lat. *molecula*, dim. of *moles*, a mass, a particle. Molecules are the smallest particles into which a mass can be conceived to be divided. They are distinguished into integrant and constituent. *Integrant molecules* are the smallest particles into which a simple body can be conceived to be divided, or the smallest particles into which a compound body can be conceived to be divided, without being resolved into its elements. *Constituent molecules* are the molecules of each element which form an integrant molecule of a compound.

MOLENDINA'CEOUS, from *mola*, a mill;

resembling the sails of a windmill. Applied to seeds which have many wings.

MOL'LAH. The title of the higher order of judges in Turkey.

MOL'LE (It.). In *music*, a sound that is flat as compared to another a semitone higher.

MOL'LITIES, softness; Lat. from *mollis*, soft. Applied to bones, nails, &c., when preternaturally soft.

MOLLUS'CA. *Mollusca.* A great division of invertebrated animals, comprehending, according to Cuvier, six classes, viz.:—Cephalopoda, Pteropoda, Gasteropoda, Acephala, Brachiopoda, and Cirrhopoda. In all of which, as the name imports (*mollusca*, a soft nut, or nut with a soft shell), the body is of a soft consistence, inclosed in a muscular envelope, called the mantle. The pulmonary circulation is double; the blood is white or rather bluish; the skin is very sensible, and as no particular organ of smell has been detected in them, although they enjoy that sense, it has been conjectured to reside in the whole skin. Those in which the mantle is simply membranous or fleshy, are termed *naked mollusca*, but most frequently the animal is provided with a calcareous covering called a *shell*, and the animal is then said to be *testaceous*. See **SHELL**.

MO'LOCH. The chief God of the Phœnicians.

MOLYBDE'NA. The ore of molybdenum. It is a sulphuret of that metal, and is very similar in its properties to plumbago: whence the name *μολυβδαίνα*, plumbago.

MOLYBDE'NUM. The metal obtained from the substance called *molybdena*. It has not yet been reduced to masses of much size, but is readily obtained in small separate globules, by exposing its acid mixed with charcoal to an intense heat.

MOLYB'DIC ACID. An acid obtained in fine white scales (which become yellow on melting and subliming them), by roasting *molybdena*, dissolving it in water of ammonia, and adding nitric acid to the solution.

MOLYB'DOUS ACID. Deutoxide of molybdenum. It is of a blue colour, and possesses acid properties.

MO'MENT. 1. An indefinitely small portion of time, having the same relation to duration that a point has to a line.—2. In *mathematical analysis*, the same as *infinitesimal*, *increment*, or *decrement* (q. v.).

MOMEN'TUM. The quantity of motion in a moving body. The term is Latin, contracted from *motamentum*. The momentum of a body is the product of its mass into its velocity.

MO'MIERS, Fr. *momery*, mummery. A name applied to certain religionists of the so-called Evangelical party.

MONODICA. A genus of herbaceous

plants. *Monocia*—*Syngenesia*. Name from *mordio*, to bite, in allusion to the sharp taste of the fruit. The squirting cucumber of the South of Europe, and the balsam apple of the East Indies, are species. The dried juice of the fruit of the first is the *elaterium* of the shops, and from which *elatine* is obtained.

MON'ACHISM, } *monos*, alone. The monk-
MONKERY. } ish system was estab-
lished in the middle of the third century,
by which many persons were brought
together, and bound by vows to the per-
formance of religious duties, and abstinence
from worldly enjoyments.

MON'ADE. 1. An indivisible thing: from
monas, unity. —2. An individual of the
genus *Monas* (q. v.).

MONADEL'PHIA, from *monos*, one, and
αδελφια, a brotherhood. The name of
the 16th class of plants in the sexual
system of Linnaeus, consisting of plants
with hermaphrodite flowers, in which
all the stamina are united below into a
cylindrical body, through which the pistil
passes. It consists for the most part of
plants belonging to the natural orders
Malvaceae and Geraniaceae, as the cotton-
tree, geranium, passion-flower, &c.

MONAN'DRIA, from *monos*, one, and *ανη*,
male. The name of the first class of plants
in the sexual system of Linnaeus, consist-
ing of plants with hermaphrodite flowers,
which have only one stamen. It contains
only two orders, Monogynia and Digynia.

MON'ARCHY, from *monos*, one, and *αρχος*,
a chief. A government in which the su-
preme power is vested in a single person.
It is *absolute* when the "sovereign is ac-
countable to none but God," and *limited*
when the supreme power is virtually in
the laws.

MO'NAS, from *monas*, unity. A genus of
animalcules of the class *Infusoria*, re-
siding in water, and usually considered
the ultimate term of animality, as neither
mouth nor vessels can be perceived in the
individuals; yet they perform their loco-
motive evolutions with considerable ra-
pidity. The recent observations of Prof.
Ehrenberg have brought to light the ex-
istence of monades, which are not larger
than the 24,000th of an inch, and are so
thickly crowded in the fluid as to leave
intervals not greater than their own
diameter. Hence, he concludes, that a
single drop may contain 500,000,000 of
these monades.

MONOTREM'ATA. The name given by
Geoffroy to a tribe of Edentata found only
in New Holland. Two genera are known,
the *Echidna*, Cuv., and the *Ornithorynchus*,
Blum., or *Platypus*, Shaw.

MON'EX, Sax. *mynet*. Whatever is made
the medium of trade for determining the

value of commodities in buying and sell-
ing, whether it be stamped metals, called
coin and specie, or promissory notes com-
prehending bank paper, bills of exchange,
and all other tangible promises to pay.
There are also moneys of account, which
are merely imaginary names, as the Eng-
lish pound, before sovereigns were coined.
Paper money is styled paper currency, to
distinguish it from specie or metallic
currency or cash. The word has been
derived from *moneta*, the Latin name for
money, because the Romans kept their
silver money in the temple of Juno
Moneta.

MON'EYERS. Officers of the mint.

MON'ITOR. 1. One who gives warning,
from *monitio*, warning. —2. A genus of
lizards, containing those species which
are of the largest size; have two teeth
in both jaws, but none in the palate, and
a laterally compressed tail, which ren-
ders them more aquatic. They frequent
the waters like the crocodiles and alliga-
tors, and are said to give notice by whist-
ling of the approach of those dangerous
animals. Species are found in most warm
and temperate parts of the world, and
some of large size are found fossil.

MON'KEY. The monkeys, so called, be-
long to the eastern continent. They have
the same number of grinders as Man; but
otherwise differ from each other by char-
acters which have caused them to be
denominated Ourang-Outangs, Gibbons,
Macaques, Baboons, and Mandrills. The
American monkeys are divided into
Sapajous, Sagouins, and Lemurs.

MONOCAR'POUS, *monos*, single, and
καρπος, fruit. In botany, a term applied
to plants which perish as soon as they
have once borne fruit.

MONOCEN'TRIS. The name given by
Schneider to a singular genus of acan-
thopterygious fishes found in the sea of
Japan, from *monos*, one, and *κεντρον*,
centre. The body is short (six inches),
thick, and completely mailed with enor-
mous angular, rough, and carinated
scales, of a silvery white. One species.

MONOC'EROS. The *Unicorn*, from *monos*,
one, and *κερας*, a horn. 1. The unicorn
of the ancients is commonly regarded as
a fabulous animal; but the name *monoceros*
has been appropriated by Linnaeus
to the narwhal, which has a single horn
or tusk, of ten feet in length, implanted
in the intermaxillary bone, and pointed
in the direction of the axis of the body.
It has indeed the rudiments of two tusks,
but both are never developed. —2. A
constellation of the northern hemisphere,
formed by Hevelius out of the *stellae in-
formes* of the ancients; 38 stars.

MON'ODCHORD, from *monos*, one, and
χορδη, chord. A musical instrument of

one string with which to try the variety and proportion of musical sounds: invented by Pythagoras.

MONOCHROMATIC, from *μονος*, one, and *χρωμα*, colour. Consisting of one colour.

MONOCHROME, *μονος*, and *χρωμα*, colour. A painting executed in a single colour.

MONOCOTYLEDON, from *μονος*, one, and *cotyledon*. A plant with only one cotyledon or seed-lobe. The grasses are all regarded as monocotyledonous plants.

MONOCOTYLEDONES. One of the three great tribes, and the most important of the three, into which the vegetable kingdom is divided, according to the natural system of botany. The Acotyledones and Dicotyledones are the other tribes. Grasses, lilies, palms, aloes, &c. are examples of the acotyledonous tribe.

MONOCULUS. A genus of apterous insects, which mostly frequent stagnant waters: named from *μονος*, and *oculus*; but they have often two eyes, though these are placed very close to each other.

MONODELPHS, from *μονος*, and *δελφς*, a womb. Animals having no external marsupium; antithetical to Didelphs.

MONODON. A generic name of the Narwhal, (*M. monoceros*, Lin.), from *μονος*, one, and *δους*, a tooth, being characterised and distinguished from all the rest of the cetacea by a single tusk of ten feet or so in length. See MONOCEROS.

MONOCLA, from *μονος*, one, and *οικία*, a house. The name of the 21st class of plants in the sexual system of Linnaeus, consisting of such as have male and female organs in separate flowers, but growing on the same plant. The orders depend on the circumstances of the male flowers.

MONOGRAM, from *μονος*, one, and *γραμμα*, a letter. A character composed of one, two, three, or more letters, interwoven, being an abbreviation of a name, &c., anciently much used on seals, arms, monuments, &c.

MONOGRAPH, from *μονος*, one, and *γραφω*, to describe. A treatise on a single subject; as a monograph of an Egyptian mummy.

MONOGYNIA, from *μονος*, one, and *γυνη*, a female. The name of an order of plants in the sexual system of Linnaeus, comprehending such as, besides their agreement in the classic character, have only one style.

MONOLITHIC, from *μονος*, one, and *λίθος*, a stone; consisting of a single stone.

MONOMANIA, from *μονος*, one, and *mania*. A form of mania in which the mind of the patient is absorbed by one idea.

MONOMIAL, from *μονος* one, and *ονομα*, a name. An algebraic quantity consisting of only one term, as ax^2 , distinct from a binomial, trinomial, &c.

MONOPETALOUS, from *μονος*, one, and *πεταλον*, a petal. One-petalled; applied to flowers which have only one petal, or which have the corolla formed of one piece.

MONOPHYLLOUS, from *μονος*, alone, and *φυλλον*, a leaf. Having only one leaf: applied to calices consisting of not more than a single leaf.

MONOPHYTES, from *μονος*, one, and *φυσις*, nature. A sect of Christians who maintain that Jesus Christ had only one nature.

MONOPOLY, from *μονος*, alone, and *πωλειν*, to sell. An exclusive privilege, secured to one or a few persons, to carry on some branch of trade or manufacture, by royal grant. Such grants were very common in England previous to the accession of the House of Stuart, and were only abolished in 1624 (by 21 Jac. 1. c. 3), to avoid the total ruin of the industry of the country. Patentees are justly monopolists during the period of their patents.

MONOPOLYLOGUE, *μονος*, one, *πολυς*, many, and *λογος*, discourse. An entertainment in which a single actor sustains many characters.

MONOPTERAL, *μονος* and *πτερον*, wing. In architecture, a circular enclosure of columns without a cell.

MONORHyme, *μονος*, and *ρhythmos*, measure. A composition in verse, in which all the lines end with the same rhyme.

MONOSPERMOUS, from *μονος*, one, and *σπερμα*, seed. One-seeded: applied to seed-vessels.

MONOTHALAMOUS, from *μονος*, single, and *θαλαμος*, a chamber. One-chambered: applied to shells when the chamber is not divided by partitions.

MONOTHEISM, from *μονος*, and *θεος*, God. The doctrine or belief of the existence of one God only, opposed to polytheism or plurality of Gods.

MONOTONY, } from *μονος*, one, and
MONOTONE, } *τονος*, sound. 1. Sameness of sound: want of inflections of voice in speaking or reading.—2. Repetition of the same sound in music.

MONOTRIGLYPH. The space of one triglyph (*monos* and *triglyph*), and two metopes between two Doric columns.

MONS MEN'SÆ. The table mountain. A modern asterism, situated between the south pole of the world and the ecliptic.

MONSOONS. Periodical winds in the Indian seas, which blow one half of the year from the same quarter or point of

the compass, and the other half from the opposite point. The change of these winds is termed the *breaking up of the monsoons*, and is accompanied with hurricanes. Those winds which blow throughout the year from the same point are termed *trade winds*, but sometimes this name is also given to the regular monsoons.

MON'TANISTS. A sect of heretics, the followers of Montanus, a Phrygian, who pretended to be inspired by the Holy Spirit, to give instruction on points not revealed to the apostles. The sect sprung up in the second century.

MON'TEM. A singular celebration, which takes place at Eton on Whit-Tuesday every third year. The scholars march in procession to Salt-hill, where their captain (the best scholar) recites a passage from some ancient author. The young gentlemen, called *salt-bearers*, who are arrayed in fancy dresses, then disperse in various directions to collect money from all passengers. The money collected is given to the captain, to enable him to take up his residence at one of the universities.

MONTOOLFIER. A name sometimes given to those balloons which derive their buoyancy from the burning of combustible materials, being thus denominated from their inventor, and to distinguish them from inflammable air-balloons.

MONTH, SAX. moneth, from mona, the moon. A space of time constituting a division of the year. The name originally signified the time of one revolution of the moon: a *lunation*. This is the *periodical month*, or as we generally now term it, the *lunar month*: it is 27 days, 7h., 43m., 8". The *synodical month* is the time between two conjunctions of the moon with the sun: 29d., 12h., 44m., 3s., 11". The time which the sun takes to pass through the twelfth part of the zodiac we call a *solar month*: it is 30d., 10h., 29m., 5". In the year there are 12 solar, and 13 lunar, months. In popular language 4 weeks make a month, and in the calendar the months consist alternately of 30 and 31 days, except February and July.

MOOD. A word often written for *mode* (q. v.) *Mood*, temper of mind, is a different word; it is from Goth. *mod*, anger, or Sax. *mod*, mind, whereas *mood* for *mode*, is Latin *modus*. *Mood*, in grammar, applies to the various forms of a verb corresponding to our conceptions of facts and events. In *logic*, mood is the designation of the three propositions of a syllogism, in the order in which they stand.

MOON. The earth's satellite. Mean sidereal revolution 27d., 7h., 43m., 11", 30". Mean synodical revolution 29d., 12h., 44m., 28". Mean distance from the earth,

237,000 miles. Subtends a mean angle of 31', 8". Diameter 2180 miles. The moon has been worshipped by various nations, and under many names. Our Saxon ancestors worshipped it under the name of *Mona*, and dedicated *Monday* to it, as they did *Sunday* to the sun.

MOONSTONE. A variety of adularia, worked by lapidaries. It exhibits a beautiful pearly light, and when held in certain positions, its surface is iridescent. It occurs massive, and also in crystals, in fissures of granite, gneiss, &c.

MOOR. 1. Sax. *mor*. A tract of land overrun with heath. — 2. Ger. *mohr*, from *mauves*, dark, a native of the coast of Africa, called by the Romans, from the colour of the people, *Mauritania*, or the country of the dark-complexioned people.

MOOR-FOWL. The pinnate grouse (*Tetrao cupido*, Gm.), protected by game-laws for the benefit of sportsmen.

MOORINGS. The anchors, chains, &c. laid athwart the bottom of a river or harbour, to confine a ship.

MOORSTONE. A variety of coarse granite, found in Cornwall and some other parts of England, and in immense masses in some parts of Ireland.

MOOSE. The American elk, the largest animal of the deer kind, sometimes weighing 1200 lbs. The name is Indian.

MOOT-CASE, } In *law*, a point, case, or
MOOT-POINT. } question, to be *mooted* or
debated: a disputable case. *Moot* is Sax. *motian*, to debate; Goth. *motyan*, to come on.

MORAINES. The stony detritus found at the bases of glaciers in Switzerland.

MOR'AL, Lat. moralis, from mos, moris, manner. Relating to the practice, manner, or conduct of men towards each other as social beings, and with reference to right and wrong. The *moral law* is that which prescribes the moral or social duties: the *moral sense* is that by which we perceive with distinctness the maxims of the moral law. *Moral philosophy* treats of the nature and condition of man as a social being, of the duties which result from his social relations, and the reasons on which they are founded. It is called the science of morals.

MORALITIES. A sort of allegorical plays in vogue during the latter part of the middle ages. They consisted of moral discourses, in praise of virtue, and condemnation of vice. They were exhibited so late as the reign of Henry VIII., but gradually assumed the form of the *masque*, which became the favourite entertainment at the court of Elizabeth.

MORASS-ORE. A name of the bog iron ore.

MORAVIANS. A denomination of Christians, which sprung up in Moravia and Bohemia, at the dawn of the Reformation,

and are otherwise called *United Brethren*, and on the continent, *Hernhutters*, from their settlement, *Hernhutter*, watch-of-the-Lord. They generally adhere to the Augsburg Confession. They celebrate agapæ, and cast lots to discover the will of the Lord.

MORBIDEZ'ZA. An Italian term in the arts denoting refinedly delicate; pliant and soft to the eye and touch.

MOR'DANT. 1. In *dyeing*, and *calico-printing*, denotes a body which, having a twofold attraction for organic fibres and colouring particles, serves as a bond of union between them, and thus gives fixity to dyes; or it signifies a substance which, by combining with colouring particles in the pores of textile filaments, renders them insoluble in hot, soapy, and weak alkaline solutions. The mordant is the substance previously applied to the goods, in order that they may afterwards take and retain any particular colour or dye. Sulphate of iron and acetate of alumina are much used as mordants.—2. In *gilding*, any adhesive matter by which gold-leaf is made to adhere to the surface of metal, wood, or other material.

MORDEN'TE (It.). In *music*, a grace which is effected by turning upon a note, without using the note below.

MOREL. The *Morchella esculenta*, used, like truffles, for gravies. It is in perfection in May and June.

MORESQUE, *Moresek.* } After the man-
MAURESQUE, *Moorish.* } ner of the
MOORS. Applied to a style of painting and carving, consisting of grotesque pieces and compartments promiscuously interspersed. Also to the peculiarities of the Arabian style of architecture.

MORGANAT'IC or **LEFT-HANDED MARRIAGE.** A marriage between a man of superior, and a woman of inferior, rank; in which it is stipulated, that the latter and her children shall not enjoy the rank, nor inherit the possessions of the former.

MOROUE (Fr.). The place, in many towns in France, where unclaimed dead bodies are exposed, in order to be recognised by friends.

MO'RIA, from *μαρος*, foolish. A variety of monomania, in which the illusion is of a happy nature, as where the patient fancies himself a hero, great genius, &c.

MO'RION. The smoky Topaz. A variety of rock crystal.

MOR'NING-STAR. The planet Venus, when it precedes the sun in rising, and shines in the morning. Thence called Phosphorus by the Greeks, and Lucifer by the Romans.

MOROCCO, Fr. *Maroquin*, Sp. *Marroqui*. A fine sort of leather, prepared of the skins of goats, imported from the Levant, Barbary, Spain, &c., and so named from its having been first imported from Mo-

rocco. The skins are first tanned, and then dyed on the side of the grain. Sheepskin treated in the same way is often substituted for morocco.

MOROXYLIC-ACID. An acid discovered by Dr. Thomson in combination with lime, on the bark of the white mulberry-tree (*Morus alba*), in the botanic garden of Palermo, in Sicily. It dissolves readily in water and alcohol.

MOR'PHEW, from Lat. *morphea*. An old name for various cutaneous diseases of the face.

MOR'PHEA. } A vegetable alkali ex-
MORPHI'NA. } tracted from opium, of
MOR'PHINE. } which it is the narcotic principle. It is copiously precipitated, in a very pure state, by adding water of ammonia to a strong solution of opium. It is a colourless substance, of a bitter taste, and crystallises in quadrangular prisms; it is difficultly soluble in water, even when boiling, but dissolves freely in boiling alcohol, and deposits crystals on cooling.

MORPHOL'OGY, from *μορφη*, form, and *λογος*, description. That division of botanical science which treats of the metamorphosis of organs.

MOR'ETS-DANCE. A peculiar kind of dance practised in the middle ages.

MORSE. The *Trichechus rosmarus*, Lin. This animal inhabits the Arctic seas, surpasses the largest ox in size, attains the length of 20 feet, and is covered with a short yellowish hair. It is sought for on account of its oil and tusks. It is also called walrus, sea-horse, and sea-cow.

MORTAL'ITY (**BILLS OF**). Registers of the number of deaths or burials in any parish or district.

MORTAL'ITY (**LAW OF**). A mathematical relation subsisting among the number of persons living at the different ages of life.

MORTAR, Lat. *mortarium*. 1. A bell-shaped vessel, used by druggists, &c., to pound substances in with a pestle; also a short piece of ordnance, thick and wide, used for throwing bombs, carcasses, &c.—2. A cement, used for building purposes, composed of lime, sharp sand, and hair of cattle, thoroughly mixed and incorporated with a small portion of water: thus named from beating and mixing as in a mortar.

MORT D'ANCESTRE (Fr. for death of the ancestor). The name of a writ of assize, by which a demandant recovers possession of an estate from which he has been ousted on the death of his ancestor.

MORT'GAGE, from Fr. *mort*, dead, and *gage*, a pledge. A dead pledge. Land or other property pledged to a creditor as a security for money borrowed.

MORTIFICATION, from *mors*, death, and *facto*, to become. 1. The putrefaction and

consequent death of one part of an animal body, while the rest is alive, caused by inflammation, injury, or debility of the part.—2. In *Scottish law*, nearly synonymous with mortmain.

MORTISE AND TENON. A description of joint in wood-work. The extremity of one piece of timber is let into the face of another piece, a tongue being formed at the end of the piece to be let in, which is called a *tenon*, and the hole cut in the face of the other is termed a *mortise*.

MORTMAIN, Fr. *mort*, dead, and *main*, hand. Possession of lands or tenements in dead hands, i.e. hands that cannot alienate. See ALIENATION.

MORTUARY. In *law*, a fee paid to the incumbent of a parish, by custom peculiar to some places, on the death of a parishioner.

MORUS. The Mulberry-tree. A genus of permanent plants. *Monacia*—*Tetrandria*. Name from *μυρα*, black, the colour of the fruit when ripe.

MOSAIC, Fr. *mosaïque*, } Mosaic work

MOSAIC, Lat. *musivum*. } is composed of small cubes of glass, stone, wood, &c. of various colours, and cemented on a ground of stucco, in such a manner as to imitate the colours and gradations of painting. Roman floors were often of mosaic work.

MOSAIC GOLD. The *Aurum musivum* of the old chemists is a bisulphuret of tin, prepared artificially: but the *or-moulu*, or mosaic gold, at present employed in the arts, is a species of brass, formed by melting together equal quantities of copper and zinc, at the lowest temperature that copper will fuse.

MOSASAU'RUS, } A gigantic fossil marine

MOSOSAURUS, } reptile, most nearly allied to the monitors, long known by the name of the Great Animal of Maastricht, a head of it having been found near that city, in calcareous freestone.

MOSCHUS. The Musk. A genus of ruminant animals. Name Latin, of Arab *moschē*. The most celebrated species is the *M. moschiferus*, Lin.; size of a goat, has scarcely any tail, and is covered with hairs, so coarse and brittle that they might be termed spines. The animal is remarkably light and elegant.

MOSLEM. See MUSSULMAN.

MOSQUE. A Mohammedan temple or place of worship. The word is French, from Arabic *maqṣid*, from *sajada*, to adore.

MOSQUET'ORES. A genus of dipterous insects. See CULEX. *Mosqueto* is the Spanish name of this troublesome insect, from *mosca*, a fly; Latin *musca*.

MOSS. 1. The English name for the *musci*, a natural order of small plants, with leafy stems, and narrow simple leaves. The term moss is also applied to many other small plants, particularly *lichens*, species

of which are called tree-moss, rock-moss, coral-moss, &c. The fir-moss and club-moss belong to the genus *Lycopodium*.—2. A bog where peat is found; called often a *peat-moss*.

MOSS-TROOPER. In *Border history*, those inhabitants who formed themselves into clans and lived by rapine.

MOTACILLA. A genus of passerine birds. The *Warblers*; comprehending the nightingale (*Curruca*), wheat-ear (*Saxicola*), blue-bird (*Sylvia*), wren (*Troglodytes*), wagtails (*Motacilla*), meadow-larks (*Anthus*). These are regarded as sub-genera by Cuvier.

MOTE. *Gemote*. An old Saxon word for an assembly, meeting, or court; as *ward-mote*, *burgh-mote*, &c.

MOTET (French). A musical composition of a sacred kind, as a hymn.

MOTH. The English name (Sax. *motha*) of an extensive genus of lepidopterous insects. See PHALENA.

MOTHER, Sax. *moder*. 1. A female parent.—2. A term formerly applied to many chemical preparations and plants, for various whimsical reasons.

MOTHER CAREY'S CHICKENS. A name given by sailors to the storm petrels.

MOTHER-OF-PEARL. The shining internal part of those shells which produce pearls. The genus of shell-fish called *Pentadina* furnishes the finest pearls, as well as mother-of-pearl: it is found in the greatest perfection round the coasts of Ceylon.

MOTHER-WATER. A name for the liquid which remains after all the regularly crystallisable salts have been extracted, by evaporation and cooling, from any saline solution, as sea-water.

Mo'tion. 1. Change of local position, from *moveo*, to move: opposed to rest. Motion is the effect of impulse; action proceeding from any cause, internal or external. In the growth of plants and animals there must be a *motion* of the component parts, though invisible. Chemical affinity produces often sensible motion of the parts of bodies. The mind produces *muscular motion*, but there are *animal motions* which are independent of the mind, as the *peristaltic motion* of the intestines, and the *motions* of the heart during life. *Mechanical motion* is effected by one body acting mechanically on another. No *perpetual motion* has yet been obtained.—2. Proposals made in an assembly or meeting are termed *motions*. A bill is introduced into parliament after *motion* from some honourable member, and the same honourable member may make a *motion* to adjourn.—3. In *painting* and *sculpture*, the change of place or position which, from certain attitudes, a figure seems to be making in a picture.—4. *La music*, the manner of becomg

the measure, so as to hasten or retard the pronunciation of the words or notes.

MO'TIVE POWER. In *mechanics*, the whole power or force acting upon a body.

MO'VE. A mover, from *moveo*, to move. Applied to muscles, &c.

MOT'to (Italian). A word. By motto is now generally understood a phrase prefixed to something, as an essay, &c.; or added to a device, as on a seal.

MOULD. 1. The matrix in which anything is cast.—2. In *carpentry*, a thin flexible piece of wood, whereby to form the different curves of the timbers.—3. In *paper-making*, a little frame, the size of the sheet of paper to be made, composed of several wires fastened together by wire still finer, and having a little ledging of wood, into which the wires are fastened used to cast the sheets of paper.—4. Among *gold beaters*, a certain number of leaves of vellum, of a certain size, and laid over one another with leaves of gold or silver, to be beaten, placed between them.—5. In *anatomy*, the anterior fontanel or interstice between the parietal bones and the frontal of a child's head.—6. In *agriculture*, loose earth everywhere obvious on the surface of ground: the upper soil.—7. The white down or lanugo which grows on the surface of bodies when undergoing humid decay in air. This appears, on examination with a microscope, to be a luxuriant vegetation.—8. In *architecture*. See **MOULDINGS**.

MOULDINGS. In *architecture*, the small projecting ornaments of columns, &c., so called because their forms and dimensions are regulated by the workmen by means of the *caliber* or *mould*, an instrument of iron or hardwood, which serves as a gauge in all carved work. The regular mouldings are the fillet, listel or annulet; the astragal or bead; the torus; the scolia or trochilus; the echinus, ovolo, or quarter-round; the cyma reversa, inverted cyma or ogee; the cyma recta; the cavetto or hollow (q. v.).

MOULD-LOFT. A large room in a dock-yard, in which the parts of the ships are drawn out full size.

MOULD'WARP, ! The mole, which throws **MOLDY'WART.** / up the mould of the earth.

MOU'LINE,) In *mechanics*, the roller of
MOU'LINET,) a capstan, crane, &c.

MOULT'ING. The fall of the plumage of birds.

MOUN'TAIN. A term formed from the Latin adjective *montanus*, from *mons*, an elevation, and applied to the largest class of elevations on the earth's surface; but marking no definite altitude except that it is greater than a hill.

MOUN'TAIN-LIMESTONE. A name common to a series of marine limestone strata, whose geological position is immediately

below the coal-measures, and above the old red sand-stone. It exists in vast quantity in England and Wales, yields all the common limestone used in the country for building, and some varieties of marble, &c.

MOUN'TAIN-SOAP. A mineral of a greenish-black colour. It has a greasy feel, adheres to the tongue, and soils paper. It is a hydrated silicate of alumina and iron, and occurs in secondary rocks of the trap formation.

MOUN'TAIN-TALLOW. A mineral found originally in Sweden, but since also in Scotland. It melts at 118° F., boils at 290° F.; is soluble in alcohol, but does not form soap with alkalis.

MOUNTS OF PIETY. In *Italy*, establishments of the nature of pawnbrokers' shops, where money is lent out to the poor on moderate interest and security.

MOUSTA'CHE. The beard of the upper lip, the cultivation of which affords harmless employment to many whose time would not be otherwise more usefully occupied.

MOU'TH. In *architecture*, the same as *cavetto*, which see.

MO'VEMENT. 1. The train of wheel-work in a clock or watch.—2. In *politics*, the *movement* party are those who are perpetually agitating for popular rights.

MOXA. In *surgery*, a Japanese word denoting a soft lanuginous substance, prepared from the young leaves of a species of mugwort (*Artemisia chinensis* or *Moxa japonica*), and employed by surgeons on the Continent as a means of forming an eschar, which in England is usually done with caustic.

M.S. On *monuments*, an abbreviation of *memoriae sacrum*, sacred to the memory. **MS.** is an abbreviation of "manuscript," and **MSS.** of "manuscripts."

MU'CIC ACID. An acid originally called *saccholarctic* and *sacclactic acid* by the French chemists, because it was first obtained by Scheele from sugar of milk; but as all the gums afford it, and as the chief acid of milk is the oxalic, it is now generally called *mucic acid*. It is readily obtained by treating gum-arabic with dilute nitric acid, and applying heat, when a white powder precipitates, which is *mucic acid*. It is soluble in boiling water, and combines with alkalis, earths, and metallic oxides, forming a class of salts called *mucates*.

MU'CILAGE. Fr. from Lat. *mucus*, the slimy discharge from the nose. Vegetable *mucus*: one of the proximate elements of vegetables. The same substance is gum when solid, and *mucilage* when in solution. Perhaps the purest specimen of *mucilage* is gum-arabic, which, when distilled *per se*, affords *pyromucic acid*,

and when treated with dilute nitric acid affords mucic acid.

MUCK, RUNNING A. Figuratively, an indiscriminate attack upon friends and enemies; such as is made by the Malays, when intoxicated with opium or bangué.

MU'COR. Mouldiness. An old Latin word, retained by botanists to denote that genus of minute and evanescent fungi found on decaying bread and other vegetable matters.

MUCOUS GLANDS. Glands of the body which secrete mucus.

MU'COUS MEMBRANE. The membranous lining of the canals and cavities of the body, which are exposed to the contact of air and other inorganic substances.

MU'CRO COR'DIS. The lower pointed end of the heart: *mucro*, a sharp point.

MU'CUS, Lat. from *muſa*, the mucus of the nose. A name common to two substances: (1.) *Animal mucus*: one of the primary fluids of the animal body, generally combined with gelatine and albumen, but distinct from these substances. It forms a layer of greater or less thickness on the surface of the mucous membranes, and is renewed with more or less rapidity. It is not soluble in water, nor capable of mixing oil and water, which mucilage is, and it is soluble in the mineral acids, which vegetable mucus is not. (2.) *Vegetable mucus*. See **MUCILAGE**.

MUD-SILL. A sill of a bridge, &c., which is placed at the bottom of a river.

MUEZ'IN. In Mohammedan countries, the officer who proclaims the summons to prayer at the regular periods.

MUFFLE. 1. Germ. *muffeln*, to mask. To muffle the oars of a boat is to put some matting, &c. round that part which lies on the edge of the gunwale of the boat, to prevent its making a noise against the tholes. — 2. Sp. *muffla*. A chemical vessel, in the shape of an oblong arch or vault, closed behind by a semicircular plane, and having a rectangular flat bottom, on which small vessels of any kind may be set to protect them from the actual contact of the fuel of the furnace

in which the muffle is placed. The muffle is entirely open at one end, and has sometimes small slits to allow free access of the hot air. It is used in cupellation.

MUR'RI, } A high priest of the Moham-
MURRA'TI, } medan religion.

MUGOLET'NIANS. A sect of fanatics, which arose in England, in 1657; so denominated from their leader Ludowic Muggleton, a tailor, who, with his associate Reeves, asserted that they were the two last witnesses of God mentioned in the Revelations.

MU'GIL. The name given by Linnæus to a genus of acanthopterygious fishes, forming the type of the family *Mugiloides*, Cuv. The common mullet (*M. cephalus*, Cuv.) is the best known of several species which the European seas produce. This fish is gregarious, and resorts in vast troops to the mouths of rivers. The flesh is much esteemed.

MUGILOIDES. A family of acanthopterygious fishes: type *Mugil*, Lin. The other genera are the *Tetragonurus* and *Atherina* (the Aphyes of the ancients).—Cuvier.

MULAT'IO. The offspring of a white woman by a negro, and *vice versa*. The mixed descendants of Europeans and Indians are called *Mestizos*. The term *mulatto* is Spanish, from *mulo*, a mule: Lat. *mulus*.

MUL'BERRY. The *Morus nigra* is the common mulberry-tree, and its fruit is termed the Mulberry; but the name *mulberry* is common to all the species of the genus *morus*, of which there are nine.

MULCH. A name (local) for dung for manure.

MULE, Sax. *mul*, from Lat. *mulus*. 1. An animal of mongrel breed: usually applied to denote the offspring of a mare by an ass, and *vice versa*. — 2. The offspring of two plants of different species.

MULE, or MULE-JENNY. A machine employed in cotton-spinning, invented by Samuel Crompton, a weaver, of respectable character, and moderate circumstances, near Bolton: so named from its combining the principles of Arkwright's water-frame, and Hargreave's jenny. Like the former it has a system of rollers to reduce the roving; and like the latter it has spindles without bobbins to give the twist, and the thread is stretched and spun at the same time by spindles, after the rollers have ceased to give out the rove. The distinguishing feature of the mule is, that the spindles, instead of being stationary, as in both the other machines, are placed in a moveable carriage, which is wheeled out to the distance of 54 or 56 inches from the roller-beam, to stretch and twist the thread, and wheeled in again to wind it on the spindles. By this arrangement, comprising the advantages both of the rollers and spindles, the thread is stretched more gently and equably, and a much finer quality of yarn can therefore be produced.

MU'LIER. 1. In *law*, a married woman.—2. Lawful female issue born in wedlock.

MULL. In *Scotland*, a term almost synonymous with *cape*.

MULLAGITAW'NY. In *cooking*, a Coromandel dish; from the Tamul words *mullagar*, pepper, and *tanee*, water; as there is no meat whatever in the dish, being merely a kind of decoction of pepper.

MUL'LAS. The priests of Tartary.

MUL'LER, from *mola*, a mill-stone. 1. A stone with (sometimes without) a handle, used for grinding colours and other matters on a large flat stone.—2. An instrument used by glass-grinders, being a piece of wood with the piece of glass to be ground cemented to one end, either convex in a basin, or concave in a sphere or bowl.

MUL'LET. 1. In *ichthyology*. See MUGIL.—2. In *heraldry*, a figure, in addition to the family arms, made by the junior branches of a family, as the mark of their cadence.

MUL'LION, or MAN'NON. In *architecture*, the upright post dividing two lights in a window.

MULTIARTICULATE, Lat. *multus*, and *articulus*, joint. In *zoology*, applied to the antennae of insects, &c. composed of a number of joints.

MULTICAPSULAR, Lat. *multicapsularis*. Having many capsules: from *multus*, many, and *capsula*, a capsule.

MULTICARINATE, Lat. *multus*, and *carina*, keel. Applied to a shell traversed by many keel-like ridges.

MULTIDENTATE, Lat. *multus*, and *dens*, tooth. Applied to a part armed with many tooth-like processes.

MULTIFID, Lat. *multifidus*, many-cleft: from *multus*, many, and *findo*, to divide.

MULTIFLO'ROUS, Lat. *multiflorus*, many-flowered: from *multus*, many, and *flos*, flower.

MULTILO'CCULAR, Lat. *multilocularis*, many-celled: from *multus*, many, and *loculus*, a cell.

MULTINO'MIAL, Lat. *multus*, and *nomen*, name. In *algebra*, an expression consisting of several terms connected by the signs + or -. Called also *polynomial* or *polynome*.

MULTIPARTITE, Lat. *multipartitus*. Having many and deep divisions: from *multus*, many, and *partitus*, divided. Applied to leaves, &c.

MULTIPEDE, Lat. *multipes*, an animal having more than four feet: from *multus*, many, and *pes*, a foot.

MULTIPLE. 1. Lat. *multiplex*, many-fold: from *multus*, many, and *plico*, to fold.—2. In *arithmetic*, a multiple is a number which contains another number a certain number of times: thus, 20 is a multiple of 2 or 5; it is also a common

multiple of 2 and 5; but the least common multiple of 2 and 5 is 10.

MULTIPLE POINTS. In *analytical geometry*, when a curve intersects itself, the cutting point is called a multiple point.

MULTIPLE VALUES. In *algebra*, symbols which fulfil the algebraic conditions of a problem when several different values are given them.

MULTIPICAND, Lat. *multiplicandus*,)
MULTIPLICATION, Lat. *multiplicatio*,)
MULTIPLICATOR, Lat. *multiplicator*,)

from *multus*, many, and *plico*, to fold. *Multiplicator* is an arithmetical operation by which any given number, called the *multiplicand*, is repeated any number of times or parts of a time, according as the *multiplicator* is a whole number or a fraction: thus, 12 multiplied by 3 is 36: the number 12 is the *multiplicand*, 3 is the *multiplicator* or *multiplier*, and 36 is the *product* arising from the *multiplication* of 12 by 3. *Multiplication* is called *simple* when the terms are abstract numbers, and *compound* when the *multiplicand* is a concrete number.

MULTIPLYING GLASS. A glass whereby objects appear to be increased in number: otherwise called a *polyhedron*, being ground into several planes that make angles with each other.

MULTISILIQUEÆ. The 26th natural order of plants according to Linnaeus, from *multus*, many, and *siliqua*, a pod. The hellebores are examples.

MULTISPIRAL. Applied to univalve shells exhibiting numerous narrow coils.

MULTISTRIATE, *multus*; *stria*, streak. Marked with many streaks.

MULTIVALVE, from *multus*, many, and *valva*, valves. Multivalvular: having many valves: applied to mollusca which have, in addition to the two principal valves, small supplementary pieces of shell.—2. A multivalvular shell.

MULTO'CA. The Turkish code of laws.

MULTUN'GULATE, *multus*; *ungula*, hoof. The hoof of animals which is divided into more than two parts.

MUL'TURE, Lat. *mutura*, a grinding. An emolument given in Scotland to the lessee of a mill for grinding corn.

MUM. A sort of ale brewed from wheaten malt: much used in Germany, where it is called *munne*. It is chiefly brewed at Brunswick.

MUM'IA. A variety of mineral pitch, soft and tough like shoemaker's wax when warm, but brittle in cold weather. Found in Persia.

MUM'MY. An embalmed body: Lat. *mumia*, from Arab. *mum*, wax. Bodies dried in the sun, such as are found in the sands of Libya, are also called mummies, although the name appears to be properly applicable to those embalmed bodies taken from the catacombs of Egypt.

Egyptian mummy was highly esteemed for its medicinal virtues by the Arabian physicians, and subsequently a perfect rage for mummy prevailed in Europe. This induced the Jews to prepare all the dead bodies they could get, in such a manner as to resemble the ancient mummies, which they did by filling the cranium with asphaltum, pouring the same substance into incisions made in the limbs, and binding them up, and lastly exposing the bodies to the heat of the sun. This fictitious mummy was sold for the real, the Jews realised immense sums of money, and mummy retained its efficacy, till, unfortunately, towards the latter end of the 16th century, the slave of a Jew at Damietta, who carried on a great traffic in mummies, having been ill-used by his master, disclosed the mystery of the mummies to the pasha. This was the signal for a universal demand upon the coffers of Jewish manufacturers, and the traffic consequently ceased. The doctors found that they had been outwitted, and mummy went out of fashion.

MUMPS. A popular name of that sort of quinsy which is accompanied by inflammation and swelling of the parotid glands. Technical name *Parotitis*.

MUN'DIC. A variety of marcasite found chiefly in tin mines, and so named from its shining appearance.

MUNICIP'UM. In *Roman antiquity*, a corporation, borough, or enfranchised city, where the inhabitants enjoyed their own laws and the privileges of Roman citizens (but some with and some without the votive suffrage). Hence our epithet *municipal* as applied to the laws, &c. of any particular city. The root is *muni-cep* (from *munus*, office, and *cipio*, to take), a free citizen.

MUN'JEET (Indian). A species of *Rubia tinctorum* or madder, produced in various districts in India. It is used for the same purposes as the European madder, but is reckoned inferior.

MUN'IMENTS. In *law*, all manner of writings, as charters, feoffments, releases, &c., relating to a person's estate or inheritance; a university, cathedral, &c.

MUR'ENA. The eel. A genus of apodal fishes. This genus, according to Linnaeus, has been successively divided into five or six genera: the principal are the *Anguilla*, Cuv. (eels proper); the *Conger*, Cuv. (conger eels); the *Muræna*, Thunberg. The last comprises the *Muræne* properly so called, which have no vestige of pectorals; but have their branchiae open on each side by a small hole. These are common in the Mediterranean. Name *μυραίνα*, from *μυγα*, to flow.

MU'RAL. Appertaining to a wall: from *mur*, wall. A *mural arch* is an arched wall placed exactly in the plane of the

meridian for fixing a large quadrant, sextant, or other instrument, to observe the meridian altitude, &c. of the heavenly bodies.

MU'RAL CROWN. A crown given, as a mark of distinction, among the Romans, to him who first scaled the walls of a besieged city, and there planted a standard.

MU'REX. A genus of univalvular, spiral shells: animal a limax; inhabits the ocean, and has been held in high esteem from the earliest ages, on account of the dye which some of the species yield. Name *murex*, "the shell-fish of the liquor whereof purple colour is made: the purple colour itself." This genus, according to Linnaeus, comprises all those shells of the order *Pectinibranchiata*, in which there is a salient and stringent canal, but the *Murex* of Brugueir includes only those which in addition to this character have varices across the whorls. The other subgenera are the *Ranella*, Lam., the *Fusus*, Brug., and the *Turbinella*, Lam.

MU'RIATE. A salt formed by the union of the muriatic (hydrochloric) acid with a salifiable base. Those saline substances called muriates are in reality *chlorides* when dry, and *hydrochlorates* when in solution.

MURIAT'IC. Pertaining to sea-salt (*muriatic*), as *muriatic acid*, called also *marine acid* and *spirit of salt*; its correct name is *hydrochloric acid* (q. v.). Chlorine was also formerly called *oxygenated muriatic acid*, being regarded as a compound of the muriatic acid with an equivalent of oxygen.

MUR'RAIN. An infectious and fatal disease among cattle, which particularly prevails in hot and dry seasons. Origin of the term is not well ascertained. The Spanish word *morrina*, and the Portuguese *morrinha* are synonymous.

MUR'RET OF SANGUINE. In *heraldry*, dark red.

MUR'RHINE, Lat. *murrhinus*, from *μυρρῖνος*. An epithet for a description of delicate ware brought from the east: Pliny says from Carmania, now Kerman, in Persia. The nature of the substance of which the vasa murrhina were composed is still doubtful, but the description seems to denote fluor spar.

MUR'ZAS. The hereditary nobility of the Tartars.

MUS. A genus of mammiferous quadrupeds: order *Rodentia*. The common mouse (*M. musculus*, Lin.), the black rat (*M. rattus*, Lin.), the Norway or brown rat (*M. decumanus*, Pall.), are well known species. The two large species appear to be natives of the East. The black rat found its way into Europe in the 10th century; the brown rat in the 18th century. This last belongs to Persia, where it lives in furrows. The mouse is known everywhere. Name *mus*, from *μυσ*, from *μύω*, to hide.

MU'S.E. A genus of plants. *Polygamia*—*Monacia*. Name from *μῦσα*, "the moss tree, whose leaves are so large that a child may be wrapped in them." The Plantain tree and Banana tree are well known tropical species. According to some, the name *musa* is a corruption of *mauz*, the Egyptian name of the Plantain tree; according to others, this plant was named *musa*, in honour of *Antonius Musa*, the physician of Augustus. Some again consider the origin of the name to have some connexion with *musa*, a song.

MUS'CADINE VINE. *Vitis apiana*. A species of vine, thus named from the liability of its grapes to be attacked by bees and flies (*muscae*). It yields the rich muscadine wine of Languedoc and Roussillon.

MUS'CAE VOLITAN'TES. A disease or affection of the eyes, in which dark spots and small serpentine figures appear to float before the person. The *muscae volitantes* are commonly not observed when the person is young and in good health, but they exist in all eyes, however healthy, and may be observed by looking at a clear sky through a very small aperture, such as a pin-hole made in a card. The *muscae* always appear to rise, their real motion of course being downwards.

MUSCHEL KALK (Ger.). A shell-limestone formation.

MUS'CI. *Mosses*. The 56th natural order of plants in Linnæus' system, and the 2nd order of the class Cryptogamia. See *MUSCUS*.

MUSCIC'APA. The *Fly-catcher*. A genus of passerine birds of passage. The species are numerous, and form such subgenera as *Tyrannus*, *Muscipeta*, *Muscicapa*, *Gymnocephalus*, &c. The true *muscapa* live on flies, whence the name from *musca*, a fly, and *capiō*, to catch.

MUSCLE, Lat. *musculus*, dim. of *mus*, a mouse (being supposed to resemble a flayed mouse). 1. The muscles are the organs of motion in animal bodies, consisting of fibres susceptible of contraction and relaxation; one set according to the will (when in a healthy state), and therefore called *voluntary* muscles; another set perform their functions independently of the will, as the heart, stomach, intestines, &c., these are termed *involuntary* muscles. The muscles of respiration being in some measure under the control of the will are said to have a *mixed* motion. When the fibres of a muscle are placed parallel to each other, in a straight direction, it is called a *rectilinear* muscle; if the fibres cross and intersect each other, they constitute a *compound* muscle; when the fibres are disposed in the manner of rays, they form a *radiated* muscle, when they are placed obliquely, like the plume of a pen, it is a *penniform* muscle. When muscles act in opposition to each other, they are

termed *antagonists*, and every extensor has a *flexor* for its antagonist, and *vice versa*. Almost every muscle is composed of *fleshy* and *tendinous* fibres, occasionally intermixed, but the fleshy fibres generally prevailing in the *belly* or middle part of the muscle, and the tendinous ones at the extremities. See *MUSCULAR*.—2. A bivalvular shell. See *MYTILUS*.

MUS'CLE BAND. A substratum of imperfect ironstone and indurated shells (mostly resembling fresh-water muscles), found in the Derbyshire and Yorkshire coal fields.

MUSCOVA'DO. Unrefined sugar: the raw material from which loaf sugar is procured by refining. See *SUGAR*.

MUS'COVY DUCK. The *Anas Moscata*, Lin., called also Sheldrake, and now placed in a subgenus under the name *Tadorna*. It is a native of South America, where it perches on trees.

MUS'CLAR. Pertaining to a muscle. *Muscular fibre*: the fibres which compose the body of a muscle are disposed in bundles, which are probably subdivisible *ad infinitum*. These muscles are essentially composed of fibrine and ozmazome. *Muscular motions*: these are of three kinds, viz., voluntary, involuntary, and mixed. See *MUSCLE*.

MUSCUS. A moss: from *μωσχος*, tender, in allusion to its tender and delicate consistence. Plural, *musci* (q. v.)

MU'SES. Poetical deities which preside over the various branches of polite learning: said to be the daughters of Jove and Mnemosyné, and companions of Apollo upon Parnassus. All the functions of the Muses are sometimes united in Mnemé, Aarde, and Meleté; i.e. Memory, Song, and Meditation; but it is more usual to reckon nine, viz., Clio, to whom is ascribed the invention of history, Melpomene, of tragedy, Thalia, of comedy, Euterpe, of the use of the flute, Terpsichore, of the harp, Erato, of the lyre and lute; Calliope, of heroic verse, Urania, of astronomy, and Polyhymnia, of rhetoric.

MUSE'UM, μουσειον. Originally the name of a palace in Alexandria, and now used as a denomination for any apartment or building set apart as a repository for such things as have an immediate relation to the arts and sciences: a cabinet of curiosities.

MUSH'ROOM. The common name of numerous species of cryptogamic plants of the natural order Fungi, some of which are edible, and others poisonous. Name corrupted from French, *mousseron*, from *mousse*, moss. See *FUNGI*, *PHALEUS*, and *AGARICUS*.

MU'SIC. 1. The science which treats of the properties, dependencies, and relations of melodious sounds.—2. The art of pro-

ducing melody and harmony by the due combination and arrangement of sounds. According to Hermes, *μουσική*, comprehends the general knowledge of order, and this was also the doctrine of Plato, who taught that everything in the universe is music. Hence among the ancients, music had a much wider significance than we are inclined to give it.

MUSICAL GLASSES. A musical instrument, consisting of a number of glass goblets, tuned by pouring more or less water into them, and played upon with the end of a finger damped.

MUSK. 1. In *zoology*, see *Moschus*.—2. An odoriferous substance, obtained from the *Moschus moschiferus*, or Thibet musk, which inhabits the Alpine mountains of the east of Asia. The musk is found in a little bag under the belly. It is imported from China.—3. The substance called *artificial musk*, is a tincture, prepared by the action of nitric acid on rectified oil of amber, and dissolving the product in alcohol.

MUSKET. Fr. *mousquet*. A description of handgun used in war, originally fired by means of a match-lock, but now by a spring-lock fitted with a flint and steel.

MUSKETOO'N, Fr. *mousqueton*. A short thick musket, carrying $7\frac{1}{2}$ oz. of lead: the shortest description of blunderbuss.

MUSK-ox. A bovine quadruped of North America, the *Bos moschatus*, Gm. Considerably smaller than the common ox. The legs are very short and thick, and the hair is very long and matted.

MUSK-ROSE. A species of rose, from which an odorous oil is extracted at Tunis.

MUS'LIN. A fine thin cotton fabric, originally imported from the East, but now manufactured in Britain in vast quantity. The name is Indian, *mousselin*, Anglicised.

MUSOPH'AGA. The Plantain-eater. A genus of birds. Order *Scansoria*. Name from *musa*, the plantain-tree, and *φαγω*, to eat; because its principal food is the fruit of the plantain and banana. One species is known, the *M. violacea*, Viell. Guinea and Senegal.

MUS'ULMAN. A Mahommedan. The term signifies "resigned to God," and is the dual number of *Moslem*.

MUS'TARD. In *botany*, a name common to all the plants of the genus *Sinapis*, of which Don enumerates twenty-seven species; of which four are indigenous in Britain.—2. The ground seeds of the black-seeded (*M. nigra*), or white-seeded (*M. alba*), which are indigenous, and much cultivated in England, both for medicinal and culinary purposes. The black mustard is the most pungent.

MUS'TELA. The name given by Linnæus

to a genus of carnivorous mammalia, of the digitigrade tribe, now subdivided into four subgenera; the polecats (*Pectoreus*, Cuv.), the true weasel (*Mustela*, Cuv.), the skunks (*Mephitis*, Cuv.), and the white-tailed skunk (*Mydace*, F. Cuv.). The *Mustela*, Cuv., comprehends the marten (*M. martes*, Lin.), the sable (*M. zibellina*, Pall.), so highly valued for its fur, and several North American martens, indicated by travellers under the indefinite names of Pekan, Vision, Mink, &c. See MARTEN.

MUTE. 1. In *grammar*, a letter which represents no sound: *k*, *p*, and *t* are mutes.—2. In *music*, a little utensil of wood or brass, used on a violin, to deaden or soften the sounds.—3. Among *undertakers*, mutes are persons employed to stand at the door of the deceased until the body is carried out.—4. In *law*, it is said of a person who refuses to plead to an indictment for felony, &c.

MUTULE. In *architecture*, a projecting ornament of the Doric cornice, which occupies the place of the modillion in the other orders, and supposed to represent the ends of rafters.

MUZ'ARAB. Christians under the Moorish government in Spain.

MUZ'ZLE-LASH'ING. The act of securing the muzzle of a gun, on board a ship, to the upper part of the port.

MY'A. The Gaper. The name given by Linnæus to a genus of Mollusca; family *Inchusa*, Cuv. The shell is bivalvular and oblong, but the hinge varies, which circumstance has caused the genus to be variously subdivided. Name *μυα*, *μυα*, Plin. ix. 36.

MYO'ALE. A genus of aquatic insectivorous mammalia; the *Desmans*, of which the Russian musk-rat is the best known species. It is nearly as large as a shrew, inhabits the banks of rivers and lakes of Southern Russia, where it lives on worms, larva of insects, &c.

MYO'GRAPHY, from *μυς*, a muscle, and *γραφη*, description. Description of the muscles of the body.

MYOLOGY, from *μυς*, a muscle, and *λογος*, discourse. The doctrine of the muscles.

MYO'SCY. from *μυα*, a fly, and *σκις*, vision. That state of vision in which *muscæ volitantes* are seen before the eyes; clumsily written sometimes *myodesopsy*.

MYOT'H'ERA. The Ant-catcher. A genus of passerine birds of the dentirostrine family. The species live on insects, chiefly on ants, and are found in both continents. The largest is about the size of a quail. Name from *μυα*, an insect, and *θηρίον*, a beast.

MYOTOMY, from *μυς*, a muscle and

μύς, to cut. The anatomy of the muscles of the human subject.

MYOX'US. The Dormouse. A genus of mammals of the order *Rodentia*, Cuv. Name from *μύς*, a mouse, and *αἶψα*, sharp, (the sharp-nosed mouse, or rat). The dormice pass the winter in lethargy like the marmots. The Common Dormouse (*M. avellanerius*, Lin.) constructs its nest of grass in the hollows of trees. The Garden Dormouse (*M. nitelea*, Gm.) shelters itself in holes of the walls. The Fat Dormouse (*M. glis*, Lin.) of the South of Europe is as large as the Norway rat, and nestles in the hollows of trees and fissures of rocks. This is probably the rat fattened by the ancients, among whom it was considered a delicacy of the highest description. There are some other less known species.

MYRIAGRAMME, from *μύρια*, 10,000, and *gramme* (q. v.). A French weight equal to 10,000 grammes, or 26'795 lbs. troy.

MYRIAL'TRE, from *μύρια*, 10,000, and *litre* (q. v.). A French measure of capacity equal to 10,000 litres, or 353'17146 cub. feet.

MYRIAM'ETRE, from *μύρια*, 10,000, and *metre* (q. v.). A French measure of length = 10,000 metres, or 10,936'389 Eng. yards.

MYRIAP'ODA. An order of insects, commonly called *Centipedes*: from *μύριος*, innumerable, and *πους*, a foot. They are the only insects which have more than six feet in their perfect state, and whose abdomen is not distinct from the trunk. Cuvier divides them into two families, *Chilognatha* and *Chilopoda*.

MYRIARE, from *μύρια*, 10,000, and *are* (q. v.). A French superficial measure of 10,000 acres.

MYRICA. The Candle-berry Myrtle. A genus of trees. *Diaccia*—*Tetrandria*. The Gale or Sweet Willow is the British type of the genus. The other species mostly belong to warm climates. One species, the *M. cerifera* of North America, yields a green wax, from which candles are made. Name borrowed from the Greek *Μυρίςκη*, which however appears to be the *Tamarix Gallica*.

MYRIC'INE. The ingredient of wax which remains after digestion in alcohol. Dr. John, who first described it, gave it this name, because it is very abundant in the green wax of the *Myrica cerifera*. See **MYRICA**.

MYR'ICIN. That portion of wax which is insoluble in water.

MYRIOPHYLL'UM. Water milfoil. A genus of indigenous perennial plants. *Monocia*—*Polyandria*. Name from *μύριος*, innumerable, and *φύλλον*, a leaf, on account of its number of leaves. Two species.

MYRIOB'AMA, from *μύριος*, innumerable, and *οἶαμα*, a picture. A moveable picture, capable of forming an almost endless variety of picturesque scenes, being painted on cards, which may be placed together in numberless combinations.

MYRIS'TICA. The Nutmeg-tree. A genus of three species. *Diaccia*—*Monadelphis*. The true nutmeg and mace tree (*M. moschata*) is a native of the East Indies. The other species, of Santa Fé and Surinam, produce nutmegs of very inferior quality.

MYRMECOPH'AGA. The Ant-eater. A genus of many animals, with a long muzzle, terminated by a smooth toothless mouth, from which it protrudes a filiform tongue, which it insinuates into ant-hills and the nests of Termites, whence these insects are drawn by being entangled in the viscid saliva which covers it. The Ant-eaters inhabit the western continent, and are placed by Cuvier among the ordinary Edentata. Name from *μύριμις*, an ant, and *φαγω*, to eat.

MYRME'LEON. The Lion-ant. A genus of neuropterous insects: family *Planipennes*, Cuv. Name from *μύριμις*, an ant, and *λέων*, a lion, in allusion to the number of ants destroyed by the larva of the common European species, the *M. formicarium*, Lin.

MYRMILLO'NES. A species of Roman gladiator.

MYROB'ALAN. Dried fruit of the plum kind, brought from the East Indies; so named from *μύρον*, an unguent, and *βάλανος*, a nut, because it was formerly used in ointments, though now expunged from the pharmacopœias. There are five species of myrobalans, varying from the size of olives to that of gall-nuts. They are all bitterish, and unpleasant to the taste.

MYRON'YLON. The Balsam-tree of Peru. A genus. *Diandria*—*Monogynia*. Name from *μύρον*, ointment, and *ξύλον*, wood. This tree, the *M. peruvianum*, affords the Peruvian balsam, and grows in the warmest parts of South America. There are three sorts of the balsam, that of incision, the dry balsam, and the balsam of lotion.

MYRRH. *Μύρρα*. 1. A drug obtained by incision from a tree (not known botanically) which grows on the eastern coast of Arabia Felix, and that part of Abyssinia situated near the Red Sea, and called by Bruce, Troglodyte.—2. In botany, a species of Stork's-bill, the *Peltagonium myrrhifolium*, a tree of the Cape of Good Hope.

MYR'TLE. 1. In botany. See **MYRTUS**.—2. *Dutch Myrtle* is a name of the *Myrica Gale* or Sweet Willow.—3. *Myrtleberry*, another name for the Bleaberry.

—4. *Candleberry-myrtle*, the *Myrica cerifera*, the North American plant which affords the *myrtle-wax*. See *MYRICA*.

MYRTUS. Myrtle. A genus of trees. *Icosandra*—*Monogynia*. Name from *μύρρα*, myrrh, because of its smell, or Myrrha, a virgin fabled to have been turned into this tree. The species are natives of warm climates: only one is found in Europe, and that in the warmest parts. The tree which affords the clove-bark, and that which bears the Jamaica pepper, (the allspice or pimenta), are referred to the genus by some. See *CARYOPHYLLIS* and *PIMENTA*.

MYSTERIES. A kind of dramatic spectacles in vogue during the early part of the middle ages; so called because they taught the mysterious doctrines of Christianity, and represented the miracles attributed to saints and martyrs. They preceded the *Moralities*.

MYSTICA. A religious sect, professing to have direct intercourse with the Spirit of God.

MYSTICISM. In religion, applied to enthusiastic ideas of more direct communication with God than is given in revelation.

MYTHOLOGY, from *μῦθος*, a fable, and *λογος*, discourse. A system of fables respecting the deities which heathen nations have supposed to preside over the world and its affairs.

MYTILUS. A genus of bivalve shell: animal, an ascidia. The true *Mytili*, or *Sea Muscles*, have a close shell, with equal, convex, and triangular valves: the anterior and longest side of the shell allowing passage to the byssus. The muscle is a littoral shell, moored to rocks, stones, crustaceans, &c.; and the *M. edulis*, Lin., or common muscle, is very common on most European shores.

MYXINE. The *Hag*. A genus of chondropterygeous fishes, placed among the *Cyclostomi* by Dumeril. The body is cylindrical, and the animal has no vestige of eyes; the tongue acts like a piston, and the spine of the back is in the form of a cord. Name from *μύξα*, mucus, in allusion to the vast supply of mucus which the animal pours out through the pores of its lateral line, to such an extent that the water of the vases in which they are kept seems to be converted into a jelly. They attack and pierce other fishes, like the lampreys.

N.

N, the fourteenth letter of the English alphabet, was used by the ancients as a numeral signifying 900, and, with a dash over it, for 9000. In medical prescriptions, N stands for *numero*, in number; as N. xij, twelve in number.

NA'BOB. A title in India, which in its origin signified a *deputy*, and was first assumed by subordinate officers, who ruled over districts under the soubah. In the declension of the power of the Mogul, many of the Nabobs obtained independent sovereignty.

NA'CARAT. A fine linen fabric, dyed fugitively of a pale red colour, which ladies rub upon their face to give them a delicate roseate hue. From Spanish *nacar*, the lustre of mother-of-pearl.

NA'CRE (French). 1. Mother-of-pearl, or any substance resembling it.—2. Of a pearly lustre.

NA'CREOUS: applied to a surface which reflects iridescent light.

NA'DAB. The high-priest of the Persians, whose office and dignity are very similar to that of the mufti of Turkey.

NA'DIR. The point of the heaven immediately opposite to the zenith. The term is Arabic.

NE'NIA. In *Roman antiquities*, a funeral dirge sung to the music of flutes.

NE'VUS. A natural mark upon children at birth.

NA'ADS. *Nasadis*. Water nymphs: mythological deities, who presided over brooks and fountains.

NA'TANT, swimming, from *ναω*, to swim. An epithet applied to fishes borne across the escutcheon as if swimming.

NAIL. A word originally applied to a claw or talon (Sax. *naegel* or *neagl*, from a root signifying to catch). 1. The fingers and toes of man are provided with *nails*; but the nails on the feet of birds and inferior animals are usually termed *claws*.—2. In *joinery*, &c., the small spikes of iron, &c. used to fasten parts together are called *nails*. These are of various kinds: as *buck nails*, with flat shanks; *clasp nails*, or *brads*, with flat heads; *clench nails*, used by boat-builders; *dog nails*, used to fasten hinges; *rose nails*, with square shanks; *scupper nails*, for nailing canvass, &c. to wood; *square nails*, for hard wood; *tacks*, for fixing paper, &c. on wood. There are also *deck nails*, *port nails*, &c., used by ship-builders; *clout nails*, with flat heads, for fixing iron work, clouts to axles, &c.—3. *Nail* is also the name of a measure of length equal to the 1-sixteenth of a yard.

NA'IVETE, Fr. *naïveté*. Native simplicity; unaffected ingenuousness.

NA'KED, not covered. *Naked flowers* are such as are furnished with a corolla, but have no calyx. *Naked seeds* are seeds not inclosed in any pod or case. *Naked flooring*, the framing of one or more rows of equidistant beams of timber (*joists*) for supporting the boarding.

NANKEE'N, or **NANKIN.** A species of cotton cloth, manufactured chiefly in the

province of Kyang nan, in China, the capital of which is Kyang-ning, corrupted by Europeans into *Nanking*.

NAPH'THA, *ναφθα*. An inflammable liquid mineral substance, of the bituminous kind, perfectly colourless when pure, exhaling an agreeable bituminous smell, and which occurs in considerable springs in different parts of Persia, in Sicily, and in Italy. It is used instead of oil, and differs from petroleum, obtained by distilling coal, only by its greater purity and lightness. It is composed of 8 carbon and 12 hydrogen by volume; sp. gr. '755.

NAPHTHAL'IC ACID. A crystalline product, resembling benzoic acid, obtained from naphthaline.

NAPHTHALINE. A greyish-white substance, found during the rectification of the petroleum of the coal-gas works, incrusting the pipes; and may be obtained in thin white scales by re-sublimation in glass vessels. It has a strong smell of naphtha, is insoluble in water, but very soluble in ether, and moderately so in alcohol and oils. It is a solid bicarburet of hydrogen. Sp. gr. 1'048.

NA'PIER'S RODS, } A set of rods, made
NA'PIER'S BONES, } of bone, ivory, horn, or the like, contrived by Lord Napier for facilitating the arithmetical operations of multiplication and division. They form essentially a moveable multiplication table, and are valuable in cases of lengthened and continuous processes of multiplication and division.

NA'PLES YEL'LOW. A fine yellow pigment, called *giallino* in Italy, where it has long been prepared by a secret process. It is employed in oil-painting, and also for porcelain and enamel, but is now, in a great measure, superseded by chromate of lead.

NARCE'IA, from *ναρκη*, torpor. A vegetable alkaline base contained in opium.

NARCISSUS. Daffodil. An extensive genus of perennial plants. *Hexandria—Monogynia*. Name borrowed from the Greek *Ναρκισσος*. The species are all hardy; five are British, of which the common daffodil (*N. pseudo-narcissus*), is the most known.

NARCO'IC, from *ναρκεω*, to stupify. A term applied, both substantively and adjectively, to medicines which have the power of diminishing the activity of the nervous system. To the class of narcotics belong opium, hemlock, henbane, belladonna, aconite, digitalis, tobacco, &c.

NAR'COTINE. The active principle of any narcotic, but chiefly applied to the active principle of opium, obtained by digesting that substance in ether. The ethereal tincture, being filtered and evaporated to the necessary extent, deposits crystals of *narcotine*, called also, from its

discoverer, *Salt of Derome*. It is distinct from morphia.

NARD. Spikenard. The *Lavendula spica*, an odoriferous shrub, called also Indian nard (*Spica Indica*). It is used by the Orientals as spice. *Celtic nard*, the *Valeriana Celtica*, a plant which is a native of the Alps.

NAR'DUS. 1. Mat-grass. A genus. *Triandria—Monogynia*. Name borrowed from the Greek *ναρδος*, said to be of Oriental origin. One species, *N. stricta*, a British perennial.—2. The *nardus* of the ancients is believed to have been the *Lavendula spica*. See **NARD**.

NAR'WAL, } Germ. *narhwal*. The Sea-
NAR'WHAL, } unicorn (*Monodon monoceros*, Lin.). See **MONODON**.

NA'SAL, Lat. *nasus*, nose. A nasal pronunciation is given to particular letters in some languages, as in French to *m* and *n*, in certain positions.

NA'SCENT, Lat. *nascens*. Beginning to exist, from *nascor*, to be born.

NA'SCENT STATE. The state of gaseous bodies at the moment of their evolution.

NASIL'UM (Lat.). Freight. Anciently the money put into the mouths of deceased persons, to pay their fare across the Styx.

NASTUR'TIUM. A genus of herbaceous plants. *Tetradynamia—Siliquosa*. Named, *quod nasum torqueat*, because the seed when bruised irritates the nose. The species are hardy; four are natives of Britain, of which the water-cress and water-radish are examples.

NA'SUA. The generic name given by Storr to the Coati, a plantigrade nocturnal animal of the warm parts of America. The red coati (*Viverra zibetia*, Lin.) is the type of the genus. It has the dragging gait of the racoon, and a singularly long and flexible snout, from which it takes its name; *nasus*, a nose.

NASU'TA, Lat. *nasus*. In zoology, the prolongation of the muzzle into the form of a nose.

NA'TIONAL DEBT. Money borrowed by the government on the security of the taxes, which stand pledged to the lenders for the payment of the interest. See **FUNDS**.

NATIV'ITY. The day of a person's birth, from *natus*, born. The term is used in speaking of the saints; as the *nativity* of St. John: but *The Nativity* is understood to mean that of Jesus Christ, or Christmas-day.

NAT'ROLITE. A variety of prismatic zoolite, found in small reniform, rounded, or irregular masses, composed of minute fibres; so named from the large proportion of soda or *natron* (24'5 per cent.) which it contains. Its colour is commonly yellowish brown, owing to about 1'75 of oxide of iron which it contains.

NA'TRON. Native sesqui-carbonate of soda, which occurs in Egypt and other hot countries, in the bottoms of salt lakes, which are sometimes dried up by the heat of the sun. In the province of Sukena, in Northern Africa, it exists, under the name of *Trona*, crystallised along with sulphate of soda: in Columbia it is dug up in vast quantities under the name of *Urao*. It is said to take its name from the lake *Natron* in Judea. It is never found pure.

NAT'URAL. Appertaining to nature, as 1. *Natural History*, a description of the natural productions of the earth, water, and air; such as beasts, fish, birds, insects, worms, reptiles, plants, minerals, &c. These are arranged sometimes in *artificial* and sometimes in *natural orders*, from their external habits and characters. The branches of natural history are zoology, ichthyology, ornithology, entomology, botany, mineralogy, and meteorology. — 2. *Natural Philosophy*, the science which considers the properties of natural bodies, and their mutual action on one another, appropriately called *physics* (q. v.). It comprehends mechanics, hydrostatics, hydraulics, optics, electricity, magnetism, galvanism, and, in its widest sense, chemistry. — 3. In *music*, *natural harmony* is that produced by the natural and essential chord of the mode. A *natural* or a *natural note* is a note which, according to the usual order of the scale, is opposed to *flat* and *sharp* notes, which are called *artificial*.

NATURALIZATION. In law, the investing of an alien with the rights of a native-born subject.

NAU'MACHY. A representation of a sea-fight: Lat. *naumachia*, from *ναυς*, a ship, and *μαχη*, fight. The *naumachia* formed an important part of the Circensian games among the Romans. The *naumachiarii*, or those who fought in these exhibitions, were gladiators, slaves, and criminals, who were doomed to die unless saved by the interposition of the people or of the master of ceremonies.

NAU'COPE, from *ναυς*, a ship, and *σκοπεω*, to view. The art of ascertaining, at a very great distance, the approach of vessels; or, being on a vessel, the approach to land.

NAU'SEA, Lat. from *nausia*, from *ναυς*, a ship. Originally and properly sea-sickness, but now applied generally to sickness at the stomach with inclination to vomit.

NAU'TICAL INDICA'TOR; is a somewhat complicated machine invented by James Hunter, M.P.S., Glasgow (1817), for finding the latitude, longitude, and variation of the compass without a meridian observation. The same machine was after-

wards patented (1823) by Joseph Bordwine, Esq., Professor of Fortification at the East India Company's Military College at Addiscombe. The invention, however, is believed to be equally due to both, as there is no proof that Mr. Bordwine knew anything of Mr. Hunter's machine.

NAU'TILUS. A little sailor, from *nauta*, a sailor. A genus of univalve multilocular marine shells, inhabited by a cephalopoda. At present the nautilus is an inhabitant of the tropical seas, but its fossil remains are found in strata of every age, from the mountain-limestone upwards, and in every latitude. It takes its name from it being possessed of a hydraulic apparatus, by which it is enabled so to modify its specific gravity as to float or sink itself at will: on the surface it navigates its little skiff with great dexterity; at the bottom it creeps with the boat uppermost.

NAVAL CROWN. *Navalis corona.* Among the Romans, a crown given to him who first boarded an enemy's ship. It was a circle of gold surmounted by nautical emblems.

NAYE, Sax. *nafa*, the middle. 1. The middle part or body of a church, distinct from the aisles or wings. — 2. In *mechanics*, the centre piece of a wheel, in which the spokes are fixed, and through which the axle passes.

NAVIC'ULAR, Lat. *navicularis*, boat-like; from *navicula*, a little boat. Applied, 1. In *anatomy*, to two bones, one of the wrist and the other of the ankle, from their supposed resemblance to a boat. — 2. In *botany*, to parts of plants, from their shape.

NAVIGA'TION, from *navis*, a ship. The art and science by which ships are guided upon the ocean from one port or harbour to another. The sailing of boats and other craft on rivers, canals, &c., is termed *inland navigation*: when vessels are conducted along coasts, or from one port to another on the same coast, it is *coasting*.

NAVIGA'TORS. 1. Sailors. — 2. Men accustomed to work upon canals, railways, &c.

NAVI'RE. An order of knighthood instituted in France, in 1269, by St. Louis.

NAZ'ARENES. A name originally given to all Christians, but afterwards appropriated to a sect who blended the Mosaic law with the Gospel; from Nazareth.

NAZ'ARITES. Jews who professed great purity of life, i.e., abstained from wine, and did not shave or cut the hair of the head.

N.B. for *Nota Bene*, mark well.

NEAP. Deccrescent, from Sax. *hnipan*, to fall. Applied only to those tides which happen when the moon is in the middle

of the second and fourth quarters. The highest spring tide is three days after the full or change; the lowest neap tide is four days before the full or change.

NEAPED. The situation of a ship which is left aground on the height of the spring tide, so that she cannot be floated off till the next spring tide.

NEAT, Ital. *netto*. 1. In commerce. See **NET**.—2. Sax. *neat*. Cattle of the bovine genus, as bulls, oxen, and cows: sometimes used tautologically, in *neat cattle*.

NEBULA, Lat. from *nebulæ*, *νεβηλα*, fog. 1. A dark spot, a film in the eye, or a slight opacity of the cornea.—2. In *meteorology*, a cloudy appearance.—3. In *astronomy*, a cluster of telescopic stars, or of stars not distinguishable from each other, but which exhibit a dim, hazy light, appearing like a cloud when viewed with the telescope. In a paper read before the Royal Society of London, Sir John Herschel gives the places of 2500 nebulae and clusters of stars, of which 500 were discovered from the time of Sir William Herschel.—4. In *heraldry*, a line drawn with undulations, resembling the form of clouds; or a shield or charge divided by several such lines drawn across it.

NECESSITY, DOCTRINE OF. That scheme which represents all human actions and feelings as being under the direction of laws entirely similar to those which govern the material universe.

NECK OF A CAPITAL. In *architecture*, the space between the annulet of the capital above, and the astragal at the top of the shaft below.

NECRONITE, from *νεκρός*, dead. Foetid felspar; a mineral which, when rubbed or pounded, emits a foetid odour like that of putrid flesh. It occurs in small masses, in limestone, near Baltimore.

NECROSIS, from *νεκρῶν*, to destroy. 1. Mortification of the bones.—2. The absorption which takes place when deer shed their horns.

NECTAR, *νικταρ*. 1. The drink of the gods.—2. In *pharmacy*, a drink made of wine and honey.—3. In *botany*, juices secreted by glands placed on the organs of fructification.

NECTARINE. 1. Sweet as nectar.—2. The name of the produce of the *Amygdalus nucepersica*, a fruit which differs from the common peach, of which it is a species, in having a smooth rind and firmer flesh.

NECTARY, Lat. *nectarium*, the nectar or honey cup. An accidental part of a flower, which does not come under the description of any of its organs, but which may be defined as that part of the corolla which secretes the sweet juices or honey. It has **various forms**.

NEEDLE, Sax. *nedl*. 1. A small instrument of steel pointed at one end, with an eye at the other to receive a thread, used in sewing. Mr. S. Cocker, of Sheffield, has invented machinery by which needles may be produced at a penny per 1000.—2. The *magnetic needle* is a small piece of magnetised steel, sustained on a pivot, in the centre of a compass: its south pole points always in the direction of the magnetic north pole, by which means the mariner is guided in crossing the ocean.

NE EXEAT REGNO. A writ to restrain a person from going out of the kingdom without the king's license.

NEGATIVE, Lat. *negativus*, from *negō*, to deny. A term which applies denial; opposed to *affirmative* or *positive*. Thus, "matter is not spirit," is a *negative* proposition. In *algebra*, the *negative sign* is that which denotes subtraction, and *negative quantities* are such as have the negative sign prefixed: opposed to *positive quantities* and *positive sign*. Thus in the expression $a - ab + az$, the term ab , which has the negative sign — prefixed, is a negative quantity, and the term az , which has the positive sign + prefixed, is positive. a is also a positive quantity, the sign + being understood. *Negative electricity*, according to the theory of Dr. Franklin, is that state of a body wherein it has less electricity than its natural share. At present it is termed the *resinous electricity*, in contradistinction to the vitreous. A *negative pregnant* is a negation of one thing implying the affirmation of another.

NEGROES. A variety of the human species, deriving their name from one of their most striking characteristics, the black colour of their skin. Ital. and Sp. *negro*, black, from Lat. *niger*. The females are *negresses*. The negro country seems to be the central portion of Africa, but the peculiar negro formation is observable in eastern and western portions of that continent, and is most strongly developed in Guinea.

NE INJUS TE VEX'ES. A writ of prohibition to the lord, not to distrain or vex his tenant needlessly.

NELUMBIUM. The Sacred Bean: a genus of perennial plants. *Polyandria—Polygynia*. Name Latinized from the *Nelumbo*, the Ceylonese name of the *N. speciosum* of India, which produces the sacred bean. The species are natives of hot climates.

NEME'AN GAMES. Games celebrated in ancient Greece, deriving their name from Nemæa, a village between the cities Cleonæ and Philus, where they were celebrated every third year.

NEM. CON. For *Nemine contradicente* (no one opposing). A phrase chiefly used in the House of Commons, when anything is carried without opposition. *Nemine*

dissentiente (no one dissenting), is similarly applied in the House of Lords.

NE'MESIS. A Greek divinity, the goddess of Vengeance.

NEOC'ORUS. The guardians of the Grecian temples.

NEOL'OGY, from *neos*, new, and *logos*, a word; the introduction of new words into a language. The progress of science requires perpetual exercise of *neology*, but unnecessary *neologisms*, especially in scientific language, are at all times to be reprehended.

NEOMEN'IA, from *neos*, and *μην*. A monthly festival, in ancient mythology, in honour of all the gods; but especially Apollo, who was called Neoménos.

NE'PA. The *water-scorpion*: a genus of hemipterous insects. Family *Hydrocoriscæ*. This genus was formed by Linnæus, but it is now variously divided. Named *nepa*, a scorpion, from the species, which inhabit stagnant waters, preying on the smaller aquatic insects.

NEPEN'THES, *νηπενθής*. 1. "A drug which banishes sorrow, allays wrath, and causes oblivion of all evils." The preparation of hemp, known in the East under the name of *bangue*, is supposed to have been the *νηπενθής* which Homer tells us Helen cast into the wine (*Odyss. lib. iv. v. 220*). In that passage, however, the word is merely an epithet of *φαρμακον*.—2. The preparation now called *laudanum*.—3. The *pitcher-plant*: a genus. *Diaccia*—*Monandria*. Ceylon and China.

NEPH'ELINE. A mineral, usually found in volcanic productions, crystallised in six-sided prisms, and named from *νεφελη*, a cloud, in allusion to its yellowish-white colour. It is the *Sommeite* of Jameson, being found only in cavities of lava at Mont Somma. It is composed of silice, alumina, lime, and oxide of iron.

NEPHE'LIUM. A genus of trees. *Monæcia*—*Pentandria*. One species. East Indies.

NEPH'RALGY, Lat. *nephralgia*, from *νεφρος*, the kidneys, and *αλγος*, pain. Pain of the kidneys, not attended by fever.

NEPHREITE, kidney-stone (*νεφρεϊτης*, from *νεφρος*, a kidney). A subspecies of jade, formerly worn by persons from an absurd notion that it relieved disease of the kidneys. Its colours are green, gray, and white; its constituents are silice, lime, alumina, soda, potash, iron, manganese, and water. It is chiefly found in the East, and in some parts of Germany, and is worked into handles for sabres, daggers, knives, &c.

NEPHRI'TIS. Inflammation of the kidneys (*νεφριτις*).

NE PLUS ULTRA, *no further beyond*. The utmost extreme of anything.

NEP'OTISM, from Lat. *nepotæ*, nephews, relations. A species of favour so called, in the grant of the Roman pontiffs, to which many of the Italian nobility owe their high rank.

NEPTU'NIAN, pertaining to the ocean, the domain of Neptune. The *Neptunian theory* of geology was that originated by Werner, who attempted to show that all the formations have been precipitated from water, or from a chaotic fluid. This theory, which received at first almost unanimous assent, was successfully opposed by the *Vulcanic theory* of Dr. Hutton, so beautifully expanded and illustrated by Lyell and some other geologists of the present day.

NER'EIS. The Sea-nymph. A genus of articulata: order *Dorsibranchiata*. The Nereides are described by Cuvier as having an even number of tentacula, attached to the sides of the base of the head; and a little further forwards, two others that are biarticulate, behind which are two simple ones. They have been called *Se-centipedes*.

NER'ITA. The Sea-snail. The name given by Linnæus to a genus of mollusca, which is now variously subdivided: order *Pectinibranchiata*: family *Trochoida*, Cuv. Name borrowed from the Greek *νηρίτης*, described by Pliny. The Nerita is a littoral univalve shell, semi-globose, depressed beneath, and having no umbilicus.

NER'IUM. The Rose-bay. A genus of shrubby and arborescent plants. *Pentandria*—*Monogynia*. Name from *νησος*, humid, because the species grow in moist places. The Oleander is the best known European species.

NER'OLI. The name given by perfumers to the essential oil of orange flowers, procured by distillation with water, in the same way as the other volatile oils.

NERVE, Lat. *nervus*, from *νῆϋος*. 1. "In the *anatomy of the ancients* (says Dr. K. Grant), the nerves and tendons were confounded under this name, and this accounts for the opposite meanings of the word *nervous*, which sometimes signifies strong, sinewy, and at others weak and irritable. In the language of *modern anatomy*, the nerves are those long white cords which arise from the brain and spinal cord, and are distributed in all parts of the frame, endowing it with sensation and voluntary motion. They are distinguished into *cerebral* and *spinal*: the cerebral nerves are generally reckoned as nine pairs; the spinal are thirty pairs, and are divided into twelve pairs of dorsal, five pairs of lumbar, and five of sacral."

—2. In *botany*, applied to a congeries of

vessels, running like a rib or cord in most leaves.

NEU'VOUS. Appertaining to a nerve: applied—1. In *medicine*, to fevers and affections of the nerves, and to medicines which act on the nervous system.—2. In *anatomy* and *physiology*, to the structure and functions of parts.—3. In *botany*, to leaves which have hard fibres, or nerve-like cords. The *nervous system* of the more perfect vertebral animals consists of the brain and its nerves, the spinal cord and its nerves, and the ganglia of the Sympathetic and filaments connecting them with each other. The nervous system is the seat of sensation, volition, and motion; but by what means conveyed is yet a mystery. Much has been written about a subtle *nervous fluid*, on which the nervous phenomena of the animal are said to depend; but the hypothesis is entirely gratuitous so far as our present knowledge goes. Nor is the hypothesis of the celebrated Hartley, which ascribes sensation and voluntary motion to vibration, in the nervous substance, less free from objection. The theory of Dr. Wilson Philip, which infers that the nervous and galvanic energies are identical, perhaps approaches near the truth, although his experiments do not legitimately lead to such a conclusion.

NERVUS. 1. In *botany*, the veins of leaves. 2. In *entomology*, corneous tubes for expanding the wing and keeping it tense.

NES. A terminational syllable, in several names of places, supposed to be derived from the French *nes*, or the German *nase*, nose, where there is a headland or promontory,—as Inverness, Durness, Sheerness.

NESTS, ESCULENT. A species of nest, built by swallows peculiar to the Indian Isles, much esteemed in China as an edible.

NESTORIANS. Followers of Nestorius, a heretic of the fifth century, who taught that Christ was divided into two persons.

NET, SAX. *net*, from the same root as *knit*. 1. An instrument formed with twine or thread interwoven with meshes: for catching fish, fowls, and wild beasts.—2. *Net*, or *nett*, from Ital. *netto*, pure, free, as the *net* profits of a transaction; also clear of all tare and tret, or free of any deductions of weight.

NETHINIMS. The servants of the Jewish priests and the Levites.

NETTING. A sort of fence formed of net-work of ropes, common in ships.

NETTLE-RASH. An eruption on the skin, like the wheals caused by the sting of a nettle. See **URTICARIA**.

NEU'RALGY, LAT. *neuralgia*, from *νεῦρον*, a nerve, and *αλγος*, pain. Pain in a nerve, of which *tic-douloureux* and *sciatica* are species.

NEUROTÓOY, FROM *νεῦρον*, a nerve, and *λογος*, discourse. The doctrine of the nerves and nervous system.

NEUROTOMA, ΝΕΥΡΟΣ. A tumour formed upon a nervous trunk.

NEUROTÉRA, FROM *νεῦρον*, a nerve, and *πτερον*, a wing. An order of insects in which the wings are finely reticulated, generally naked and diaphanous. The abdomen is destitute of a sting, and is rarely furnished with an ovipositor. Cuvier divides them into three families; the *Subulicornes*, the *Planipennes*, and the *Plicipennes*. The Dragon-flies, the Termites, and the Lily-flies, are examples.

NEUROTOMY, FROM *νεῦρον*, a nerve, and *τομή*, to cut. 1. Dissection of the nerves.

—2. The division of a nerve.

NEUTER, LAT. comp. of *ne* and *uter*, not either; belonging to neither gender: applied in grammar to nouns which are neither masculine nor feminine. 1. A *neuter verb* is one which expresses an action or state limited to the subject, and which is not followed by an object, as *I walk*; but the term *intransitive* is more appropriate.—2. An animal which belongs to neither sex. The working bees are *neuters*; and those individuals among the Termites called *soldiers* are *neuters*. Their business is to keep the labourers at work.

NEUTRAL, FROM *neuter*. 1. In *chemistry*, applied to salts formed by the combination of an acid with an alkali, and which possess neither alkaline nor acid properties.—2. In *botany*, applied to such flowers or florets as have neither stamens nor pistils, and of course produce no seed.

—3. In *politics*, not engaged on either side in a dispute between nations.

NEUTRALIZATION. In *chemistry*, the combination of an acid and an alkali, in such proportions that the compound evinces none of the properties of the ingredients, or does not affect the colour of litmus or turmeric.

NEUVAINES, FR. *neuf*, nine. In the Roman Catholic Church, prayers offered for nine days to obtain the favour of Heaven.

NEWEL. In *architecture*, the upright cylinder or pillar around which winding stairs turn, thence called *newel stairs*.

NEW STYLE. In *chronology*, the days of the year, according to the Gregorian Calendar, adopted in England A.D. 1753.

NEWTONIAN PHILOSOPHY. The doctrine of the universe as propounded by Sir Isaac Newton.

NEW ZEALAND FLAX. See **PHORMIUM**.
NIEBELUNGEN, LAY OF THE. The oldest existing monument of German epic poetry.

NICARAGUA OR PEACH WOOD. The wood of a tree of the same genus (*Casalpineae*)

as the Brazil and Japan woods, and which grows principally in the vicinity of the lake of Nicaragua. It is used as a dye-wood for the same purposes as Brazil wood, but is much inferior. The best brings, including duty, 20*l.* per ton in London.

NICENE CREED. A particular creed, drawn up by the ecclesiastics of the Council of Nice, and since adopted by the Church of England.

NICK'EL. A metal of a silver white colour, very hard and difficultly fusible, but malleable, and may be drawn into wire of $\frac{1}{50}$ of an inch, and rolled into plates $\frac{1}{500}$ of an inch thick. It is an ingredient in all meteoric iron, and is found in Bohemia, associated with arsenic, in the mineral termed *Kupfernickel* (base copper); in the Hartz combined with cobalt, iron, and copper, in *arsenic-nickel*; as a sulphuret of nickel in *Haarkies*; as a sulphuret and arseniate in *nickel-glance*; and with sulphur and antimony in *nickle-spiess*. All the ores of nickel are coppery coloured, generally covered more or less with a greenish-grey efflorescence, and all its solutions in acid are nearly grass-green. It forms ductile alloys with silver and iron, and combines with copper and zinc to form German silver. Sp. gr. of nickel, 8.93.

NICOLA'I'TANE. A sect in the ancient Christian church, so named from Nicolas, a deacon of the Church of Jerusalem. The most distinguishing tenet was that all married women should be in common, to prevent jealousy. Rev. ii.

NICOTIA'NA. Tobacco. An extensive genus of herbaceous plants. *Pentandria—Monogynia*. Named after Nicot, who first brought it to Europe (1560). The *N. tabacum*, an annual plant, of which there are seven or eight varieties, is that used for smoking. It is a native of Virginia, in North America. It is narcotic, emetic, purgative, diuretic, and sternutatory. These properties depend on the nicotine which it contains.

NICOTINE. A peculiar principle obtained from the leaves and seeds of the tobacco (*Nicotiana tabacum*), by Vauquelin. It is colourless, has an acrimonious taste, a pungent smell; mixes in all proportions with water and alcohol, and is highly poisonous. It combines with acids, and forms salts acrid and pungent like itself.

NIC'TITATING MEMBRANE (the) of birds and fishes, is a thin membrane which covers the eyes, and thereby protects them from the injurious effects of too intense light, particles of dust, &c., without entirely obstructing the sight, being so pellucid that it is quite pervious to light.

NIDDIN. A species of minor excommunication among the Hebrews, which lasted a month.

NID'GED ASH'LAR. Ashlar squared by means of a cuvil or pointed hammer.

NID'ULATE, Lat. *nidulans*, from *nidulus*, to place in a nest. An epithet for the seeds of some fruits which nestle as it were, or are embedded on their surface, as in the strawberry.

NIE'LO (It.) A method of plate engraving.

NIGEL'LA. Fennel-flower. A genus of annual plants. *Polyandria—Pentagynia*. Name *Quasi nigrella*, in allusion to its black seed. The love-in-a-mist, and the devil-in-a-bush are species.

NIGHT-FIRE. *Ignis fatuus* or will-o'-the-wisp.

NIGHT'INGALE. A bird; the *Motacilla lusciniæ*, Lin., a well-known songster of the night. It builds on trees, and does not begin to sing till the young ones are hatched.

NIGHT'SHADE. In botany, the deadly nightshade is a British perennial plant, the *Atropa belladonna*. The American nightshade is a species of *Phytolacca*. The woody nightshade is a species of *Solanum*, the bitter-sweet. The Palestine nightshade belongs to the same genus. The bastard nightshade belongs to the genus *Rivina*; the enchanter's nightshade to the genus *Circæa*; the Malabar nightshade to the genus *Basella*; and the three-leaved nightshade to the genus *Trillium*.

N'I'IL AL'BUM. White nothing. Flowers or oxide of zinc.

NILON'ETER, A contrivance, among the Nil'oscope. Ancient Egyptians, to measure the height of the water in the river Nile in its overflowsings.

NIM'BUS. 1. A circle representing luminous rays, on certain ancient medals, round the heads of emperors and demigods, answering to the *areolæ* or circles of light painted round the heads of saints.

—2. The rain-cloud, a shape assumed by a cloud previous to its ultimate resolution and fall in rain.

NINTH. In music, one of the dissonant intervals.

NIP'PERS. 1. Small pincers.—2. The fore-teeth of a horse.—3. In a ship, certain pieces of cordage used to fasten the cable to the messenger or royal, when the former is drawn into the ship by the application of some mechanical contrivance to the latter. *Nipper men* are those employed to bind the nippers about the cable and royal.

N'I'SI P'RI'US. A judicial writ which lies in a case where the inquest is pannelled, and returned before the justices of the bench, one party making petition to have this writ for the ease of the country, that the case may be tried before the

justices of the same county. The purport of the writ is this: the sheriff is commanded to bring to Westminster the men impelled at a certain day, before the justices *nisi prius justiciarii ad assisas capiendas venerint*, that is, unless the justices shall first come into the county to take assizes, which they always do in the vacation preceding each Easter and Michaelmas term. Hence courts directed to try matters of fact in the several counties, are called *Nisi Prius* or *Nisi Prius Courts*.

NITIDULA. A genus of coleopterous insects of the pentamerous division, of which *Colobicus*, *Thymalus*, *Ips*, *Cercus*, and *Byturus*, are subgenera.

NITRE, nitro, saltpetre. Nitrate of potash, found ready formed in the East Indies, in Spain, in the kingdom of Naples, and some other places, in considerable quantities. It is an important ingredient in the manufacture of gunpowder, and from it we obtain nitric acid.

NITRIC ACID. An acid composed of nitrogen and oxygen, and obtained by the action of sulphuric acid on nitrate of potash (*nitre*) with the aid of heat. Nitric acid cannot be isolated. For the purposes of the arts it is commonly used in a dilute state, and generally contaminated with sulphuric and muriatic acids, under the name of *aqua fortis*, of which there are two kinds: *double aqua fortis*, which is about half the strength of nitric acid, and *single aqua fortis*, which is again about half the strength of the double. A mixture of nitric acid (2 pts.) with hydrochloric acid (1 pt.) forms *aqua regia*, the only solvent of gold and platinum. Pure nitric acid is perfectly colourless.

NITRIC OXIDE. Deutoxide of nitrogen.

NITRITE. A salt formed by combination of nitrous acid with a salifiable base.

NITROGEN, from *νιτρον*, nitre, and *γενναω*, to generate. A gaseous principle, called also *azote*, constituting four-fifths of our atmosphere. It is neither combustible nor a supporter of combustion; possesses neither taste nor smell, and does not combine directly with any known substance, though indirectly it unites with oxygen (in five proportions), hydrogen, and carbon, and forms some of the most energetic compounds we possess. Mixed with oxygen it constitutes atmospheric air; united with oxygen it forms *aqua fortis*; united with hydrogen it forms ammonia, and with hydrogen and carbon it forms prussic acid. It enters largely into the composition of animal bodies. Sp. gr. 0.9722.

NITROGLYCERINE, TRINITRINE, or TRINITRO-GLYCERINE. A violent and dangerous explosive body produced by the action of concentrated nitric acid on glycerine. Three atoms of typical hydrogen are thereby replaced by $N O_2$

NITRO-LEUCIC ACID. When leucine is dissolved in nitric acid, and the solution evaporated to a certain point, it passes into a crystalline mass, which, being pressed between blotting paper and redissolved in water, yields by concentration fine, divergent, and nearly colourless needles of *nitro-leucic acid*. It unites with bases, and forms salts which fuse on red-hot coals.

NITRO-MURIATIC ACID,
NITRO-HYDROCHLORIC ACID. } *Aqua regia*.
When nitric acid (2 pts.) and muriatic acid (1 pt.) are mixed together, they become yellow, and acquire the power of readily dissolving gold and platinum, which neither of them possesses separately. The acids by mixture are partially decomposed, and water, chlorine, and nitrous acid gas, are produced, so that *aqua regia* is really a mixture of chlorine, nitrous acid, and water.

NITRO-NAPHTHALENE. A compound obtained from the action of nitric acid on naphthalene.

NITRO-SULPHURIC ACID. An acid resulting from the mixture of one of nitre and eight or ten of sulphuric acid.

NITROUS ACID. An acid which is most easily obtained by exposing nitrate of lead to heat in a glass retort, when the acid in question comes over in the form of an orange-coloured liquid. Boils at 82° .

NITROUS GAS. Nitric oxide; deutoxide of nitrogen. A colourless, elastic, gaseous body, which has no sensible taste, and is neither alkaline nor acid. It is exceedingly hurtful to animals, producing instant suffocation whenever they attempt to breathe it. It combines with oxygen, and forms *nitrous acid gas*.

NITROUS OXIDE. Protoxide of nitrogen, called also *laughing-gas*, from the peculiar pleasurable excitement, often accompanied with laughter, which it produces upon those who inhale it. It was discovered by Dr. Priestley in 1772, but was first accurately described by Sir H. Davy in 1799. It is readily obtained by heating nitrate of ammonia in a glass retort by means of a spirit lamp. It has been called gaseous oxide of nitrogen.

NIZAM. The title of great officers of state in the Asiatic governments.

NIZAMUT AD-DAWLET. A court of criminal justice in India.

N. L., for non liquet, it does not appear. A form of verdict in ancient law, equivalent to the *ignoramus* of a modern grand jury.

NOAH'SIAN DELUGE. The deluge related by Moses, and from which only Noah and his family were saved.

NOBILITY. Rank conferred by express authority of the governing power. The hereditary nobility of all European states

is the offspring of military despotism: that of England originated in the Norman Conquest.

NOBLE. 1. In *numismatics*, a gold coin, value 6s. 8d. It was struck in the reign of Edward III., with the emblem of a ship, commemorative of a famous victory gained by him over the French at Sluys in 1340.—2. In *ichthyology*, a name of the *Aspidophorus Europæus*, Yarr. and Cuv., called the armed bullhead, sea-poacher, pogge, lyre, pluck, &c., &c.

NOCTHORS. The generic name given by Fred. Cuvier to the Douroucoulis, a quadrumanous mammifer, which differs from the Sagouins in its greater nocturnal eyes, and the ears, which are for the most part hidden under the hair. It is a native of South America.

NOCTILUCA, Lat. *nox*, night, and *luceo*, to shine. A name anciently given to phosphorus.

NOCTURNA. A family of Lepidopterous insects formed by Cuvier, of the genus *Phalena*, Lin., the species of which seldom fly except at night or after sunset: hence the name from *nocturnus*.

NOCTURNE. A family of Accipitrine birds, comprehending the owls (*Strix*, Lin.), which are to be found abroad only after sun-set.

NOCTURNAL, Lat. *nocturnus*, pertaining to night; from *nox*, night. 1. In *astronomy*, a *nocturnal arc* is that part of the orbit of a heavenly body described during the night. The *nocturnal semi-arc of the sun* is that portion of a circle which he passes over, between the point of the horizon wherein he sets, and the lower part of one meridian.—2. A *nocturnal* or *nocturnalabe* is an instrument, chiefly used at sea, to take the altitude or depression of some stars about the pole, in order to find the latitude and hour of the night. It consists of two circles fitted to each other, yet moveable together, with a moveable index; all three fixed together by a rivet, which is pierced through the centre with a small hole, through which the star is to be viewed.

NOODY. 1. A bird (the *Sterna stolidæ*, Lin.) celebrated for the blundering manner in which it throws itself on vessels at sea.—2. A description of carriage, drawn usually by one horse.

NODE, from *nodus*, a knot. In *botany*, a joint which has only a small elevation, as observed in the stems of some grasses. In *surgery*, a hard circumscribed tumour, proceeding from a bone, and caused by a swelling of the periosteum. In *astronomy*, a point in the orbit of a planet which intersects the ecliptic. There are two such points in the orbit of every planet: that where the planet ascends northward, above the plane of the ecliptic, is called the *ascending node*, or *dragon's head*;

and that where a planet descends to the south is called the *descending node*, or *dragon's tail*. The first is marked ☊, and the latter ☋. In *dialling*, a small hole in the gnomon, which indicates the hour by its light, as the gnomon does by its shadow.

NODULAR. In the form of a nodule or small lump. *Nodular iron ore* is a variety of argillaceous oxide of iron, which occurs in small masses, often spherical, oval, or nearly reniform, but sometimes in little parallelopipeds, with the angles rounded off. These nodules have been called *attites* and *eagle-stones*.

NODULE. Lat. *nodulus*. A small knot or lump, from *nodus*, a knot. A rounded but irregular-shaped mineral mass of small size.

NOETIANS. In *ecclesiastical history*, a sect named from Noetus, an Ephesian, who held that there was only one person in the Deity.

NOGGING. In *architecture*, brick-work carried up between upright pieces or quarters. *Nogging-pieces*, the horizontal timbers fitted between the quarters, to steady them.

NOLLE ME TAN'GERE. Touch-me-not. 1. A species of malignant herpes, or lupus, which affects the skin and cartilages of the nose, and sometimes destroys the whole nose.—2. An annual species of the indigenous balsam-plant. See *IMPATIENS*.

NOLLE PROSEQUI, in *law*, is where a plaintiff does not declare in a reasonable time, which is regarded as a confession that he has no real cause of action.

NOMA (Lat. from *véus*, to eat. An ulcer that attacks the skin, and often the cheek or ulva, of young girls. It appears, at first, in somewhat livid spots, and in a few days becomes gangrenous.

NOMADES. Tribes who lead a wandering and pastoral life. The term is from the Greek *nomas*, *nomados*, living on pasturage. Nomadic tribes are still to be found in the northern parts of Asia; and the Numidians, in Africa, are supposed to have been so called from this practice.

NO-MAN'S-LAND. A space in the middle of a ship, when she is stowed upon the booms.

NOM DE GUERRE (French). A fictitious name, or a name assumed for the time.

NOMBRIL. The centre of an escutcheon.

NOMENCLATURE. A systematic classification of the terms of a science, as the *nomenclature of botany*, from *nomen*, a name, and *calo*, to call.

NOMINALISTS. A sect of school-philosophers of the fourteenth century, the disciples of Ocham, or Occam, who maintained that names, and not things, are the object of dialectics. They founded the university of Leidszig.

NON'INATIVE, from *nomino*, to name. 1. Pertaining to the name which precedes the verb, or the first case of nouns.—2. The first case of nouns and adjectives: the case which primarily designated the name of anything.

NOMO'CANON, νόμος, law, κανών, canon. In *ecclesiastical law*, a work in which canons of the church and imperial laws are collected and compared.

NONÆ ET DECIMÆ. The contributions of tenants of the Church were anciently so called; the nonæ or ninth being the rent, and the decimæ or tenth the tithe due to the Church.

NONAGESIMAL, Lat. *nonagesimus*, ninety. Noting the 90th degree of the ecliptic; called the *mid-heaven*.

NON'AGON, from *nonus*, nine, and γωνία, an angle. A figure of nine sides and nine angles.

NON ASSUMPSIT. In *law*, a general plea in a personal action, by which a man denies that he has made any promise.

NON CLAIM, in *law*, is where a person fails to demand his claim within a reasonable time, by which he is precluded from enforcing it.

NON COMPOS MENTIS. Not of sound mind or judgment.

NON-CONDENSING ENGINE. A high-pressure steam-engine is sometimes so called, because it is not provided with the apparatus for condensing the steam, so as to form a vacuum in the steam cylinder.

NON-CONDUCTOR. A substance which is not a conductor. Wool, fur, and water are *non-conductors* of heat; glass, sealing-wax, and sulphur are *non-conductors* of electricity. There is, however, perhaps, no body in nature which is absolutely a *non-conductor* of heat or electricity; but the term is nevertheless applied to such substances as transmit the energies very slowly.

NONCONFORMIST. One who refuses to conform to the rites and worship of the established church. The name has been particularly applied to those clergymen who were ejected from their livings by the Act of Uniformity, in 1662.

NONES, Lat. *nonæ*. In the *Roman calendar*, the fifth day of January, February, April, June, August, September, November, and December; and the seventh day of March, May, July, and October. See *CALENDAR* and *IDES*.

NON EST FACTUM. In *law*, a plea where an action is brought upon a bond, and the defendant denies it to be his deed.

NON EST INVENTUS. He is not found. The sheriff's return to a writ when the defendant has not been found.

NONIL'LION, from *nonus*, nine, and *million*. The number of nine million millions.

NO'NIES. See *VERNIER*.

NON LIQUET. It does not appear. A verdict given by a jury when a matter is to be deferred till another day of trial, not being sufficiently clear. The Romans used the same phrase, marked *N. L.* (q. v.).

NON-NATURALS. *Res non naturales*. Old physicians comprehended under this name air, eating and drinking, sleeping and watching, motion and rest, the retentions and secretions, and the affections of the mind, as not entering into the composition of bodies, yet as necessary to their existence.

NON-JURORS. In *history*, adherents of James II., who refused to take the oath of allegiance to the Hanoverian family at the revolution: from *non*, and *juro*, to swear.

NON OBSTAN'TE, Notwithstanding. A clause in statutes and letters-patent, importing that a thing may be done, *notwithstanding* an act of Parliament to the contrary.

NON SEQ'UTUR. It does not follow.

NONSENSE. In *law*, "something grammatically correct, but unintelligible in the sense!"

NON'SUIT. *Non prosequitur*. The renunciation of a suit by the plaintiff, commonly on the discovery of some error or defect when the matter is ready for the verdict of the jury.

NOON. Mid-day: called *apparent*, as shown by the sun-dial, and *mean*, as shown by a clock.

NO'PAL. The Mexican name of the *Cactus opuntia*, a plant upon which the cochineal insect feeds. It is termed in English the *prickly pear*.

NO'RIA. A hydraulic machine used in Spain for raising water. It nearly resembles the Persian wheel, but is inferior in practice.

NO'FOLK CRAIG. An English tertiary formation belonging to the older pliocene, and consisting of irregular beds of ferruginous sandy clay mixed with marine shells.

NOR'MA. *Euclid's Square*. A small constellation south of the Scorpion. It contains 12 stars, all below the fourth magnitude.

NOR'MAL, Lat. *normalis*, according to a square or rule (*norma*). 1. Perpendicular, as a *normal line* which forms with another line a right angle.—2. Relating to the rudiments, or elements, as a *normal school*, in which boys are instructed in the elementary branches of education.

NOR'MAN. 1. In *nautical language*, a short wooden bar, thrust into a hole of the windlass to fasten the cable to. It is only used when there is little strain on the cable.—2. In *geography*, &c., pertaining to Normandy.

NOR'ROY, for *north-roy*. North-king. The title of the third of the three kings at arms, or provincial heralds.

NOR'THERN LIGHTS are more commonly termed *Aurora Borealis*.

NOR'THERN SIGNS are Aries, Taurus, Gemini, Cancer, Leo, and Virgo, which are on the north side of the equinoctial.

NOR'THING. In navigation, the difference of latitude which a ship makes in sailing towards the north.

NORTH POLE, is that point of the heaven which is 90° every way distant from the equinoctial. Its place is pointed out within 2½° by the *North Pole Star*, in the tail of *Ursa Minor*.

NOR'WAY SPRUCE. A species of the Fir-tree, the *Pinus abies*, which grows abundantly in Norway and other parts of the north of Europe.

NOSINGS OF STAIRS. The parts of the tread boards of the steps which project over the risers.

NOSOG'RAPHY, from *nosos*, a disease, and *γραφη*, description. Description of diseases.

NOSOLOG'Y, from *nosos*, a disease, and *λογος*, a discourse. A classification of diseases, with names and definitions, according to the distinctive character of each class, order, genus, and species. Cullen's system of nosology is that generally adopted in this country.

NOSTALOG, Lat. *nostalgia*, from *nosτος*, a return, and *αλγος*, pain. A vehement desire to return to one's native country, attended with melancholy, loss of appetite, and want of sleep. Mountaineers are peculiarly liable to this affection.

NOS'TOC. A vegetable jelly of a greenish colour, regarded by Linn. as a cryptogamic plant, and hence placed by him in the genus *Tremella*. It is frequent, especially in sandy soils, and immediately after rain in summer, and is vernacularly termed witches' butter, fallen stars, &c. It is edible.

NOS'TRUM. A Latin word which means *our own*, and is applied to all quack medicines, the composition of which is kept secret.

NO'TABLES. In *French history*, the deputies of the states under the old régime, appointed and convoked by the king on certain occasions.

NOT'ACANTHA. A family of dipterous insects, so named from *nosτος*, the back, and *ακανθος*, a spine, because the scutellum is generally armed with teeth or spines. The *Notacantha* are divided by Latreille into three divisions, the *Mydasii*, the *Decatoma*, and the *Stratiomydes*.

NOTA'RIAL ACTS, are those acts in the civil law which require to be done under the seal of a notary, and are admitted as evidence in foreign courts.

NOR'ARY, Lat. *notarius*, from *notus*, known. A legal officer, whose business

it is to attest deeds and writings, protest bills, enter and extend a ship's protests, &c. He is usually styled a *notary public*.

NOTA'TION, from *noto*, to mark. The method of expressing, by means of appropriate characters, any proposed quantity: thus—1. In *arithmetic*, we call the method of expressing numbers by means of the nine digits and cipher, *notation*; and we use the same term for the method adopted in the higher analysis to express an operation by means of appropriate symbols.—2. In *music*, the method of expressing or representing by characters (*notes*), all the different sounds and modifications of the same.

NOTCH-BOARD. A board which is grooved or notched for the reception and support of the ends of steps in a stair-case, &c.

NOTCH'INGS. Hollows cut in the faces of a piece of timber, &c., usually of a rectangular form, for the reception and support of the tread-boards of a stair, &c.

NOTE, Lat. *nota*, from *notus*, known. A mark, as, 1. In *music*, a character which marks the pitch and time of a sound, as a semibreve.—2. A minute, memorandum, or short writing, intended to assist the memory.—3. A short remark, or passage of explanation, in the margin of a book, or at the bottom of a page.—4. A written or printed paper, acknowledging a debt and promising payment, as a *promissory note*, a *bank note*.—5. An official paper sent by one diplomatist to another.—6. A billet.

NOTONECTA. The *Boat-Fly*. A genus of Hemipterous insects established by Linn., but now divided into *Corixa* and *Notonecta proper*. They compose the tribe *Notonectides* of the family *Hydrocorisæ*, Cuv., and take their name from their habit of swimming on the back.

NOTTUNO. In *music*, a composition in which love and tenderness form the theme.

NO'TUS. A Latin name of the south wind.

NOUN. A term altered from *nomen*, a name: that sound, or combination of sounds, by which a thing is called, whether material, as *house*, or immaterial, as *guile*.

NOVAC'ULITE. The hone-stone or Turkey-oil-stone. A variety of argillaceous slate named from *novacula*, a razor.

NOVA'TIANS. In *ecclesiastical history*, the followers of Novatius, a heretic.

NOV'EL, Lat. *novellus*, dim. of *novus*, new. 1. In *civil law*, the *novel constitutions*, or simply the *novels*, are those decrees or constitutions which are supplementary to the code and posterior in time to the other books. These contain new decrees of successive emperors. 2. In *common law*, the assize of *novel disseizin* is an action in which the demandant recites a com-

plaint of the disseizin in terms of direct averment, whereupon the sheriff is commanded to reseize the land and chattels thereon, and keep the same in custody till the arrival of the justices of assize. In *literature*, a *novel* is a fictitious tale, or narrative in prose, generally intended to exhibit the operations of the passions, and particularly of love. Historical novels are usually termed romances. *See* ROMANCE.

NOVEM'BER, from *novem*, nine. The ninth month of the ancient Roman year, which began with March; but now the eleventh month of the year. It has 30 days.

NOVENNA'RIA, Lat. *nine*, and *year*. Festivals in honour of the dead, held every nine years.

NOVENSILES. Anciently, the generic name of deified heroes and demigods.

NOVICE, Fr. from Lat. *novitius*, from *novus*, new. 1. A person not yet skilled in an art or profession into which he has entered.—2. In *monasteries*, one who has not completed the novitiate.

NOVI HOMINES. Among the Romans, such persons as by their personal merit alone had raised themselves to curule dignities.

NOVI'TIATE. In *monasteries*, a year or other prescribed time of probation for the trial of a novice (*novitius*), to determine whether he has the requisite qualities for living up to the rules to which his vows bind him.

NOY'ADES, Fr. *noyer*. A peculiar punishment practised in the first French Revolution, which consisted in launching the victims in a boat, out of the bottom of which a plug could be withdrawn.

NOY'AU (Fr.). A delightful liqueur flavoured with bitter almonds, or the kernels of peach stones, and containing prussic acid.

NUBECULE, Lat. *nubecula*, a little cloud. A disease of the eye, in which objects appear as through a mist.

NUCLEUS, Lat. a kernel, a *nuc*, from the nut. 1. Anything about which matter is gathered or conglobated.—2. In *astronomy*, the solid part of a comet, as distinguished from its nebulosity.

NUDE COMPACT, } *Nudum pactum*. A NUDE CONTRACT. } promise made without any consideration, and therefore not valid.

NU'DIBRANCHIATA. An order of Mollusca, the second of the class Gasteropoda, so named from *nudus*, naked, and *branchiæ*, their branchiæ being exposed on some part of the back. The genera are all marine, the individuals often swimming in a reversed position with the foot on the surface, concave like a bateau, and employing the margin of their mantle and their tentacula as oars.

NUDIPEDA'LIA Lat. *nudus*, and *pes*, foot.

An ancient religious rite, on account of some public calamity, in which the votaries appeared barefooted.

NU'I'LAR. A hydrographic term in India, for a natural canal or small branch of a river.

NU'LIPORES, Lat. *nullus*, none, and *porus*, a pore. Plants which have no visible pores on their surface.

NUL TIET RECORD. The replication which the plaintiff makes to the defendant, when the latter pleads a matter of record in bar of the action, and it is necessary to deny the existence of such record.

NUM'BER. 1. In its extended signification, it refers to every abstract quantity that can be made the subject of arithmetical computation; but in a more limited sense, it means only several things of the same kind, and may be defined a multitude of units. Numbers of this latter sort are termed *integral*, and are distinguished into various classes, as absolute, abstract, abundant, amicable, cardinal, circular, composite, concrete, figurate, homogeneous, irrational, ordinal, perfect, polygonal, prime, rational, &c., all of which are distinguished from *fractional numbers*. *See* FRACTION. The number of *direction* is one of the 35 numbers between the Easter limits, or between the earliest and latest days on which Easter can fall, viz., 22nd March and 25th April; and is so called because it serves as a direction for finding Easter for any year, being the number which expresses how many days after the 21st March Easter-day falls. For *golden number*, *see* GOLDEN NUMBER and CYCLE.

—2. In *grammar*, a modification (marking *singular* and *plural*); of nouns, verbs, &c., to accommodate them to the variety of their objects, considered with regard to number.

NUMBERS. *Poetical numbers* are those measures of order and quantity of syllables which constitute feet, as distinguished from *rhetorical numbers*, where the harmony is measured only by the agreeable effects produced upon the ear by the cadence of the articulations.

NUM'ENIA, *veses* and *juny*, month. Grecian festivals celebrated monthly in honour of all the gods of antiquity.

NUM'ERAL. Pertaining to number; expressing number; standing as a substitute for figures, as—1. *Numeral letters*, the Roman capital letters, as I. for 1, X. for 10, L. for 50, C. for 100, D. for 500, M. for 1000.—2. *Numeral characters*, these are 1, 2, 3, 4, 5, 6, 7, 8, 9, 0. They were brought to Europe by the Arabians, who received them from India, according to some.—3. *Numeral algebra* is that wherein numbers are employed, in contradistinction to *literal algebra*, where the letters of the alphabet only are employed to represent quantities.

NUMERATION. The art of numbering, from *numero*, to number. Numeration is the art of reading, as numbers expressed by figures; notation is the art of writing such numbers. These terms are however often used synonymously.

NUMERATOR. That which numbers. See **FRACTION**.

NUMIDA. The *Pintado* or *Guinea-fowl*: a genus of Gallinaceous birds, of which there are two species, both natives of Africa. In a wild state they live in flocks, and prefer the vicinity of marshes. The plumage is slate-coloured, everywhere sprinkled with small white spots.

NUMISMATICS. That branch of archæology which treats of coins and medals: from *numisma*, coin. The word *numismatology* has been used in the same sense.

NUMMULITES. Lenticular stones. A genus of multilocular fossil shells. Order *Cephalopoda*. Name from *nummus*, coin, and *lithos*, stone, in allusion to a supposed resemblance to pieces of money. The nummulites are the most widely diffused of all fossils, forming entire chains of calcareous hills, and immense bodies of building-stone. The pyramids of Egypt are built of them.

NUN, Sax. nunn. 1. A woman devoted to religion, under a vow of perpetual chastity.—2. In *ornithology*, the blue titmouse.

NUNCIO. *Nuntio*. A kind of spiritual ambassador from the Pope. Lat. *nuncius*, a messenger.

NUNCUPATIVE, from *nuncupo*, to declare; existing only in name. A *nuncupative will* is one made by the verbal declaration of the testator, and depends merely on oral testimony for proof.

NUN'DINÆ. Market days among the Romans: *quasi novem-dinæ*, every ninth day. Hence also the term was applied to the first eight letters of the alphabet, which were repeated successively from the first to the last day of the year, and of which one always expressed the market days.

NUT. 1. The fruit of certain trees and shrubs, consisting of a hard shell inclosing a kernel. Various kinds are distinguished, as *walnuts*, *chestnuts*, *hazel-nuts*, *cocoa-nuts*, *butter-nuts*. See also **NUX**, **JATROPA**, and **PISTACIA**.—2. In *mechanics*, the small hollow or interior screw upon the end of a screwed-bolt or other male screw to fasten it.

NUTATION, from *nuto*, to nod. A term used in astronomy for that kind of vibratory motion of the axis of the earth, by which its inclination to the ecliptic varies a few seconds, and as often returns to its former position. The period of these variations is nine years.

NUC'GALLS. Excrescences formed on the leaves of the oak by the puncture of an insect. See **GALL-NUTS**.

NUTMEG. The fruit of the genuine nutmeg-tree (*Myristica moschata*), a native of the Moluccas, but which has been transplanted to other congenial climates.

NU'TRIA, or NEUTRIA. The commercial name of the skins of the *Conia* (*Myopotamus coipus*, Comaner), an animal which lives in burrows along the banks of rivers, through a great part of South America. The skins are valuable for their fur, which is largely used in the hat manufacture, and take their name from some similarity of the animal which produces them to the otter, called by the Spaniards *nutria*.

NUTRITION, from *nutrio*, to nourish. The completion of the assimilating processes in living bodies. The food, changed by a series of decompositions, and rendered similar to the being which it is designed to nourish, applies itself to those organs, the loss of which it is to supply, or the growth of which it is to promote, and this identification of nutritive matter to the living organs of the system constitutes nutrition.

NUX. The Latin word for nut (q. v.). The *nux vomica* is the fruit of a species of *Strychnos*, which grows in various parts of the East Indies. The fruit is about the size of an orange, covered with a smooth crustaceous yellow bark, and filled with a fleshy pulp, in which are embedded several round flat seeds, covered with a kind of woolly matter, and internally hard and tough like horn. The taste is extremely bitter and acrid, but the substance has no remarkable smell. It is known as a virulent poison. See **STRYCHNIA**.

NUZZER. A term in India for a sort of compulsory present made to a superior.

NYCTALOPY, Lat. *nyctalopia*, from *νύξ*, night, and *οφθαλμος*, the eye. A defect of vision in which the person sees little during bright day, but tolerably well by the dull light of evening, called also *nyctalops*.

NYL'GAU, } Blue-bull. The Persian
NYL'GAU, } name of a species of antelope, the *Antilopa pietu*, Gm. It has two small smooth horns bent forward, and the upper and under parts of the neck maned India.

NYMPH, Lat. *nympha*, from *νύμφη*. 1. In *mythology*, a goddess of the mountains, forests, meadows, rivers, and lakes, named according to their places of residence, places of dominion, &c., as the *oceanides* or nymphs of the ocean, the *neræides* of the sea, the *naiads* of the fountains, the *dryads* and *hamadryads* of the forests and groves.—2. In *entomology*, the second state of an insect passing to its perfect form: another name for the *pupa*, *chrysalis*, or *aurelia* (q. v.).

NYMPHÆA. The water-lily. A genus of perennial plants. *Polyandria*—*Mono-*

gynia. Named from *νυμφα*, a water-nymph, because it grows in watery places. The white and yellow water-lilies, the Egyptian and the Indian lotus, and the Pontic or Egyptian bean, are species.

NYSTAG'MUS, Lat. from *νυστασ*, to nod with sleep. A disease of the eyes, in which there is an involuntary motion, such as happens when a person is very sleepy. It is also defined an involuntary agitation of the ocular bulbs.

O

O is the fifteenth letter and the fourth vowel of the English alphabet. As a numeral, O was sometimes used by the ancients for 11, and with a dash over it for 11,000. It was also used as a mark of triple time, from the notion that the ternary or number 3 is the most perfect of numbers, and is properly expressed by a circle, the most perfect figure. O with an apostrophe after it is used in Irish names to signify *son*, as O'Neil for *son of Neil* or Neilson. It answers to the Celtic *Mac*.

OAK, Sax. *ac*, æc. 1. In *botany*, a name common to the whole genus *Quercus*, of which there are three British species, the common oak (*Q. robur*), the long-peduncled oak (*Q. pedunculata*), and the durmast (*Q. pubescens*).—2. The wood of the oak-tree (*Q. robur*), which, when cut at the age of 60 or 70 years, is the best wood known. It is also one of the most picturesque trees, and is deservedly styled the "lord of the forest." The Jerusalem oak is the *Chenopodium botrys*; the sea-oak is the *Fucus vesiculosus*; the oak-leather is the *Xylostoma giganteum*; the oak lungs is the *Lichen pulmonarius*.

OAK'UM, Sax. *æcemba*. The substance into which old ropes are reduced when they are untwisted, loosened, and drawn asunder; principally used in caulking the seams, tree-nails, and bends of ships.

OAR, Norm. *ower*. A long piece of timber, flat at one end, and round or square at the other, for rowing boats. To *boat the oars* is to cease rowing; to *ship the oars* is to place them in the rowlocks.

OAST. A kiln for drying hops.

OAT, Sax. *ate*. A plant of the genus *Avena*, of which *oats* are the seeds. The cultivated oat is the *Avena sativa* of botanists, and to which the name *corn* is commonly applied in Scotland. This plant is the hardiest of all the cereal grasses. It thrives best in latitudes north of Paris, to the south of which it is little known. There are many varieties indigenous to Britain.

OB; signifies inversely or inverted, as ob-conic, ob-cordate, &c.

OB'EH. A species of witchcraft practised among the negroes, the apprehen-

sion of which, operating upon their superstitious fears, is frequently attended with the fatal consequences dreaded.

OB'ELISK, Gr. *obeliskos*, dim. of *obelos*, a spit. A truncated, quadrangular, and slender pyramid, intended as an ornament, and frequently enriched with inscriptions in bas-relief. Obelisks have also been frequently raised in honour of distinguished individuals, their achievements, &c.—2. In *printing*, a mark referring the reader to a note in the margin, thus +.

O'BELUS. In *diplomats*, a mark resembling a needle, thus —.

OBITU'ARY, from *obitus*, death. 1. A list and account of persons deceased.—2. A register of obituary anniversaries.

OB'JECT. In *grammar*, that which is produced, influenced, or acted on by something else; that which follows a transitive verb.

OB'JECT-GLASS. In *optical instruments*, is that which is placed towards the object, the other extreme lens being called the *eye-glass*.

OB'JECTIVE, Fr. *objectif*, belonging to the object. In *perspective*, the *objective line* is that drawn on the geometrical plane, the representation of which is sought in the draught or picture. In *grammar*, the *objective case* is that which follows a transitive verb or a preposition: that case in which the *object* of the verb is placed when affected by the act expressed by the verb.

OB'LTE, Lat. *oblatus*, flattened: opposed to *prolate*. The earth is an *oblate spheroid*, having its polar axis shorter than its equatorial diameter, in the proportion of 331 to 332.—2. In *ecclesiastical history*, a person who, on entering the monastic life, made a donation of all his goods to the community; also, one dedicated by his parents from early life to a religious order.

OBLIGA'TION, Lat. *obligatio*, from *ob* and *ligo*, to bind. In *law*, a bond with a condition annexed, and a penalty for non-fulfilment. The person to whom the bond is given is called the *obligee*, and he who signs it is styled the *obligor*.

OBLIGA'TO (It.). In *music*, a part written for a particular instrument.

OBLI'QUE, Lat. *obliquus*, aslant. In *geometry*, something slant, or inclining from the perpendicular, as *oblique ascension*, *oblique descension*, *oblique circle*; *oblique planes* in dialling, *oblique sailing* in navigation. *Oblique case* in *grammar*. See these terms. *Oblique*, in *botany*, sometimes means twisted. *Oblique motion*, in *music*, when one part holds on a sound, while the other rises and falls on any other note.

OBLI'QUITY, Lat. *obliquitas*. See **OBLIQUE**. Deviation from a direct line. In *ethics*, deviation from moral rectitude. In *geo-*

obliquity, deviation from parallelism, or from perpendicularity. The *obliquity of the ecliptic* is the angle which the ecliptic makes with the equator; it is 23°, 27'.

OB'LONG. In *geometry*, a rectangle whose length is greater than its breadth.

Obōe (It.) A musical wind instrument sounded through a reed.

OB'OLUS, *ὀβολός*. A brass coin among the ancient Greeks, worth about a penny farthing sterling.

OB'OVATE. Ovate with the broader end uppermost: *ob* and *ovatus*, ovate. Applied to leaves.

OBSCURANTS. A nickname, applied in Germany to those writers who sought to obstruct the progress of enlightenment.

OBSERVANTS. A branch of the Franciscan order.

OBSERVATION, from *observe*. A term, in astronomy and navigation, for the operation of measuring, with some proper instrument, the angular distance, altitude, &c., of a celestial body.

OBSERVATORY, Lat. *observatorium*. A place fitted up with the proper instruments and conveniences for observing the heavenly bodies. Observatories are usually built in the form of a tower, and covered with a terrace. Those of Greenwich, Paris, Munich, and Palermo, are the most celebrated ones of modern times. That of Greenwich was built in 1676, by order of Charles II., at the instance of Sir Jonas Moore, surveyor-general of the ordnance; a circumstance from which the office of astronomer-royal has been placed under that department.

OBSID'IAN. A volcanic production of a greenish-black colour; the *Obsidianum vitrum* of Pliny, and vernacularly termed *volcanic glass*. It is a compound of silica, alumina, potash, lime, soda, with slight admixture of the oxides of iron and manganese. The fracture is either vitreous or pearly: hence the two varieties, *vitreous obsidian* and *pearl-stone*.

OBSID'IAN-STONE. The *Obsidianus lapis* of Pliny. Another name for the Chian marble.

OBSID'IONAL COINS, are such as were struck in a besieged place, to supply the scarcity of other current money.

OBSID'IONAL CROWN. A crown or garland made of the grass, &c. which grew in a besieged place, and given by the Romans to the general who delivered it from the enemy.

OBSTRACTOR. A stopper up; from *obstruo*, to stop up. The name of two muscles of the thigh, which shut up the aperture between the os pubis and the hip-bone, and rotate the thigh.

OBSTRUENT, Lat. *obstruens*, hindering, from *obstruo*, to hinder. Obstruents are medicines supposed to have the power of

closing the orifices of the ducts or vessels of the body.

OBTEM'PER, Lat. *obtempero*, I obey. In *Scotch law*, to comply with the judgment of a court.

OBTURATOR MUSCLES, Lat. *obturare*, to close up. Muscles which fill up openings in the bones.

OBTU'SE, Lat. *obtus*, blunt: opposed to *acute*. An *obtuse angle* is one greater than 90° or a right angle; an *acute angle* is less than 90°. See **ANGLE**.

OBVERSE. 1. In *numismatics*, the side of a medal or coin on which is the face or head; the other side is the *reverse*.—2. An *obverse leaf* is one having the base narrower than the top.

OCCIDENTAL, Lat. *occidens*, setting. Applied to precious stones of inferior hardness and beauty.

OCCIP'ITAL. Belonging to the occiput or hind part of the head, as the *occipital bone*, which forms the posterior and inferior part of the skull.

OCCIPUT. In *anatomy*, the hind part of the head; the protuberance immediately above the neck.

OCCULT, Lat. *occultus*, invisible, secret, undiscoverable. An *occult line* in a draught is a dry line not intended to be seen when the plan is finished. The *occult sciences* are the imaginary sciences of the middle ages, such as alchemy and astrology.

OCCULTATION, from *occult*. An astronomical term, applied to the time that a star is hid from our sight by the interposition of any other heavenly body, as the moon, between it and the eye of the observer.

OCCUPANCY, } from *ob* and *capio*, to
OCCUPANT, } seize. In *law*, the taking
OCCUPATION, } possession of things
which do not belong to any body is termed *occupancy*, and is the foundation of property. He who takes possession is termed the *occupant*, and holds it by right of *occupancy*. Property so possessed is said to be in the *occupation* of A. B.—2. *Occupation* is also used in the sense of *calling* or *trade*. Thus agriculture, manufactures, and commerce, furnish the most general *occupations* of life.

O'CEAN, Lat. *oceanus*, Gr. *Ὠκεανός*. A name which seems to have for its origin greatness or extent, used to designate the great mass of salt water which covers more than three-fifths of the surface of the globe, and which for convenience is usually spoken of as if divided into three portions: the *Atlantic ocean*, which divides Europe and Africa from America, the *Pacific ocean*, or South Sea, which divides America from Asia, and the *Indian ocean*, which separates the East Indies from Africa. These, however, are only parts of the vast whole.

OCEANIDES. Sea-nymphs. Sea-shells, as distinguished from the Naiads or fresh water shells.

OCHLOCRACY, from *οχλος*, a multitude, and *κρατος*, to govern. A term synonymous with democracy (q. v.).

OCCHRE, from *οχρος*, pale. An argillaceous earth, coloured red, yellow, or brown, by admixture of oxide of iron. The red ochre is termed red chalk, and ruddle or reddle in England, and contains often so much iron that it may be reckoned an ore of that metal. Yellow ochre may be rendered red or reddish brown by calcination in a reverberatory oven, which peroxidizes the iron. Armenian bole is a variety of ochre. Ochre when finely ground is used as a pigment.

OCCHREA, Lat. *a boot*. In *botany*, applied to membranous stipules, that surround the stem like a sheath.

OCCHREA. 1. In *antiquity*, a kind of military shoe or short boot, made of tin, and ornamented with gold and silver.—2. In *botany*, the membrane which enfolds the flower-stalks in *Cyperus*.

OCCTÆDRITE. A pure oxide of titanium, crystallized in acute, elongated octædrons. Colours, blue, bluish-black, and brown; lustre, splendid; fracture, foliated; easily broken, and scratches glass. Sp. gr. 3.8. Found in veins in Dauphiny, Norway, Spain, and some parts of South America.

OCCTÆ'DRON, } from *οκτω*, eight, and
OCCTAHE'DRON, } *ιδρα*, a base. A geometrical solid, contained by eight equilateral plane triangles: it consequently consists of two equal square pyramids, joined together at their bases. It is one of the five regular bodies. Epithet, *octahedral* or *octahedral*.

OCCTETTERIS, *οκτω* and *ετος*, year. A cycle or period of eight years, at the end of which three lunar months were added.

OCCTAGON, from *οκτω*, eight, and *γωνια*, an angle. 1. A geometrical figure having eight angles and as many sides.—2. In *fortification*, a place which has eight sides.

OCCTANDRIA, from *οκτω*, eight, and *ανηρ*, a male. The name of the 8th class of plants in the sexual system of Linnæus, consisting of such as produce hermaphrodite flowers with eight stamens. It contains four orders, Monogynia, Digynia, Trigynia, and Tetragynia.

OCCTANS HADLIENUS. Hadley's Quadrant. The polar constellation in the southern hemisphere.

OCCTANT, Lat. *octans*. 1. The eighth part of a circle, or 45 degrees.—2. *Octant* or *octile* is also a term in ancient astronomy for one of the aspects, viz., when two planets are distant from each other 45 degrees.

OCCTAVE, from *octavus*, eighth. In mu-

sic, an eighth or harmonical interval consisting of seven degrees or twelve semitones. It is the most perfect of the chords, consisting of six full tones and two semitones major. It contains the whole diatonic scale. See **CHORD**.

OCCTAVO. A book in which the sheets are each folded into eight leaves. The word is also used as an adjective, as an *octavo* volume. The correct phrase is a *book* or *volume in octavo*.

OCCTOBER, from *octo*, eight. The eighth month of the ancient Roman year which began in March, but the tenth month of the year in the modern calendar.

OCTODENTATE, Lat. *octodentatus*, eight-toothed. Having eight teeth.

OCCTOFID, from *octo*, eight, and *fidus*, cut, separated into eight segments.

OCTOLOCU'LAR, Lat. *oculocularis*, eight-celled; *octo* and *oculus*, an eye. Having eight cells for seeds: applied in *botany*.

OCTOPET'ALOUS. Having eight petals: *octo* and *petalum*, a petal or flower-leaf.

OCTOSPER'MOUS. Eight-seeded: *octo* and *σπέρμα*, seed: applied in *botany*.

OCCTOSTYLE, from *οκτω*, eight, and *στυλος*, a column. 1. A temple with eight columns on its principal façade.

OCCTROI. An old French term from *auctoritas*, signifying a grant of some commercial privilege to a person or company.—2. Tolls levied at the gate of some French towns upon articles of food brought to market.

OCCTULI, plural of *oculus*, an eye. *O. cancerorum*, crab's eyes: stony concretions found in the head of the *Astacus fluviatilis*.

OCCTULUS. The Latin word for *eye*. The *oculus belii* is a semipellucid gem of a grayish white colour, variegated with spots of yellow, and having a black central nucleus; the parts answering to the pupil and iris of the eye. *Oculus mundi* (eye of the world), is another name for *hydropneumane* (q. v.). *Oculus cati* (cat's eye), is a beautiful variety of sapphire, otherwise called *asteria* (q. v.) and bastard opal.

O'DALISKS, Turk. *oda*, chamber. Female slaves employed about the seraglio.

ODE (Lat.) from *ωδη*. A poetical composition, adapted to be set to music. The *ode* consists of unequal verses, in stanzas or strophes. The ancient odes had originally only one stanza, but afterwards they were divided into three parts, the *strophe*, the *antistrophe* and the *epode*.

ODE'ON, *ωδισιον*. A sort of theatre among the Greeks and Romans, devoted to poetical and musical contests.

ODOMETER. An instrument for measuring the distance passed over by a post-chaise or other carriage. It is so attached as to show, by means of an index and dial, the number of revolutions made by the wheel.

ODONTALGICS. Medicines for the relief of odontalgia, or toothache. The best is creosote.

ODON'TOID, from *οδους*, a tooth, and *ειδος*, like. Toothlike, dentate.

ODONTOL'OGY, from *οδους*, a tooth, and *λογος*, discourse. The science of the teeth; their anatomy and functions.

O'DOUR, Lat. *odor*, smell. This, which is the emanation of an odoriferous body, is generally ascribed to a portion of the body itself converted into vapour: but, from some experiments of M. Robiquet, it would seem probable, that in many cases the odour is owing not to the substance itself, but to a gas or vapour resulting from its combination with an appropriate vehicle, capable of diffusion in space.

OECON'OMY, *οικος*, house, *νομω*, I distribute. In *architecture*, the proper laying out of a building into separate apartments.

ECUMENICAL, *οικουμενικος*. General, as respects the whole inhabited world.

O'EUS. In *ancient architecture*, an apartment adjoining a dining-room.

OEDEMA, from *οιδω*, to swell. A tumour: restricted now to a minor degree of anasarca.

OEDEMATOID, from *οιδημα*, oedema, and *ειδος*, like. Like to an oedema.

OEDEMOSAR'CA, from *οιδημα*, oedema, and *σαρξ*, flesh. A tumour of a nature between the oedema and sarcoma.

OE'NANTHE. Water Drop-wort. A genus of perennial plants. *Pentandria—Digynia*. Name from *οινος*, wine, and *ανθος*, a flower, because the flowers smell like the vine. There are four British species of this plant, of which the most known is the hemlock dropwort, an actively poisonous plant, which has often proved fatal, being eaten by mistake instead of water-parsnip. It is the most deleterious of all the plants produced by this country.

OE'NOMANCY, from *οινος*, wine, and *μαντια*, prophecy. A Grecian mode of divination, by pouring out wine in libation, and observing its colour, sound, &c.

ESOPHAGOT'OMY, from *εισοφαγος*, the gullet, and *τομω*, to cut. The operation of cutting into the gullet, to extract a foreign body.

ESOPH'AGUS, *εισοφαγος*. The gullet, from *εισω*, to carry, and *φαγω*, to eat; because it carries the food into the stomach. It extends between the pharynx and the upper orifice of the stomach.

OE'STRUS. The Gad-bee. A genus of dipterous insects, of the athericerous family. The oestri resemble large and densely pilose flies, and their hairs are frequently coloured in bands, like those

of the Bombi. They deposit their eggs on the body of various herbivorous quadrupeds, each species being usually a parasite of one particular species of mammiferous animal. The ox, horse, ass, rein-deer, stag, antelope, camel, sheep, and hare, are all subject to be inhabited by the larvæ of oestri, and all exhibit an extraordinary dread of the insect, when it is buzzing about them for the purpose of depositing its eggs. The species are named from the animals they infest.

OFFERTORY, Lat. *offertorium*. Primarily, an anthem chanted, or a voluntary played on the organ, during the offering, and a part of the mass in the Catholic church: but since the reformation it denotes certain sentences in the communion-office, read while the alms are being collected.

OFFICE. 1. Some particular charge or trust, or dignity attended with a public function. Thus we speak of the *office* of secretary of state, of treasurer, of a judge, of a sheriff, of a justice of the peace, &c. We also describe *offices* as civil, judicial ministerial, executive, legislative, political, municipal, diplomatic, military, ecclesiastical, &c.—2. A place or apartment appointed for the discharge of any particular duty or employment. The term is also used generally in the plural, *offices*, for subordinate buildings belonging to a farm.

OFFICER. A person authorized to perform some public duty. *Officers* are civil, military, and ecclesiastical. The *great officers of state* are the lord high steward, the lord high chancellor, the lord high treasurer, the lord president of the council, the lord privy-seal, the lord chamberlain, the lord high constable, and the earl-marshal, with numerous subordinate officers. In the army there are *general officers*; as generals, lieutenant-generals, major-generals, and brigadiers. *Staff-officers* are such as belong to the general staff, as quarter-master-generals, adjutant-generals, aides-de-camps. *Commissioned-officers* are such as hold their appointments by a commission from the Crown; *non-commissioned-officers* are sergeant-majors, quarter-master-sergeants, &c., down to file-majors, appointed by the superior officers of the regiments. *Brevet-officers* are such as hold a higher rank than they receive pay for. *Subaltern-officers* are all below the rank of captain. In the navy, the *commissioned officers* hold their commissions from the lords of the admiralty. *Flag-officers* are admirals, who hoist flags at the mast-head. See ADMIRAL. The *petty-officers* are appointed by the captains of ships.

OFFICIAL. 1. Relating to an office.—2. An ecclesiastical judge appointed by the bishop, chapter, archdeacon, &c., with charge of the spiritual jurisdiction.

OFFICIAL, Lat. *officialis*. Relating to a shop (*officina*) as *official medicines*, which are directed by the colleges of physicians to be kept in the shops.

OFFICINA SCULPTORIS. The *Sculptor's Shop*. A small constellation on the S. of Cetus. It contains 12 stars, none of which exceeds the fifth magnitude.

OFFING. In *nautical language*, that part of the sea which is at a considerable distance from the shore, where there is deep water, and no need of a pilot to conduct the ship.

OFFSET. 1. A shoot or sprout from the roots of a plant.—2. In *surveying*, a perpendicular measured on the side of an irregular figure: thus *ad'*, *bb'*, &c. are

offsets drawn perpendicular to the base line AB. These offsets are usually measured with an *offset-staff*, made of light wood, ten links in length.—3. In *accounts*, a sum set-off against another sum or account as an equivalent.—4. In *building*, when the face of a wall is not one entire or continued surface, but is formed by two or more continued surfaces, each rising from the horizontal base which forms the top part of the wall below; the line thus connecting the two surfaces is called an *offset*; the term however having reference only to the superior part of the wall, or that part above the *offset-line*.

OGEE. In *architecture*, a moulding the same as the *cyma reversa*, or *cymatium* of

the ancients. It consists of two members, the one concave, and the other convex, somewhat like S.

O'GHAM, } A peculiar kind of stenographic, found on ancient Irish monuments.

O'GIVE, (pron. *ojive*). An arch, or a branch of a Gothic vault, which, instead of being circular, passes diagonally from one angle to another, forming a cross with the other arches. The centre where the ogives cross is termed the *key*; their members or mouldings are called *nerves*, *veins*, and *branches*, and the arches which separate them, *double arches*. The key is usually cut in form of a rose, or *cul de lamp*.

OGY'GIAN. Relating to Ogyges, one of the most celebrated of the ancient mon-

archs of Greece, and during whose reign a deluge happened which so inundated the territories of Attica, that they remained waste for nearly 200 years. This is generally supposed to have occurred 1764 years before the Christian era, and is spoken of as the *Ogygian Deluge*.

OIL, Sax. *æl*, from *alan*, to kindle. A proper juice of a fat or unctuous nature, either solid or fluid, indissoluble in water, combustible with flame, and volatile in so very different degrees as to give rise to the denominations of *volatile* and *fixed oils*. The *volatile oils*, called also *essential oils*, are often almost as liquid as water sometimes viscid, very combustible, have an acrid taste, and a strong fragrant odour, are soluble in alcohol, and imperfectly in water, evaporate at a temperature not higher than 212°, and leave no stain on paper. These oils are almost all obtained from vegetables, and they exist in every part of plants, the root, the bark, the wood, the leaves, the flower, and even the fruit, but never in the substance of the cotyledons. The *fixed oils*, called also *fat oils*, are liquid, or easily become so, when exposed to a gentle heat; have an unctuous feel, and a mild taste; are very combustible, and insoluble in water, and very slightly so in alcohol. Their boiling point is never under 600° F., and they leave a greasy stain on paper. These oils are numerous; some of them are obtained from animals, and others from vegetables, by simple expression.

OIL-GAS. An illuminating gas, obtained by decomposition of a fat oil (usually train oil), much in the same way that coal gas is manufactured. It is somewhat richer than the common coal gas.

OIL OF BRICKS. The product of distillation of a brick soaked in oil.

OIL OF VITRIOL. Sulphuric acid.

OLBERS. A name sometimes given to the planet Pallas, because discovered by Dr. Olbers in 1802.

OLDENLANDIA. A genus of plants of two species: *Pentandria—Digynia*. Named in honour of Oldenland, a Danish botanist. The root of one species, the *O. umbellata*, which grows wild on the coast of Coromandel, affords the beautiful red dye so much admired in the Madras cottons.

OLD'ER-PLIOCENE. See **PLIOCENE**.

OLD RED SANDSTONE. The lowest member of the carboniferous group of strata. It consists of many varieties of siliceous sandstones, and conglomerates of various colours, but red predominates.

O'LEA. The *Olive-trees*. A genus of nine species: *Diandria—Monogynia*. Name from *ἔλαια*, oil, because the earliest and best known species, the *O. europæa*, is that which affords the olive-oil. It is a

native of the south of Europe. All the other species are natives of warm climates.

OLECRA'NON, from *αλεσην*, the ulna, and *κερανον*, the head; the elbow. The process of the ulna upon which a person leans.

OLEFIANT GAS. The name originally given to bi-carburetted hydrogen, because, when it combines with chlorine gas, it condenses into an oily-looking fluid: *olefant*, from *oleum*, oil, and *facio*, to make, the oil-making gas.

OLEINE. The thin oily part of fats, naturally associated in them with glycerine, margarine, and stearine.

O'LEO-RESINS. Native combinations of resins with the essential oils, forming balsamic and terebinthinate substances.

OLERA'CEÆ, from *olus*, a pot-herb. The name of a natural order of plants in Linnaeus' natural method, consisting of such as have incomplete and inelegant flowers heaped together in the calyces, as spinach, mint, beet, &c.

O'LERON LAWS. Laws relating to maritime affairs, so called because sanctioned by Richard I. at the Isle of Oleron, in Aquitaine.

OLFACTORY NERVES. *Nervi olfactorii*. The first pair of nerves are so termed because they are the organs of smell (*olfactus*).

OLIBANUM. A gum-resin, called also *thus* and *frankincense*. It was formerly much used in medicine, but is now chiefly used as incense in Roman Catholic churches. The gum has been supposed to be a product of the *Juniperus lycia*, but the plant which yields it is now generally believed to be the *Boswellia serrata*. The best is brought from Turkey. The name *olibanum* is the Arabic *lubanum* with the prefix *al*, corrupted into *ol*; the name therefore meaning the *white-incense* or the *Frank-incense*. At present benzoin is called *lubahn*, which is a general name in Arabia for incense, and *olibanum* is called *condhur* (whence the Greek name *κονδρος*.)

OLIGARCH'Y, *ὀλιγαρχία*. A form of government which places the supreme power in a few hands.

OLIVA. 1. A genus of gasteropods of the order *Pectinibranchiata*, and family *Buccinoida*, Cuv., so named from the oblong and elliptical shape of the shell (*oliva*, an olive.) Recent species inhabit various depths, but chiefly a muddy bottom, and fossil species are found in the London clay.—2. The gum of the olive-tree.

OLIVE. 1. A fruit, the produce of the *Olea* or olive-tree. It is a smooth oval plum, about three quarters of an inch in length, of a deep violet colour when ripe, whitish and fleshy within, bitter and nauseous, but replete with a bland oil, for which it is chiefly cultivated.—2. The olive-tree, the wood of which

is beautifully veined, and has an agreeable smell. It takes a high polish.

OLIVE-OIL. An insipid, inodorous, pale-greenish-yellow-coloured, viscid fluid; unctuous to the feel, inflammable, and incapable of combining with water, obtained from the fruit of several species of the olive-tree, but especially from that of the *Olea europæa*. Olive-oil is the lightest of the fixed oils, and is largely used in some parts of Europe as an article of food and in the arts. The best is that known in our markets by the name of *Florence oil*, but by far the largest portion of olive-oil brought to England is from Gallipoli, and is hence known commonly by the name of *Gallipoli oil*.

OLIVILE. The name given by Pelletier to the substance which remains after gently evaporating the alcoholic solution of the gum which exudes from the olive-tree. It is a white, brilliant, starchy powder.

OLIVINE. A mineral, usually of an olive-green colour, which occurs in granular concretions, of a foliated structure and conchoidal fracture, in basalt. It is a constituent of many lavas, and is itself composed of siliceous, magnesia, lime in small quantity, and oxide of iron. As a gem, olivine is of inferior value.

OLIVINITE. An ore of copper, of an olive-green colour. It is a hydrated phosphate of copper, occurring with quartz in micaceous clay-slate in drusy cavities.

OL'Æ. Roman sepulchral earthen vessels, containing the ashes of inferiors.

OL'LA PODRIDA (Span.) Putrid mixture. A favourite dish in Spain, being a mixture of meats and vegetables stewed; it sometimes turns putrid among the poorer classes, as they serve up the same dish so often, whence the name. In England it is frequently applied to any incongruous mélange.

OLLA'RIS LAPIS, } Potstone, found abundantly near the lake of Como, in beds of primitive slate, and manufactured into pots (*olla*); called also *ollite*.

OLLITE. }
OLIMPIAD. *Ολυμπιας*. A period of four years, by which the Greeks reckoned their time. The first olympiad corresponds to the 775th year before the Christian era, and the 22nd before the building of Rome. This computation took its rise from the olympic games, which were celebrated in every four years, near the city Olympia, in Peloponnesus. These games consisted of gymnastic exercises, horse-racing, chariot-racing, &c.

ONAGRA, from *αίμος*, the shoulder, and *αγρæ*, a seizure. Gout in the shoulder
ON'BRE. A game at cards. (The Spa

nish *hombrs*, man.) Usually played by three persons.

OM'BRE DE SOL'ZIL. Shadow of the sun. A heraldic phrase when the sun is borne in armoury, so that the eyes, nose, and mouth, which at other times are represented, do not appear, and the colouring is so slight that the field is seen through it.

OMEROM'ETER, from *ομβρος*, rain, and *μετρον*, measure. A rain-gauge.

OM'EGA. The name of the last letter of the Greek alphabet, as Alpha is the first; hence *alpha* and *omega*, the first and the last.

OMEN'TUM. The caul or epiploon. An adipose membranous viscus of the abdomen, attached to the stomach, and lying on the anterior surface of the intestines, so named from *omen*; because the soothsayers prognosticated from an inspection of that part of the sacrifices.

OMNIBUS. The dative plural of the Lat. word *omnes*, all, meaning therefore for all. A well-known carriage for conveyance of passengers. Omnibuses are of Parisian origin.

OMNIUM. The genitive plural of the Latin word *omnis*, all, meaning therefore of all. 1. A word in common use among stock-brokers, to denote the aggregate of certain portions of different stocks in the public funds.—2. It also denotes the securities which the subscribers to a loan receive from government, and is therefore the subject of extensive speculations.

OMNIVORES, Lat. *omnis*, all, and *vor*, I devour. An order of birds, which feed on both animal and vegetable substances.

OMOCOTYLE, from *ωμος*, the shoulder, and *κοτυλη*, a cavity. The cavity in the extremity of the neck of the scapula, in which the head of the humerus is articulated.

ΟΜΟ-ΗΥΟΙΔ. An epithet for a muscle situated between the hyoid bone and the shoulder, and which pulls the hyoid bone (*os hyoides*) obliquely downwards.

ΟΜΟΠΛΑΤΕ. A name of the scapula, from *ωμος*, the shoulder, and *πλατυς*, broad.

ΟΜΦΑΚΙΝΕ, from *ομφακιον*, the juice of unripe grapes. An epithet for whatever pertains to, or is expressed from, unripe fruit; as omphacine oil, which is expressed from green olives. The juice of unripe grapes, though properly named *omphacion*, is sometimes termed *verjuice*; but this name is more commonly applied to the juice of unripe wild apples or crabs.

ΟΜΦΑΛΟΚ'ΕΛΕ, from *ομφαλος*, the navel, and *ελεη*, a tumour. An umbilical hernia.

ΟΜΦΑΛΟΤ'ΟΜΥ, from *ομφαλος*, the navel, and *τεμνω*, to cut. The operation of dividing the umbilical cord.

ΟΜΦΑΛΟΣ. *Ομφαλος*. The navel.

ONEIROCRIT'ICS, *ονειρος* and *κρινω*, I judge. The science of interpreting dreams.

ONEIROD'YNY, Lat. *oneirodynia*. Disturbed imagination during sleep: from *ονειρον*, a dream, and *οδυνη*, anxiety. Walking in sleep and nightmare are species.

ONEI'ROMANCY, from *ονειρον*, a dream, and *μαντια*, divination. Divination by dreams.

ON'GLEE. In heraldry, an appellation given to the talons or claws of wild beasts or birds, when borne of a different colour from that of the body of the animal.

ON'ION. A well-known bulbous plant, the *Allium Ceba*, cultivated for culinary purposes all over Europe. The onion is biennial, and a native of Spain and Portugal. See also SCILLA.

ONIS'CUS, Lat. from *ονος*, an ass. 1. The stock-fish.—2. A genus of crustaceans composing the order *Isopoda*, Cuv. This genus, by Linné, is now divided into six sections and numerous subgenera. Some are aquatic, and others terrestrial. Among the latter are the wood-louse, hog-louse, church-bug, &c.

ON'OMANCY, *ονομα*, name, and *μαντια*, prophecy. A species of divination from the letters of a person's name.

ONOM'ATOPE, } *Ονοματοποια*. 1. A gram-
ONOMAT'OPY, } matic figure, in which
words are formed to resemble the sound made by the thing signified.—2. A word whose sound corresponds to the sound of the thing signified: from *ονομα*, name, and *ποιω*, to make.

ON'ONIS. Rest-harrow. An extensive genus of plants, mostly herbaceous: class *Diadelphia*: order *Decandria*. Name from *ονος*, an ass, because it interrupts asses in ploughing!

ΟΝΤΟΛ'ΟΓΥ, from *οντα*, being, and *λογος*, discourse. A part of the science of metaphysics, which investigates and explains the nature and essence of all beings, their qualities and attributes.

ΟΝΥΣ. Burden, from *ονος*, an ass. By *onus probandi* is meant the burden of proving a fact, or the obligation of establishing it by evidence.

ΟΝΥΧ. *Ονυξ* 1. A semipellucid gem of little value. The name is applied to any stone of the gem-order exhibiting two or more colours strongly contrasted, as banded jasper, chalcedony, &c.; but more particularly the chalcedony, when it is marked with white, and stratified with opaque and translucent lines. The name *onyx* was originally given to any stone presenting somewhat the appearance of the human nail: *ονυξ*, a finger nail.—

2. In surgery, an abscess or collection of pus between the lamellæ of the cornea:

so called from its resemblance to the stone called onyx, and *unguis*, from its resemblance to the nail of the finger.

OOLITE, from ὄον, an egg, and λιθος, stone; eggstone. A species of limestone composed of globules clustered together, commonly without any visible cement; hence called also *roestone*, from its resemblance to the roe of a fish. The oolite in England forms a considerable formation, commencing with the Portland beds above, and terminating in the *inferior oolite* resting upon the lias. These beds comprehend sandstones, marls, and clays; and are exceedingly rich in fossil remains of ammonites and belemnites. Many limestones in other groups are oolite.

OOST. } A stove in which the pickled

OAST. } hops are dried.

Ooz'e. 1. Soft mud or slime.—2. The liquor of a tan-vat.

ὄζο'α, ὄον, egg, ζῶον, animal. A primary division of the animal kingdom, in which the nervous and sanguiferous systems are completely developed, corresponding to the *Acritia*.

O'PAL. An ornamental stone of moderate value, a sub-species of indivisible quartz, of which there are several varieties, found in different parts of Europe and the East Indies. The principal of these are—(1.) The *noble opal*, a milk-white or pearly-grey variety, with a beautiful play of very various and rich colours; (2.) *Fire opal*, a variety which by reflected light exhibits, as its position is varied, elegant and most beautiful iridescent colours, particularly emerald-green, golden-yellow, flame and fire-red, violet and purple, and celestial blue, beautifully blended; (3.) When the colour is arranged in small spangles, it takes the name of the *Harlequin opal*; and (4.) When the stone is a monochromatic yellow, it is named *Golden opal*; (5.) The *semi-opal* is a feebly translucent variety, of a white, grey, or brown colour; (6.) *Menilite* is a variety occurring in small irregular roundish masses, often tuberoso, often bluish or striped, and generally translucent. These varieties consist of siliceous in various proportions, from 85 to 95 per cent., combined with oxide of iron and water. The semi-opal contains a little alumina. Prof. Ehrenberg states that some specimens of semi-opal which he has examined consist almost exclusively of the shells of infusoria, some partially dissolved, and others unaltered. He has also found indications of animalcular shells in the noble opal.

OPALES'CENCE. A coloured shining lustre, reflected from a single spot in a mineral when held in some particular position: iridescence.

OPALIZED WOOD. Wood petrified by silica, resembling opal.

OP'ERA (Lat., Ital., Sp., Fr., Eng.). A dramatic composition, set to music, and sung on the stage, accompanied with musical instruments, and enriched with magnificent dresses, dancing, &c. According as the serious or the comic character prevails, the opera is termed *opera seria* or *opera buffa* (the *opera comique* of the French). The *grand opera* is confined to music and song.

OP'ERA-GLASS. An optical instrument, so called from its use in theatres, and sometimes termed a *diagonal perspective*, from its construction. It consists of a tube about four inches long, in each side of which there is a hole, exactly against the middle of a plane mirror, which reflects the rays falling upon it to the convex lens, through which they are refracted to the concave eye-glass, whence they emerge parallel to the eye at the hole in the tube. The instrument is not intended to magnify objects more than two or three times. The peculiar artifice is, that a person at a small distance may be observed without exciting suspicion, for the instrument points to a different object from that viewed, and as there is a hole in each side of the tube, it is not even known on which hand of the observer the object is situated.

OPERAM'ETER. Work-measurer. A machine consisting of a train of toothed wheels, working in a box, having indexes attached like the hand of a clock, and a dial-plate, whereby the number of rotations of a shaft projecting from the posterior part of the box is shown. This shaft is to be attached, in any convenient way, to the working parts of rotatory machinery, to show the revolutions, &c. made in a given time. It is particularly useful in the machinery for dressing cloths.

OPER'ULUM (Latin) a cover. 1. The lid or cover of the *peristomium*, or fringe of mosses.—2. The flap which covers the gill or organ of respiration in fishes.—3. A lid by means of which many of the mollusca close the aperture of their shells. It is testaceous in some, and in others horny or cartilaginous.

OPERET'À, diminutive of *opera*. A short musical drama of a light character. The French *vaudeville* belongs to this species of composition.

OPH'IASIS, from ὄφις, a serpent. A form of porrigo which commences at the occiput, and winds to each ear, and sometimes to the forehead, with a sort of serpentine course.

OPHICEPH'ALUS. A genus of acanthopterygious fishes, resembling the *Anabas*, Cuv., in most of its characters, and also in the habit of creeping out of the water. The Indian jugglers often exhibit it out of the water; and in the markets of China, the larger species are cut up alive for

distribution. Name from *οφίς*, a serpent, and *κεφαλή*, a head.

OPHICLET'DE, *οφίς*, serpent, *κλεις*, key. The bass wind-instrument in a brass band.

OPHID'IA, from *οφίς*, a serpent. The third order of the class Reptilia, in Cuvier's arrangement, comprising three families, Anguina, Serpentina, and Nuda. The ophidians are reptiles without feet, thin, extremely elongated; the body moves by means of the folds it forms when in contact with the ground.

OPHIOL'OGY, from *οφίς*, a serpent, and *λογος*, discourse. The branch of natural history which treats of the serpent tribe of reptiles.

OPHIOMANCY, from *οφίς*, and *μαντεια*, prophecy. Divination from serpents.

OPHIOR'RHIZA. Snake-root. A genus of plants. *Pentandria—Monogynia*. Name from *οφίς*, a serpent, and *ρίζα*, root, the root of a species, the *O. mungos*, being regarded in Java, Sumatra, &c., as a specific for the bite of the *naja*, a venomous serpent. It is also regarded as an antidote to the poison of the bite of a mad dog.

O'PHITE, *οφίτης*. The green porphyry or serpentine. From *οφίς*, a serpent.

OPHIU'CHUS. A constellation of the northern hemisphere, named also *Serpentarius* and *Serpens*, and anciently *Asculapius*, from *οφίς*, a serpent.

O'PHRYS. The Twyblade. A genus of perennial plants. *Gynandria—Monandria*. Name *οφρυς*, from *οφρυς*, the eyebrow, because it was thought to promote the growth of the hair of the eyebrows. Europe; five species British.

OPHTHAL'MIA, from *οφθαλμος*, the eye. A term universally applied to an inflammation of the membranes of the eye, or of the whole bulb of the eye; but which, according to the modern nomenclature of diseases, should be called *ophthalmitis*.

OPHTHALMODYN'IA, from *οφθαλμος*, the eye, and *δύνη*, pain. A vehement pain in the eye, with or without a little redness, and not produced by inflammation.

OPHTHALMOP'TOSIS, from *οφθαλμος*, the eye, and *πτωσις*, a fall. A protrusion of the globe of the eye on the cheek, canthus, or upwards, the globe itself being scarcely altered in size.

OPHTHALMOSCOPY, from *οφθαλμος*, the eye, and *σκοπω*, to view. A branch of physiognomy, which treats exclusively or principally of the eyes.

OPISTHOT'ONIC. Bent backwards; from *οπισθεν*, backwards, and *τινω*, to draw. Applied to a form of tetanus in which the body is bent backwards.

OPTUM (Lat.) from *οπιον*, from *ὄψος*, juice. The inspissated juice of the white

poppy, *Papaver somniferum*, a native of some parts of Asia, but now naturalised in various parts of Europe. Opium is chiefly prepared in India, Turkey, and Persia; it has a peculiar, strong, heavy, narcotic odour, and a bitter taste, and, when good, has a reddish-brown or fawn colour. It is little used in Europe except as medicine, but is pretty extensively used as a masticatory, and in smoking, in Turkey and India; but the great consumption of opium is in China, where its importation is strictly prohibited by the government.

O'FOBAL'SAM, from *ὄψος*, juice, and *βάλσαμον*, balm. The Balm or Balsam of Gilead. It is the produce of a tree, the *Amyris Gileadensis*, indigenous to Arabia and Abyssinia, and early transplanted to Judea. It is obtained by making incisions into the bark, by which the juice flows out. It is now chiefly used by the Turkish ladies as a cosmetic, but was formerly in high repute as a medicine. It is rarely, if ever, brought to this country; what passes under the name is *Canada balsam*, which is merely fine turpentine.

OPODEL'DOC. In medicine, a camphorated soap liniment. Steer's opodeldoc is composed of Castile soap, rectified spirit, camphor, spirit of hartshorn, and some essential oil.

OPOP'ANAX, } A gum-resin, obtained
OPOP'ONAX, } from a species of parsnip,
the *Pastinaca opoponax*, a native of the south of Europe and Asia Minor. Name from *οπος*, juice, and *παναξ*, the panacea. It is imported from Turkey, but is as yet little used in medicine.

OPOS'SUM. A genus of quadrupeds. Order *Marsupialia*. They belong to America. See **DIDELPHIS**.

OPPIL'ATION, from *oppilo*, to shut up. The obstruction of the passages of the body by redundant or peccant humours.

OPPOSITIFOLIATE, Lat. *oppositifolius*, being opposite to a leaf. Applied to a flowerstalk when opposite to a leaf.

OPPOSITION, Lat. *oppositio*. 1. In *astronomy*, the situation of two heavenly bodies, when distant from each other 180°, that is, diametrically opposite.—2. In the *fine arts*, contrast.

OPSI'OMETER, *οφίς*, sight, and *μετρον*, measure. An instrument for measuring the limits of vision of a person. Same as *optometer*.

OP'TATIVE, Lat. *optativus*, expressing desire, from *opto*, to wish. The *optative mood*, in grammar, is that form of the verb in which wish or desire is expressed.

OP'TICS, *οπτική*. The science of the nature and laws of vision; from *οπτομαι*, to see, from *ὄψ*, the eye. Optics is a mixed mathematical science, including

catoptrics, dioptrics, and perspective; and considers the nature, composition, and motion of light; the whole doctrine of colours, and all the circumstances of vision; the construction and management of optical instruments, &c.

OP'TIC, } Relating to optics or to vi-
OP'TICAL, } sion. The *optic nerves* are the second pair springing from the crura of the *medulla oblongata*, and passing thence to the eye. The *optic inequality* of a heavenly body is an apparent irregularity which arises from the situation of the eye of the observer, and not from any real irregularity in the motion of the moving body. The *optic place* of a star is its place as seen by the eye.

OP'TICAL SQUARE. An instrument used in surveying, for laying out perpendicular lines. It is made of brass, in the shape of a circular box, and containing two principal glasses of the sextant, viz. the index and horizontal glasses, fixed at an angle of 45°, so that while viewing an object by direct vision, any other, forming a right angle with it, will appear by reflection at the spot where the observer is situated.

OP'TIMATES. *Grandeos*, from *optimus*, best. A division of the Roman people, opposed to *populares*, though it does not certainly appear what were the characteristic differences between these two parties.

OP'TIME. A scholar of the first class of mathematics at Cambridge.

OP'TIMISM, from *optimus*, best. The philosophical and religious doctrine which maintains that this world, notwithstanding its apparent imperfections, is the best that could have been devised; and that the existing order of things in the universe is that adapted to produce most good.

OP'TION. At the *Stock Exchange*, a percentage given for the option of putting or calling, i. e. selling or buying, stock in time bargains at a given price.

OPTOMETER, from *optix*, vision, and *metros*, measure. An instrument to measure the limits of distinct vision, and determine with exactness the comparative strength of the sight.

OPUN'TIA. The Indian fig-tree. A species of cactus which grows abundantly in the south of Europe, and takes its name, *ab opunte*, from the city *Opus*, near which it flourished. De Candolle makes it the type of an extensive genus.

OR. The French word for *gold*: used in *heraldry* to express gold-colour or yellow, represented in engraving by small dots.

O'RA. A Saxon coin, supposed to be worth about one shilling and sixpence sterling.

OR'ACHE. In *botany*, the *Atriplex sativa*, used often as a substitute for spinach. The *wild orache* belongs to the genus *Chenopodium*.

OR'ACLE, Lat. *oraculum*. The reply or answer of a god, from *oro*, to utter: also, by metonymy, the god who gave oral replies to the inquiries of men. The most celebrated of the ancient oracles were those of Apollo at Delphi, and Jupiter Ammon at Thebes. These were consulted, through the medium of priests and priestesses, on all momentous occasions, and never failed to give suitable responses, many of which are famous for their ambiguity. The superstition indeed was mainly supported, and it was kept up for many centuries, by the ambidexterous nature of the oracular saying, for whichever way the event happened, the oracle was certainly correct in the revelation.

OR'ANGE. The well-known fruit of the orange-tree. The sweet orange is the produce of the *Citrus sinensis*, or *Citrus nobilis*, or Mandarin tree, and the bitter or Seville orange is the produce of the *Citrus aurantium*. The true orange is a native of China, but was long since transplanted to other countries by the Portuguese. It now grows abundantly in the south of Europe.

OR'ANGEMEN. The name given by the Catholics of Ireland to their Protestant countrymen, on account of their adherence to King William, (of the house of Orange), while the former party supported the cause of James II.

ORANG'-OUTANG'. The satyr or great ape, the *Simia satyrus*, Lin., which of all animals is considered as approaching most nearly to man, in the form of his head, height of forehead, and volume of brain. The body is covered with coarse red hair, the face bluish, and the hinder thumbs very short, compared with the toes. He inhabits only the most eastern countries, such as Malabar, Cochin-China, and particularly the great island of Borneo, whence he has been occasionally brought to Europe by the way of Java. He is mild and gentle, easily rendered tame and affectionate, but his intelligence does not appear to be much superior to that of the dog. The popular name *orang-outang*, (often written *ourang-outang*), is composed of two Malay words: *orang*, a reasonable being, and *outang*, wild, or of the woods: hence, "Wild Man of the Woods." The orang-outang is very generally confounded with the chimpanzé (q. v.); and there is a monkey of Borneo, known only by his skeleton, called the *Pongo*, which is either of the species of, or one closely allied to, the orang-outang. He is the largest monkey known, and in size is nearly equal to man.

OR'ATOR. In *ancient Rome*, the *orators* were advocates for clients in the forum, and before the senate and the people. They were employed in causes of importance, instead of the *patrons*. In *modern*

usage, a public speaker; an eloquent public speaker; a person who can speak two hours at a time without taking a drink of water. In *chancery*, a petitioner.

ORATORIO, Ital. from *oratorium*. 1. A place of worship.—2. A sacred drama, in imitation of theatrical pieces, but always on sacred subjects, and accompanied by grave and solemn music, vocal and instrumental.

ORATORY, Lat. *oratoria*, from *orator*. 1. The art of speaking, according to the rules of rhetoric, in order to persuade. It consists of four parts, invention, disposition, elocution, and pronunciation. The speaker must be just and pertinent to the subject; must be methodical in all the parts of his discourse; and must embellish it with the beauties of language, and pronounce it with eloquence.—2. Among *Romanists*, a close apartment near a bed-chamber, furnished with an altar, a crucifix, &c. for private devotions.

ORB, Lat. *orbis*. A hollow sphere, or space contained between two concentric spherical surfaces. The ancient astronomers conceived the heavens to consist of several vast azure, transparent orbs or spheres, inclosing one another, and including the bodies of the planets.

ORBIT, Lat. *orbita*, a track, from *orbis*, a wheel. 1. In *astronomy*, the path of a planet or comet; the curve line which a planet describes in its periodical revolution round its central body. The orbits of the planets are elliptical, having the sun in one of the foci.—2. In *anatomy*, the two cavities under the forehead, in which the eyes are situated, are called *orbits*, each of which is composed of seven bones; the frontal, maxillary, jugal, lachrymal, ethmoid, palatine and sphenoid.

OR'CHANET. 1. A plant, the *Anchusa tinctoria*.—2. A bitter astringent substance obtained from the *Lithospermum tinctorium*.

OR'CHESTRA. *Ορχήστρα*. The place in the ancient theatres where the chorus used to dance; in the modern theatres the name is given to the place where the musicians sit. From *ορχισμας*, to dance.

ORCHIS. An extensive genus of perennial plants. *Gynandria—Monandria*. Named *orchis*, from the testicular form of the roots. There are nine indigenous and fourteen exotic species.

ORCINE. The substance which furnishes the colouring matter of archil or orchil. Orcine is, however, itself colourless, forming colourless crystals, which have the shape of flat four-sided prisms, terminated by a bihedral summit, and which melt by heat into a transparent liquid. It is soluble in water and alcohol; nitric acid causes it to assume a blood-red

colour; and when exposed to the joint action of air and ammonia it becomes a deep violet colour.

OR'DEAL. In *law*, trial by fire or water, now abolished in Europe. The term is Sax. *ordal*, or *ordael*, which signifies complete judgment; and the practice of ordeal seems to have had its origin in the belief that the substances used had each its peculiar presiding deity, that had perfect control over it. The two forms of it practised in England were the *fire-ordeal* and the *water-ordeal*. The first was performed by taking into the hand a bar of red-hot iron, walking barefooted and blindfolded over nine red-hot ploughshares, laid lengthwise at unequal distances, &c.; and if the person escaped unhurt, he was adjudged innocent, otherwise he was condemned as guilty. The *water-ordeal* was performed, either by plunging the bare arm to the elbow in boiling water, or by casting the person suspected into a river or pond of cold water, and if he floated without effort to swim, it was an evidence of guilt; but if he sunk (and was drowned) he was acquitted. It is from these barbarous practices that we have our proverbial phrase, to go through fire and water.

OR'DER, Lat. *ordo*. Regular disposition or methodical arrangement of things; a term of very extensive application, as—1. In *natural history*, a subdivision of a class which is itself further divided into genera, as these are into species.—2. In *architecture*, a system or arrangement of the several members, ornaments, and proportions of columns and entablatures, from the diversity in which have sprung the *Five Orders*, transmitted from antiquity: the Doric, the Ionic, the Corinthian, the Tuscan, and the Composite (q.v.). There is no standard of proportion common to the three Grecian orders: each has its own peculiar symmetry; the capitals are the distinguishing features.—3. In *geometry*, a rank or division in a series of curves, lines, &c.: thus, the first order of curves are such as are expressed by a simple equation; those of the second order by a quadratic equation, &c.—4. In *military and naval affairs*, the word *order* has various significations, as *order of battle*, the disposition of troops or ships for battle. There are *orders* from the commander-in-chief: the general issues *orders*; so we have *brigade orders*, *general orders*, and *standing orders*.—5. In *society*, we recognise *orders* of nobility, *orders* of knighthood, *military orders*, and higher and lower *orders*; we moreover speak of clergymen being in *orders*, meaning thereby that these individuals belong to some one of the clerical *orders*, which are three in number, namely, bishops, priests, and deacons: these constitute

the *holy orders*.—6. Courts of law, as Chancery, Queen's Bench, &c., issue *orders* regarding causes there depending; and on particular occasions *orders* are made by magistrates at the sessions.—7. In the *fine arts*, *order* is the harmonious disposition of the parts of a work.

OR'DERLY. In *military affairs*, the *orderly books* are those books in which the sergeants write the general and regimental orders. *Orderly sergeants* are those petty officers who attend on superiors.

OR'DINARY. 1. In *common and canon law*, one who has *ordinary* or immediate jurisdiction in matters ecclesiastical. The bishop is usually the *ordinary* of the diocese, and the archbishop is the *ordinary* of the whole province. The *ordinary* of Newgate is a person who attends on condemned criminals, to prepare them for death.—2. The establishment of persons employed by government to take charge of ships of war laid up in harbours. Hence a ship *in ordinary* is one laid up, under the direction of the master attendant.—3. In *heraldry*, a portion of the escutcheon comprised between straight or other lines.

OR'DINATE, Lat. *ordinatus*. Regular, methodical. 1. An *ordinate figure* is one whose sides and angles are equal.—2. In the *theory of curves*, any right line drawn from a point in the absciss to terminate in the curve: if drawn perpendicularly to the absciss, it is called a *right ordinate*. The ordinates are bisected by the right line called the axis.

OR'DINATION. 1. Admission to *holy orders*, or initiation of a person into the priesthood.—2. In *presbyterian and congregational churches*, the act of settling or establishing (placing in Scotland) a licensed preacher over a congregation with pastoral charge and authority.

ORD'NANCE, from *ordinance*. A general name for all sorts of great guns used in war. The *Board of Ordnance* is the board which provides guns, ammunition, and arms of every description, for public service.

ORDON'NANCE. In *architecture*, the same as *economy*, which see.

ORE, Sax. *ore*, or *ora*. A native compound of a metal and some mineralising substance: a metal in the mineral state. The name is only applied to mineral bodies which contain the metal in such quantities as to be worth the labour of extracting it; and they are styled *rich* or *poor* ores according as they contain more or less of the metal. The ores are exceedingly numerous.

OR'FRAISE, Fr. *orfrois*. Cloth embroidered with gold.

OR'GAN. *Ogyavos*. 1. A part of an animal or vegetable which has a determinate office in its economy: thus the eye

is the organ of vision, the ear of hearing, the muscles of motion, &c. A catenation of organs destined to one function is called an *apparatus*; thus, although the lungs be the immediate organ of respiration, the *apparatus* of respiration consists of the lungs, air passages, muscles, nerves, &c., of respiration, without which the function could not be performed.—2. In *music*, the largest and most harmonious of the wind instruments. It is blown by bellows, and consists of numerous pipes of various sizes, and stops which are touched by the fingers. The instrument is sometimes constructed of immense size: that of the Cathedral Church at Ulm, in Germany, is 90 feet high, and 28 broad; it is blown by 16 pair of bellows, and its largest pipe is 13 inches in diameter.

ORGA'NIC. Pertaining to an organ or to organs; consisting of organs, or containing them, as the organic structure of living bodies. *Organic bodies* are such as contain organs on the action of which depend their growth and perfection: animals and plants belong to this division of nature, and when these are found in the earth in a mineral or fossil state, they are styled *organic remains*, and their study forms *oryctology*. There are also *organic diseases*, in which there is a visible change of the structure of the organ, as opposed to *diseases of function*, in which the action only of the organ is changed. The examination of the nature and composition of organic matter constitutes *organic chemistry*. The *organic description of curves* is the method of describing them on a plane by means of instruments, as the compasses and ruler. The *organic laws* of a state are the laws directly concerning the fundamental constitution of the state.

ORGANISA'TION. 1. The construction of the parts of an animal or vegetable body, with reference to a determined function.—2. The arrangement of the parts of a complex body, in a suitable manner for service. Governments, armies, &c., are *organised*, and their *organisation* is good or otherwise, according as their parts or organs are duly adapted for the end proposed, and to each other.

OR'GANON, *ogyavos*. In *philosophy*, nearly synonymous with *method*, and implying a body of rules and canons for direction.

OR'GANZINE. A description of silk usually imported from Italy into this country. It is washed, spun, and thrown in a particular manner, long kept secret.

OR'GIES, pl. Lat. *orgia*, from *ogyia*, from *ogyn*, fury. Ancient revels, sacrifices, &c., in honour of Bacchus, held during the night by the Bacchæ.

OR'GUES. 1. In *fortification*, a French term for long pieces of timber pointed and shod with iron, and hanging over a

gateway, to be let down in case of attack.—2. A machine composed of several musket barrels united, by means of which several explosions are made at once to defend breaches.

OR'ICHALCUM, } Lat. *orichalcum*, moun-
ORICHAL'COM. } tain brass; *ορος* and
χαλκος; or gold-brass, *aurichalcum*. The
brass of the ancients.

OR'IEL, } Old Fr. *oriol*, a sort of recess
OR'IOLE. } or small apartment. The *oriel*
window is a projecting angular window,
commonly of a triangular or pentagonal
form, and divided by mullions and transoms
into different bays and compartments.

OR'IFLAMB, Fr. *oriflamme*. An ancient
royal standard of France.

ORIO'ANUM. The *Marjoram*: a genus of
plants. *Didynamia*—*Gymnospermia*. Name
ορειανον, from *ορος*, a mountain, and
γανος, joy. The British type, the *O. vul-*
garis, is a perennial plant, but some of the
exotic species are permanent.

OR'IGENISTS. Followers of Origen of
Alexandria, a celebrated Christian father,
who held that the souls of men have a
pre-existing state; that they are holy
intelligences, and sin before they are
united to the body; and that Christ will
be crucified hereafter for the salvation of
devils, &c., &c.

ORIG'INAL, Lat. *originalis*. In *law*, where
the parts of an indenture are interchangeably
executed between the parties, that
part executed by the grantor is called the
original, the others, *counterparts*. In the
fine arts, a work not copied, but the ar-
tist's own: a copy of his own work is a
duplicate. In *theology*, *original sin* is the
corruption of nature derived to us from
our first parents.

ORIL'LOX. In *fortification*, a small round-
ing of earth, lined with a wall, raised on
the shoulders of such bastions as have
casemates to cover the cannon in the re-
tired flank.

ORI'ON, *Ωριων*. In *astronomy*, one of
the most extensive and brightest constel-
lations of the southern hemisphere: men-
tioned in the Book of Job, and in other
parts of the Bible. When it comes to the
meridian, there is then above the horizon
the most splendid view of the celestial
bodies which the starry firmament affords
to the eye of the beholder, and this is
visible to the whole inhabited world,
because the equinoctial passes nearly
through the middle of the constellation.
Orion contains 78 stars, of which two are
of the first magnitude, four of the second,
and four of the third.

ORLE, } Fr. *ourlet*, Ital. *orlo*, a hem.
OR'LET, } 1. In *architecture*, a fillet or
band under the ovolo of the capital: by
some applied also to the plinth of the base

of a column or pedestal.—2. In *heraldry*,
an ordinary in the form of a fillet round
the shield.

OR'LOP, Dut. *overloop*, a running over.
A platform of planks, laid over the beams
in the hold of a ship of war, whereon the
cables are usually coiled. It contains also
the sail-rooms, the purser's, surgeon's,
boatswain's, and carpenter's cabins, and
the several officers' stove-rooms. In three-
decked ships, the second and lowest decks
are sometimes called orlops.

ORNITHIC'NITES, from *ορνις*, a bird, and
θίγω, to touch. The name given by geo-
logists to certain footmarks of birds, ob-
served in the rocks of different formations.
The most remarkable are perhaps those
of the new red sand-stone of the valley of
Connecticut, described by Prof. Hitch-
cock, in the American Journal of Arts and
Sciences.

ORNITH'OLITE, from *ορνις*, a bird, and
λίθος, stone. A fossil bird. The name is
also given to stones of various colours,
bearing the figure of birds.

ORNITHOL'OGY, from *ορνις*, a bird, and
λογος, discourse. The department of na-
tural history which treats of birds; de-
scribes their structure, teaches their eco-
nomy, and arranges them in classes,
orders, genera, and species.

ORNITH'OMANCY, from *ορνις* and *μαν-*
τεια, prophecy. Divination by birds.

ORNITHORHYN'CUS. The duck-bill. A
mammiferous animal peculiar to New
Holland, and thus generically named by
Blumenbach; from *ορνις*, a bird, and
ρύγχος, a beak, in allusion to the form of
the muzzle, which presents the closest
external resemblance to the bill of a duck
or spoonbill. Cuvier places it in the order
Edentata, and division *Monotremata*. It is
aquatic, inhabiting the rivers and marshes
in the neighbourhood of Port Jackson.

OROGR'APHY, from *ορος*, a mountain,
and *γραφη*, description. Description of
mountains, as to their heights, scenery,
&c.

ORO'OGY, from *ορος*, a mountain, and
λογος, discourse. Description of moun-
tains as to their structure, geological re-
lations, &c.

OROMAS'DES. In *Persian mythology*, the
principle of good.

OR'PHEUS, } 1. A fish, the *ορφος* of Pliny,
ORPHUS. } caught in the Archipelago.
It is a broad flat fish, said to weigh some-
times 20lbs.—2. A mythological per-
sonage, a son of the Thracian river
Ægeus and the muse Calliope. The *Or-*
phean mysteries, the mysteries of which
Orpheus was the founder.

OR'FIMENT. Yellow sulphuret of arse-
nic: the golden pigment (*auripigmentum*)

of the Latins. It occurs in lamellar masses, composed of indistinct crystalline particles, for the most part in kidney and other imitative forms; it volatilizes before the blow-pipe with a white smoke, and with the odour of both sulphur and arsenic. Sp. gr. 3.4 to 3.6. It is found in veins, in various metalliferous formations, in various parts of the world, but the finest comes from Persia, in brilliant yellow masses; this is commonly termed *golden orpiment*. Orpiment is used as a pigment, and is prepared also artificially for this purpose.

ORRERY. A machine constructed for the purpose of representing and illustrating the movements and phases of the planetary system. This machine was invented by George Graham, but it takes its name from the circumstance of the Earl of Orrery having procured a copy of Graham's machine, by means of a workman of the name of Rowley; it was named after the Earl by Sir R. Steele, on the supposition that his machine was the first of the sort constructed. Orreries convey only very rude and contracted notions of the planetary movements and proportions.

OR'IS. The plant *iris*, of which *orris* seems to be a corruption: fleur-de-lis or flag-flower.

OR'IS-ROOT. The root of a white flowering species of *iris*, the *Iris florentina*, a native of the south of Europe. It is used in the manufacture of hair powder and some other articles, on account of its grateful odour. See **ORRIS**.

ORSE'DEW, } *Manheim or Dutch Gold*, an
ORSE'DUE, } inferior sort of *gold-leaf*
(rather, *brass-leaf*) prepared principally at
Manheim from a sort of fine brass.

ORTHOCE'ATA, } An extinct genus of
ORTHOCE'ATITE, } cephalopods, inha-
biting polythalous straight shells:
hence the name from *oëthos*, straight, and
keas, a horn. The orthoceratite (says
Mr. Kemble) resembles an ammonite un-
rolled, having its chambers separated by
transverse septa, concave externally and
convex internally, the septa being pierced
by a siphuncle. There are many varie-
ties, some of which are upwards of two
feet in length. Part of the pavement of
the palace of Hampton Court, and that of
the hall of University College, Oxford,
are composed of marble containing re-
mains of orthoceratites. Some species,
found in the carboniferous limestone of
Dumfries-shire, are nearly the size of a
man's thigh.

ORTHOD'ROMICS, from *oëthos*, straight,
and *δρομος*, course. The art of sailing in
the arc of a great circle, which is the
shortest distance between two points on
the surface of the globe.

ORT'HOGON, from *oëthos*, straight, right,
and *γωνία*, an angle. A rectangular figure.

ORTHOGRAPH'IC. 1. Relating to ortho-
graphy.—2. An orthographic projection
of the sphere is one in which the eye is
supposed to be at an infinite distance: so
called because being made on a plane,
passing through the middle of the sphere,
and the eye placed vertically at an in-
finite distance, all the perpendiculars fall
in the common intersection of the sphere,
with the plane of the projection.

ORTHOGRAPHY, from *oëthos*, right, and
γραφή, writing, description. In *gram-
mar*, that branch which teaches how
words should be spelled. In *geometry*, the
art of delineating the foreright plan of
any object, and of expressing the heights
or elevations of each part, so called be-
cause it determines things by perpendi-
cular lines falling on the geometrical
plane. In *perspective*, the foreright side
of any plane, that is, the side or plane
that lies parallel to a straight line, that
may be imagined to pass through the
outward convex points of the eyes, con-
tinued to a convenient length. In *archi-
tecture*, the elevation of a building, show-
ing all the parts in their true proportions.
In *fortification*, the profile or representa-
tion of a fortress, or other work, in all its
parts, as they would appear if perpendi-
cularly cut from top to bottom.

ORTHOPE'IA, from *oëthos*, erect, and
πνεν, breathing. 1. A disease of the
lungs, in which respiration can only be
performed in an upright posture.—2. In-
ability of breathing in a recumbent pos-
ture.

ORTHOPT'ERA. An order of insects, the

6th in Cuvier's arrangement. Named from *oëtes*, straight, and *ptégon*, a wing, being characterised by two straight wings, covered with soft and flexible cases or elytra. They compose the two families, *Cursoria*, or runners, and *Saltatoria*, or jumpers. The *Cockroaches* are examples of the first, and the *grasshoppers* and *crickets* of the second. All the orthoptera are terrestrial; some are carnivorous, some omnivorous, but the greater number feed on living plants.

OR'TIVE, Lat. *ortivus*, rising, or eastern. The *ortive amplitude* of a heavenly body is an arc of the horizon, intercepted between the point where a star rises and the east point of the horizon, the point where the horizon and equator intersect.

OR'TOLAN. A bird, the *Emberiza hortulana*, Lin., about the size of a lark; builds in hedges, is very fat, and common in France, &c. in autumn. It is highly celebrated in the annals of gastronomy, and under the name of *Milioria* was sold at enormous prices to the epicures of Rome.

ORVIE'TAN. A medicine once celebrated as an antidote to poisons. Named after *Orvietanus*, a mountebank, who invented it, or from *Orvielo*, a town in the Papal territories.

ORYCTOG'NOST, from *ορυκτος*, a mineral, and *γνωσις*, knowledge. 1. The name given by Werner to what is otherwise more generally named *mineralogy* (q.v.)—2. That branch of mineralogy which has for its object the classification of minerals, and the determination of their nomenclature.—3. Oryctology.

ORYCTOG'RAPHY, } from *ορυκτος*, a fossil,
ORYCTOL'OGY, } and *λογος*, discourse.
1. That part of geology which treats of fossils.—2. The same as oryctognosy.

ORY'ZA. *Rice*. A genus of annual plant. *Hexandria*—*Digynia*. Name corrupted from the Arabic *orez*. One species, the *O. sativa*, which affords the rice, the chief food of the inhabitants of all parts of the east. It grows naturally in moist places, and only comes to perfection in localities where the ground is occasionally overflowed with water.

OSCHEOC'ELE, from *οσχιον*, the scrotum, and *ωνλη*, a tumour. 1. Any tumour of the scrotum.—2. A scrotal hernia.

OSCILLA'TION, Lat. *oscillum*, from *cillo*, to move; vibration. The reciprocal ascent and descent of a pendulum. The *axis of oscillation* is a right line, passing through the point of suspension parallel to the horizon. The *centre of oscillation* is that point in an oscillating body into which, if all the matter were collected, the vibrations would be performed in the same time.

OSCILLATOR'IA. Minute organised beings, having the power of making oscillatory movements.

OS Coc'CYOIS. The tail-bone: the first bone of the tail of tailed animals.

OSCULA'TION, from *osculo*, to kiss. A term in geometry for the contact between any given curve and its *osculatory circle*; i.e. a circle having the same curvature as the given curve.

OS'CULATORY (see **OSCULATION**). 1. An *osculatory* is a tablet or board with the picture of Christ, the Virgin, &c., kept in Romish churches, to be kissed by the priest, and then delivered to the people for the same purpose.—2. For *osculatory circle* (see **OSCULATION**).

OSIAN'DRIANS. In ecclesiastical history, a sect of the Lutherans, founded by Osiander.

OS'MAZOME, from *οσμη*, odour, and *ζυμας*, juice. A peculiar animal principle, obtained by digesting cold water for some hours on slices of raw muscular fibre, evaporating the liquor to dryness, and treating the fixed remainder with alcohol, and finally dissipating the alcohol by a gentle heat. It has a brownish yellow colour, and the taste and smell of soup.

OS'MIUM, from *οσμη*, smell. A metal discovered by Tennant in crude platinum, and thus named by him from the pungent and peculiar smell of its oxide. It occurs also associated with the ore of iridium. Osmium has a dark grey colour, readily combines with oxygen when heated in the air, and is insoluble in acids, but readily soluble in potassia.

OS'NABURG. A sort of coarse linen, first imported from Osnaburg in Germany.

OSS'FRAY, } The sea-eagle or fish-hawk
OSS'PREY, } (*Falco ossifraga*, Lin.) about the size of a peacock. It feeds on fish, which it takes by suddenly darting upon them when near the surface of the water. The name is a corruption of the Latin *ossifraga*, the bone-breaker (*os* and *frango*).

OS'SEANS OR **OS'SEI**. In *ichthyology*, a primary division of fishes, including such as have a bony skeleton.

OSSIFICA'TION, from *os*, a bone, and *facio*, to make. 1. The formation of bone: osteogony.—2. In *pathology*, the conversion of membranous or muscular substances into a bony substance.

OS'SEOUS, Lat. *osseus*, bony. *Osseous breccia* is a mass of fragments of the bones of animals, cemented together by a calcareous gangue, and commonly found in fissures and caves.

OSTEN'SIVE, from *ostendo*, to show; showing. An *ostensive demonstration* is one which plainly and directly demonstrates the truth of a proposition, in contradistinction to an apagogical one, or one which depends upon a *reductio ad absurdum*.

OSTEOCOL'LA, from *οστρεον*, a bone, and *πυλλαιω*, to glue. Glue-bone, stone, or bone-binder. A peculiar carbonate of lime, found in some parts of Germany, in loose sandy grounds, spreading from very near the surface to considerable depths, ramifying like the roots of a tree. It is of a whitish colour, soft whilst under the earth, friable when dry, rough on the surface, for the most part hollow within, but always bearing evidence of its having been deposited on some fibrous matters, as the roots of plants. It takes its name from a ridiculous notion not yet entirely vanished, that it promotes the coalition of fractured bones, and the formation of callus.

OSTEO-SARCO'MA, } from *οστιον*, a bone,
OSTEO-SARCO'SIS, } and *σαρκωμα*, a fleshy tumour. A term that is very vaguely applied to any tumour which contains a mixture of bony and soft matter. It is most commonly applied, however, to a tumour commencing in the medullary structure of a bone, and afterwards blended with osseous matter.

OSTIARY. Lat. *ostium*. a mouth. The opening by which a river disembogues itself.

OSTRACISM. *Οστρακισμος*, from *οστρακον*, a shell. 1. Banishment by the people of Athens of a person whose merit and influence gave umbrage to them; so named from the shell on which the name or the note of acquittal or condemnation was written. The shell, however, was a piece of baked earth called *testa* by the Latins.—2. Banishment.

OSTRACITES. Fossil oyster-shell: *ostrea*, an oyster.

OSTREA. A genus of testaceous Acéphala, comprehending, according to Linné, all those which have but a small ligament to the hinge, inserted into a little depression on each side, and without teeth or projecting plates. The genus is now divided into *Ostrea proper* or true oysters, which are irregular, inequivalve, and lamellated; shell inhabited by a tethys: *pectens*, which are distinguished from the true oysters, principally by two angular productions called *ears*, which widen the sides of the hinge; *limæ*, which differ from the pectens in the superior length of their shell in a direction perpendicular to the hinge. There are, also, certain fossils which belong to the *ostrea* of Linné, as the *hinnita*, *plagiostoma*, *pachytes*, *dianchora*, and *podopsis*. Name *ostrea*, from *οστρεον*, a shell.

OSTRICH. A bird of which there are two species, constituting the genus *Struthio*, Lin. The ostrich of the eastern continent (the *S. camelus*, Lin., of the sandy deserts of Arabia and Africa), has

been celebrated from the earliest ages. It attains the height of from 6 to 8 feet, lives in great troops; lays eggs weighing nearly 3lbs., feeds on grass, grain, &c., and runs with such speed that no animal can overtake it in the race. The loose flexible feathers of its wings are highly valued for ornamental purposes of dress, and the coarse part of the plumage, called *hair*, to which it bears a resemblance, is used in the manufacture of hats. The American ostrich (*S. rheu*, Lin.) is about one-half smaller than the oriental species. When taken young it is easily tamed.

OTARY. In zoology, the *Phoca jubata*, Gm., or sea-lion of Steller and others, of which there appears to be three or four species. The otaries are regarded as seals with external ears, but they differ from the seals also in the characters of their teeth, feet, &c., so as in fact to form a distinct genus.

OTIS. A genus of birds. The bustards. Order *Grallatoriæ*; family *Pressirostres*. Name borrowed from the Greek *ὄτις*. The most known species is the great bustard (*O. tarda*, Lin.). It seldom flies, and feeds indifferently on grain, herbs, worms, and insects. It builds on the ground among grain.

OTOMYS. The name given by F. Cuvier to a genus of animals nearly allied to the Field Rats, from *ὠτος*, an ear, and *μῦς*, a rat, on account of the large size of the ears.

OTAR OF ROSES. An essential aromatic oil, obtained from the flower-leaves of the rose. See **ATTAR**.

OTTAV'A RIM'A. Octuple rhyme. An Italian form of versification, consisting of stanzas of two alternate triplets and a couplet at the end.

OTTER. A mammiferous animal, of which there are several species. See **LUTRA**.

OTTO, Arab. *otr*, essence. A term signifying essence, and usually applied to essential oils extracted from flowers, as the otto of roses. See **ATTAR**.

OT'TOMAN, Turkish. Relating to Turkey or the Turks. The term originated in Othman, or Osman, the name of the first Sultan, who assumed the government about 1300 A.D.

OTUS. In ornithology, a subgenus of *Strix*, comprehending the horned owls, or those owls which have tufts of feathers on the forehead, (vulg. *horns*), which they can erect at pleasure. The best known species is the *Strix otus*, Lin., or common owl. Name from *ὠτός*, eared, in allusion to the horns.

OUCH. A socket in which a precious stone is set.

OUISTI'TIS. A small genus of *Quadrana*, similar to the *S'akis*, and for a long

time confounded with them in the great genus of monkeys. The common ouistitis, the *Simia jacchus*, Lin., is found in Paraguay, and nearly every part of South America.

OUNCE, Lat. *uncia*, the twelfth part of anything. 1. A weight, the twelfth part of a pound troy, and the sixteenth part of a pound avoirdupois.—2. An animal of the Lynx tribe.

OURANOGRAPHY, *oupanos*, heaven, and *γραφω*. I describe. A description of the heavens.

OUROLOGY, or **OUROSCOPY**, *ouros*, *λγω*, I speak, and *σκοπω*, I view. The judgment of diseases from an examination of the urine.

OVS. In chemistry, a termination for those acids which contain of the acidifying principle, as oxygen, one equivalent less than the acid of the same elements, whose name ends in *ic*. Thus, sulphurous acid is O_2S , and sulphuric acid is O_3S . See **ACID**. We also speak of nitrous and nitric oxides: these follow the same law; but such terms are now being laid aside.

OUTCROP. A term used by miners and geologists, to express the exposure at the surface of a stratum, bed, or vein.

OUT OF TRIM. The state of a ship when she is not properly balanced for sailing.

OUTLAWRY. The punishment of a person who, being called into law, and lawfully sought, according to the usual forms, contemptuously refuses to appear. All the goods and chattels of the person so outlawed are forfeited to the Crown, and all profits of lands, so long as the outlawry lasts. The man is moreover out of the protection of the law.

OUTLICKER. A small piece of timber, made fast to the top of the poop of a ship, and standing outright astern.

OUTLIER. 1. One not belonging to a group, flock, or some specific collection of individuals.—2. Among agriculturists, an animal which is not taken into the fold at night with the others.—3. In geology, a detached rock at some distance from the principal mass.

OUTPOST. In war, a body of men posted beyond the main guard.

OUTER (Fr.). In the fine arts, exaggerated, overstrained.

OUTRIGGER. A strong beam fixed on the side of a ship and projecting from it, in order to secure the masts in the operation of careening, by counteracting the strain it suffers from the effort of the careening tackle; also a boom, occasionally used in the tops to thrust out the breast backstays to windward, to increase the angle of tension, and give additional security to the topmast.

OUTWORK. The part of a fortification

most remote from the main fortress or citadel: such are ravelins, or half-moons, tenailles, hornworks, crownworks, &c.

OVA, plural of *ovum*, an egg. In architecture, ornaments in the form of eggs, carved on the contour of the ovolo, or quarter-round, and separated from each by anchors and arrowheads.

O'VART, Lat. *ovarium*. 1. That part of the body where the ovaria are lodged. In the mammiferous subject ovaria are two flat oval bodies, suspended in the broad ligaments a little below the Fallopian tubes.—2. The lower part of the pistil of a flower, containing the rudiments of the future plants.

O'VERSHOT-WHEEL. See **WATER-WHEEL**.

O'VERT ACT, Fr. *ouvert*, open. In law, a manifest act implying criminality.

O'VERTURE, Fr. *ouverture*, opening. In music, the symphony in the theatres which precedes the drawing up of the curtain.

OVA'TION. A Roman custom of granting an inferior kind of triumph to military leaders.

OVI'FEROUS, from *ovum*, an egg, and *pario*, to produce. An epithet for animals which lay eggs inclosed in a calcareous shell.

O'vis. The sheep. A genus of well-known ruminant mammiferous animals. The Argali of Siberia (*O. Ammon*, Lin.) inhabits the mountains of Asia, and attains the size of the fallow-deer. The Mouflons of America, Africa, and Sardinia, belong also to this genus. It is from the Mouflon or the Argali that we are supposed to derive the innumerable races of our woolly animals, which, next to the dog, are most subject to variation.

OVIPOSITOR, Lat. *ovum*, and *pono*, I place. In insects, the instrument by which it deposits its eggs.

Ov'olo. In architecture, a round moulding, whose profile and sweep, in the Ionic and Composite capitals, is usually the quadrant of a circle or quarter-round.

O'VO-VIVIFEROUS, from *ovum*, an egg, and *viviparus* (q. v.). A distinctive epithet for those animals, as the salamander and the viper, which never lay their eggs, these being hatched within the body of the parent, so that, although originally contained in eggs, the offspring are brought forth in a living state.

O'VUM (Lat. Egg). In anatomy, the body formed by the female in which, after impregnation, the development of the fœtus takes place. In architecture, the same as *ovolo*.

OWLING. The offence of transporting wool or sheep out of England, contrary to statute; so called because usually done during night, when owls are awake!

Ox. A name common to all the animals of the genus *Bos*, Lin., but especially to the *B. taurus*, Lin., known by its lat

bread, round horns, placed at the extremities of the salient line or ridge which separates the forehead from the occiput. Some have regarded it (Cuvier says erroneously) as a variety of the Aurochs (*B. urus*, Gm.).

OXALIC ACID. An acid which takes its name from its existing in considerable quantity in the juice of the wood-sorrel (*oxalis acetosella*). This juice is almost pure bioxalate of potash, and in a crystallised state forms an article of commerce, under the name of *salt of sorrel*, or very erroneously, *salt of lemons*, and was long supposed to be analogous to tartar. The acid, however, is obtained most readily and most economically from sugar, by the action of nitric acid. It crystallises from its solutions; the crystals are quadrilateral prisms, the sides of which are alternately broad and narrow, and summits dihedral; they effloresce in dry air, and deliquesce slightly in damp air. The acid acts as a violent poison in the quantity of two or three drachms. The best antidote is lime in some convenient form, as chalk.

OXALIS. Wood-sorrel. A very extensive genus of herbaceous plants. *Dicandria—Pentagynia*. Name from *ὄξυς*, acid, on account of the acidity of its juice. Out of 77 species enumerated, two are British, of which the *O. acetosella* is the best known, being, from its peculiar grateful acid taste, *ἄριστον* used in salads. See **OXALIC ACID**.

OX'GANG, Germ. *ochs*, and *gang*, walk. Formerly used to signify as much land as an ox could plough in a season.

OXIDATION. The process by which metals and some other elements are converted into oxides by combination with oxygen. See **OXIDE**.

OXIDE. A substance combined with oxygen, without being in the state of an acid. As many substances are susceptible of several degrees of oxidisation, several terms have been used to distinguish them: thus we have the black and red oxides of iron and of mercury, the white oxide of zinc, and the black oxide of manganese; but, in the new chemical nomenclature, the terms *protoxide*, *deutoxide* (or *binoxide*), *tritoxide*, signifying the first, second, and third stages of oxidisation, are substituted for the old specific names. And if only two oxides of a substance are known, the appellation *protoxide* denotes that at the minimum, and *peroxide* that at the maximum.

OXYCOC'CUS. The cranberry. A genus of permanent plants. *Octandria—Monogynia*. Name from *ὄξυς*, acid, and *κοκκος*, berry. There are two American and one British species, the *O. palustris*.

OX'YEN from *ὄξυς*, acid, and *γενναον*,

to generate. An elementary body which exists sometimes in a solid, but which can be examined only in the gaseous form: it is never distinctly perceptible to the human senses except in its combinations. It forms 21 per cent. by volume of the atmosphere, being the constituent essential to the support of animal and vegetable life and combustion. In combining with substances in the process of combustion, it forms oxides and acids, from which latter circumstance it takes its name of *oxygen* or *acid generator* (see **ACID**). The act of combining with bodies is called *oxidisation* or *oxygenation*. Oxygen, when isolated, has all the mechanical properties of air; it is void of taste, colour, and smell. Sp. gr. 1.1026 compared to air, as 1. It is procured by the action of heat from chloride of potash, red oxide of mercury, and black oxide of manganese. Nitrate of potash and red oxide of lead also yield it. Bleachers give the name *oxygen* to thin aqueous solutions of chlorine; and bleaching by means of chlorine was long named *oxygen bleaching*; these absurd names originated in the same error which gave rise to the following chemical names.

OX'YGENATED-MURIATIC, } Names originally given by the French chemists to chlorine, from a theoretical error regarding that element, by them supposed to be muriatic acid united with an equivalent of oxygen. This mistake was rectified by Sir H. Davy.

OXYGENATION. A term sometimes used synonymously with *oxidisation* and *oxidisation*; but, in its wider sense, it includes every case of union with oxygen, whatever the product may be; whereas the other terms are applied only when an oxide is formed.

OXYHYDROGEN BLOWPIPE. A blowpipe in which one volume of oxygen with two of hydrogen are burned while issuing from a small aperture. They produce an intense heat.

OXYMO'RON. *ὀξύμωρον*. A rhetorical figure, in which an epithet of a quite contrary signification is added to a word, as *cruel kindness*.

OXYMU'RIATES. An old name for those compounds now called *chlorides*.

OXY'OPHY, from *ὄξυς*, acute, and *ὀφθαλμος*, the eye. The faculty of seeing more acutely than is usual, from a preternatural sensibility of the retina.

OXYPHOS'PHIC ACID. An old name for the chlorocyanic acid.

OXYSUL'PHURET. A sulphuret of a metallic oxide.

OXYTAR'TARATE. An old name for the acetate of potash.

O'YER AND TERMINER'. In law, a court

held by virtue of the Queen's commission, to hear and determine all treasons, felonies, and misdemeanors. Norm. *oyer*, to hear, and *terminer*, to determine.

O' YES, corrupted from the French *oyez*, hear ye. An expression used by the crier of a court, in order to enjoin silence when any proclamation is made.

OYSTER. A name common to all the molluscs of the genus *Ostrea*, but especially applied to the *O. edulis*, which is nursed and fed on several parts of the British coasts, and is deemed nourishing and delicious food. There are about 200 vessels, with from 400 to 500 men and boys attached to them, employed in dredging for oysters. The English oysters are the best procurable in Europe, and were much sought after by the epicures of ancient Rome.

OYSTER-BED. A bank where oysters are planted, nursed, and fed.

OYSTER-CATCHER. A bird which is provided with a beak somewhat longer than the plover or the lapwings; straight, pointed, compressed into a wedge, and sufficiently strong to enable it to force open the bivalve shells of oysters, &c., on which it feeds. See *HEMATOPUS*.

OZE'NA, from *ὄζη*, a stench. An ulcer in the nose, discharging fetid purulent matter, and sometimes accompanied with caries of the bone.

P.

P, the sixteenth letter of the English alphabet, stands as an abbreviation.—1. Among *astronomers*, for *post*, after.—2. Among *physicians*, for *pugil*, the eighth part of a handful; and sometimes for *part* or *parts*, as P. Æ. for *partes æquales*, equal parts; and also for *pulvis*, powder.—3. In *music*, for *piano*, softly; *pp.* for *pia piano*, more softly; and *ppp.* for *pianissimo*, very softly.—4. In *numismatics*, &c. for *Publius*; Pat. Dig. for *Patricia dignitas*; P. C. for *Patres Conscripti*; P. M. for *Pontifex Maximus*; P. P. for *propositum publice*; P. R. for *Populus Romanus*; PR. S. for *Prætoris Sententia*; PRS. P. for *Præses Provincia*.

PA'CA. A small American animal, of a fawn colour, spotted with white; the *Cavia paca*, Lin., placed in a new genus, *Cælogenyx*, by Fred. Cuvier.

PACE, from *passus*, a step. 1. The space between the two feet in walking, usually estimated at two and a half feet. But the *geometrical pace* is five feet, or the whole space passed over by the same foot from one step to another. 80,000 such paces make one degree on the equator.—2. In the *manège*, the pace is of three kinds,—the walk, the trot, and the gallop.

PA'CHA, } The military governor of a
PA'SHA. } Turkish province. Pasha is the proper spelling.

PACHYDERMATA, from *παχύς*, thick, and *δέρμα*, skin. Thick-skinned animals; the seventh order of the class *Mammalia*, in Cuvier's arrangement, divided into three families: *Proboscidea*, comprehending the elephant and mammoth; *Pachydermata Ordinaria*, of which the hippopotamus and rhinoceros are examples; and *Solidungula*, at the head of which is the horse. Several genera of pachydermatous animals are now extinct, and known only by their fossil remains; among these are the mastodon, the anoplotherium, and the lophiodon.

PACIFIC OCEAN. The ocean which lies between America on the east, and Asia and Australia on the west.

PACK'AGE. 1. A bundle or bale of goods.—2. Used sometimes synonymously with *baillage*, *scavage* and *portage*. See *BAILLAGE*.

PACK'YONG. The Chinese name of the alloy; now usually called white copper, or German silver. It is composed of copper, zinc, and nickel.

PA'CO, } A Peruvian word. 1. In zoo-
PA'cos. } *loggy*, a species of lama, the *Camelus vicugna*, Lin., frequently named the Peruvian sheep, but resembles the camel in shape. It is smaller than the true lama, the *C. llama*, Lin., but is highly prized for its wool.—2. In *mineralogy*, an earthy-looking ore, which consists of brown oxide of iron, with imperceptible particles of native silver disseminated through it. This ore is found in Peru, and is named from its colour, which resembles the peculiar blackish-brown colour of the wool of the Paco.

PAD'DING. In *calico-printing*, the process of imbuing a piece of cloth thoroughly and uniformly with a mordant. This is usually effected by a machine called the *padding machine*.

PAD'DLE. 1. A short oar: *batillus* is a paddle; *πατάλος* a pole. The name is now applied to a sort of short oar, used in propelling canoes; and has been adopted in natural history, to designate the swimming apparatus of the chelonian reptiles and marine saurians.—2. In *engineering*, a *paddle* or *clough* is a panel, to fit the openings left in lock gates and sluices, for the purpose of letting the water in or out as may be desired. *Paddle-holes* or *clough-arches* are small culverts or drains, connected with canal work, as the small passages through which the water passes from the upper pond of a canal into the lock-chamber during the process of filling. *Paddle-wheels* are those wheels employed in the propulsion of steam-boats.

PAD'DOCK. 1. Sax. *pad* or *pada*, a frog.—2. Sax. *parruc*, a small inclosure

under pasture, for turning in a sick horse &c.

PAD'DOCK-STOOL. A species of mushroom; vulg. *toadstool*.

PAD'DY. An East Indian name for rice in the husk.

PAD'DY BIRD. A species of heron, the *Ardea tora*, which frequents the paddy or rice fields.

PADIS'HA. A title of the Turkish sultan, and of the Persian shah.

PAD'USOY. A peculiar kind of silk stuff, first manufactured at Padua in Italy.

PA'AN, } 1. Among the ancients, a song
PE'AN. } in honour of Apollo, chiefly used on occasions of triumph, and so named because the words *Io paan!* frequently occurred in it, in allusion to Apollo's contest with the serpent.—2. Any song of triumph.—3. In ancient poetry, a foot of four syllables; written also *pæon*. Of this there are four sorts: the first consisting of a trochee and pyrrhic, as *tēpōribus*; the second of an iambus and pyrrhic, as *pōtētiā*; the third of a pyrrhic and trochee, as *animātis*; and the fourth of a pyrrhic and iambus, as *clēritis*.

PACILOP'ODA, from *ποικίλος*, various, and *πους*, a foot. Various-footed animals. The second order of the class Crustacea in Cuvier's arrangement, comprising two families, *Xyphosura* and *Siphonostoma*. The Mollucca crab is an example of the first, and the Fish-louse of the second.

PÆDOBAPTISTS, *παῖς*, child, and *βαπτίζω*, I baptize. Those who hold that infants should be baptised in infancy.

PÆONIA. Pæony. An extensive genus of perennial plants. *Polyandria—Digynia*. Natural family *Ranunculaceæ*. Named from Pæon, who cured Pluto with it when wounded by Hercules. Temperate climates.

PA'GAN, Lat. *paganus*, a peasant, from *pagus*, a village. A word originally applied to the inhabitants of the country, who, on the first propagation of the Christian religion, adhered to the worship of their ancient gods, or refused to receive Christianity after it had been received by the inhabitants of cities. In like manner, *heathen* signifies an inhabitant of the *heath* or woods, and *caffer* (Arabic) is a dweller in a hut, and one who does not receive the religion of Mohammed. *Pagan* is now used to designate one who is neither a Christian nor Mohammedan, and the religion which Pagans profess is *paganism*.

PAGANA'LIA. Festivals held in Roman villages, in honour of the local tutelary divinities.

PAGEANT, from *pagma*. Something carried about in triumph, a pompous display without value. The Lord-Mayor's coach is a pageant.

PA'GETTING, } Rough plastering, &c.
PAR'GETTING. } cially that in the interior of chimney-flues.

PAGO'DA, Pers. *pout ghoda* or *boot khoda*, Hind. *boot khuda*, abode of God. 1. A temple in China and the East Indies. The most remarkable pagodas of India are those of Benares, Siam, Pegu, and particularly that of Juggernaut, in Orissa. The images in these temples are also called *pagodas*. These are usually made of baked earth, richly gilt, but without any particular expression.—2. A gold coin, formerly current in the south of India, value eight shillings. This name was given to it by the Europeans.

PAG'ODITE. The mineral of which the Chinese make their pagodas, called also lardite, koreite, and agalmatolite.

PAINS AND PENALTIES. In law, an act of Parliament to inflict pains and penalties beyond or contrary to the common law, in the particular cases of great public offenders.

PAINTER'S COLIC, } A species of colic,
PLUMBER'S COLIC. } so named from its victims, painters and plumbers; and from its symptoms called the dry belly-ache. It has also been called, from the place where it is endemic, the Poitou, the Surinam, the Devonshire colic. It is generally attributed to the poison of lead, but early cider and new rum are found also to produce it.

PAINT. A colouring substance, or substance used in painting, as green, red, blue, &c. paint.

PAINTER. 1. An artist who *paints* or represents objects by means of colours, or light and shade; as a portrait-painter.

—2. An artisan who lays colours on wood, plaster, &c.; as a house-painter. The company of painters in London was incorporated by Queen Elizabeth, but existed long previous.—3. From Irish, *painter*, a snare; a rope used to fasten a boat to a ship, wharf, &c.

PAINTER-STAINER. A painter of coats of arms. The painter-stainers were incorporated with the painters.

PAINT'ING. An art coeval with civilization, practised with success by the Etrurians, Greeks, and Romans, obscured for several centuries, but revived in Italy in the fifteenth century, whence sprung the Roman, Venetian, and Tuscan schools. Afterwards arose the German, Dutch, Flemish, French, and Spanish schools: and, latterly, the English school, founded by Sir Joshua Reynolds;—it is properly a compound of the Italian and Flemish schools. As regards the subjects, painting is distinguished into historical, landscape, portrait, &c. painting; as regards the form and materials, into painting in oil, water colours, fresco, miniature, distemper, mosaic, &c.—2. A picture.

PAIR'ING. In *parliament*, when two members of opposite opinions agree to absent themselves from divisions of the House during stated periods.

PALACE-COURT. The court which administers justice among the domestic servants of the Crown. Its jurisdiction extends twelve miles in circuit from the royal palace.

PAL'ADIN. An errant knight, whose business was to praise his mistress, and to fight anybody who refused to acknowledge the truth of his panegyrics. The "brave Orlando" is a specimen.

PALÆO'GRAPHY, from *παλαιός*, ancient, and *γραφω*, to write. Description of ancient manuscripts, inscriptions, &c.

PALÆOL'OGY, } From *παλαιός*, ancient,
PALÆOL'OGY. } and *λογος*, discourse.
The study of ancient things.

PALÆONTO'LOGY, from *παλαιός*, ancient, *οντα*, beings, and *λογος*, discourse. The study of fossil remains of animal and vegetable life.

PALÆOSAU'RUS, from *παλαιός*, ancient, and *σαῦρες*, a lizard. A genus of saurians, found only fossil in the magnesian limestone.

PALÆOTHERIUM, from *παλαιός*, ancient, and *θηριον*, a wild beast. An extinct genus of quadrupeds, belonging to the order *Pachydermata*. The place of the Palæotherium is intermediate between the rhinoceros, the horse, and the tapir. Some of the species appear to have been as large as the rhinoceros; others were from the size of a horse to that of a hog.

PALÆSTRA. A sort of educational establishment among the Greeks, consisting both of a college and academy; the one for exercises of the mind, and the other for those of the body.

PALANQUIN', } Hind. *palkee*, from San.
PALANKEE'N. } *paluc*, a couch. A sort of litter or covered carriage used in India, and borne on the shoulders of four porters, called *coolies*; eight of whom are always attached to one palanquin, and relieve each other.

PAL'ATE, Lat. *palatum*. 1. The roof or upper part of the mouth.—2. In *botany*, an eminence in the inner part of the mouth of gaping blossoms which closes them.

PAL'ATINE, } Appertaining to the palate.
PAL'ATAL. } The letters *d, g, j, k, l, n,* and *q*, are called palatals.

PALAT'INATE. The name formerly given to two states of Germany.

PALE, Sax. *pal*, from Lat. *pallus*. 1. A pointed stake used in fencing or inclosing.—2. In *heraldry*, one of the greater ordinaries, being a broad perpendicular line, the representation of a pale or stake placed upright.

PALÆACEOUS, Lat. *paleaceus*, chaffy

(*palea*, chaff): applied to the receptacles of some plants.

PALIL'OGY, *παλιν*, again, and *λογω*, I speak. In *rhetoric*, the repetition of a word or phrase for the sake of effect.

PALIN'DROME. *Παλινδρομια*, from *παλιν*, again, and *δρομω*, to run. A word, verse, or sentence, as *madam*, and *Roma tibi subito motibus ibit amor*.

PALINGEN'ESY, from *παλιν*, again, and *γενωαι*, to produce. Regeneration: a term used by entomologists to designate the transitions of insects from one state to another.

PAL'ISADE, Fr. *palissade*, from the root of *pale*. A fence or fortification, consisting of a row of pales or stakes (called also sometimes *palisades*), set firmly in the ground. In *fortifications*, the posts are placed closely together, parallel to the parapet in the covered way, to prevent surprise. Palisades serve also to fortify the avenues of open forts, gorges, half-moons, the bottom of ditches, &c.

PALIMPSEST', *παλιν*, again, and *ψαω*, I rub. A sort of parchment, from which writing might be erased, and which might be written upon anew.

PALISSE'. In *heraldry*, a bearing like a range of palisades before a fortification, represented on a fesse, rising up a considerable height and pointed on the top, with the field appearing between them.

PALL', Sax. *pælle*, Lat. *pallium*. 1. A mantle of state.—2. The mantle of an archbishop. Also a hood of white lamb's wool, with four crosses upon it, forming the arms of the see of Canterbury: sometimes called the *episcopal pall*.—3. The covering thrown over a dead body at funerals.—4. In *heraldry*, a figure like *Y*, representing the pallium or ornament of an archbishop, sent from Rome to metropolitans.

PAL'LA. In *Latin*, the long outer garments suitable for Roman females of respectable rank.

PALLA'DIUM. 1. A rare metal discovered in 1803 by Dr. Wollaston, in crude platinum, and so named from the planet Pallas, discovered the year before. It is a white metal much resembling platinum, but has more of a silvery appearance, and like silver is liable to tarnish in the air. Sp. gr. 11·8 to 12·1. Melts from 150° to 160°. Wedgewood, and does not oxidise at a white heat.—2. Primarily, a wooden statue of the goddess Pallas, which represented her as sitting with a pike in her right hand, and in her left a distaff and spindle. On the preservation of this statue depended the safety of Troy; hence the term has come to denote any effectual defence, protection, or safety. Thus we say the trial by jury is the *palladium* of our civil rights.

PAL'LAS. 1. In *mythology*, another name for Minerva.—2. One of the four small planets, situated between the orbits of Mars and Jupiter, discovered by Dr. Olbers of Bremen, in 1802. It appears like a star of the eighth magnitude; its mean distance from the sun is 266,000,000 miles, diameter uncertain, and its period of revolution 4 years, 7 months, and 11 days.

PAL'LET, Fr. *palette*, from Lat. *pala*, a shovel. 1. A painter's colour-board, i.e. the little board on which the colours for immediate use are placed and mixed in working.—2. In *gilding*, an instrument made of a squirrel's tail, &c., to take up the gold-leaf from the pillow, and to apply and extend the same.—3. In *pottery*, &c., a small instrument, usually wood, for forming the articles from the plastic clay.—4. A partition in the hold of a ship.—5. In *heraldry*, a small pale, being one-half the breadth of that ordinary.—6. In a *watch* and *clock*, the pallets are those parts, two small levers, which give the beats, sometimes written *palettes* and *paillats*.

PAL'LUM. The cloak worn by the Greeks as the *toga* was by the Romans.—2. A pontifical ornament worn by popes, patriarchs, primates, and metropolitans of the Romish church.

PALL'-MALL', *palle-maille*. An old game, in which a ball was driven through an iron ring or arch. It was formerly practised in St. James's Park, London, and gave its name to the street called Pall-Mall (pron. pell-mell).

PALLS'. In *ships*, strong short pieces of iron or wood, placed near the capstan or windlass, so as to prevent its recoiling.

PALM'. 1. In *botany* (see **PALMA**).—2. The *palm*s of an anchor are the broad parts at the ends of the arms or flukes.—3. A hand-breadth; a linear measure equal to 3 inches, considered as the average breadth of the *palm* or broad part of the hand. This, when distinguished, is termed the *little palm*; the *great palm* is equal to 8½ inches.—4. A little flat instrument, used instead of a thimble in sewing canvas.

PAL'MA CHRIS'TI. Christ's palm. The castor-oil plant. *Ricinus communis*.

PAL'MÆ. The palm tribe of trees. A most important and natural family of plants. They have trunks similar to trees, but come under the name of *stipes*, the tops being frondescent, that is, sending off leaves instead of branches. They are, though commonly called trees, really perennial herbaceous plants, having nothing in common with the growth of trees in general. They take their name from *palma*, the hand, because the leaves are extended from the top like the fingers upon the hand when spread. The palm

is characteristic of tropical scenery. It was adopted as an emblem of victory by the ancients, it is said, because the *stems*

is so highly elastic as when pressed down, to rise and recover its erect position. The figure represents the date-tree, a species of the palm.

PALM'ER. A begging pilgrim returned from the Holy Land, bearing a branch of palm.

PAL'METTO. The dwarf palm. A species of *Chamaerops* or Fan-palm of America.

PALM', FRUITFUL. An order formed in 1617 in Germany, for the preservation and culture of the language.

PAL'MIC ACID. An acid substance, obtained in silky acicular crystals, by saponifying palmine, and treating an aqueous solution of the soap with hydrochloric acid. It fuses at 122° Fah., and is soluble in all proportions in alcohol and ether.

PAL'MINE. A white substance, about the consistence of wax when first obtained, but hardens with keeping, and assumes a resinous appearance. It dissolves in alcohol and ether, and saponifies with potash ley. It is readily obtained by treating castor oil (*oleum ricini*), with about one-twentieth of its weight of hyponitrous acid, diluted with thrice its weight of nitric acid.

PALMIP'EDES, plur. of *palmipes*, a web-footed animal. An order of birds having the toes connected by a web or membrane, and thus the feet fitted for swimming. Cuvier divides them into four families. *Brachyptera*, *Longipennes*, *Totipalmata*, and *Lamellirostres*.

PALM'-OIL. An unctuous substance, about the consistence of butter, of a yellowish colour, and no particular taste, obtained from the fruit of several species of palms, especially from that of the *Elaeis guineensis*, which grows abundantly on

the west coast of Africa and in Brazil. It is sometimes imitated with hog's lard coloured with turmeric, and scented with Florentine iris root. Palm-oil consists of 69 oleine and 31 stearine, melts at 84° F., and becomes rancid by exposure to the air. It has hitherto been employed in the manufacture of brown soap; but, as it can now be economically bleached by the action of chromic acid, it may be employed in the manufacture of white soap, candles, &c.

PALM' SUNDAY. The sixth Sunday in Lent, the next before Easter, commemorative of the Saviour's triumphant entrance into Jerusalem, when palm branches were strewed in the way.

PALM'-WINE. A juice obtained in the East Indies (where it is named *Toddy*), by the incision of a species of the palm.

PALM'-WORM. An American insect about 12 inches long, covered with hair, and extremely swift in its motions. It is a species of centipede, and wounds severely, but not fatally.

PALMY'RA. A genus of *Annulata*, established in the order *Dorsibranchiata*, by Savigny, to receive a beautiful animal of one to two inches in length, found in the Isle of France. It is recognised by its superior fasciculi, the setæ of which are large, flattened, flabelliform, and glistening like highly polished gold.

PAL'PI. *Feelers.* These are articulated appendages, attached to the jaws of insects: they are the auxiliary organs of a masticating mouth. Those upon the maxillæ are termed maxillary feelers (*palpi maxillares*); those placed laterally upon the labium are the labial feelers (*palpi labiales*).

PALPICOR'NES. *Palpi-horned insects.* The fifth family of pentamerous Coleoptera in Cuvier's arrangement. The antennæ terminate in a club, usually perfoliaceous, and consist of nine joints in all. They are much longer than the maxillary palpi.

PAL'LY, } A term in *heraldry*, when
PAL'EWAYS, } the shield is divided into four or more equal parts, by perpendicular lines from top to bottom.

PAM'PAS. A name for the vast plains of South America and Africa. See *PRAIRIE*.

PAM'PEROS. Violent winds which come from the west or southwest, and sweep over the pampas in the southern parts of Buenos Ayres.

PAM'TREE (Fr.). An ornament in sculpture, consisting of vine leaves and branches of grapes.

PAN'AX. A genus of plants. *Polygamia*—*Diacia*. Name borrowed from the Greek botanists, whose *παναξ* or *πανακης* was so denominated, from *παν*, all, and *αξος*, medicine, because of its universal virtues. The name being unoccupied, Linné adopt-

ed it for the Chinese Ginseng (*P. quinquefolia*), equally celebrated with the ancient panax for its medicinal virtues. Besides the Ginseng plant, there are seven other species of panax, all natives of warm climates.

PANCA'R'TES. In *diplomatics*, royal charters, in which the enjoyment of his possessions is confirmed to a subject.

PANCRAT'UM. 1. An athletic exercise among the Greeks: from *παν*, all, and *κρατω*, to conquer.—2. An extensive genus of perennial plants. *Hexandria*—*Monogynia*. Warm climates.

PAN'CREAS, from *παν*, all, and *κρεας*, flesh. A flat glandular viscus of the abdomen, compared to the form of a dog's tongue, and situated in the epigastric region under the stomach: named from its fleshy consistence. The use of the pancreas is to secrete the pancreatic juice, a fluid in its nature similar to saliva, to be mixed with the chyle in the duodenum.

PAN'DA. The *Ailurus refulgens*, Fred. Cuv. An animal about the size of a cat, having a fine close fur, above of the most brilliant cinnamon red, behind more fawn coloured, beneath of a deep black, found in the north of India.

PAN'DECTS. A digest of civil or Roman law, made by order of Justinian. The compilation consists of 50 books containing 534 decisions, to which the emperor gave the force and authority of law.

PAN'DIT, } A learned Brahmin.

PANDIT. }
PANDOR'RA. The first woman, according to the poets, made by Vulcan at the command of Jupiter, and named *πάντων δαΐδα*, because every god adorned her with some gift. She presented her husband, Epimetheus, with a box, the gift of Jupiter, and on his opening it, there flew out all sorts of evils over the earth, and filled it with diseases and all sorts of calamities.

PAN'DORE, } *πανδουρα*, *Pandura*. A
PANDO'RON, } musical instrument of the lute kind: a bandore.

PANDO'RUS. A light infantry raised from the Turkish frontiers, in the Austrian army.

PAN'EL. 1. A schedule or roll of such jurors as the sheriff returns to pass upon any trial. *Impanelling* a jury is returning their names in such schedule of parchment. In *Scottish law*, the prisoner at the bar is the *panel*.—2. In *joinery*, a thin board, having its edges inserted in the groove of a surrounding frame, as the panels of a door. Masons also give the name *panel* to a face of a hewn stone.

PAN'EMORE. In *mechanics*, a globular windmill, proposed to be erected in the middle of a ship, for turning wheels and paddles.

PAN'IC. 1. A sudden fright without real cause: from *Pan*, a captain, who with a few men routed a numerous army by the noise which his soldiers raised in a rocky valley, which reflected numerous echoes. —2. A grain like millet: the seed of the panic-grass.

PAN'ICLE, Lat. *panicula*, a cluster. A species of compound inflorescence, in which the flowers are scattered on peduncles, without order, appearing like a branched spike. This species of inflorescence occurs most commonly in grasses.

PAN'ICUM. Panic-grass. A genus of grasses. *Triandria* — *Digynia*. Named *à paniculis*, the spike consisting of numerous thick seeds disposed in many panicles. Millet-seed is the produce of the *P. miliaceum*, a hardy annual, a native of India, but now cultivated pretty extensively in the South of Europe. The *P. Italicum*, or Italian millet, is believed to have been the *panicum* of the ancients.

PAN'NAGE. The feeding of swine upon mast in woods; also the money taken by agisters for the mast of the crown-forests.

PAN'NEL, Fr. *panneau*. In *architecture*, an area sunk from the general surface of the work.

PANOPH'OBIA, from *παν*, all, and *φοβος*, fear. That kind of melancholy which is chiefly characterised by groundless fears.

PANOR'A'MA, from *παν*, all, and *οραμα*, view; entire view. A picture drawn upon the interior of a large cylinder, representing the objects which can be seen from one station, when the observer directs his eye successively to every part of the horizon. Invented by Mr. Robert Barker in 1787.

PANOR'PA. The *Scorpion-fly*: a genus of Neuropterous insects, family *Planipennes*. See PANORPATE.

PANOR'PATE. The name given by Latreille to that tribe of insects which compose the genus *Panorpa*, Lin. and Fab. They have five joints to all the tarsi, and the anterior of their head prolonged and narrowed in the form of a rostrum or proboscis. Palpi, four to six, and filiform.

PANSTER'ZORA'MA, *παν*, *στιγμις*, solid, and *οραμα*, I see. A model of a town or country in cork, wood, or any other material.

PAN'TOGRAPH, from *παν*, every, and *γραφω*, I write. Improperly written pantograph, which see.

PANTECH'NICON, *παν* and *τεχνη*, art. A place where every kind of workmanship is exposed for sale.

PANTH'E'A. In *antiquity*, single statues, composed of figures of several different divinities combined: *παν*, all, and *θεος*, god.

PAN'THEISM, from *παν*, all, and *θεος*, god. The system of theology in which

the doctrine is maintained that the universe is God.

PANTH'E'ON, *πανθειον*. A temple dedicated to all the gods (*παν*, all, and *θεος*, god). One of the most magnificent temples of ancient Rome, and the only one which has been preserved entire. It is now converted into a Christian church, and is dedicated to the Virgin Mary and all the martyrs. It is of the Corinthian order; is round; has a spherical dome, and its diameter within, and its height from the pavement to the grand aperture at the top, are each 144 feet. There was also a pantheon at Athens; first changed into a Christian church, and afterwards into a Turkish mosque.

PAN'THER. The *pardalis* of the ancients, and *Felis pardus*, Lin. A ferocious animal, found throughout Africa, Southern Asia, and the Indian Archipelago. It is the size of a large dog; is very similar to the leopard, but has only six or seven rows of black spots.

PANTO-CHRONOM'ETER, *παν*, *χρονος*, time, *μετρον*, measure. An instrument which combines the functions of compass, sundial, and universal time-dial.

PAN'TOGRAPH, from *παντα*, all, and *γραφω*, to describe. An instrument con-

trived for the purpose of copying drawings, either on a larger or smaller scale.

PANTOL'OGIA, *παν* and *λογος*. A work of universal information; a dictionary or encyclopædia.

PANTOM'ETER, from *παντα*, all, and *μετρον*, a measure. An instrument for measuring all sorts of elevations, angles, and distances.

PAN'TOMIME, *παντομιμος*. A general mimic; from *παν*, all, and *μιμος*, a mimic. The ancient pantomimes were persons who could imitate all sorts of actions and characters, and were first introduced upon

the stage to express by gesture and expression of countenance whatever the chorus sung. They were subsequently employed to divert the audience, after the chorus and comedies, and finally, their interludes became distinct entertainments, and were separately exhibited, and by metonymy, took the name of *pantomimes*.

PA'PAL CROWN. The Pope's tiara or crown, called also the triple crown, because it is a cap of silk environed with three crowns of gold.

PAPA'VER. The *Poppy*: a genus of plants. *Polyandria—Monogynia*. Name from *papa*, pap, because nurses used to mix this plant in children's food to make them sleep, relieve colic, &c. The heads of most of the species afford a sort of narcotic juice, but that cultivated for its opium is the *P. somniferum*, which is grown extensively in India, Turkey, and Egypt, in fields, as corn is with us. It has also been grown in England, but the climate is too changeable to render it a safe crop. See *OPIMUM*.

PAPAW' TREE. A name common to all the species of the genus *Carica*, but especially applied to that (*C. papaya*) which grows in both Indies and the Guinea Coast. It is a roundish fruit, has somewhat the flavour of a pompon, and is boiled and eaten with meat as turnip is with us.

PAPER—is chiefly manufactured of vegetable matter, as fragments of linen and cotton reduced to a pulp. There is a sort made from rice for drawing upon, and another from silk for bank-notes, &c. The name is derived from *papyrus* (q. v.), and the works where paper is manufactured are called *paper-mills*. The sorts are numerous, but all are made up into *sheets*, *quires*, and *reams*; each quire consisting of 24 sheets, and each ream of 20 quires. Chinese paper is made from the inner bark of the paper-tree (*Broussonetia papyrifera*), or Chinese mulberry, now acclimated in France, and the India paper, employed for engravings, is made of the bamboo, by triturating, grinding, boiling, and fermenting: it is much thinner than the myrtle-tree paper.

PAPER COAL. A variety of bituminous shale: so called from its divisibility into extremely thin leaves.

PAPER-CUR'ENCY,) Notes or bills is-
PAPER-MO'NEY.) sued by authority, and promising the payment of money, and circulated as the representative of coin. The name is commonly applied to notes or bills issued by a state, or by a banking corporation; but some suppose that the terms should be extended to all promissory notes and bills of exchange.

PAPER-HANG'INGS. A general name for all stained, painted, or stencilled papers,

used as hangings for covering the walls of apartments, &c. The art of making paper-hangings has been copied from the Chinese, and till lately was almost monopolised by the French, who were allowed to exercise their genius in perfecting the art, unchecked by taxation.

PA'PER-MUL'BERRY,) The Chinese mul-
PA'PER-TREE.) berry, *Broussonetia papyrifera*, from the inner bark of which the Chinese make their paper. See *PAPER*.

PA'PIER LI'NGE. A sort of paper manufactured in France. It resembles damask and other linen so completely, as to require narrow inspection to discover the difference.

PA'PIER-MACHE'. The French name of a composition now much employed in the manufacture of tea-trays, snuff-boxes, and numerous other light and elegant articles. It consists of cuttings and other waste of paper, boiled in water, and beaten in a mortar to a sort of paste. It is then boiled in a solution of size, when it is ready to be fashioned in oiled moulds. When the moulded articles are dry, they are covered with a coating of size and lamp-black, and afterwards varnished. When an article is to be ornamented with figures, these are painted before varnishing.

PAPIL'IO. The Butterfly. A genus of diurnal Lepidoptera, of which there are numerous species. The larvæ have always sixteen feet; the chrysalides are always naked, the perfect insect is always provided with a proboscis or trunk, flies only during the day, and has the most splendidly decorated wings of all the insect tribes. The genus *Papilio*, Linn., is now divided into 28 sub-genera.

PAPILIONA'CEÆ. A natural order of plants, the 32nd of Linn., comprehending such as have flowers resembling the wings of a butterfly (*papilio*), as the vetch, pea, &c. See *LEGUMINOSÆ*.

PAPILIONA'CEOUS, Lat. *papilionaceus*. Butterfly-like. Applied to the corolla of plants when they are irregular and spreading, and thus have some resemblance to a butterfly. Such a flower usually consists of five petals; *vexillum*, the banner, the large one at the back; *ala*, the two side petals or wings; and the *carina* or keel, consisting of two petals, generally united by their lower edges, and embracing and protecting the internal organs.

PAPIL'LA, Lat. from *pappus*, down. 1. The nipple of the breast.—2. The termination of a nerve, &c., generally used in the plural, *papillæ*; as the nervous papillæ of the tongue, skin, &c. These are minute projecting filaments, each containing, perhaps, a separate branch of the nerves of touch.

PA'PILLOSE. Lat. *papillosus*, pimpled. Applied to stems of plants with soft tu-

bercles; also to leaves covered with fleshy dots or points.

PAP'US. Down, from *παππος*. 1. In *anatomy*, the hair on the middle of the chin. — 2. In *botany*, the seed-down; the feathery appendage which crowns many seeds that have no pericarp, and which originates in a partial calyx, which crowns the summits of the seeds, as of the dandelion, goat's-beard, &c. By some botanists the term is generally used for the feathery crown of seeds furnished with a capsule, and also for a similar appendage to the base of some seeds and the sides of others.

PAP'ULOSE, Lat. *papulosus*. Pimpled. Applied to leaves, &c., which are covered with vesicular dots, or minute blisters.

PAPYROGRAPHY, from *παπύρος*, paper, and *γραφω*, to write. A method of taking impressions from a sort of pasteboard, covered with a calcareous substance, exactly as from the stone in lithographic printing. The prepared pasteboard is also called lithographic paper.

PAPYRUS, *παπύρος*. The paper-plant. A genus. *Triandra—Monogynia*. There are two species: the *P. odoratus*, of the West Indies; and the renowned *P. antiquorum* of Egypt, a stately reed or rush,

the inner bark of which was used by the ancients for writing upon; or rather for making paper to write upon; and latterly, indeed, for all the common purposes to which paper is at present applied. Pliny, in his *Hist. Nat. lib. xiii.*, c. 11, 12, 13, describes the process of making paper from the papyrus, and enumerates the various kinds that were composed, from the coarsest, which was used like our brown paper for packing, to the finest and most expensive. The chief seat of the manufacture was at Alexandria.

PAR. A Latin word for *equal*. Used in *commerce*, to denote that two things

are of equal value; and in *money-affairs*, the equality of one kind of money or property with another.

PA'RA. A Turkish coin of copper and silver, very small and thin, and worth the fortieth part of a piastre.

PARAB'OLA. *Παραβολή*, from *παρεα*, against, and *βαλλω*, to throw. A conic

section, formed by a cone being cut by a plane, which is parallel to a tangent plane, to the curved surface of the cone. Thus *V* is the vertex of the parabola *mVo*; the right line *Vn* is the axis, and any line parallel to it is called a diameter: any line parallel to

the base *mno* is called a double ordinate.

PARAB'OLIC. In *geometry*, having the form of a parabola. A *parabolic asymptote* is a parabolic line continually approaching to a curve, but never meeting it. A *parabolic pyramidoid* is a solid figure which was thus named by Dr. Wallis. *Parabolic space*, the area contained between the curve of the parabola and a whole ordinate. *Parabolic spindle*, a solid generated by the rotation of a semi-parabola about one of its ordinates. *Parabolic spiral*, or *helicoid*, a curve arising from the supposition of the axis of the common parabola bent into the periphery of a circle, the ordinates being portions of the radii next the circumference.

PARAB'OLISM, from *parabola*. In *algebra*, the division of the terms of an equation by any known quantity that is involved or multiplied in the first term.

PARAB'OLOID, from *parabola*, and *ειδος*, like. A paraboliform figure: a solid formed by the revolution of a parabola about its axis.

PARACEN'TRIC, from *παρεα*, beyond, and *κεντρον*, the centre. Deviating from circularity. By the *paracentric motion* of a planet is meant the quantity which it approaches nearer to, or recedes further from, the sun or centre of attraction, in its orbit: the difference by which the real orbit of the planet differs from a circular orbit of equal area.

PARACHRON'ISM, from *παρεα*, beyond and *χρονος*, time. An error in chronology, by which an event is related as having happened later than its true date.

PARACHU'TE, Fr. from *παρεα*, against, and *chute*, a fall. An instrument some-

what resembling an umbrella, annexed to a balloon, or used separately, to prevent, by its expansion and buoyant properties, the too rapid descent of a heavy body. Aeronauts have descended from great heights, without injury, by means of parachutes.

PARACROS'TIC. A poetical composition in which the first verse contains in order all the letters which commence the succeeding verses.

PAR'ADIGM. Παράδειγμα. Example or instance of something done or said, as an example of a verb conjugated in the several moods, tenses, and persons.

PARADISE'A. Birds of Paradise. A genus of birds, natives of New Guinea, and of the adjoining islands; said to live on fruits, and to be particularly fond of aromatics: order, *Passerina*: family, *Conirostres*. The great bird of paradise, the *P. apoda*, Lin., is of the size of a thrush; head and neck yellow, circumference of the throat and beak of an emerald green; male distinguished by those elegant long bundles of yellowish feathers employed by the ladies as plumes.

PARADOX'US. A genus established in the order Carnaria and family Carnivora by Fred. Cuvier, to receive the pougoné, a semi-digitigrade and semipalmate animal of India, agreeing in most of its characters with the genets; but particularly distinguished by the spiral inclination of the tail, which is not prehensile: whence the name from *παράδοξα*, a paradox, and *ουσα*, a tail.

PARAFFINE. A substance discovered by M. Reichenbach of Blansko, in the tar obtained by the distillation of various substances, both animal and vegetable, but especially in the tar of the beech-tree. If beech tar be distilled to dryness, the receiver will be found to contain three liquids, a light oil swimming upon the top; below it an aqueous liquid having an acid taste; and a heavy oil at the bottom. This last being distilled a second time, pyrélaine passes over, in which will be observed numerous scales of paraffine. These scales are separated and purified by a laborious process, to obtain the paraffine in a state of purity, which is then a colourless crystalline mass, transparent like glass, scarcely flexible, and destitute of taste and smell, and with nearly the feel of cetine. Melting point 110 F. Sp. gr. 0.87. It is a bicarburet of hydrogen; and if any process shall be invented for procuring it in a sufficient quantity, and sufficiently cheap, it will supersede all other substances for candles. It takes its name from its little tendency to combine with other bodies—*parum affinis*. It is the same substance which Mr Christison called *petroline*, having ob-

tained it from the petroleum of Rangoon without any knowledge of M. Reichenbach's discovery. Both discoveries were made about the same time.

PARAG'NIUM, Lat. *par*, equal. In *feudal jurisprudence*, the body of nobles was so termed.

PARAGRAN'DINE. An invention to avert hail-stones, which, on some parts of the continent, are reckoned the most severe scourge of the husbandman. The whole machinery consists of numerous metallic points and straw ropes, bound together by hempen threads, and erected over the fields to be protected.

PARAGUAY TEA. The leaves of a species of holly, the *Ilex paraguayensis*, a tree which grows in different parts of South America, especially in Paraguay and the interior of Brazil, where it is called *yerva maté*. (It was named *maté* by the Aborigines, and *yerva* or *yerba* by the Spaniards.) It rises to the height of an orange-tree; the leaves are opposite, shining, oblong, and serrated, and are used almost universally in South America as tea is with us. When the infusion of Paraguay tea is taken in moderation, it acts as a stimulant; but when taken in excess, it occasions intoxication, and a kind of delirium tremens.

PARALIPOM'ENA (Gr.) Things left out; a term applied to works of a supplementary character.

PARALLAC'TIC. Pertaining to the parallax of a heavenly body.

PAR'ALLAX. Παράλλαξις. Variation; an astronomical term for the arc of the heavens intercepted between the true and apparent place of any heavenly body as viewed from the earth, i.e. between its place as viewed from the centre of the earth, and from some point on its surface. Thus the true place of a star being P or P', if viewed from the surface of the

earth will appear at *p* or *p'*, and the arc *Pp* or *P'p'* is the parallax of such star. When the star is on the horizon as at *p*, the parallax is greatest, and continually diminishes till it reaches the zenith *P''*, when it is nothing, as appears from the figure. The parallaxes receive different denominations according to the circles

upon which they are computed, and it is by means of the parallactic angles that the astronomer calculates the distances of the heavenly bodies.

PARALLEL. Παράλληλος. Similarly continued: from *παρά*, opposite, and *ἄλλω*, one another. 1. The term is applied, in *geometry*, to lines which are everywhere equidistant from each other, and which though ever so far produced would never meet; and to such planes as have all the perpendiculars drawn betwixt them equal to each other. *Parallel rulers* have been contrived for the purpose of drawing parallel lines. These are

of wood, brass, &c. AB and CD jointed together by cross blades, *ac* and *bd*, so adjusted as to allow the rulers to accede and recede, and yet retain their parallelism. *Parallel coping* is a name among masons for such copings as have the upper surface parallel to the bed of the stone, as those upon gables. *Parallel motion* is a term used by practical mechanics to denote the rectilinear motion of a piston rod, &c., in the direction of its length, and contrivances by which such alternate rectilinear motions are converted into rotatory ones, and *vice versa* in pumps, saw mills, and especially in double-acting steam-engines, when the arrangement of parallel rods connected with the piston-rod and the working beam, to transfer the motion of the former to the latter, is now by way of eminence termed the parallel motion.—2. In *astronomy* and *geography*, the *parallels of latitude* are the circles of latitude (see *LATITUDE*). The *parallels of altitude* are circles parallel to the horizon (see *ALMUCANTARS*). The *parallels of declination* in astronomy are the same as the parallels of latitude in geography. A *parallel sphere* is that situation of the sphere wherein the equator coincides with the horizon, and the poles with the zenith and nadir. *Parallel sailing* is a name for the sailing on a parallel latitude (see *SAILING*).—3. We also speak of *parallel rays* in optics; of *parallel lines* or *trenches* in fortification; of *historical parallels* and *parallel passages* of scripture, &c. *Parallel cut* is a name sometimes used for a counter drain.

PARALLELISM. The state of being parallel. The parallelism of the earth's axis denotes the invariable position of the earth's axis, by which it always points to the same point in the heavens, abstracting from it the slight effect of muta-

tion, &c. To this parallelism we owe the vicissitudes of seasons, and the inequality of day and night.

PARALLELOGRAM, from *parallel* and *γραμμή*. A right-lined quadrilateral figure, whose opposite sides are parallel and equal. It receives particular denominations, according to the equality or inequality of its sides and angles, as *rectangle*, *rhombus*, *rhomboid*, and *square* (q. v.); but in common usage the term is applied to quadrilateral figures of more length than breadth, as ABCD, of which

AD is a diagonal. *Parallelogram of forces* is a term used to denote the composition of forces, or the finding of a single force that will be equivalent to two or more given forces when acting in given directions. Thus if a body at A be at the same instant acted upon by two forces represented by AB and AC, the compound force will be represented by the diagonal line AD.

PARALLELOPIPED, } from *parallel* and
PARALLELOPIPEDON, } *πῆξ*, on, and
πίδες, a plane. In *geometry*, a regular solid comprehended under six parallelograms (or faces), the opposite ones of which are similar, parallel, and equal to each other; or it is a prism whose base is a parallelogram.

PARALYSIS. Παράλυσις. Palsy: from *παράλυσις*, to loosen. A disease known by loss or diminution of the power of voluntary motion, affecting any part of the body. Called also *Catalysis*.

PARAMALIC ACID, called also *fularic* and *lichenic acid*. An acid obtained by keeping malic acid at a temperature of 302°, when a decomposition ensues, and water and paramaleic acid are the result. The paramaleic acid forms large striated prisms, sometimes rhomboidal, and sometimes six-sided. It requires 200 water for its solution, whereas the malic acid dissolves in 100 water. Name *παράμα*, beyond, and *malic acid* (q. v.)

PARAMETER, from *πέρα*, through, and *μετρίω*, to measure. A constant right line in each of the three conic sections, called also *Latus rectum*.

PARÁMO. A mountainous exposed district, covered with stunted trees, so termed in South America. In the torrid

zone, these are commonly from 10,000 to 12,000 feet in height, where snow frequently falls, but lies only a very short time.

PAR'AMOUNT, from *per* and *mount*, to ascend. Superior: possessing a highest jurisdiction or title. Thus the *lord-paramount* is the chief lord of the fee. In England, the sovereign is the lord-paramount, of whom all land in the kingdom is supposed to be held; but sometimes the lord of several manors is called the lord-paramount.

PARAMUCIC ACID. An acid isomeric with mucic acid, and corresponding with it in most of its actions with other bodies, but soluble in alcohol, and also much more freely in water than the mucic acid. It is obtained by saturating water with mucic acid, evaporating to dryness, digesting the residual matter in alcohol, and allowing this alcoholic solution to evaporate spontaneously, when a crystalline mass of paramucic acid is obtained. *Παρα*, beyond, and *mucic acid* (q. v.)

PARANAPHTHALINE. A substance obtained by M. Dumas from coal-tar, and thus named by him because it appears in its composition to be identical with naphthaline: *παρα*, beyond, and *naphthaline*. It crystallises in hard grains; and melts at 356° (while naphthaline melts at 174°), is insoluble in water, and hardly soluble in alcohol even when boiling.

PARAN'GON. A variety of black marble, which the ancients procured from Egypt and Greece, and which they called also *basaltes*.

PAR'ÆGON, παραπηγμα. A brazen table on a pillar, on which laws and proclamations were anciently engraved. Also a table, affixed in a public place, containing an account of the rising and setting of the stars, eclipses, seasons, &c.

PAR'APH, παρα and αττω, I touch. In *diplomats*, the figure formed by the flourish of a pen at the end of a signature.

PARAPHERNA'LIA, παραφίενα. Something in addition to a dower: *παρα*, beyond, and *φίενη*, dower. The goods which a woman brings with her at her marriage, or which she possesses beyond her dower, and which remain at her disposal after her husband's death. Such are her wearing apparel, and personal ornaments, over which the executors have no control unless the husband has died insolvent.

PAR'APLEGY, Lat. *paraplegia*, palsy of the upper or lower half of the body: from *παρα*, beyond, and *πληγη*, a stroke.

PAR'ASANG. An ancient Persian measure, different at different times, and in different places; being sometimes 30, sometimes 40, and at other times 50 stadia or furlongs.

PARASCENIUM, from *παρα*, beyond, and *scenium*, a scene. A place beyond or behind the scenes, in the ancient theatres, where the actors withdrew to dress and undress themselves. The Romans called it more commonly *postscenium*.

PARASELE'NE, from *παρα*, near, and *σληνη*, the moon; a mock moon. A luminous ring encompassing the moon, in which are sometimes bright spots, bearing some resemblance to the moon.

PARASI'TA. An order of insects, so called from their parasitical habits. They have only six legs, and are all apterous. According to Linné, they form but one genus, (*Pediculus*, Lin.), but the species are exceedingly numerous, being found on man, beasts, and birds, of which almost every species has a peculiar species of parasite to support and nourish.

PARASI'TÆ. The name of a natural order of plants, comprehending such as are parasitical, or are produced on the branches, trunk, &c., of other plants. The *mistletoe* is an example.

PAR'ASITE. Among the *Greeks*, ministers of the gods, whose business was to collect the corn allotted for the public sacrifices: hence the name *παρα*, by, and *σιτος*, corn, and *παρασιτος*, corn-keeper. The parasites also superintended the sacrifices, and infested the tables of the wealthy.

PARASIT'IC. Having the habits of a parasite. *Parasitic animals* attach themselves to draw their nourishment from the bodies of others. *Parasitic plants* do not take root in the earth, but send their roots into other plants, and draw their nourishment from them.

PARATARTAR'IC ACID. When tartaric acid is exposed to a moderate temperature it loses water, and is converted into a liquid which concretes on cooling. This constitutes a new acid, composed of three atoms tartaric acid and two atoms water, and was called paratartaric acid by Prof. Erdmann, who regarded it as isomeric with tartaric acid: *παρα* and *tartaric acid* (q. v.).

PARATONNER'RE. A name given by the French to a conductor of lightning: *para*, against, and *tonnerre*, thunder.

PAR'AVAIL, Nor. par, by, and availle, profit. In *feudal law*, the tenant paravail is the lowest tenant, holding under a mediate lord, as distinguished from a tenant in *capite*, who holds immediately of the crown.

PAR'BUCKLE, for *pair-buckle*. A contrivance to haul up or lower a cask, &c., where there is no crane or other tackle. It is formed by passing the middle of a rope round a post or ring, the two parts of the rope being then passed under the two quarters of the cask, bringing the two ends back again over it, so that these, being hauled or slackened together, either

raise or lower the barrel as may be required.

PAR'CELLING. Among *seamen*, long narrow slips of canvas, daubed with tar, and bound about a rope, like a bandage, before it is sewed. Parcelling is also used to raise a mouse on the stays, &c., and is firmly fastened by marline from one end to the other. *Parcelling a seam* is laying a slip of canvas upon it, and daubing it over with melted pitch.

PAR'CEL MAKERS. Two officers of the exchequer, who make parcels of the escheator's accounts, and deliver the same to the auditors of the court.

PAR'CENER. Co-parcener. A co-heir: one who holds lands by descent from an ancestor in common with another, or with others. Norm. *parcenier*, from *par-sonnier*, a participator.

PARCH'MENT. The skin of sheep or goats, prepared in such a manner as to render it proper for writing upon, covering books, &c.: different from *vellum*. The name is said to derive, through the medium of the continental languages, from Pergamus, the city where it is said to have been first manufactured. The etymology is, however, very doubtful.

PARAGOR'IC, from *παράγορῖς*, to mitigate. Anodyne: *P. elixir*, is a name given in England to the *Tinctura Camphoræ Composita*: and in Scotland to the *Tinctura opii ammoniata*.

PARAIR'A BRAV'A. The root of the *Cissampelos Pareira*.

PAREM'BOLE. Πάρεμβολή. Insertion: a rhetorical figure, in which something relating to the subject is inserted in the middle of a period: it thus differs from a *parenthesis*, which is foreign to the subject. The *parembole* and *parenthesis* are, however, often confounded.

PARENCHY'MA. Παρεγχύμα. Suffusion: from *παρέγχυω*, to strain through. 1. The spongy and cellular substance, or tissue, which connects parts together: applied to the connecting medium of the substance of the viscera. It takes its name from the ancient notion, that the blood was strained through it.—2. In *botany*, the green juicy layer of the bark, which lies immediately under the epidermis of trees.

PARENCHY'MATA. An order of Entozoa, comprising those species in which the body is filled with a cellular substance, or even with a continuous parenchyma, the only alimentary organ it contains being ramified canals which distribute nourishment to its different points, and which, in most of them, originate from suckers visible externally. Cuvier divides the order into four families: Acanthocephala, Tremadotea, Tænioides, and Cestoidea.

PARENCHY'MATOUS. Consisting of parenchyma: spongy: porous.

PAR'ESH, } A large shield, used in the
PAR'IS. } warfare of the middle ages,
to cover assailants advancing to the walls of a fortress.

PAR'GASITE. A variety of actinolite, so named from its being found in the Isle of Pargas, in Finland.

PAR'OET. 1. Plaster-stone, or gypsum.—2. To *parget*, is to plaster roughly. See **PAGETTING.**

PARH'ELION, from *παρά*, near, and *ἥλιος*, the sun. A mock sun, or meteor of a bright colour, appearing on one side of the sun, having somewhat the appearance of the great luminary himself. *Parhelia* are not, however, always round; some are tinged externally with colours like the rainbow, and many of them have a long fiery tail opposite the sun, becoming paler towards the extremity. Their cause is not well ascertained, though it is generally believed that they are caused by the reflection of the sun's beams on a very thin cloud, composed of minute cylinders of ice: spherical particles produce halos.

PA'RIAN. Pertaining to Paros, an island of the Egean Sea, as the *Parian marble*, which was found there. The *Parian Chronicle* was a chronicle of the city of Athens, engraven on marble, in capital letters, in the isle of Paros. It contained a chronological account of events from Cæcrops, B.C., 1582 years, to the archonship of Diognetus, B.C., 264 years; but the chronicle of the last 90 years is lost. This marble was procured from Asia Minor, in 1627, by the Earl of Arundel; and, being broken, the fragments are now denominated the *Arundelian Marbles*.

PA'RIAS. A degraded tribe of Hindûs, who live by themselves in the outskirts of the towns, and in the country build their houses apart from the villages, or rather have villages of their own. They are precluded from all possibility of advancement, and are doomed to perform all sorts of menial work.

PARIE'TAL, Lat. *parietalis*. Appertaining to a wall: applied in *anatomy* to two arched and somewhat quadrangular bones, situated one on each side of the superior part of the cranium. In *botany*, &c., any organ growing from the side of another.

PARIETA'RIA. Pellitory. A genus of plants. *Polygamia*—*Monæcia*. Name from *paries*, a wall, because it grows chiefly on old walls: this applies principally to the *P. officinalis*, or wall-pellitory, formerly in high estimation among physicians.

PAR-IMPAR. Among the Romans, the game of *even or odd*.

PARI PASSU. With equal step.

PARIS. Herb-paris, called also True love and One-berry. A genus of perennial plants. *Oxandria* — *Tetragynia*. Named after *Paris*, the youth who adjudged the golden apple to Venus.

PARIS BASIN. In *geology*, a large area, about 180 miles in length, from north-east to south-west, and about 90 miles wide, from east to west, in which Paris, the capital of France, is situated. It is remarkable from the succession of different soils of which it is formed, and from the vast quantity and variety of organic remains which it contains. The whole lies in a vast depression of the chalk.

PARISH, Low Lat. *parochia*, from *παροικια*, a dwelling. The territorial jurisdiction of a secular priest, of which there are 9913 in England.

PARK, Sax. *parruc*. A large piece of ground, inclosed by licence under the broad seal, for beasts of the chase. There are also parks in reputation, though not erected with lawful warrant. An *artillery park* is a place, in the rear of both lines of an army, for encamping the artillery. A *park of artillery* implies the whole train of artillery belonging to a division of troops. *Provision-park*, the place where the sutlers pitch their tents and sell provisions, and that where the bread wagons are stationed. *Park* is also the name of a sort of large net, used by fishermen: it is fixed at the brink of the sea, and is left dry by the ebb of the tide.

PARLIAMENT, French *parlement*, from *parler*, to speak. A word which was introduced into England under the Norman kings, to designate the supreme council of the nation, called under the Saxon kings *wittenagemote*, the meeting of sages or wise men. Parliament consists of the three estates—the lords spiritual, lords temporal, and the commons. Perhaps the sovereign ought to be considered a constitutional branch of parliament, though in common language that functionary is kept apart.

PARLIAMENT HEEL. In *nautical language*, the causing a ship to incline so to one side as to allow the upper part of the bottom on the other side to be cleaned.

PARLOUR, Fr. *parloir*, from *parler*, to speak. Primarily an apartment in monasteries for conversation: hence a room in a house which the family usually occupy, when they have no company, as distinguished from a *drawing-room*, intended for the reception of company.

PARME'NIANISTS. In *ecclesiastical history*, the sect of the Donatists, named after their leader Parmenianus.

PARNAS'SUS. In *mythology*, a celebrated mountain in ancient Greece.

PAR'ODY, *παρ'odia*. A kind of writing, in which the words of an author are, by

some slight alterations, adapted to a different purpose, by way of burlesque.

PAR'OLE, Fr. from *parler*, to speak. A term signifying anything done verbally, or by "word of mouth," in contradistinction to what is written; as *parole* evidence, *parole* pleadings, &c.—2. In *military affairs*, a promise given by a prisoner of war, when suffered to be at large, that he will not attempt to escape, that he will return at a certain time, &c. Also the watch-word given out every day in orders by a commanding-officer in camp or garrison, that sentinels may be able thereby to distinguish friends from enemies.

PARON'YMOUS, *συνυμα*, name. In *grammar*, words of similar derivation.

PAR'OTID. Appertaining to the parotis; as the *parotid gland*, which is a large conglomerate and salival gland, situated under the ear, between the mammillary process of the temple-bone, and the angle of the lower jaw.

PAR'OTIS. The parotid gland. From *παρα*, near, and *οτις*, the ear.

PAR'QUETRY. See MARQUETRY.

PARR. The young of the salmon.

PAR'REL. An apparatus contrived to fasten the sail-yards of a ship to the mast, in such a manner that they may be easily hoisted and lowered thereon. Some *parrels* are made simply of ropes; some others have ribs and trucks.

PARRO'QUET. The French name for a parrot, but now applied with us as a general name for the smaller species of parrots. See PSITTACUS.

PAR'SEE, Pers. *Parsi*. The Persian refugees (fireworshippers) who now inhabit various parts of India.

PARS'ING. In *grammar*, the resolving of a sentence into its elements, by showing the several parts (*pars*) of speech of which it is composed, and their relation to each other, according to the grammatical rules of government and agreement.

PARS'LEY. A well-known garden herb, the *Apium petroselinum*, a native of Sardinia. The *black mountain parsley* is a species of the genus *Athamanta*; the *Macedonian parsley*, of the genus *Bubon*. *Stone parsley* is a popular name for the *Amomum verum*.

PARS'NIP, } A name common to all the

PARS'NEP. } plants of the genus *Pastinaca*, but especially applied to the *P. sativa*, an indigenous biennial, cultivated for the sake of its esculent root.

PART. In *music*, a name of each of the melodies of any harmonic composition, and which, when performed in union, form its harmony. There must be at least four *parts* in every such composition.

PARTER'RE. A French term, employed in *gardening* to denote a level division of ground furnished with evergreens and

flowers, and sometimes cut into shell and scroll work, with alleys, walks, &c.

PAR'THENON. A famous temple to Minerva, at Athens. It was of the Doric order, built of marble, and the roof was also covered with marble, sculptured so as to represent large tiles. It had resisted all the ravages of time, and had been alternately a Christian church and a Turkish mosque, down to 1687, when the Venetians besieging the citadel of Athens, a bomb fell upon the Parthenon, and set fire to a quantity of powder which was then kept in it by the Turks: the explosion reduced this splendid building almost to ruins.

PARTICIPANTS. An order of knighthood, founded, 1586, in honour of Our Lady of Loretto.

PARTICIPLE, Lat. *participium*, from *pars*, part, and *capio*, to take. In *grammar*, a word partaking of the properties of a noun and of a verb, as *having*, which becomes a noun by prefixing *the*. Participles sometimes lose the properties of a verb and become adjectives, as a *willing* heart.

PARTICLE, Lat. *particula*, from *pars*, part. 1. In *grammar*, a word not varied by inflexion, as a preposition. 2. In *physics*, a minute part of a body. The word is sometimes used in the same sense as atom, and in this sense *particles* are the elements or constituents of bodies.

PARTICULARISTS. In *theology*, those who held the doctrine of partial election.

PARTÍDAS, LAS SIETE (Span.). An ancient Spanish code of laws.

PARTING. In *metallurgy*, any process by which gold and silver are separated in refining or assaying.

PARTITE, Lat. *partitus*. Cut or divided. A *partite* leaf is one separated almost to the base. When a leaf has two such incisions, it is said to be *bipartite*, when three *tripartite*, &c.

PARTITION. In *architecture*, the vertical assemblage of materials which divides one apartment from another. In *music*, the arrangement of the parts of a composition under one another, commonly called a *score*.

PARTNERS. In *naval affairs*, pieces of planks nailed round the several scuttles or holes in a ship's deck, wherein are contained the masts and capstan.—2. A name sometimes given to the scuttles themselves.

PARTNERSHIP. An association of two, three, or more individuals, to carry on some branch of business in common. The term is usually applied to those smaller associations in which the partners personally conduct their joint affairs: the term *company* being applied to those greater associations, conducted by directors and servants, appointed by the body of the partners to act for them.

PART'BRIDGE. A well known bird, the *Tetrao perdix*, Lin., esteemed a great delicacy at the table. In America the name partridge is applied to various species of the genus *Tetrao*, and in different parts to different birds. See **PERDIX**.

PART'BRIDGE WOOD. A fancy wood from Martinique.

PARTY. In *politics*, a body of men united under a leader, for carrying out some common principle. In *heraldry*, used to signify the division of a shield by lines.

PARTY WALLS. Partitions of brick between buildings, in several occupations.

PA'RUS. The *Titmouse*: a genus of very active little passerine birds, placed in the family *Corvirostræ* by Cuvier. The titmouse seems to be omnivorous: it builds in the holes of old trees, and lays more eggs than any of the passerinæ. It takes its name both English and Latin (*à parva mus*), from its continually flitting and climbing from branch to branch, suspending itself in all sorts of positions, and indeed from its appearance and general habits. Fourteen species are enumerated.

PASH'A. A viceroy or military governor of a Turkish province: written also *pacha* and *bashaw*. The Persian and correct word is *pasha*.

PASIG'RAPHY, from *pas*, all, and *γράφω*, writing. A system of universal writing, which may be understood by all nations: a thing still to be discovered.

PASQUIN. A mutilated statue at Rome, in a corner of the palace of Ursini, so called after a cobbler of that city, famous for his sneers and gibes, and who diverted himself with passing jokes on all the people who went through the street in which he lived. After the death of this man, some workmen, who were digging up the pavement before his shop, found a statue of an ancient gladiator, well executed, but maimed: this they set up in the place where it was found, and by common consent named it Pasquin. Since that time all satirical papers in that city are attributed to this figure, and either put into its mouth or are pasted on its body. Hence *pasquinade*, something in the style of Pasquin: a lampoon.

PASS, Wel. *pás*. 1. A narrow passage into an open tract of country, or into a country.—2. In *mining*, a frame of boards, set sloping for the ore to slide down.—3. In *fencing* (see **PASSADE**).

PASSA'DE, } 1. A push or thrust in fen-
PASSA'DO, } cing. Of these there are several sorts, as *passades* within, above, beneath, to the right, left, &c.—2. In the *manège*, a turn or course of a horse backwards or forwards on the same ground.

PASSAGE. 1. In *music*, every member of a strain or movement is a passage: Ital. *passo*. 2. In *navigation*, the course pursued

at sea in passing from one country to another; also the time occupied on such passage. A *north-east passage* to India has been sought by coasting along the northern parts of Europe and Asia; and a *north-west passage* has been found to the same place, by sailing round the northern part of the American Continent. *Birds of passage* are such as migrate, at certain seasons, from one climate to another. The swallow is an example.

PAS'SANT. In *heraldry*, walking: Fr. *passant*, a passenger.

PASSAR'EE. In a *ship*, a rope to confine the tacks, when going at large in a light breeze.

PAS'SERES. The sixth order of birds, according to the arrangement of Linné. See *PASSERINÆ*.

PASSERI'NÆ. An order of birds formed by Cuvier, on the basis of Linnæus's order *passeres*, of which the sparrow (*passer*) is the type. This order is the most numerous of the whole class. The birds which compose it have neither the violence of the birds of prey, nor the fixed regimen of the Gallinacæ, nor of the water-birds. Insects, fruits, and grain, constitute their food, which consists the more exclusively of grain in proportion to the largeness of their beak, and of insects, as the beak is the more slender. All the singing birds are found among them. They are divided into families according to the form of the beak: these are Dendropteres, Fissirostres, Conirostres, and Tenuirostres. Epithet *Passerine*.

PASSIFLO'RA. Passion-flower. A very extensive genus of plants. *Monadelphia—Pentandria*, and N. order *Cucurbitaceæ*. Name altered by Linné from *flos passionis*, the name given to this beautiful genus by preceding botanists, because the instruments of Christ's passion were thought to be represented in the parts of the fructification. The species are all natives of warm climates.

PAS'SIM. A word of reference in books, signifying everywhere, in many different places, here and there.

PAS'SING BELL. The bell that rings at the hour of death, to obtain prayers for the *passing* soul, called vulgarly the *soul-bell*, it being originally intended to drive away any demon that might seek to take possession of the soul.

PASSING NOTES. In *music*, graces wherein two notes are connected by smaller intervening notes.

PAS'SION, from *patior*, to suffer. 1. The impression or effect of an external agent upon a body: that which is suffered or received.—2. Strong feeling or emotion of the mind, impelling the individual to act according to the general tenor of the feeling which excites him. Man has *passions* in common with the inferior animals: these are *animal passions*, and con-

sist of animal wants become excessive; but he has likewise others which are displayed only in the social state, and which are really *social* wants grown to excess. The animal passions are essential to the preservation of the individual and of the species: to this class belong fear, anger, desire, jealousy, love, hatred, &c. The passions which belong to the social state owe their development in part to the circumstance of our civilisation, and to the universal bent of mind to increase the feeling of existence, as ambition, envy, avarice, gaming, and indeed all active virtues and vices. Some passions are allayed by gratification, others are irritated by it: the first sort are therefore sources of happiness, the latter often causes of misery. Philanthropy and love are examples of the one class; avarice and ambition of the other. If our necessities develop the intellect, the passions are the principle or cause of everything great which man performs, whether good or bad. Great poets and heroes, great criminals and conquerors, are men of strong passions.

PAS'SION-WEEK. The week immediately preceding Easter, named in commemoration of the Saviour's crucifixion.

PAS'SIVE, Lat. *passivus*, suffering. A *passive verb* is one which expresses the effect of an action of some agent, as, "she is loved by her friends." *Passive obedience*, as used by political writers, means not only quiet, unresisting, submission to power, but implies the denial of the right of resistance; or the recognition of the duty to submit, in all cases, to the existing government. *Passive commerce* is that species of trade in which the productions of a country are carried in foreign bottoms.

PASS'OVER. The solemn festival of the Jews, celebrated on the 14th day of the month following the vernal equinox, and instituted in commemoration of their providential deliverance on the night before their departure from Egypt, when God, smiting the first-born of the Egyptians, passed over the houses of the Israelites, which were marked with the blood of the paschal lamb.

PASTE. 1. Any cement, as that which holds together the fragments composing conglomerate rock.—2. A factitious gem. The base of the pastes is a vitreous body, called *Strass* (from the name of its inventor, a German) composed of rock-crystal (8), salt of tartar (24), white lead (12), and borax (12) fused together. To this glass some metallic oxide or salt is added, according to the gem to be imitated, as oxide of antimony for oriental topaz; chloride of silver or glass of antimony for yellow diamond; oxide of cobalt for sapphire; manganese, or precipitate of cassius and peroxide of iron for

oriental ruby; glass of antimony and oxide of cobalt for emerald; horn silver and black oxide of iron, with some earthy substance for common opal; oxides of manganese and cobalt for amethyst; oxides of antimony, gold and manganese for ancient carbuncle, &c.

PASTEBOARD. A sort of thick paper, formed of several sheets of paper pasted together, much used in binding books, making pill-boxes, &c.

PASTEL. A colouring matter obtained from the leaves of the *Isatis tinctoria*. It has a yellow or greenish-yellow colour, and gives a green stain to paper, which improves by keeping. In dye-works the *pastel vat* is prepared with 4 of indigo, 50 of pastel, 2 of madder, and 2 of potash, to which $\frac{1}{2}$ of lime is gradually added to retain the brown matter of the indigo. The name is Spanish.

PASTERN. In *farriery*, the distance between the fetlock, or joint next the foot, and the coronet of the hoof of a horse. The *pastern-joint* is that immediately above the pastern.

PASTICCIO. An Italian word meaning a *pie*, used in music to denote an opera composed of detached airs, by different composers, occasionally introduced.

PASTIL. Fr. *pastille*. 1. A roll of paste or sort of paste, made by grinding together different colours with gum-water, in order to make crayons.—2. A small cone made of gum benzoin, with powder of cinnamon and other aromatics, to diffuse a grateful odour when burned in an apartment.—3. Aromatic sugared confection, called *tablettes*.

PASTINACA. The parsnip. A genus of plants. *Pentandria—Digynia*. So named because the root resembles the *pastinum*, a forked instrument used by the Romans for planting seeds. The *P. sativa*, or garden parsnip, is the British type of the genus.

PASTOPHORI. Priests of an inferior order among the Egyptians, who carried the statues of the gods in solemn processions: whence the name *πάστορος*, a couch, and *ἰσῆω*, to bear. They are often found sculptured or painted on Egyptian monuments.

PASTO RESIN. A resinous substance employed by the Indians at Pasto, in the northernmost parts of Peru, for covering wood, to render it impermeable to water. Its solvent is potash, which forms with it a kind of soap, soluble in water, and from which it is precipitated by acetic acid in a state fit to be applied to the wood. The plant which yields it is not known.

PATACA, } A Spanish coin worth 4s. 8d.
PATACON, } sterling.

PATACHE (French). A tender or small vessel employed in conveying men, pro-

visions, and orders from one ship to another.

PATANS. A name in the East Indies, applied to all the Afghan tribes.

PATAVINITY. A term among classical scholars to denote the peculiar style or diction of Livy, the Roman historian, from Patavium or Padua, the place of his nativity. Authors are not, however, agreed as to what this *patavinity* consists in.

PATE. In *fortification*, a sort of platform resembling what is styled a horse-shoe, and usually erected in marshy grounds to cover a gate of a town.

PAT'E, } In *heraldry*, a cross, small in
PATTEE, } the centre, and widening to the extremities, which are broad.

PATELLA, Lat. *patella*, a little deep dish: dim. of *patina*, a dish. 1. In *anatomy*, a small flat bone of the leg, commonly known as the knee-pan.—2. In *conchology*, the limpet-shell: a subconic univalve shell, shaped like a basin, without a spire, and inhabited by a limax. Order *Cyclobranchiata*, Cuv.

PATELLIMANI. A tribe of pentamerous coleoptera, comprehending the genera *Dolichus*, *Agonum*, *Chlenius*, *Dicelus*, &c. &c. They frequent the shores of rivers and other aquatic localities. The *patellimani* are thus named from the form of the two anterior tarsi: *patella*, a little dish, and *manus*, a hand.

PATEN, Lat. *patina*. In *ecclesiastical usage*, the saucer on which the chalice rests.

PATENT, } Lat. *patens*, opening: ex-
PAT'ENT, } panding. 1. Applied to leaves which form a moderately acute angle with the stem or branch on which they grow.—2. A privilege from the crown, granted by *letters-patent* (q. v.), conveying to the individual or individuals, therein specified, the sole right to make, use, or dispose of, some new invention or discovery, for a certain specified time. One to whom such privilege is conveyed by patent is called a *patentee*. A patent costs for the three kingdoms about 400*l.*, for stamps, fees, &c.

PATENT-YELLOW. A pigment obtained by fusing a mixture of oxide and chloride of lead.

PATERA. A vessel used in the Roman sacrifices, sometimes introduced as an ornament in the Doric frieze.

PATERNOSTER, Lat. *pater noster*, our father. 1. The Lord's Prayer, thus named from the two first words of it in Latin. The term is now often used for a rosary or string of beads used by Roman Catholics in their devotions, and also for every tenth bead of the same, which is large and requires the repetition of the prayer, whereas the other beads only require *Ave Marias*.—2. In *architecture*, rows of beads carved on mouldings.—3. In

heraldry, a paternoster cross is one represented on the escutcheon as if formed of beads.

PATHE'TIC. Relating to the passions. The *pathetic muscle* is the superior oblique muscle of the eye, which is instrumental in expressing certain passions. The fourth pair of nerves are distributed to it, and are hence termed *pathetic nerves*.

PATHOOGNOMON'IC, from *παθος*, disease, and *γινωσκω*, to know. An epithet for such symptoms as are peculiar to a disease, or for such as are properly characteristic.

PATHOO'KOMY, from *παθος*, passion, and *γινωμην*, signification. Expression of the human passions by proper signs; the modes of action indicative of passion.

PATHOLO'OGY, from *παθος*, disease, and *λογος*, discourse. The doctrine of diseases; that branch of medicine which treats of the nature of diseases.

PA'TINA. 1. A name common to various sorts of ancient Roman domestic vessels.—2. In *numismatics*, the genuine rust of antique medals.

PA'TOIS, Lat. *pater*, father. The dialect peculiar to lower classes.

PA'TRES CONSCRIPTI. Conscript Fathers. A name for the Roman senators in general, but originally applied only to the 200 created subsequent to the appointment of the 100 *patres* by Romulus, because they were written down or put upon the list along with these.

PATRIARCH, from *πατρις*, a father, and *αρχος*, chief. 1. The father and ruler of a family. The title is usually applied to the progenitors of the Israelites, Abraham, Isaac and Jacob, and to the heads of families before the flood.—2. In the *Christian church*, a dignitary superior to the order of archbishops, as the patriarch of Constantinople, Alexandria, &c., which are styled *patriarchates*.

PATRIARCH'AL CROSS. In *heraldry*, a cross which has its shaft crossed twice.

PATRIC'ANS. 1. The descendants of the Roman senators (*patres*), created by Romulus, in contradistinction to the *plebeians* or people. The dignity was subsequently enjoyed by all who became senators by other means than hereditary claims.—2. In *church history*, the followers of Patricius, who maintained that the substance of the flesh was the work of the devil, and that it was therefore a virtue to abuse or even destroy it!

PAT'RIK, ST., ORDER OF. An Irish order of knighthood, instituted by George III. in 1783.

PAT'RIOT. In the *Latin of the middle ages*, *patriola* signified a native, in contradistinction to *peregrinus*, a foreigner; and as the native or citizen was considered

to be attached by his interests to the Commonwealth, the word *patriot* gradually acquired the meaning of a citizen who loves his country (*patria*).

PATRIPAR'SIANS, from *pater*, father, and *passio*, passion. A religious sect who held that God the Father suffered with Christ.

PATRI'STIC, Lat. *pater*. In *theology*, related to the fathers of the church, as *patristic theology*.

PATROL', Fr. *patrouille*, from *patrouiller*, to paddle about. A guard of observation, who *patrol* or march during the night, to observe what passes, and secure the safety of a certain station.

PA'TRON. 1. A *patron* among the Romans was a person who had freed his slave, but retained some power over him after his emancipation; also a person in power, under whose protection a few inferiors (*clients*) put themselves, under certain conditions of personal service.—2. In the *canon and common law*, a person who, having the advowson of a parsonage, vicarage, or like spiritual promotion, belonging to his manor, has the gift and disposition of the same, and may present to it whenever it shall become vacant.—3. In the *Romish church*, a guardian saint, whose name is borne by the object protected.

PAUL. A short bar of wood or iron, fixed close to the capstan or windlass of a ship, to prevent those engines from rolling back when they are charged with any great effort.

PAUL BITS. Pieces of timber placed perpendicularly before the windlass of a ship, and serving as supports to the pauls which are pinned to them.

PAUL'ANISTS. A heretical sect, founded by Paulus of Samosata, in the third century.

PAUL'ICIANS. Christians of the seventh century; a branch of the ancient Manichees, so called from their leader, one Paulus, an Armenian. They endured great persecution, but were at length exterminated.

PAUSE, Lat. *pausa*, a stop. 1. A temporary cessation in reading. The use of punctuation is to mark the pauses in writing. Besides the ordinary pauses, which mark the sense, and which are the same in prose and verse, there is in verse a *caesural pause*, which divides the verse, and a *final pause*, which closes it.—2. In *music*, a mark consisting of a curve drawn over a dot \frown , and signifying that the note or rest over which it is placed is to be continued beyond the regular time.

PA'VAN. Peacock-dance. A grave Spanish dance, in which the gentlemen dance with cap and sword, princes in their robes, and ladies with their long trains. The name is from Lat. *pavo*, a peacock.

PAVED-WAY. A certain description of tramway, but formed of stone instead of iron, and which may be described as a medium between a road and a railway.

PAVING. } *Paving* is applied to the

PAVEMENT. } covering of stones laid

over roads. The flat paving laid down on footpaths is termed *pavement* or *flagging*, and the line of stone set on edge, and which separates the road from the footpath, is called the *curb*, as keeping each sort of paving in its place. When the paving-stones of a street are not dressed, they form a *rubble causeway*: when they are properly dressed and pointed, they form an *aisler causeway*.

Brick has been used, and is still used in Amsterdam, Venice, &c., as a paving material, and wood is at present under experiment for that purpose; but the common materials are granite and Purbeck-stone, though basalt (*whinstone*) is very much used in Scotland, and other localities where it is plentiful. In France, gritstone (*grès*) is used. In the interior of some edifices, the pavement is formed of marble, often variegated and inlaid with mosaic work. For flagging, the Arbroath and Newcastle flags are perhaps the best; but flagging is now beginning to be superseded, in some of the large towns, by various bituminous preparations, as Robinson's Parisian bitumen, Bastenne Ganjac bitumen, Scottish asphaltum, &c., which are employed to form the surface, the foundation being any coarse material. *Diamond pavements* have the stones laid diagonally. *Tessellated pavement* is composed of mosaic work, made of square pieces of stone, &c., called *tesserae*, imbedded in cement. This was the favourite pavement of the Romans, and it was certainly an improvement on the painted pavements of Greece.

PAVILION (Fr.), from Lat. *papilio*, a butterfly. 1. A tent, or covering in the form of a tent.—2. In *architecture*, a kind of turret or building, usually insulated, and comprised beneath a single roof. The name is also given to the projecting part in front of a building, and which sometimes flanks a corner, when it is termed an *angular pavilion*.—3. Among *jewellers*, the under side and corner of brilliants, lying between the girdle and collet.

PAVO. The Peacock. A genus of gallinaceous fowls, characterised by a crest on the head, and by the coverts of the tail of the male being larger than its quills, and capable of being erected, so as to form a circle. The shining, lax, and silky barbs of these feathers, and the ocellated spots that decorate their extremities, are well known in the common peacock, *P. cristatus*. Lin., originally from the north of India, and introduced into Europe by

Alexander. The magnificent plumage of this superb bird is surpassed by that of the wild ones.

PAVO ET INDUS. The Peacock and India. A constellation situated in the Antarctic circle. It contains 26 stars, of which one is of the second magnitude.

PAVO'NIA, from *pavo*, a peacock. 1. A coral with a deep and isolated cell, containing a large depressed polypus, very similar to the actinia; both as regards its structure and appearance.—2. A genus of plants. *Monadelphia*—*Polyandria*. Most of the species are shrubs, and all inhabit hot climates.

PAWN. A pledge lodged for the security of the payment of a sum of money borrowed. The term is applied to goods, and not to real estate. Those individuals who lend money on pledges are termed *pawnbrokers*, and the business they carry on in this way is *pawnbroking*. Pawnbrokers are required to take out a license, and are allowed to charge interest at from 15 to 25 per cent., with other fees for duplicates.

PAY. Among *seamen*, to *pay* is to daub the surface of any body with some substance, as tar, to protect it from injury by water, weather, &c. *Paying-off* is the movement by which a ship's head falls to leeward. The same term is also used for the discharge of the ship from actual service. *Paying-out* or *paying-away* is the act of slackening a cable or other rope, so as to let it run out of the vessel.

PAY'N. The person named in a bill or note, as he to whom the amount is promised or directed to be paid.

PEA. One of the most esteemed of the pulse plants, introduced into Britain by the Romans. There are several varieties, but the common garden-pea (*Pisum sativum*), and the common grey or field-pea (*Pisum arvense*), are the most generally cultivated.

PEACH, Fr. *pêche*. The fruit of the peach-tree, the *Amygdalus persica*, a native of Persia, hence called by the ancients *Malus Persica*, or Persian apple: also the tree itself.

PEA'COCK. } See **PAVO**. The name *pea-*

PEA'-FOWL. } *cock* properly belongs to the male, but it is popularly applied to the species in general, though the female is, for distinction, called a *peahen*. The prefix *pea* is from the French *paon*, contracted from Lat. *pavonis*, from *pavo*, the peacock.

PEAK. In *naval language*, the name given to the upper corner of those sails which are extended by a gaff, or by a yard crossing the mast obliquely.

PEARL, Sax. *pearl*, Ir. *pearla*, Welch *perlyn*, Ger. and Fr. *perle*, It. and Sp. *perla*. Pearls are well-known globular concretions, found in several species of

shell-fish, but particularly the mother-of-pearl oyster (*Concha margaritifera*, Lin.), found in various parts of the world, particularly on the west coast of Ceylon, on the coast of Coromandel, in the Gulf of Persia, at the Sooloo Islands, off the coast of Algiers, the St. Margarita or Pearl Islands, in the West Indies, &c. Much difference of opinion has existed with respect to the production of pearls in the oyster, but it seems now to be generally believed they are the result of disease, whereby the pearly secretion, instead of being spread over the shell, is accumulated round foreign bodies accidentally introduced into the shell.

PEARL SHELLS. Mother-of-pearl shells. See MOTHER-OF-PEARL.

PEARLSTONE. A variety of obsidian, which has a pearly lustre, occurring in globular and concentric lamellar concretions. Sp. gr. from 2.2 to 2.55.

PEARL WHITE. Subnitrate of bismuth, obtained by pouring the nitrate of that metal into a dilute solution of sea-salt, whereby a beautiful light white powder is obtained.

PEAT. An intermediate substance between simple vegetable matter and lignite; the conversion of peat into lignite being gradual, and brought about by the action of water. It is composed of the remains of many different plants, but probably a great portion is derived from the *Sphagnum palustre*. The process of its formation is owing to the perpetual destruction of the lower roots of the plants, while the upper parts continually send off new roots, thus furnishing a perpetual supply of decomposing matter. *Peats* are the peat-bog cut out into small rectangular pieces, and dried for fuel. *Peat-soil* is peat in a state of decomposition, on which agricultural produce may be grown.

PEBBLES. Siliceous stones larger than gravel, the round form of which is owing to their mutual attrition caused by the action of water.

PECARY, } The *Tajouca* of South Ame-

PECARY, } rica, a quadruped placed among the hogs by Linné. It has shorter legs than the hog, the bristles are stronger, resembling the quills of the porcupine, and the body is less bulky.

PECH'BLEND. The German name for *Pitchblend* (q. v.).

PECK. A dry measure for grain, pulse, &c., equal to 2 imperial gallons, or 554 cubic inches.

PE'CORA. A name which has been used to designate all mammiferous animals which have no front teeth in the upper jaw, as the ox, sheep, goat, camel, &c.

PECTEN, Lat. *pecten*, a comb. 1. In conchology, the scallop or comb shell. A genus separated from the oysters by Brugnières. The pectens are all marine bivalves belonging to the *Ostracea*, Cuv.,

and forming the type of the family *Pecteniæ*, Lam.—2. In anatomy, the pubes.

PECTIC ACID. The name given by Braconnot to an acid which he conceives to be universally diffused through vegetables, and analogous to if not identical with jelly: hence the name, from *πηκτις*, coagulum. It is most easily obtained from the roots of carrots.

PECTINE. A vegetable jelly, obtained by mixing alcohol with the juice of ripe currants (or any similar fruit), till a gelatinous precipitate falls, which is pectine: *πηκτις*, jelly.

PECTINATE, Lat. *pectinatus*, comb-like. Applied to leaves, &c., when the segments are extremely narrow and straight, like the teeth of a comb.

PECTINIBRANCHIATA. An order of Mollusca, comprising, beyond all comparison, the most numerous division, inasmuch as it includes all the spiral univalves, and several that are simply conical. The *branchiæ*, composed of numerous lamellæ or stripes, laid parallel with each other like the teeth of a comb (*pecten*), are attached on one, two, or three lines, according to the genus, to the ceiling of the pulmonary cavity, which occupies the last whorl of the shell, and which has a large opening between the edge of the mantle and the body. They are divided into families, according to the form of the shell, viz. *Trochoida*, *Capuloida*, and *Buccinoida*.

PECTORAL. Appertaining to the breast: *pectus*, the breast. *Pectoral medicines* are those intended to relieve diseases of the chest. The *pectoral fins*, or *pectorals* of a fish, are those fins situated on the sides immediately behind the gills.

PECTORALES PEDICULATI. A family of fishes, consisting of certain Acanthopterygii, whose carpal bones are elongated, so as to form a sort of arm which supports their pectorals.

PECTORIL'OGUY, from *pectus*, the breast, and *loquor*, to speak. The peculiar sound obtained in a stethoscopic exploration of the chest, when the instrument is placed over an excavation of the lungs. Under these circumstances, the voice appears to come direct through the tube of the instrument, from the chest of the patient to the ear of the auscultator.

PECU'LIAR. In canon law, a parish or church which has jurisdiction within itself, and is competent to grant probates of wills and letters of administration, exempt from the bishops' courts. The *Court of Peculiars* is a branch of the Court of Arches. It has jurisdiction over all the parishes dispersed through the province of Canterbury, in the midst of other dioceses, which are exempt from the ordinary jurisdiction, and subject to the metropolitan only.

PEDULIUM (Lat.). In *Roman law*, the property which a slave might acquire, independent of the control of his master.

PEDAGOGUE, *παις*, boy, and *αγωγος*, leader. Among the ancient Greeks, a slave charged with the personal care of a boy, from the earliest age after infancy, until the 17th or 20th year.

PEDAL, Lat. *pedalis*. 1. Belonging to the foot (*pes*, *pedis*).—2. A large pipe of an organ, because played and stopped by the foot.

PEDALMA'SCHI. A Turkish officer, who looks after the interest of the Sultan in cases of legacies.

PEDATE, Lat. *pedatus*, bird-foot-like. Applied to ternate leaves, which have their lateral leaflets compounded in their forepart.

PEDATIFID, Lat. *pedatifidus*, divided like the toes of a waterfowl. Applied to leaves when their segments are not entirely separated.

PEDICEL, Lat. *pedicellus*. A partial flower-stalk, or subdivision of the general peduncle.

PEDICULATE, Lat. *pedicellatus*, having a pedicel or partial flower-stalk: *pedicellus*, a partial flower-stalk. Applied to flowers, glands, nectaries, &c. when placed at the top of a stalk.

PEDICELLATA. An order of radiated animals or zoophytes, of the class *Echinodermata*, of which the star-fish (*asterius*) may be taken as the type.

PEDICLE, Lat. *pediculus*, a little foot. 1. Applied to the support of some species of *Lepas*, by which they attach themselves to wood, &c.—2. In *botany*, the term is used in the same sense as *pedicel* (q. v.)

PEDICULATION. *Morbis pedicularis*. A disease of the body in which lice are continually bred in the skin: *pediculus*, a louse.

PEDICULUS, a louse: from *pes*, a foot, so named from its many feet. A genus of parasitical insects, including the various species of lice found on man, beasts, and birds.

PEDIGEROUS. Having legs: *pes*, a foot, and *gero*, to bear. The body of the myriapod is divided into numerous *pedigerous* segments.

PEDIMANI, Lat. *pes*, and *manus*, a hand. A family of marsupial animals.

PEDIMENT, from *pes*, a foot. An ornament, generally of a low triangular form, which crowns the ordonnances, finishes the fronts of buildings, and is used as a decoration of windows, doors, &c.; or more properly the angular end of a building which surmounts a portico.

PEDIPALPI. A family of Arachnides, the second of the Pulmonarie, in which are observed very large *palpi*, resembling projecting arms terminated by a forceps

or a claw (*pes*). The scorpions belong to the family.

PEDOMETER, from *pes*, a foot, and *μετρον*, measure. 1. A mechanical instrument in the form of a watch, and carried in the pocket, to register the number of steps or paces which the bearer makes in travelling between one place and another. The old pedometer has a string or chain attached to the foot, but the improved instrument now in use consists of a lever or pendulum, one end of which is weighted or inlaid, and the other supported by a delicate spring, and so nicely adjusted that each step of the wearer produces a vibration, and moves a ratchet wheel one tooth, and the latter being geared into a train of wheels, moves indexes or hands over the face of a dial-plate, on which the number of vibrations, and consequently of steps, is indicated.—2. The name *pedometer* has also been used to designate an instrument similar to a pedometer, attached to carriage-wheels, to register the number of revolutions which they make; and the perambulator is sometimes also so called.

PEDUNCULATE, Lat. *pedunculatus*, having a peduncle. Growing on a fruit-stalk.

PEDUNCLE, Lat. *pedunculus*. 1. A flower-stalk, or that which springs from the stem, and bears the flowers and fruit and not the leaves.—2. In *conchology*. See **PEDICLE**.

PEEK. In *nautical language*, a general name for the upper corners of sails, extended by a gaff, or by a yard crossing the mast obliquely, as the mizen-yard of a ship. To *peek* the mizen is to put the mizen-yard perpendicular to the mast. The *peek-haliards* are the ropes or tackles by which the outer end of the gaff is hoisted.

PEEPUL-TREE. The *Ficus religiosa* or sacred fig of the East Indies.

PEER. 1. An equal.—2. A nobleman, as a *peer of the realm*. In England persons belonging to the five degrees of nobility are all peers, for whatever formality of precedence may attach to the title of duke, earl, marquis, viscount or baron, it is a barony which conveys the right to a seat in the *house of peers*, and confers every privilege annexed. It is as barons, not as dukes, bishops, &c. that peers take their seats in parliament, and they take their general name of *peers* from being formerly regarded as the companions of the sovereign.

PEGASUS. 1. The winged horse of the poets, which according to the Greeks sprung from the blood of the gorgon Medusa, after Perseus had cut off her head.—2. A constellation of the northern hemisphere; it contains 89 stars, of which 4 are of the second magnitude.—3. In *zoology*, a genus of *Lophobranchiate fishes*.

PEG'MATITE. A name given by the French mineralogists to a variety of granite composed of granular quartz and felspar, called from its appearance graphitic stone.

PEIRAM'ETER, from *πιρην*, to strain.

An instrument invented by John Macneill, to indicate the amount of resistance offered to the passing of wheeled carriages, &c., by the surfaces of roads of different constructions.

PELA'GIAN. Belonging to the sea: *pelagus*, the sea.

PELA'GIANS. A Christian sect, followers of the doctrines of Pelagius, a monk of Bangor, who denied original sin, asserted the doctrine of free will, the merit of good works, &c.

PELAGUS. A sub-genus of seal (*Phoca*, Lin.). The monk (*Phoca monachus*, Gm.) found among the Grecian and Adriatic islands, is from 10 to 12 feet in length, and is that best known to the ancients. Name *pelagus*, the sea; it being found only in Pelagian situations.

PELECAN'IDE. *Pelicanus*, the type. A family of swimming birds.

PELECA'NOIDES. The name given by Lacepede to certain birds of the antarctic seas, which have the bill and figure of the petrel and the dilatable throat of the cormorant. Sailors call them petrels.

PELECA'NUS. The pelican: a genus of aquatic birds. Order *Palmipedes*; family *Totipalmate*. There is only one species, the *Ponocrotalus*, Lin., as large as a swan, entirely white, bill of extreme length, very broad, the lower mandible sustaining a naked membrane attached to its flexible branches, susceptible of being dilated into a large sac, in which it is said to transport both food and water. It is found more or less disseminated throughout the eastern continent, breeds in marshes, and lives entirely on live fish. Linné included in the genus the cormorants, frigate bird, and boobies. Name *pelicanus*, from *πτελαω*, to perforate.

PELECOID, } from *πτελαω*, a hatchet,
PELECO'DES, } and *ιδος*, like. A ma-

thematical figure in the form of a hatchet, contained under two quadrantal arcs and a semi-circle.

PELECOID.

on a sand-bath, with a contrivance for constantly returning on the materials at the bottom all the liquid of the menstruum,

PELICAN.

PELICAN. 1. In ornithology. See **PELECANUS**.

—2. A description of alembic formerly much used in cases of long digestions

which would otherwise evaporate. It is not now used.

—3. An instrument for extracting teeth.

—4. A piece of ordnance equal to a quarter culverin, and carrying a six-pound ball.

PELLA'GRA, }
PELLA'GRA, }
from *πτελος*,
black, & *αγγελος*,
seizure. The name of a peculiar disease, very common to the inhabitants of the Lombardo-Venetian plains.

It commences with a red shining spot, on the back of the hands, or some other part of the body; this increases in size, produces numerous small tubercles of different colours, and assumes a very malignant appearance; but usually disappears during the winter, and the part again becomes well. During this first attack the health does not seem to suffer, but next season the affection returns with increased vigour, the patient becomes emaciated, enfeebled, and melancholy; and as the disease advances, it assumes various forms, the patient becomes truly wretched, and suffers every extreme of torture which is known to attack the human being, before death puts an end to his misery. Before the disease breaks up the constitution, the local affection sometimes appears successively for several summers, but often proves fatal after the second or third. The disease is confined to the agricultural population, and the poorest classes, but the cause of it is not known.

PEL'LCLE, Lat. *pellicula*, dim. of *pellis*, a skin. 1. A film or thin skin, as that which lines the shell of an egg, or which covers the seeds and some other parts of plants.—2. In *chemistry*, a thin crust appearing on the surface of a solution of salt evaporated to a certain degree, and which consists of saline particles crystallised.

PEL'LTORY. 1. In *pharmacy*, the root of the Spanish chamomile (*Anthemis pyrethrum*), a native of the Levant, Barbary, and the south of Europe. It is used in medicine as a stimulant.—2. In *botany*, see **PARIETARIA**. The *Bastard Pellitory* is a species of *Achillea*; *Pellitory of Spain* is another name for the *Anthemis pyrethrum*, which affords the pellitory of the shops.

PELLS. In *England*, the clerk of the pells is an officer of the exchequer, who enters every teller's bill on the parchment rolls, the roll of receipts, and the roll of disbursements; Lat. *pellis*, a skin.

PELT, } *Pelt* is properly the raw skin
PELT'RY, } of an animal, with the hair on it; and *peltry* is the collective term by which such skins are denominated in commerce. The terms are, however, now restricted to the skins of those animals found in high latitudes, as the beaver, bear, moosedeer, marten, minx, sable, woolverin, &c. When the insides of the skins are dressed, they are then denominated *furs*; but in their raw state they are *peltry*.

PEL'TA. 1. A small shield or buckler, used by the ancients.—2. A fruit of an oblong, flat, and obtuse form, observed in the lichen tribe.

PELTASTÆ. Light-armed infantry among the Greeks were so called, as they carried the target.

PEL'TATE, Lat. *peltatus*, target-shaped: *pelta*, a target. Applied to leaves when they have the stalk inserted into their middle, like the arm of a man holding a shield.

PEL'VIS, from *πίλος*, a basin. The cavity of the body below the belly, which is shaped like the basin used in ancient times.

PEN'PHIGTS, from *πυφίξ*, a vesicle. An eruption, consisting of vesicles of various sizes, and mostly attended by fever.

PEN. A well-known instrument for writing, of which there are numerous varieties. The first sort of pens used appear to have been metallic *styles*, the next reeds, the third quill-pens, and now we have in some measure returned to the use of metallic pens. Numerous forms have been given to metallic pens, but those which suit best are those which approach the nearest to the common quill pen. Drawing-pens consist of de-

licately formed steel blades, drawn together and adjusted according to the breadth of the line wanted, by means of a fine set-screw. *Music pens* are made for ruling the five staves of music at once, having as many points.

PEN'ALTY. Fine or forfeiture by way of punishment: *pena*, punishment. The law inflicts *penalties*, sometimes pecuniary and sometimes personal, and the non-fulfilment of a bond or other agreement subjects the party to the *penalties* therein expressed.

PEN'ANCE. In the *Romish church*, one of the seven sacraments, consisting in the infliction of bodily suffering, as fasting, flagellation, &c.

PEN'ATES. The domestic gods of the Romans. They were properly the tutelary deities of the Trojans, adapted by the Romans, and thus named from *penitus*, because they were kept within the house.

PEN'CILS; are of two kinds: small hair brushes employed by painters in oil and water colours; and slender cylinders of black lead, either naked or inclosed in wood, for drawing black lines upon paper. The first sort are called for distinction *hair pencils*, and are made of various materials, as the bristles of the boar, camel's hair, swan-down, &c.; the second, styled *black lead* or *lead pencils*, are usually composed of slender parallel pipes of plumbago, inclosed in cases of cedar wood, but of late years the plumbago has been formed into little cylinders, and fitted to a peculiar sort of *pencil-case*, provided with an iron wire and screw, to protrude a minute portion of the plumbago beyond the tubular metallic case: these are denominated *ever-pointed pencils*.

PENCIL OF RAYS. In *optics*, a double cone or pyramid of rays, diverging from

some luminous point, and which, after falling upon and passing through a lens, converges again on entering the eye.

PENDANT, from *pendeo*, to hang. 1. A hanging ornament.—2. In *nautical language*, a short piece of rope, fixed on each side under the shrouds, on the heads of the main and foremast, from which it depends, as low as the cat-harpings, having an iron thimble to receive the hooks of the tackle. There are also many other pendants of this sort, generally consisting of single or double ropes, to whose lower extremity is attached a block or tackle. *Pendant* is also the name of the long nar-

row banner displayed from the mast-head of a ship of war, and usually terminated in two points, called the swallow's tail: written also *pennant*, and Fr. *pennon*.

PEN'DENT BRIDGE. A wooden bridge with abutments only at the ends, and supported by posts and pillars.

PENDEN'TE LA'ITE. During the dispute: while the suit is undetermined.

PENDEN'TIVE. In *architecture*, the whole body of a vault suspended out of the perpendicular of the walls. *Pendentive bracketing*, or cove bracketing, springing from the rectangular walls of an apartment upwards to the ceiling, and forming the horizontal part of the ceiling into a circle or ellipse. *Pendentive cradling* is the timber-work for sustaining the lath and plaster in vaulted ceilings.

PENDULUM. In *mechanics*, any heavy body so suspended that it may vibrate about some fixed point by the action of gravity. The vibrations of a pendulum are called its *oscillations*; the time of each being counted from the time of its descent from the highest point on one side till it attains the highest point on the opposite side. The point A, about which the pendulum moves, is called the *point of suspension* or *centre of motion*, and the line PQ,

PENDULUM.

parallel to the horizon, is the *axis of oscillation*. Pendulums receive different denominations, according to the materials of which they are composed, or the purposes they are intended to answer. A single weight attached by a string, &c., is called a *simple pendulum*; but, in order to counteract the effects of variations of temperature upon the suspending medium, several contrivances have been adopted, under the name of *compensation pendulums*; these again take particular names, according to their form and materials, as the *gridiron pendulum*, the *mercurial pendulum*, the *lever pendulum*, &c. The gridiron pendulum is composed of any odd number of rods, so connected that the expansion or contraction of the one set of them is counteracted by that of the other. The mercurial pendulum consists

of one rod with a vessel containing mercury at the lower end, so adjusted in quantity that whatever alterations take

GRIDIRON
PENDULUM.

MERCURIAL
PENDULUM.

place in the length of the pendulum, the centre of oscillation remains the same, the mercury ascending when the rod descends, and *vice versa*. Our clocks are nothing more than pendulums, with wheel work attached, to register the number of vibrations, and with a weight or spring having force enough to counteract the retarding effects of friction and the resistance of the air; and when the pendulum is so adjusted as to beat or vibrate $60 \times 60 = 3600$ in an hour, it is called a *seconds pendulum*, and its length at London is thirty-nine and one-eighth inches. This length varies with the latitude, in consequence of the variation of the force of gravity.

PEN'ETRALE. The most sacred part of an ancient temple, which usually contained an altar, dedicated to Jupiter Herceus, the supposed protector of its sanctity.

PEN'ETRALIA. Small chapels in the innermost part of Roman houses, dedicated to the *Penates*, &c., in which was deposited whatever was deemed most valuable.

PEN'QUIN. In *ornithology*, a name first given by the Dutch to the Aptenodytes of the south, to indicate the oily nature of their fat. See *APTENODYTES*.

PENCIL'ATE, Lat. *pencilium*, a pencil. In *zoology*, when a part supports bundles of diverging hair.

PENITENTIARY. 1. A presbyter in the ancient Christian church, whose business was to hear confessions, and award private penance, in cases where it was unadvisable to censure publicly.—2. An office at the Court of Rome, in which are examined and delivered out the secret bulls, graces, and dispensations, relating to cases of conscience.—3. An officer in

some cathedrals, vested with power from the bishop to absolve, in cases reserved to him.—4. A house of correction, where offenders are confined for punishment and reformation, and compelled to labour.

PEN'ITENTS. In *Roman Catholic* countries, certain religious fraternities, distinguished by their particoloured garments.

PENNAT'ULA. The *sea-pen* or *feather*: a genus of zoophytes, distinguished by a double set of branches, extending from a calcareous axis, like the vanes of a quill. They float about in the waters of the ocean, just as the wind and current may direct them.

PEN'NIFORM, from *penna*, a feather, and *form*; having the form of a feather. Applied to muscles when the fibres pass obliquely outwards on either side from a tendinous axis.

PEN'NON. In *heraldry*, a small pointed flag, borne by a gentleman. When knight-hood was conferred upon him, the point was cut off, and the square flag that remained was a *banner*.

PEN'NY, plu. *pence*. An ancient English silver coin, but now a copper coin: the twelfth part of a shilling. The penny was the first silver coin struck by our Saxon ancestors: it weighed 22½ grains troy, being the 240th part of their pound.

PEN'NYWEIGHT. A troy weight, the 20th part of an ounce, and equal to 24 grains.

PEN'SIONER. Literally, one who receives an allowance. At Cambridge and Dublin Universities, however, it is applied to students who live at their own expense.

PEN'STOCK. A sluice or floodgate, serving to retain or let go at pleasure the water of a mill-pond, &c.

PENTACAP'SULAR, from *πεντε*, five, and *capsula*, a capsule. Having five capsules or cells.

PENTACHORD, from *πεντε*, five, and *χορδη*, chord. A musical instrument having five strings.

PENTACOC'COUS, from *πεντε*, five, and *coccus*, a berry. Having five united cells, with one seed in each: five-seeded.

PENTACRE'NUS, from *πεντε*, five, and *encreinus*. A genus of acephalous zoophytes, of which there are few known living species, but vast quantities are found fossil in the lower oolite formation, and especially in the lias. The animal is so named from the pentagonal formation of its vertebral column.

PENTACROS'TIC, from *πεντε*, five, and *acrostic*. A set of verses so disposed as to have five acrostics of the same name in five divisions of each verse.

PENTADAC'TYL, from *πεντε*, five, and *δακτυλος*, a finger; having five fingers.

1. Applied to leaves.—2. The five-fingered fish, common in the East Indian seas, and marked with five black streaks on each side, resembling the prints of five fingers.

PEN'TAGON, from *πεντε*, five, and *γωνία*,

an angle. A geometrical figure having five sides and as many angles.

PEN'TAGRAPH. An absurd orthography of *Pantograph* (q. v.).

PENTAGYN'IA, from *πεντε*, five, and *γυνή*, a female. An order of plants having five pistils in a hermaphrodite flower.

PENTAE'DRON, from *πεντε*, five, and **PENTAE'DRON.** } *ῥόδα*, a base. A figure of five equal sides. *Pentahedral*, having five equal sides.

PEN'TAHEXAE'DRAL. Having five (*πεντε*) ranges of faces, one above another, each range consisting of six faces, that is, *hexahedral*.

PENTAM'ETER, from *πεντε*, five, and *μετρον*, measure. A sort of verse in ancient poetry, consisting of five feet. The first two feet may be either dactyls or spondees, the third always a spondee, and the two last always anapaests. A pentameter verse subjoined to a hexameter constitutes what is called elegiac.

PENTAN'DRIA, from *πεντε*, five, and

ανηρ, a male. The name of a class of plants in the sexual system of Linnaeus, embracing those which have hermaphrodite flowers and five stamens.

PENTAN'GULAR, from *πεντε*, five, and *γωνίαν*. Five-angled.

PENTAPET'ALOUS, from *πεντε*, five, and *πέταλον*, a petal: five-petalled.

PENTAPHYL'LOUS, from *πεντε*, five, and *φύλλον*, a leaf: five-leaved.

PENTASPER'MOUS, from *πεντε*, five, and *σπέρμα*, seed: five-seeded. Applied to capsules.

PEN'TASTILE, from *πεντε*, five and

στύλος, a column. A building having five columns in front.

PEN'TATEUCH, from *πεντε*, five, and *τευχος*, a book. A name for the five books of Moses.

PEN'TATHLON, from *πεντε*, five, and *ἀθλος*, exercise. The five exercises performed at the Grecian games; wrestling, boxing, leaping, running, and playing at discus.

PEN'TECOST. Πεντηκοστή, from *πεντε*, five, and *κοστος*, fiftieth. 1. A solemn festival among the Jews, so called because celebrated on the fiftieth day after the sixteenth of Nisan, which was the second day of the passover. It was also called the *feast of weeks*, because it was celebrated seven weeks after the passover. — 2. Whitsuntide.

PEN'TELIC MARBLE. A beautiful variety of Parian and Carrara marble, named from Mount Pentelicus, near Athens, where it was quarried.

PENT'-ROOF, Fr. *pente*, a slope. A roof formed like an inclined plane, the slope being all on one side. called also a shed-roof.

PENULT, } Lat. *pene ultima*, almost
PENULTIMA, } last. In grammar and prosody, the last syllable but one.

PENUM'BERA, *pens umbra*, almost a shadow. A partial shade observed on the margin of the perfect shadow in an eclipse. It arises from the great rotative magnitude of the sun.

PEON. In the *East Indies*, a footman or foot-soldier; hence *pawns* at chess.

PEREPI'NO MARBLE. A calcareous stone found in the environs of Rome, something of the nature of *Travertino*. It is supposed to be the ancient *Saxum Albanum*.

PER'LUM. An upper garment worn by the females of Ancient Greece.

PE'PO, from *πέρω*, to ripen. In botany (1.) the Gourd (*Cucurbita pepo*); (2.) a fleshy succulent seed-vessel, the seeds of which are inserted into the sides of the fruit.

PEP'PER, Sax. *peppor*, Lat. *piper*. 1. In botany, see PIPER and POLYGONUM. — 2. The berry or fruit of different plants, especially of the genera *Piper* and *Capsicum*, having an aromatic, hot, pungent taste. Used for seasoning, &c. The common sorts are (1.) *black pepper*, the fruit of the *Piper nigrum*, a creeping plant, cultivated in India, Siam, and the Eastern Islands. (2.) *White pepper*, made by blanching the finest grains of the black pepper. (3.) *Cayenne pepper* is produced by several species of *Capsicum*, common to both Indies: the best is the *bird pepper*, imported from the West Indies. It is the produce of the *C. baccatum*, an annual plant. The *Guinea pepper*, the produce of the *Capsicum an-*

num, is also highly valued. What is called *Cayenne pepper*, in commerce, is, however, an indiscriminate mixture of the powder of the dried pods of seven or eight species of capsicum. (4.) *Long pepper* is the produce of the *Piper longum*, a perennial of Malabar and Bengal. (5.) *Jamaica pepper* is the produce of the *Myrsine pimenta*. See PIMENTO.

PEP'PER DULCE. The *Fucus pinnatifidus*, often eaten as a salad. It tastes like cresses.

PEP'PERMINT. The *Mentha piperita*, an indigenous plant. It has a more penetrating smell than the other mints, and a strong pungent taste, glowing like pepper; hence its name.

PEP'PERWATER. A liquor prepared from powdered black pepper.

PER. A Latin preposition, signifying *by*. 1. Used in many phrases, as *per annum*, *per cent.*, &c. — 2. In chemistry, it is used as a prefix to *oxide*, to denote the furthest degree of oxidation which does not confer the property of acidity, as *per-oxide* of mercury; and to the names of acids, where acids have been discovered containing still more oxygen than those whose names end in *ic*, *perchloric acid*. A salt formed by the union of an acid with a peroxide, is termed a *per salt*, as the *pernitrate* of mercury. We have also *periodides*, *per-chlorides*, &c., on the same principle.

PERACU'TE, Lat. *peracutus*. Very acute. Applied to diseases when very severe.

PERAMBULA'TOR. Surveying wheel. An instrument for measuring roads, &c., where only moderate accuracy is required. As the great wheel turns round it communicates motion to a set of toothed wheels, which again move indexes or hands upon a dial-plate, and thus register the number of revolutions made by the wheel of the instrument; and knowing the circumference of this, the distance passed over is consequently known. The registering part of the machinery is sometimes attached to the wheels of carriages let on hire, to show the distance driven.

PER'SEND, or THOROUGH. The term applied to the heading-stones of a wall when they are carried through the whole thickness: if the stones only reach a part of the way through, they are termed *binders*.

PER'CA. The Perch. A genus of acanthopterygious fishes, and the type of the family *Percoides*, Cuv. The species are numerous. Name, *πέρκη ἢ πέρκις ὁ πέρκνυς*, black; *quia nigris maculis est varius*.

PERCEP'TION. In logic, the first act of the mind, which consists in the reception of ideas through the medium or instrumentality of the senses.

PERCH. 1. In *ichthyology*, see PERCA.
—2. A measure of length equal to $5\frac{1}{2}$ yards: a rod or pole.

PERCHLORATE. A salt formed by the union of the perchloric acid with a base.

PERCHLORIC ACID. Oxychloric Acid. An acid consisting of 1 equivalent of chlorine and 7 equivalents of oxygen, condensed into a colourless liquid of sp. gr. 1.6. It is obtained by distilling perchlorate of potash with an equal weight of sulphuric acid, diluted with a fourth of water. By redistillation with concentrated sulphuric acid, the perchloric acid may be obtained in a solid form, and crystallised. The discovery of this acid is due to Count Stadion.

PERCUSSION, from *percutio*, to strike. The striking of one body against another. The *centre of percussion*, in any body, or system of bodies revolving about a point or axis, is that point which, striking an immovable object, the whole mass is brought to rest in equilibrio, without acting upon the centre of suspension. In a straight stick, of uniform thickness, the centre of percussion is two-thirds of the length of the stick from the axis of motion. *Percussion caps* are little caps containing minute portions of fulminating powder, to be fixed on the nipple of a *percussion lock*, to ignite the powder in the barrel of the musket, when exploded by the stroke of the hammer or *dog-head*. Locks adapted to explode fire arms, &c. by these caps are called *percussion locks*.

PERE LA CHAISE. The name of a celebrated cemetery, in Paris, laid out in 1804. It was formerly the chief seat of the Jesuits' establishment in France, and was presided over by Pere La Chaise, Confessor of Louis XIV.

PERENNIAL, Lat. *perennis*, from *per*, and *annus*, a year. Lasting naturally more than two years. Applied to plants, the stems of which perish annually; but the roots last more than two years. The term is sometimes used in the sense of *perpetual*, or never ceasing, as a perennial stream, spring, &c.

PERFECT NUMBER, is a number equal to the sum of all its divisors.

PERFOLIATE, Lat. *perfoliatus*, from *per*, and *folium*, a leaf. Applied to plants, the leaves of which surround the stem at their base.

PERFORATE. One of Linnæus' natural orders of plants, comprehending such as have their leaves perforated with small holes.

PERFORATE, Lat. *perforatus*, penetrated. Applied to leaves through which the stems pass, and also to those penetrated with small holes.

PERGAMENEUS, Lat. *pergamena*, parchment. In *entomology*, when a part resembles parchment.

PERGUN'NAH. In the *East Indies*, a subdivision of a district answering to the English hundred.

PERI. In *Persian mythology*, the peris are the descendants of fallen spirits, excluded from Paradise until their penance is completed.

PER'ANTH, Lat. *perianthium*. The calyx properly and commonly so called when it is contiguous to, and makes part of, a flower, from *περι*, about, and *ανθος*, a flower. It has many forms.

PER'BOLOS, *περι*, and *βαλλω*, I cast. In *architecture*, an inclosure entirely round a temple, surrounded by a wall.

PERICARDIUM, from *περι*, around, and *καρδια*, the heart. The membranous bag which surrounds the heart, and the arterial and venous trunks connected with it. It contains a liquid which lubricates the heart.

PER'ICARP, Lat. *pericarpium*. The seed-vessel of a plant. From *περι*, about, and *καρπος*, seed.

PERICHÆTIUM, from *περι*, about, and *χαιτη*, a hair. A scaly sheath investing the fertile flower, and consequently the base of the fruit-stalk, of some mosses.

PERICHON'DRIUM, from *περι*, about, and *χονδρος*, a cartilage. The membrane that covers a cartilage.

PERICRANIUM, from *περι*, about, and *κρανιον*, the cranium. A membrane covering the outside of the cranium, and corresponding to the periosteum of other bones.

PERIDROME, from *περι*, around, and *δρομος*, a course. That part of a temple, or other like edifice, between the periptere and the wall, and which served among the Greeks as a promenade.

PER'IGEE, from *περι*, near, and *γη*, the earth. A term in the *ancient astronomy*, opposed to *apogee*, and signifying the nearest approach of the sun, or any of the planets, to the earth. In *modern astronomy*, the term *perihelion* is used, because it is not the sun but the earth which is in motion.

PERIGYN'IUM, *περι*, and *γυνη*, female. The areolate body formed in the genus *carex* by two bractee.

PERIGYNOUS, from *περι*, around, and *γυνη*, a female. Applied to the stamens of flowers, when they grow out of the corolla, calyx, or perianth, or are not in any way joined to the seed-vessel.

PERIHELION, } from *περι*, near, and
PERIHEL'LIUM, } ἥλιος, the sun. That point of the orbit of a planet or comet wherein it is nearest to the sun, being the extreme of the transverse axis nearest

the focus in which the sun is placed : opposed to *aphelion*.

PERIM'ETER, from *περι*, around, and *μετρον*, to measure. The sum of the boundary lines of any figure. In circular figures, the terms *circumference* and *periphery* are commonly used.

PER'IOD. *Περίοδος*, from *περι*, about, and *ὁδος*, a way. A circuit: hence—1. In *astronomy*, the time in which a planet or satellite makes one revolution in its orbit.—2. In *chronology*, a series of years by which time is reckoned; a revolution of time, at the end of which things comprised within the calculation shall return to the state in which they were at the beginning; as the Calippic *period*, the Dionysian *period*, the Julian *period*.—3. In *grammar*, a complete sentence; also the point which marks the termination of a period, thus (.).—4. Figures are sometimes marked off into periods of three places for convenience of reading large numbers, as £800,000,000 of national debt.

PERIOD'ICALS. In *literature*, a general name for all those publications which appear at regular intervals, whether devoted to general information or to some particular department of science. Newspapers, magazines, journals, and reviews, are all periodicals.

PERIODIC'ITY. The disposition of certain phenomena to recur at stated times or periods.

PERIE'CI, } *Περιοικοι*, from *περι*,
PERIE'CIANE, } about, and *οἶκος*, a house.
Neighbours: inhabitants of the earth who live in the same latitude, but in opposite longitudes. The term has been extended to all who live in the same latitude.

PERIOPTHAL'MUM, from *περι*, about, and *ὀφθαλμος*, the eye. A name for the nictitating membrane of the eyes of birds and fishes.

PERIOS'TEUM, from *περι*, about, and *ὀστέον*, a bone. The membrane which invests the external surfaces of all the bones, except the crowns of the teeth. It is called *pericranium* on the cranium; *periosteum* on the orbits; *perichondrium* when it covers cartilage; and *peridesmium* when it covers ligament.

PERIPATET'ICS, from *περιπατις*, to walk. An ancient sect of philosophers, followers of Aristotle, so named because they disputed while walking up and down the Lyceum at Athens.

PERIPH'ERY, from *περι*, about, and *φειν*, to bear. The circumference or bounding line of any curvilinear figure.

PERIPHORAN'THIUM, from *περιφειν*, to encircle, and *ανθος*, a flower. A kind of

involucre, in which the bracts are numerous, closely packed, and parallel to one another.

PERIPNEU'MONY, Lat. *peripneumonia*, from *περι*, and *πνευμων*, the lungs. Inflammation of the lungs.

PER'IPTERE, from *περι*, about, and *πτειρον*, a wing. A range of columns surrounding a temple, and distant from the wall an intercolumniation. The vacant space is termed a *peridrome*, and the temple having such periptere is denominated a *peripteral*.

PERIRHANTER'ION (Gr.), from *περιρραινειν*, to sprinkle. Lustral vases placed at the entrance of the ancient temples.

PERIS'CII. *Περισκυιοι*. Periscians: inhabitants of either frigid zone, where the sun, when in the summer signs, moves round about the horizon without setting, and consequently their shadows in the course of their day turn to every point of the compass: *περι*, around, and *σκια*, a shadow.

PERISPERM, from *περι*, around, and *σπερμα*, seed. A thick, farinaceous, fleshy, or horny part of the seeds of plants, either entirely or only partially surrounding the embryo, and inclosed within the investing membrane. It corresponds to the *albumen* of Gärtner.

PERISTAL'TIC. *Περισταλτικος*. Spiral: vermicular or worm-like, from *περιστλλαν*, to contract. Applied to the vermicular motion of the intestines, by which they propel forward their contents.

PERISTOME, from *περι*, around, and *στομα*, a mouth. The fringe-like membranous margin which in many mosses borders the orifice of the capsule or theca.

PERISTYLE, from *περι*, about, and *στυλος*, a column. A range of columns within a court or building, as the internal colonnade of an hypæthral temple.

PERISTSTOLE, from *περι*, about, and *συστολή*, contraction. The time between the *systole* or contraction of the heart, and its *diastole* or dilatation.

PERITONEUM, } *Περιτοναειον*, from *περι*,
PERITONÆUM, } about, and *τονων*, to extend. A strong simple membrane, by which all the viscera of the abdomen are surrounded, to prevent friction and retain them in their proper position.

PERITROCH'ium, from *περι*, around, and *τροχος*, a wheel. A wheel or circle concentric with the base of a cylinder, and moveable together with it about an axis. The axis, with the wheel and levers fixed in it to move it, constitute that mechanical power called *axis in peritrochio*. See WHEEL and AXLE.

PER'IWINKLE. 1. In *conchology*, the sea-

snail, or *Turbo littoreus*, Lin.—2. In *botany*, a species of *Vinca*.

PER'MIT, from *permetto*. A license or instrument granted by the officers of excise, authorising the removal of goods subject to excise duties. Permits are one of the useless nuisances of our excise laws.

PERMUTATION. In *algebra*, the arrangement of any determined number of objects in all possible orders, after each other.

PER'NIS. A genus of birds of prey: the honey-buzzards, separated by Cuvier from the kites. Order *Accipitres*, Lin., family *Diurnæ*, Cuv.

PERORATION, from *per* and *oro*, to pray. The concluding part of an oration, where the speaker recapitulates the principal points of his argument, and urges them with greater earnestness.

PEROXIDE. See *PER*.

PERPENDICULAR, Lat. *perpendicularis*, relating to a plumb-line (*perpendicularum*), from *per* and *pendeo*, to hang. A *perpendicular line*, or a *perpendicular*, means in common language any line falling at right angles to the plane of the horizon, that is, extending from some point in a right line towards the centre of the earth or centre of gravity. In *geometry*, a perpendicular is any line falling at right angles on another line, or making equal angles with it on either side. In *gunnery*, the name is given to a small instrument for finding the centre line of a piece of ordnance, in the operation of pointing it at an object.

PERPENDICULAR LIFT (on canals). A contrivance for passing boats from one level to another.

PERPETUAL MOTION. Motion that generates a power of continuing itself indefinitely. Every body in nature, when in motion, would continue in that state, and every motion once begun would be perpetual, but for the operation of some external causes, as friction, gravity, &c.; but since no absolute power can be gained by any combination of machinery, to counteract these causes, it follows that a perpetual motion can never take place by any purely mechanical contrivance; yet this is a problem which has engaged the attention of many ingenious, though ill-educated men.

PERPETUAL SCREW. A screw which acts against the teeth of a wheel, and continues its action without end.

PERPETUITY. 1. In *law*, is where, if all that have an interest join in the conveyance, yet they cannot bar the estates.—2. In *annuities*, the number of years

in which the simple interest of any principal sum will amount to the same as the principal itself.

PER'FYEN-WALLS. The name given to two walls in Fotheringhay church, which divide the body of the church from the aisles. The origin of the name does not appear to be known.

PER'RON (French). A staircase lying open or withoutside the building; more properly the steps in front of a building, which lead into the first story, when this is raised above the level of the ground.

PER SALTUM. By a leap, at once.

PER SE. 1. Of its own nature; i.e. in virtue of its own entity, as the sun gives light *per se*.—2. By itself; as when a body is distilled without the addition of any other matter, it is said to be distilled *per se*.

PER'SEUS. 1. In *mythology*, a hero, the son of Jupiter.—2. In *astronomy*, a northern constellation.

PER'SIAN BERRIES. A yellow dye drug, the fruit of a Persian variety of the *Rhamnus infectorius*, which grows in Persia. See *BERRIES OF AVIGNON*.

PER'SIAN WHEEL. A wheel used for the purposes of irrigation, and usually equipped with floats on its circumference, and turned by the stream in which it is placed, but turned by animal power when the water in which it is worked is stagnant. Upon its rim are buckets suspended, which are filled with water at the lowest point, and empty themselves into a receiver at the highest point, from which it is conveyed away in canals. This is one of the cheapest and most efficient modes of raising water to small elevations, and requires neither nicety in construction, nor attention in working, especially where a running stream is obtained. It is much used in the East.

PER'SIANS. In *architecture*, the same as *Caryatides* (q. v.). According to some, the male figures only are called *Persians*, and the female figures *Caryatides*.

PERSIS'TENT, Lat. *persistens*. Permanent. Applied to flower-cups which remain long after the flower. Also, in *optics*, to the duration of the impression of light upon the retina of the eye, after the removal of the source of the light.

PER'sON, Lat. *persona*. 1. A mask used by actors on the stage, from *per* and *sonus*, sound. The term is now used to denote a human being.—2. In *grammar*, the agent which performs, or the patient which suffers, the action expressed by the verb, and hence, also, we apply the word *person* to the termination or modified form of the verb used in connection with the persons, as the verb is in the first, second, or third *person*. Such verbs are usually denominated *personal verbs*.

PERSONATE. A natural order of plants

in Linneus's natural method, characterised by being fetid, poisonous, and aromatic, with personate corolla.

PERSONATE, Lat. *personatus*, from *persona*, a mask. A term applied to monopetalous flowers of an irregular form, the corolla having an oval appearance, with the labia closed.

PERSPECTIVE, from *perspicio*, to see through. 1. A term, in *drawing* and *painting*, for the science by which objects are ranged upon a plane surface, as in a picture, according to their appearance in their real situation. This embraces three subjects: *lines*, which determine the outline; the *chiaro-scuro*, which shows the relief; and the *color*, which gives the true appearance. The *lines* form what we call the design, and the *colouring*, in conjunction with the design, constitutes the art of painting; consequently we may divide perspective into *linear* and *aërial*. The first is a branch of mathematics, and, as such, is subject to principles which are rigorously demonstrated: it shows how lines which define figures appear to the eye of the spectator, according to the point on which the eye is fixed, and the distance of the objects. *Aërial perspective* is so named because it is the effect of the vaporous air which is interposed between the different objects, diminishing by its colour the tones in proportion to its greater or less quantity, and the distance of the planes of the picture in relation to the eye. Perspective, generally, divides itself into *projection*, *ichnography*, *orthography*, *scenography*, and *stereography* (q. v.).—2. A terrestrial telescope.

PERSPIRATION, from *perspiro*, to breathe through. The vapour secreted by the extremities of the cutaneous arteries from the external surface of the body. It is called *sensible* when it becomes visible in the form of very small drops (*sweat*) adhering to the skin; and *insensible*, when it passes off in the form of invisible vapour.

PERTURBATION. In *astronomy*, the deviation of a celestial body from its theoretical elliptical orbit, caused by the attraction of other bodies.

PERUVIAN BALSAM is the produce of the *Myroxylon Peruiferum*, a tree of Peru, &c. See **BALSAM**.

PERUVIAN BARK. *Cortex Peruvianus*. See **BARK** and **CINCHONA**.

PESADE. Fr. *pessade*. The motion of a horse when he raises his fore quarters, and keeps his hind feet on the ground, without advancing.

PESARY, from *πῆσσω*, to soften. A surgical instrument or application of many forms, for introducing into the vagina, to support the uterus.

PETAL, Lat. *petalum*, and Gr. *πέταλον*,

from *πέταω*, to expand. The name of each of the coloured leaflets of the corolla of a flower. In monopetalous flowers the corolla and *petal* are the same.

PETALODÆUS, *πέταλος* and *εἶδος*. Any organ like a petal in texture or colour.

PETARD (French). A warlike engine, made of metal, and shaped like a sugar-loaf. It is loaded with powder, and fixed on a madrier or plank, and exploded against gates, barricades, &c., to break them open.

PETAURUS. A genus of Marsupialia, established by Shaw, to receive the *flying phalangiers* of New Holland. Name from *πέταλον*, a leaf, and *ουρα*, a tail; the skin of the flanks being more or less extended, which enables them to sustain themselves momentarily in the air, and make great leaps, like the flying squirrels among the Rodentia.

PETECHIA. An Italian word, commonly used in the Latin plural from *petechia*, to denote the purple spots which appear on the skin in some malignant fevers.

PETIOLAR, Lat. *petiolaris*. Fixed to the petiole or leaf-stalk.

PETIOLATE, Lat. *petiolatus*. Having petioles or leaf-stalks.

PETIOLE, Lat. *petiolus*. The footstalk or leafstalk of a plant.

PETITIO PRINCIPII. In *logic*, the taking of a thing for true, and drawing conclusions from it as such. This is what is termed, in common parlance, "begging the question."

PETREL. A name for all those storm birds forming the extensive genus *Procellaria*, Lin. See **PROCELLARIA** and **PELECANOIDES**.

PETRIFICATIONS, Lat. *petra*, stone, and *facio*, I make. Otherwise called organised fossils, organic remains. The conversion of vegetable and animal matter into a stony substance.

PETROBRUSIANS. The followers of Peter de Bruys, a heretic of the 12th century.

PETROLENE, from *petra*, stone, and *oleum*, oil. An oily liquid, of a pale-yellow colour, and Sp. gr. 0.891, obtained by distilling about 15lbs. of the bitumen of Bechebroun, in the department of Bas-Rhin, with about 22 imperial gallons of water. The bitumen itself is viscid, has a deep brown colour, and is employed, around the locality where it is found, as grease for machinery, under the name of *stone oil*.

PETROLEUM, from *petra*, rock, and *oleum*, oil. A mineral oily substance, which flows from the clefts of rocks, and in different places at the surface of the earth. It is usually, at the temperature of this country, about the consistency of tar, has a reddish-brown colour, but be-

comes black by exposure to the air, and is then called *mineral tar*. In places where it occurs plentifully, it is used as oil for lamps, as in the Burman empire, where, in one locality, there are said to be between 500 and 600 wells, yielding annually 400,000 hogheads of petroleum. It is composed of several oils, a little olefine and stearine, resin, with a brown indifferant substance in solution. By distillation it yields naphtha, Sp. gr. '087. Smell bituminous.

PETROLINE. A substance obtained from the petroleum of Rangoon, by Professor Christison. It is the same substance as that previously discovered by M. Reichenbach, and named *Paraffine* (q. v.).

PETROM'YZON. The lamprey, a genus of fishes. Order *Chondropterygii branchiis fis*, Cuv. Family *Cyclostomi*, Dumeril. Name from *πτρες*, a stone, and *μυζαν*, to suck, as these fishes habitually fix themselves by suction to stones and other solid bodies; they attack the largest fishes in the same way, and are finally enabled to pierce and devour them.

PETROS'LEK, chert or rock-flint: *petra*, rock, and *silex*, flint. A fusible variety of hornstone; according to some authors, the same as clinkstone; others again make it compact felspar.

PET'IT. In law, formerly written *petit*, French for small. A *petty constable* is one subordinate to the high constable. A *petty jury*, in distinction to *grand jury*, consists of 12 freemen empanelled to try causes at the bar of a court. *Petty serjeanty* is a tenure of lands of the crown, by rendering annual service of some implement of war, as a bow, arrow, sword, &c. *Petty treason* is the crime of killing a person to whom the offender owes duty or subjection.

PETUNTZE, } The Chinese name (*pe-*
PETUNTSE, } *tunt-ze*) of the fusible earthy matter of their porcelain, analogous to our Cornish stone. It is a variety of felspar.

PET'WORTH MARBLE. Sussex marble. A limestone of various shades of colour occurring in the weald clay, and composed of the remains of fresh-water univalves, shells of the paludina, and crusts of the Cypris faba, united into a compact marble by a gangue of calcareous matter.

PEUCE'DANUM. Sulphur-wort or hog's fennel. A genus of perennial plants. *Pentandria—Digynia*. Name from *πικνη*, the pine-tree, on account of the shape of its leaves. The officinal hog's fennel (*P. officinale*) and the meadow saxifrage (*P. silaus*) are indigenous species; the others belong to the continent and the other European isles.

PEUTING'RIAN MAP (Germ.) A map of the roads of the ancient Roman world,

written on parchment, and supposed to have been constructed about the year 226.

PEW'TER. A factitious metal, used in making plates, dishes, spoons, and several other domestic utensils. The alloy, generally speaking, consists of tin and lead, with sometimes a little zinc, copper, or antimony, according to the purposes for which the metal is designed. The sorts known in commerce are plate, triple, and ley-pewter; the first is the hardest, and is used for plates and dishes; the second is used for beer-pots; and the third for the larger wine measures. The name is obtained from Norman, *peautre*.

PEZI'ZA, a genus of fungi. The name was used among the Greeks to denote such fungi as grow without any stalk or apparent root.

PHENOG'AMOUS, from *φαινω*, to show, and *γάμος*, marriage. An epithet for such plants as have the stamens and ovarium distinctly visible.

PHA'ETON. 1. In *mythology*, the son of Phœbus and Clymene, who, having rashly undertaken to drive the chariot of his father for a day, set fire to the world, for which Jupiter precipitated him into the Po by a thunderbolt.—2. A light open carriage on four wheels, and drawn by two horses.—3. The *tropical bird*: a genus known by two long and narrow feathers which flow from their tail, and which at a distance resemble so many straws.

PHAGEDEN'IO, from *φαγω*, to eat. An epithet for any ulceration which spreads rapidly; also for escharotics.

PHALE'NA. The Moths: a genus of nocturnal Lepidoptera. Name, *φέλαινα*, "quæ noctu lucernis advolat."

PHALAN'GERS. In zoology (see *PHALANGISTA*).

PHALAN'GES, pl. of *phalanx*. The small bones of the fingers, and the toes of animals and birds are called *phalanges*.

PHALANGIS'TA. The Phalangiers: a genus of Marsupialia of many species, natives chiefly of the Moluccas and New Holland. The genus is now subdivided into *Phalangista*, Cuv., or *Balantia*, Illiger, or the true *Phalangiers* and *Petaurus*, Shaw, or *Phalangista*, Illiger, or the *Flying Phalangiers*.

PHA'LANK, *φάλαγξ*, a battalion. 1. In the ancient warfare, a huge square compact mass of troops, of 8000, drawn up in close order, with their shields joined and pikes ranged across. The term is now more loosely applied.—2. The plural of the term, *phalanges*, is used to denote the small bones of the fingers and toes.

PHAL'ARIS. Canary-grass: a genus. *Triandria—Digynia*. The *P. canariensis*, the seed of which is the food of canary birds, is the British type. Named from the *φάλαρος* of Dioscorides.

PHALAR'OPÉ. The name of several species of aquatic fowls, inhabiting the northern latitudes of Europe and America. Their flesh is oily and unpalatable.

PHAT'LUS. A genus of fungi, named after the φαλλος of the Greeks, which it closely resembles. The Morel fungus and stinkhorns are species.

PHANEROGAM'IC, from φανερός, manifest, and γάμος, marriage. An epithet for plants in which the stamens and ovarium are distinctly visible: opposed to *cryptogamic*.

PHAN'TASM, φαντασμα, from φανταζω, to appear. The imaginary perception of some object which is not really present: the result of disease of the eye or sensorium.

PHANTASMAGO'RIA. In *optics*, denotes remarkable illusions or combinations of *phantasma*, arising from the application of the magic-lantern, exhibited sometimes on a grand scale in the public halls of this country and France.

PHAR'ISEES, Heb. *pharisees*, separated. A sect among the Jews, who pretended to peculiar holiness.

PHARMACOP'E'IA, from φαρμακον, a medicine, and ποιω, to make. The art of preparing medicines; also a book of directions for the composition of medicines, approved of by medical practitioners, and published by authority.

PHA'ROS. A lighthouse, thus named from a celebrated one on a small island near the port of Alexandria in Egypt, reckoned one of the seven wonders of the world.

PHARYNG'EAL. Belonging to or affecting the pharynx.

PHARYNG'ITES. Inflammation of the membrane which forms the pharynx.

PHARYNGOT'OMY, from φaryγξ and τεμνω, to cut. The operation of cutting into the pharynx.

PHA'RYNX, φaryγξ. The muscular bag at the back part of the mouth, the use of which is to receive the masticated food, and convey it into the œsophagus, where it terminates.

PHASCOL'OMYS. A genus of Marsupialia established by Geoffroy to receive the Wombat found in King's Island, on the South of New Holland. It is as large as a badger, feeds on grass, lives in burrows, and is much esteemed for its flesh. Name from φασκαλον, a pouch, and μως, a rat.

PHASE'OLUS. The Kidney-bean: a genus of papilionaceous plants. *Diadelphia-Decandria*. Name from φασηλος, a little ship, or galliot, which its pods somewhat resemble.

PHAS'ES (plural of *phasis*), φαις, from φαίνω, to shine; appearances. Applied,

in *astronomy*, to the various appearances of the moon, Venus, Mercury, &c., at dif-

ferent times. The diagram exhibits the phases of the moon.

PHASIANE'L'IA. A genus of Mollusca established by Lamarck in the order *Pectinibranchiata*, family *Trochoida*, Cuvier. The species inhabit the Indian ocean, and are much sought after by collectors, on account of the beauty of their colours. Name dim. of *phasianus*, a pheasant.

PHASIAN'IDEÆ, φασιανος, pheasant. A family of Gallinaceous birds.

PHASIA'NUS. A genus of Gallinaceous birds, the *pheasants*, now divided into various subgenera, such as *Gallus* (our common cock and hen), of which several wild species are known; pheasants, properly so called, as the common pheasant of Europe, gold and silver pheasants of China, &c.; *Tragopan*, &c., Cuvier. The name φασιανος, supposed to be from the river Phasis, in Asia.

PHELLAN'DRUM. A genus of herbaceous plants. *Pentandria—Digynia*. Name from φελλος, the cork-tree, and ανδρειος, male; because it floats upon water like cork. The water-fennel (*P. aquaticum*), a narcotic and poisonous plant, is the British type.

PHELLOPLAS'TICS, from φελλος, cork-wood, and πλασσω, to mould. The art of modelling in cork.

PHEN'ICINE. A brownish-black substance (when dry) obtained from indigo by the action of sulphuric acid, and thus named by Mr. W. Crum, but called by Berzelius *purple of indigo*. It dissolves readily in water and alcohol, and both

solutions are blue; but from these solutions it is precipitated by any saline substance.

PHENOM'ENON. Φαινόμενον, appearance; φαίνομαι, to appear. Something observed; something discovered to exist: used most commonly in the plural, as the *phenomena* of the heavenly bodies. The term often denotes an unusual appearance.

PH'E'ON. In *heraldry*, the barbed iron head of a dart.

PHILADEL'PHUS: φιλέω, I love; αδελφός, brother. A secret society said to have existed in France during the government of Napoleon.

PHILADEL'PHUS. The Syringa, or Mock Orange. A genus of permanent plants. *Icosandria—Monogynia*. Name from φιλέω, to love, and αδελφός, a brother. Temperate climates.

PHILAN'THROPINISM. A system of education on natural principles, mainly founded on the notions of Locke and Rousseau.

PHILIP'PIC. A discourse, or declamation, full of acrimony. The name was originally given to an oration of Demosthenes against Philip, king of Macedon, and subsequently came to denote any such orations, such as those of Cicero against Mark Antony.

PHIL'MOT, from Fr. *feuille morte*, a dead leaf. Coloured like a dead leaf.

PHILC'OGY. Φιλολογία; φιλέω, to love, and λόγος, a word. Primarily, a love of words: a desire to understand the origin and construction of language. It is now used, in a more general sense, to denote what the French call *Belles Lettres*, and includes grammar, rhetoric, poetry, history, and criticism.

PHILOSOPHER'S STONE. A wonderful substance, the discovery of which was the principal object of alchemy. It was supposed to have the power of transforming all the baser metals into gold, and of curing all diseases. The appellation of *stone* is of modern date: no mention is made by any alchemist that the substance sought was of a lapideous nature.

PHILOSOPHY. Φιλοσοφία, from φιλέω, to love, and σοφία, wisdom. The love of wisdom. The term is now used, generally, to denote an explanation of the reason, or an investigation of the causes, of all phenomena both of mind and of matter. When applied to any particular department of knowledge, it denotes the collection of the general laws or principles under which all the subordinate phenomena or facts relating to that subject are ranged. Thus, that branch which treats of nature is called *natural philosophy*, or *physics*; that which treats of man, as a moral creature, is called *moral philo-*

sophy, or *ethics*; that which treats of him as an intellectual being is termed *intellectual philosophy*, or *metaphysics*.

PHLEBI'TIS, from φλεψ, a vein. Inflammation of a vein.

PHLEB'ORRAGY, from φλεψ, a vein, and ῥήγνυμι, to break out. A rupture of a vein.

PHLEGMAS'IA, inflammation: from φλεγω, to burn. The disease popularly called *puerperal tumid leg* has been named by Dr. Hull *Phlegmasia Dolens*. The term *Phlegmasiæ* is also used by Dr. Cullen to designate an order of diseases in the class *Pyrexia*, characterised by pyrexia, topical pain, and inflammation; the blood, after venesection, exhibiting a buffy coat.

PHLEGS'MOS, from φλεγω, to burn. An inflammation of the sort called *healthy inflammation*.

PHLE'TUM. Cat's-tail. A genus of gramineous plants. *Triandria—Digynia*. Most of the species are British, among which are the Timothy-grasses, varieties of the meadow-grass.

PHLOGIS'TIC. 1. Pertaining to phlogiston.—2. Inflammatory.

PHLOGIS'TICATED AIR. Nitrogen was so called by the old chemists, because it was found neither to be inflammable nor a supporter of combustion.

PHLORID'ZINE, from φλωος, bark, and ῥίζα, root. A bitter-tasted principle, which exists in the bark of the trunk and roots of the apple, pear, cherry, and plum trees. Composition C14 H9 O9. It is the *Phloridzite* of Dr. Koninck.

PHOCÆ. The Seals. A genus of *Mammalia*; order *Carnaria*; family *Carnivora*; division *Amphibia*. The *Phocæ* live on fish, always eat in the water, and, when they dive, close their nostrils by a sort of valve. The Common Seal (*P. vitulina*, Lin.) is from three to five feet in length, of a yellowish gray, spotted with brown. Common on the coasts of Europe.

PHOCEN'IC. Appertaining to the dolphin. *Phocenic acid* is obtained from phocanine by saponification. Composition C20 H15 O6.

PHOCENINE. A peculiar fatty matter, obtained from the oil of the porpoise (*Delphinium phocæna*, Lin.). It yields phocenic acid by saponification.

PHENICOPTERUS. The Flamingo. A genus of birds. Order *Grallatoriæ*; family *Macrodactyli*. Name *φαινικοπτερος*, red-winged, *φαινικος*, red, and *πτερον*, a wing, the bird being well characterised by its general red plumage. The species of the eastern continent and that of America seem to be different, although both are named *P. ruber* by naturalists.

PHÆ'NIX, Φεινίξ. 1. A fabulous bird, of which wonderful stories are told. It was of the size of an eagle; its head was finely crested; the feathers of the neck

were brilliant like gold, and those of the tail were purple and carnation down. There could only be one such bird in the world at a time. It lived 1000 years according to some, and 500 according to others; after which it died, but sprung to life again from its own ashes.—2. The Date Palm-tree, a genus of nine species. *Diacia*—*Triandria*. All the species are natives of warm climates; that which affords the *dates* of commerce is the *P. dactylopera*.—3. In *astronomy*, one of the southern constellations, so called after the example of the Arabians, who were acquainted with it, under the appellation of the *Griffin* or *Eagle*, from the most remote antiquity.

PHOLADA'RIA. A family of marine bivalve shells, in the arrangement of Lamarck, of which the genus *Pholas* is the type.

PHO'LAS. A genus of molluscs. Order *Acephala testacea*; family *Inclusa*. The shell is bivalvular, and convex towards the mouth. Name *φωλας*, from *φωλλος*, a burrow, the pholades inhabiting canals which they excavate, some in ooze and others in stone, like the Lithodomi, Petricolæ, &c., and hence popularly called *stone-borers*. They have a peculiarly agreeable flavour.

PHONET'IC WRITING, *φωνη*, sound. That writing in which the signs represent sounds.

PHON'ICS, from *φωνος*, sound. The doctrine of sound; otherwise called *acoustics*.

PHON'OLITE, from *φωνος*, sound, and *λίθος*, stone. Another name for clinkstone.

PHONOT'OOT, from *φωνος*, sound, and *λογος*, discourse. The doctrine of the sounds and tones of the human voice.

PHOR'MIUM. Flax-lily, or New Zealand Flax. A genus. *Hexandria*—*Monogynia*. One species a perennial. New Zealand.

PHORONO'MIA, } Gr. *φορνω*, to carry, and
PHORONO'MY, } *νομος*, a law. A term used to denote the science of motion, by some of the older mathematicians; e.g. Hermann's work entitled *Phoronomia, seu de Viribus et Motibus Corporum Solidorum et Liquidorum* (Amster. 1716).

PHORONO'MICS. The English word for *Phoronomia* (q. v.). The term being less expressive than the word *mechanics*, now in general use to denote the science of moving bodies, has been laid aside by modern writers.

PHOS'GENE, from *φως*, light, and *γενναω*, to produce. See **CHLORO-CARBONIC ACID**.

PHOS'PHATES. Salts formed by the union of the phosphoric acid with the salifiable bases.

PHOS'PHITE. A salt formed by the combination of the phosphorous acid with a base.

PHOSPHORESC'ENCE. The luminous ap-

pearance presented by phosphorescent bodies. The phosphorescence of seawater, occasionally observed, arises from the presence of vast numbers of microscopic medusæ which float on its surface.

PHOSPHOR'IC ACID. An acid formed by the oxygenation of phosphorus. It exists abundantly in the mineral, vegetable, and animal kingdoms. In the mineral kingdom we meet with phosphates of lead, iron, copper, manganese, &c. In the animal kingdom the basis of all bone is phosphate of lime, and this substance forms a large portion of testaceous coverings. Phosphoric acid is always formed when phosphorus is burned in atmospheric air or in oxygen.

PHOSPHOROUS ACID. When phosphorus and corrosive sublimate act on each other, at an elevated temperature, a liquid called *protochloride of phosphorus* is formed. Water added to this resolves it into muriatic and phosphorous acids: a moderate heat expels the former, and the latter remains associated with water.

PHOS'PHORUS, from *φως*, light, and *φοω*, to bear. A substance regarded as elementary, having never yet been decomposed. It is yellow and translucent; melts at 90° F., and boils at 550°. In the atmosphere, at common temperatures, it emits white fumes, which in the dark appear luminous: it is acidulous, and results from the slow oxygenation of the phosphorus. When heated in the air to about 148°, phosphorus inflames, and continues to burn, with much dense white smoke, which is phosphoric acid. It is obtained from bones by a chemical process.

PHOSPHOVIN'IC ACID. A crystallisable acid, formed by the re-action of phosphoric acid and alcohol. Composition $\text{Ph}_2 \text{O}_5 + \text{C}_4 \text{H}_8 \text{O}$.

PHOS'PHURET. A compound formed by phosphorus with a combustible or metallic oxide.

PHOS'PHURETTED HYDROGEN. Hydroguret of phosphorus. A gas procured by presenting phosphorus to nascent hydrogen, as by heating phosphorus in a solution of caustic potassa. It inflames spontaneously in atmospheric air, chlorine, and nitrous oxide.

PHOTOGEN'IC DRAWING. The name given by the discoverer, Mr. H. F. Taubot, to a process of making pictures by the action of the light of the sun: whence the name, from *φως*, light, and *γενναω*, to produce. The process is this: a slip of paper is brushed over with a solution of nitrate of silver, and dried in the dark; it is then placed in a camera-obscura, properly adjusted before the object (as a building) whose image is to be taken. In a few minutes, more or less (according to

the strength of the light), the picture is made, and to fix it, it is only necessary to immerse the paper in a solution of sulphate of potash. A simpler picture may be made (as of a leaf, feather, or the like), by simply placing the object between the prepared paper and the pane of a window exposed to the sun. Chromate of potash, also, may be used in the preparation of the paper, instead of nitrate of silver, and for botanical drawings it is preferable.

PHOTOMETER, from *φως*, light, and *μετρον*, to measure. An instrument or apparatus for measuring the intensity of light. Instruments for this purpose have been invented by Count Rumford, M. de Saussure, Mr. Leslie, and others, but they are all very defective. A very convenient photometer, for solar light, may be made by means of paper prepared as for photogenic drawings, as by exposure to the light for given times, slips of this paper will readily afford a comparative measure of the photic intensity of the rays which fall upon it; and as mechanism may be easily adapted to the constant shifting of the paper, so that only a very small but definite portion of it shall be exposed for a known length of time, the shades upon it may be reduced to a scale, and numerically estimated. The instrument will thus be rendered self-registering, and attended with few sources of error.

PHOTOMÉTRV, *φως*, and *μετρον*, measure. The science which treats of the measurement of light.

PHOTOPHOBV, } from *φως*, light, and
PHOTOPHOBIA, } *φοβία*, to dread. Intolerance of light, arising from too great sensibility of the retina of the eye.

PHOTOPSY, } from *φως*, light, and *οψις*,
PHOTOPSYA, } vision; lucid vision. An affection of the eye in which the patient perceives luminous rays, ignited lines, coruscations, &c.

PHRASE, *φρασις*, expression. In music, a short melody, in which a complete musical idea is not expressed.

PHRA'TRY. A subdivision of Athenian citizens.

PHREN'IC. *Φρενικός*. Belonging to the mind, or to the diaphragm. The term is now only used in the latter sense.

PHREN'ITIS. *Φρενιτις*. Phrensy. Inflammation of the brain (regarded as the seat of the mind, *φρεν*, the mind).

PHRENOL'OGY, from *φρεν*, mind, and *λογος*, discourse; the doctrine of the mind. The term is now restricted to that particular view of the constitution first promulgated by Drs. Gall and Spurzheim; in which it is believed certain portions of the brain called *organs* minister to different faculties, propensities, and senti-

ments of the individual. The intellectual powers are assumed to reside in the anterior parts of the brain, the sentiments in the middle, and the animal propensities in the posterior parts. That the general principles and scope of phrenology are true, seems to be generally admitted; but much doubt still exists with regard to the details.

PHYGA'NEA. A genus of neuropterous insects belonging to the family *Plicipennes*, and called papilionaceous flies by Reaumur. They frequent ponds, and their nymphs are aquatic.

PHY'GIANS. An early sect of heretics, who abounded in Phrygia.

PHTHIS'IS. *Φθίσις*, from *φθίω*, to consume. Pulmonary consumption.

PHY'LACTERY. *Φυλακτηριον*, from *φυλασσω*, to preserve. An amulet worn about the person, to prevent disease.

PHY'LE, *φυλη*, tribe. The tribes into which Attica was anciently divided. A superintending officer, named a *phylarch*, was appointed to each tribe.

PHY'LADE. The name given by the French geologists to clay-slate, from *φυλλος*, leafy.

PHY'LITE, from *φυλλον*, a leaf, and *λιθος*, stone, a petrified leaf.

PHY'MA, from *φυν*, to produce. 1. A tubercle.—2. A genus of cuticular diseases, of which anthrax is a species.

PHYLL'ODIA, *φυλλον*, leaf. The petioles of certain leafless plants, which perform all the functions of leaves.

PHYLL'ODOCE. A sub-genus of Nereides, distinguished by their broad leaf-like branchiæ, from which they are named *φυλλον*, a leaf, and *δοκίς*, trabcicula.

PHYLL'OSOMA. A genus of Crustacea belonging to the family *Bipeltata* (q. v.). The species inhabit the Atlantic Ocean and Oriental Seas.

PHYSA'LIA. A genus of hydrostatic Acalepha resembling an extremely large oblong bladder, whence the name from *φυσω*, to inflate. The animal swims on the surface of the sea in calm weather; and its touch is said to sting and burn like the sea-nettle.

PHY'SALITE. Pyrophysalite. A subspecies of prismatic topaz, so named from *φυσω*, to inflate, because it intumescs with heat.

PHY'SCONT, from *φυσκων*, a big-bellied fellow. Enlargement of the abdomen, of which there are several species, denominated from the viscus in which the enlargement takes place.

PHYSE'TER. A genus of whale-fish, the *Cachalots*, known by a very voluminous head, the superior portion of which consists almost entirely of large cavities,

filled with an oil, which becomes fixed as it cools, and which is known in commerce by the name of *spermaceti*. The substance called *ambergris* is a concretion formed in the intestines, during certain states of disease. The names *physeter* and *physalus* signify blown, from *φυσαι*, to blow. See CACHALOT.

PHYSICAL. Pertaining to nature, or natural productions. 1. Opposed to *mental* and *moral*, as *physical* force, education, &c.—2. Opposed to *mathematical*, as a *physical* lever, that is, an actual and real lever, having thickness and weight, which a mathematical lever is supposed to want.—3. Opposed to *chemical*, as the *physical* properties of a mineral.—4. Opposed to *metaphysical*.

PHYSICO-THEOLOG. Theology illustrated and enforced by physical science.

PHYSICS. The doctrine of natural bodies, their phenomena, causes, and effects, with their various operations, affections, &c., otherwise called *Natural Philosophy*. See PHILOSOPHY.

PHYSIOGNOMIES. Indications in the countenance which serve to indicate the state and disposition of the mind and body, and which being described and treated in their causes and effects, give rise to *physiognomy* (q. v.).

PHYSIOGNOMY, from *φυσis*, nature, and *γνῶμη*, opinion. The art (called a science by some) of discerning the character of individuals by their countenances, gestures, and other external peculiarities. It consists in the study of what is generally termed *expression*. The spurious physiognomy of Lavater, however, consists in attempting to establish, with mathematical exactness, a correspondence between the disposition of the individual and the size and contour of particular parts of the face and body, as the nose, lips, &c. It is a mass of nonsense, with a particle of truth.

PHYSIOGNOTYPE. An apparatus for taking an exact imprint of the face or other part, lately invented at Paris. It consists of a plate pierced with numerous minute holes, through each of which a wire passes freely, so that the whole has much the appearance of a brush. When a figure is applied against the ends of the wires, they yield, and their ends remain imprinted on a very exact mould, which, however, is not of much value.

PHYSIOLOGY, from *φυσis*, nature, and *λογος*, discourse. That branch of natural knowledge which relates to the laws of life and the functions of living beings, whether animal or vegetable. *Φυσιολογια* in its original meaning is synonymous with natural philosophy, and in this sense it was used by the Greeks.

PHYTALUMA. Rampion. A genus of pe-

rennial plants. *Pentandria—Monogynia*. Name from *φυτειναι*, to sow, because of its rapid increase. The horned rampion is the British type.

PHYTEL'EPHAS. The Tagna plant: a genus inhabiting America. Name from *φυτενα*, a plant, and *ελεφας*, an elephant, in allusion to the great size of its fruit, the milk of which hardens into a substance like ivory.

PHYTOGRAPHY, from *φυτον*, a plant, and *γραφη*, description. Description of plants.

PHYTOLA'CCEÆ. A genus of plants. *Decandria—Decagynia*. Name from *φυτον*, a plant, and *λακκα*, gum-lac, of which it is the colour. There are seven species, but the Virginian poke, Pork-physic, red-weed, or American nightshade, is the best known.

PHYTOLITE, from *φυτον*, a plant, and *λιθος*, stone. A fossilised plant.

PHYTOLOG, from *φυτον*, a plant, and *λογος*, discourse. Another term for Botany.

PHYTOPHAGA, *φυτον*, a plant, and *φαγω*, I eat. A tribe of cetaceous animals, synonymous with Herbivora.

PHYTOPHAGOUS, *φυτον*, and *φαγω*, I eat. Plant-eating.

PI'A M'ATER. A thin vascular membrane which lies under the dura mater, embraces the brain, and adheres to its surface.

PIA'NO. In *Italian music*, signifies soft, as contrasted with *forte*, loud: hence

PIA'NO-FORTE. A musical instrument, resembling the harpsichord (of which it is an improvement), in which the tone is produced by hammers, instead of quills, upon the strings. Of all the keyed instruments, the piano-forte seems to merit the preference, on account of its superior tone, sweetness, and variety, as all shades of *piano* and *forte* may be produced upon it, without the harsh scratching of the quills, so disagreeable in the harpsichord.

PIARISTS. A religious order, founded at Rome in the 17th century, devoted to the purpose of education.

PIAS'TRE. A Spanish silver coin, equal to the American dollar, and worth 4s. 3½d. nearly.

PIAZ'ZA (Ital.). A portico, or continued archway, supported by pillars.

PIB'ROCH, Gael. *piobaireachd*, pipe-music. A wild irregular species of music, peculiar to the Highlands of Scotland. It is performed on the bagpipe, and is adapted to excite or assuage passion, and particularly to rouse the martial spirit of the clans.

PICA. 1. The *maggie*, a small species of corvus, prized for its beautiful plumage, the greater part of which is black and silky, reflecting purple, blue, and gold

the belly is white, and there is a large spot of the same on the wing. Its eternal chattering has rendered it notorious. In Scotland it is named the *pyet*.—2. In *printing*, a large species of type, probably named from *litera picata*, a great black letter at the beginning of some new order in the Liturgy. The name *pica*, or *pye*, was also formerly given to an ordinary, table, or directory, for devotional purposes, but for what reason does not appear.—3. Depraved appetite, with strong desire for unnatural food, so named, because the magpie was thought to be subject to this disease!—4. *Pica* formed the second order of birds in the system of Linnaeus.

PICAMARE. A thick oil, one of the six new principles discovered by M. Reichenbach in wood-tar. It has an insupportably bitter taste, from which it is named: *piccam amaram*, the bitter principle of pitch.

PICAR'DS. A fanatic and immoral sect, who sprung up in Bohemia, in the 15th century.

PICE. Small copper coins in the East Indies.

PICK'ET, Fr. *picquet*. 1. In *military affairs*, a guard, consisting of a small number of men, who do duty at an outpost to prevent surprises.—2. In *fortification*, pickets are sharp stakes sometimes shod with iron, used in laying out ground, or for pinning the fascines of a battery.

PICRID'UM. A genus of herbaceous plants. *Syngenesia*; *Poly. æqualis*. France and Barbary.

PICROLITE, from *πικρος*, bitter, and *λίθος*, stone. A green-coloured mineral, chiefly composed of carbonate of magnesia, and so named from its taste.

PICROLICH'ENITE. The bitter principle of the *Variolaria amara*, a lichen which grows in great abundance on the bark of the beech: *πικρος*, bitter, and lichen. It is a neutral substance, insoluble in water, but very soluble in alcohol: crystallises in octahedrons with a rhomboidal base. Sp. gr. 1.176.

PIC'ROMEL, from *πικρος*, bitter, and *μέλι*, honey. The black bitter principle of bile is so named by M. Thenard.

PICROTOX'INE. } The substance to
PICROTOX'IC ACID. } which the *Cocculus indicus*, the fruit of the *Menispermum cocculus* owes its deleterious qualities: from *πικρος*, bitter, and *τοξικον*, poison. It forms acicular crystals, dissolves in water and alcohol, and does not combine with acids, and hence is not an alkali, as was supposed when it was named *pyrotoxic*. From the experiments of MM. Pelletier and Couerbe, on the other hand, it appears that picrotoxine is capable of combining with alkalies, and therefore

approaches nearer the character of an acid than a base: it is sometimes in consequence named *picrotoxic acid*, and the compounds which it forms are accordingly *picrotoxates*.

PICTS' WALL. Adrian's Wall. An ancient wall, begun by the emperor Adrian, A.D. 123, on the northern boundary of England, from Carlisle to Newcastle, to prevent the incursions of the Picts and Scots.

PICTURES'QUE. All objects which afford fit matter for the imitation of the painter.

PIE. } 1. Among *printers*, types mixed
PYE. } or unsorted.—2. See **PICA**.

PIECE. In *commerce*, a definite quantity of cloth, according to its kind. The *pieces* of some *piece-goods* are much longer than others.

PIED'MONT TRUFFLE. In *botany*, the *Lycoperdon tuber* or *Trubs*, a solid fungus of a globular form, which grows under the surface of the ground.

PIEDROIT (Fr.). In *architecture*, a pile or square pillar partly inserted in a wall.

PIENO (It.). In *music*, signifies that all the instruments are at that place performing.

PIE'POW'DER (corrupted from Fr. *pie-poudre*, from *pie*, foot, and *poudre*, dust, or *pie*, *poudreux*, a pedlar). An ancient court of record in England, incident to every fair and market, of which the steward of him who had the toll was the judge. It had jurisdiction of all causes arising in the fair or market.

PIER, Fr. *pierre*. A strong erection, jutting into the sea, extending either in a curved or straight line, constituting a harbour for protecting shipping and other craft. Piers are generally constructed of strong masonry, supported on the outside by large fender piles driven into the ground, and strongly framed together by several rows of cross pieces. The *piers* of a bridge are the wall or masses from which the arches spring. In *buildings*, generally a pier is a strong flat buttress, projecting from the face of a wall; the term is also applied to any wall interposed between two windows or other openings.

PIERCED. In *heraldry*, when a charge is represented as perforated.

P'ETISTS. A sect of Protestants who sprung up in Germany, in the latter part of the 17th century, professing great piety and strictness of life. They despised learning and cultivated mysticism.

PIEZOM'ETER, from *πίεζω*, to press, and *μετρον*, measure. An apparatus for ascertaining the compressibility of water. The best piezometer is that of CErsted, described in Mosley's Illustrations of Mechanics.

Pig (of lead). About 150 lbs.

PIC-IRON. Crude Iron. The melted iron from the smelting furnace is conducted into moulds or furrows, made in sand; the large mass which sets in the main one is called by the workmen a *sow*, and the lesser one are *pigs*, and these are known in commerce as *pig or crude iron*.

PIGMENT, Lat. *pigmentum*. 1. A paint or colour, usually of a solid form.—2. In anatomy, a mucous substance found in the eye, as the *pigment of the iris*, which covers the posterior surface of the iris, and takes the name of *uvea*, from its resemblance in colour to the grape; and the *pigment of the choroid membrane*, which covers the anterior surface of that membrane, and is generally named the *pigmentum nigrum*, or the black pigment.

PIG-NUT. Earth-nut. The bulbous root of the *Bunium bulbocastanum*, Lin., so called because pigs are fond of it.

PIKE. 1. A military weapon consisting of a long wooden shaft, with a flat steel head pointed. Its use among soldiers is now superseded by the bayonet.—2. A fish, the *Esox lucius*, Cuv., Yarr., &c., found in almost all the fresh waters of Europe. Its usual length is about two feet, but they are frequently found weighing 30 lbs. in the lakes of the north of England. It is one of the most voracious and destructive fishes in existence, but very palatable food. It takes its name from its long snout.

PILASTER, Fr. *pilastre*. A square column, sometimes insulated, but oftener set in a wall, and showing only the fourth or fifth part of its thickness.

PILCHARD. Gipsy herring. A fish, the *Clupea pilchardus*, Cuv., Yarr., &c., which closely resembles the herring, but is shorter and thicker. It is rarely found on the British shores, except on the coasts of Cornwall and Devon, where are the principal pilchard fisheries.

PILE. 1. Lat. *pila*, a heap, as a *pile of balls*. The ancient architects gave the name *pila* to those square blocks placed upon the epistylia, for supporting the timbers of the roof, and likewise to buttresses built against the walls of a mole.

—2. Lat. *palus*, a stake or beam of timber driven into the ground to form the foundation of buildings, piers of bridges, &c., when the ground is soft or loose. Amsterdam and some other cities are wholly built on piles. Piles, or, as they are sometimes called, *pile-timbers*, are driven by a machine called the *pile-driving machine* or *pile-engine*. It consists of a frame of timber, 30 or 35 feet long, placed in an upright position, and having a slide between the timbers of the frame, for the *ram* (a heavy iron weight) to be drawn up and run down. The ram is raised by a rope or chain passing over a

pulley, fixed to the top of the framing, by means of the mechanism of a common

crane, called a *crab*, and when it has arrived at the highest point, it is disengaged from the hook from which it is suspended, by a contrivance called the *monkey*, and descends with great force upon the head of the pile.—3. *Pile* is also a name given to the arms-side of a coin; the head-side being called the *cross*. Hence the phrase *cross and pile*. This application is derived, by metonymy, from the *pile* or *punchcon* used in stamping figures on coins.—4. In heraldry, an ordinary represented wedge-shaped.

PILEWORT. A plant: the *Ranunculus ficaria*, the root of which is reckoned a specific for the piles.

PIL'LAR. 1. An irregular and rude column. The supporters in Saxon, Norman, and Gothic architecture are pillars, not columns; but in common language the terms *column* and *pillar* are often used synonymously.—2. In conchology, the columella, or perpendicular centre, which extends from the base to the apex in most spiral shells.

PIL'LORY. An instrument of punishment, consisting of a frame of wood erected on posts, made to confine the head and hands of a criminal, in order to expose him to public view, and render him publicly infamous. This mode of punishment was abolished in 1816, in all cases except perjury, and it has now fallen altogether into desuetude.

PIL'LOSE, Lat. *pilosus*, hairy. Applied very generally in natural history.

PIL'LOT. A name applied either to a particular officer serving on board a ship during the course of a voyage, and having the charge of the helm and the ship's route; or to a person taken on board at any particular place, for the purpose of conducting a ship through a river, road,

or channel, or from and into a port. It is in the latter sense that the term *pilot* is now usually applied.

PÍLOT-FISH. Pilot mackerel. A species of the genus *Centronotus*, Lacep. The name owes its origin to the fact that this fish follows vessels to seize upon what may fall from them, and, as a similar habit is observed in the shark, it has been said that the former acts as a guide or pilot to the latter. The fish is not above a foot long.

PÍLUM. A missile weapon used by the Roman soldiers. It was a sort of dart thrown by the hand.

PIME'LIA. A genus (or rather tribe of numerous genera) of coleopterous insects belonging to the family *Melasma*. The species inhabit the countries situated around the basin of the Mediterranean, to western and southern Asia and Africa.

PIM'ELITE, from *πυμάλη*, fat. A variety of steatite coloured by chrome, and so named from its greasy feel.

PIMEN'TA, from *pimenta*, the Spanish for pepper. The generic name of the Allspice or Pimento tree. Class *Icosandria*; order *Monogynia*. This beautiful tree is a native of Jamaica. It is the *Myrtus pimenta*, Lin., and the *Eugenia pimenta*, De Cand.

PIMEN'TO. Allspice or Jamaica Pepper. The fruit of the *Pimenta officinalis*. See **PIMENTA**. The berries are plucked when green, dried in the sun, and sent to Europe in bags and hogheads, where they are sold at about fourpence to fivepence per lb., exclusive of threepence duty. A single tree will sometimes produce 100 lbs. of the dried berries.

PIM'PERNEL. In botany, the *Anagallis arvensis*. The Water Pimpernel is a species of *Veronica pimpinella*, Burnet Saxifrage. A genus of herbaceous plants. *Pentandria—Digynia*. Name, *quasi bipinnella*, from the double pinnate order of its leaves. Four species are indigenous: the roots of the *P. saxifraga* are used in medicine. The Anise plant (*P. anisum*), is a native of Egypt.

PIN. This is a small bit of wire, commonly brass, with a point at one end and a spherical head at the other, requiring for its completion no less than fourteen distinct operations. (1.) straightening the wire; (2.) pointing; (3.) cutting the wire into pin-lengths; (4.) twisting the wire for the pin heads; (5.) cutting the heads; (6.) annealing the heads; (7.) stamping or shaping the heads; (8.) yellowing or cleaning the pins; (9.) whitening or tinning; (10.) washing; (11.) polishing; (12.) winnowing; (13.) pricking the paper to receive the pins; (14.) fixing the pins in the papers.—2. In *Chinese diplomacy*, a petition from foreigners to the emperor of China or any of his deputies.

PINACOTHE'CA, *πινάξ*, a picture, and *τιθημι*, I place. In ancient architecture, an apartment for the reception of pictures.

PIN and WEB. An old vernacular name for an opacity of the cornea of the eye.

PINAN'O, } The Malay name for the
PENAN'G. } betel-nut (*Areca catechu*).

PIN'CERS. A sort of tool used by artificers for drawing nails, &c. The upper

cut represents the shoemaker's pincers; the under, the joiner's.

PINCH'BECK. A species of brass, intended as an imitation of gold, and used in the formation of watch-cases, and articles of a like description. It is also named *tombac* (Spanish), and sometimes *similor* and *petit-or* (French).

PINE. 1. In botany, see **PINUS**.—2. The wood of the pine or fir-tree, of which several kinds are known in commerce. (1.) *Scotch pine*, the wood of the *Pinus sylvestris*, a native of most of the northern parts of Europe. It is the most durable of all the pine woods, and is exported from Norway and Sweden under the name of *redwood*. Riga exports a considerable quantity, under the name of *masts and spars*; the first sort being eighteen inches and upwards in diameter, and seventy or eighty feet in length; and the latter less than eighteen inches in diameter. (2.) *Spruce pine*, of which there are three species—the Norway spruce (*Pinus abies*); white spruce (*Pinus alba*); and black spruce (*Pinus nigra*). These trees rise in straight stems from 150 to 200 feet, and yield the timber known as *white fir* or *deal*. The white and black spruce grow in America. (3.) *White or Weymouth pine*, the wood of the *Pinus strobus*, a tree of North America, imported in large logs. (4.) *Yellow pine* is the wood of the *Pinus picea*, or silver fir-tree, a native of Europe. (5.) *Larch* belongs to the same family.

PIN'EAL. Resembling the fruit of the pine; as the *pineal gland*, a small projection at the base of the brain, about the size of a pea. It was whimsically imagined by Descartes to be the seat of the soul.

PINE-APPLE. *Ananas*. A tropical fruit, now extensively cultivated in the hot-houses of this country. It is the fruit of the *Bromelia ananas*, and sometimes

grows to several pounds weight. *Pine-apple-yarn* is manufactured from the leaves of the tree: it is simply the fibrous part, and bids fair to rival flax. It has been manufactured into very fine cambric.

PINEASTER. A variety of the pine, a considerably sized timber tree, which throws out large spreading arms, but is naked in winter. It is also named the cluster pine, the morentum, and wild pine, &c.

PINE-THIS'TLE. The *Atractylis gummifera*, the root of which abounds with a gummy matter, which exudes when it is wounded. It grows in the south of Europe, where the flower-stalks are dressed with oil and used as food, and the gummy matter is chewed to strengthen the gums.

PIN'ION. In *mechanics*, a small toothed wheel, which drives, or is driven by, a larger one. The term primarily signifies the top of a feather, and subsequently the tooth of a wheel working into another wheel; latterly a toothed spindle or arbor, into which the teeth of a wheel work.

PINK, Wel. *pinc*. Sprightly, gay. 1. In *botany*, see *DIANTHUS*. The Indian-pink, or Peruvian worm-grass, is a species of *Spigelia*, used by the Indians of North America as an anthelmintic.—2. For Fr. *pinque*, picked. A ship with a long narrow stern. Hence also *pink-sterned*.—3. *Dutch-pink* is a colour of reddish hue.

PIN'NA. A genus of marine bivalvular shells, belonging to the family *Mytalacea*. Named from *pinna*, a plume, in allusion to the long silky byssus by which they are moored, and which has been woven into stockings, gloves, &c. The animal is a limax.

PIN'NACE. 1. A small vessel, navigated with oars and sails, having generally two masts, rigged like those of a schooner.—2. One of the boats of a man-of-war, for carrying the officers to and from the shore.

PIN'NACLE, Lat. *pinna*. In *architecture*, a polygonal pillar, generally applied at the angles of a building, terminating pyramidally, and embellished with foliage.

PIN'NATE, Lat. *pinnatus*. Having *pinnæ* or leaflets: winged. Applied to a leaf which has several leaflets proceeding laterally from one stalk.

PINNAT'IFID, Lat. *pinnatifidus*, feather-cleft. Applied to leaves which are cut transversely into several oblong parallel segments.

PINNAT'ULATE, Lat. *pinnatulus*, dim. of *pinnatus*, pinnate. Applied to the leaflet of a pinnate leaf, when it is again subdivided.

PINT. A measure for liquids chiefly. The imperial pint contains 34·659 cubic inches; but there was formerly a pint for

wine, and another for beer and ale. The word is Dutch, and signifies a little measure of wine.

PIONEER', Fr. *pionnier*, contracted from *piochmier*, from *pioche*, a pickaxe, or *piocher* to dig. Pioneers are those whose business it is to march with, or before, an army, to repair the road, or clear it of obstructions, work at entrenchments, form mines to destroy an enemy's works, &c.

PIP. A disease among poultry, consisting of a white thin skin, or film, growing upon or under the tip of the tongue, which hinders their feeding.

PIPE (Saxon). 1. A wind instrument of music, consisting of a long tube of wood or metal. Pipe is not now, however, the technical name of any particular instrument, but is applicable to any tubular wind instrument, and it occurs in *bagpipes*.

—2. A long tube, as for conducting water, gas, steam, &c. The large water and gas pipes are cast-iron; the principal ones are called *mains*, and the others *services*. The smallest sorts of services are generally made of some alloy, of which lead is the base; but some are made entirely of tin, others of lead only, and a few of brass.—3. A measure of wine, equal to 105 imp. gals. (nearly), or 126 wine gals. 2-pipes make 1 tun. In *practice*, however, the pipe varies according to the sort of wine it contains: thus, a pipe contains 138 gals. of Port, 130 gals. of Sherry, 140 gals. of Lisbon, 110 gals. of Madeira, &c. As these are rarely accurate, it is common to charge for the quantity which the vessel actually contains.

PIPE-CLAY. A clay of which tobacco-pipes are made. It is a species of clay, abounding in Devonshire and other parts of England, employed in the manufactory of various sorts of earthenware.

PIPE-FISH. A name common to all the *Fistulariæ*, on account of the long tube on the fore part of the cranium, and to all the *Sygnathi*, on account of their tubular snout.

PI'PER. In *botany*, the pepper-genus of plants. *Diandria—Trigynia*. Name *πτερι*, from *πτερον*, to concoct, because by its heat it assists digestion. The long pepper, black pepper, clove pepper, and cubebs, are all fruits of species of this genus.

PI'PERINE. A crystalline principle, extracted from black pepper, by means of alcohol. It is colourless, insoluble in water, has hardly any taste, and fuses at 212° F.

PIP'RA. A genus of birds. The Manakins. Order *Passerina*: family *Dentirostres*. The rock manakins, or cocks of the rock, are large birds, have a double vertical crest on the head, formed of feathers arranged like a fan. The adult males of

the American species are of a most splendid orange colour. They live on fruit, scratch the ground like the common hen, and construct their nests in the depths of rocky caverns.

PIRACY, *sugaribus*, an attempt. 1. In law, acts of robbery upon the high seas, equivalent to felony on land.—2. Any infringement in the law of copyright.

PIROGUE, *Sp. piragua*. A canoe formed out of the trunk of a tree. The name in America for a narrow ferry-boat carrying two masts and a leeboard.

PIROUETTE (French). In dancing, a rapid circumvolution upon one foot. In riding, the sudden turn of a horse so as to bring his head suddenly in the opposite direction to where it was.

PISALPHATUM. Mineral pitch.

PISCARY, from *piscor*, to fish. The right or liberty of fishing in another proprietor's waters.

PISCES. The Fishes. In *natural history*, the fourth class in the systems of Linnæus and Cuvier. The class is composed of oviparous vertebrata, with a double circulation, but in which the circulation is altogether effected through the medium of water. They form two distinct series, that of *Fishes*, properly so called, and that of the *Chondropterygii*, otherwise called *Cartilaginous fishes*. In the first division are the *Acanthopterygii*, the *Malacopterygii*, the *Lophobranchii*, and the *Plectognathi*.—2. In *astronomy*, the last of the signs in the fixed zodiac, and consequently the last of the southern and winter signs: marked \times on globes and planispheres. The sun enters Pisces about the 19th of February.

PISCIS AUSTRALIS. The Southern Fish. One of the old constellations. Its brilliant, Fomalhaut, is nearly on the same meridian with Markab in Pegasus.

PISCIS VOLANS. The Flying Fish. A constellation of the antarctic circle, consisting of 8 stars, all under the 4th magnitude.

PISIFORM, from *pisum*, a pea, and *forma*, likeness; pea-like. Granular iron-ore is called *pisiform iron-ore*, from its containing small rounded masses like peas in size.

PISAPHALTUM, from *πίσα*, pitch, and *ἀσφαλτος*, asphaltum. A thick variety of rock-oil. See **PETROLEUM**.

PISTACIA. A genus of trees. *Diacia-Pentandria*. Name *Πιστάκια*, supposed to be of Syriac origin. The trees which afford the mastic, Chian turpentine, and pistachio nuts, are species.

PISTACHIA, or **PISTACHIO NUTS**. The fruit of the *pistacia vera*, a large tree, which grows in Arabia, Persia, and Syria; and also in Sicily, whence the nuts are chiefly

brought. They are about the size and shape of a filbert, including a kernel of a pale greenish colour, pleasant, sweetish, and unctuous taste, resembling that of sweet almonds. Those imported from the east are the best.

PISTIL, Lat. *pistillum*, a pistil. The female organ of a flower, situated in the centre, and forming the rudiments of the fruit. Linné believed the pistil to originate from the pith, and the stamens from the wood.

PISTILLIFEROUS, from *pistillum*, a pistil, and *fero*, to bear. Pistil-bearing. Applied to flowers or florets which contain one or more pistils, but no stamens.

PISTOLE. The name of a gold coin of several countries. The pistole of Spain (of 1801) is worth 15s. 11½d.; the quadruple pistole (of the same year) is worth 63s. 9½d. The value of the pistole of Berne is 18s. 11½d.; that of Brunswick is 18s. 8½d.; of Geneva is 14s. 2d. (new), 16s. 4½d. (old); of Parma, 16s. 11½d.; of Piedmont, 22s. 2½d.; and of Switzerland, 18s. 9d.

PISTON. A thin body of metal, or other solid substance, adapted to move within a cylinder, so as to run freely up and down, air or water-tight. In the *lifting-pump*, the piston is sometimes (and perhaps more correctly) termed the *bucket*, being that part of the machine by which the water is lifted in the cylinder. The *solid-piston* of steam-engines and force-pumps is that to which the name piston is strictly applicable.

PISTON-ROD. The rod connected with a piston: that by which it is forced down and drawn up.

PISUM. The Pea: a genus of herbaceous trailing plants. *Diadelphia-Deceandria*. Name *πίσος*, borrowed from the Greeks. The Garden and Wild Peas are cultivated in England; but the Sea Pea (*P. maritimum*) is the only indigenous species.

PITCH. 1. Inspissated tar.—2. In music, the degree of acuteness or graveness of a tone.—3. The *pitch of a roof* is the inclination of the sloping sides to the horizon.

PITCH-BLENDE. A compound of the oxides of uranium and iron.

PITCH-STONE. A vitreous lava which occurs in veins and beds, and sometimes forms whole mountains. It intumesces and whitens before the blowpipe.

PIT-COAL. The coal in common use throughout the country, and thus named because it is dug out of pits.

PIT-TACALL. One of the six principles detected in wood-tar by M. Reichenbach. It is a dark-blue solid substance, like indigo, and (like that pigment) when rubbed it assumes a copper-colour, passing according to its degree of purity into gold- or brass-yellow, so that all sub-

stances spread over with it appear as if gilded. From this circumstance, it has been named: *πιττα*, pitch, and *καλλος*, beautiful; hence *pittacall*, beautiful pitch. Pittacall would be highly useful as a pigment, could it be procured sufficiently cheap.

PITTIRIASIS, from *πιτυρον*, bran. Dr. Willan's name for a genus of cutaneous diseases, characterised by irregular patches of small thin scales, which repeatedly form and separate, but never collect into crusts, nor are attended by redness or inflammation.

PIÙ. In *music*, an Italian word for "a little more." It is prefixed to other terms, as *piu allegro*, a little brisker; *piu forte*, a little bolder, &c.

PIVOT (French). 1. The pin, or short shaft, on which a body (as a wheel) turns or revolves.—2. In *military language*, that soldier upon whom the different wheelings are made in the evolutions of the drill.

PIX. 1. A Latin word for Pitch.—2. For Latin *pix*. A little box in which the consecrated Host is kept in Roman Catholic churches.

PIZZICATO. In *music*, an Italian word, signifying that the strings of the violin must be pinched with the fingers.

PLACARD (Fr. and Eng.). 1. A written or printed paper, posted in a public place. It seems to have been formerly the name of an edict, proclamation, or manifesto, issued by authority.—2. In *architecture*, the decorations of a chamber-door.

PLACENTA, a cake. 1. In *anatomy*, a spongy body, which forms the medium by which the mother and child in the womb are connected.—2. In *botany*, the receptacle of the fructification of plants.—3. In *fossiology*, the name given by Klein to a section of Catocysti, because the shells are flat.

PLACODIANS. One of the orders into which fishes are divided by M. Agassiz. The order comprises all the cartilaginous fishes of Cuvier, except the sturgeons. The distinguishing character is the irregular covering of enamel plates upon the skin: whence the name, *πλαξ*, a plate, and *ιδος*, form. Epithet, *Placodian*.

PLAGAL MELODIES, from *πλαγιος*, oblique. In *music*, such as have their notes between the fifth of the key and its octave or twelfth.

PLAGIOSTOMA. A genus of sub-equivalve, inequilateral, oblique shells, found only in a fossil state, and chiefly in the chalk. Name from *πλαγιος*, oblique, and *στομα*, mouth. Several species are known.

PLAIN CHANT. In *music*, an ancient term signifying the chief melody.

PLAIN CHART. A chart wherein the

meridians and parallels of latitude are straight lines.

PLAIN-SAILING. The working of a ship's course on a plain chart, as if the earth were an extended plain. This kind of reckoning should never be attempted, except within the tropics.

PLANE. A draught or form: properly, the representation of anything drawn on a plane. In a *geometrical plan*, the parts are represented in their natural proportions; a *perspective plan* is exhibited with diminution according to the rules of that science. The *raised plan* of a building is the elevation. The *plan* of a ship, machine, &c., is a section thereof, unless *ground-plan* is the term used. The *plan* of a bastion answers to the *face* of the same.

PLANARIA. The name of a genus of intestinal worms.

PLANCHET, Fr. *planchette*. A flat piece of metal, as the *planchets* prepared for the coining-press.

PLANE, Lat. *planus*. 1. In *geometry*, a surface which coincides everywhere with a right line, answering to a *plain* in popular language. In *perspective*, *geometrical plane* is a plane surface, parallel to the horizon, placed lower than the eye, wherein the visible objects are imagined without any alteration, except as to size. A *horizontal plane* is a plane parallel to the horizon, which passes through the eye, or has the eye supposed to be placed in it. A *vertical plane* is a plane surface, which passes through the principal ray, and consequently through the eye, and is perpendicular to the geometrical plane.—2. In *astronomy*, an imaginary surface, supposed to pass through any of the curves described on the celestial sphere. Thus, we speak of the *plane* of the ecliptic, the *plane* of a planet's orbit, &c.—3. In *joinery*, an edged tool, of which there are great variety for different uses, and known by different names. The same principle is, however, common to all the sorts: a broad chisel or steel cutter, called the *plane iron*, is fixed into a hole cut obliquely through a piece of wood (perfectly plane

on one side), called the *plane stock*, beyond which the iron slightly projects, leaving an aperture before it called the *mouth* of the plane. The common use is to shave wood smooth, and those adapted for this purpose are *planes* properly so called. Their varieties are the *jack plane*, about 17 inches long; the *long plane*, about 26 inches; the *shooting plane* or *jointer*, about

30 inches; the *smoothing plane*, about 7½ inches: these are called *bench planes*, being always laid on the work-bench. Besides these, there is a *straight block*, for straightening short edges; the *plough*, a very narrow plane, having an apparatus to guide it in ploughing a groove at any required distance from the edge of a board; a *dado*, for similar purposes; a *toothing plane*, with a toothed iron, for roughening woods for veneering; *moulding planes*, with curved faces, and cutting edges, for forming various ornamental mouldings, and known by the names of snipes'-bills, beads, hollows, rounds, ovolos, ogees, &c.; *rebating planes*, for cutting out rebates, or semi-grooves, on the edges of boards, and sometimes also for ornamental mouldings, &c.—4. In *crystallography*, the flat surfaces are called *planes*, or *faces* of the crystal.—5. In *botany*, see *PLATANUS*. The tree known by the name of *Plane* in England, is the Sycamore, or Great Maple (*Acer pseudo-platanus*). Its wood is valuable, being close and compact, easily wrought, and not liable to splinter or warp. It takes a fine polish.

PLANE TABLE. A rectangular board enclosed by a frame, graduated into degrees from the centre, for finding the position and distance of points which are situated in the same plane, taking angles, and laying down the work of a survey.

PLAN'ET, from *πλανητη*, wandering. 1. A wandering star, as distinguished from the fixed stars, which always maintain the same relative positions with relation to each other. In this primary sense of the term, comets and satellites are included; but modern astronomers restrict the term to those bodies which revolve about the sun, as a centre, with a moderate degree of eccentricity, thus excluding comets, the eccentricity of whose orbits is great, and satellites which revolve about their primaries, as these primaries do about the sun. The *elements of the planets* are certain quantities, which are necessary to be known in order to determine the theory of their ecliptic motions. These are seven:—(1.) The duration of the sidereal revolution. (2.) The semi-axis major. (3.) The eccentricity. (4 and 5.) The mean longitude of the planet at any given epoch, and the longitude of the perihelion at the same epoch. (6 and 7.) The longitude of the nodes of the orbit with the ecliptic at a given epoch, and the inclination of the orbit to this plane.

PLAN'ET WHEELS. Wheels by whose mutual connexion a variable angular motion, such as that of the radius vector of a planet in its orbit, may be exhibited. The common contrivance now in use for this purpose consists of two elliptical wheels, connected by teeth running into

each other: these wheels revolve on their foci, and, while the driving ellipses move uniformly, the radius vector of the other has the required motion.

PLANETA'RIUM. See ORRERY.

PLANETOLDS. See ASTRONOMY.

PLA'NI. A family of the order *Malacopterygii subrachiali*, commonly called *flat-fishes*, comprising the great genus *Pleuronectes*, Lin.

PLANIPET'ALOUS, from *planus*, flat, and *πτελον*, a petal; flat-leaved. A flower is *planipetalous*, or *planifolious*, when made up of plain leaves set round the centre.

PLAN'ISPHERE, from *planus*, plain, and *sphere*. 1. A projection of the sphere and its circles upon a plane.—2. An astronomical instrument used in observing the motions of the heavenly bodies, being a projection of the celestial sphere upon a plane, representing the stars, constellations, &c., in their proper situations, distances, &c., as the astrolabe, which is a common name for all such projections.

PLANK, Sax. *planc*, or *plank*. A name given generally to all timber, except fir, which is not more than four inches thick, and thicker than a *board*, which is an inch and a half downwards.

PLA'NO. A prefix to several words, as *plano-concave*, plane on one side and concave on the other; *plano-convex*, plane on one side and convex on the other (see *LENS*); *plano-horizontal*, having a level horizontal surface; *plano-subulate*, smooth and awl-shaped.

PLAN'TAIN. The herbaceous *plantains* form the genus *Plantago* (q. v.); the *water-plantain* is a species of *Alisma*; and the *Plantain-tree* of South America, &c. belongs to the genus *Musa*. The fruit of this perennial tree is highly valued by the Indians as an article of subsistence.

PLANT-CANE. A name in the West Indies for sugar-canes of the first growth, in distinction from the ratoons, or sprouts from roots of canes which have been cut.

PLANTIG'RADA. *Plantigrade* animals: from *planta*, the sole of the foot, and *gradior*, to walk. A tribe of Mammiferous quadrupeds, in which the whole sole of the foot is placed upon the ground in walking; distinct from the *Digitigrada* which walk on the extremities of the toes. The bear and badger are *plantigrade* animals; the cat and dog belong to the *Digitigrade* tribe.

PLASH'ING. A mode of modifying a hedge, by bending down some of the shoots and twisting them among the stems.

PLAS'MA. A grass-green variety of rhombohedral quartz, occurring in beds with common chalcedony. It was formerly in repute for ornamental purposes.

PLAS'TER. A composition of lime, sand, and water, for coating the walls of buildings. The composition still retains the

name of *plaster* after it has become dry and hard. In *pharmacy*, a compound, generally oxide of lead and olive oil, for applying externally.

PLASTER OF PARIS. A preparation of a sub-species of gypsum, called *plaster-stone*, dug near Montmartre, in the neighbourhood of Paris. When the stone is calcined, and the powder made into a paste with water, it quickly sets, and has its bulk increased at the same instant, so that, under the name of *stucco*, it has been much valued for modelling and like purposes.

PLASTIC CLAY. In *geology*, a name for one of the beds of the eocene period, from its being used in the manufacture of pottery, *πλαστικός*, fit for the art of fashioning. The plastic clay is a marine deposit answering to the London clay of English geologists.

PLATRON (French). 1. A sort of leather pad used by fencers to defend the body against thrusts.—2. A name for the sternum of reptiles.

PLATANUS. The plane-tree. A genus of trees. *Monœcia*—*Polyandria*. Name from *πλατύς*, broad, in allusion to the size of the leaves. The two principal species are the oriental and occidental, the one a native of the Levant, and the other one of the largest trees of North America.—2. The tree which bears the name of *plane* in England belongs to the genus *Acer*. See *PLANE*.

PLATE. The denomination usually given to gold and silver wrought into articles of household furniture. Gold plate pays a duty of 17s., and silver plate a duty of 1s. 6d. per oz. Watch-cases, chains, collars, &c., are exempt.

PLATBAND. In *architecture*, any square moulding with little projection, as the fasciæ of an architrave, the list between flutings, &c. The *platband* of a window or door is the lintel when it is made square and not much arched.

PLATFOND, (French). The ceiling of **PLATFOND,** a room, the bottom of the projection of the *armier* of the cornice; a soffit.

PLATFORM. A row of beams which support the *umber-work* of a roof lying at the top of a wall; also any erection of a temporary kind having a floor of boards, stone, &c., for some immediate purpose. The term is properly applicable to any elevated floor not wholly surrounded, as the floor of a stage, hustings, scaffold, &c.—2. In *ships*, the orlop (q. v.).

PLATINA. The Spanish word for *platinum* (q. v.), from *plata*, silver, or the river *Plata*, near which it was first found.

PLATING, OR PLATED MANUFACTURE. The art of covering other metals with silver so as to give the articles manufac-

tured somewhat the appearance of silver plate.

PLATINUM, Sp. platina. A metal which is found in flat grains, of a grayish-white colour, like tarnished steel, and containing always some other metal, as palladium, rhodium, osmium and iridium, in alloy. The metal when pure resembles polished steel, is harder than silver, about double its density, ductile, malleable, and unalterable in air or water, and has not its polish impaired by a white heat. Like gold it is only soluble in nitro-hydrochloric acid; but, unlike gold it cannot be fused in any considerable portion by the strongest heat of our furnaces, but may be welded like iron at a white heat. It is found in South America, the Ural mountains, and in minute quantity in Spain and Bavaria. It is about half the value of gold.

PLATONIC YEAR. The great year. The period of time determined by the revolution of the equinoxes, upon a supposition of the precession going on uniformly till they have made a complete revolution.

PLATOON. 1. A small square body of soldiers, drawn out of a battalion of foot, when they form a hollow square, to strengthen the angles.—2. A small body acting together, but separate from the main body.

PLATS (of a ship): **FLA** ropes of rope-yarn woven together and used for the same purposes as *marline*.

PLATTING. In *commerce*, slips of bast, cane, straw, &c., *platted* or *plaited* for making hats, &c.

PLATYDACTYL, pl. of *platydactylus*, from *πλατύς*, broad, and *δακτύλος*, a finger, toe. A sub-genus of nocturnal lizards, *Gecko-tida*, from the Mauritius. See *GECKO*.

PLATYPUS. The name given by Shaw to the *Ornithorhynchus* of Blumenbach, from *πλατύς*, broad, and *πύς*, a foot. See *ORNITHORHYNCHUS*.

PLEA, Norm. ple. 1. In *law*, that which is alleged by a party in support of his demand; but, in a more limited and technical sense, the answer of the defendant to the plaintiff's declaration. *Pleas to the action* are an answer to the merits of the complaint, which confesses or denies it.—2. A cause in court.

PLEADINGS. In *law*, the mutual alterations between a plaintiff and defendant, or written statement of the parties in support of their claims, comprehending the declaration, count of narration of the plaintiff, the plea of the defendant in reply, the replication of the plaintiff to the defendant's plea, the defendant's rejoinder, the plaintiff's sur-rejoinder, the defendant's rebutter, &c., &c., till the question is brought to issue, that is, to rest on a single point.

PLEBEIANS. The free citizens of Rome who were not in the class of patricians or clients.

PLECOTOMATHI. An order of fishes comprising two families, the Gymnodontes and the Sclerodermi, characterised by having the maxillary bone soldered to the side of the intermaxillary, which alone constitutes the jaw, and the connexion of the palatine arch to the cranium by a suture. Hence also the name from *πλεκτω*, to bind, and *γαβος*, a jaw.

PLECTRUM. The small ivory instrument with which the ancients struck the lyre.

PLEG'ET. In surgery, a compress or small flat tent of lint, laid over a wound to imbibe the matter discharged, and keep it clean.

PLEIADS, Lat. pleiades. A cluster of seven stars in the neck of the constellation Taurus: called by the Latins *Vergilias*, because they rose about the vernal equinox.

PLEN'ARTY, Lat. plenus, full. In law, the condition of an office, &c., when filled.

PLENUM (full). A term used in the Cartesian philosophy to denote the complete occupation of space by matter: opposed to *vacuum*.

PLEONASM, Lat. pleonasmus, Gr. πλεονασμος, from πλεω, full. In rhetoric, a form of expression in which more words are used than are necessary: a redundancy of words used to express a thought, as "I saw it myself with my own eyes," where the words in italics are superfluous.

PLEIOSAURUS. A fossil saurian of the lias and oolite. Name from *πλεως*, complete, and *σαυρα*, a lizard.

PLESIOMORPHISM, πλεσιος, near, and μορφη, form. The state of crystallised substances, of which the forms are nearly identical.

PLEIOSAURUS. An extinct genus of marine saurians, of which prodigious numbers are found in the lias. Name from *πλεσιος*, near, and *σαυρα*, a lizard. Some individuals have been found upwards of 20 feet long.

PLEURA. Πλευρα. The Greek word for a rib, or the side of the thorax formed by the ribs; but now applied by anatomists to the membrane which lines the internal surface of the thorax, and covers its viscera. It forms a great process, the mediastinum, which divides the thorax into two cavities.

PLEUROBRANCHIUS. A genus of gastropods established by Cuvier: order *Tectibranchiata*. Name from *πλευρα*, the side, and *βραγχια*, branchia. The branchiae being attached along the right side, in the furrow between the mantle and the foot. Various large and beautiful

species inhabit the Mediterranean and Atlantic.

PLEURONECTES. A genus of malacopterygious fishes, of which the Plaice, Flounder, Sole, Turbot, Halibut, &c., are species. Name from *πλευρα*, the side, and *νέω*, to swim, *νηπτης*, a swimmer, because they swim on the side. They have also both eyes on the side, which is uppermost when they are swimming, and the upper side is always deeply coloured; whereas the other side is white. They are taken along the coasts of almost all countries, and furnish a delicious article of food. They form the family *Planii*. Cuvier.

PLEXIMETER, from πλεξίς, percussion, and μέτρον, measure. The name given by M. Piorry to the ivory plate which he uses in mediate percussion.

PLEXUS. The Latin word for *net-work*: applied to blood-vessels, nerves, &c., when many are near together, and the branches cross and intertwine in the form of a net.

PLICA, Plaited hair: from plico, to entangle. A disease of the hair, in which it becomes long and coarse, and matted and glued into inextricable tangles. It is peculiar to Poland, Lithuania, and Tartary: hence called *Plica Polonica*.

PLICATUS, Lat. plicatus, plaited, folded. Applied to leaves when the disc is acutely folded up and down.

PLICIFENNES, from plico, to fold, and penna, a wing. A family of neuropterous insects, in which the inferior wings are usually wider than the others, and plaited longitudinally.

PLINTH, from πλινθος, a brick or tile.

1. A term in architecture, for a flat square member in form of a brick, which serves as the foundation of a column, being the flat square table under the moulding of the base and pedestal, at the bottom of the order.—2. The *plinth* of a wall, is two or three rows of bricks, which project from it in form of a platband; and in general, any flat high moulding which serves, in a front wall, to make the floors, sustain the eaves of a wall, or the lamier of a chimney.

PLIOCENE, from πλείων, more, and καινός, recent. The name given by Sir C. Lyell to two of his four divisions of the tertiary strata; the eocene, miocene, older pliocene, and newer pliocene or pleistocene, as then characterised by the proportions of recent fossils they were supposed to contain; the newer pliocene then showing from 90 to 95 per cent.; the older pliocene from 80 to 35 per cent.; the miocene 18, and the eocene 32 per cent.

**PLOT, } In surveying, a plan or horizon-
PLAT, } tal section of any piece of land,
country, or works.**

Plotting. The art of laying down on paper the angles and lines of a survey, by admeasurement from the field book.

Plotting Table. An improved description of plane table.

Plotus. A genus of birds; the *Darters*. Order *Palmipedes*: family *Totipalmates*. The habits are similar to those of the pelicans; the body is about the size of a duck, but the neck is long. Name *plotus*, or *plautus*, flat-foot.

Plough. 1. An agricultural machine for turning up the soil, preparatory to receiving the seed; and of which there are numerous forms.—2. A bookbinder's machine, for cutting the edges of books.—3. A description of plane used by joiners. See **PLANE**.

Plough'share. The part of a plough which cuts the ground at the bottom of the furrow, and raises the slice to the mould-board, which turns it over.

Plug. In architecture, a piece of wood driven into a wall, to afford holding-surface for fixtures.

Plug and Feather. Key and Feather. A mode of dividing hard stones, by means of a long wedge called the *key*, and wedge-shaped pieces of iron called *feathers*.

Plum. A fruit of several species, especially that of the *Prunus domestica*, said to have been introduced into England in the 15th century, and now cultivated over all parts of the country. There are, it is said, about 300 varieties of this tree. There is also the Bullace Plum of Britain, the Myrobalan Plum of the United States of America, and the Black Plum of Canada.

Plum's, } A weight of lead, hung to
Plum'met. } a string, to sound depths;
or on a level, to mark the perpendicular.
See **PLUMB-LINE**.

Plumbago. 1. Graphite or black lead: from *plumbum*, lead. See **BLACK-LEAD**.—2. *Leadwort*. A genus of plants, mostly shrubs. *Pentandria—Monogynia*. Warm climates.

Plum'ber Block. In mechanics, a carriage fastened on to any contrivance, and adapted to support a shaft or axle.

Plumb-line. An instrument chiefly used by builders, consisting of a leaden bob, suspended to the end of a line, used to determine the perpendicularity of their structures to the horizon. The *Plumb-rule* is used for the same purpose; but in this the bob is suspended to the end of a straight board, with a line marked down the middle, so that when the edge of the board is placed against the wall, or other object, the plumb-line shall exactly coincide with the line marked upon the board.

Plum'bery. 1. The art of casting and working lead. Such tradesmen are called **plumbers**.—2. Works in lead.

PLUME, } Lat. *plumula*. dim. of *plu-*
PLUM'ULE. } *ma*, a feather. A little feather. The expanding embryo or germ of a plant, within the seed, resembling a little feather, and which speedily becomes a tuft of young leaves, with which the young stem, if there be any, ascends.

PLUME'-ALUM. A variety of asbestos.

PLUMO'SE, Lat. *plumosus*. Feathery, downy.

PLUM'MET. See **PLUMB** and **PLUMB-LINE**.

PLUNG'ER. A long solid cylinder, sometimes used in force-pumps, instead of the ordinary pistons or buckets.

PLURALITY. In ecclesiastical law, the holding of more than one benefice.

PLUS. A Latin word signifying *more*. Used in algebra as the name of the character +, which denotes that the quantity before which it is written is additive.

PLUSH, Germ. *plüsch*, shag. A sort of shaggy cloth or stuff, with a velvet nap on one side, composed regularly of a wool of a single thread and a double warp; the one, wool of two threads twisted: the other, of goat's or camel's hair. Some plushes are, however, made wholly of worsted, others wholly of hair.

PLUTON'IC. Relating to *Pluto*, the mythological king of the infernal regions. The epithet is applied, by geologists, to certain rocks elaborated in the deep recesses of the earth. The plutonic rocks are those unstratified crystalline formations, such as granites, greenstones, and others of igneous origin, formed at great depths, whereas the volcanic rocks are solidified at or near the surface.

PLUVIAM'ETER, from *pluvia*, rain, and *metron*, measure. A rain-gauge; an apparatus for ascertaining the quantity of rain which falls at the place where the observations are made.

PLY'ERS. In fortification, a kind of balance or timber levers, for raising or letting down a drawbridge.

PLYM'OUTH MARBLE. A very fine variety of marble, found in various parts of Devonshire, especially near Plymouth. The ground is bluish-white, varied with veins of pale red, with some of brown and yellow. It takes a fine polish.

PNEUMAT'IC. Appertaining to air or gas. Πνευμα, wind. The chemist requires a large quantity of *pneumatic* apparatus in experimenting on gases.

PNEUMAT'ICS, from πνευματική, from πνευμα, wind. The branch of science which relates to the equilibrium and motions, and other mechanical conditions and properties, of æriform fluids, as their weight, density, compressibility, and elasticity.

PNEUMATO'LOGY, from πνευμα, air, and λογος, discourse. 1. Pneumatics.—2. The doctrine of spiritual existences.

PNEUMATOM'ACHI, πνευμα, and μαχη, contest. In ecclesiastical history, a general term of reproach bestowed, in early times, upon those who impugned the divinity of the Holy Ghost.

PNEUMATOM'ETER, from πνευμα, air, and μετρον, measure. A gasometer.

PNEUMOBRA'NCHIATA, πνευμα, and βραγχια, gills. Applied, by Hunter, to Perennibranchiate reptiles; and by Lamarck, to an order of Gastropodous Molluscs.

PNEUMOGASTRIC, from πνευμων, the lung, and γαστρις, the belly. An epithet for a nerve which arises from the lateral part of the medulla oblongata, immediately below the glosso-pharyngeal nerve: called also the *par vagum*.

PNEUMONIA, } From πνευμων, the
PNEUMONITIS, } lung. Inflammation of the lungs. Called also *peripneumonia* and *peripneumonia vera*.

PNEUMOPLEURITIS, from πνευμων, the lung, and πλευρα, the pleura. Inflammation of the lungs and pleura.

POA. Meadow-grass. A genus. *Triandria—Digynia*. *Nemo poa*, signifies herbage in general, but more especially grass. There are fifteen indigenous species.

POC'KET (of wool). A bag containing about 25 cwt.

PO'CO (It.). In *music*, signifies less; as *poco largo*, a little slow.

POD. In *botany*, this word has been considered as synonymous with the Latin word *legumen* or *legume*, as well as *siliqua*, but its meaning is now restricted to this last.

PODES'TA. One of the chief magistrates of Genoa and Venice.

POD'ICEPS. The Grebes. A genus of birds, separated from the Divers by Latham. Order *Palmipedes*; family *Brachyptera*. The crested grebe, the best-known species, is about the size of a duck. See *COLYMBUS*.

PO'DIUM. A balcony.

PO'CILE (Gr.). A celebrated gallery at Athens where Zeno taught his doctrines.

PACILIT'IC, from παχιλος, variegated. A term applied to the new red sandstone group of rocks, by M. Brongniart; and to the entire group of strata between the coal formation and the lias, by Mr. Conybeare.

PO'ET-LAU'REATE. A poet whose duty it is to compose birth-day odes, and other congratulatory poems, for the sovereign in whose pay he is retained. The services formerly required of this important functionary are now dispensed with, so that the office is a sinecure. See *LAUREATE*.

POIND'ING. In *Scottish law*, that process affecting moveable subjects, by

which their property is carried directly to the creditor.

POINT, in *geometry*, is defined that which has neither length, breadth, nor thickness: that which has position, but no magnitude. A *conjugate point* is that into which, in some curves, the conjugate oval vanishes. There are also *points* of reflection, of retrogradation, and of contrary flexure, &c.—2. In *perspective*, a certain position with regard to the perspective plane.—3. In *astronomy*, the divisions of the great circles of the horizon and mariner's compass are termed *points*. The *cardinal points* are the east, west, north, and south. On the space between two of these points, making a quadrant or quarter of a circle, the compass is marked with subordinate divisions, the whole being 32 points. The zenith and nadir have the name of *vertical points*; and nodes are the *points* where the orbits of planets intersect the plane of the ecliptic. We have also *equinoctial* and *solstitial points*.—4. Among *sailors*, points are flat pieces of braided cordage, tapering from the middle towards each end: used in reefing the courses and topsails of square-rigged vessels. Hence, to *point a sail* is to affix points through the eyelet-holes of the reefs.—5. In *manufactures*, point is a general name for all kinds of lace worked by the needle; and sometimes the term is used for lace woven with bobbins. *Point-devisé* is used to denote fine needle-work.—6. In *grammar*, see *PUNCTUATION*.—7. In *artillery*, *pointing* a gun is placing it so as to give the shot a particular direction.—8. In *heraldry*, a point is an ordinary resembling a pile.

POINT'AL. In *botany*, the pistil of a flower. See *PISTIL*.

POINT-BLANK. In *gunnery*, denotes that the gun is levelled horizontally. In shooting point-blank, the ball is supposed to move directly to the object, without curve. The *point-blank range* is the extent of the apparent right line of a ball discharged.

POINT'ED ARCHITECTURE. The characteristic style of architecture usually called Gothic, in which all the arches are pointed at the top.

POINT'EL. 1. Something fixed on a point.—2. A kind of pencil or style.

POINT'ER. 1. A variety of the *Canis familiaris*, Lin., trained by sportsmen to find partridges, pheasants, and other feathered game. The Pointer differs from the Setter in this, that when he has approached sufficiently near the game, he stands erect, whereas the true-bred Setter lies close to the ground.—2. In *astronomy*, the Pointers are two stars in Ursa Major, the hindermost of the Wain, so called because they always point nearly in a direction towards the North Pole-star.

POINT'ING. Among *masons*, filling the

joints and crevices of a wall with mortar or cement.

POINT NET, or LACE. Lace worked with the needle, now superseded by bobbin-net. See **POINT**.

POISON. Any substance which in a particular manner deranges the vital functions and produces a mortal effect, if not counteracted. Substances of this sort are generally deleterious in certain doses; for, in small doses, the most active form the most valuable medicines. There are, however, some which are deleterious in the smallest doses, as hydrophobic virus; others are not deleterious when taken into the stomach, which are highly so when taken into the lungs, or applied to an abraded surface, as sulphuretted hydrogen.

POITREIL, Fr. poitrail. A graving tool.

POLAC'CA. A peculiar three-masted vessel.

POLACRE (Sp. and Fr.). A vessel with three masts, each of one piece, so that they have neither tops, caps, nor cross-trees to their upper yards: used in the Mediterranean.

POLARITY. The opposition of two forces in bodies, or that quality of a body by virtue of which peculiar properties reside in certain points: usually, as in magnetised and electrified bodies, properties of attraction and repulsion, or the power of taking a particular direction when freely suspended. Thus, we speak of the polarity of the magnetic needle. See **MAGNET**.

POLARIZATION. The communication of polarity. By the *polarization of light and heat* is meant the change produced upon their agencies by reflection or refraction at certain angles, or by refraction in certain crystals, whereby they acquire the property of exhibiting opposite effects in planes at right angles to each other. Thus, when a ray of light is passed through a crystal of Iceland spar, it is separated into two portions of equal intensity; but if each of these rays be further acted upon by a second crystal, it is found that each of them has suffered a physical change, and is not affected by the second crystal in all positions, as it was by the first. The same applies to other media besides Iceland spar, and to heat as well as light. The discovery of the polarization of light is due to Huygens, and that of heat to Prof. Forbes, of Edinburgh.

POLE. In *physics*, the extremities of the axis about which a body revolves, or is supposed to revolve: from *πολεω*, to turn. Thus, the extremities of the axis of the earth are called its poles, and the points opposite are the poles of the world. In a sphere, the poles are 90° distant from the plane of a circle passing through the centre perpendicular to the axis. Thus, the

zenith and nadir are the poles of the horizon.

POLE-AXE. A description of hatchet, with a handle about 15 inches long, and a point or claw bending downwards from the back to its head. It is principally used in actions at sea, to cut away the rigging of the enemy attempting to board. Sometimes it is thrust into the side of an enemy's ship in attempting to board, and is therefore called the *boarding-axe*.

POLE'CAT. The *Mustela putorius*, Lin., the terror of poultry-yards and warrens. It is the most sanguinary of all the weasel tribe. See **PUTORIUS**.

POLEMONIUM, Greek Valerian. A genus of perennial plants. *Pentandria—Monogynia*. Name from *πολεμος*, war; because, according to Pliny, kings had contended for the honour of its discovery. Jacob's-Ladder (*P. coeruleum*) is the only British species.

POLEMONSCOPE: *πολεμος*, war, and *σκοπια*, to view. A reflecting perspective glass, invented by Hevelius, who commended it as useful in sieges, &c., for discovering what the enemy is doing, while the spectator lies hidden behind an obstacle. The opera-glass is the polemoscope somewhat improved.

POLES OF A MAGNET. Points in a magnet where the intensity of the magnetic force is at a maximum: one of these attracts and the other repels the same pole of another magnet.

POLE-STAR. A star of the second magnitude, the last in the tail of Ursa Minor. It is only 1° 41' from the true pole, consequently never sets, and is therefore of great importance with navigators in the northern hemisphere.

POLICY. In *insurance*, the instrument by which a contract of indemnity is effected between the insurer and the insured: the writing containing the terms or conditions of a contract of insurance. Policies are said to be *valued* when the goods insured are valued at prime cost, and *open* when the goods are not valued. There are policies of marine insurance, of life insurance, &c.

POLITICAL ARITHMETIC. The art of reasoning by figures on matters relating to a nation, its revenues, value of lands and effects, produce of lands, manufactures, population, &c. &c.

POLITICAL ECONOMY. The administration of the revenues of a nation, or the management and regulation of its resources and productive property and labour. Political economy comprehends all the measures by which the property and labour of a country are directed in the best manner to the success of individual industry and enterprise, and to the public prosperity. It is now considered a science.

POLITICS; *πολιτική*, from *πολις*, a city. The science of government; a branch of ethics, which consists in the management of the affairs of a nation or state for its preservation, peace, and prosperity. Politics has hitherto been a science of trial and error.

POLINGS. Small boards supporting the earth during the formation of a tunnel, &c.

POLL. In *politics*, the register of those who give their vote; also the place where the votes are registered. The term belongs to the Slavonic, and signifies *head*: hence a register of heads.

POLL'EN. Fine flower or dust. The farina of flowers: the powder which adheres to the anthers of the flowers of plants, and which is contained in the anther, and is thrown out chiefly in warm dry weather when the coat of the latter contracts and bursts.

POL'LUX. 1. In *astronomy*, the name of a star of the second magnitude in the constellation Gemini.—2. *See* *Castor*.

POLOMAISE. A robe or dress worn by ladies, and adopted from the fashion of the Poles.

POLONOISE. In *music*, a movement of three crotchets in a bar, with the rhythmic cesura on the last.

POLY, for *πολυς*, many. A prefix often found in the composition of words derived from the Greek.—2. In *botany*, a popular name of some species of Germander.

POLYACOUS'TIC, from *poly* and *acoustic*. 1. That multiplies sound.—2. An instrument to multiply sounds.

POLYADELPHIA, from *πολυς*, many, and *αδελφος*, brother. The name of the 18th class of plants in the sexual system of Linné, embracing all plants with hermaphrodite flowers, in which the stamens are united by their filaments into three or more distinct bundles. Example, St. John's wort, *Hypericum calycinum*.

POLYANDRIA, from *πολυς*, many, and *ανης*, a male. The name of the 13th

class of plants in the sexual system of Linné, consisting of plants with herma-

phrodite flowers, furnished with many stamens inserted into the common receptacle of the flower, by which circumstance the class is distinguished from *Icosandria*, where the stamens are situated on the calyx.

POLYANTHUS. 1. A species of primrose (*primula*), so named from its many-clustered flowers: *πολυς*, many, and *ανθος*, a flower.—2. The name has also been given to other flowering plants which produce clusters of flowers on the same flower-stalks.

POLYARCHY, *πολυς*, and *αρχην*, to govern. The government of many, whether aristocratic or democratic.

POLYCHREST, from *πολυς*, many, and *χρηστος*, use. A medicine supposed to be of use in many diseases.

POLYCHROITE, from *πολυς*, many, and *χρως*, colour. The colouring matter of saffron, so called because it is susceptible of many changes of colour. The alcoholic solution is yellow, sulphuric acid turns it blue and then lilac; nitric acid makes it green.

POLYDIPSIA, from *πολυς*, many, and *διψη*, thirst. Excessive thirst.

POLYGALA. Milk-wort. An extensive genus of plants. *Diadelphia-Octandria*. Name from *πολυς* much, and *γαλα*, milk, in allusion to the abundance of its milky juice. The common milk-wort is indigenous. The root of the *P. senega*, called rattlesnake-root, is employed in medicine.

POLYGALIC ACID. An acid constituting the peculiar principle of the rattlesnake-root (root of the *Polygala senega*), discovered by Gehlen, and described by him under the name of *senegin*. Polygalic acid is a white powder, dissolves in water, and abundantly in boiling alcohol, but is insoluble in ether and the fixed oils.

POLYGAMIA, from *πολυς*, many, and *γαμος*, marriage. Polygamy. The name

of the 23rd class of plants in the sexual system of Linné, consisting of polygamous plants or plants having hermaphrodite flowers, and likewise male or female flowers, or both. The orders of the class are *Monacia*, *Diazcia*, and *Triacia*.

POLYGAMIA EQUALIS. An order of the class *Syngenesia*, of the sexual system of plants. Plants with perfect florets, each

having pistils and stamina, and producing one seed.

POLYGA'MIA FRUSTRA'NEA. An order of the class *Syngenesia*, of the sexual system of plants. Florets of the disk perfect; those of the circumference with an abortive pistil, or it is wanting altogether.

POLYGA'MIA NECESSARIA. An order of the class *Syngenesia*, of the sexual system of plants. Florets of the disk with stamens only; those of the radius with pistils only.

POLYGA'MIA SEGREGA'TA. An order of the class *Syngenesia*, in the sexual system of plants. Plants with several flowers either simple or compound, but with united anthers and a proper calyx, all included in one common calyx.

POLYGA'MIA SUPERFLUA. An order of the class *Syngenesia*, of the sexual system of plants. Florets of the disk of the compound flowers perfect: those of the circumference having pistils only; but both kinds producing perfect seed.

POLYGO'NIUM. Persicaria or Knot-grass. An extensive genus of holoraceous plants, *Octandria—Trigynia*. Name from *πολυς*, many, and *γωνι*, a joint. There are at least ten indigenous species of polygonum, among which are the Bistort, or Snake-weed, Water-pepper, Common Knot-grass, Buck-wheat, and Black Bird-weed.

POLY'GLOTT, from *πολυς*, many, and *γλωττα*, tongue. 1. Having many languages.—2. A book, particularly the Bible containing the Scriptures in several languages.

POLY'GON, from *πολυς*, many, and *γωνια*, an angle. 1. A geometrical figure of many sides and angles.—2. In fortification, an exterior polygon is the distance of one point of a bastion from the point of another, reckoning all round the works: an interior polygon is the distance between the centres of the bastions, reckoning round as before.—3. In mechanics, when a series of more than three forces act in equilibrium upon one point, they may be represented in direction and intensity by a polygonal figure; this figure is termed the polygon of those forces.

POLYGO'NAL NUMBERS. The successive sums of a series of numbers in arithmetical progression.

POLYGA'STRICA. An order of animalcules especially characterised by numerous cavities or stomachs (sometimes upwards of 200): whence the name *πολυς*, many, and *γαστρις*, a stomach. Almost all the known genera of polygastric animalcules possess eyes: they are also found to possess an acute sense of taste; distinguish, pursue, and seize their prey; and although so excessively minute that 6,000,000 have been calculated as being contained in one drop of water, they

avoid infringing upon each other when swimming. There is no proper skeleton, nor any secretion of shell; yet there are parts destined to give support. In the majority there is an alimentary canal, but no teeth for mastication. Notwithstanding their extreme minuteness, they appear to be the most numerous, the most prolific, the most active, and the most voracious of all living beings.

POLYGRAM, *πολυς* and *γραμμα*, line. A figure consisting of many lines.

POLYGRAPH, from *πολυς*, many, and *γραφω*, to write. An instrument for multiplying copies of a writing.

POLYGY'NIA, from *πολυς*, many, and *γυνη*, a female. An order of plants having many pistils.

POLY'HALLITE, from *πολυς*, many, *αλς*, salt, and *λιθος*, stone. A mineral which occurs in masses of a fibrous texture at Ischel, in Austria, and is thus named from its containing sulphates of lime, magnesia, potash, and soda, coloured red by peroxide of iron. Lustre pearly.

POLYHE'DRON, from *πολυς*, many, and *εδρα*, a side. 1. A solid contained under many sides or faces.—2. A multiplying glass: a lens cut into many facets, disposed in a convex form.

POLYMI'O'NITE, from *πολυς*, many, and *μικρονι*, to mix. A recently discovered mineral, so named in consequence of the variety of its constituents: titanic acid, zirconia, lime, yttria, oxides of iron, cerium, and manganese, with minute portions of magnesia, potash, silica, and oxide of tin. It is of a black colour, and metallic lustre; crystallised in small prisms. Sp. gr. 4.8.

POLYM'NITE. A stone, so named from *πολυς* and *μνος*, because it is marked with dendrites and black lines, so disposed as to represent rivers, marshes, and ponds.

POLY'MORPHS, from *πολυς*, many, and *μορφη*, form. Small and irregular shells not referred to any known genera.

POLYNO'MIAL, from *πολυς*, many, and *ονομα*, a name. An algebraical name for any quantity consisting of several terms, as, $ax + bx^2 + cx^3 - dx^4$.

POLY'PARIA. See POLYPE.

POLYPE, } *Πολυπους*, from *πο*, *υς*,
POLY'FUS, } many, and *πους*, a foot. 1.

Something that has many feet or roots. The name has been used to designate a peculiar description of tumour which grows in the nose, from the erroneous idea that it has usually several roots or feet.—2. The name *Polype* has been used to designate the individual tubes, with their tentacula, of the *Polypus*, reserving this last as the name of the ag

gregate of the animal mass of polypes. See POLYPI.

POLYPET'ALOUS, from πολυς, many, and πέταλον, a petal; many-petalled. A botanical term applied to a corolla which has the petals separate.

POLYPI, pl. of *polypus*. See POLYPE. The fourth class of Radiata or Zoophytes, so named because the tentacula which surround their mouth give them a supposed resemblance to an *Octopus* called *Polypus* by the ancients. These animals are commonly known as *corals*; and an idea was formerly generally entertained, that they were stony plants, (whence the name *zoophytes*). Such is the enormous accumulation of the stony envelopes formed by them in certain seas, that islands are produced, coasts extended, and harbours blocked up, by them; and with such facility that M. de Lamarck has hazarded the idea that the calcareous strata of the globe may have been produced by them. The orders are Carnosi, Gelatinosi, and Corallifera.

POLYPIP'ERA, } A term applicable to
POLYPIPH'ERA. } the habitations of poly-
ypi, but applied to that class of animals commonly known by the name of *Zoophytes*. See POLYPI.

POLYPO'DIUM. Polypody. A genus of perennial ferns, most of which are found in hot climates, but several inhabit Britain. Name from πολυς, many, and πους, a foot, because it has many roots. Some species are used medicinally.

POLYSCOPE, πολυς, and σκοπῶ, I view. In *optics*, a plano-convex lens, of which the convex surface is subdivided into several *facets*.

POLYSEP'ALOUS, from πολυς, many, and sepal (q. v.). A term applied to a calyx which has its sepals separate from each other.

POLYSPE'RMIOUS, from πολυς, many, and σπέρμα, seed; many-seeded.

POLYS'TOMA (rather *Hexastoma*). A genus of Entozoa belonging to the family *Tremadotea*, Rud. Name from πολυς, many, and στωμα, mouth; the body being depressed, smooth, and furnished with six cups or orifices arranged in a transverse line.

POLYSTYLE, from πολυς, many, and στυλος, a column. A building surrounded by so many columns that they cannot readily be calculated at a first view.

POLYSTY'NETON, from πολυς, many, and συνδῆτες, connecting. A rhetorical figure by which the copulative is often repeated, as, "we have money and men and ships and stores."

POLYTECH'NIC, from πολυς, many, and τεχνη, art. Denoting many arts, as the

Polytechnic School of France, which is designed to supply education for the various departments of active life, both civil and military. This has been one of the most justly celebrated schools of Europe.

POLY'THEISM, from πολυς, many, and θεος, God. The doctrine of a plurality of gods.

POLYTRICHUM, from πολυς, many, and θρίξ, hair. A genus of Cryptogamic plants of the order *Musci*: so named either from its resemblance to a woman's hair, or because in ancient times women used to dye the hair with it to prevent it from shedding. The golden maidenhair is a species.

POLYZ'OA, πολυς, and ζων, animal. A class of compound animals, resembling the *Sertularia* and the compound *Ascidians*.

POLYZ'ONAL LENS, πολυς, and ζωνη, zone. A burning lens composed of several zones or rings.

POMACEÆ. A natural order of plants, consisting of such as have a pomaceous fruit or fruit of an esculent, pulpy, apple, berry, or cherry kind.

POMATUM. *Pomado*. A name formerly applied to a fragrant ointment made with lard and apples, but now only to solid greasy substances used in dressing the hair.

POMEGRAN'ATE, from *pomum*, an apple, and *granatum*, grained. The fruit of the Pomegranate tree (*Punica granatum*), cultivated in warm climates. The fruit is a pulpy many-seeded berry, about the size of the orange, with a reddish rind.

POMG'RIMUM, Lat. *post*, behind, *murus*, a wall. In *Roman antiquities*, a vacant space of ground within and without the walls of a city.

POMPHOLYX, from πομφος, a bladder.

1. A small vesicle. — 2. A cutaneous disease, described by Dr. Willan as an eruption of bullæ, appearing without inflammation around them and without fever.

POMPION. In *botany* (see *CUCURBITA*).

PO'MUM. The Latin word for *apple*, but applied in botany to any fleshy pericarpium or seed-vessel, containing a capsule within it with several seeds.

PONE (Lat.). In *law*, a writ which lies to remove actions of debt, detinue, nuisances, &c., out of an inferior court into the Common Pleas.

PONGO. 1. The name in Borneo, of a monkey, closely resembling the orang-outang in the proportions of all his parts, but somewhat larger, being nearly equal to man. He is the largest monkey known.

— 2. The name has also been applied to the *Simia troglodytes*, Lin., or *Chimpanzee* of Guinea and Congo, but not properly

PONS VAR'OLII. An arched eminence of the *medulla oblongata*.

PONTER'. In *glass-works*, an iron instrument used to stick the glass on at the bottom, for the more convenient fashioning of the neck of it.

PONTIFF, Lat. *pontifex*, a high priest. The Romans had a college of *pontiffs* (*pontifices*); the Jews had their *pontiffs*, and in modern times the Pope is denominated the sovereign *pontiff*, and his reign a *pontificate*.

PONTOON, Fr. and Span. *ponton*. 1. A floating bridge, formed of flat-bottomed boats, anchored in two lines, with planks laid across, for the passage of soldiers and military stores. The boats themselves are sometimes called *pontoons*, and the bridge formed of them is accordingly a *pontoon-bridge*.—2. In *naval affairs*, a lighter: a low flat vessel, resembling a barge, furnished with cranes, capstans, and other machinery; used in careening vessels chiefly in the Mediterranean.

PONTOO'N-CAR'RIAGE. A carriage made with two wheels only, and two side pieces, whose fore-ends are supported by timbers.

PONT-VOLANT. A flying-bridge. This is a description of light bridge, used in sieges, for surprising a post or outwork which has but a narrow moat. It is composed of two small bridges, laid one over the other, and so contrived that by the aid of cords and pulleys, the upper one may be drawn forward till it reaches the destined spot.

POOP. The highest and aftmost deck of a ship. The *poop-royal* is a short deck or platform, placed over the aftmost part of the poop, in the largest of the French and Spanish men of war, and serving as a cabin for their masters and pilots. This is usually called the *top-gallant-poop* by our seamen. *To have wind in the poop* is to have the wind behind or favourable.

POOP'ING. The shock of a heavy sea upon the stern or quarter of a ship, when she scuds before the wind in a tempest. The term is also used to denote the action of one ship running her stem into another's stern.

POPE, Papa, παπα, father. 1. The Bishop of Rome and head of the Catholic Church.—2. A small fish, the ruff.

POPINJAY. 1. In *ornithology*, a parrot.—2. The green woodpecker of Europe.

POR'LIN. A stuff made of silk and worsted.

POPULI'AL. Appertaining to the ham (*poples*), or back part of the knee-joint, as the *popliteal* artery.

PORULUS. Poplar tree. A genus of about 20 known species. *Diæcia*—*Octandria*. The most known species are the *Able* or great white poplar (*P. alba*), the *Black* (*P. nigra*), the *Aspen* or *trembling poplar* (*P. tremula*); the one indigenous.

All the species are of rapid growth; the wood is soft, but easily wrought, and not apt to swell or shrink. The Lombardy poplar (*P. dilatata*), is the finest species of the tree.

POR'CATE, Lat. *porca*, ridge. When a surface has several longitudinal ridges.

POR'CELAIN. A beautiful and semi-transparent variety of earthenware, first (and extensively yet) manufactured in China and Japan. The Chinese call it *tsé-ki*, and the two chief ingredients which they employ in the manufacture of it are *pé-tun-tsé*, and *kao-lin*. The Portuguese were the first importers of the article, and bestowed upon it the name of *porcelain*, from *porcella*, a cup. The name is now used to denote generally all earthenware which has been semi-vitrified, and has become somewhat translucent in the process of firing; and the name *china*, or *china-ware*, is again used, to denote the finest variety of porcelain. See **POTTERY**.

PORCEL'LANITE. A siliceous mineral, of various colours, which occurs in amorphous masses, or fragments often rifted. Its fracture is imperfectly conchoidal, more or less glistening, and often has the aspect of certain porcelains. It melts before the blowpipe into black scoria, and yields by analysis silex 61, alumina 27, potash 3.6, magnesia 3, oxide of iron 2.4. It is supposed to be an alteration of some variety of argillaceous slate by pseudo-volcanic heat. It occurs in large masses near the pitch-lake of Trinidad, and often in the vicinity of coal-mines.

PORCH. An arched vestibule at the entrance of a building. See **PORTRICO**.

POR'CUPINE. 1. In *zoology*, see **HYSTRIX**.—2. The porcupine, properly so called, is the *H. cristata*, Lin. The name *porcupine* (Fr. *porc-épic*) is from *porcus* (Welsh *porc*), a pig, and *spina*, a spine, or thorn: that is, *spiky-hog*, or *spine-hog*.

POR'CUPINE-FISH. A species of *diodon* covered with spines.

PORES, from *poros*, a passage. 1. The small interstices between the solid particles of bodies.—2. The animal body is provided with pores for respiration.

PORIF'ERA, from *porus* and *fero*. } An
PORIPH'ERA, from *poros* and *pherein*. } order of Radiata, forming the various genera of sponge met with on every rocky coast of the ocean.

POR'ISM, from *porisimos*, acquisition. The ancient geometers gave this name to two classes of propositions: (1.) to *collaries*; and (2.) to propositions affirming the possibility of finding such conditions as will render a certain problem indeterminate, or capable of innumerable solutions. The *porism* is not a theorem nor a problem, or rather it includes both. It asserts that a certain problem is inde-

terminate, and so far it partakes of the nature of a theorem; and seeking to discover the conditions by which this may be effected, it partakes of the nature of a problem.

ΠΟΡΟΣΙΤΥ. A property of matter; its molecules not being in absolute contact, but separated by *pores*.

PORPHYRY, from πορφύρα, purple. The *porphyrites* of the Latins; a form of compound rock, composed essentially of crystals of felspar, disposed in a base of hornstone, which base in an Egyptian variety of porphyry is of a beautiful red colour, passing to a purple, and which, with its snow-white crystals of felspar, forms one of the most beautiful rocks in nature. There are, however, several varieties, as petrosiliceous porphyry, felspar porphyry, clinkstone porphyry, &c. Porphyry is an igneous rock, often forming masses of enormous thickness, and sometimes dikes like basalt.

PORPHYRY-SHELL. A species of murex. The animal afforded the Tyrian purple.

PORPOISE, from *porcus-piscis*, hog-fish. The *Delphinus phocæna*, Lin., so named from its shape.

PORRECT, Lat. *porrigo*, I extend. In zoology, when a part extends forth horizontally.

PORT. 1. Lat. *portus*, a harbour, either natural or artificial, but usually applied to such harbours as are much resorted to, as the *port* of London; whereas *harbour* includes all places of safety for ships. Among *seamen*, the term is further applied to designate the larboard or left side of a ship, as a *heel to port*, meaning an inclination to the larboard side. *Port the helm*, is an order to put the helm to larboard. Also the opening in the ship's side for a gun.—2. A kind of wine made in Portugal, and so named from Oporto.

PORTAL. 1. Fr. *portail*, from Lat. *porta*, a gate. The arch over a door or gate; the frame-work of the gate; the lesser gate when there are two of different dimensions at an entrance.—2. A little square corner of a room, separated from the rest of the apartment by wainscoting.

PORTCULLIS, Fr. *port*, and *coulisse*, a groove. A strong grating of timber, fenced with iron, and made to slide up and down, in a groove of solid stone-work, within the arch of the portal of old castles, to be let down in case of surprise, to prevent the entrance of an enemy.

PORTER. 1. Fr. *porteur*, from *porter*, to carry. A person who conveys burdens for hire.—2. Fr. *portier*, from Lat. *porta*, a gate; a gate-keeper.—3. A malt liquor, which differs from ale in being made with high-dried malt. It is so called from its being at first regarded as a drink well adapted for porters, and other labourers about the metropolis.

PORTE, SUBLIME. The official title of the government of the Ottoman empire.

PORT-FIRE. A pyrotechnic composition of 4 nirate of potash, 1 sulphur, 2 mealed powder, and 1 sulphuret of antimony, well rubbed together. This composition is sometimes moistened with linseed oil.

PORT-GRAVE, } From *port*, and Sax. *ge-*
PORT-GREVE, } *refa*, a count or earl. Formerly the chief magistrate of a port or maritime town. This officer is now called mayor or bailiff.

PORT-HOLES. The embrasures in the side of a ship of war, through which the guns are pointed.

PORTICO (Ital.), from Lat. *porticus*, from *porta*, a gate. A long covered place, composed either of vaults supported by arcades, or of flat roofs supported by pillars, the sides being open.

PORTLAND BEDS. The name given by geologists to a marine formation, occurring in the island of Portland, and in Wiltshire. The beds consist of coarse shelly limestone, fine-grained white limestone, and compact limestone (all having an oolitic structure), and chert.

PORTLAND STONE, } A marine
PORTLAND LIMESTONE, } oolitic member of the Portland Beds. It is soft when quarried, but hardens by exposure to the atmosphere. It was formerly highly valued as a building material in London and elsewhere, but it is not durable.

PORTLAND VASE. A celebrated cinerary urn, presented by the Portland family to the British Museum. It was found in the tomb of the Emperor Alexander Severus and his mother. It was recently broken to pieces by an Irishman, but has been repaired in a masterly manner, by Mr. Doubleday.

PORT-SILLS (of a ship) are the upper and lower edges of the ports.

PORTULACA. Purslane. A genus of herbaceous plants. *Dodecandria—Monogynia*. Name from *porto*, to carry, and *lac*, milk, because it (at least the garden-purslane, *P. oleracea*) is said to increase the flow of milk.

POSE. In heraldry, the attitude of a lion, horse, or other beast, standing still, with all his four feet on the ground.

POSITION, from *positus*. In arithmetic, a rule called also the *rule of false*, and *trial and error*, because in calculating on several false numbers, taken at random, as if they were the true one, and from the difference found, the number sought is determined. Position, both single and double, affords only imperfect and tedious processes for working some of the simpler cases of algebraical equations.—2. In geometry, when the direction of a line is known, it is said to be *given in position*, and to be *given in magnitude*, when its length is known. The investigation of

the relations that have place between the position of the different parts of a geometrical figure with regard to each other, has been named the *geometry of position*, and was first treated of by Carnot.—3. In *painting*, placing the model in the best way to suit the view of the artist.

Pos'ITIVE, Lat. *positivus*. A term of relation, sometimes opposed to *negative*, as, (1.) *Positive quantity*, an algebraical quantity affected by the sign +, being affirmative or additive; (2.) *Positive degree*, the state of an adjective which denotes the simple or absolute quality, without comparison or relation to increase or diminution; (3.) *Positive electricity*, in the Franklinian theory all bodies supposed to contain more than their natural quantity of the electric agency are said to be *positively electrified*, and those which have been deprived of some part of their electricity are said to be *negatively electrified*. Bodies electrified in these two different states attract each other, but bodies positively electrified repel other positively electrified bodies, and so of negatively electrified bodies. As the friction of glass and resin communicates to these substances a state of activity with regard to other bodies similar in the two cases, but opposite in their nature, the terms *vitreous* and *resinous* have been used in the same senses as *positive* and *negative*.

Pos'se COMITAT'US. The power of the county, which the sheriff is empowered to raise in case of riot, said to be all knights and other men, above the age of fifteen, able to travel within the county.

Pos'se'sIVE, Lat. *possessivus*. In *English grammar*, the genitive is termed the *possessive case*, as denoting possession; as, John's book.

Pos't. 1. Any piece of timber when used in an upright position, as a king-post.—2. A military station. Detachments placed in front of an army are termed *out-posts*, and those on the wings are *posts of honour*, as being most exposed.—3. See **MAIL**.

Pos't DISSEI'SIN. In *law*, a writ for him who, having recovered by *præcipe quod reddat*, upon default of reddition, is again disseised by the former disseisor.

Pos't DISSEI'SION. A person who disseizes another of lands which he had before recovered of the same person.

Pos'TEA (Latin). The record or return of the proceedings by *nisi prius* into the Court of Common Pleas, after a verdict.

Pos't ENTRY. When goods are weighed or measured, and the merchant has got an account thereof at the Custom-House, and finds his entry (already made) too small, he must make a *post* or additional *entry* for the surplusage, in the same manner as the first was done.

Pos'TERN (old French). 1. A small door or gate at the back of a building.—2. In *fortification*, a small gate usually in the angle of the flank of a bastion, or in that of the curtain, or near the orillon, descending into the ditch: called also the *sally-port*.

Pos't-FAC'TO LAW. A law made after the act is committed.

Pos't FINE. In *English law*, a fine due to the sovereign by prerogative, after a *licentia concordandi*, given in fine of lands and tenements: called also *king's silver*.

Pos'tI'LUM. In *architecture*, the portico at the back of a temple.

Pos'tlim'IN, from *post*, and *limen*, the end. *Postliminium* was the term used by the Romans to signify the return of a person to his own country, who had gone to sojourn in a foreign country, or had been banished or taken by the enemy. In the modern law of nations, the right of *postliminy* is that by virtue of which persons and things taken by an enemy in war are restored to their former state, when coming again under the power of the nation to which they belonged. The sovereign of a country is bound to protect the persons and property of his subjects, and a subject who has suffered the loss of his property by the violence of war, on being restored to his country can claim to be re-established in all his rights, and to recover his property. But this right does not extend, in all cases, to personal effects or moveables, on account of the difficulty of ascertaining their identity.

Pos't-MASTER. An officer having the direction and superintendence of a post-office. The *postmaster-general* is the chief officer of the post-office department, and makes all contracts for the conveyance of the public mails, receives and is accountable for the moneys arising from the postage of letters, pays expenses, and superintends the whole.

Pos't-NOTE. A bank-note intended to be transmitted by the public mail and made payable to order.

Pos't-OBIT, Lat. *after death*. In *law*, a bond for securing a sum of money on the death of an individual.

Pos't-OF'FICE. An establishment for the reception, conveyance, and delivery of letters. The post-office is perhaps one of the most beneficial institutions which a country can possess, and the framers and supporters of the Post Office Act (1839), which has transfused into that of this country both efficiency and economy, deserve the lasting gratitude of the nation for this one measure alone.

Pos'tSCEN'IUM. In *architecture*, the back part of a theatre behind the scenes.

Pos'tULATE, Lat. *postulatum*, from *pos-tulo*, to demand. A position assumed without proof, or one which is considered

as self-evident. It differs from an axiom in being put as a request or petition, whereas an axiom is asserted.

POT'ASH, Latinized *potassa*. The vegetable alkali, so called because it is obtained from the lixivium of the *ash* which remains from the incineration of certain vegetables by evaporation in iron pots. Potash is strictly the protoxide of potassium. In commerce, it is usually met with in the form of black ashes, obtained by evaporating the lixivium and fusing the residue; and *pearl-ash*, prepared by again lixiviating the black ashes to free them from some of their impurities, and evaporating to dryness. The ashes of commerce rarely contain more than 60 per cent. of the alkali. The greater part of the alkali of the black ash is in a caustic state (that is, in the state of oxide), but in the pearl-ash it is in the state of carbonate.

POTAS'SA. The Latinized name of potash, adopted by chemists.

POTAS'SIUM. The metallic basis of potash. Its sp. gr. being 0.865, it is lighter than water, and when thrown upon it floats, and burns with a beautiful rose-coloured flame, evolving hydrogen, and leaving the water a solution of pure potash. At ordinary temperatures it is solid, soft, and easily moulded by the fingers; and when cut exhibits a beautiful metallic lustre, closely resembling silver, which speedily tarnishes by exposure to the air. It conducts electricity like ordinary metals. It must be preserved in pure naphtha.

POTA'TO. The well-known root of the *Solanum tuberosum*, a native of North America, where it was called by the native Indians *batatas*, which Europeans have altered to suit their particular languages. The potato, of which there are now almost innumerable varieties, has generally been regarded as a native of South America; but this arises from confounding it with the sweet potato (*Convolvulus batatas*), which is a native of the intertropical parts of America, and does not succeed well even in the warmer parts of Europe, and consequently is not attempted to be grown in this country as an article of food. It is often absurdly called the *Spanish potato*.

POTEN'TIAL. Having power (*potentia*) to impress on us the ideas of certain qualities, though the qualities are not inherent in the thing, as *potential* heat. A *potential* cautery is any caustic application, as nitrate of silver, distinct from an *actual* cautery, or a red hot iron. The *potential* mode of a verb is that form used to express the power, possibility, liberty, or necessity of an action, indicated by *may* or *can*.

POTENTIL'LA. Cinquefoil. A very extensive genus of plants, mostly perennials.

Icosandria—*Polygyria*. Named from *poten-*

tia, power, on account of its supposed medicinal virtues. There are 11 indigenous species, among which are the wild tansy or silver-weed, the common cinquefoil or five-leaved grass, the barren strawberry, the white rock, shrubby, silvery, golden, and spring cinquefoil.

POT'E'RIUM. Burnet. A genus of plants. *Monœcia*—*Polyandria*. Name from *ποτηριον*, a cup, in reference to the shape of its flowers. The burnet-saxifrage, so much used in the beverage called cool-tankard, is the British type.

POTOROO'. The name given in New Holland to the Kangaroo rat.

POT'STONE. The *Lapis Ollaris* of Pliny; the *Toftstein* of Werner, the *Talc oilaire* of Haüy. A variety of steatite, usually of a greenish colour, but of various shades, and often spotted. Sp. gr. 3.

POT'TERN ORE. An ore, so named by the miners, because it tends to vitrify like the glazing of potters' ware.

POT'TERS' CLAY. A variety of clay usually of a grey colour, but becomes red when highly heated, and so named because it is used in the manufacture of the coarse red earthenware.

POT'TERY. In reference to chemical constitution there are only two genera of baked stoneware; the first consists of a fusible earthy mixture, along with an infusible, which when combined are susceptible of becoming semi-vitrified and translucent in the kiln. This constitutes porcelain or china-ware, which is either hard and genuine, or tender and spurious, according to the quality and quantity of the fusible ingredient. The second kind consists of an infusible mixture of earths, which is refractory in the kiln, and continues opaque. This is pottery, properly so called, but it comprehends several subspecies, which graduate into each other by imperceptible shades of difference. To this head belong earthenware, stoneware, flintware, *fayence*, delfware, iron-stone china, &c.

POUNCE. 1. Gum-sandarach pulverized to a fine powder, and used to prevent ink from spreading on paper.—2. Ground charcoal, inclosed in some open stuff, as muslin, to be passed over holes forming the lines of a pattern, to mark the same on the material on which the pattern is to be embroidered, &c.—3. In *falconry*, the talons of a bird of prey are called *pounces*, perhaps from the same root as Sp. *punzar*, and Ital. *punzione*.

POUND, Sax. *pund*; a standard weight. 1. The imperial troy pound contains 5760 troy grains, and the imperial avoirdupois pound contains 7680 avoirdupois grains, or 7000 grains troy; hence 144 lbs. avoirdupois = 175 lbs. troy.—2. A money of account = 20s.

POUPART'S LIGAMENT. An abdominous muscle.

POURPRE'STEE, Fr. *pour*, and *pris*, taken. In *law*, a wrongful inclosing or encroaching on another's property, highway, &c.

POW'DER, Fr. *poudre*, contracted from *poudre*. A general name for all dry substances comminuted or triturated to fine particles, but the term is applied technically to substances reduced to fine particles for medicinal purposes. We have also *gunpowder* (q. v.), and *hair-powder*, which is pulverized starch.

POW'DERINGS. Devices of minor character, to fill up vacant spaces in carved works, &c.

POWER. 1. In a *philosophical* sense, is the faculty of doing or performing anything: ability or strength. The exertion of power proceeds from the will, and, in strictness, no being destitute of will or intelligence, can exert power. In man *power* is active or speculative: *active power* is that which moves the body; *speculative power* is that by which we see and judge, or by which we think. Power has also been distinguished into *active* and *passive*: the power of *doing* or *moving*, and the power of *receiving* impressions and of *suffering*.—2. In *mechanics*, that which produces motion or force, or which may be applied to produce it. Hence the term *mechanical powers* (q. v.). The term also comprehends *momentum*, as the *power* of the wind, and *force* and the *power* of steam. We also call the aggregate capabilities of a machine its *power*, as a steam-engine of 200 horse-power (this power perhaps made up of two others, the *power* of steam and the *power* of the atmosphere).—

3. In *arithmetic* and *algebra*, that which arises by the successive multiplication of any quantity into itself; the *degree* of the power being always denominated by the number of equal factors that are employed. See *INVOLUTION* and *EXPONENT*.

4. In *law*, the authority which one man gives to another to act for him, and it is sometimes a reservation which a person makes, in a conveyance, for himself to do some acts, as to make leases and the like. The deed or instrument by which authority is conveyed is termed a *power of attorney*.—5. In *politics*, &c., rule, sway, authority, actual government. The *powers* of government, are legislative, executive, judicial, and ministerial. The ecclesiastical and military *powers* are subject to the civil, and that of the sovereign is limited by law.

POW'ER-LOOM. A loom worked by steam or water.

POWL'DRON. In *heraldry*, that part of the armour which covers the shoulders.

POX SAX. *pocce*, a pustule. Strictly, *eruptions* of any kind, but restricted to

small pox, chicken pox, the vaccine, and the venereal diseases. When used without any epithet, *pox* signifies the *lues venerea*.

POR'NING'S LAW. An act of parliament, made under Henry VII., whereby the law of England was introduced into Ireland, under the lieutenantship of Sir Edward Poyning.

POZZUOL'ANA. Volcanic ashes brought from Pozzuoli, a town in the bay of Naples, and used to mix with lime in making Roman cement.

PRACTICE. In *arithmetic*, a rule by which the operations of the general rules are abridged in use.

PRÆCOGNITA (before known). Things previously known in order to understand something else. The knowledge of the structure of the human body is one of the *præcognita* of the medical skill.

PRÆCOR'DIA, from *præ*, before, and *cor*, the heart. The forepart of the region of the thorax.

PRÆFECTURE. In *antiquity*, an appellation given to certain towns in Italy whose inhabitants had the name of Roman Citizens, but were governed by prefects sent from Rome.

PRÆMUNIRE. A Latin corruption of *præmonere*, to pre-admonish. 1. A writ, or the offence for which it is granted. The offence consists in introducing a foreign authority into England, i.e., introducing and maintaining the papal power, creating *imperium in imperio*, and yielding that obedience to the mandates of the pope which constitutionally belongs to the sovereign. Both the offence and the writ are so denominated, from the words used in the writ *præmunire facias*—Cause A. B. to be forewarned to appear before us, to answer to the contempt wherewith he stands charged.—2. The penalty incurred by infringing a statute.

PRÆNOMEN, from *præ*, before, and *nomen*, a name. The name among the Romans like our Christian name, serving to distinguish brothers, &c. from each other, as Caius, Julius, &c.

PRÆTEXTA. A long white robe, with a purple border, worn by the children of the higher classes of ancient Rome.

PRÆTOR. A chief magistrate among the Romans, instituted for the administration of justice in the absence of the consuls engaged in war, &c. The hall or court where the prætor administered justice was called the *prætorium*.

PRAGMATIC SANCTION. In *civil law*, a rescript or answer of the sovereign, delivered by advice of his council or college, order, or body of people, who consult him in relation to the affairs of the community. The like answer given to a particular person is called simply a rescript. The term *pragmatic* is directly

from the Latin *pragmaticus*, from *πραγματικός*, and this from *πράγμα*, something performed from *πράσσω*, to do: hence *pragmatic* meddling.

PRAIRIE. A French word, signifying *meadow*, and used throughout America as a general name for those remarkable natural meadows, or plains, which characterise the valley of the Mississippi, and a great part of Texas, and are very common in other localities. Prairies are divided into three classes: (1.) The *heathy* or *bushy*, which are covered with brush-wood, and abound with springs; (2.) The *dry* or *rolling*, which are destitute of water, and of all vegetation except grass; and (3.) The *alluvial* or wet prairies.

PRAM, Dut. *praam*. 1. A description of flat-bottomed boat or lighter, used in Holland for conveying goods to, or from, a ship.—2. A similar boat, mounting several cannon; used in covering the disembarkation of troops.

PRASE. A leek-green (*prasinæ*) translucent variety of rhombohedral quartz: the *praseum* of Werner and the *quartz prase* of Brongniart. Sp. gr. 2.5.

PRA'SINE, from *πράσιν*, a leek. A term applied to designate the grass-green colour of the purest kind.

PRA'TIQUE (French). Intercourse: communication between a ship and the port in which she arrives. Hence a license or permission to hold intercourse and trade with the inhabitants of a place after having performed quarantine, or upon a certificate that the ship did not come from an infected place. The term is used chiefly in the South of Europe, where vessels coming from countries infected with contagious diseases are subjected to quarantine.

PRAX'EANS. A sect of heretics, that sprung up in Asia in the 2nd century, founded by Praxeas, a heresiarch.

PREE'ND, from *præbeo*, to allow. The stipend or maintenance granted out of the estate of a cathedral or collegiate church. It is *simple* when restricted to the revenue only, and *dignitary* when jurisdiction is annexed.

PREE'NDARY. The ecclesiastic who enjoys a prebend. He differs from a canon in this: he receives his prebend in consideration of his officiating in the church; the canon merely in consequence of being received into the cathedral.

PREE'DENT, from *præ*, before, and *cedo*, to go. 1. Going before in time.—2. In law, a judicial decision which serves as a rule for future determinations of the same kind.

PREEN'TOR, from *præ*, before, and *canto*, to sing. 1. The leader of the choir in a cathedral.—2. The leader of the

congregation in the psalmody of Scottish churches.

PREE'CEFT, from *præ*, before, and *capio*, to take. 1. A commandment to be taken as an authoritative rule of action.—2. In law, a command or mandate in writing.

PREE'CESSION, from *præcedo*, to go before. A term in *astronomy*, to denote that slow and imperceptible motion by which the equinoxes change their places, receding westwards; or contrary to the rest of the signs, and which causes the sun's equinoctial place to precede the usual calculation. The annual amount is about $50\frac{1}{2}''$, that is, if the celestial equator cuts the ecliptic in a particular point on any day of this year, it will, on the same day of next year, cut in a point $50\frac{1}{2}''$ west of the point of its former intersection; and the sun will come to the equinox $20' 23''$ before he has completed his revolution of the heavens. Hence it appears that the equinoctial points will make an entire revolution in about 26,000 years.

PREEDESTINA'TION. A term used in *theology*, to signify the preordination of men by the Supreme Deity to everlasting happiness or misery! One who believes in this doctrine is a *predestinarian*.

PRED'IAL, Lat. *prædium*, farm. Belonging to a farm: thus *predial* slaves, in opposition to *domestic*.

PRED'ICABLE. In *logic*, a term which can be affirmatively predicated of several others.

PREDIC'AMENT, Lat. *prædicamentum*, from *prædico*, to affirm. In *logic*, a category.

PRED'ICATE. In *logic*, something affirmed or denied of the subject: *prædico*, to affirm.

PREE-EMPTION, *præ* and *emptio*. The right of purchasing before others. Thus the kings of England had formerly the right of *pre-emption*, or of buying provisions for their households in preference to all others.

PREE'FIX, *præ* and *fix*. A letter or syllable put to the beginning of a word, to affect its meaning. A prefix is united to a word, as *inseparable*, and therefore differs from a preposition.

PREECIP'ITANT, } In *chemistry*, when to
PREECIP'ITATE, } a solution of some

PREECIPITA'TION. } salt, as alum, another solution, as of potash, is added, which causes a decomposition of the salt, and the base falls (is *precipitated*) to the bottom of the vessel in a (usually) pulverulent form, the phenomenon is usually termed *precipitation*; the substance which sinks is called the *precipitate*, and the substance by means of which the precipitation is effected, is denominated the *precipitant*. See **DECOMPOSITION**. The following tables contain a useful and simple scheme of precipitants of the metals, and of the acids in salts, originally constructed by J. J. Griffin.

INDICATING PRECIPITANTS FOR METALS IN SALTS.

SOLUTIONS TO BE NEUTRAL.				SOLUTIONS TO BE ACID.	METALS INDICATED.
Carbonate of Soda.	Ammonia.	Potash.	Red Prussiate of Potash.	Sulphuretted Hydrogen Gas.	
None	None None None				1. Potassium
None					2. Sodium
None					3. Ammonium
					4. Barium
					5. Strontium
					6. Calcium
		White	Brown		7. Manganese
		White	Blue		8. Iron, Protosalts
		White	None		9. Magnesium
		White		Yellow	10. Cadmium
		White		Black	11. Bismuth
		White			12. Zinc
		White	Yellow-Red		13. Tin, Protosalts
		White	White	None	14. Aluminum
		White		Black	15. Lead
		White		Yellow	16. Tin, Persalts
		White		Orange	17. Antimony
		Black	Red-Brown		18. Mercury, Protosalts
		Blue If boiled, Red	Red-Brown		19. Cobalt
		Blue If boiled, Black	Yell.-Green		20. Copper
		Green	Yell.-Green		21. Nickel
		Green	None		22. Chromium
		Green	Light-Blue		23. Iron, Persalts & Protosalts mixed
		Yellow	Yellow-Red None from the Perchloride		24. Mercury, Persalts
		Yellow Sometimes slight and Black	None		25. Gold
		Yellow	Yellow		26. Platinum
		Deep-Brown	None		27. Iron, Persalts
		Lt.-Brown	Brown		28. Silver

INDICATING PRECIPITANTS FOR ACIDS IN SALTS.				
<i>Nitrate of Baryta.</i>	<i>Nitrate of Silver.</i>	<i>Nitrate of Lead.</i>	<i>Chloride of Calcium.</i>	SALTS INDICATED.
None	None			1. Nitrates
None	None			2. Chlorates
None	White			3. Chlorides
None		Yellow		4. Iodides
None		White		5. Arsenites
None	Black			6. Sulphurets
White	None			7. Fluorides
White	Yellow			8. Phosphates
White	Brown			9. Arseniates
White			White [Soluble in Water]	10. Borates
White			White [Insoluble in Water]	11. Oxalates
White [Soluble in Acids with effervescence]				12. Carbonates
White [Insoluble in Acids]				13. Sulphates
Yellow				14. Chromates

PREEN. A forked instrument used by cloth-dressers.

PREHEN'SILE, from *prehendo*, to seize. Seizing, adapted to seize or lay hold of. Thus the tail of some monkeys is *prehensile*, and they use it to grasp the branches of trees.

PREH'NITE. A siliceous mineral, thus named after Colonel Prehn, who brought it from the Cape of Good Hope. It has since been discovered in England, in the amygdaloidal wacke of Gloucestershire, and the basalt of Staffordshire. It occurs crystallised, in granular and stellular fibrous concretions, massive and reniform. It is of a green, grey, or white colour, and internal pearly lustre: scratches glass. Sp. gr. 2.6 to 2.9. It is allied to stilbite, and is classed by the French among the zoolites.

PRÆLUDE, from *præ*, before, and *ludo*, to play. A term in *music*, denoting a short symphony or flight of fancy, which serves as an introduction to a regular composition, as the overture of an opera.

PRÆMISES, Lat. *præmissa*. 1. In *logic*, the two first propositions of a syllogism, from which the conclusion is drawn. Also propositions antecedently proposed or proved.—2. In *law*, lands, tenements, &c., mentioned in the preamble of a lease or deed.

PRÆMIUM (Latin). A reward. 1. A prize offered for a specific discovery, &c.—2. The recompense to underwriters for insurance.—3. A sum per cent. on loans, distinct from the fixed interest.

PREMON'STRANTS. An order of regular canons (called also *White Canons*), or Monks of Prémontré, in the Isle of France, instituted in 1120. They were subsequently to be found in every part of Europe.

PREPARA'TION. In *music*, the adjustment of two notes, by whose introduction a note which would be discordant is heard in the preceding harmony.

PREPOSITION, from *præ*, before, and *pono*, to place. A word placed before another, to express some relation or quality, as, exercise is necessary to health. Prepositions govern cases of nouns, and are sometimes, in colloquial language, placed after the word governed, as, the horse *which* he rode on, for the horse on *which* he rode.

PREROG'ATIVE, from *præ*, before, and *rogo*, to demand. A peculiar privilege. Thus the *royal prerogative* is the special pre-eminence which the sovereign has over all other persons, and out of the course of the common law, in right of the regal dignity: as the right of appointing ambassadors, and of making peace and

war. It is the *prerogative* of the House of Peers to decide legal questions, after the decisions of the courts of law have been appealed against, &c., &c.

PREROGATIVE COURT. In *law*, a court established for the trial of testamentary causes, when the deceased has left goods within two different dioceses, in which the probate of wills belongs, by special prerogative, to the archbishop of the province.

PRESEY'OPIA, from *πρεσβυς*, old, and *οφθαλμος*, the eye. A defect of sight common to old men, by which objects near the eyes are seen confusedly, but at remoter distances distinctly.

PRESEYTER, *πρεσβυτης*, from *πρεσβυς*, old, elder. An elder; a person in the primitive church, somewhat advanced in age, who had authority in the church, and whose duty was to feed the flock over which the Holy Spirit had made him overseer.

PRESEYTERIAN. 1. Relating to ecclesiastical government by presbyters. Thus the government of the Church of Scotland is *presbyterian*.—2. One who believes in the validity by ordination and government by presbyters.

PRESEYTERY. An ecclesiastical judicatory, consisting of all the pastors of churches within a certain district, and one ruling elder (*presbyter*) from each parish, commissioned to represent the parish in conjunction with the minister. This body receives appeals from the kirk-sessions, and appeals lie from it to the synod.—2. In *architecture*, a portion of the choir of a church, fitted with seats for the dignitaries of the Establishment.

PRESCRIPTION. In *law*, claim of title authorized by immemorial usage: custom continued till it has the force of law (in Scotland 40 years). Title to lands, roads, &c., may be obtained by prescription: and a right may similarly be lost or prescribed by neglecting to use it. The first is *positive*, and the other *negative*, prescription.

PRESENT TENSE. In *grammar*, that form of a verb which expresses action or being in the present time; as, I am writing. See *TENSE*.

PRESENTATION. In *ecclesiastical law*, the act of offering (*presenting*) a clerk to the bishop or ordinary for institution in a benefice. An advowson is the right of *presentation*.

PRESENTMENT. In *law*, the notice taken by a grand jury of any offence from their own knowledge or observation, without any bill of indictment laid before them at the suit of the queen, and on which the officer of the court must afterwards frame an indictment before the party presented can be put to answer it.

—2. The official notice in court which the jury gives of the surrender of a copyhold estate.—3. In a more general sense presentment comprehends inquisitions of office and indictments.

PRESENTS. In *law*, is used for a deed of conveyance, a lease or other written instrument, as in the phrase "Know all men by these *presents*," i.e., the writing itself, *per presentes*.

PRESERVE. 1. Fruit or other vegetable seasoned and kept (*preserved*) in sugar or sirup.—2. An inclosure on grounds for the preservation of game.

PRESIDENT, from *presidens*. An officer elected to preside over a corporation or company of men to keep order, manage their affairs, or govern their proceedings. Also an officer appointed or elected to govern a province, or to administer the government of a nation. In the United States of America the president is the chief executive magistrate. A *vice-president* is one who is second in authority to the president.

PRESS, *Fr. presse*. A machine by which something is to be *compressed*, crushed, or squeezed, as a *packing-press* for forcing goods into a more compact form; a *cane-press* (usually a *cane-mill*) for crushing the sugar-canes to obtain the sugar-juice; a *cider-press* for squeezing the juice out of apples, &c. The common sorts are screw, lever, and hydrostatic presses; but as the combinations of all the mechanical agents (reducible indeed to inclined plane and lever) are almost illimitable, there may be presses made of an almost infinite variety of forms. In *printing* various kinds of presses are used (see *PRINTING-PRESS*); and the art and business of printing, and the publications which are issued by means of printing, are all comprehended in the unqualified term "*The Press*." Hence we speak of the *liberty of the press*, the *licentiousness of the press*, &c. &c.

PRESS-GANG, from *press* and *gang*. A detachment of seamen under the command of an officer empowered to impress men into the naval service.

PRESSIROSTRES, from *pressus* and *rostrum*, a bill. A family of birds of the order *Grallatorie*, Cuv., *Grallæ*, Lin., comprising genera with very long legs, without a thumb, or in which the thumb is too short to reach the ground, and a moderate bill, strong enough to penetrate the ground in search of worms. The bustards, plovers, and lapwings are examples.

PRESS-WORK. In *printing*, the operation of taking impressions from the types.

PRESTATION-MONEY. A sum of money paid yearly by archdeacons and other dignitaries to their bishop, *pro exteriori jurisdictione*.

PRESTIMONY, from *præsto*, to supply

A term in canon law denoting a fund for the support of a priest, appropriated by the founder, but not erected into any title or benefice, and not subject to the pope or ordinary. In Spain *prestimonio* is a prebend for the support of poor clergymen, on condition of their saying prayers at certain stated times.

PRESTO. An Italian word meaning quick; used in music as a direction for a quick lively movement or performance.

PRESUMPTION OF LAW. The assumption of the truth of a certain state of facts by the ordinary custom of law.

PRESUMPTIVE EVIDENCE. In law, is that which is derived from circumstances which necessarily or usually attend a fact, as distinct from direct evidence or positive proof.

PRESUMPTIVE HEIR. One who would inherit an estate if the ancestor should die with things in their present state, but whose right of inheritance may be defeated by the birth of a nearer heir before the death of the ancestor; distinct from *heir-apparent*, whose right is indefeasible, provided he outlives the ancestor.

PRETERITE, from *præter*, beyond. A term in grammar applied to the tense which expresses an action perfectly past or finished, but with a specification of time: called also the *perfect tense*.

PRETERIMPERFECT. In grammar, a term designating the tense which expresses action or being, not perfectly past. The term is awkward.

PRETERITION, from *prætereo*, to pass by. A rhetorical figure, by which, in pretending to pass over anything, we make a summary mention of it. Praise and blame are often artfully bestowed by *preterition*.

PRETERPERFECT, from *præter*, more than, and *perfect* (q. v.). A term in grammar equivalent to *preterite*, applied to the tense of verbs which expresses action, or being absolutely past.

PRETERPLUPERFECT, from *præter*, beyond, *plus*, more, and *perfect* (q. v.). A term in grammar designating the tense of verbs which expresses action or being past, prior to another past event or time; better denominated the *prior past tense*; that is, past prior to another event.

PRÆTOR. } A judge among the ancient Romans, answering to the modern chief justice or chancellor, or both. In later times there were pretors appointed to distribute justice in the provinces; such provinces being called *præfectures*.

PREVARICATION. A shuffling; *prævaricor*, from *præ*, before, and *varicor*, to straddle. In civil law, the collusion of an informant with the defendant, for the purpose of making a sham prosecution. In common law, a seeming to undertake a

thing falsely or deceitfully, for the purpose of defeating it.

PREVENTIVE SERVICE. A designation for the duty performed by the armed police engaged in watching the coasts, for the purpose of preventing smuggling and other illegal acts.

PRICE. By the price of a commodity is meant its value estimated in money, or simply the quantity of money for which it will exchange. By *price current* is meant a list or enumeration of the various articles of merchandise, with their prices, the duties (if any) payable thereon when imported or exported, with the drawbacks occasionally allowed upon their exportation.

PRICKING-UP. In architecture, the first coat of plaster in work of three coats upon lath.

PRICK-POST. In architecture, a post, in wooden buildings, between two principal posts.

PRICK-PUNCH. A piece of tempered steel with a round point, to impress a round mark on cold iron.

PRIEST, from Lat. *præstes*, a chief. Among pagans, priests were persons whose appropriate business was to offer sacrifices and perform other sacred rites of religion. In the modern churches, a priest is a person who is set apart or consecrated to the ministry of the religion of his country. In England, the word is understood to be chiefly applicable to the subordinate orders of the clergy, above a deacon and below a bishop, but in the United States of America, the word denotes any licensed minister of the gospel.

PRI'L'ON. A name, in Cornwall, for tin extracted from the slag.

PRI'MA FA'CTE. "On the first view" of anything. A term in logic.

PRI'MÆ VIÆ. First passages. A term in anatomy, employed to denote the stomach and intestinal tube, because they are the first passages for what is taken into the stomach.

PRI'MAGE. In commerce, a certain allowance, paid by the shipper or consignee of goods, to the marines and master of a vessel for loading the same. It differs in amount at different places, from a penny to sixpence a pack, ball, &c.

PRI'MARY, Lat. *primarius*, from *primus*, first; first in order, original; as—1. In pathology, applied to diseases, to their symptoms, causes, &c., to denote priority, in opposition to what follows, or what is secondary. — 2. In geology, applied to rocks or strata, supposed, from the absence of fossil remains, to have been formed before animals and vegetables existed: those in which organic remains appear being termed *secondary*. It is now known, however, that some portions of those so called *primary rocks* (gneiss

mica schist, argillaceous schist, &c.), are newer than others which belong to the *secondary* groups. To obviate this confusion, Mr. Lyell has proposed the term *hypogene*, which will probably be adopted by geologists instead of *primary*.—3. In *astronomy*, applied to those planets which revolve about the sun, in distinction from the *secondary planets*, which revolve about the *primaries*.—4. In *physics*, the *primary qualities* of bodies are such as are original and inseparable from them, as extension, in distinction to those qualities which are *secondary*, as softness, hardness, &c.—5. In *optics*, the *primary colours* are those into which a ray of solar light may be separated.—6. *Primary quills*, the largest feathers of the wings.

PRIMATE, low Lat. *primas*. An archbishop.

PRIMATES. In *zoology*, the first order of animals in the class Mammalia, in the system of Linné, including four genera, *Homo*, man, *Lemur*, the lemur, *Simia*, the ape, and *Vespertilio*, the bat.

PRIME, from *primus*. 1. A *prime number* is one which cannot be divided without remainder by any number except itself and unity, as 5, 7, 11. A *prime figure* is a geometrical which cannot be divided into any other figure more simple than itself, as a triangle, a pyramid, &c.—2. *Primes* are numbers adopted by chemists, in conformity with the doctrine of definite proportions, to express the ratios in which bodies enter into combination. Primes, duly arranged in a table, constitute a scale of chemical equivalents. They are supposed to express the ratios of weights of atoms, according to the atomic theory.—3. The *prime vertical* is the vertical circle which passes through the poles of the meridian, or the east and west points of the horizon. Dials projected on the plane of this circle are called *prime vertical*, or north and south dials. *Prime of the moon* is the new moon, when it first appears after the change.

PRIMER-FINE. In *England*, a fine due to the crown on the writ or commencement of a suit by fine.

PRIMER-SEISIN. In *feudal law*, the right of the king, when a tenant in *capite* died seised of a knight's fee, to receive from the heir, if of full age, one year's profit of the land if in possession, and half a year's profit if the land was in reversion expectant, on an estate for life: abolished 12 Charles II.

PRIMINE. In *botany*, the outermost covering of an ovule.

PRIMING. 1. In *painting*, the first colour laid on the canvass, on the walls of a building, &c.—2. The powder laid in the pan of a gun (with a flint-lock), to receive the fire from the steel, and being ignited to fire the powder of the charge.

—3. In *steam-engines*, the hot water carried along with the steam from the boiler into the cylinders, and which is always an evil.

PRIMING-WIRE. A pointed wire, used to penetrate the vent of a musket, &c., for examining the powder of the charge, or for piercing the cartridge.

PRIMITIVE, Lat. *primitivus*, from *primus*; original. 1. A term formerly used in geology, in the same sense as *primary* is at present.—2. In *grammar*, a *primitive* is a word not derived from any other: an original word.—3. In *painting*, *primitive colours* are red, yellow, and blue, from which all other colours are compounded.

PRIMO. An Italian word, meaning *first*; used in music in that sense, as *primo canto*, the first treble, *alto primo*, the first counter tenor, &c.

PRIMOGENITURE, from *primus*, first, and *genitus*, begotten; seniority by birth among children. In *law*, the right which belongs to the eldest son or daughter.

PRIMORDIAL, Lat. *primordialis*. 1. First in order: *primus*, first, and *ordo*, order.—2. First principle or element.

PRIMULA. Primrose. A genus of perennial flowering plants. *Pentandria—Monogynia*. Name from *primulus*, very early, because it flowers in the beginning of the spring. The common primrose (*P. vulgaris*), the cowslip or paigle (*P. veris*), oxlip (*P. elatior*), the bird's eye (*P. farinosa*), and Scotch primrose (*P. scotica*), are indigenous in Britain. There are also 25 exotic species, mostly hardy plants.

PRIMUM MOBILE. In the *ancient astronomy*, this was the ninth or highest sphere of the heavens, above those of the planets and fixed stars, and including all the others.

PRINCEPS SENATUS. In *ancient Rome*, the citizen whose name was written first on the list of the Senate by the Censors.

PRINCE'S METAL. Prince Rupert's Metal. One of the many modifications of brass.

PRINCIPAL, Lat. *principalis*, chief, from *princeps*, sovereignty. 1. In *law*, a *principal challenge* is where the cause assigned carries with it *prima facie* evidence of partiality, favour, or malice. A *principal* is an actor or absolute perpetrator of a crime.—2. In *commerce*, a capital sum lent on interest, due as a debt, or used as a fund, so called as distinct from *interest* or *profit*.—3. In *architecture*, a main timber in an assemblage of carpentry.—4. The head of a Scottish University.—5. In *fine arts*, the chief circumstance in a work of art.

PRINCIPLE, from *principium*, beginning. 1. In *science*, a truth admitted either without proof, or considered as having been proved. In the former sense it is

synonymous with axiom, and in the latter it is an *established principle*.—2. The term is vaguely used in chemistry. It sometimes denotes a component part, as the *constituent principles* of bodies. At other times it means a substance, on the presence of which certain qualities, common to a number of bodies, depend: thus we say the *acidifying principle*. We have also *proximate principles* of animal and vegetable bodies, meaning thereby substances peculiar to those bodies, which result from peculiar modes of combination of ordinary matter.

PRINT'ING. The art of taking copies by impression of type, engraved plates, and blocks, or any design or work whatever, in black ink, or pigments of various colours; but the word *printing*, without any distinctive addition, is usually understood to imply typography, or printing from type, usually called *letter-press printing*. The art is divided into two departments, *composition*, or the arrangement of the types; and *press-work*, or the taking off impressions from the types so arranged: the workmen employed are therefore distinguished into two classes—*compositors* and *pressmen*.

PRINT'ING-INK. A composition, according to Mr. Savage's recipe, of balsam of capivi (36), lamp-black (12), indigo and Prussian-blue (together, p. æq. 5), Indian-red (3), turpentine soap (dry 3). This gives a superfine black ink: the pigments for the coloured inks are carmine, lakes, vermilion, red-lead, gall-stone, Roman-ochre, yellow-ochre, verdigris, blues and yellows mixed for greens, indigo, Prussian-blue, Antwerp-blue, lustre, umbre, sepia, Venetian-red, &c.

PRINT'ING-MACHINE. A general name for all self-acting printing-presses. The first machine of this sort was projected by Mr. William Nicholson, (1790); but the first operative machine of the sort was contrived by, and constructed under the direction of, Mr. T. König, a clock-maker from Saxony, (1804). This formed a basis for the admirable machine of Messrs. Cowper and Applegarth, first constructed for printing the *Times* newspaper, and which is capable of throwing off 4200 copies per hour of that large paper.

PRINT'ING-PRESS. The common ap-

paratus employed in taking impression from types.

PRIONTES. A genus of passerine birds: the *Motmots*. Family *Tenuirostres*. They are beautiful birds, as large as the magpie: fly badly, are solitary, build in holes, and feed on insects.

PRI'OR (Latin). 1. The first in the order of time.—2. The superior of a convent.

PRI'SAGE, Fr. prise, from *priser*, to prize. See BUTLERAGE.

PRISCILIANISTS. A Christian sect, so denominated from Priscillian, bishop of Avila, who practised magic, maintained the errors of the Manichees, and held it to be lawful to make false oaths in support of one's cause and interest.

PRISM, Gr. πρίσμα, from *prism*, to cut.

1. A solid, whose bases or ends are any similar equal and parallel plane figures, and whose sides are parallelograms. They receive particular names from the figure of their bases, as triangular, square, pentagonal, hexagonal, &c.—2. In optics,

a triangular prism of glass, which separates the rays of light pass-

ing through it, in consequence of the different degrees of refrangibility that take place in different parts of the same ray.

PRISMATIC COLOURS. The colours manifested by the decomposition of a ray of light in passing through a glass prism. These are violet, indigo, blue, green, yellow, orange, and red.

PRISMATIC SQUARE OR COMPASS. An instrument used in surveying, for measuring horizontal angles only, and which are taken from the magnetic meridian; a graduated float-card being attached to the needle.

PRISMOID, from *πρισμα*, a prism, and *ειδος*, like. The frustrum of a wedge: a solid which has two rectangular faces, and the remaining faces trapezoids, terminating with their parallel edges in the same lines as the two parallel faces, which are called *ends*, the greater being the *base*.

PRISONS, MAMERTINE. Certain fearful places of confinement in ancient Rome, intended chiefly for state prisoners.

PRIVATEER. A ship of war, owned and equipped by a private man or men, at his or their expense, to seize or plunder the ships of an enemy in war. Such ship must, however, be licensed or commissioned by government, otherwise it is a pirate.

PRIVATIVE, from *privo*, to bereave. 1. That of which the essence is the absence of something: *darkness* is a privative.—2. In *grammar*, a prefix to a word, which changes its signification, and gives it a contrary sense, as *un* in *unwise*. The privative is, however, sometimes a suffix, as *less*.

PRIVILEGE. A writ of privilege is one to deliver a privileged person from custody, when arrested in a civil suit.

PRIVY, Fr. *privie*, private. In *law*, a partaker: a person having a private interest in any action.

PRIVY CHAMBER, Gentlemen of the Officers of the king's household.

PRIVY-COUNCIL. An extensive body, with whose advice and assistance the crown administers the government. *Privy Counsellors* are made by nomination of the crown, without patent or grant.

PRIVY-SEAL. A seal affixed by the sovereign, or the lord keeper of the privy seal, called also *Privy-Seal* from his office, to instruments which are afterwards to pass the great seal.

PRO and CON. *Pro et contra*. For and against.

PROA. Flying Proa. A description of vessel, used in the South Seas, with the head and stern exactly alike, but with the sides differently formed: that which is intended for the lee side being flat, the other rounded. It is fitted with an outrigger, on the windward side, to prevent its upsetting.

PROAULION, *προ αυλη*, hall. In *architecture*, the same as Vestibule, which *see*.

PROBABILITY. 1. In the *doctrine of chances*, the ratio of the number of chances by which the event may happen, to the number by which it may both happen

and fail; so that if there be constituted a fraction, of which the numerator is the number of chances for the events happening, and the denominator the number for both happening and failing, the fraction will properly express the value of the probability of the events happening.—2. *Probabilities* is used synonymously with chances: we thus speak of the *science of probabilities*, and the *doctrine of chances*.

PROBABILISM. In *theology*, a theory according to which it is lawful to follow a *probable* opinion in doubtful points, even though others may appear to be more probable.

PROBANG. A flexible piece of whalebone, with an oval piece of ivory or piece of sponge fixed to the end; used by surgeons to push down into the stomach foreign bodies which stick in the oesophagus.

PROBATE, Lat. *probatus*, from *probo*, to prove. 1. In *law*, the probate of a will is the proving of its genuineness or validity, or the exhibition of the will to the proper officer, with the witnesses, if necessary, and the process of determining its validity and the registry of it, and such other proceedings as the laws prescribe as preliminary to the execution of it by the executor.—2. The right or jurisdiction of proving wills, which in England belongs to the spiritual courts.

PROBE, Germ. *probe*, proof. A surgeon's instrument, of a long and slender form, for examining the depth or other circumstances of a wound, ulcer, or cavity, or the direction of a sinus, and the like.

PROBE SCISSORS. Scissors used to open wounds, the blade of which, to be thrust into the orifice, has a button at the end.

PROBLEM. *Προβλημα*. A question proposed. 1. In *logic*, a proposition that appears neither absolutely true nor false, and consequently may be asserted either in the affirmative or negative; or, *generally*, any question involving doubt or uncertainty, and requiring some operation, experiment, or further evidence, for its solution.—2. In *mathematics*, a proposition in which some operation is required.

PROBOSCIDIANA. Proboscidiæ. A family of mammiferous animals, of the order *Pachydermata*, characterised by a cylindrical trunk or *proboscis*, composed of several thousands of small muscles, variously interlaced, extremely flexible, endowed with the most exquisite sensibility, and terminated by an appendage resembling a finger. The elephant is the only living type.

PROBOSCIS. *Προβοσκis*, from *προς*, before, and *βοσκη*, to feed. The lengthened tube, snout, or trunk belonging to the Proboscidiæ. *See* PROBOSCIDIANA.

PROGASTR'DIUM, from $\pi\gamma\sigma$, before, and $\gamma\sigma\tau\rho$, the orifice of the stomach. The pit of the stomach.

PROCELLARIA. A genus of birds: the *Petrels*. Order, *Palmipedes*; family, *Longipennes*. Of all the *Palmipedes*, these remain most distant from land; and when a tempest intervenes, they are forced to seek shelter on reefs and ships, from which circumstance they derive the name of *storm-birds*: that of *Petrel* (Little Peter) has been given them on account of their habit of walking on the water, which they effect by aid of their wings. They chiefly inhabit the Antarctic Seas; the Giant Petrel only is found in the South Seas. It is the largest of all the species, surpassing the goose in size, whereas the common species is scarcely larger than a lark.

PROCESS. 1. In law, the whole course of proceedings in a cause, real or personal, civil or criminal, from the original writ to the end of the suit. *Original process* is the means taken to compel the defendant to appear in court. *Meme process* is that which issues, pending the suit, upon some collateral or interlocutory matter.—2. In anatomy, a production of any part, as the projecting part of a bone.

PROCES VERBAL. In French law, an authentic minute of an official act, or statement of facts.

PROCHRONISM, from $\pi\gamma\sigma$, before, and $\chi\epsilon\sigma\sigma$, time. An error in chronology, when events are dated anterior to the time at which they happened.

PRO CONFES'SO, in law, is applied to a defendant in Chancery, who appears and is afterwards in contempt for not answering; wherefore the matter contained in the bill shall be taken *pro confesso* (as though it had been confessed).

PROCON'SUL. Originally, an officer invested with the consular command without the office.

PROCRUSTES. In mythology, a famous robber of Ancient Greece, who tortured his victims by placing them on an iron bed, and stretching or mutilating them to suit its dimensions. Hence the expression—"The bed of Procrustes."

PROCTOR, } from *procuro*, to care for.

PROCURATOR, } 1. One employed to manage the affairs of another; and, appropriately, a person employed to manage another's cause in a court of law.—2. A magistrate of a university.—3. One who undertakes the care of any legal proceeding for another.

PROCUMBENT, Lat. *procumbens*. Trailing and a little bent upwards: applied to stems of plants when lying upon the ground without sending out roots.

PROCURATION, from *procuro*. 1. In ecclesiastical affairs, a sum of money paid

to the bishop or archdeacon by incumbents on account of visitations, called also proxy.—2. In law, the instrument by which a person is empowered to transact the affairs of another.

PROCURATOR, } The first of these terms
PROCTOR, } is used commonly in the general sense of manager, and the other in a legal sense. See PROCTOR.

PROCYON. 1. In astronomy, the Dog-star: $\pi\gamma\sigma$, before, and $\kappa\upsilon\omega\omega$, a dog. Procyon is a star of the second magnitude, in the constellation Canis Minor.—2. In zoology, the *Raccoon*, a genus of plantigrade animals. The *P. lotor* of North America is about the size of a badger, is easily tamed, and eats nothing it has not previously dipped in water.

PRODUCING. In geometry, the continuing of a right line to any required length.

PRODUCT, Lat. *productus*, from *produco*. In arithmetic and algebra, the quantity arising from the multiplication of two or more factors together.

PRODIGY. A surprising though natural event: distinguished from *miracle*, which is something out of the course of nature.

PROEMPTOSIS, from $\pi\gamma\sigma$, before, and $\pi\iota\pi\tau\omega$, to fall. The lunar equation, or addition of a day, necessary to prevent the new moon from happening a day too soon according to the civil calculation.

PROFILE, Fr. *profil*, from *pro* and *fil*. 1. Primarily, an outline or contour: hence, in sculpture and painting, a head or portrait represented in a side view.—2. The perpendicular section of a building; also the contour of any member, as a cornice.

PROFIT (Fr.), from Lat. *proficio*, to advance. Gain made by the sale of produce or manufacture, after deducting the value of the labour, materials, and all expenses, together with the interest of the capital employed (whether land, machinery, buildings, instruments, or money). *Net profit* is the gain made by selling goods at a price beyond all costs and charges.

PROGNOSIS, from $\pi\gamma\sigma$, before, and $\gamma\iota\omega\sigma\tau\omega$, to know. The foretelling the event of diseases from their symptoms.

PROGRAMME, } from $\pi\gamma\sigma$, before, and
PROGRAM, } $\gamma\gamma\epsilon\alpha\phi\omega$, to write. A detailed advertisement, or account, of some public entertainment, previously issued.

PROGRESS. The state journeys of royal personages.

PROGRESSION. A series of numbers, in arithmetic, proceeding according to a certain order, termed *arithmetical*, *geometrical*, or *harmonical*.

PROHIBITION. In law, a writ to forbid any court from proceeding with a cause then depending, on suggestion that the cause of it does not properly belong to that court.

PROJECTILE. 1. Impelling, or impelled forward: as a *projectile* force, a *projectile* motion: *pro*, before, and *facio*, to throw.—2. A body projected into the atmosphere: as a stone thrown from a sling, a bullet from a gun, &c. The laws of projectiles are identical with those by which the motions of bodies falling perpendicularly in free space are governed. Thus, a body at A, if projected forward towards B, will

arrive at D exactly in the same time that it would descend to C, if simply left unsupported at A.

PROJECTION. 1. In *mechanics*, communication of projectile force.—2. A branch of perspective; the art of forming the representation of a body upon a plane, by drawing straight lines through a given point or parallel, from the contour, and from the intermediate lines of the body, if any, so as to cut the plane; then colouring the respective compartments according to the degree of light, shade, and hue of each surface. In the projection of the sphere there are three principal points; the *stereographic*, in which the eye is supposed to be placed on the surface of the sphere; the *orthographic*, in which the eye is supposed to be at an infinite distance; and the *gnomic*, in which the eye is supposed to be placed in the centre of the sphere.—3. Among the *alchemists*, the casting of a certain powder, called the *powder of projection*, into a crucible full of some prepared metal or other matter, which was thereby to be transmuted into gold.

PROJECTURE. In *architecture*, the jutting out of mouldings.

PROSOJOT. A peculiar vegetable production, described by Mr. Mackay, of the British Consulate at Maracaibo, in a letter to the Zoological Society (read in September, 1839). The plant somewhat resembles the trefoil in its leaves and branch, and at the extremities of the latter there are buds, which contain neither leaves nor flowers, but an insect (resembling a wasp) which, as it grows, falls to the ground, or remains on its parent plant, feeding on the leaves till the plant is exhausted, when the insect returns to the earth, disappears under the surface, and dies. Soon after, the two head-legs begin

to sprout and vegetate, the shoot extending upwards; and the plant in a short time reaches the height of six inches, and produces new viviparous buds, which perform again the same functions. The same or a similar production is also known in North Carolina.

PROLAPSE, prolapsus. A protrusion or falling down of a part of some viscus of the body, as the uterus, rectum, &c.

PROLATE, Lat. prolatus. A spheroid is said to be prolate when it is produced by the revolution of a semi-ellipse about its long diameter; when revolved about its short diameter, it produces an oblate spheroid.

PROLEGOMENA, Gr. προλογόμενα, from *προ*, before, and *λεγω*, to speak. Preliminary observations or remarks prefixed to a book, &c.

PROLEGS. A name for what are otherwise termed the spurious legs of insects. They consist of fleshy and retractile tubercles.

PROLEPSIS, προληψις, from *προ*, before, and *λαμβάνω*, to take. Anticipation. 1. A rhetorical figure by which objections are anticipated or prevented.—2. An error in chronology, wherein an event is dated before the actual time: an anachronism.

PROLIFIC, } Lat. prolifer, from pro-
PROLIFEROUS, } les, offspring, and fero,
to bear. A term applied in *botany* to stems which shoot out new branches from the summit of the former ones, as in the Scotch fir; and to blossoms, when one grows out of another, as happens in the genus *polyanthus*.

PROMETHEANS, from Prometheus. Small glass tubes, containing concentrated sulphuric acid, and surrounded with an inflammable mixture, which they ignite on being pressed.

PROMISE, Lat. promissum. In *law*, a declaration, verbal or written, made by one person to another, for a good or valuable consideration, in the nature of a covenant, by which the promiser binds himself, and, as the case may be, his legal representatives, to do or forbear some act; and gives to the promisee a legal right to demand and enforce a fulfilment.

PROMONTORY, Lat. promontorium. A headland, or high point of land, projecting into the sea beyond the line of the coast. It differs from a *cape* in being high land.

PRONATION. The act of turning the palm of the hand downwards, which is performed by means of the muscles called pronators. Opposed to *supination*.

PRONATOR. In *anatomy*, a name common to two muscles of the hand, the *pronator radii quadratus*, and *pronator radii teres*, the use of which is to perform the

opposite action to that of the supinators, viz. *pronation*.

PRO'NOUN, Lat. *pronomen*. A word used instead of a noun or name, to prevent the repetition of it. Pronouns are *personal* when they simply denote the person, as I, thou, he; *possessive*, when they also denote possession, as his, its; *relative*, when they express a relation to something going before, as which, what; *interrogative*, when they serve to ask a question, as whose, which; *demonstrative*, when they point out things precisely, as this, that; *indefinite*, when they point out things indefinitely, as any, some.

PROOF. 1. In *law* and *logic*, that degree of evidence which convinces the mind of the certainty of truth or fact, and produces belief.—2. In *printing* and *engraving*, an impression taken for correction.—3. In *general* trial or experiment to ascertain a fact. The quality of spirit is ascertained by *proof* (their specific gravity); hence high *proof*, first *proof*, second, third or fourth *proof*. What is technically called *proof-spirit* consists of equal parts of alcohol and water, and the strength is numerically estimated either higher or lower than this standard; as 11 over *proof*, 5 below *proof*. The term *proof* is also used to designate impenetrability, strength, &c. of bodies, as *water-proof*, *fire-proof*, *proof* against shot, &c.

PROP. See FULCRUM.

PROPEDE'UTICS, from *πρῶτο*, and *παιδευω*, I instruct. German authors use this term to signify the preliminary learning connected with any art or science.

PROPAGAN'DA. A term used, during the French revolution, to designate certain secret societies, whose object was the propagation of democratic principles, and latterly any society for making political proselytes. Members of such societies are called *propagandists*, and their practice of propagating their tenets is *propagandism*.

PROPEDES. Applied by Kirby to the soft appendages of certain larvæ, behind the true feet.

PROPER, Lat. *proprius*. Belonging to an individual thing; not common. In *heraldry*, any object represented of its natural colour is so termed.

PROPERTY. 1. A peculiar quality of anything, naturally essential to it: called by logicians an *essential mode*.—2. In *law*, ownership: also the thing owned.

PROPHYLACTIC, from *προφυλασσω*, to guard against. Any means used with a view to guard against disease.

PROPHETIA'RY. Among the *Jews*, the mercy-seat, or lid of the ark of the covenant.

PRO'POLIS, from *πρῶτο*, before, and *πολις*, the city. A thick, odorous substance, resembling wax, used by bees to stop up the

holes and crevices in their hives, to prevent the entrance of cold air, &c.

PROPORTION, from *pro* and *portio*, a share. 1. The comparative relation of one thing to another.—2. In *mathematics*, an equality of ratios; for instance, if $\frac{a}{b} = \frac{c}{d}$ then are *a*, *b*, *c*, *d* in proportion, which is denoted by placing the quantities thus, *a* : *b* :: *c* : *d* or *a* : *b* = *c* : *d*, and is read as *a* is to *b* so is *c* to *d*. Proportion is direct as, *a* : *b* :: *c* : *d*; inverse, as *b* : *a* :: *d* : *c*; alternate, as *a* : *c* :: *b* : *d*. For *arithmetical*, *geometrical*, and *harmonical* proportion, see ARITHMETICAL, GEOMETRICAL, and HARMONICAL.—3. In *arithmetic*, a rule by which, when three numbers are given, to find a fourth, which bears the same relation to the third as the second does to the first, or, bearing the same relation to the second as the first does to the third. The former is *direct*, and the latter *inverse* proportion.—4. *Compass of proportion*, a name given by some authors to a sector.—5. *Definite proportions*, the limited proportions in which elementary substances combine chemically to form compound bodies.

PROPORTIONAL. 1. Relating to proportion, as proportional compasses.—2. One of the terms of a proportion, which receives different names according to the place it holds in the proportion. Thus a *mean proportional* is the middle term of three continued geometrical proportionals; a third, fourth, &c., proportional, is the third, fourth, &c., term of a geometrical proportion.

PROPOSITION, from *propono*. 1. In *logic*, one of the three parts of a regular argument, wherein some quality, either positive or negative, is attributed to a subject.—2. In *mathematics*, a statement in terms of either a truth to be demonstrated or an operation to be performed. It is called a *theorem* when it is something to be proved, and a problem when it is something to be done.—3. In *rhetoric*, something affirmed for discussion or illustration.—4. In *poetry*, that part of a poem in which the author states the subject matter of it.

PROPRÆTOR. A Roman magistrate who is related to a prætor, as a pro-consul is to a consul. See PRO-CONSUL.

PRO RA'TA (Latin). In proportion. A commercial and financial phrase.

PRO RE NA'TA (Latin). An idiomatic phrase, signifying, as occasion may serve, as circumstances may require, &c.; used in law, medical prescriptions, &c.

PROROGA'TION, from *prorogo*, to stretch forward (primarily). In England, the continuation of parliament from one session to another, as an adjournment is a continuation of the session from one day to another.

PROSCENIUM. Προσκήνιον. The place or stage before the scene in the ancient theatres, where the *pulpitum* stood, into which the actors came from behind the scenes to perform.

PROSCRIPTION, *proscriptio*, among the Romans, was the public offer of a reward for the head of a political enemy. The names of the *proscripti*, or persons proscribed, which was posted up in tablets at the forum.

PROSENCHYMA, προσεγχύω, I pour still more upon. Cellular tissue, the cellules of which taper to each end.

PROSEN'NEAH'DRAL, Gr. πρὸς, εννία, and ἰδέα. In *crystalography*, having nine faces on two adjacent parts of the crystal.

PROSODY. Προσῳδία, from πρὸς, and ᾠδή, an ode. That part of grammar which treats of the quantity of syllables, of accent, and the laws of versification.

PROSOPOPY, } Personification: προσ-
PROSOPOPH'IA. } ὤπων, a person, and
πρῶσω, to feign. A rhetorical figure, in which things are spoken of as animate beings, or where an absent person is introduced as speaking. It is, therefore, more extensive than personification, which it, however, includes.

PROSTATĒ, Lat. *prostat*, standing out; jutting. Applied chiefly to a very large, heart-like gland, situated between the neck of the urinary bladder and the bulbous part of the urethra.

PROSTHESIS, πρὸς, and τίθημι, I place. In *grammar*, one or more letters prefixed to a word. See *METAPLASM*.

PROSTRATE, Lat. *prostratus*, lying flat upon the ground. Applied in *botany* to stems spreading horizontally over the ground.

PROSTYLE, from πρὸ, before, and στύλος, a column. A temple or other building, with columns only in the front. When there is also a portico at the opposite front, the temple is an *amphiprostyle*.

PROXYLOGISM. In *logic*, when two or more syllogisms are so connected that the conclusion of the former is the major or minor of the following.

PROT. A prefix in chemical terms for *proto* (q.v.).

PRO TAN'TO (Latin). For so much.

PROTASIS. Προτάσις. 1. A proposition.—2. In the *ancient drama*, the first part of a play, explaining the argument of the piece.

PROTEST', from *pro* and *testor*, to affirm. 1. To *protest a bill*, is for a notary public, at the request of the payee, to make a formal declaration, under hand and seal, against the drawer of the bill, on account of non-acceptance or non-payment, for exchange, cost, commissions, damages and interest, of which act the indorser

must be notified within such a time as the law prescribes. The instrument containing such declaration is termed a *protest*.

—2. A solemn declaration of opinion, commonly against some act; appropriately a formal and solemn declaration in writing, of dissent from the proceedings of a legislative body.—3. A writing attested by a justice of the peace or consul, drawn by the master of a vessel, stating the severity of the voyage by which the ship has suffered, and showing that the damage sustained was not owing to the neglect or misconduct of the master.

PROTESTANTS. The adherents of Luther at the Reformation, in 1520, who *protested*, or made a solemn declaration of dissent from a decree of the Emperor Charles V. and the diet of Spire, and appealed to a general Council. The same name was subsequently given to the followers of Calvin, and in present usage it includes all belonging to the reformed churches.

PROTEST'ATION. In *law*, a declaration in pleading, by which the party interposes an oblique allegation or denial of some fact, protesting that it does or does not exist.

PROTEUS. Πρωτεύς. 1. A marine deity, the son of Oceanus and Tethys, whose distinguishing characteristic was the faculty of assuming different shapes.—

2. The generic name of a Batrachian reptile, about 12 inches long, the thickness of the finger, with a vertically compressed tail, and four small legs. Also the name of a genus of infusoria, remarkable for the mutability of their forms, and sudden transformations.

PROTHONOTARY, low Lat. *protonotarius*, from πρῶτος, chief, and *notarius*, a notary.

1. Anciently, the title of the chief notaries of the emperors of Constantinople. Hence, 2. In *England*, an officer in the Court of Queen's Bench and Common Pleas. The prothonotary of the Queen's Bench records all civil actions; in the Common Pleas the prothonotaries enrol all declarations, pleadings, judgments, &c., make out judicial writs and exemplifications of records, &c.—3. The *apostolic prothonotaries* are 12 persons in the Court of Rome, constituting a college, who receive the last wills of cardinals, and make informations and proceedings necessary for the canonization of saints, &c.

PROTHTRUM, πρὸ and θύρα. In *architecture*, a porch before the outer door of a house.

PROTO, from πρῶτος, first. A prefix, expressing relation in priority. Also, in *chemistry*, when more than one oxide of a substance is known, the first has the prefix *prot* for *proto*, as *protozide* of nitrogen. See *OXIDE*.

Πρωτόλ, low Lat. *protocollum*. A term in law and diplomacy, for the original copy of any writing: the first minute, draught, or summary. The term is from *πρωτος*, first, and *κόλλα*, glue, probably from the gluing together of the pieces of paper on which the draught was first made.

PROTOGENE. A variety of granite, in which tale takes the place of mica, as in that of Montblanc.

ΠΡΟΤΟΡΟΦΗ, from *proto* and *pope*. The imperial confessor, an officer of the holy directing synod, the supreme spiritual court of the Greek Church of Russia.

PROTO SALTS. Salts of which protoxides are the bases, as a protosulphate, a proto-nitrate.

PROTOXIDE. A first oxide. See **OXIDE** and **PROTO**.

PROTOZOA, *πρωτος*, and *ζωον*, animal. The simplest class of animals, or those on the first step of organisation.

PROTRACTOR, Lat. from *pro* and *traho*, to draw. A mathematical instrument, used for laying down on paper the angles of a survey or other figure. It is usually a small semicircle of brass, having its ends connected by a straight rule, the outside of which constitutes the diameter, and is itself divided into 180 parts, termed degrees, with a small point in the diameter, which marks the centre. Circular protractors are, however, also used, having divisions marked quite round from 0° to 360, the same as the theodolite, which, indeed, the protractor represents.

PROVENCE ROSE. A species of rose, highly valued for its beauty and fragrance. There are three varieties, the white, blush, and dwarf.

PROVINCE, Lat. *provincia*, from *pro* and *vinco*, to conquer. 1. Among the Romans a province was a country of considerable extent, which being reduced under their dominion was new-modelled, subjected to the command of an annual governor sent from Rome, and to such taxes and contributions as the Senate thought fit to impose. The provinces had also the appellations of *consular* and *prætorian*, according as they were governed by consuls or prætors. The term *province* is now used for a country belonging to a kingdom or state, situated at a distance from, but more or less dependent upon it. Such is Canada, in reference to Great Britain. —2. In the ecclesiastical division of England there are two provinces, viz., those of Canterbury and York, under the jurisdiction of their respective archbishops.

PROVISO, Lat. abbr. of *provisus*, it being provided. An article or clause in any statute, agreement, contract, grant, or other writing, by which a condition is introduced; a conditional stipulation

which affects an agreement, contract, law, grant, &c.

PROVISOR. A person nominated to a benefice before the death of the incumbent, and to the prejudice of the rightful patron.

PROVOST, Sax. *profost*. 1. The chief magistrate of a town, having the same functions as the mayor of other cities. —2. In a general sense, a person who is appointed to superintend or preside over something; as the *provost* of a college, answering to president; *provost of the mint*, a particular judge, appointed to apprehend and prosecute false coiners. The *provost marshal* in the army and navy is the chief executioner. The *provost of the royal stables* is an officer of the household, and holds the Queen's stirrup when she mounts her horse.

PROW, Lat. *prora*. The head or forepart of a ship, in opposition to the poop or stern.

PROXIMATE, nearest; *proximus*, next. A *proximate cause* is that which immediately precedes and produces the effect, as distinguished from the *remote*, *mediate*, or *predisposing cause*. *Proximate principle*. See **PRINCIPLE**.

PROXY, contracted from *procuracy*. A person deputed to act for another. Peers may vote in parliament by *proxy*.

PRUNELLO. 1. The Brignole plum: a variety of the common plum. —2. A sort of stuff formerly used for clergymen's gowns.

PRUNUS. A genus of pomaceous trees. *Icosandria—Monogynia*. Name *prunus*, a plum-tree, *prunum*, a plum or prune. The cherry trees, plum trees, apricot and sloe are well known species. Don enumerates 36 species in all, mostly hard wooded trees.

PRURI'GO, from *prurio*, to itch. A papulous eruption, of which six varieties are described by Willan.

PRUSSIAN BLUE. A compound of a rich blue colour, well known as a pigment. In *chemical nomenclature*, it is a ferrocyanide of iron, and is the precipitate which falls when prussiate of potash is poured into a solution of a persalt of iron.

PRUSSIC ACID. An acid so called because it was first obtained from Prussian-blue. See **HYDROCYANIC ACID**.

PSALTERIUM, Lat. *psalter*. The third cavity of the stomachs of ruminating animals, so called, as it resembles the leaves of a book.

PSAL'TERY, *Ψαλτηριον*. An instrument of music, used by the Jews, but the form of which is not now known. That which now bears the name is a flat triangular instrument, truncated at the top, strung with thirteen chords of wire, mounted on two bridges at the sides, which are struck with a plectrum, or crooked stick.

PSELLIS'MUS, from *ψελλίζω*, to stammer in speech. A defect of speech, in which articulation is depraved.

PSEUDEPIGRAPHY, *ψευδης*, false, and *επιγραφή*, inscription. The ascription of false names of authors to works.

PSEUDŌ, *Ψευδος*. False: a prefix signifying false, counterfeit, or spurious.

PSEUDOPLEPSIS, from *ψευδης*, false, and *βλεψις*, sight. False or depraved vision: imaginary objects floating before the sight, or real objects appearing with imaginary qualities.

PSEUDODIPTERAL, *ψευδης* and *δισ*, twice, and *πτειρον*, wing. In *architecture*, in a building, when the distance from each side of the cell to the columns on the flanks is equal to two intercolumniations.

PSEUDO-ER'ETHNE. A substance of a snow-white appearance, has the form of scales or flat needles, is a little soluble in water, but dissolves freely in alcohol. It is obtained by digesting *parmelia* rock-cell in boiling alcohol, and treating the alcoholic solution exactly as if it were intended to prepare erythine. It yields no bitter principle.

PSEUDO-METAL'LIC. An epithet for that degree of lustre in minerals where it can only be observed when the mineral is held towards the light.

PSEUDOMORPHOUS. Not having the true or natural form (*μορφη*, form), but having a form arising from some accidental circumstance.

PSEUDO-SCORPIONES. A family of Arachnides, of the order *Tracheariae*. The genera are *Galeodes*, Oliv., and *Chelifer*, Geoff. They take their name from their scorpion-shape. They are all terrestrial, and have an oval body with eight legs.

PSEUDOTHYRON, *ψευδης*, and *θυρα*, door. In *architecture*, a false door.

PSEUDO-TINEA. All the caterpillars whose habitations (sheaths) are fixed or immovable, are termed *Pseudo-tinæ* by Reaumur; those which construct portable ones, which they transport with them, are true *tinæ*.

PSITTACUS. The Parrot. A genus of birds: order *Scansoriae*: name borrowed from the Greek *ψιττακος*. The species are well known for the facility with which they learn to imitate the human voice. They feed on all sorts of fruit, climb among the branches of trees by aid of their beak and claws, and build in hollows of trees. Their voice is naturally harsh and disagreeable, and they are almost universally ornamented with the brightest colours. They exist in both continents, but hardly any of them are found beyond the torrid zone. The species are exceedingly numerous.

PSO'E. *Ψοα*. 1. The loins.—2. The name of two pair of muscles in the loins.

PSORA'LEA. An extensive genus of plants, many of them trees and shrubs. *Diadelphia*—*Decandria*. Name from *ψωραλιος*, scabby, because the calyx and other parts of the plant are more or less besprinkled with glandular dots, causing a scurfy roughness. Warm and temperate climates.

PSORI'ASIS, from *ψωρα*, itch. A disease characterised by a rough scaly state of the cuticle, sometimes continuous, sometimes in separate patches, and for the most part accompanied with rhagades or fissures of the skin. Dr. Willan describes eight varieties of the disease.

PSYCHOL'OGY, from *ψυχη*, the soul, and *λογος*, a discourse. The doctrine of the soul or mind: mental philosophy.

PSYCHOMANCY, from *ψυχη*, and *μαντια*, prophecy. Divination by the dead, in which they were supposed to appear as spirits.

PSYCHROMETER, from *ψυχρος*, cool, and *μετρον*, measure. An instrument for measuring the tension of the aqueous vapour in the atmosphere.

PTAR'MIGAN. The white game, *Tetrao albus*, Gm. See *LAGOPUS*.

PTE'NIS. Brake. A genus of ferns. Name from *πτειρον*, a wing, on account of the resemblance of the leaves to wings. There are 21 species, of which the common brake and stone-fern are the British types.

PTEROCAR'PUS. A genus of trees. *Diadelphia*—*Decandria*. Name from *πτειρον*, a wing, and *καρπος*, fruit; in allusion to the wing-like expansion of the legume. Hot climates. The trees which afford the red sandal-wood, the Andaman red wood, one of the sorts of dragon's blood, and the African kino, are species.

PTERODACTYLUS, { An extinct genus
PTERODACTYLE. } of winged saurian, placed among the Agamians, in the family *Iguanida*, by Cuvier. It is only to be found among the fossils of the old Jura limestone. Name from *πτειρον*, a wing, and *δακτυλος*, a finger; its chief characteristic being an excessive elongation of the second toe of the fore-foot, which was more than double the length of the trunk, and most probably served to support some membrane, which enabled the animal to fly, like that upheld by the ribs of the dragon.

PTEROMYS. The flying squirrel. A genus of mammiferous animals; order *Rodentia*. Name from *πτειρον*, a wing, and *μυς*, a rat. The skin of the flank extending between the fore and hind legs, imparts the faculty of supporting them-

selves for a moment in the air, and of making great leaps. There are several species found in Poland, Russia, and Siberia, and also in America, and the Indian Archipelago.

PTEROPHORUS. A sub-genus of fissionate tinea, having wings with fringed edges like feathers. The caterpillars have sixteen feet, live on leaves, but construct no tube. Name from *πτερον*, a wing, and *φορος*, to bear.

PTEROPODA. Pteropods. A class of molluscs which swim in the ocean, but being deprived of feet, can neither fix themselves to other bodies, nor crawl. The organs of locomotion consist of fins, placed like wings on the two sides of the mouth: whence the name, from *πτερον*, a wing, and *πους*, a foot. Four genera only are known, and these abound in the colder regions of the ocean.

PTEROPUS. A sub-genus of the bat tribe, found in the East Indies. It is the largest bat known, and the flesh is eaten. Name from *πτερον*, and *πους*, a foot.

PTOLEMAIC. In astronomy, the Ptolemaic system was that maintained by Ptolemy, who supposed the earth to be fixed in the centre of the universe, and that the sun and stars revolved round it. This theory was received for ages, but was finally superseded by the Copernican system.

PTOLEMAITES. A sect of ancient heretics among the Gnostics.

PUBESCENCE. Lat. *pubescentia*, from *pubes*. In botany, this term comprehends all the various downy, woolly, or hairy clothing of plants, which Linné reckoned the seventh of their fulcra or appendages.

PUBLICAN. Lat. *publicanus*, from *publicus*. Amongst the Romans, publicans were farmers of the taxes and public revenues, and the inferior officers of this class were deemed oppressive.

PUCERON. The name of a small insect, frequently found on the young branches of trees and plants, often in such clusters as nearly to cover them. The name is French, from *puce*, a flea; but the insect has no resemblance to the flea, and so far from hopping, it rarely walks. See *APHIS*.

PUCK. In mediæval mythology, a domestic fairy, famous for nocturnal exploits.

PUDING. In nautical language, a thick wreath or circle of cordage, tapering from the middle towards the ends, and fastened about the mast below the trusses, to prevent the yards from falling down, should the ropes sustaining them be shot away.

PUDINGSTONE. A conglomerate, composed of rounded stones imbedded in a paste. The fragments composing breccia are angular.

PUDLE (for engineering purposes). A mixture of good tempered clay and sand,

reduced to a semi-fluid state, and rendered impervious to water by manual labour.

PURPERAL. Lat. *puerperalis*, relating to child-bearing.

PURFALL. In botany, see *LYCOPERDON*.

PURFIN. A bird. 1. The *Alca arctica*, Linn., is the most common species. It is about the size of a pigeon, sometimes breeds on the English coast, and is very common on those of France during the winter. See *FRATERCULA*.—2. The *Procellaria puffinus*, Gmelin, about the size of a crow, and very common in almost every sea.—3. The *Procellaria anglorusis*, Temminck, about the size of a woodcock. It breeds in immense numbers on the northern coast of Scotland.

PURGING. A coarse kind of mortar, laid on the boards between joists.

PUGIL. Lat. *pugillus*, dim. of *pugnus*, the fist. The eighth part of a handful.

PUG-PIILING. The same as *Dovetail Piling*.

PUISNE JUDGES. Fr. younger. The judges and barons of the King's Bench, Common Pleas, and Exchequer, are so named, excepting the chief judges and barons.

PU'LEX. The Flea. A genus of apterous insects, of the order (rather composing the order) *Suctoria*, Cuv. There are many species peculiar to quadrupeds and birds. They also attack the human subject, but are not natural to man.

PUL'LEY. In mechanics, one of the simple machines or mechanical powers. The term is strictly applicable to the small wheel turning on a pin in a block, with a furrow or groove, in which runs the rope that turns it. The word is now, however, used in the general sense of tackle, to denote all parts of the machine for raising weight, of which the pulley forms a part. The first cut is an example of the

single pulley, the second of a system of pulleys.

PULMONARIA. Lungwort. A genus of perennial plants. *Pentandria—Monogynia*. Named from *pulmo*, the lung, because of its virtues in diseases of the lungs. The species are all hardy plants.

PULMONARIAE. The first order of Arachnides, characterised by a well-marked circulating system, and pulmonary sacs, always placed under the abdomen: hence the name.

PULMONEA. The first order of Gastropods, distinguished from all the other Mollusca by respiring elastic air, having no branchiae, but a net-work of pulmonary vessels. Some of them are terrestrial, as the slug (*limax*), and snail (*helix*): others are aquatic.

PULSE. Lat. *pulsus*, from *pello*, to drive. 1. In animals, the beating or throbbing of the heart and arteries; more particularly the sudden dilatation of an artery, caused by the projectile force of the blood. It is generally felt at the wrist, by pressing the radial artery.—2. In botany, leguminous plants or their seeds, from their being *pulled* (?) Beans, peas, vetches, lupins, &c. are examples of pulse.

PULVILLI, in insects, are the cushions of soft hair closely set, with which their feet are provided, by means of which they are enabled to suspend themselves against gravity.

PULVINATED, Lat. *puleinar*, a pillow. In architecture, expresses a swelling in any portion of an order, as the frieze of the Ionic order, for example.

PUMMA. A name of the Cougar (*Felis discolor*, Lin.), found in both Americas.

PUMICE, } A light, spongy, fibrous lava, supposed to be produced by the disengagement of gases, while the lava is in a plastic state. It melts before the blowpipe into a white enamel or glass. Immense quantities are often ejected by volcanoes.

PUMICE-STONE. } rous lava, supposed to be produced by the disengagement of gases, while the lava is in a plastic state. It melts before the blowpipe into a white enamel or glass. Immense quantities are often ejected by volcanoes.

PUMP. Fr. *pompe*, Lat. *pomp*. A machine for raising water or other fluid: usually consisting of a tube or tubes, in which valves and pistons or buckets are made to operate. Pumps are of two kinds: (1.) Those upon the lifting principle, therefore called *lifting pumps*, and absurdly *suction pumps*. (2.) Those upon the forcing principle, termed *force pumps*. The first sort are applied to wells when the height does not exceed 33 feet. The principle is shown in the first cut. The

force-pump acts by compression instead of by exhaustion, and is mostly employed for great depths, or for supplying boilers against the force of steam. The principle

FORCE-PUMP.

LIFT-AND-FORCE PUMP.

will be understood from the second figure. The *lift-and-force pumps* are, however, often combined, forming a machine which gives a continuous and regular supply. The principle is shown in the third figure, it being understood that *a a* is an air-chamber, the elasticity of the air within it acting upon the surface of the water and forcing it upward through the delivering pipe. There are numerous other forms of pumps; indeed there is perhaps no machine of which there are so many forms and modifications.

PUNCH, } Fr. *poinçon*. 1. A common name for all iron tools used by stone-cutters, &c., for cutting or chipping. Also the name of a short stout piece of steel, or iron steeled, used for stamping out pieces so as to make perforations in iron plates and the like. A die is also sometimes termed a *punch*.—2. In carpentry, a piece of timber raised upright under the ridge of a building, and in which are joined the little timbers, &c.—3. *Puncheon* is sometimes applied as the name of a large cask containing about 120 gallons. In this sense the word is synonymous with *hogshead*.

PUNCTATE, Lat. *punctatus*, dotted. Applied to parts of plants, &c.

PUNCTATION, from *punctum*, a point. The art of marking with points the divisions of a discourse or other writing into sentences and clauses. It is accomplished by means of four points: the period (.) ; the colon (:) ; the semicolon (;) ; and the comma (,). The art is modern; the ancients wrote without any distinction of members, periods, or words.

PUNDIR. A name in Hindoostan for a learned Brahmin.

PUNICA. The pomegranate tree. A genus of *Iconandria—Monogynia*. The *P. granatum* or common pomegranate is a

native of the south of Europe; the *P. nana* of the West Indies.

PUNICEAL, from *punicus*. Of a fine bright red colour, like the flowers of the pomegranate (*punica*).

PUNT. An oblong flat-bottomed boat, with a square head and stern.

PUPA 1. In *entomology*, the chrysalis. —2. In *conchology*, a genus of cylindrical univalve land shells belonging to the family Colimacea.

PURVOROUS, from *pupa* and *voro*, to feed. Feeding on the larvæ or pupæ of insects.

PURANA, Sanscrit, a poem. The sacred books of India explanatory of the Shaster.

PURBECK BEDS or **STRATA**. The lowest deposits of the Wealden group, consisting of various kinds of limestones and marls.

PURGATORY. A place appointed for the satisfaction of temporal punishments, which among Roman Catholics are distinguished from the eternal, the latter alone being remitted by the death of Christ.

PURGING FLAX. Mill mountain. A plant, the *Linum catharticum*, a decoction of which is an effectual and safe cathartic.

PURGING NUT. The seed of the *Jatropha curcas*, which affords an oil which is employed in some places as the castor oil is in this country.

PURIM. Among the *Jews*, the Feast of Lots, instituted to commemorate their deliverance from the machinations of Haman.

PURITANS. The dissenters from the Church of England were so called in derision, because they professed to be guided by the pure word of God, in opposition to all traditions and human institutions.

PURLINS. Pieces of timber which are laid across the inside of rafters, to keep them from sinking in the middle.

PURPLE OF CASSIUS. Gold purple. A vitrifiable pigment, which stains glass and porcelain of a beautiful purple hue. It is obtained by adding to a neutral muriate of gold a mixture of the protochloride and perchloride of tin, all in solution. A beautiful purple precipitate falls.

PURPURA 1. One of the four genera into which Brugueir has divided the gastropods, forming the genus *Buccinum*, Lin. The species are numerous, and the animal secretes a purple liquor, which was formerly used in dyeing wool, &c., and is supposed to be the substance of the Tyrian dye, so highly prized in ancient Rome for producing the imperial purple. —2. A disease in which small distinct purple specks appear on the skin.

PURPURE. In *heraldry*, purple; represented in engraving by diagonal lines from right to left.

PURPURIC ACID. An acid obtained by treating uric or lithic acid with dilute nitric acid. It has a fine purple colour when in solution, but in a dry state it is a fine powder of a cream colour.

PURPURINE. A colouring principle which exists in madder, and hence called *madder-purple*.

PURSER. In the *navy*, an officer who has charge of the provisions of a ship of war, and attends to their preservation and distribution among the officers and crew.

PURSIVANTS. In *heraldry*, the lowest order of officers at arms. They attend the heralds when they marshal public ceremonies. The term is French, *poursuivant*, a state messenger.

PURVEYANCE. In *English law*, the royal prerogative of pre-emption, abolished by 12 Charles II., c. 24.

PUS, *pus*, matter. Applied to designate the whitish, bland, cream-like fluid, heavier than water, found in abscesses and on the surface of sores.

PUS TULE, from *pus*, (q. v.). An elevation of the cuticle, sometimes globate, sometimes conoidal in its form, and containing pus or lymph, which is in general discoloured.

PUTAMEN. A Latin name for the shell of a nut: applied in botany as another term for the endocarp, stone, or shell of certain fruits.

PUTAMINEE. The name of the 25th natural order of plants according to Linné, comprising such as have an outer shell (*putamen*), over a hard fruit.

PUTCHOCK. The root of a plant which grows abundantly in Scinde, and is exported in considerable quantities from the north-west coast of India into China, where it is burned as incense in the temples of the gods. It yields a fine smoke, and diffuses a grateful odour in burning.

PUTLOGS, } Pieces of timber, about
PUTLOCKS, } seven feet long, used in building scaffolds.

PUTORIUS. One of the four sub-genera into which Cuvier has divided the genus *Mustela*, Lin. This sub-genus comprises the polecat, and mink or norek of the north and east of Europe.

PUTREFACTION, from *putrefacio*, to make rotten. 1. The spontaneous decomposition of animal and vegetable matters, attended with fetid exhalations: called also *putrid*, or *putrefactive fermentation*. In the process of putrefaction, the solid and fluid matters are resolved into gaseous compounds which escape, and earthy matters which remain. The requisites of the process are (1.) a certain degree of humidity, (2.) a certain degree of heat, and (3.) the presence of oxygen (a constituent of atmospheric air). All organic bodies, when life is extinct, decay with

more or less rapidly (when the requisites are present), according as they contain more or less nitrogen.

ΠΥΤΤ, *Sp. potes*. 1. A cement composed of whiting and linseed oil, beaten or kneaded to the consistency of dough; used to fasten glass in sashes, stop crevices, &c.—2. A white powder formed by calcining an alloy composed of equal parts of tin and lead. It forms the base of most enamels, and is also used in polishing metals, stones, and glass.

ΠΥΚΝΟΔΟΝΤΕΣ. Thick-toothed fishes: *πυκνός*, compact, and *ὀδὼς*, a tooth, their leading character consisting in a peculiar armature of all parts of the mouth, with a pavement of thick, round, and flat teeth, the remains of which, under the name of *bisfontes*, occur most abundantly throughout the oolite formation. The pycnodonts are now extinct: five genera have been recognised.

ΠΥΚΝΟΣΤΥΛΕ, from *πυκνός*, close, and *στυλος*, a column. A method of intercolumniation which has only a diameter and a half between each pair of columns. Exemplified in the ruins of Palmyra.

ΠΥΛΟΡΟΣ, from *πύλη*, an entrance, and *αἰών*, to guard. The inferior aperture of the stomach which opens into the intestines.

ΠΥΡΑΪΔΕΣ. There are several vegetable acids which, when distilled, undergo decomposition, and new acids are generated by the process: these new acids are distinguished by the name of *pyracids* from *πυρ*, fire, and acid. Thus, tartaric acid yields *pyrotartaric acid*; mucic acid yields *pyromucic acid*; gallic acid yields *pyrogallic acid*, &c.

ΠΥΡΑΜΙΔ, *πυραμῖς*. 1. A geometrical solid, having one of its sides, called the *base*, a plane figure, and the other sides triangles, their points joining in one point at the top, called the *vertex*. The edge of the base and the vertex are called the two *directrices*, and the straight line extending between them is called the *generatrix*. Pyramids are termed triangular, square, &c., according to the number of their sides.—2. A building of a pyramidal form. Those of Egypt are the most celebrated structures of this sort, and many attempts have been made to ascertain their use. Some have supposed them to have been erected for astronomical purposes; others have taken them for religious edifices; but it seems to be now generally agreed that their principal, if not their sole use, was to serve as sepulchres for the kings and other great men of the land. There are a considerable number of these pyramids between Calro and Meidan, on the west side of the Nile, but the three of Memphis have attracted particular attention from their size. These

have from time immemorial been regarded as the most stupendous wonders of the world. The dimensions of the largest has been variously given as follows, in French feet.

	Height	Width of one of its sides.
Le Bruyn,	610	704
Prosper Alpinus,	625	750
Thevenot,	620	682
Niebuhr,	440	710
Greaves,	444	648

This pyramid, according to the least of these dimensions, covers upwards of 11 acres (English), and may be ascended on the outside by 208 steps.

ΠΥΡΑΜΙΔΑΛ ΝΥΜΒΕΡΣ are formed by the successive sums of polygonal numbers, in the same manner as polygonal numbers are formed from arithmetical progressions, thus: *Arithmetical Progression*, 1, 2, 3, 4, 5, &c.; *Polygonal Numbers*, 1, 3, 6, 10, 15, &c.; *Pyramidal Numbers*, 1, 4, 10, 20, 35, &c.

ΠΥΡΑΜΙΔΟΙΔΕ, } Parabolic spindle. A **ΠΥΡΑΜΟΙΔ**. } solid formed by the revolution of a parabola about its base or greatest ordinate.

ΠΥΡΕΤΗΡΟΝ. Feverfew. An extensive genus of plants. *Syngenesia*; *Poly. superflua*. Name from *πυρετός*, fever, being regarded as a specific for some fevers. Most of the species are hardy, many are perennial, some shrubby, and a few annual. The common, sea, and scentless feverfew are British species.

ΠΥΡΕΤΟΛΟΓΟΝ, from *πυρετός*, fever, and *λογος*, discourse. The doctrine of fevers.

ΠΥΡΕΪΑ. Fever: from *πυρ*, fire. Febrile disease, under the systematic name *Pyrexia*, constitute the first class in Cullen's Nosology. Epithet, *Pyrexial*, febrile.

ΠΥΡΙΤΕΣ, *πυριτης*, fire-stone. A name first given to the native sulphuret of iron, because it emits sparks of fire when struck against steel, and because, when heated red hot, the sulphur which it contains burns with a lambent blue flame. The name is now used to designate three native sulphurets, the ferruginous, the cupreous, and the arsenical. The first is bisulphuret of iron, the second of copper, and the third of arsenic; and they have all a general similarity in external appearance. Their colour varies from yellowish-white to golden-yellow, with a high degree of metallic lustre.

ΠΥΡΟ-ΑCΕΤΙΚ ΣΠΙΡΙΤ, } Acetone. **ΠΥΡΟ-ΑCΕΤΙΚ ΕΘΗΕΡ**, } roxille spirit. A colourless limpid liquid, of a peculiar penetrating odour, so called because it is obtained along with acetic acid by the dry distillation of the acetates. It is highly inflammable, and is therefore often used in lamps, instead of spirit of wine. Boiling point 132° F., sp. gr. 0.792.

PYRO-ACIDS. The prefix *pyro* is attached to the products obtained by subjecting organic acids to heat, which gives rise to distinct classes of acids.

PYROCH'ROA. A genus of heteromeric Coleoptera of the Trachelide family. The species are found in the spring in woods, and their larvæ live under the bark of trees.

PYRO-CIT'RIC ACID. A peculiar acid obtained by subjecting citric acid to dry distillation, saturating the acid liquor which results with lime, and decomposing the precipitate with oxalic acid. It is therefore reckoned one of the pyracids.

PYRO-CIT'RIC ETHER. A colourless and transparent liquid, obtained by heat acting on a mixture of citric acid, alcohol, and sulphuric acids. Sp. gr. 1.04.

PYRO-GAL'LIC ACID. An acid obtained from gallic acid by heat. It sublimes in crystalline plates, which are white and brilliant, and contain no water. Soluble in water.

PYRO-KIN'IC ACID. An acid obtained by heat from kinic acid. It passes over in a liquid state, but crystallises in tufts, when the liquor is filtered and evaporated.

PYROLYG'NOUS ACID. Wood vinegar. This acid liquid, which passes over during the destructive distillation of wood, is a mixture of various products, the most abundant of which is acetic acid. This liquor being rectified by a second distillation, the acetic acid passes over, contaminated with a minute portion of a brown empyreumatic oil. This, from its smell, was regarded for some time as a distinct acid, and was accordingly called *pyrolyg'neous acid* (from *pyr*, fire, and *lignum*, wood), and the salts which it formed were in consequence termed *pyrolygnites*.

PYROLYG'NOUS SPIRIT. See PYROXILIC SPIRIT.

PYRO-LITH'IC ACID, } When uric or li-
PYRO-U'RIC ACID. } thic acid con-
cretions are subjected to dry distillation, silvery white plates of pyrolithate of ammonia sublime. A solution of these, poured into that of subacetate of lead, gives a precipitate of pyrolithate of lead. The precipitate being washed, and diffused through water, into which passes a stream of sulphuretted hydrogen, the pyrolithate of lead is decomposed; and the liquid becomes a solution of pyro-lithic or pyro-uric acid. Acicular crystals are obtained by evaporation.

PYRO-MAL'IC ACID, } The liquid acid
PYRO-SOR'BIC ACID. } which passes over in subjecting malic or sorbic acid to dry distillation, is so named. It affords crystals by evaporation.

PYRO-MANT, from *pyr*, fire, and *μαν-τεια*, prophecy. Divination by the fire of the ancient sacrifices.

PYRO-MECON'IC ACID. An acid obtained when meconic or parameconic acid is distilled. It is soluble in water and alcohol, and affords crystals when its solutions are evaporated.

PYROM'ETER, from *pyr*, fire, and *μετρον*, measure. The name of an instrument for measuring degrees of heat, higher than the range of the mercurial thermometer, as that of furnaces and the like. *Wedge-wood's Pyrometer* consists of a metallic groove or gauge, the sides of which gradually converge; pieces of very pure clay are made into small cylinders, having one side flattened, and being heated to redness, they are made to fit the larger extremity of the groove. As it is a property of clay to contract and become harder by exposure to a high temperature (supposed to be) in proportion to the heat to which it is exposed, all that is necessary to make an observation is, to subject one of the cylinders of clay to the heat of the furnace, and when it is again cooled, to try how far it slides downwards in the gauge, which is marked off into 240 parts or degrees, each calculated to be equal to 130° of Fahrenheit's scale. The zero is red heat, supposed to be 1077° Fah.

Daniel's Register Pyrometer consists of two parts, the register and scale. The register is a solid bar of black-lead earthenware highly baked. In this a hole is drilled, into which a bar of platinum or malleable iron (6 inches long) is put, which rests against the bottom of the cavity. A cylindrical bar of porcelain (called the index), is then placed upon the top of the bar, and confined in its situation by a ring of platinum. This arrangement being subjected to an increase of temperature, the metal rod expands and forces the index to recede, and the amount of displacement being noted, the temperature is known by the scale on the index.

PYRO-MU'IC ACID. An acid obtained by distilling mucic acid in a retort. The matter which comes over is mixed with four times its weight of water, and then evaporated, when the pyromucic acid is deposited in crystals. It forms soluble and crystallisable salts called *pyromucates*.

PYROPH'ANE, from *pyr*, fire, and *φωσ*, clear. A mineral which in its natural state is opaque, but is rendered transparent by heat.

PYROPH'ORUS, from *pyr*, fire, and *φορος*, bearing. A generic name for any chemical preparation which becomes ignited on exposure to the air. Several such substances are prepared, mostly, however,

depending on the same ultimate principle. *Hombert's pyrophorus*, the best known, is readily prepared by calcining together 3 parts alum and 1 part sugar, or flour, in a bottle of stone or other fitting material, until no product appears to be given off; the mouth of the bottle is then to be stopped, and the whole set aside to cool: the bottle will now be found to contain a black powder, which will spontaneously take fire when poured out.

PYRO-PHOSPHORIC ACID. The acid formed when phosphoric acid, or any of its salts, is subjected to a heat of 415° F.

PYRORTHRITE, from *πυρ*, fire, and *ορθήριτις* (q. v.). A mineral resembling orthrite, but differing from it essentially. Pyrorthrithite burns like charcoal before the blow-pipe, whereas orthrite melts.

PYROSCOPE, from *πυρ*, fire, and *σκοπεω*, to view. An instrument for measuring the intensity of heat radiated from a fire.

PYRO'SIS, from *πυρ*, to burn. A disease called in Scotland *water-brash*, and in England *black-water*: known by a sensation of heat in the stomach, attended with copious eructations, generally of a watery insipid fluid.

PYROSO'MA. A floating polypus, differing from the coral in being locomotive, and is so named from *πυρ*, fire, and *σώμα*, body, because it emits a sort of phosphorescence which is considerably augmented when the animal is irritated. The pyrosomes unite in vast numbers, and arrange themselves in the form of a hollow cylinder, open at one end and shut at the other, and in this form the body moves about by the alternate dilatation and contraction of the individual animals.

PYRO-TARTAR'IC ACID. An acid obtained by exposing tartaric acid to heat in a retort. When the tartaric acid in the retort is kept at a temperature of 374°, a liquid passes into the receiver, which yields by evaporation crystals of pure pyro-tartaric acid.

PYR'OXENE, from *πυρ*, fire, and *ξενος*, a stranger. The name given by Haüy and Brongniart to augite, because it is not altered by fire.

PYROX'ILIC SPIRIT, } Pyrolignous spirit.

PYROX'YLIC SPIRIT, } rit. *Pyro-acetic spirit.* A liquid often improperly termed naphtha. It is one of the products obtained by subjecting wood to destructive distillation. When the pyrolignous acid is saturated with quick lime, and distilled, it yields 1 per cent. of this spirit. See PYRO-ACETIC SPIRIT.

PYROX'ILINE. A name given by Dr. Ure to pyroxanthine or eblanine, because obtained from pyroxilic spirit. If potash be added to unrectified pyro-acetic spirit, a precipitate of pyroxiline falls, mixed with tarry matter. From this im-

purity it is freed by washing with alcohol of sp. gr. 0.84. It has an orange red colour closely resembling ferro-prussiate of potash.

PYRR'IC. Πυρρικός, from *πυρρική*, an ancient military dance. A poetical foot consisting of two syllables.

PYRRHOCORAX. A genus of passerine birds belonging to the family *Dentirostres*, Cuv. Name a corruption of *pyrocorax*, the *πυροκοράξ* of Pliny, from *πυρ*, fire, and *κοράξ*, a crow, the feet and beak being flame-coloured, and their other characters coinciding nearly with those of the crows, to which they were for a long time united.

PYRRHONIANS, } A sect of ancient phi-
PYRRHONISTS. } losophers, founded by Pyrrho, a native of the Peloponnesus. They were also called *Sceptics*, because they professed to doubt everything, and although they seemed always in search of truth, they never acknowledged that they had found it. Hence the terms *scepticism* and *pyrrhonism* became synonymous.

PYR'ULA. A genus of marine pyriform univalve shells, belonging to the family *Canalifera*, Lam. Pyrulae occur both recent and fossil; the former on muddy bottoms, and the latter in the London clay.—2. In *ornithology*, the bull-finch.

PY'RUS. An extensive genus of trees of the natural order Pomaceae, and arranged by Linné in the class *Icosandria*, and order *Pentagynia*, of the sexual system. Name *pyrus*, a pear; the pear-tree being the type of the genus. The apple, quince, whitebeam, mountain-ash, &c. trees are also species.

PYTHA'GOREANS. A sect of ancient philosophers, so called from their being followers of Pythagoras of Samos, who lived in the reign of Tarquin, the last king of Rome. Pythagoras first taught that the sun was a moveable sphere, situated in the centre of the universe, and that the planets revolved about this centre. This doctrine was revived by Copernicus, and has in consequence been named the *Copernican system* of astronomy.

PYTH'IA, } The priestess of Apollo,
PYTH'ONESS. } who delivered oracular answers at Delphi in Greece.

PYTH'IAN GAMES. One of the four national festivals of Greece, celebrated every fifth year near Delphi, in honour of Apollo, who overcame the dragon Python.

PYX, from *πυξίς*, a box. The name of the box in which the consecrated host is kept by the Romish priesthood. The *trial of the pyx*, or *pyx*, at the Mint, is a trial of the coins previous to their being put into circulation, and is so called from the box in which the coins to be tried are kept.

ΠΥΞΙΔΙΟΝ, *πυξίς*, a small box. A fruit which divides circularly into a lower and upper half.

ΠΥΞΙΣ. *Πυξίς*, from *πυξίς*, the box-tree. Properly a box; but, from its resemblance, the cavity of the hip-joint. See ACETABULUM.

Q.

Q, the seventeenth letter of the English alphabet, is an articulation, borrowed from the oriental *koph*, or *quoph*. It never ends an English word, and is always followed by *u*, in which it differs from *k*. Q, as a numeral, stands for 500, and with a dash over it Q̄, for 500,000. It is often used as an abbreviation for *question*.

Q. E. D. An abbreviation of *quod erat demonstrandum*, which was to be demonstrated.

Q. E. F. An abbreviation of *quod erat faciendum*, which was to be done.

Q. P. An abbreviation of *quantum placet*, as much as you please.

Q. S. An abbreviation of *quantum sufficiat*, as much as may suffice.

QUADRAGESIMA. Lent: *quadragesimus*, fortieth, because it consists of forty days.

QUADRANGLE, Lat. *quadratus angulus*. A quadrilateral figure: a surface having four sides and four equal angles.

QUADRANT, from *quadrans*, a fourth. 1. In *geometry*, the fourth part of a circle, or 90 degrees.—2. An instrument for taking the altitudes of the sun and stars, of great use in astronomy and navigation. Quadrants are variously made, but Hadley's reflecting quadrant is most commonly used. It consists of an octant

(eighth part of a circle), an index, a speculum, two horizontal glasses, two screens, and two sight vanes.

QUADRANTAL TRIANGLE. In *trigonome-*

try, a spherical triangle, having one side equal to a quarter of a circle.

QUAD'RAT, from *quadratus*, squared. 1. In *printing*, a piece of metal cast like the letters, used for filling up the incomplete lines at the ends of paragraphs.—2. A mathematical instrument called also a *line of shadows*, and a *geometrical square*. It is frequently an additional member on the face of the common and some other quadrants. It is made of four plane rules, joined together at right angles, where A

is the centre, to which a plummet is attached. Each side is divided into 100 or 1000 equal parts: C and F are two sights fixed on the side AD; and GH is an index, joined to the centre A, in such a manner as to move freely, yet to remain in any given situation. On this there are also two sights, K and L. The side DE is called the line of direct shadows; and the side BE is termed the line of reversed shadows.

QUAD'RATE, Lat. *quadratus*, square. 1. Having four equal and parallel sides.—2. In *astrology*, the same as *quartile*.

QUADRAT'IC EQUATIONS. Equations in which the unknown quantity is of two dimensions, or of the second degree, or squared.

QUAD'RATO (It.). In *music*, the note B in the natural scale.

QUAD'RATRIX. In *geometry*, a mechanical line, by means of which right lines may be found equal to the circumference of circles and other curves, and other parts.

QUAD'RATURE, from *quadratus*, squared. 1. In *geometry*, the reducing of a figure to a square: the finding of a square which will be equal in area to the given figure: thus, the quadrature of the circle has been a mathematical problem since the days of Euclid, and it is not yet solved.—2. In *astronomy*, that position of the moon, with relation to the sun, when she is equally distant from the points of conjunction and opposition.

QUADRELL', Ital. *quadrello*. A sort of artificial stone, made of a dry chalky

earth, and dried in the shade for two or three years: used in some parts for building, and so named because it is square.

QUADRICAPSULAR, from *quadra* and *capsula*: having four capsules to a flower.

QUADRIDENTATE, from *quadra* and *dentatus*, toothed: four-toothed. A botanical term.

QUADRIFID, from *quadra* and *fidus*, cut: four-cleft. A botanical term.

QUADRIGA, from *quatuor*, four, and *jugum*, yoke. An ancient chariot drawn by four horses abreast.

QUADRILATERAL, from *quatuor*, four, and *latus*, a side: four-sided.

QUADRILLE (French). 1. A game played by four persons, with 40 cards, being the remainder of the pack after the four tens, nines and eights are thrown out.—2. A dance, in which eight persons usually join.

QUADRILOBATE, from *quatuor* and *lobatus*, lobed: four-lobed.

QUADRILOCULAR, from *quatuor* and *locularis*, celled: four-celled.

QUADRIMANI. A tribe of Carabici, so named from the arrangement of the joints of the tarsi, and the quadrate shape of the thorax: *quadra* and *manus*, a hand. There are many genera, as *Acinopus*, *Daptus*, *Harpalus*, &c., all preferring sandy and hot localities.

QUADRIPHYLLOUS, from *quatuor* and *φύλλον*, a leaf: four-leaved. A botanical term.

QUADRIFOLICATE, from *quatuor* and *plica*, a fold: having four folds or plaits. A term in conchology.

QUADRIREME, from *quatuor* and *remus*, an oar. An ancient ship of war, furnished with four rows of oars.

QUADRISULCATA, from *quatuor* and *sulcus*, a furrow. Applied to ungulate quadrupeds, whose hoofs are divided into four digits.

QUADRIVALVULAR, from *quatuor* and *valva*, a valve: having four valves. A term in botany.

QUADRIVM (Lat.). The four lesser arts—arithmetic, music, geometry, and astronomy.

QUADROON, from *quadra*; *quatuor*, four. A name in Mexico, &c. for the offspring of a Mulatto woman by a white man: a person quarter-blooded.

QUADRUUM. In *music*, the same as *natural*.

QUADRU'MANA, from *quadra* and *manus*, a hand. The name of the second order of mammalia, in Cuvier's arrangement, including all the monkey tribes, which are very numerous.

QUADRUPE'DIA, *quatuor*, and *pes*, foot. All vertebrate animals, fitted with four extremities for progression, were for-

merly so termed; but the term is no longer used as indicative of a particular group of animals.

QUES'TOR. An officer among the Romans, who had the management of the public treasury.

QUAIL. A migratory bird, somewhat smaller than the partridge. It is the least of all the gallinaceous birds. See **COTURNIX**.

QUAKERS. A christian sect, otherwise called *Friends*, which sprung up in England during the protectorate of Cromwell. They have few articles of faith, insist chiefly on moral virtue, mutual charity, the love of God, and a deep attention to the feelings and emotions of the mind, which they regard as the secret workings of the Holy Spirit. Their worship is devoid of ceremonies, and they uniformly profess great probity and uprightness in their dealings, and affect the utmost frugality in their manner of living, and singular plainness and simplicity in their dress.

QUALITATIVE. Regarding the qualities or properties of a body, without reference to quantity.

QUALITY, Lat. *qualitas*, from *qualis*, such. Property. Qualities are *natural* and *accidental*. Whiteness is a *natural quality* of snow; figure and dimension are *natural qualities* of solids; but blue is an *accidental* or *adventitious quality* of cloth; and all determinate figures, as cube, square, sphere, &c. are *accidental qualities* of solids. *Essential qualities* are such as are necessary to constitute a thing what it is: *sensible qualities* are such as are cognisable by the senses, as colour, smell, taste, &c.

QUANTITATIVE. Regarding quantities; as a *quantitative analysis* of any chemical compound.

QUANTITY, Lat. *quantitas*, from *quantus*, how much. In *physics*, that property of anything which may be increased or diminished. In *mathematics*, any portion, definite or indefinite, known or unknown, of any magnitude whatever, which can be expressed by units. In *algebra*, quantities are called *positive*, when they have the sign + prefixed, and *negative* when the sign — is prefixed. All positive quantities are greater than, and all negative quantities are less than, 0. Quantities are said to be *given* when they are known, and *unknown* when they are not given. Given or known quantities are denoted by *a, b, c*, &c.; and unknown quantities by *x, y, z*, &c. In *grammar*, quantity denotes the measure and magnitude of syllables, or that which determines them to be called long or short; or it is the measure of time in pronouncing a syllable.

QUANTUM (Latin). The quantity. In *law*, *quantum meruit*, an action on the case, grounded on the necessity to pay a

man for doing some service, *as much as it merits* or deserves. *Quantum valebat*, or *valebant*, an action to recover of the defendant for goods sold *as much as they were worth*.

QUA-QUA-VER'SAL, Lat. *quaquà*, on every side, and *versus*, inclined. Inclined to every side: facing all ways, as the *quaquaversal* dip of coal-beds.

QUARANTINE, Ital. *quarantina*, forty. Properly, the space of forty days; appropriately, the regulation by which a ship arriving in port, and suspected of being infected with plague, or other malignant contagious disease, is obliged to forbear all intercourse for the space of forty days. See LAZARETTO.

QUARE (Latin). Wherefore, for what reason. A term in *law*, affixed to the title of several writs.

QUARE IMPEDIT (Lat.). A writ lying for one who has a right of advowson against one who disturbs him by presenting a clerk when the church is vacant.

QUARREL, Welch *quarel*. 1. An arrow with a square head.—2. A pane of glass, a square. See QUARRY.

QUARRY, Fr. *carré*, for *quarré*. 1. The same as *quarrel* (q.v.). 2. In *falconry*, from Fr. *querir* (?), to fetch: the game which a hawk pursues or has killed.—3. Fr. *carrière*, an artificial excavation, formed in rocky ground, for the purpose of obtaining marble, stone, slate, &c.

QUARTAN, *Febris quartana*. The fourth-day ague; the exacerbations occurring every fourth day.

QUARTATION. An operation in assaying, by which the quantity of one thing is made equal to the *quarter* or fourth part of the quantity of another thing. Thus, in refining gold, it is alloyed with three parts of silver, so that the gold may constitute only one *quarter* of the mass, and thereby have its particles too far separated to be able to protect the other metals originally associated with it, such as silver, copper, lead, tin, &c., from the action of the acids employed in the processes of assaying.

QUARTER, Lat. *quartus*. The fourth part. Thus the fourth part of 112 lbs., or 28 lbs., is called a quarter; eight bushels (fourth of a ton) is a quarter of grain; the fourth part of the moon's monthly revolution is called a *quarter*, and is either first, second, third, or last.

QUARTER-CLOTHS. In *ships*, long pieces of painted canvas, extending on the outside of the quarter-netting, from the upper part of the gallery to the gangway.

QUARTER-DAYS. In *law*, these are the 25th of March, or Lady-day; the 24th of June, or Midsummer-day; the 29th of September, or Michaelmas-day; and the 25th of December, or Christmas-day.

QUARTER-DECK (of a ship). The short

upper deck from the foremost end of the main-chains to the stern.

QUARTERING. In *heraldry*, the dividing of a coat of arms into quarters, by parting, coupling, &c. by perpendicular and horizontal lines.

QUARTER-MASTER. 1. An officer in the navy, who assists the mates in their duties, in stowing the hold, coiling ropes, keeping time by the watch-glasses, &c.—2. An officer in the army, whose business it is to attend to the quarters for the soldiers, their provisions, fuel, forage, &c. The *quartermaster-general* marks the marches and encampments of the army, the head-quarters, &c., &c.

QUARTER-RAILING. In a *ship*, narrow-moulded planks, reaching from the top of the stern to the gangway, serving as a fence to the quarter-deck.

QUARTER-ROUND. In *architecture*, the same as *ovolo* (q.v.).

QUARTERS. 1. A place of temporary residence, as the winter-quarters of an army.—2. In *farriery*, the quarters of a horse's foot are the sides of the coffin, between the toe and heel. *False* quarters are a cleft in the horn of the hoof, extending from the coronet to the shoe.—3. In *house-carpentry*, slender pieces of timber placed between the punchcons and the posts, to nail the laths to, in partitions. If four-inch thick they are called double quarters.—4. The stations of a ship's crew in time of action.

QUARTER SESSIONS. In *law*, a general court, held quarterly by the justices of peace of each county, with jurisdiction to try and determine felonies and trespasses.

QUARTETTO, } (Italian). A musical com-
QUARTETTE, } position for four voices,
or for four instruments.

QUARTILE. In *astrology*, an aspect of the planets when they are three signs or 90 degrees distant from each other: quadrate.

QUARTINE. The fourth envelope, from the outside, of the vegetable ovulum.

QUARTO, Lat. *quartus*. A book in which every sheet being twice doubled makes four leaves.

QUARTZ, Fr. for Germ. *quarz*. Rock crystal. Silica in its purest form occurring in 6-sided prisms, with pyramidal points: primitive form a rhomboid. It is strictly an oxide of silicium (silicon according to some). It melts before the oxy-hydrogen blow-pipe into a white glass, but cannot be fused by the common blow-pipe, except when mixed with alkalis. It is an ingredient in every rock, and many of the gems are simply quartz combined with some oxide, which gives the colour, as the amethyst, opal, and Bristol diamond.

QUARTZ SINTER. A mineral found in the form of siliceous concretions.

QUARTZOSE ROCK. A primary unstra-

tified rock, consisting of quartz of a granular form, united sometimes to other crystalline elements.

QUASI CONTRACT. In civil law, an act which has not the strict form of a contract, but has the force of one, as if (*quasi*) the forms had been all complied with.

QUASIMO'DO. In the Roman Catholic calendar, the first Sunday after Easter.

QUAS. QUASS. A fermented liquor drunk by the peasantry of Russia, and made by pouring warm water on rye or barley meal. It is reckoned an excellent antiscorbutic.

QUASSIA. A genus of trees. *Decandria Monogynia*. Nat. order *Gruinales*. There are two species, both natives of South and North America and West Indies: that which affords the bitter quassia of the shops is a beautiful tree. The bitter extract has been considered as a principle *sui generis*, and named *quassine*. The term *quassia* is derived from *quassi*, the name of a slave who first used it, with uncommon success, as a secret remedy for the malignant endemic fevers which frequently prevail in Surinam.

QUASSINE, } The bitter extract of quassia.
QUASSITE, } *sia amara* and *exceles*. It crystallises in very small white prisms. Its solutions are colourless and intensely bitter.

QUATREFOIL (French). Four-leaved grass: a favourite bearing in coat armour.

QUAVER, from *quiver*. 1. In music, a measure of time equal to half a crotchet, or the eighth part of a semi-breve.—2. A shake performed by the voice or on an instrument.

QUEBRADAS (Spanish). The name given by the Spaniards to the enormous perpendicular rents of the Andes. The word has been adopted by geographers, &c.

QUEENS OR QUEEN POSTS. In carpentry, the name given to those coupled bearers, G G, framed with one straining beam be-

tween them, for supporting roofs of from 30 to 40 feet span, instead of the single king-posts used in roofs of from 20 to 30 feet span.

QUEEN'S-YELLOW. An old name of Turbith mineral (yellow sub-sulphate of mercury.)

QUERCITRIN. The yellow colouring matter of quercitron bark. It crystallises in yellow spangles.

QUERCITRON. A dye-stuff. The inner bark of the *Quercus tinctoria*, a tree which grows spontaneously in North America,

and has been introduced into France and Bavaria. Its colouring matter is *quercitrin*.

QUERCUS. The oak. A genus of trees. *Monocia*—*Polyandria*. Natural order *Amentacea*. There are about 60 species, besides varieties. The common oak (*Q. robur*), and durmast (*Q. pubescens*), are natives of Britain; the evergreen, black, white, Italian, and Turkey oaks, are natives of the south of Europe, as is also the cork-tree and kermes. America has 33 species, of which the live oak is perhaps the most valuable for ship-building.

QUESTIONIST. A candidate for a bachelor's degree at Cambridge.

QUEST-MEN. In law, persons chosen to inquire into abuses and misdemeanors, especially such as relate to weights and measures.

QUESTUS. In law, land which does not descend by hereditary right, being acquired by one's own labour and industry.

QUICK-BEAM, } The wild sorb (*Sorbus*
QUICK-EN-TREE, } *aucuparia*) or mountain ash.

QUICK-LIME. Lime in its most active and caustic state, before it is slaked; and prepared by exposing any carbonate of lime, as common limestone, marble, chalk, &c., to a full red-heat for some time, whereby the carbonic acid and water are expelled, and a simple oxide of calcium left.

QUICK-MATCH. A combustible preparation used by artillerymen. It is formed of cotton strands dipped in a boiling composition of vinegar, saltpetre, and powder.

QUICK-SET-HEDGE is a general name for all living hedges, but, in a stricter sense, the name is applied only to those planted with hawthorn, or *Crataegus oxyacantha*, under which name these young plants or sets are sold by the nursery-gardeners.

QUICK-SILVER, *argentum vivum*. A name for mercury. See **MERCURY**.

QUICK-WORK signifies all that part of a ship which is under water when she is laden. The term is also applied to that part of the side which is above the sheer-rail.

QUID'DITY. In the school philosophy, essence. That which is a proper answer to the question *quid est?* The term is now used to designate any trifling nicety or cavil.

QUID PRO QUO. A Latin phrase, used to denote that one thing is made use of to supply the defect of another. A *quid pro quo* is a *succedaneum*.

QU'ETISTS. A sect of mystics originated by Molino, a Spanish priest, who maintained that religion consists in the internal rest (*quietus*) of the mind, employed in contemplating God and submitting to his will.

QUIETUS (Latin), rest. An exchequer term, used for discharge or acquittance to accountants. In *law*, a *quietus est*, granted to a sheriff, discharges him of all accounts due to the crown.

QUILL, *fr. cuille*, a reed. Quills are the hard and strong feathers of geese, &c., used in writing. They are divided into firsts, seconds, thirds, and flags, according to their order in the wing: the seconds and thirds are the best. The Riga quills are the finest, and the first quality of these brings in London about £3 per mille = 1200.

QUILT, } 1. A stuff made by putting
QUILTING. } wool, cotton, &c., between pieces of cloth, and sewing them together.
—2. The act of making a quilt is also named quilting.

QUINATE. 1. In *chemistry*, the same as *kinate*, the *quinic acid* being the same as the *kinic*.—2. In *botany*, from *Lat. quinque*, five, an epithet for a digitate leaf having five leaflets on a petiole.

QUINCE. The fruit of the *pyrus cydonia*, called the Cydonian apple (*Cydonium malum*) by the ancients, from a town in Crete, in the neighbourhood of which it abounded.

QUINCUNX, *Lat. corrup. of quinque and uncia*. In *horticulture*, the quincunx order is a plantation of five trees, disposed one at each corner, and the fifth in the middle . . . and this order, repeated indefinitely, forms a regular grove, which viewed by an angle of the square or parallelogram, presents equal or parallel layers.

QUINDECAGON, from *quinque*, five, and *deca* (q. v.). A plain geometrical figure, with fifteen sides and as many angles.

QUINDECIMVIRI. Roman magistrates, to whose care was intrusted the Sibylline books.

QUININA, } An alkali obtained from
QUININE. } the yellow Peruvian bark, called *quinquina* by the French. The sulphate, or rather disulphate of quinine is much employed in medicine, and possesses all the virtues of the bark in a high degree of concentration. Quinine when pure is pearly white, and intensely bitter. It crystallises (but with much difficulty) in silky flocculi.

QUINQUAGESIMA SUNDAY. Shrove-Sunday, so called, being about the fiftieth day before Easter (*quinquagesima*, fifty).

QUINQUANGULAR, *Lat. quinque and angulus*. Having five angles.

QUINQUECAPSULAR, *Lat. quinque and capsula*. Having five capsules.

QUINQUEDENTATE, *Lat. quinque and dentatus*. Five-toothed.

QUINQUEFOLIATE, *Lat. quinque and foliatus*. Five-leaved.

QUINQUELOBATE, *Lat. quinque and lobatus*. Five-lobed.

QUINQUELOCULAR, *Lat. quinque and locularis*. Five-celled.

QUINQUENALIA. *Anciently*, public games celebrated every five years.

QUINQUEREMIS, *quinque* and *remus*, an oar. A Roman war-ship having five banks of oars.

QUINQUEVALVULAR, *Lat. quinque and valvularis*. Having five valves.

QUIN'TAL (Fr.). A weight originally of 100 lbs., but now commonly of 112 lbs. It however differs considerably in different countries.

QUIN'TESSENCE, *Lat. quinta essentia*, fifth essence. 1. A term used by the alchemists to signify the active principle of anything, in which its properties and virtues reside, separated by art from the inert matters with which it is combined.—2. The pure essential part of anything. The term is now chiefly used by quack doctors and perfumers.

QUIN'TILE, from *quintus*, fifth. The aspect of the planets, when distant from each other the fifth part of the zodiac, or 72 degrees.

QUINTILIANS. A sect of ancient heretics, founded by Quintilia.

QUIN'TINE. The fifth envelope of the vegetable ovulum.

QUIN'TUPLE. In *music*, a species of time, containing five crotchets in a bar.

QUIN'ZAIN. The fourteenth day after a feast day, in *chronology*, or the fifteenth, including the feast day.

QUI'POS. A name given, in Peru, to knots and cords of various colours, which imperfectly supply the place of writing.

QUI PRO QUO, *Lat. one for another*. A verbal ambiguity.

QUIRITES. The common people of ancient Rome, as opposed to the soldiery.

QUIRK. In *building*, a piece taken out of any regular ground plot or floor.

QUIRK'ED MOULDING. In *architecture*, one whose convexity is sudden, in the form of a conic section.

QUI-TAM. In *law*, an information, when the party informing prosecutes for the king and himself.

QUIT-CLAIM. In *law*, a release of any action that one person has against another: a deed of release by which all claims are relinquished to another without warranty.

QUIT-RENT, *Lat. quietus redditus*. In *law*, a small rent reserved, payable in token of subjection.

QUITTER-BONE. In *farricry*, a hard round swelling on the coronet, between the heel and the quarter, usually on the inside of the foot.

QUO ANIMO (Lat.). With what mind: with what intent, as *animo furandi*, with the intention of stealing.

QUOD PERMITTAT. In *law*, a writ for the heir of him that is disseised of common of pasture, against the heirs of the disseisor.

QUOIN, *Fr. coin*, a corner. 1. Quoins are stones, or other materials, put into the corners of brick buildings, to strengthen them. If the stones project before the face of the wall, and have chamfered edges, they are termed *rustic quoins*.—

2. In *artillery*, a loose wedge of wood put below the breech of a cannon to adjust its elevation.

QUOIR, *Dut. coite*. A sort of annular disc of metal, to be pitched at a fixed object, in the game called *quoits*. A flat stone is used in common practice.

QUO JURIS (*Lat.*). By what law, right, or title.

QUO MI'NUS. In *law*, a writ which issues from the Exchequer, to take the body of the defendant, in the same manner as the *Capias* in the Common Pleas, and the *Latitat* in the Queen's Bench.

QUORUM, *Lat. gen. pl. of qui*, who. Such a number of persons as is competent, by the law in the case, to transact business. The term originates from the words of a justice-of-peace commission, "*quorum aliquem vestrum unum esse volumus*."

QUOTIENT, from *quoties*, how often. The name, in *arithmetic*, for the number which results from the division of one number by another. See *DIVISION*.

QUO WARRANTO. In *law*, a writ which lies against a person, or corporation, that usurps any franchise or liberty against the Crown.

Q. V. 1. An abbreviation of *quantum vis*, as much as you will.—2. An abbreviation of *quod vide*, which see: frequently used in this dictionary.

R

R is the eighteenth letter of the English alphabet, and an articulation *sui generis*, having no resemblance in pronunciation to any other letter. As a Roman numeral it stands for 80, and with a dash over it for 80,000. **R**, or **R**, placed at the beginning of medical prescriptions, is a contraction of *Recipe*, take. In ancient times (says Dr. Paris), such was the supposed importance of planetary influence, that it was usual to prefix a symbol of the planet under whose reign the ingredients were to be collected, and it is not, perhaps, generally known, that the character which we at this day place at the head of our prescriptions, and which is understood and supposed to mean *recipe*, is a relic of the astrological symbol of Jupiter, as may be seen in many of the older works on pharmacy.

RAS'EST, *Fr. raboter*, to plane. A deep

groove or channel, cut longitudinally in a plank or piece of timber, to receive the edge of another plank, which is to be let into it. This is termed a *rabbet-joint*; and the plane with which the rabbet is made, is denominated a *rabbet-plane*.

RAB'BI, } A title assumed by the Jew-
RAB'BIN. } ish doctors, signifying lord, or master.

RAB'BINISTS. Those among the Jews who adhered to the Talmud and the traditions of the rabbins, in opposition to the Caraites, who reject all traditions.

RA'BIES. A Latin term for madness. Generally applied to the disease in dogs, otherwise called *hydrophobia* (*rabies canina*).

RA'CA (*Syriac*). Vanity or folly. Pronounced by the Jews with gestures of indignation.

RACE, } In *engineering*, the canal
RACE-COURSE. } along which the water is conveyed to and from a water-wheel.

RACE'NE, *Lat. racemus*, a cluster or bunch. In *botany*, a species of inflorescence, consisting of a cluster of flowers, rather distant from each other, each on its own proper stalk, and all connected together by one common peduncle.

RACEM'IC ACID. The name given by M. Gay-Lussac to an acid isomeric with tartaric acid, and obtained along with it in decomposing tartrate of lime by means of sulphuric acid. It has been called *vinic acid*, which, on the Continent, is also a name of tartaric acid (*German, weinsäure*).

RACEMOVIN'IC ACID. An acid formed by the action of alcohol on racemic acid. It crystallises, and differs from tartrovinic acid in containing an atom more water.

RA'CHRIS, *gaxys*. The vertebral column of mammals in birds.

RACK, *Sax. racan*, to stretch. 1. An engine of torture, composed of pulley-tackle, formerly too much used for extorting confessions from suspected persons.

—2. In *mechanics*, a straight machine which has teeth or cogs similar to those of a toothed wheel.—3. In *ships*, a frame of timber containing several sheaves, and usually fixed to the opposite sides of the bowsprit, to direct the sailors to the respective ropes passing through it.—4. In *stables*, a railed convenience above the manger for the reception of hay.

RACK'ET, *Fr. raquette*. The instrument with which players at tennis strike the ball.

RACK'ING-FACE (of a horse). An amble, but with a shorter and quicker tread.

RACK'-RENT. In *law*, the full yearly value of the land.

RAC'OVIAN. In *ecclesiastical history*, the Unitarians of Poland are so called, from Racow, a city of that country, where the Socinian Catechism was published.

RADIANT. In *geometry*, a straight line proceeding from a given point or fixed pole, about which it is conceived to revolve. In *physics*, *radiant heat* is that which is thrown off at the surface of hot bodies in all directions.

RADIA'TA. The name given to the fourth great division of the animal kingdom, because the parts of the body of the animals composing it are arranged round an axis, and in one or several radii or lines, extending from pole to pole; whence the name. The division comprises five classes; viz. Echinodermata, Acalepha, Polypiphera, Poriphera, and Polygastrica. The Radiata have also been termed *Zoophyta* or *Zoophytes*.

RADIATE, Lat. *radiatus*, rayed. Diverging like rays from a common centre. Applied to compound flowers, in which the florets of the centre differ in form from those of the circumference. Example, the daisy.

RADIATED IRON PYRITES. A variety of sulphuret of iron, which occurs regularly crystallised, in radiated, granular, and lamellar concretions, in spherical, and also in cylindrical masses, with fibres diverging from the centre or axis. Iron 46, sulphur 54.

RADIATING POINT. In *optics*, any point from which rays of light proceed.

RADICAL, from *radix*, a root. 1. In *chemistry*, applied to that which is considered to constitute the distinguishing part of an acid, by its union with the acidifying principle. Thus sulphur is the radical of sulphuric acid, and nitrogen of the nitric acid.—2. In *botany*, applied to leaves which spring from the root, like those of the cowslip.—3. In *philology*, a *radix*, or simple undervived, uncompounded word.

RADICAL BASS. In *music*, the same as *fundamental bass* (q. v.).

RADICAL QUANTITIES. In *algebra*, all quantities under the *radical sign* (q. v.).

RADICAL REFORMERS. In *politics*, a party who desire the *rooting out* of abuses which have crept into the government, and the remodelling all our institutions.

RADICAL SIGN. The sign $\sqrt{\quad}$ placed before any quantity to denote that the root of that quantity is to be extracted: thus, \sqrt{a} , and $\sqrt{a + b}$.

RADICANT, Lat. *radicans*, rooting. Applied in *botany* to stems which cling to other bodies for support, and strike root by means of fibres, which do not imbibe nourishment. The ivy (*hedera helix*) is an example.

RADICA'TION, from *radicate*, to root. In *botany*, the disposition of the root of a plant with respect to the ascending and descending caudex and the radicles.

RADICLE, Lat. *radicula*, from *radix*, a

root: a rootlet. In *botany*, that part of the embryo which grows downwards and becomes the root.

RADIOMETER, from *radius*, rod, and *metron*, measure: the forestaff. An instrument for taking the altitudes of the celestial bodies.

RADISH. In *botany*, the common and horse-radish belong to the genus *Cochlearia*; the garden-radish is the *Raphanus sativus*. The water-radish is a species of *Sisymbrium*.

RADIUS (Lat.), a ray. 1. In *geometry*, a right line, drawn or extending from the centre of a circle to the periphery; the semidiameter of a circle.—2. In *mechanics*, the spoke of a wheel, &c.—3. In *anatomy*, a bone of the forearm, which accompanies the ulna from the elbow to the wrist; so named from its supposed resemblance to the spoke of a wheel.—4. In *botany*, the marginal part of the corolla of compound radiate flowers. Also the *radii* of a peduncle of a compound umbel are the common stalks or spokes of that umbel, and the *pedicelli* are the stalks of the florets.

RADIUS VECTOR. In *physics*, a line drawn from the centre of force of any curve in which a body is supposed to move by centripetal force, to that point of the curve where the body is supposed to be. Plural, *Radii vectores*.

RAILERS. In *carpentry*, pieces of timber which stand in pairs on the railing-piece, meet in an angle at the top, and form as it were the ribs of the roof.

RAG BOLT. An iron pin or bolt with barbs on its shank to hold it in its place.

RAGG, } called also *Rowley Ragg*,
RAGSTONE, } and *Dudley Basalt*. A fusible siliceous stone, of a dark grey colour, with shining crystals, and a granular texture; so named from its rough fracture. It is used as whetstone, and is found near Dudley.

RAGMAN'S ROLL. A roll or register of the value of benefices in Scotland, made by Ragimund, a legate of the pope, and according to which the clergy were afterwards taxed by the court of Rome: hence the word *rigmarole*.

RAGULED. In *heraldry*, a cross *raguled* may be best understood by calling it two ragged staffs.

RA'IA. A genus of fishes, the *Rays*, recognised by the horizontally flattened body, which resembles a disk: order *Chondropterygii*, with fixed branchiæ: family *Selachii*, Cuv. *Raia*, in Latin, and *Batis* and *Batis*, in Greek, are the ancient names. The subdivisions are the Sting-ray, Spotted Torpedo, Thornback Skate, &c.

RAIL. 1. In *fences*, the rails are the

pieces of timber which lie horizontally from post to post. Similarly the upper and lower part of the banister of a stair-case are called *hand-rail* and *foot-rail*.—2. In *framing*, those pieces which lie horizontally are called *rails*; and those which are perpendicular are *stiles*.—3. In *ships*, planks nailed for ornament, or security, on the upper-works; also curved pieces of timber, extending from the bows to the continuation of the stern, to support the knee of the head.—4. In *ornithology*, rail is a name of the *Rallus crex*, Lin., or corn-crake; called also the *Quail*-king, because it arrives and departs with those birds, and leads a solitary life on the same grounds.

—5. In *engineering*, &c., see RAILWAY.

RAIL'ROAD, } An improved description
RAIL'WAY, } of roadway, first used about 1680, under the name of *tram-way* and *tram-road*; being formed of tram-plates of wood. Cast-iron tram-plates were next employed (1738); then wrought-iron (1786); and, at length, wrought-iron edge rails were adopted in the collieries of the north of England, and are now everywhere used in the construction of railways in this and other countries. The steam-engine was applied to railways about 1808, but only to drag the waggons up ascents by a rope, the engine being stationary. Thirty miles an hour, including stoppages, seems to be about the average speed upon the public lines of railway; but the limit of velocity does not appear to be yet known; but it is somewhere beyond 60 miles an hour.

RAIL'WAY, ATMOSPHERIC. A system of locomotion on railways, in which atmospheric pressure is employed as the motive power.

RAIL'WAY-LINK. See DRAW-LINK.

RAIL'WAY-SLIDE. A contrivance on railways, for shifting a carriage from one line of rails to another. It consists of a platform upon wheels, and having upon it two or more pairs of rails of the same gauge as those of the line, so that a carriage, being upon the platform, may be run off conveniently upon the line of rails.

RAIN'BOW. A circular image of the sun, variously coloured. It is thus produced: the solar rays entering the drops of falling rain are refracted to their further surfaces, and thence, by one or more reflections, transmitted to the eye. At their emergence from the drop, the rays are separated into their prismatic colours, and are thus exhibited to an eye properly placed to receive them. The *Lunar rainbow* is a similar, but less usual, phenomenon, caused by the refraction of the moon's rays.

RAIN'-GAUGE. An instrument contrived to measure the quantity of rain which falls on a given surface of a locality;

called also an *ombrometer* and *pluviometer* (q. v.)

RAISERS. Among *joiners*, the upright boards of the front of the steps of a flight of stairs.

RAI'SING. In *carpentry*, pieces which lie under the beams, over the posts or puncheons, by the side of the house.

RAI'SINS. The dried fruit of the vine. Raisins are produced from various species of the vine, and take names accordingly, as muscatels, blooms, sultanas, &c. They are also named from the place of their growth, as Smyrnas, Valencias, &c. The duties on raisins vary according to the quality, from 30 per cent. on the best, to 130 on the worst!

RA'JAH (Sanskrit). A title of dignity in India, equivalent to king, prince, or chieftain.

RAKE. 1. An instrument used in agriculture, containing a series of teeth or prongs affixed at right angles to a cross-head. The tool is made light, and all wood when it is intended for collecting hay, but the cross-head and teeth are usually iron when designed for combing seed-beds in gardens, &c. The harrow is a rake upon a large scale.—2. The *rake* of a ship is that part of the hull which hangs over both ends of the keel.

RA'KING. In *architecture*, a term applied to mouldings whose arrises are inclined to the horizon.

RA'KING TEMPLE. In *architecture*, a member hollowed in the square of a pedestal, &c.

RAM. 1. In *zoology*, the male of the ovine genus, called in some parts a *tup*.—2. In *astronomy*, the English name of the sign Aries.—3. An engine of war. See BATTERING-RAM.—4. A hydraulic machine. See WATER-RAM.

RAM'ADAN, } The great fast or Lent of
RHAM'ADAN, } the Mohammedans.

RAMAYA'NA. The oldest of the two great Sanscrit epic poems, describing the life and actions of Rama and his wife Sita.

RAM'ENT, Lat. *ramentum*. A species of pubescence of plants, consisting of hairs in form of flat strap-like portions, resembling shavings, seen on the leaves of some species of begonia.

RAM'ISTS or RAM'EANS. The partisans of Ramus, a professor of rhetoric and philosophy at Paris, in the reign of Henry II.

RAMOLLISSEMENT, Fr. from *ramollir*, to soften. A term applied in pathology to any morbid softening of the texture of an organ, as the brain in hydrocephalus.

RAMP. 1. A cavity on the upper side of hand-rails, formed over risers, or over a half or quarter space, made by the sudden rise of the steps above.—2. In *fortification*, ramps are gentle slopes made for the cannon to be drawn up and down by and to facilitate communication, raised either

on the side of an elevated work, or against a salient angle on each side of an entering angle.

RAM'FANT, Fr. from *rampier*. In architecture, a term applied to an arch whose abutments spring from an inclined plane. In heraldry, a term applied almost exclusively to the lion, when in the attitude of attack, being reared on his hinder legs.

RAM'PART, Fr. *rampart*. An elevation of earth, &c., raised for the purpose of covering a place from the direct fire of an enemy. It is made of sufficient thickness to resist cannon-shot, and is formed into bastions, curtains, &c. The name is also applied to the space left void between the wall of a city and the houses next to it.

RAMPHAS'TOS. In ornithology, the generic name of the *Toucans*, climbing birds (*Scansoriae*), easily distinguished from all other birds by their enormous beak, which is almost as thick and long as their body: hence the name from *εραμπος*, a beak, by way of pre-eminence. The Toucans are confined to the hot parts of America, where they live in flocks, feeding on fruit, insects, birds' eggs, &c.

RA'MUS. The Latin word for branch: applied in botany to the primary division of a stem into lateral stems.

RA'NA. The frog. 1. A genus of Batrachians, having four legs in their perfect state but no tail, although the young (the tadpole), is at first furnished with a long fleshy tail. *Rana* is the Latin name, à sua voce dicta; *βατραχος*, the Greek name. The tree-frogs and toads have been separated from the genus as constituted by Linné. See *HYLA* and *BUTO*.—2. In anatomy, the name of an artery; the second branch of the external carotid.

RA'NDOM SHOT. A shot discharged with the axis of the gun above the point blank direction.

RANGE, Fr. *rangée*. 1. In gunnery, the path of a ball, &c., or the line which it describes from the mouth of the piece to the point where it lodges. Also the distance to which such ball or bomb is thrown.—2. In ships, the ranges are two pieces of timber, that go across from side to side: the one on the fore-castle a little abaft the foremast, and the other in the beak-head before the mouldings of the bowsprit.

RA'NNY. In England, the shrew-mouse. In India, the wife of a rajah.

RA'NTERS. Primitive Methodists, which originated in Staffordshire, 1807, under Hugh Bourne, who also wrote their history. The praying people, in returning home (from camp meetings) were accustomed to sing through the streets of Belper, and this circumstance procured them the name of *Ranters*.

RA'NU'NULUS. Crowfoot. A very ex-

tensive genus of herbaceous plants. *Polyandria*—*Polygynia*. Name from *rana*, a frog, because found in fenny places, where frogs abound. The spearwort, least, small and great, the pilewort, the golden locks, with 12 other species, are indigenous in Britain, and there are about 40 exotic species.

RANZ DE VACHE. In music, a favourite national air among the Swiss shepherds, played upon the bag-pipes.

RAPE. 1. A division of a country, meaning sometimes the same as hundred, and at other times signifying a division consisting of several hundreds.—2. A biennial plant of the turnip kind, the *Brassica napus* of botanists. It is indigenous, and is cultivated partly for its seed, from which an oil is expressed, and partly for its leaves as food for sheep.—3. A violent defecation of women.

RAPE-CAKE. The adhering masses of the husks of rape-seed, after the oil has been expressed: commonly used for manure.

RAPH'ANIA. The Cripple-disease, so named from *raphanus*, the radish or charlock, because it has been thought to be brought on by eating the seeds of a species of raphanus. It forms a genus in Cullen's Nosology: class *Neurosis*: order *Spasmi*.

RAPH'ANUS. The Radish: a genus of plants. *Tetradynamia*—*Siliquosa*. Name *ραφανος*, borrowed from the Greek. The wild and sea-radish are indigenous; the garden-radish is a native of China, &c.

RA'PHE. *Ραφή*. A suture. 1. Applied in anatomy to parts which appear as if they were sewed together.—2. In botany, the vascular cord between the nucleus of an ovule and the placenta, when their bases are separated.

RAPTO'RIOUS, from *rapio*, to snatch. An epithet for animals which dart on their prey, and also for certain parts of insects adapted for seizing prey.

RAREFACTION, from *rare* and *facio*, to make. In physics, the diminution of the density of a body, as of a gas by the agency of heat, whereby it occupies more space without accession of new matter.

RA'KO'LNIS, Russian, *raskolo*, division. The largest body of dissenters from the Greek church in Russia.

RASP. A description of file, on which the cutting prominences are distinct, being raised by punching with a point, instead of cutting with a chisel. See *FILE*.

RAT, Sax. *raet*. A small quadruped. The rats of this country are the Black Rat, (*Mus rattus*, Lin.), and the Norway, or Brown Rat, (*Mus decumanus*, Pall.) In other countries there are Musk Rats, (see *FIBER*), and Field Rats. See *ARVICOLA*.

RATAT'IA, } A generic name, in France
RATIF'IA. } and Spain, for liquors com-

pounded with alcohol, sugar, and the odoriferous principles of vegetables, especially of the bruised seeds of cherries, apricots, and peaches.

RATCH. In *mechanics*, a bar containing angular teeth, into which a pail drops to prevent machines from running back.

RATCH'ET (of a watch). A small tooth at the bottom of the fusee, which stops it in winding up.

RATCH'ET-WHEEL. 1. A circular ratch. —2. The ratchet-wheel of a clock is a sort of wheel which has twelve fangs, that serve to lift the dents every hour, and thereby cause the clock to strike.

RATCH'IL. Among miners, fragments of stone.

RATE. 1. A tax assessed for public use, as parish rates. —2. In the navy, the order or class of a ship according to its magnitude or force. Ships of the first rate mount 100 guns, or upwards; those of the second rate carry from 90 to 98 guns; those of the third rate from 64 to 80; those of the fourth rate from 50 to 60; those of the fifth rate from 32 to 44; those of the sixth rate from 20 to 30 guns. Those of the latter rates are called frigates.

RAT'ELUS, } A subgenus of the class
RAT'EL. } *Mammalia*: order Carni-
vora: family Carnivora: tribe Plantigrada. One species only is known, the *Viverra zibethica*, Sparrm., of the Cape of Good Hope. It is about the size of the European badger, and digs up the earth with its long paws, in search of the honey-combs of the wild-bees, on which it feeds.

RAT'IO. Lat. from *ratus*, *reor*, to confirm. The relation which one quantity bears to another in respect of magnitude; the comparison being made by considering how often the one magnitude contains the other. Thus the ratio of 6 to 3 is $\frac{6}{3}$ or 2, and the ratio of 4 to 5 is $\frac{4}{5}$, which may be written 4:5. This is *geometrical ratio*, and is that which is signified when the term is used without any distinctive epithet; but *arithmetical ratio* is the difference between two quantities. Thus the arithmetical ratio of 2 to 5 is 3. Ratio respects magnitudes of the same kind only. Thus one line has a certain ratio to another line, but not to a surface.

RAT'ION. Fr. from *ratio*, a proportionate quantity. A fixed allowance of provisions, drink, and forage, assigned to each soldier in any army for his daily subsistence, and for the subsistence of horses.

RAT'IONAL. 1. In *arithmetic* and *algebra*, an expression in finite terms. —2. In *geography*, the *rational horizon* is a plane passing through the centre of the earth, parallel to the *sensible horizon*, at the place of observation.

RAT'IONALE (French). 1. A detail with reasons assigned. —2. An account of a

solution of the principles of some opinion, action, hypothesis, phenomenon, &c.

RAT'IONALISTS, from *reason*. Rationalists may be said to comprehend those latitudinarians who consider the supernatural events of the Old and New Testaments as events happening in the ordinary course of nature, but described by writers, without any real ground, as supernatural, and who consider the morality of the Scriptures as subject to the test of human reason.

RAT'LINES, } Small lines traversing the
RAT'LINES. } shrouds of a ship, making the step of a ladder for ascending to the mast head.

RAT MOLE. In *zoology*, a name common to two small quadrupeds, the Zanni, Slepaz, or Blind Rat-mole (*Spalax typhus*, Guelden), which is rather larger than our rat, and lives under ground like the mole; and the Maritime Rat-mole (*Bathyergus maritimus*, Illiger), nearly the size of a rabbit, and furnished with a short tail, and visible eyes.

RATO'ON, Sp. *ratoño*. A sprout from the root of the sugar-cane which has been cut.

RAT'TANS. Canes. The long slender shoots of the *Calamus rotang*, a prickly bush, and one of the most useful plants of the Malay peninsula, and Eastern islands. Called by the Malays *rotan*, and by the Javanese *rottang*. They are extensively used for cane-work, and are a considerable article of trade.

RAT-TAIL. In *fariery*, an excrescence growing upon the pasteron to the middle of the shank of a horse.

RATTEEN', Sp. *ratina*. A thick woollen stuff, quilted or twilled.

RATTINET'. A woollen stuff, somewhat thinner and lighter than ratteen.

RAT'TLES. In *pathology*, a popular name for the rattle-like noisy breathing often heard in persons who are in *articulo mortis*, and which arises from the accumulation of mucus in the air-passages. In *nosology*, a popular name of croup, or cynanche trachealis.

RAT'TLESNAKES. A genus of venomous snakes (*Crotalus*, Lin.), all distinguished by the rattle which terminates the tail. See *CROTALUS*.

RAT'TLESNAKE-ROOT. A plant; the *Polygala Senega*, the root of which was formerly deemed a specific against the poison of the rattlesnake. It is still used as an antiphlogistic.

RAY'ELIN (French). In *fortification*, a detached work, with two faces, which make a salient angle without any flanks; it is raised before the curtain of the place. In this it differs from a half-moon, which is placed before an angle.

RAY'EN. A bird (the *Corvus corax*, Lin.), noted for its entirely black plumage. It

is the largest of the Passerinae which inhabit Europe. It is found in most parts of the globe; is easily tamed, and may be taught to speak tolerably well.

RAV'ISSANT, in *heraldry*, expresses the posture of a wolf half raised, as it were, just springing forward on its prey.

RAT, *Fr. raie*. 1. A line of light, proceeding from a radiant point through a translucent medium. It is supposed to be described by a particle of light. A collection of parallel rays constitute a *beam*, and a collection of diverging rays form a *pencil*. The mixed solar beam contains, (1.) *calorific rays*, producing heat and expansion, but not vision or colour; (2.) *colorific rays*, producing vision and colour, but not heat or expansion; (3.) *chemical rays*, producing certain effects on the composition of bodies, but neither heat, expansion, vision, or colour; (4.) *magnetic rays*, inducing magnetism. This last power seems to belong to the violet rays. —2. In *ichthyology*, see RAIA.

RAY'ANS. The non-Mohammedan subjects of Turkey.

RAYONNANT, in *heraldry*, signifies darting forth rays, as the sun does when it shines out.

RAYS, *Lat. radii*. In *botany*, the spreading marginal florets of a compound radiate flower.

RAZE' (Fr.). Applied to any vessel cut down to an inferior class.

RA'ZOR-BACK. In *ichthyology*, one of the largest species of the whale tribe, being sometimes found above ninety feet long.

RA'ZOR-BILL. Cut-water. 1. An aquatic fowl, the *Alca tarda*, Lin. —2. The same name has been given also to the Black Skimmer, the *Rhynchops nigra*, Lin. from the Antilles.

RE. In *grammar*, an inseparable particle, used by the Latins, and from them borrowed by us, to denote iteration, or backward action; as in *return* and *reaction*.

REACH. Among *seamen*, the distance between two points on the banks of a river, in which the current flows in a straight course.

REACTION. In *physics*, the reciprocation of any impulse or force impressed, made by the body on which impression is made. Thus it is a law that *action* and *reaction* are equal and contrary.

REA'DER. In *ecclesiastical affairs*, one of the five inferior orders in the Romish church. In the English church, a deacon who conducts divine service in churches and chapels, where no one has the cure.

REA'GENTS, Tests. A name, in *chemistry*, for those substances which are used to discover the presence of other substances in solution. Thus hydrochlorate of baryta (solution of chloride of barium) is a reagent or test for the presence of sulphuric acid in solutions. See TEST.

REAGGRAVATION. In *ecclesiastical law*, the last monitory, published after three admonitions, and before the last excommunication.

RE'AL, *Lat. realis*, from *res*, thing. 1. In *law*, pertaining to things fixed, permanent, or immoveable. Thus lands and tenements are called *real estate*, in contradistinction to *personal* or *moveable property*. A *real action* concerns real estate, and *real assets* consist in real estate. —2. In *Spain*, the name of a silver coin (*real of plate*), varying in value from 6½d. to 5d., and also of a money of account (a *real vellon*) worth about 2½d. to 3d. —3. The doctrine of the *real presence*. See TRANSUBSTANTIATION. —4. *Real property*, in *law*, consists in lands, tenements, and hereditaments.

REAL'GAR. Red orpiment. A native sulphuret of arsenic (arsenic 70, sulphur 30), of a red colour, sometimes employed as a pigment. It occurs in primitive mountains.

REALISTS. Scholastic philosophers, who maintained that things, not words, were the objects of dialectics: opposed to the nominalists.

REAM (Saxon). A quantity of paper. The ream of writing, &c., paper is 20 quires; but a *printer's ream* is 24 quires (516 sheets). Two reams make a *bundle*.

REAP'ING-MACHINE. An implement of

husbandry for cutting down corn, instead of reaping it with the sickle.

REA'SON, *Sax. raed*, from *raeswian*. 1. The power or faculty of the mind by which man deduces one proposition from another, or proceeds from premises to consequences, and from facts to causes. —2. Exercise of reason; reasoning.

REBA'TE. 1. In *commerce*, discount or deduction from the stipulated price. —2. In *heraldry*, an abatement of the bearings in a coat of arms. —3. In *architecture*, a groove sunk on the edge of any piece of material.

REBECK', *Ital. ribeca*. A three-stringed fiddle.

REBEL'ION, from *re*, and *bello*, to war. An open and avowed renunciation of the authority of the government of one's own country; differing from *insurrection*, which may be a rising in opposition to a particular law or acts, without design to renounce wholly all

subjection to the government. The term was first used by the Romans, to denote the open resistance to their government of nations whom they had conquered.

REBUS, Lat. from *res*. 1. An enigmatical representation of some name, &c., by a picture.—2. A coat of arms which bears some allusion to the name of the person, as three cups for Butler.

REBUTTER. In *law-pleadings*, the answer of the defendant to a plaintiff's sur-rejoinder.

RECAPTION. A retaking. A writ of *recapition* is a writ to recover property taken by a second distress, pending a *replevin* for a former distress, for the same rent or service.

RECEIVER. A chemical vessel, adapted to the neck or beak of a retort, alembic, or other distillatory vessel, to receive and contain the product of distillation.

RECENT. In *geology*, an epithet for whatever is of a date posterior to the introduction of man. The *recent period* commences with the introduction of man, and all formations within that period are termed *recent*.

RECEPTACLE, Lat. *receptaculum*, a receiver. In *botany*, the common base or point, upon which all the parts of the fructification rest.

RECHABITES. A religious order among the ancient Jews, who engaged among other things to abstain from wine. Recently, a branch of *Tee-totalers* has assumed the name of Rechabites.

RECIP'IANGLE. An instrument, somewhat like the bevel, formerly used, chiefly by French engineers, to take angles in fortification, &c.

RECIP'ROCAL. In *arithmetic*, &c., the reciprocal of a quantity is unity divided by the quantity. Thus, $\frac{1}{2}$ is the reciprocal of 2.—*Reciprocal ratio* is that between the reciprocals of two quantities; thus, the reciprocal ratio of 5 to 9 is $\frac{1}{5}$ to $\frac{1}{9}$.—*Reciprocal proportion* is when in four numbers, the fourth number is so much less than the second as the third is greater than the first, and *vice versa*.—*Reciprocal figures*, in *geometry*, are two figures of the same kind, as triangles, such that two sides of the one form the extremes of a proportion, of which the homologous sides of the other are the means.

RECIP'ROCATING SYSTEM (on railways) denotes the method of working railways by means of stationary engines, instead of locomotive ones. A succession of steam-engines are placed along the line, at intervals of $\frac{1}{2}$ miles or so apart, with ropes for pulling the trains along the locality of each. This is likely, for various considerations, when the system is properly developed, to be found the most economical method of working railways.

RECITAT'VE, Ital. *recitativo*. A term in *music* for a tuneful kind of pronunciation, more musical than common speech, and less so than song: something between recitation and singing.

RECK'ONING. In *navigation*, the place of a ship, calculated from the rate as determined by the log, and the course as determined by the compass, the original starting-point being known.

RECLINA'TION. 1. In *surgery*, one of the operations for the cure of cataract, in which the lens is made to turn over into the middle, and towards the bottom, of the vitreous humour.—2. In *dialling*, the angle which the plane of the dial makes with a vertical intersected by it in a horizontal line.

RECOGNISANCE. In *law*, a bond of record, testifying the recognisor to owe to the *recognisee* a certain sum of money acknowledged in some court of record.

RECOGNISEE'. In *law*, he in whose favour a bond of recognisance is drawn.

RECOGNISOR. In *law*, he who gives a bond of recognisance in favour of the *recognisee*.

RECOLLETS, } Monks of the order of
RECOLLECTS, } St. Francis under a reformed rule.

RECONNOIT'RE (Fr.), from *re* and *connoître*, to know. A term, in *military language*, meaning to inform one's self by ocular inspection of the situation of an enemy or of the nature of ground.

RECORD. An authentic account of any fact, in writing, contained in rolls of any durable substance.

RECORDARI FACIAS LOQU'E'LAM. In *law*, a writ to remove proceedings out of an inferior court to the King's Bench or Common Pleas.

RECOR'DER. 1. In *law*, one whose business is to record or register events.—2. The keeper of the rolls of a city or corporate town.—3. A musical instrument resembling the flageolet.

RECOVERY. In *law*, the recovering or obtaining lands in fee-simple, by a fictitious action, against the tenant of the freehold, which recovery (usually called *common*) binds all persons, and vests an absolute fee-simple in the recoverer.

RECT'ANGLE, Lat. *rectus angulus*. In *geometry*, a figure whose angles are all right angles. Solids are also *rectangular* with regard to situation, as a cylinder when perpendicular to the plane of the horizon.

RECTIFICA'TION, from *rectus* and *facio*, to make. 1. In *geometry*, the finding of the length of a curve line, or a right line equal to a given curve.—2. In *chemistry*, second distillation of alcoholic liquors, to free them from impurities which pass over in the first.

RECTOR (Lat.), from *rego*, *rectum*, to

rule. 1. A clergyman who has the charge and cure of a parish, and has the tithes, &c.: the parson of an unimpropriated parish.—2. The chief elective officer in some universities, and the head-master of a principal school, in Scotland.

RECTUM (Lat.). The last portion of the large intestines, so named by the *old anatomists* from an absurd notion that it was straight.

RECURRENT, Lat. *recurrens*, returning. A *recurrent crystal* is one whose facets being counted, in annular ranges from one extremity to the other, furnish two different numbers, which succeed each other several times, as 4, 8, 4, 8, &c.

RECURRENT NERVE. A branch of the *par vagum*, given off on each side, in the upper part of the thorax, is so called because reflected so as to run along the trachea to the larynx.

RECURRENT SERIES. In *algebra*, a series so constituted that each succeeding term is connected with a certain number of terms preceding it, by some invariable law.

RECURVATE, Lat. *recurvatus*, or *recurvus*, recurved. Bowed or turned backward: applied to leaves, &c.

RECURVOSTRA (Lat.), from *recurvus*, and *rostrum*, a beak. A genus of birds: the *Avocets*, which approximate closely to the Snipes, but are strongly characterised, from these and all other birds, by the strong upward curvature of their beak. Order, *Grallatoria*; family, *Longirostres*, Cuv.

RECUSANT, from *recusans*, refusing. In *English history*, the recusants are those who refuse to acknowledge the supremacy of the Crown in matters of religion.

REDAN'. In *fortification*, a work indented or formed with salient and re-entering angles, so that one part may flank and defend another: written sometimes *redent* and *redens*, from Lat. *recedens*, receding.

RED-BIRD. The name of several American birds, as the red summer bird, *Tanagra aestiva*; the red tanager, *Tanagra rubra*; the Baltimore oriole or hang-nest.

RED BOOK OF THE EXCHEQUER. An ancient English record, containing various treaties relating to the times before the Conquest.

RED COR'AL. *Corallium rubrum*. A branched zoophyte, somewhat resembling, in miniature, a tree deprived of its leaves and twigs. It consists of a bright red stony axis, invested with a fleshy substance of a pale blue colour, studded over with stellular polypi.

RED'DLE. Red chalk. A species of argillaceous iron ore, which occurs in opaque masses, having a compact texture and hardness similar to chalk. The best comes from Germany.

REDEEM'ABLE. Capable of redemption; that may be re-purchased. Annuities are often, and debts are always redeemable. Some annuities are *self-redeeming*.

REDEMPT'ION, from *re* and *emo*, to purchase. Re-purchase. In *law*, a conditional contract, whereby the equity of re-entering lands, &c., is retained, on repaying the purchase-money and legal charges.

REDEMPT'IONISTS. A religious order, founded in Naples in 1732.

RED-LEAD. Minium. A red oxide of lead, generally regarded by chemists as a sesquioxide. It is prepared by exposing massicot for about 48 hours to the flame of a reverberatory furnace.

RED-LIQUOR. A crude acetate of alumina employed in calico-printing, and prepared from pyroliginous acid.

RED MARL. In *geology*, another name for the new red sandstone.

REDOUBT'. In *fortification*, a small fort, mostly square, and defended only in front, used in trenches, lines of circumvallation, &c. Redoubts usually consist of two parts, a rampart and parapet.

RED SAUNDERS. *Santalum rubrum*. A wood capable of communicating a red colour to spirituous liquors. The chief of these woods (if not the only one), is that of the *Pterocarpus santalinus*, which is itself of a garnet-red colour and extremely hard. It grows on the Coromandel coast and other parts of India, especially Ceylon. The old wood only is employed as a dye-stuff, and the colouring matter which it yields is known to chemists by the name of *santaline*.

RED-SNOW. In *botany*, the *uredo nivalis*, a minute fungus of the arctic region which gives the colour to the red snow.

REDUC'ING SCALE. *Surveying scale*. A broad thin slip of box or ivory, with several lines and scales of equal parts upon it; used by surveyors for turning chains and links into rods and acres by inspection, and also for reducing maps and draughts from one dimension to another.

REDUCT'. In *building*, a quirk or a little piece taken out of a larger, to make it more regular and uniform.

REDUCTIO AD ABSURDUM. See **ABSURDUM**.

REDUC'TION. 1. A reducing: *reduco*, to reduce. In *arithmetic*, the bringing of numbers of different denominations into one denomination, as the *reduction* of 71. 5s. 8d. to farthings. This is called *reduction descending*: when the reverse operation is performed, as bringing farthings to pounds sterling, it is called *reduction ascending*.—2. In *algebra*, &c., the reduction of equations is the clearing them of all superfluous quantities and bringing them to their lowest terms. The same applies to surds, fractions, &c.—3. In *metallurgy*, the operation of bringing metallic substances, which have been

changed or divested of their metallic form, into their original state of metals; called also *revivification*.—4. In *surgery*, the returning of a dislocated bone into its proper place.—5. In *practical geometry*, describing figures similar to given figures on a different scale, usually smaller. The pentagraph and the proportional compasses are the most expeditious and accurate methods of effecting a reduction.

REDUN'DANT, superfluous. (1.) A *redundant chord* is one which contains a greater number of tones, semitones, and lesser intervals, than it does in its natural state, as from *fa* to *sol*, sharp. (2.) A *redundant hyperbola* is a curve of the higher kind, so called because it exceeds the conic section of that name in the number of its hyperbolic legs, it being a triple hyperbola with six hyperbolic legs.

REE. A Portuguese coin or money of account. The milree is a gold coin, value 3s. 2½d., nearly.

REED, Sax. *hræod*, *reod*. 1. The common name of many aquatic plants, most of them large grasses with hollow jointed stems, such as the common reeds of the genus *Arundo*, the bamboo, &c. The *bur-reed* is a species of *Sparganium*, the *Indian flowering reed* of the genus *Canna*.—2. A weaver's implement, resembling a comb, having the teeth inclosed at each of their ends; used for separating the threads of warp. It is so called from the teeth, slips, dents, or splits being originally made of reed, though now made generally, at least in the finer sorts, of brass.

REEF, Ger. *riff*. 1. A range of rocks lying generally near the surface of the water. Also a reef, or *coral reef*, is a chain of rocks occurring in various parts of the ocean, lying near the surface.—2. Dut. *reef*; a certain portion of a sail between the top or bottom, and a row of eyelet holes, which is folded or rolled up, to contract the sail, when the violence of the winds renders it necessary.

REEF-BAND. In *nautical language*, a piece of canvas sewed across a sail, to strengthen it in the part where the eyelet-holes are formed.

REEF-LINE. In *nautical language*, a small rope, formerly used to reef the courses, by being passed through the holes of the reef spirally.

REEF-TACKLE. A tackle on the deck of a ship, communicating with its pendant, and passing through a block at the topmast-head, and through a hole in the topsail-yard-arm, is attached to a cringle below the lowest reef; used to pull the skirts of the topsails close to the extremities of the yards, to lighten the labour of reefing.

REEL, Sax. *rheol*, *reol*. 1. A frame or cylinder turning on an axis, on which lines,

thread or yarn, are wound into skeins, or from skeins on spools and quills. There are several analogous applications of the term; for instance, seamen wind their log-line on a reel, and sportsmen have reels for winding their fishing lines on.—2. A rude sort of lively dance common in the lower circles, where *scientific dancing* is little known.

REEM'ING. The opening of the seams between the planks of vessels by caulking irons, for the purpose of re-caulking them.

RE-EN'TER. In *engraving*, passing the graver over those parts which the aquafortis has not bitten sufficiently.

RE-EN'TERING AN'GLE. In *fortification*, the angle of a work pointing inwards.

REEVE (Sax.). 1. A monosyllable that enters into the composition of some titles still in use; as *sheriff*, i. e. *shire-reeve*, the governor of a shire; *borough-reeve*; *port-reeve*, &c.—2. The sea term for pulling a rope through a hole.

REFEC'TORY, Lat. *refectorium*. In *architecture*, an eating-apartment.

REFERENCE. In *law*, the process of referring or assigning a cause depending in a court, for a hearing and decision, to persons appointed by the court: these persons are *referees*.

REFI'NING. In *metallurgy*, the separation of the metal from all other matters: particularly applied to the separation of gold and silver from metals with which they are alloyed.

REFLEC'TION. A throwing back. thus, in the *reflection* of light, the law is that the angle of reflection is equal to the angle of incidence.

REFLECT'ING CIRCLE. An astronomical instrument for measuring angles. It is a modification of Hadley's Quadrant; one of the objects of the angle is measured by direct vision, and the other by reflection from plane mirrors.

REFLEX, Lat. *reflexus*. Directed back. Applied in *botany* to parts; and sometimes to designate parts of a painting illuminated by reflected light from another part of the same picture.

REFLEX'ION. In *mechanics*, the rebound of one body from another with which it comes into collision.

REFORMA'TION. In *history*, the name applied by Protestants to designate the change from the Roman Catholic to the Protestant religion, begun in Germany by Luther (1517), and in England by Wickliffe, whose work was completed, from less pure motives, by Henry VIII., who assumed the title of Head of the Church (1531 and 1534).

REFORM'ED CHURCH. In general, all those bodies of Christians who have separated from the Church of Rome since the Reformation: more particularly, the Calvinistic Churches on the Continent.

REFRACTION, a breaking: *re*, and *frango*, to break. The term is technically applied to denote the deviation of bodies in motion (especially rays of light) from their original course, arising from different densities of the several parts of the medium through which they pass. It is in consequence of this, that rays from objects, whether terrestrial or celestial, proceed in curves, which are concave towards the earth,—and that the eye never sees in its true place a distant object, except it be directly in the zenith, but

always more elevated, viz., in the direction of the tangent to the curve of that point. Refraction is therefore an element of the utmost importance in astronomical calculations. *Double refraction* is the separation of a ray of light into two parts, by passing through certain transparent media, as Iceland spar.

REFRACTIBILITY. In *optics*, the disposition of the rays of light to be refracted in passing from one medium into another.

REFRIGERATORY, from *refrigero*, to cool. A vessel filled with cold water, to condense vapours into liquids in the process of distilling. The common worm-tub is an example.

REGARD. In the *forest laws*, inspection. The *Court of Regard* or *Survey of Dogs*, is a court in England, held every third year, for the lawing or expeditation of mastives, i. e., for cutting off the claws and ball of the fore feet, to prevent them from running after deer.

REGARDANT, 1. In *law*, a *villein regardant* is one annexed to the manor or land.—2. In *heraldry*: a beast, as a lion, *regardant* is when placed in the attitude of looking behind.

REGARDER. In the *forest laws*, an officer of the royal forests, the chief judge of the Court of Regard.

REG'EL, } In *astronomy*, the name of a
RI'GEL, } fixed star of the first magnitude in Orion's left foot.

REGENERATION. In *theology*, the new birth of man unto righteousness, having been delivered from the original corruption of his nature.

REGENT, a governor: *rego*, to rule. 1. One who governs a kingdom, in the mi-

nority, absence, or disability of the sovereign.—2. In *colleges*, a teacher of the arts and sciences, inferior to the Professors. This title is also given, in the English universities, to Masters of Arts under five years' standing, and to Doctors under two years'. In the United States of America, the corporate bodies invested with the superintendence of the educational establishments of their respective States, are called *regents*. They have power to grant acts of incorporation for colleges, to visit those in operation, and regulate their government.

REG'IMEN (Lat.), from *rego*, to govern. 1. In *medicine*, the regulation of diet with a view to the preservation or restoration of health.—2. In *grammar*, government.

REG'IMENT: Lat. *rego*, I rule. A body of troops consisting (if infantry) of several battalions, or (if cavalry) of several squadrons, under the command of a colonel.

REG'ISTER. 1. Low Lat. *registrum*, from *regero*, to write down. A written account or entry of facts, for transmitting to future times an exact knowledge of transactions; also, the book in which the register or record is kept.—2. Low Lat. *registrarius*. An officer appointed to keep a register, particularly the acts and proceedings of courts and public bodies; as the *Register of the Court of Probate*.—3. In the *arts*, an aperture or valve placed in a chimney, stove, or furnace, furnished with a turning or sliding door for regulating the quantity of air to be admitted to the fire, or to open and shut the communication with the chimney.

REG'ISTRY. In *commercial navigation*, the registration or enrolment of ships at the Custom-house, so as to entitle them to be classed among, and to enjoy the privileges of, British-built ships, first required by the Navigation Act of 12 Car. II. c. 18.

REG'NUM DO'NUM (Lat.), royal gift. An annual grant of public money in aid of the Presbyterian clergy of Ireland.

REG'NIUS, the Latin word for royal, from *rex*, a king. In the *universities*, those Professors whose Professorships were instituted and endowed by the Crown are called *Regius Professors*.

REG'LET (Fr.), from *règle*, rule. 1. A flat narrow moulding, used to separate from each other the parts or members of compartments and panels, and to form knots, frets, &c.—2. A slip of metal (originally a ledge of wood exactly planed) used by *printers* to separate lines, and make the work more open: slips of this kind are now generally called *leads*; and printing where they are used is said to be *lead*.

REGRA'TING: Fr. *regratter*, to scratch again. 1. In *old law*, purchasing provisions and selling them in the same

market, which used to be a punishable offence, as it tended to raise the price. It differed from *engrossing*, which signified the buying the whole of certain articles, with a view to raising the price; and from *forestalling*, which signified the purchasing of the provisions before they reached the market.—2. Among *masons*, the process of taking off the outer surface of an old hewn stone, for the purpose of whitening it and making it look fresh again.

REGRESSION: Lat. *regressus*, going backwards. In *astronomy*, the regression of the moon's nodes is the motion of the line of intersection of the orbit of the moon with the ecliptic, which is retrograde.

REGULAR, Lat. *regularis*, from *regula*, a rule. 1. In *geometry*: a figure is said to be regular when it is equilateral and equiangular; and a body is regular when it is bounded by regular and equal planes, and has all its solid angles equal. There are five such regular bodies, viz., the Tetrahedron, the Hexahedron or Cube, the Octahedron, the Dodecahedron, and the Icosahedron: called the Five Platonic Bodies. *Regular curves* are such as are the perimeters of the conic sections, which are always curved after the same geometrical way.—2. In the *Roman Catholic Church*, those that profess and follow a certain rule of life, and observe the three vows of poverty, chastity, and obedience, are called *Regulars*.

REGULATOR, Fr. *regulier*. In *mechanics*, that part of a machine (whatever is its nature), which makes the motion equable. In a watch it is a small spring; in a steam-engine, windmill, &c. it is usually named the governor. See *GOVERNOR*.

REGULUS, Lat. dim. of *rex*, a king. 1. A name given by the old chemists to metallic matters, when separated from other substances by fusion. It arose out of the alchemical notion of finding gold, *the king of the metals*, collected at the bottom of the crucible after fusion. The term came subsequently to be applied distinctively in those cases where the metal and one of its ores happened to be called by the same name. Thus the sulphuret of antimony was known by the name of *antimony* long before it was suspected to contain a peculiar metal; hence, when this discovery was made, the metal was called *regulus* of *antimony*, to distinguish it from the ore from which it was procured.—2. In *astronomy*, a star of the first magnitude in the constellation Leo, named also, from its situation, the lion's heart (*cor leonis*).—3. In *ornithology*, the wren.

REHABILITATION, in *law*, is the reinstatement of a criminal in his personal rights, lost by a judicial sentence.

REIN-DEER. A quadruped; the *Cervus tarandus*, Lin., of the northern regions.

It is about the size of the stag, but has shorter and stouter legs. Rein-deer constitute the wealth of the Laplanders, &c.

REINFORCE. In *artillery*, that part of a gun nearest the breech, made stronger to resist the explosive force of the powder.

REIS-EFFENDI. One of the principal Turkish officers of state.

REJOIN'DER. In *law-pleadings*, the defendant's answer to the plaintiff's replication.

RELAIS. In *fortification*, a narrow walk, four or five feet wide, left without the ramparts.

RELATION, INHARMONIC. In *music*, when a dissonant sound is introduced, which was not heard in the preceding chord.

RELEASE. In *law*, an instrument in writing, by which estates, rights, titles, entries, actions, and other things, are extinguished and discharged.

RELESSEÉ, } In *law*, a *relessee* is a person
RELESSEUR, } to whom a release is executed; a *releasor* is the person who executes a release.

REL'EVANCY. In *Scots law*, sufficiency to infer the conclusion.

REL'EF SYNOD. A body of Presbyterian dissenters in Scotland, whose ground of separation from the established church was the violent exercise of lay-patronage.

RELIEV'ING-TACKLE. In *mechanics*, two strong tackles, used to prevent a ship's overturning on the careen, and afterwards to assist in uprighting her.

RELIEVO (Italian), } In *sculpture*, the

RELIEF (Fr. & Eng.), } projecture or prominence of figures beyond or above the plane or ground on which it is formed. It is of three kinds, *alto-relievo* (high relief), *basso-relievo* (low-relief), and *demi-relievo* (half-relief)—(q.v.).

RELIQUARY. A receptacle for the relics venerated in Roman Catholic churches.

REMAIN'DER. 1. In *arithmetic*, that which arises by subtracting one quantity from another.—2. In *law*, an estate limited in lands, tenements, or rents, to be enjoyed after the expiration of another particular estate. A grants land to B for 20 years, *remainder* to C in fee.

REMEN'BRANCERS. Officers of the Court of Exchequer, whose chief function is to remind the judges of things to be done for the benefit of the king.

REMON'STRANTS. In *church history*, those Arminians who remonstrated against the decisions of the Synod of Dort, in 1618.

REN'DERING. In *building*, see *PAGETTING*.

RENIFORM. Kidney-shaped; *ren*, and *forma*, likeness.

REN'TENCE, } Lat. *renitens*. In *mecha-*
REN'TENCY, } *nic*, that resistance in

solid bodies when they press upon, and are impelled against, one another.

REN'NET. } From *rinnen*, *runnen*, to co-
RUN'NET. } agulate. 1. The gastric juice and contents of the stomach of calves, much employed, in preparing cheese, for curdling the milk.—2. A variety of apple.

RENT. *Fr. rente*, from *vendre*. At common law, rents are of three kinds: *rent-service*, *rent-charge*, and *rent-seck*. The *rent-service* is where some corporeal service is incident to it, as by fealty and a sum of money; *rent-charge* is when the owner of the rent has no future interest in the land, but the rent is reserved in the deed, by a clause of distress for rent in arrear; *rent-seck* (dry-rent) is rent reserved by deed, but without any clause of distress. There are also *rents of assize*, certain established rents of freeholders and copyholders of manors, which cannot be varied; called also *quit-rents*, and when paid in silver, *white-rents*; but if in baser coin, *black-rents*. A *fee-farm rent* is a rent-charge issuing out of an estate in fee, of at least one-fourth the value of the lands at the time of reservation. *Rack-rent* is the full value of the lands, &c.

RENVERSE'. In *heraldry*, inverted. Contrary to the natural position.

REPEAT'. In *music*, a character or mark directing a part to be repeated in performance.

REPEATING CIRCLE. An invention, by Borda, for diminishing the effects of errors of graduation in astronomical instruments.

REPEL'ING POWER. In *physics*, that power inherent in the minute particles of matter, by which, under certain circumstances, they recede from one another: the reverse of the *attractive power*. See **REPULSION**.

RE'PENT. *Lat. repo*, I creep, in *geology*, is used to signify creeping, and is applied to animals which move close to the ground.

RE'FETEND. In *arithmetic*, that part of an indeterminate or infinite decimal which is continually repeated *ad infinitum*.

REPLE'VIN. *Low Lat. replegio*. In law, an action granted on a distress, by which a person, whose cattle or goods are distrained, has them returned to his own possession, upon giving security to try in a suit at law the right of taking; and if that should be determined against him, to return the cattle or goods into the possession of the distrainer.

REPLICA'TION. In law, the plaintiff's answer to the defendant's plea.

REPORT'. In *commercial navigation*, a paper delivered by the masters of ships arriving from ports beyond seas to the Custom-house, and attested upon oath, containing an account of the cargo on board, &c.

REPO'SE. *Lat. repono*, I lie down. In the *fine arts*, the absence of that agitation which is induced by the subdivision of a work into too many unconnected parts.

REPRI'SALS. *Fr. reprisailles*. When the people of one nation have unlawfully seized and detained property belonging to another state, the subjects of the latter are authorised by the law of nations to indemnify themselves, by seizing the property of the subjects of the state aggressing. This is termed making *reprisals*, and commissions to this effect are issued by the admiralty.

REPRI'SES. In law, deductions from the value of lands, such as rent-charges.

REPRODUCTION. *Lat. reproduco*. In *physiology*, strictly, it signifies the power possessed by an organised being of forming anew parts of the body which have been cut off. Vegetables are well known to possess this faculty. Worms reproduce many segments of the body: lobsters and spiders regain a claw or a leg; and so on.

REPTA'TION. A mode of progression by successive advances of the trunk, as in serpents; applied also to that of animals whose bodies touch the ground, their legs being very short.

REPTIL'IA. Reptiles, from *Lat. reptilis*, from *repo*, to creep; a creeping animal. The third class of vertebrated animals, comprehending Chelonians. (*tortoises*); Saurians (*lizards*); Ophidians (*serpents*); and Batrachians (*frogs*). All reptiles are cold-blooded, (a comparative term), owing to the disposition of the heart, which transmits only a portion of the blood to the lungs, (the remainder returning to the other parts of the body, without passing through the pulmonary organs), and the consequent deficient action of the oxygen upon the blood, and diminished respiration. In temperate and cold climates they almost all pass the winter in a state of torpor.

REPUE'LIC. *Lat. respublica*. That form of government in which the people exercise the supreme power.

REPUL'SION. from *repello*. A term in *physics*, for that property of bodies which is opposed to attraction, and which, like that force, appears, as far as has been ascertained, to follow the same law, viz., increasing inversely as the square of the distance. Consequently at the point of contact it is infinite. It is as essential as attraction itself to the constitution of the material forms of created nature.

REQUEST', Court of. A Court of Equity, in England, for the relief of such persons as addressed the Crown by supplication: abolished by Stat. 16 & 17 Car. I.

RE'QUIEM. In the *Romish church*, a hymn or mass sung for the *requiem* or rest of the dead.

RESCRIPT, Lat. *rescriptum*. The answer of an emperor when consulted on some difficult question: the rescript serves as a decision of the question, and is therefore equivalent to an edict or decree.

RESCUE, Norm. *rescous*, relieved. In law, the forcible retaking of a lawful distress from the distrainor, or from the custody of the law; also the forcible liberation of a defendant from the custody of the officer, in which cases the remedy is a writ of *rescue*.

RESERVATION, from *reservo*. In law, a clause or part of an instrument, by which something is reserved, not conceded or granted; also a proviso.

RESER. In *Scots law*, the receiving of stolen goods, harbouring an outlaw, &c.

RESIDUAL. In *mathematics*, from *residuum*, remainder. 1. *Residual analysis*, the same with what is otherwise called the method of exhaustions. All problems to which residual analysis has been applied are more conveniently solved by means of the doctrine of fluxions.—2. A *residual quantity* is a binomial connected by the residual sign, —, as $a-x$. A remainder.

RESIDUUM (Latin). 1. Residue.—2. In law, what remains after payment of debts, &c.

RESIN, Fr. *résine*; Lat., Ital., Sp., *resina*, from *res*, to flow. The name resin is given to a very important class of vegetable substances, of which there is a great variety of species, differing from each other in consistence, colour, smell, and in some degree, in chemical composition; but have a common vegetable origin, many of them exuding spontaneously, and others extracted by incisions made in the bark of certain resinous trees, and procurable from almost all plants by chemical processes. The chemical properties, which are usually understood to characterise a resin, are these: it is first softened, and then melted by heat, and, when kindled, it burns readily, with a strong and generally fragrant smell, with copious flame and smoke, and leaves scarcely any residue behind; it is insoluble in water, but is readily dissolved by alcohol; it is not easily acted upon by acids, except the nitric, by which it is converted into artificial tar; and it is readily saponified by alkalis, when those are concentrated. Most resins are translucent, and have a brown (sometimes a red, or green,) colour, and a vitreous fracture; being often so brittle as to be readily pulverised in the cold. There are some, however, which are soft: these are usually termed *balsams* (q. v.), and contain a certain portion of volatile oil, (some benzoic acid). The chief solid resins are amber, elemi, *animé*, benzoin, copal, rosin, mastich,

sandrich, dammora, lac, dragon's blood, guaiacum, Highgate resin, resin of Jalap, labdanum, tacamahac, storax.

RESIN'CINE. A light-coloured oil, destitute of taste and smell, obtained by distilling resin *per se*. Formula $C_{30}H_{15}O_1$.

RESIN'EON. A product obtained from resin by M. Fremy. It is less volatile than resinone, and has a less burning taste. Formula $C_{23}H_{18}O_1$.

RESINONE. A product obtained by M. Fremy from resin. It somewhat resembles alcohol, and differs from oil of turpentine in containing an additional atom of water. Formula $C_{10}H_9O_1$.

RESINOUS ELECTRICITY. This is the electricity eliminated by rubbing a cylinder of resin with a rubber of wool: named also *negative electricity*. See *ELECTRICITY*.

RESIST'ANCE. In *mechanics*, that power which acts in opposition to another, so as to diminish or destroy its effect: *re*, against, and *sisto*, to stand.

RESOLU'TION, from *resolve*. 1. In *chemistry*, analysis: the process of separating the component parts of bodies.—2. In *medicine*, the disappearance of a local inflammation with suppuration, mortification, &c.—3. In *music*, the resolution of a dissonance is the carrying of it according to rule into a consonance in the subsequent chord.—4. In *algebra*, the resolution of an equation implies the solution of it.—5. In *mechanics*, the resolution of forces or motion is the act of dividing any single force or motion into two or more others, in different directions; or of finding the quantity of two or more forces or motions, which taken together shall produce the same quantity of force or motion, with the given one in the same direction. This is the reverse of *composition of forces or motion*.

RES'ONANCE. In *music*, prolonged and reflected sound: *resonans*, resounding.

RESPIRA'TION, from *re* and *spiro*, to breathe. The act of breathing, which comprehends *inspiration* and *expiration*. Respiration appears to be essential to the life of all living bodies, plants as well as animals; and moreover, the blood of animals is warm or cold according as they respire more or less air.

RESPIRA'TOR. An instrument fitted to cover the mouth, and retained by bandages: its object being to heat the inspired air before entering the lungs, by retaining that of the expired air, and giving it off to the succeeding inspiration.

RESPONDEN'TIA. In *commercial navigation*, a loan upon a cargo, differing from *bottomry*, which is a loan upon the ship.

RESPONSE. 1. In the *Romish church*, a kind of anthem sung after the morning lesson.—2. In *music*, a repetition of the given subject by another part.

RESSAULT' (French). A term used to denote the effect in a building of a body which projects over or falls back from the line or range of the other members.

REST. In *music*, a pause or interval of silence.

RESTITUTION, WRIT OF, in *law*, lies where judgment has been reversed, to restore to the defendant what he lost.

RESULTANT. In *mechanics*, a force which is the combined effect of two or more forces acting in different directions.

RESUPINATE, Lat. *resupinatus*, reversed. Applied to leaves when the upper surface is turned downwards.

RETAIN'ER. Among *lawyers*, a fee paid to engage a lawyer or counsellor to maintain a cause, called also a *retaining-fee*.

RETAIN'ING WALL. A wall built for the support and maintenance of a body of earth, where it is inexpedient to slope the same gradually down.

RETE (Latin). A net. A term very often applied in *anatomy* and *natural history* to cellular membrane, nerves, vessels, and other parts which have a retiform appearance. The *rete mirabile* is a net-work of blood-vessels at the base of the brain of quadrupeds. The *rete mucosum* is a mucous substance, situated between the cuticle and true skin.

RETICULAR, Lat. *reticularis*, } Inter-
RETICULATE, Lat. *reticulatus*. } woven
like a web or net: *rete*, a net. *Reticulated work in architecture*, is that in which the stones are square and laid lozenge-wise, resembling the meshes of a net.

RETICULE, from *reticulum*, a little net or web. 1. A name given to the second stomach of ruminant animals.—2. In a *telescope*, a network of fine fibres dividing the field into equal small squares.—3. A little bag used by females as a pocket.

RETINA, Lat. from *rete*, a net. The net-like expansion of the optic nerve placed at the back of the eye, and which has been called the fourth membrane of the eye. It is the true organ of vision.

RETINASPHALTUM, } Fossil copal. Pitch-
RETINITE. } stone. A bitumi-

nous substance, found chiefly in Devonshire, accompanying the Bovey coal. It consists of (55) resin (*γρῆνη*) and (41) asphaltum, with some earthy matter.

RETIRADE, Fr. from *retirer*. In *fortification*, a kind of retrenchment in the body of the bastion or other work, which is to be disputed with the enemy after the defences are dismantled.

RETIRED FLANK. In *fortification*, a flank having an arc of a circle convex towards the place.

RETRACTOR. In *anatomy*, a muscle, the office of which is to retract the part into which it is inserted.

RETORT, Lat. *retortus*. In *chemistry*, a

globular or pear-shaped vessel, with a long neck, bent nearly at right angles

with the body: used in distilling, preparing gases, &c.

RETRAX'IT, Lat. *retraho*, *retrahi*. In *law*, the open renunciation of a suit in court, by which the plaintiff loses his action.

RETRENCHMENT, Fr. *retranchement*. In *fortification*, any work raised to cover a post and fortify it against an enemy.

RETRO. A Latin prefix, meaning backwards.

RETRO-GRADATION. In *astronomy*, an apparent (*not real*) motion of the planets, in which they seem to go backwards in the ecliptic, and to move contrary (*in antecedentia*) to the order and succession of the signs.

RETTO (Italian). A term in *music*, meaning straightforward.

RETURN. 1. In *law*, the rendering back of a writ, precept, or execution, to the proper officer of the court, or the certificate of the officer executing it, indorsed.

—2. In *architecture*, the continuation of a moulding, projection, &c., in the opposite direction: a side or part which falls away from the front or straight work. —3. In *fortification*, the returns of a trench are its several windings and lines.

RETURN'-BEAD. A bead appearing both on the face and edge of a work.

RETURN'-DAY. In *law*, the day on which the defendant is to appear in court, and the sheriff is to return the writ of his proceedings.

RETURN'ING-OFFICER. In *law*, an officer whose duty is to make returns of writs, precepts, &c.

REVE, SAX. gerefa. The bailiff of a franchise or manor.

REVE'ILLE, Fr. from *réveiller*, to awake. In *military affairs*, the beat of drum, about day-break, to arouse the soldiers, and to notify to the sentinels to cease challenging.

REV'ELS, from *revello*. In *architecture*, two vertical sides of an aperture between the front of the wall and the window or door-frame.

REVEN'DICATION. In *civil law*, a claim legally made to recover property, by one claiming as owner.

REVEN'UE, Fr. *revenu*, from *revenir*, to return. The annual produce of taxes,

excise, customs, duties, rents, &c., which a nation or state collects into the treasury for public use.

REVERBERATORY. A furnace or oven, wherein the flame or current of heated gases from the fuel is caused to reverberate, or be reflected down upon the substance under operation, before passing into the chimney. Such reverberatories are therefore usually made with domes, against which the flames, &c. first impinge, and then curve downwards upon the bed of the furnace.

REVERSE, *Fr. revers*. In *numismatics*, the side of a coin or medal on which the head or principal figure is not stamped.

REVERSION. In *law*, the residue of an estate left in the grantor, to commence in possession after the determination of some particular estate granted by him. In *annuities*, a payment or benefit which is deferred till the happening of some event, as the death of a person now living.

REVELMENT, *Fr. revêtement*, from *revêtir*. In *fortification*, a strong wall on the outside of a rampart, intended to support the earth: a retaining-wall.

REVISE, from *revisus*. In *printing*, a second proof of a sheet, taken after the corrections in the first.

REVOCA'TION (*POWER OF*). In *law*, a power by which the grantor of a voluntary deed of conveyance to uses, retains the liberty of revoking these uses.

REVOLUTE, *Lat. revolutus*, rolled back. In *botany*, applied to leaves, when the margins are rolled backwards towards the under surface.

RHABARBARINE. The bitter principle of rhubarb, called also *caphopierite*.

RHABDOMANCY, *ραβδος*, rod, and *μαντεια*, prophecy. Divination by a wand.

RHACHI'TIS. English disease: the rickets, so called from *rachis*, the spine; because with the other deformities characteristic of this disease, the spine is often distorted.

RHAMNUS. The Buck Thorn. An extensive genus of trees and shrubs. *Pentandria* — *Monogynia*. Name *ῥαμνος*, borrowed from the Greeks. The purging buckthorn, and berry-bearing or black alder, are the British types of the genus. The jujube-tree is now separated from the genus.

RHAPON'TICINE. A substance extracted from rhubarb (the root of the *Rheum raphanicum*), otherwise called *rheine* (q.v.).

RHATANY. In *pharmacy*, the root of a tree, the *Krameria*, imported from Peru.

RHE'INE. A substance obtained from rhubarb (*rheum*), by treating it with ether: otherwise called *rhaponticine*. It is obtained in minute crystalline grains, having an intense yellow colour,

but no taste or smell. Its solution in alcohol reddens litmus paper, and, indeed, behaves with bases like other acids. It is remarkable as a solvent of iron.

RHE'UM. 1. *Rhubarb*. A genus of perennial plants. *Enneandria* — *Trigynia*. Name said to be from *Rha*, a river in Russia (the Volga), on the banks of which the species grows plentifully. The roots of several species are used in pharmacy under the name of *rhubarb*, especially the roots of the *Rh. palmatum* and the *Rh. raphanicum*. Of the first there also appears to be varieties; the Turkey rhubarb, the Russian or Tartarian rhubarb, and the Chinese or East Indian rhubarb. — 2. *ῥῆμα*, *Defluxion*. A thin watery matter, arising through the glands, chiefly about the mouth.

RHEU'MATISM, *ῥευματισμός*, from *ῥεῦματιζω*, to have defluxion. A disease; an affection of the extremities and external coverings of the human body, occupying the muscular, tendinous, and fibrous textures, and characterised by pain, stiffness, and swelling of a joint, with or without fever.

RHINOC'EROS. A genus of large mammalia. Order *Pachydermata*; family *Ordinaria*. Name from *ῥιν*, a nose, and *κερας*, a horn. There are several species found in India, Java, Africa, and Sumatra; and fossil remains of the animal are found in several parts of Europe. The Indian species has only one horn on the snout, that of Africa has two. But it would appear, from the account of Burchell and Campbell, that the one-horned rhinoceros is also found in Africa.

RHINOT'RAGUS. A genus of coleopterous insects, belonging to the tribe of *Cerambycini*, characterised by the head being narrow, and prolonged anteriorly, in the manner of a snout: whence also the name.

RHIFIPT'ERA. An order of insects, established by Mr. Kirby, under the name of *Strepsiptera* (twisted wings), on certain species remarkable for their anomalous form and irregular habits: called *Rhipiptera* by Latreille, from *ῥιζα*, a root, and *πτειρον*, a wing, on account of the peculiarly radiating nervures which characterise the wings.

RHIZAN'THEE, *ῥιζα*, root, and *ανθος*, flower. A class of plants which appear to be intermediate between *Endogens* and the lower orders of vegetation.

RHIZOPH'ORA. The Mangrove-tree: a genus. *Dodecandria* — *Monogynia*. Name from *ῥιζα*, a root, and *φειω*, to bear. The juice of the root is applied in India to the bite of serpents.

RHIZ'OPODES, from *ῥιζα*, a root, and *πους*, a foot. A name proposed by M. Dujar-

dia to a new class of animals of the lower degree than the radiata, possessing a power of locomotion by means of minute tentacular filaments. This class would comprise the animals which construct the miliola and some microscopic foraminiferous shells.

RHO'DIUM. A metal discovered by Dr. Wollaston in crude platinum, and so named from *ῥόδον*, a rose, on account of the rose colour of some of its compounds.

RHODODEN'DRON. Rose-bay: a genus of permanent plants. *Decandria—Monogynia*. Name from *ῥόδον*, a rose, and *δάσεν*, a tree. There are 20 species, natives of temperate climates.

RHOMB. Lat. *rhombus*; Gr. *ῥόμβος*, from *ῥιμῶν*, to turn round. A quadrilateral plane figure, whose sides are equal and parallel, two and two, and whose adjacent angles are unequal. The opposite angles are necessarily equal, and, taken pair and pair, are greater and less than two right angles. When all the angles are equal, the figure becomes a *square*.

RHOM'BOID, from *ῥόμβος*, a rhomb, and *ειδής*, likeness. A quadrilateral figure,

whose opposite sides only are equal and parallel. The adjacent sides and angles are therefore unequal. The figure is otherwise called a *parallelogram*; and the straight line which joins obliquely the two opposite angles is named a *diagonal*. When the adjacent angles are equal, and therefore right angles, the figure is called a *rectangle*, and popularly an *oblong*.

RHOMB-SFAR. A crystallised magnesian carbonate of lime, so named from the form of the crystal, of which the faces are rhombs.

RHON'CHUS. *Pezyses*. A rattling or wheezing sound. The term is applied in *auscultation* to any preternatural sound accompanying respiration, occasioned either by the passage of the air through fluids obstructing the bronchia or air-cells, or by the constriction of the bronchial tubes. It is also called *rattle*, and *r* is by the French writers.

RHU'BARB. See **RHE'UM**.

RHUMB, from *rhomb*. In *navigation*, a vertical circle of any given place, or the intersection of a part of such circle with the horizon: in this last sense rhumbs coincide with the points of the compass, and are named accordingly.

Rhus. Sumach. A genus of trees and shrubs of many species. *Pentandria—Trigynia*. Name from *ῥῖον*, to flow, because it stops fluxes. All the species are poisonous except the *R. coriaria* of the south of Europe.

RHYNCROPH'ORA. A family of Coleopterous insects, distinguished by the entire prolongation of the head, which forms a sort of proboscis: whence the name from *ῥύγχος*, a beak, and *φάσσω*, to carry. The genera live chiefly on plants; several of them exclusively within their fruits and seeds, and do much injury.

RHYNC'H'ORS. A genus of birds; the *Skimmers*: order *Palmipedes*: family *Longipennes*. Name from *ῥύγχος*, rostrum. One species only is known, the Black Skimmer of the Antilles.

RHYTH'M. Lat. *rhythmus*; Gr. *ῥυθμός*, metre. In *music*, variety in the movement, as to quickness or slowness, or length and shortness, of the notes. In *poetry*, it is the relative duration of the moments employed in pronouncing the syllables of a verse.

RIB (Saxon). 1. A bone of animal bodies, forming a part of the frame of the thorax.—2. In *ship-building*, a piece of timber, forming part of the frame-work of the side of a ship. The *ribs* of a *parrel* are short pieces, having holes through which are reeved the two parts of the *parrel* rope.—3. In *architecture* and *engineering*, a term used generally to denote a girder, but more particularly an arched beam, sustaining the superior work of a vault, bridge, &c.—4. In *botany*, the continuation of the petiole along the middle of a leaf, and from which the veins take their rise.

RIB'BET, dim. of *rib*. In *architecture*, the recess of a wall to receive a door or window-shutter, as it folds back when opened.

RIB'BON. } Wel. *rhîbin*. A fillet of silk.

RIBB'AND. } In *naval architecture*, a long, narrow flexible piece of timber, nailed upon the outside of the ribs, from stem to stern, so as to encompass the ship lengthwise: the principal are the floor-ribband and breadth-ribband.

RIB'ES. The Currant tree. A very extensive genus of arborescent shrubs. *Pentandria—Monogynia*. The name is Arabic, and properly belongs to an acid-leaved species of *Rheum*; but which botanists, for 200 years past, have, by mistake, applied to the currant and gooseberry family, and with these it now remains. The red, rock, alpine, black, and spiked currants, and the rough and smooth gooseberry, are indigenous species.

RICE, Fr. *riz*. The seed of the *Oryza sativa*. It is the principal food of the

inhabitants of all parts of the East, where it is boiled and eaten either alone or with meat. It is the cheapest of all food, but is rendered costly in this country by the import duty upon it.

RICE PAPER. An absurd name of a description of paper, made in China and India, for painting flowers, &c. upon, from a membrane of the bread-fruit tree, *Artocarpus incisiifolia*.

RICIN'IC ACID. A product obtained by distilling castor oil at a high temperature.

RICIN'US. The Palma Christi, or Castor-oil Tree: a genus of plants. *Monœcia—Monadelphia*. Said to be named from the resemblance of its seeds to the tick, called *ricinus* by the Latins. The *R. communis*, the seeds of which yield the castor oil (*oleum ricini*), is an annual plant, found in both Indies. It is the *Kixi* or *Kegow* of Dioscorides, who administered the seeds as a cathartic. The plant is now annually reared in gardens in the neighbourhood of London.

RICOCHET', Fr. for *duck and drake*. In *gunnery*, a method of firing cannon, loaded with a small charge and elevated from three to six degrees, so that the ball may bound and roll along inside of the enemy's rampart: this is called *ricochet-firing*, and the batteries are termed *ricochet-batteries*.

RIDER. In *botany*, a small leaf inserted in or attached to other leaves. In *gunnery*, a piece of wood equal in length to the body of the axle-tree of the gun-carriage. In *law*, see **RIDER-ROLL**.

RIDER-ROLL. A small piece of parchment, containing an additional clause of a record, statute, &c., added to the principal document: called also a *rider*.

RIDERS. In *ship-building*, interior ribs, to strengthen and bind the parts of a ship together, being fayed upon the inner staff and bolted through all.

RIDGE. In *architecture*, the upper horizontal timber in a roof, against which the raft is pitch.

R'DING. In England, one of three portions into which the county of York is divided: anciently under the government of a reeve. The term is corrupted from *trithing*, third.

RIDOT'TO (It.). A favourite public Italian entertainment, consisting of music and dancing.

R'FILE, Sax. *rife*, a groove: hence *reifeln*, to groove or rife. A gun about the same length and size as the musket, but having the inside of the barrel *rifled* or cut into a number of spiral channels, making little more than one turn in the whole length of the piece.

RIO. The peculiar manner of fitting the masts and rigging to a vessel.

RIO'ZER. In *mechanics*, a cylindrical pulley called also a *drum*.

RIGGING OF A SHIP. A term comprehending all ropes employed to support the masts, and to extend or reduce the sails or arrange them to the disposition of the wind. *Rigging loft*, the room in which the rigging is prepared.

RIGHT, Sax. *riht* (*rectus*). In *geometry*, straight, as a *right line*. Also opposed to *oblique*, as a *right angle*, that is, an angle neither obtuse nor acute, but formed by one line or surface meeting another perpendicularly.

RIGID'ITY, Lat. *rigiditas*, from *ῥυγος*, stiff. In *physics*, a term which implies the opposite qualities of flexibility, pliability, ductility, malleability, &c., and is usually defined to be the degree of hardness which arises from the mutual indentation of the component particles within one another.

RIGOLE, } A sort of musical instrument,
RIGALS, } consisting of several sticks bound together and separated by beads. It is struck with a ball at the end of a stick, and makes *tolerable* harmony.

RIMO'SE, Lat. *rima*, cleft. In *zoology*, when any surface possesses numerous minute narrow excavations, running into each other.

RINFORZAN'DO (It.), *strengthening*, in *music*, denotes that the sound is to be increased, which is symbolised by \ll .

RING'-BOLT. A bolt of iron, with an eye, in which a ring of iron is fitted.

RING'BONE. In *farriery*, a hard callous substance, growing in the hollow circle or the little pastern of a horse: so named from its sometimes growing quite round like a ring.

RING'-SAIL. A small and light sail set on a mast on the taffrail; also, a studding-sail set upon the gaff of a fore and aft sail.

RING'TAIL, 1. In *ornithology*, the *Falco pygargus*, Lin.—2. A small quadrangular sail set on a small mast on a ship's taffrail.

R'ior. In *law*, a riotous assembling of twelve persons or more, and who do not disperse on proclamation. An Act prohibiting such assemblies is known by the name of the *Riot Act*, and being read by a magistrate or peace officer to a mob, constitutes that mob *rioters*, if it does not immediately disperse.

RIP'ANO. An Italian term, meaning *full*, used in *music* in opposition to *soffo*.

RITORNEL'LO (It.), from *ritorno*, return. In *music*, a repeat played while the principal voices pause.

RIV'ET. A pin of iron, or other metal, used for the purpose of joining two plates of metal together; these being made to overlap, and a hole drilled through both, the pin is inserted and firmly clinched by hammering, so that a head is now formed on both ends, and it cannot be withdrawn.

RIX'-DOLLAR, Germ. *reichsthaler*, Dutch *ryks-daalder*, Swed. *riks-daler*, the *solus*

of the realm. A silver coin of Germany, Denmark, Sweden, &c., of different values in different places. In Brunswick and Baden, it is worth 4s. 2d.; and the rix-dollar of the kingdom of Hungary is worth a farthing more. In Denmark, it is worth 4s. 6½d.; at Hamburg, 4s. 7½d. nearly, and the constitutional rix-dollar of Hanover is very nearly of the same value (4s. 7½d.). In Hesse Cassel, it is worth 4s. 1½d. nearly; in Holland, about 4s. 5d. (but the 50-stiver piece is worth only 4s. 3½d.); at Lubec, 4s. 6½d.; in Poland, 2s. 11½d.; in Prussia, currency 2s. 11½d., convention 4s. 2½d.; in Saxony, the same nearly; in Sweden, 4s. 6½d. (late coinage); at Wurtemberg, 4s. 2½d.

ROAD/STEAD. A place where ships may ride at anchor at some distance from the shore.

ROAN, Fr. rouan. A bay, sorrel, or black, with grey or white spots interspersed very closely; descriptive of the colour of some horses.

ROAST/ING. In metallurgy, a process by which the volatile parts of ores are separated by the application of heat.

ROBIN/IA. An extensive genus of trees and shrubs. *Diadelphia*—*Decandria*. The Locust-tree, Rose acacia, Pea-tree, Salt-tree, and Goat's-horn, are the best known species. Temperate and warm climates.

ROCK/ELIC ACID. An acid discovered by Dr. Heeren in the *Rocella tinctoria*. It is a solid fatty-looking matter. When heated, it melts and congeals again, at 251° F., into a crystalline mass.

ROCHE/ALUM. An alum brought from the Levant in small pieces of a pale rose colour: called also *rock-alum* (Fr. *roche*, a rock).

ROCHELLE'S SALT. Potassio-tartarate of soda. A triple salt consisting of tartaric acid, soda, and potash. It is administered in medicine, in doses from one drachm to an ounce, as a cathartic.

ROCH/ET (French). 1. A surplice; the white upper garment of an officiating priest.—2. A fish, the *roach*.

ROCK, Fr. roc or roche. In geology, a term comprehending all the materials forming the crust of the globe; clay, sand, coal, and chalk, as well as limestone, granite, slate, and basalt, and other hard and solid masses, to which the use of the term in common language is generally restricted. There are, (1.) *Alluvial rocks*, formations of recent date; (2.) *Secondary rocks* (sometimes named *floats rocks*, because they are often disposed horizontally); these consist partly of chemical, and partly of mechanical deposits, resting upon the (3.) *Transition rocks*. These rest on the primary rocks, and contain the first indications of life, and mark the transition of the world from an uninhabitable to an inhabited condition; (4.) *Primary rocks* (q. v.).

ROCK-BUT/TER. Native alum which occurs in cavities and fissures of argillaceous slate in soft masses, of a yellowish-white colour. It is mingled with clay and oxide of iron.

ROCK-CORK. Mountain-cork. A greyish-white variety of asbestos, found in France and Germany.

ROCK-CRYSTAL. The most perfect variety of quartz. It occurs crystallised in chasms and clefts of the older rock in all countries; but is found in greatest perfection in Dauphiné, in the Alps, Madagascar, &c. The name has been extended to all crystallised and diaphanous varieties.

ROCK-FISH. The *gobius niger*, Cuv. and Yarr., is so named from its inhabiting rocky situations, but it is more commonly known as the *black goby*. British coasts.

ROCKING-STONES. Immense masses of rock, which appear to have been loosened by some convulsion of nature, and, with a slightly rounded base resting on a flat surface of rock below, are easily moved or *rocked*: called also *loggan* or *laggan-stones*.

ROCK-RUBY. A name sometimes given to the garnet when it has a shade of blue.

ROCK-SALT. Mineral salt (native crystallised chloride of sodium). In America, the name is sometimes given to salt obtained in large crystals. See SALT.

ROCK-SAM/PHIRE. A plant, the sea-fennel (*Crithmum maritimum*), used as a condiment when pickled with vinegar and spice.

ROCK-SHELLS. The common name of certain univalves having their shells terminated by long straight canals.

ROCK-WOOD. Ligniform asbestos. A variety of asbestos which closely resembles fossil wood in appearance.

ROCK-WORK. 1. In architecture, masonry wrought in imitation of rough stone, chiefly used in basements.—2. In gardening, a pile of stones, &c., forming a nidus for the growth of Alpine plants.

ROD, perch, pole. A long measure of 16½ feet; also a square measure of 272½ square feet.

RODEN/TIA. An order of mammalia characterised by two large incisor teeth in each jaw, separated from the molars by an empty space; they cannot seize living prey nor tear flesh, nor even cut food, but they serve to file, and by continued labour to reduce it into separate particles—in a word to gnaw it; hence the term *rodentia* or *gnawers*, which is applied to animals of this order. The squirrels, marmots, dormice, rats, gerbils, hares, rat-moles, beavers, porcupines, rat-hares, guinea-pigs, mocos, agoutis, and pacas, all belong to this order.

ROE, Ger. rogen. The spawn of fishes. The soft *roe* or *miit* denotes the male.

the *hard rose*, or that to which the name *spaw* is usually given, denotes the female.—2. Sax. *raa*, the female of the hart.

ROZ-STONE. Oolite or Portland-stone. See **OOLITE**.

ROGA'TION, from *rogo*, to ask. The demand by the Roman consuls, or tribunes, of a law to be passed by the people.

ROGATION-WEEK. The second week before Whit-Sunday; thus called from the three fasts observed therein; viz., Monday, Tuesday, and Wednesday, called *rogation-days*, because of the extraordinary prayers then made for the fruits of the earth, as a preparation for the devotion of the Holy Thursday.

ROGUE'S YARN. A yarn of different twist and colour from the rest, and inserted in the royal cordage, to identify it if stolen.

ROLL. In *antiquity*, a volume: a book consisting of leaf, bark, paper, skin, or other material, on which the ancients wrote, and which being kept *rolled*, was called by the Latins *volumen*, from *volvo*, to roll.

ROLLERS. The sea term for unusually heavy waves.

ROLLS. 1. In *gothic architecture*, mouldings representing bent cylinders.—2. Rolls of court, of parliament, or of any other public body, are the parchments on which are engrossed, by the proper officer, the acts and proceedings of that body, and which being kept in rolls, constitute the records of such public body.

ROLLING-MILL. The name commonly applied to the machinery by which metals are laminated or compressed (while red hot), by rollers or cylinders.

ROLLING-PRESS. 1. A machine consisting essentially of two cylinders, by which cloth is calendered, waved, and tabbed. Also a machine, of similar construction, for taking impressions from copper-plates: a copper-plate printing-press.—2. A *rolling-mill* (q. v.).

ROLLING-TACKLE. The object of this tackle is to keep the yards constantly to leeward when the ship rolls, thereby doing away with friction.

ROMAN CATH'OLICS. A name for those Christians who believe in the doctrines and submit to the discipline of the Church of Rome: called also *Papists*, from *Papa*, Pope.

ROMAN CEMENT. An excellent water cement, in very general use for building purposes.

ROMANCE, Sp. *romance*, the vulgar language of Spain. The Welsh has also *romance*, rising nobly: hence *romantic*: *rhamanta*, to soar, and *rhamantu*, to use figurative language. A tale of extraordinary adventures, soaring beyond the limits of fact and real life. The first

romances were a monstrous assemblage of histories, in which truth and fiction were blended without probability. They were for the most part made up of amorous adventures and the extravagant nonsense of chivalry.

ROMAN ORDER. Another name for the composite order of architecture.

ROMANESQUE. In *painting*, appertaining to fable or romance. In *literature*, the common dialect of Languedoc, and other parts in the south of France. *Romaic* is the language of modern Greece.

ROMAN SCHOOL OF PAINTING. This school, like the Florentine, addressed itself to the mind, and is formed upon antique models. Its style was poetical; its touch easy and graceful; its composition elegant; its colouring negligent; and its draperies eminently successful.

ROMAN VAULTING. A term applied by some to a vault built in the following manner; each vault being built exactly as if it were single, the two vaults meet in an edge or groin of a regular elliptical form, lying diagonally across the compartment, and the lines running along the top of each vault will be horizontal lines.

ROME'PENNY, } A tax of a penny for each
ROME SCOT. } house, formerly paid by the people of England to the see of Rome, at the feast of St. Peter ad vincula (1st of August), granted, according to some, by Offa; according to others, by Ina, king of the West Saxons, who being on a pilgrimage, and at Rome, A.D. 725, gave it as an alms. It was much complained of by the people, but was only finally abolished by Queen Elizabeth.

ROM'PEE'. In *heraldry*, an ordinary which is broken, or a chevron bend, or the like, whose upper parts are cut off.

RONDEAU, Fr. from *rond*, round. 1. A kind of poetry, commonly consisting of thirteen verses of which eight have one rhyme, and five another. It is divided into three couplets, and at the beginning of the second and third the beginning of the rondeau is repeated in an equivocal sense.—2. In *music*, the rondeau generally consists of three strains, the first of which closes in the original key, while each of the others is so constructed in modulation as to reconduct the ear easily and naturally to the first strain.—3. A kind of jig or lively tune which ends with the first strain repeated.

ROOD. 1. A different orthography of *rod*. The fourth part of an acre; forty square rods.—2. Sax. *rode*, a cross.

ROOD'LOFT, Sax. *rode*, a cross. A gallery between the nave and choir in churches, in front of which, towards the nave, stood the rood or cross, and images of saints; now generally occupied by organs.

ROOD-TOWER OR STEEPLE. The building

at the intersection of the nave and transept of a church, which covered the rood-loft.

Roof, Sax. wrof. The top covering of a house or other building, in which sense it comprises the timber-work, slate, tile, lead, with whatever else is necessary to form and complete the whole. The parts

are AA, the tie-beam; B, the king-post; CC, the principal rafters or principals; DD, the struts; EE, the purlines; and without are the common rafters.

ROOK. 1. Sax. rhoc. A bird, the *Corvus frugilegus*, Lin.—2. Ital. *rocco*, a bishop's staff; a common man at chess.

ROOT. 1. In arithmetic and algebra, a quantity which being multiplied into itself a certain number of times, produces another quantity called a *power*, and of which power the original quantity is the root. Thus 2a is the square root of 4aa, or 2²a²; the cube root of 8aaa, or 2³a³; the fourth root of 16aaaa, or 2⁴a⁴, &c.—2. In botany, the descending fibres of a plant, whose function is to attract liquid food from the soil in which it is imbedded.

ROPE, Sax. rap. Ropes are made of hemp, hair, &c. spun into a thick yarn, of which several strings are twisted together by means of a wheel. Very small ropes are termed *cords*, and very thick ones *cables*. See **CABLE**.

ROPE-ROLL. A hollow cylinder fixed on an axle, around which either single or endless ropes or bands are passed, for the purpose of communicating motion to other parts of the machine. See **DRUM**.

ROPE-YARN. Yarn for ropes, consisting of a single thread; the threads are twisted into strands, and the strands into ropes.

ROSA. ROSE. A very extensive genus of trees and shrubs. *Icosandria—Polygynia*. Rosa is the Latin name, derived from the Celtic *rhôs*, allied to *rhuz*, red. Don enumerates 29 British species, and about as many varieties of the rose, and in all 89 species, all of which, with a very few exceptions, are natives of temperate climates.

ROSA/CIC ACID. A peculiar acid deposited from the urine of persons labouring under gout and inflammatory fevers. It is of a rose colour, and sometimes forms reddish crystals.

ROSBARY, Lat. rosarium, a rose-bed. A

Roman Catholic devotional practice, consisting in reciting a number of times the Lord's Prayer and the Ave Maria. As the computation is aided by means of beads, the string of beads has acquired also the name of a rosary.

ROSE-ENGINE. In mechanics, an appendix to the turning-lathe, by which a surface of wood or metal is engraved with a variety of curve lines.

ROSE-NOBLE. An ancient English gold coin, stamped with the figure of a rose: first struck in the reign of Edward III., and current at 6s. 8d. (according to Johnson 16s.).

ROSES, FESTIVAL OF. An annual rural festival of some parts of France, in which the best-behaved maiden of the town or village is crowned with roses in the church, to which she is conducted with great pomp by the villagers.

ROSETTA STONE. A celebrated stone, found at Rosetta in Egypt, the subject of much hieroglyphic research.

ROSE-WINDOW. A circular window, with compartments of mullions or tracery, branching from a centre; sometimes called a *Catharine-wheel*, or *marigold-window*.

ROSE-WOOD. A beautiful wood, produced in Brazil, the Canary Islands, Siam, and some other places. It is the produce of a large tree, not, however, well known to botanists: Don calls it the *Polysoclymnia floribunda*. It takes its name from its irregular knotty grain, as if studded over with small roses, together with its fragrant smell, and purple red ground. It is highly valued for cabinet work, in which, from its great price, it can only be used for veneering; price in bond from 120*l.* to 125*l.* per ton; duty 10*l.* per ton (formerly 20*l.*).

ROSICRUCIANS. A sect or cabal of hermetical philosophers, (rather fanatics), who sprung up in Germany, in the 14th century, and made great pretensions to a knowledge of science. Among other things they pretended to be masters of the secret of the philosopher's stone. They took their name from *ros*, dew, and *cruz*, cross: *dew* being the most powerful dissolvent of gold, according to their notions, and *cross* an emblem of light.

RO'SIN. This is the name given to the resin which the different species of turpentine leave when they are deprived of their volatile oil by distillation. After this process it is melted with about $\frac{1}{2}$ of its weight of galipot, placed upon a straw filter, and a little water sprinkled on the melted mass. Thus prepared, it is common rosin: when it has a golden-yellow colour, it is called *Burgundy-pitch*. It has a deep brownish-yellow colour, is translucent and brittle, and is liquified by a temperature of 215° F.

ROSMARINUS. Rosemary. A genus of permanent plants. *Diandra—Monogynia*. Two species, one a native of the south of Europe, the other of South America.

ROSTRUM, Lat. *rostrum*. 1. An elevated portion of the stigma of orchidaceous plants.—2. The word denotes the mouth of the louse and other apterous insects.—3. The uncinated proboscis of the tape-worms.

ROSTER. In *military affairs*, the plan or table by which all military duty is regulated.

ROSTRATE, Lat. *rostratus*, beaked: from *rostrum*, a beak. Applied to parts of plants and to shells, &c., which have a beak-like process.

ROSY-DROP. *Acne rosen*. A disease, which exhibits itself in suppurating tubercles, especially about the nose and cheeks, the surrounding skin being inflamed, and of a shining rosy redness; often induced by intemperance.

ROT. In *nosology*, a disease incident to sheep, and other domestic animals, in which the liver and lungs are affected, frequently accompanied by a tendency to dropsy.

ROTATION, from *roto*, to turn. Motion round an axis, as distinguished from the progressive motion of a body revolving round another body, or a distant point, as a centre. Thus, the daily turning of the earth on its axis is a *rotation*; its annual motion round the sun is a *revolution*.

ROTATION OF CROPS. In *agriculture*, the succession of crops which are sown on the same soil, year by year. A variety of crops is found to preserve the soil more fertile than if crops of the same kind were to be continually raised upon it.

ROTARY, or ROTATORY ENGINE (called also a *Concentric engine*, and a *Steam-wheel*). An engine worked by the elastic force of the steam acting upon pistons fixed to an axis, whereby the latter is put in motion, instead of being turned by means of pistons worked in hollow cylinders, and communicated by the crank motion. Such are Avery's Rotary Engine, the Patent Rotative Disc-engine, and Bunnett and Corpe's Concentric Engine.

ROTATOR, Lat. from *roto*, to turn. A muscle, the office of which is to turn round the part upon which it acts.

ROTIFERA, Lat. from *rota*, a wheel, and *fero*, to bear. The name of an order of infusory animals. The body is oval, and gelatinous, and most commonly terminates posteriorly in a tail that is variously constructed, and anteriorly it bears a singular organ variously lobate, and denticulated edges, and of which the denticulations vibrate successively in such a manner as to give the organ itself the appearance of one or more dentated and revolving wheels.

ROT, or ROTTEN STONE. A name which has been applied indiscriminately to all the species of Tripoli; but ought, according to some, to be confined to those varieties which are most light and friable, and have a fine grain. It occurs in Derbyshire.

ROTUNDA, } Ital. from Lat. *rotundus*,
ROTUNDO, } round. A round building, as the Pantheon at Rome.

ROUZ'. In the *beau monde*, a person devoted to a life of pleasure and sensuality.

ROUGE (French). Red paint: applied more especially to a cosmetic prepared from the saffron flower or flower of the *Carthamus tinctorius*, which is also in use for dyeing silk.

ROUGH-CASTING. In *building*, the ordinary mode of finishing the plaster and lath outside work of cottages and inferior buildings. A pricking-up coat of hair-mortar is first put on, upon which, when tolerably dry, a smooth coat of the same mixture is laid, and a second workman follows with a vessel full of thinner mixture, which he throws over the work as fast as it is finished: this last operation produces an uniformity of colour.

ROUGH STUCCO. Stucco floated and brushed in a small degree with water.

ROUNDEL. In *heraldry*, a circular spot.

ROUNDHEADS. A name given to the Puritans, in contempt for the practice which prevailed among them of cropping the hair round.

ROUNDHOUSE. 1. A constable's prison.—2. In *ships*, an apartment in the after-part of the quarter-deck, having the poop for its roof: sometimes called the coach.

ROUND NUMBER. A number which ends with a cipher.

ROUND-ROBIN, Fr. *rond* and *ruban*. A written petition, memorial, or remonstrance, signed by names in a circle, so as not to shew who signed it first.

ROUND TABLE, KNIGHTS OF THE. The famous English order of knights in the time of King Arthur.

ROUF. A Scottishism for auction.

ROW'EL, Fr. *rouelle*, dim. of *rouz*. 1. In *horsemanship*, the little wheel of a spur.—2. In *farriery*, a roll of hair or silk used as an issue on horses, answering to a seton in surgery.—3. A little flat ring or wheel of plate or iron on a horse's bit.

ROW LOCK. The part of a boat's gunwale on which the oars rest in rowing.

ROW-PORT. A little square hole in the side of small vessels of war, near the surface of the water, for the use of an oar in rowing in a calm.

ROYAL. A term which as an adjective means kingly; as a noun (1.) A large size of paper; (2.) In *ships*, a small sail spread immediately above the top-gallant-sail; sometimes termed the top-gallant-royal; (3.) In *artillery*, a small

mortar; (4.) A gold coin worth 10s., formerly current in England.

ROYAL OAK. In *astronomy*, a constellation in the southern hemisphere.

ROYAL STITCH. An old operation for the cure of inguinal hernia, consisting in putting a ligature round the neck of the sac till adhesive inflammation is excited.

ROYALS. A distinctive name given to the first regiment of foot in the British service.

RUBBLE, OR RUBBLE-STONE. 1. The name given by Kirwan to Greywacke. —2. Water-worn stones.

RUBBLE-WORK. A rough description of masonry, wherein the stones are merely axed on the face, and laid in as regular courses as suits the convenience of the mason.

RUBIA. Madder. A genus of plants. *Tetrandria—Monogynia*. Name from *ruber*, red. The dyer's madder (*R. tinctorum*) is a native of the south of Europe; the wild madder (*R. peregrina*) is a native of Britain. There are four other exotic species.

RUBIAN (colour of a horse) is a bay, sorrel, or black, with a light grey or white upon the flanks, but the white or grey not predominant there.

RUBINIC ACID. An acid composed of $C_{18}H_6O_2$. It is obtained only in combination and by a laborious process upon catechuic acid. It is thus named from the red colour of its salts: *rubinus* from *ruber*, red.

RUBLE. A silver coin of Russia, value 3s. 7½d. when first struck by Peter; but that of the coinage of 1805 is only worth 3s. 2½d. Name from *rublyer*, to cut, it being the fourth part of the grivna.

RUBRIC, Lat. rubrica, from ruber, red. 1. In the *canon law*, a title or article in certain ancient law-books, so called because written in red letters. —2. Directions printed in prayer-books.

RUBUS. Bramble. A very extensive genus of plants. *Icosandria—Polygynia*. Name from *ruber*, red, in allusion to the colour of the fruit of some of the species. The raspberry, dewberry, and cloudberry, with 13 other species, are natives of Britain, among the best known of which are the common bramble. Don enumerates 56 species in all.

RUBY, from ruber, red. A transparent red variety of rhombohedral corundum, found in the alluvial soil in Ceylon, and some other oriental countries, especially Birmah. The name *ruby*, however, almost ceased to be technical, as under it are said minerals which differ very essentially in their characters, and only agree in colour so far as that is characterized by the unqualified term *red*. Thus the *oriental ruby* is a variety of sapphire generally of a coelestine red, but

passing to many other shades. When 10 carats and upwards it is highly valued, and even under that weight, when fine, it has been valued higher than diamonds of equal weight. The *spinelle* and *balaïs* are also regarded as rubies, and are highly prized, but want the richness of the oriental rubies. The ruby contains about 90 per cent. of alumina. See *CORUNDUM*.

RUD'DER, Ger. ruder, an oar. The instrument by which a ship is steered: that part of the helm which enters the water, and is attached to the stern-post by hinges, on which it turns.

RUDDER COAT. A covering of tarred canvass put round the rudder-head, to keep out the water by the rudder pole.

RUDDER PENDANTS. Strong pieces of rope by which the rudder, if unshipped, is held to the ship's quarter.

RUDDER PERCH. A small fish said to follow the rudders of ships in the warm parts of the Atlantic.

RUDDER SHOCK. A piece of wood fitting between the head of the rudder and the rudder hole, to hold fast the rudder in case of the tiller being removed.

RUDENTURE, from rudens, a rope. The figure of a rope or staff, carved or plain, with which a third part of the flutings of columns is sometimes filled.

RUDIMENT, Lat. rudimentum. 1. A first principle or element: that which is to be first learned of a science or art. —2. The origin of anything in its first form.

RUDOLPHINE TABLES. A celebrated set of astronomical tables, published by Kepler, and thus entitled in honour of the Emperor Rodolph.

RUE. In *botany*, the common Rue is the *Ruta graveolens*, a small shrubby plant, common in gardens. The Goat's-rue is a species of *Galega*; and the Wall-rue belongs to the genus *Asplenium*.

RUFF. 1. In *ornithology*, the *Tringa pugnax*, Lin., which forms the sub-genus *Machetes*, Cuv. It is about the size of a snipe, and takes its popular name from the neck being surrounded with a thick collar or *ruff* of feathers, so variously arranged and coloured, and projecting in such fantastic positions, that no two individuals can be found alike. It takes its name from the pugnacious disposition of the males, so highly manifested during the nuptial season that vast numbers of them are destroyed in mutual combat. The female is called *reeve*. —2. In *ichthyology*, a species of the Perch, described by Walton.

RUGOS, Lat. rugosus, wrinkled: applied to a leaf when the veins are tighter than the surfaces between them, so that the latter swell into inequalities.

RULE, Lat. regula. 1. In hieroglyphics, a rule, or precept, to be observed

in any art or science: a determinate mode prescribed for performing an operation, producing a certain result, &c. Every science has its rules.—2 An instrument with lines, divisions, and numerals marked upon it, of the greatest utility in mensuration. Of this instrument there are numerous varieties, adapted to particular objects. The most extensively used is the *carpenter's rule*, divided into feet and inches, and various parts and scales of proportion, for taking lineal measurements. There are various *sliding rules*, for performing computation; others furnished with tables adapted to the use of various trades and manufactures, and also for professional purposes.

RUM. A spirit distilled, in the West Indies, from fermented refuse of the cane-juice and skimmings of the sugar-cauldrons. It derives its peculiar flavour and taste from the essential oils carried over during the distillation. The *pine-apple rum* is simply common rum in which a few slices of pine-apple have been macerated, to give it the peculiar flavour of the pine-apple.

RUMEN. In *comparative anatomy*, the first stomach of such animals as chew the cud, or which are endowed with the faculty of *rumination*.

RUMEX. Dock. An extensive genus of herbaceous plants. *Hexandria—Trigynia*. So named because the leaves of some species are somewhat shaped like a *rumex* or spear. There are ten species natives of Britain, among which are the Common Sorrel, or Sour-dock, and the Sheep's-Sorrel. One species, found in the Canary Islands, and another in Africa, are called trees.

RUMINANTIA. Ruminants. Animals which chew the cud: they form the eighth order of the Mammalia (see **RUMEN** and **RUMINATION**). The Camels, Musks, Stags, Giraffe, Antelopes, Goats, Sheep, and Ox, are all ruminants.

RUMINATION. A faculty characteristic of an order of animals: the *Ruminantia*. It consists in a power of laying past the food for a time, in a receptacle adapted for it, and afterwards bringing it back into the mouth and masticating it a second time. It depends upon the structure of the stomach, which is divided into four compartments, the three first being so disposed that the food may enter into either of them.

RUCINATE. Lat. *rucinatus*, notched. Applied to leaves which are cut into several acute transverse segments, pointing backwards.

RUNES. Germ. *Runen*. The ancient alphabetical letters peculiar to the northern nations.

RUNIC. An epithet applied to the letters and language of the ancient Goths: from *runa*, anything mysterious.

RUN'NER. 1. One of the stones of a flour-mill.—2. A sarment or shooting twig.—3. A thick rope, used to increase the mechanical power of a tackle.—4. One of the timbers on which a sleigh slides.

RUN'NING-RIGGING denotes all that portion of a ship's rigging which passes through the blocks, to dilate, contract, or traverse the sails: in distinction from *standing-rigging*.

RUN'NING FRUSH or **THRUSH.** An imposthume, or ulcer, that gathers on a horse's frog, and sometimes causes it to fall off.

RUN'NING TITLE. In *printing*, the title of a book continued from page to page, on the upper margin.

RUP'EE. A silver coin of the East Indies, value from 2s. 4d. to 2s. 6d. sterling. The name is the Sanscrit word for silver.

RUP'ERT'S DROPS, *Lachrymæ Batavicae*. Glass drops, with long slender tails, which burst to pieces on breaking off any part. They are made by dropping glass while in a state of fusion into cold water.

RUP'TURE. In *surgery*, see **HERNIA**.

RUS'CUS. Butcher's-Broom. A genus of trees and shrubs. *Diacia—Monadelphia*. Name, *à russo colore*, from the carnation-colour of the berries. The Prickly Butcher's-Broom (*R. aculeatus*) is the British type. The Alexandrian Laurel is a native of the Continent.

RUS'SIA ASHES. Impure potash, imported from Russia.

RUS'SIA COMPANY. A regulated company for conducting the trade with Russia, incorporated by charter of Philip and Mary, and sanctioned by Act of Parliament in 1566.

RUS'SIA LEATHER. The tanned hides of oxen and other bovine animals, denominated *yousts* or *juffs* by the Russians, on account of their being manufactured in pairs. It is soft, has a strong prominent grain, a great deal of lustre, and a powerful and peculiar odour. Its colours are red and black; the former is best, and is largely used in this and other countries for bookbinding, for which it is superior to every other material.

RUST, Sax. rust. The orange-red coating of peroxide which forms on the surface of iron, when exposed to air and moisture. This is rust properly so called, but the oxides of some other metals, as copper, are occasionally denominated *rusts*.

RUS'TIC. In *architecture*, a mode of building in imitation of nature; the stones being only smoothed on the sides where they are intended to join, and the outer surface left entirely rough. The faces of the stones, in *rustic work*, are now, however, generally hatched or picked with the point of a hammer; and

building of this sort forms the *rustic order*. When the margins of the stones are reduced to a plane parallel to the plane of the wall, the intermediate parts being an irregular surface, it is denominated *frosted rustic work*; and when the intermediate parts are so worked as to have the appearance of being worm-eaten, it is *vermiculated rustic work*. When the faces of the stones are smoothed, and made parallel to the surface of the wall, and have the margins cut away to an angle of 135° with the face of the stone, it constitutes *rustic chamfered work*.

RUTILE. } A brownish or yellowish
RUTILITE. } red (sometimes nearly black) ore of titanium. It occurs regularly crystallised, massive, disseminated, in grains, and in flakes, in Scotland, in the granite of Cairngorum. Lustre often metallic, scratches glass, and is infusible before the blowpipe. Sp. gr. 4.2 to 4.4. It takes its name from its red colour.

RYDER. In law, for *rider*. A new clause to be added to a bill on its third reading. It is done by tacking a separate piece of parchment on the bill, which piece is the *ryder*.

RYE. The bread-corn of Germany and Russia, being more easily cultivated, and a more certain crop than wheat. The common rye is the *Secale cereale*, and the spurred rye, the *Secale cornutum* of botany. Neither are much grown in England.

RYE-GRASS. The *Lolium perenne*, of which there are about fifteen varieties cultivated in Britain, all of which are perennial.

RYOT. A peasant of Hindostan. The ryots rent the land by a lease, which is considered as perpetual, and at a rate fixed by ancient surveys and valuations.

S.

S, the nineteenth letter of the English alphabet. It stands as an abbreviation for *societas*, society, or *socius*, fellow, as in F.R.S., Fellow of the Royal Society; and for *south*, on compass cards, &c. In *Italian music*, **S** signifies *solo*. In *medical prescriptions*, **S. A.** means *secundum artem*, according to the rules of art; and **s** or **ss** immediately following any quantity, imports *semis* or half.

SABA'OTH (Heb.) signifies hosts or armies.

SABBATA'RIANS. A sect of Christians, who maintain that the Jewish sabbath was not abrogated, and ought to be observed.

SAB'BATH DAY'S JOURNEY. About two-thirds of an English mile.

SABBATICAL YEAR was every seventh year in the Jewish economy. Observed with the same respect as the seventh day or sabbath.

SABEL'LIANS. Followers of Sabellius, a philosopher of Egypt, in the third century, who openly taught that there is one person only in the Godhead, and that the Word and Holy Spirit are merely virtues, emanations, or functions of the Deity.

SA'BIANISM. That species of idolatry which consists in worshipping the sun and stars, called emphatically the *hosts of heaven*: hence the term, from the Chaldaic word for *host* or *army*. Sabianism is the oldest idolatry on record, and it exists to the present day in Persia (Chaldea), whence it was imported into Europe.

SA'BIA'NS. A Christian sect; called also Christians of Saint John.

SA'BLE. 1. An animal of the weasel tribe, the *mustella*, or *Vicerra zibellina*, Lin., found in the northern latitudes of America and Asia, and much hunted for the sake of its fur. Its colour is usually of a deep glossy brown, sometimes black, rarely yellow, and more rarely white. It resembles the martin, and burrows in the ground.—2. In *heraldry*, the tincture black, represented in engraving by perpendicular and horizontal lines crossing each other.

SA'BINE. A species of juniper (the *Juniperus sabina*), so named after the Sabines, whose priests used it in their religious ceremonies. It yields the oil known as oil of sabine.

SAC. In *English law*, the privilege enjoyed by the lord of a manor, of holding courts, trying causes, and imposing fines.

SAC'CADE (French), a jerk. In *horsemanship*, a sudden and violent check of a horse, by drawing or twitching the reins on a sudden, and with one pull; a correction when the horse bears heavy on the hand.

SACCHAR'IC ACID, Lat. *saccharum*, sugar. An acid product formed during the action of nitric acid on sugar.

SACCHAR'OID, from *σάκχαρ*, sugar, and *ειδος*, form; like sugar. A term applied to rocks which have a texture resembling that of loaf sugar.

SACCHAROM'ETER, from *σάκχαρ*, sugar, and *μετρον*, measure. An instrument used by the excise officers for ascertaining the strength of wort, or the quantity of sugar it contains.

SAC'CHARUM, the Latin word for sugar. *Σάκχαρον*, the oriental name *sakar*, from Arab. In *botany*, the sugar-cane: a genus of perennial plants of five species. *Triandria—Digynia*. Natural order *Gramina*. The species from which sugar is obtained is the *S. officinarum*: it is common to the warm parts of America and Asia.

SACCHOLACTIC ACID. A name formerly given to the *mucic acid* (q. v.), from *saccharum*, sugar, and *lac*, milk: acid obtained from the sugar of milk.

SAC'OPHARYNX. The generic name of a fish, discovered by Mitchell, in the Atlantic Ocean, floating on the surface, by the dilatation of its throat: hence the name from *sacco*, to strain, and *pharynx* (q.v.).

SAC'ER MOR'BUS (Lat). Sacred disease. An old term for epilepsy and other disorders.

SACK. 1. Sax. *sacc*, sack. A large bag made of coarse hempen cloth (sacking), used for conveying corn, wool, hops, &c., in. A sack of wool in England is 308 lbs.; in Scotland it is 384 lbs. A sack (more commonly a bag) of cotton, varies from 150 lbs. to 400 lbs.—2. Fr. *sec*, *seche*, dry. The name of a wine used by our ancestors, called by Howell in his French and English Dictionary (1650) *Vin d'Espagne*, *vin sec*, and was probably the wine called *dry mountain*. By some, however, it is taken to be Rhenish, and by others to be Canary wine.—3. Wel. *segan*, a cloak of a square form, worn by our ancestors. It was originally made of skin, afterwards of wool.

SACK'UT. A musical instrument of the wind kind. It is a sort of trumpet, which is so contrived that it can be lengthened or shortened according to the tone required; hence called *schuif-trompet* by the Dutch. The name is compounded of *sacco*, to strain, and *buxus*, a box.

SAC'RAMENT. 1. The military oath taken by Roman soldiers to obey their commanders.—2. In *theology*, the name of the distinctive ceremonies of the Christian faith, baptism, and the Lord's supper.

SACRAMENTA'LIA. Certain sacramental offerings formerly paid to the parish priest at Easter, &c.

SAC'RISTY, Lat. *sacer*, sacred. In *architecture*, an apartment attached to the church, in which the services, &c., are deposited.

SAC'RO. A prefix for *sacrum*, used in anatomy.

SAC'RUM, Lat., from *sacer*, sacred. In *anatomy*, the *os sacrum* is that bone which forms the basis of the vertebral column, and derives its name from its being offered in sacrifice by the ancients.

SAD'DA. A work in the Persian tongue, being a summary of the *Zendavesta* or sacred books.

SAD'DLE, Sax. *sadel*. 1. The seat adapted to a horse's back.—2. In *ships*, a cleat or block of wood, nailed on the lower yard-arms, to retain the studding-sail booms in their place. The name is also given to other circular pieces of wood.

SAD'DLE-SHAPED. In *geology*, an epithet applied to strata when bent on each side of a mountain, without being broken at the top.

SAD'DUCEES. A sect of Deists among the ancient Jews, who denied the resurrec-

tion, a future state, and the existence of angels.

SAFE CONDUCT. A special pass or warrant of security, under the Great Seal, to protect a person in an enemy's country, or in a foreign country.

SAFETY LAMP. The miner's lamp, invented by Sir H. Davy, to prevent the fatal explosions which have arisen from use of the common lamp in coal mines. It transmits its light through a cylinder of iron or copper wire-gauze, the apertures of which are about a thousand in the square inch. It is based upon the fact, that carburated hydrogen is not ignited through wire-gauze; but, according to the old construction, the safety-lamp was no protection against a mixture of pure hydrogen and atmospheric air. This has led to certain improvements, as the covering of the cage with glass; and Messrs. Upton and Roberts's new patent safety-lamp is perhaps the most

complete of the kind. The figure shows the original Davy-lamp, of which all the others are merely modifications. Its principal parts are a brass cistern containing the oil, the rim on which the wire-gauze cover is fixed, an aperture for supplying the oil, a central aperture for the wick, and the wire-gauze cylinder.

SAFETY-VALVE. The valve usually employed in the boilers of steam-engines to prevent explosions. It is constructed in

such a manner that the power of the steam opens it, before it is of a higher pressure than the boiler is calculated to bear, whereby the surplus power escapes, and the valve again closes.

SAFFLOWER. Bastard Saffron. Called also *Spanish Red*, and *China Lake*. The red fecula separated from the flowers of the *Carthamus tinctorius*, an annual plant, common in warm climates. Used in dyeing, but is fugitive. The *vegetable rouge* is extracted from safflower, by dissolving it in carbonate of soda, and precipitating the rouge by citric acid.

SAFFRON, Fr. and Ger. *saffran*. 1. A filamentous cake, prepared from the stigmata, with a portion of the style, of the flowers of the *Crocus sativus*, a perennial bulbous plant, cultivated in England, and other parts of Europe. It has a rich, deep orange-red colour, an agreeable smell,

with a bitter pungent taste. It is used by painters and dyers, and also in medicine, and often to colour cheese and butter.—2 In botany, see *CROCUS*, *CARTHAMUS*, and *COLCHICUM*.

SAGA. The general name of the accounts of the ancient history and mythology of the northern European races.

SAGAPENUM. A concrete gummi-resinous juice, the produce of an unknown umbelliferous plant, which grows in Persia, where it is named *Sugabenage*. Its virtues are similar to those of assa-fœtida, but weaker.

SAGGER. A clay used in making the pots in which earthenware is baked.

SAGGING TO LEEWARD. When a ship makes a considerable lee-way.

SAGITTAL, Lat. sagittalis. Arrow-shaped: *sagitta*, an arrow. That suture which unites the two parietal bones is named the *sagittal suture*.

SAGITTARIUS. The Archer. In astronomy, one of the signs of the zodiac, the ninth in order, marked ♐.

SAGITTATE, Lat. sagittatus. Arrow-shaped: applied to leaves, &c., which are triangular, and hollowed out much at the base.

SAGO, Malay and Javanese, saju. A species of meal or granulated paste, imported from the Eastern Islands, where it supplies the principal part of the farinaceous food of the inhabitants. It is the pith or medullary part of the *Metrozylon sago*, a tree which attains to a height of 30 feet, and from 18 to 22 inches diameter.

SAGOU'INS. Monkeys of America, which have slender tails, not prehensile, and of which the teeth do not project. They constitute the genus *Callithrix*, Geoff. The masked monkey, *C. personata*, Geoff., is a well-known example.

SAGUM. The military dress of the Roman magistrates and dignitaries: a cloak fastened at the breast with a clasp.

SAGUS. The Sago-palm. A genus of palms of the East Indies, and Eastern Islands. *Monæcia*—*Hexandria*.

SALIC. A Turkish or Grecian vessel, very common in the Levant. It is a sort of ketch, which has no top-gallant-sail, nor mizzen-topsail.

SAIL. 1. A sheet of canvas extended on a stay, yard, &c., for the purpose of receiving the pressure of the wind, and thereby communicating the motion of the wind to the vessel, machinery, &c., to which it is attached. The sails of a ship derive particular names from the mast, yard, or stay, upon which they are extended.—2. *Sail* is also applied to a vessel seen at a distance under sail, as a *sail N.E.*, i.e., a ship on the N. E. point of the compass.

SAILING, in navigation, is distinguished by different names, according to the

principles upon which the computations are founded, as *plane sailing*, *middle latitude sailing*, *Mercator's sailing*, *globular sailing*, &c.; the last named properly comprehends *parallel*, *Mercator*, *middle latitude*, and *great circle sailing*.

SAJOUS. A division of American monkeys, generally called the *weeping monkeys*, from the plaintiveness of their voice. Their dispositions are gentle and mild; their motions quick and light; and they are easily tamed.

SAL. The Latin word for salt, from *sal*, salt.

SALAMAN'DRA. Salamanders. A genus of Batrachians, divided into two subgenera; the *Salamandra*, Laurent, comprehending the terrestrial salamanders; and the *Iriton*, Laurent, comprising the aquatic salamanders. The salamanders have nearly the form of the lizard, and were hence placed in the genus *Lacerta* by Linné. The vulgar story of their being able to endure fire was propagated by Aristotle and Pliny; but there does issue from the skin a quantity of milky fluid, when the animal is irritated, and it sometimes happens that this is sufficient to extinguish a weak fire, and allow the animal to escape. Skeletons of a salamander, three feet in length, have been discovered among the schist of Eningen: one of them is the pretended fossil man of Scheucher.

SAL AMMO'NIAC. Muriate of ammoniac. The *Secret sal ammoniac* is sulphate of ammoniac.

SALAM-STONE. A variety of sapphire, which consists of small transparent crystals, generally six-sided prisms, of pale-reddish and bluish colours. *Salam* is an oriental word for peace or safety.

SAL'EP, said to be a Turkish word, written also *salop*, *saloop*, and *saleb*. A powder prepared from the dried roots of the *Orchis mascula*, a plant which grows in Persia, Asia Minor, &c., and is said to thrive in England, but is not cultivated to any extent. Salep is used as an article of diet: it is light, bland, and nutritious, but little known.

SAL'ICINE. A bitter febrifuge substance, obtained in white pearly crystals from the bark of some species of the willow, especially from the bark of the white willow (*Salix alba*), and aspen tree (*Salix helix*).

SAL'IC LAW, Sax. salica. A fundamental law in France, by virtue of which males only can inherit the throne. The origin of the word *salic* is not ascertained.

SALIENT, Lat. saliens. 1. Leaping: moving by leaps.—2. In fortification, &c., projecting. Thus, a *salient angle* points outwards, and is opposed to a *re-entering*, which points inward.—3. In heraldry, an epithet applied to a beast of

prey, as a lion, when its fore-legs are raised in a leaping posture.

SAL'IFIABLE, from *sal* and *facio*, to make. Capable of becoming a salt, or of combining with an acid to form a salt.

SAL'ILI. The Roman flamens.

SAL'IVA. So called à *salino sapore* from its salt taste, or from *σάλος*, spittle. The fluid which is secreted by the salivary glands into the cavity of the mouth.

SAL'IVARY GLANDS. Those glands which secrete the saliva. They consist of three pairs: the *parotid glands*, the *submaxillary glands*, and the *sublingual glands*.

SAL'IX. The Willow: a genus of trees, comprising about 200 species. *Diacia*—*Diandria*. Name from Hebrew, *sala*? Don enumerates 73 British species. Almost all the species are hardy.

SAL'LY, Fr. *saillic*. In carpentry, the end of a piece of timber, when cut across the fibres with an interior angle formed by two planes.

SAL'LY-PORT. 1. In fortification, a postern gate, or passage, under ground, from the inner to the outer works, such as from the higher flank to the lower, or to the tenailles, or to the communication from the middle of the curtain to the ravelin.—2. A large port on each quarter of a fire-ship, for the escape of the men into boats when the train is fired.

SAL'MO. Salmon. A genus of fish, comprehending the salmon and trout. Dr. Parnel describes 11 species in his prize essay on the Natural History of the Fishes of the Firth of Forth. See **SALMON**.

SAL'MON. A well-known and highly-valued fish, the *Salmo Salax*, Lin., Cuv., Yarr., &c. It inhabits the seas around Great Britain, and extends to the North of Europe and Asia. It is said to grow sometimes to the weight of 80 lbs., but 20 lbs. appears to be nearly the average weight.

SALMON'IDÆ, } A family of abdominal
SALMON'IDES, } fishes, of which the salmon is the type.

SAL'MON-TROUT. The *Salmo Trutta*, Yarr.; called also *Salmon-bull trout*, and at Berwick it is occasionally named *Whiting*.

SALO'ON, It. *salone*, from *sala*, a hall. A lofty spacious hall, usually vaulted above, with two stages of windows. It is common in the palaces of Italy, whence it came to France, and from France to England.

SALPRUNEL'LA. Fused nitrate of potash cast into cakes, balls, or cylinders.

SALSO'LA. Saltwort. A genus of plants. *Pentandria*—*Digynia*. Named from the saline properties of some of the species, as the *S. kali*, which affords the mineral alkali soda; as do also the *S. soda*, the *S. sativa*, and some others.

SALT, from *sal*. 1. In chemistry, a com-

pound, in definite proportions, of an acid with an alkali, earth, or metallic oxide. When the proportions of the constituents are so adjusted that the resulting substance does not affect the colour of infusion of red cabbage, it is called a *neutral* salt. When the predominance of acid is evinced by the reddening of the infusion the salt is said to be *acidulous*, and the prefix *super* or *bi* is used to indicate this excess of acid. If, on the contrary, the infusion be turned to green, the salt is *alkaline*, and takes the prefix *sub*. The discoveries of Sir H. Davy have, however, rendered it impossible to include all salts under one category: there are a vast number of salts, formed by the combination of acids with salifiable bases, but the chlorides, bromides, cyanides, fluorides, iodides, carburets, phosphurets, sulphurets, &c., compose a distinctly different order of salts, as containing neither an acid nor an alkali; e.g. crystallised culinary salt is a chloride of sodium, consisting of chlorine and the metal sodium. A solution of a chloride becomes, however, a real salt in the old sense of the term, namely, a hydrochlorate; a portion of the water being decomposed, the hydrogen unites with the chlorine, forming hydrochloric acid, and the oxygen unites with the base, forming an oxide.—2. The name *salt* is applied particularly, and with qualitative names. *Culinary*, *Rock*, or *Sea salt* is chloride of sodium: *Bitter*, *Purgine*, or *Epsom salt* is sulphate of magnesia: *Glauber's salt* is sulphate of soda: *Salt of hartshorn*, or *sal volatile* is carbonate of ammonia: *Sedative salt* is boracic acid: *Rochelle salt* is tartrate of potash and soda: *Salt of silvius* is acetate of potash: *Salt of sorrel* is oxalate of potash: *Microcosmic salt* is a triple phosphate of soda and ammonia: *Spirit of salt* is an old name for hydrochloric acid: *Salt of tartar* is carbonate of potash: *Salt of lemons* is citric acid: *Salt of saturn* is acetate of lead: *Salt of amber* is succinic acid: *Salt of vitriol* is sulphate of zinc: *Wonderful salt* is sulphate of soda: *Perlate salt* is phosphate of soda: *Salt of wisdom* is a triple muriate of mercury and ammonia.

SALTATO'RIA. A family of orthopterous insects, remarkable for the largeness of their thighs, and for their spinous tibiae, which are adapted for *saltation*. The family is composed of the genus *Gryllus*, Lin., comprising *Grasshoppers*, *Crickets*, *Katy-dids*, &c.

SALT'IER, Fr. *sautoir*, from *sauter*, to leap. In *heraldry*, one of the eight great ordinaries; a St. Andrew's cross.

SALTPE'TRE. Nitre, or nitrate of potash: salt and *πετρος*, a stone. It is found native in India, Spain, Naples, and other parts.

SALUTE. In *military affairs*, a discharge of fire-arms (great or small guns) in honour of some person of distinction. A salute is also sometimes given by lowering the colours, beating drums, &c.

SALVAGE, Fr. from Lat. *salvus*. In *commerce*, a reward or recompense allowed by law for the saving of a ship, goods, &c., from loss at sea by shipwreck, enemies, pirates, &c.

SALVATELLA, Lat., from *salus*, health. In *anatomy*, a vein which runs along the little finger, unites upon the back of the hand with the cephalic of the thumb, and empties its blood into the external and internal cubital veins.

SALVIA. Sage. A genus of plants comprising upwards of 100 species. *Diandria—Monogynia*. The Meadow-sage and Ver-vain are the only British types.

SAL VOLATILE. Volatile salt. Sesquicarbonate of ammonia.

SAMBU'CUS. The Elder: a genus of trees. *Pentandria—Trigynia*. Name from Heb. *Sabuc'ca*, a musical instrument formerly made of elder-wood. The Dane-wort or Dwarf Elder and the Black Elder (of which last there are several varieties), are the only British types. All the species are hardy.

SA'MIAN EARTH. A marl found in the Isle of Samos, and formerly used in medicine as an astringent.

SA'MIAN STONE. A sort of polishing-stone, brought from the Isle of Samos. Used by goldsmiths.

SA'MIEL, } A hot and destructive wind,
SIMOO'M. } peculiar to the deserts of Arabia. It is common in the months of July and August. The term is Arabic, from a root signifying to poison, and has now come to signify the *destroyer*.

SAM'PHIRE. In *botany*, see CRITHMUM.

SAN'SON'S POST. A strong pillar resting on the keelson, and supporting a beam of the deck over the hold.

SAN-BENITO. 1. A sort of linen gown, painted with hideous figures, and worn by persons condemned by the Inquisition. —2. A coat of sackcloth worn by penitents on reconciliation to the church.

SANCTIFICATION. In *theology*, the state of holiness of mind which succeeds justification.

SAND (Saxon). The name given to flint or quartz finely divided by the action of water, but not reduced to powder: small particles of siliceous matter not cohering together.

SANDAL or **RED SAUNDERS WOOD,** Fr. *santal*. 1. The wood of the *Pterocarpus santalinus*, a tree which grows in Ceylon, and on the coast of Coromandel. It is a dye-wood, the colouring matter of which is named *santaline*, and is of a resinous nature. —2. A kind of slipper worn by the *accidens*

SAN'DALIFORM. Sandal, or slipper-like. Applied to the nectary of some plants.

SAN'DARACH, Lat. *sandaracha*, from Arab. *saghad narak*. 1. A resinous substance, the produce of the *Thuja articulata*, a small tree which grows in the northern part of Africa. Used as pounce-powder for strewing over erasures in writing, and in varnishes, &c. —2. A name of realgar or sulphuret of arsenic.

SAN'DEVER, } Glass-gall. The whitish
SAN'DIVER. } scum from the materials of glass while in fusion. A similar substance is thrown out in eruptions of volcanoes.

SAND-PREY, } The mud-lamprey or
SAND-PRIDE. } pride, *Ammocetes branchialis*, Cuv., Yarr. It rarely exceeds three inches, and is considered peculiar to the rivers of England and Scotland.

SAND-SMELT. A fish, the *Atherina presbyter*, Cuv. and Yarr., called also atherine.

SAND'STONE. Free-stone. A name common to all stones composed of grains of sand agglutinated together. The grains are sometimes very fine, at other times very coarse, forming conglomerates, pudding-stones, breccias, &c.

SAN'GIAC. A Turkish governor of a province.

SANGUIFICA'TION, from *sanguis*, blood, and *facio*, to make. The natural function of the body, by which the chyle is changed into blood.

SANGUIN'ARINE. An alkaline substance of a bitter taste, obtained from the root of the *Sanguinaria canadensis*, or Canadian blood-wort.

SANGUISOR'BA. Great Burnet. A genus of perennial plants. *Tetrandria—Monogynia*. Named from the blood-red colour of its flowers. The Italian *pimpinella* is the British type.

SANGUISU'GA. The leech (*sanguis*, blood, and *sugo*, to suck). The common or medicinal leech has been separated from the genus *Hirudo*, Lin., and thus generically named by Savigny.

SAN'HEDRIM, L. Lat. *synedrium*, Gr. *συνεδριον*, from *συν* and *ἔδρα*, a seat. The great council of seventy elders among the Jews. This council heard appeals from inferior courts and had the power of life and death.

SAN'NIES (Latin). A thin unhealthy discharge, with or without admixture of blood or pus, from fistulae or ill-conditioned sores.

SAN'SCRIT. The ancient language of Hindostan, from which are formed all the modern languages or dialects of the great peninsula of India. It is from the same stock as the ancient Persic, Greek, and Latin, but is, like these, a dead language. According to H. T. Colebrooke, *Sanscrit* signifies the polished dialect.

SANS-CULO'TTES, Fr., from *sans*, without, and *culotte*, breeches. The name given in derision to the popular party, by the aristocratical, in the beginning of the French revolution of 1789. As the fierce principles of democracy prevailed, the name became honourable, and *sans-culotism* became synonymous with genuine republicanism.

SANT'ALINE. The colouring matter of the red Saunders-wood, discovered and so named by Pelletier in 1814. See **SANDAL**.

SANT'ALUM. The generic name of the white and yellow Saunders: *S. album* of the East Indies. Class *Tetrandria*: order *Monogynia*. Name corrupted from the Arabic *zândâl*. It is aromatic.

SANTONINE, } A crystallisable sub-
SANTONIC ACID. } stance possessing acid properties, discovered by Köhler and Alms in the seeds of the *Artemisia santonica*, or southernwood.

SAP. 1. Sax. *sæp*. The sap of vegetables is a watery mucilaginous liquid, often strongly saccharine, so as even to yield a large quantity of sugar, and to furnish a very strong fermented liquor. It varies considerably in its composition. Also the albumen of a tree.—2. Fr. *saper*, to dig. In sieges, a trench for undermining, or an approach made to a fortified place by digging, or under cover. The single sap has only one parapet, the double has one on each side, and the flying is made with gabions, &c. In all saps traverses are left to cover the men.

SAPAJOU', } In zoology, the sapajous form
SAPAJOU'. } a division of Linnaeus' great genus *Simia*, comprehending such of the American monkeys as have prehensile tails. They have the head and the projection of the muzzle very moderate. Facial angle 60°.

SAPAN'-WOOD. A dyewood obtained from a species of the same tree which yields the Brazil-wood (the *Cassalpinia cavan*, Linn.). It is a native of Siam, Pegu, the Philippine Islands, and some other parts. The name is corrupted by the French from Japan, whence they procured the wood in old times (?)

SAP GREEN. The juice of the berries of the buckthorn, used as a pigment by water painters.

SAPH'E'NA, σαφη, visible. The large vein of the leg which ascends over the external angle.

SAPIEN'TIE DEN'TES. Wisdom teeth. The two inmost of the *dentes molares* of the upper jaw, one on each side: so named because they do not appear till the individual has attained the "years of discretion."

SAPIN'DUS. The soap-berry nut, or tree. A genus of trees and shrubs. *Ocoteandia*—*Trigynia*. Name contracted from *Sapo Indus*, Indian soap, the rind of the

fruit serving, instead of soap, to cleanse linen. India and warm parts of America.

SAPONA'RIA. The soapwort. A genus of herbaceous plants. *Decandria*—*Digynia*. Named from *sapo*, soap, because its sap, like soap, cleans linen. The common soap or bruisewort is a native of Britain.

SAPONULE, Lat. *saponulus* from *sapo*, soap. A combination of a volatile or essential oil with a base, as saponule of ammonia, &c.

SAPPERS AND MINERS, ROYAL. The non-commissioned officers and privates of the body of Royal Engineers.

SAPPHIRE, Lat. *sapphirus*, Gr. σάπφειρος, from Arab. *safara*, to shine. A precious stone, next in hardness to the diamond, consisting of alumina coloured with oxide of iron. Its colours are blue and red, sometimes white, green, and yellow. It varies from transparent to translucent, and occurs in blunt-edged pieces, in roundish pebbles, and crystallised. Found in Bohemia, Saxony, France, &c.; but the red sapphire (called oriental ruby), is only found in quantity in Ava. It is highly valued.

SAP WOOD. The external part of the wood of exogens.

SARABAND, Fr. *sarabande*, Sp. *sarabanda*. A dance and tune in vogue in Spain, and said to be derived from the Saracens.

SAR'CENET, from *sarcen*, silk. A sort of thin light silk fabric.

SAR'COCARP, from σαρκ, flesh, and καρπος, fruit. The fleshy part of certain fruits placed between the epicarp and endocarp. The sarcocarp is that part which is usually eaten.

SARCOCE'LE, from σαρκ, flesh, and κηλη, a tumour. A disease of the body of the testicle, in which it is converted into a fleshy-like substance. There are many varieties.

SARCOCOL'LA, from σαρκ, flesh, and κολλα, glue. A sub-viscid, sweetish, and somewhat nauseous gum-resin, the produce of the *Penæa mucronata*, which grows in Persia and Arabia.

SARCOL'OGY, from σαρκ, flesh, and λογος, discourse. The branch of anatomy which relates to the softer parts of the body.

SARCO'MA, from σαρκωма, cornetum reddo. A fleshy tumour or excrescence.

SARCOPH'AGUS, from σαρκ, flesh, and φάγω, to eat. A tomb or coffin made of one stone. According to Pliny, it was originally the name of a stone (a variety of limestone), found in the Troad, and which, from its powerful caustic qualities, was selected for the construction of tombs. It is said to have perfectly consumed the flesh of human bodies, which were buried in it, in the space of forty days. From its

frequent use for this purpose the name became applied to the tomb itself.

SARD, } A mineral: a variety of car-
SARDE, } nelian which displays on its
SARDON. } surface a rich reddish brown,
 but when held between the eye and the
 light appears of a deep blood-red colour.
 So named from its being found in Sardinia.

SAR'DEL, } 1. A precious stone, named
SAR'DINE. } from Sardis in Asia Minor.
 2. In *ichthyology* (see **SARDINE**).

SAR'DINE. A fish of the herring tribe, but smaller. The French often cure sardines with red brine, and then name them *anchovies sardines* (anchovies).

SARDON'IC LAUGH. A convulsive involuntary laughter or grin, which gives a peculiarly horrible aspect to the countenance. So named because it is said to be produced by eating a species of ranunculus, which grew around certain fountains of Sardinia. It is chiefly observed in cases of tetanus.

SAR'DONYX, σαδόνυξ. A variety of calcedony differing from carnelian only in its colour, which is reddish-yellow approaching to orange. It was much used by the ancients, for engraving upon, on account of its combining hardness and tenacity.

SAR'MENT, Lat. *sarmentum*. A twig, runner, or training stalk.

SARMENTA'CEOUS, having sarments. Used also synonymously with sarmentose.

SARMENTOSE, Lat. *sarmentosus*, trailing. Applied to creeping stems. See **SARMENT**.

SAR'PLAR. A sarplar of wool is a sack containing 80 tods: a tod containing 2 stones of 14 lbs. each.

SAR'RASINE. In *fortification*, a sort of portcullis, called also a *herse*. It is hung by a cord over the gate of a town, fortress, &c., and let down in case of surprise.

SARSAPARIL'LA. In *pharmacy*, the root of the *smilax sarsaparilla*, a plant which grows in South America, and some of the West India Islands. The name is Spanish, *zarza*, a briar, and *parilla*, a little vine: the thorny little vine.

SARTO'RIOUS, Lat. from *sartor*, a tailor. In *anatomy*, the Tailor's muscle: a flat, slender muscle, which is situated immediately under the teguments, and extends obliquely from the upper and anterior part of the thigh to the upper, anterior, and inner part of the tibia. It is the longest muscle of the human body.

SAS'SAFRAS. A species of laurel, the *Laurus sassafras*, so named from the river Sassefras in America, on the banks of which it grows abundantly. The wood, root, and bark have an aromatic taste and a fragrant odour. It is used only in the materia medica.

SAS'SEPARINE. A vegetable principle obtained from the root of the *smilax sarsa-*

parilla, or sarsaparilla of the apothecaries. It is thus named by Thubœuf, but Batka made some experiments upon it and gave it the name of *parillinic acid*. Pallota called it *parigline*, and Folchi named it *smilacine*.

SAS'SOLINE. Native boracic acid, so named from its being found incrustated near the warm spring of Sasso, in Tuscany.

SAS'TRA. A Hindoo book containing sacred ordinances.

SAT'AN (Heb.). An enemy or adversary. The equivalent term in Greek is *διαβολος*, whence the word *devil*.

SAT'ELLITE, Fr. and It., from Lat. *satelles*. A secondary planet, or moon: a small planet revolving about another. Eighteen satellites have been discovered in the solar system, of which the earth has one (the moon), Jupiter four, Saturn seven, and Uranus six.

SAT'IN, from an oriental root. The name of a silk stuff first imported from China. It is woven with five-leaved heddles, and a corresponding number of treddles, and is distinguished by one side of it having a fine glossy surface, four-fifths of the warp being always shown on that side.

SAT'IN-SPAR. A fibrous variety of calcareous spar, which when polished has a lustre resembling satin. Found in Cumberland.

SAT'RAP. The Greek name of the governors of provinces, under the Persian kings, before the conquests of Alexander.

SATUR'ATION, from *satur*, full. A term employed in chemistry to express that state of a body when it has taken its full dose, or chemical proportion, of any other with which it can combine. Thus water is saturated with a salt when it has dissolved its full quantity; an acid is saturated by an alkali in the state of a neutral salt.

SATUR'EIA, } The *Savory*: a genus of
SATUR'EJA. } plants. *Didynamia*—*Gymnospermia*. Name from *σατυροι*, the satyrs, because it is said to make those who eat of it lascivious. The summer savory is cultivated in our gardens for culinary purposes.

SAT'URN. 1. In *mythology*, one of the oldest and principal deities: the son of Cœlus and Terra (heaven and earth), and the father of Jupiter. He answers to the Greek *Xevros*, Time.—2. In *astronomy*, the sixth, and, excepting Uranus, the most distant primary planet. Diameter 79,042 miles; revolution on its axis 10 hours, 16 minutes, and round the sun 10,746 days; diameter of orbit 900,000,000 miles. Saturn has 7 satellites, and is encompassed besides by an opaque ring.—3. The old chemical name of lead.

SATURNA'LIA. In *antiquity*, feasts cele-

brated by the Romans, in honour of Saturn, during which solemnity the slaves were reputed masters.

SA'TURN'S RING. In *astronomy*, a thin, broad, opaque ring, 204,883 miles in diameter, encompassing the body of the planet Saturn, like the horizon of an artificial globe. It appears double when examined through a good telescope.

SA'TYR. In *mythology*, a sylvan deity, represented as half man and half goat, with horns on his head, hairy body, and the feet and tail of a goat. The Satyrs (*Zatyræ*) were chiefly distinguished for lasciviousness, raillery, and riot.

SAUCISSE, Fr. for sausage. In *military affairs*, a long pipe made of cloth well pitched, or of leather filled with powder, and extending from the chamber of a mine to the entrance of the gallery: serving to communicate fire to mines, caissons, bomb-chests, &c.

SAUCISSON (French). In *fortification*, saucissons are faggots made of thick branches of trees, bound together, to cover the men while exposed to the enemy's fire, and also to repair breaches, stop passages, make traverses over wet ditches, &c.

SAUNDERS, see SANTALUM and PTEROCARPUS.

SAURIA, from *σαῦρες*, a lizard. The second order of the class Reptilia, comprising the six families, Crocodilida, Lacertinida, Iguanida, Geckotida, Chamaeleonida, and Scincoidea.

SAURIAN. An animal belonging to the order Sauria. Many fossil skeletons of Saurians have been found, some of enormous length, the oldest in the lower part of the secondary strata, but peculiarly abundant between the eras of red sandstones and green sands. Some of these ancient saurians appear to have been marine; others amphibious; others terrestrial; and some were capable of flying.

SAUR-KRAUT. Cabbage preserved in brine: an article of food common in Germany, like our pickled cabbage.

SAUR'OID, from *σαῦρος*, a lizard, and *οἶδος*, likeness: lizard-like. An epithet used to distinguish a group of fishes of the carboniferous and secondary formations.

SAUS'SURITE. A crystallised compound of serpentine and jade or felspar, so named after Saussure, who first described it. Its usual colours are greyish white, and green. It is sometimes included under nephrite.

SAVAN'NAHS. Those vast plains watered by the Missouri and the Mississippi.

**SA'VINE, } In botany, the *Juniperus sa-*
SA'VIN. } bina, common in the south of Europe. The red cedar of America is**

also sometimes called savin, from its resemblance to the European plant.

SAW, Sax. saga. A cutting instrument. The saws for cutting wood, ivory, &c., have one edge, formed into regular teeth, which act on the principle of the wedge in cutting; those for cutting marble are of soft iron, not serrated. Saws are made of a great variety of forms and sizes, to adapt them to the materials on which they are designed to operate. The most common are those used by carpenters, who require in ordinary no less than 10 different saws: a *cross-cut saw*, for cutting a log or other heavy piece of timber transversely, by means of two workmen, one at each end; the *pit-saw*, for ripping logs into planks and scantlings (now in a great measure superseded by the sawmill); the *frame-saw*, a finer kind of pit-saw; the *ripping-saw* is a hand-saw with coarse teeth, used for dividing boards coarsely and quickly; the *hand-saw* (properly so called), is a convenient saw, of 26 inches or so of blade, with angular teeth, of 5 to the inch; the *panel-saw*, is the same as the hand-saw, but the teeth are finer (7 or 8 to the inch); the *dovetail, sash, carcass, and tenon-saws*, have very fine teeth, and very thin blades, stiffened with stout pieces of iron or brass, rivetted on the back edge. There are also several very narrow saws, indifferently called lock, compass, key-hole, and turning-saws, for cutting out small pieces, and rounded work. The best saws are of highly tempered steel.

SAW'MILL. A machine wherein several or many saws are actuated by a central power, communicated by wind, water, or steam, and now brought to such a degree of perfection, that wood may be cut to the thickness of writing paper. The sawmills in present use are of two sorts: the *circular*, cutting by a continuous rotatory motion; and the *reciprocating*, which operate as the common pit or frame-saw. Sawmills are as old as the beginning of the 14th century.

SAW'PIT. A place where wood is sawn by means of the frame-saw, one of the sawyers standing above and the other below. It is so called because the ground is usually dug away two, three, or four feet in depth.

**SAXIFRAGA, } A very extensive genus
SAX'IFRAGE. } of perennial plants. *De-*
candria—Dignia. Name from *saxum*, a stone, and *frango*, to break, because it was supposed to be good against the stone in the bladder. There are 31 species, natives of Britain, among which are the London-pride, Geum, and Alpine-brook saxifrage.**

SAX'ON BLUE. The sulpho-indigotate of alumina, precipitated from a solution

of indigo in sulphuric acid by a solution of alum, has received the name of *Saxon blue*, because the process was discovered by Barth at Grossenhain in Saxony (1810). The peculiar shade of this blue is also described by the name of *Saxon blue*.

SAX'ON ARCH. A semicircular arch,

characteristic of the Saxon style of architecture.

SCAB. In surgery, a hard substance covering superficial ulcerations, and formed by concretion of the fluid discharged from them.

SCAB'IES, Lat., from *scabo*, to scratch. The itch; a disease characterised by an eruption of pustules, or of small vesicles terminating in pustules, accompanied by incessant itching. There are several varieties, all of which are contagious.

SCAB'IOSA, } The name of an extensive
SCAB'IOUS, } genus of plants. *Tetrandria—Monogynia*. Name from *scaber*, rough, on account of its hairy surface. There are three British species; the devil's-bit, the corn, and the fine-leaved scabious.

SCAB'ROUS, Lat. *scabrosus*, rough. Applied in natural history very generally.

SCAG'LIA. The Italian name for *chalk*, used by geologists.

SCAG'LIOLA (Italian). A species of stucco or plaster, invented by Guido del Conte in 1584. It is composed of calcined selenite mixed with water into a paste. The name is now applied to ornamental plaster-work, produced by applying a fine ground of stucco made up with Flanders glue, and bestudding the surface, while soft, with splinters (*scagliola*) of marble, spar, and other matters, and laying in with the ochres various shades of colour; the whole when dry is polished, and has a good effect, but is not durable.

SCALE. 1. In *natural history*, the small laminae which cover the surfaces of some fish, serpents, &c., are called *scales*.—2. A mathematical instrument consisting of

various lines drawn on wood, ivory, brass, &c., and variously divided, according to the purposes they are intended to serve. They are denominated according to their kinds and uses, as the plain scale, diagonal scale, plotting scale, Gunter's scale, &c. Scales of equal parts are often marked upon plans and drawings, to explain the real dimensions of the objects delineated.

—3. In *music*, a denomination given to the arrangement of the six syllables invented by Guido Aretino, *ut, re, mi, fa, so, la*: the same as *gamut* (q. v.).—4. In *arithmetic*, *scale* signifies the order of progression on which any system of notation is founded, as the *binary scale*, the *decenary scale*.

SCALE'NE, from *scalenus*, unequal. 1. In *geometry*, a triangle whose sides and angles are all unequal.—2. The name of a muscle of the neck. There are two, one on each side. When both act together they bend the head forward; when only one acts, it turns the head to that side.

SCALE-STONE, Ger. *schalstein*. Tabular spar. A mineral, usually of a pearly-white colour, and composed of thin laminae collected into prismatic concretions.

SCAL'LION, Ital. *scaliogna*. An onion which never forms a proper bulb at the root, but is usually green in spring: a species of allium.

SCAL'LOP. In *conchology*, a bivalve pectinated shell, the *Ostrea maxima*, Lin., inhabited by a tethys. The scallop was formerly worn on the hat or coat by pilgrims, as a mark that they had crossed the sea for the purpose of paying their devotions in the Holy Land.

SCAL'OPS. A genus of insectivorous mammalia. The only species known is the *S. aquaticus*, Cuv., which inhabits the greater part of North America. It closely resembles the European mole, and supplies its place in America.

SCAL'PEL, Lat. *scalpellum*. A surgical knife.

SCAL'FER. Scalping-iron. A surgical instrument for cleaning bones when foul and carious, a raspatory.

SCAM'MONY, Lat. *scammonium*, corrupted from Arab. *chamozah*. 1. In *botany*, a creeping species of bind-weed, the *Convolvulus scammonia*, which grows abundantly in Syria and the Levant.—2. In *pharmacy*, a gum-resin, the inspissated juice of the root of the scammony plant, imported chiefly from Aleppo.

SCAN'DALUM MAGNA'TUM. Great scandal. In *law*, a defamatory speech, writing, or false report, to the injury of a peer or dignified person, for which a writ thus named is granted.

SCAN'DENT, Lat. *scandens*, climbing. Applied to plants which climb either by spiral tendrils, as the pea, or by adhesive fibres, as the common bryony.

SCANDIX. The cicely or great chervil. A genus of herbaceous plants. *Pentandria—Digynia*. Name *σκανδιξ*, from a Hebrew word meaning small and sharp, according to Pliny, who used the term to denote the *S. cerefolium*, or chervil of Europe. There are three British, namely the sweet-scented and the rough-seeded, cicely and Venus' comb.

SCANDING. In *grammar*, from *scando*, to climb, is the critical examination of a verse, by counting the feet and syllables, to see that the quantities are right.

SCANSORIE. Climbers. The name of the third order of birds in the arrangement of Cuvier, comprising such as have the external toe directed backwards like the thumb, by which conformation they are better enabled to support the weight of their bodies, and of which some of the genera take advantage in clinging to and climbing trees. The scansorie usually nestle in the hollows of old trees, and live chiefly on insects. The wood-peckers, jacamars, barbets, and parrots, are examples.

SCANT. In *naval language*, applied to the wind when barely fair.

SCANTLING. Fr. *échantillon*, from Lat. *scandula*. 1. A term used in reference to timber, in the same sense as size, but with respect to breadth and thickness only: thus a piece of timber 12 inches wide and 6 inches thick, is said to have a *scantling* of 12" X 6".—2. The name of a piece of timber when under 5 inches square, or the rafter, purlin, or pole-plate of a roof.—3. In *masonry*, scantling is the dimensions of stone in length, breadth, and thickness.

SCAPE. Lat. *scapus*, a column. In *botany*, an herbaceous stalk, bearing the fructification, without leaves. The hyacinth and narcissus are examples.

SCAPEMENT. In *horology*, a part of the construction of a watch or clock, to regulate its motion by means of a balance or pendulum. The general contrivance by which the pressure of the wheels, which move always in one direction, and the reciprocating motion of the pendulum or balance, are so accommodated to one another, that when a tooth of a wheel has given the balance or pendulum a motion in one direction, it must quit it that it may get an impulsion in the opposite direction; and it is this *escaping* of the tooth of the wheel from the balance or pendulum, or of the latter from the former, that has given rise to the term *escapement*, now commonly written *scapement*.

SCAPHOID. from *σκαφος*, a boat, and *ειδος*, like. Boat-like. Applied, in *natural history*, to denote form.

SCAPULA (Lat.) from Heb. *schipha*. The shoulder-blade.

SCAPULAR. Lat. *scapularis*, appertaining to the scapula.

SCAPULARY. 1. In *surgery*, a bandage for the shoulder-blade or scapula.—2. Lat. *scapularia*, a scapulary.—3. In *ornithology*, a feather which springs from the shoulder of the wing, and lies along the side of the back.

SCAPUS (Lat.). A stalk. 1. The base, or hollow part of a feather.—2. The shaft of a column.

SCARABÆUS. In *entomology*, a genus of pentamerous coleoptera, belonging to the family of Lamellicornes. Name *σκαρᾶβος*, a beetle. The scarabacides are now variously subdivided. Cuvier enumerates the following tribes: *Coprophagi*, comprehending the genera *Ateuchus*, *Sisyphus*, *Coprobius*, *Oniticellus*, *Copris* proper, *Aphodius*, &c., &c.; the *Xylophili*, comprising *Geotrupes*, *Phileurus*, *Rutela*, *Oryctes*, &c., &c.; the *Arenicoli*; the *Phyllophagi*; the *Anthobii*, comprising *Glaphyrus*, *Amphicoma*, *Anthipna*, &c.; the *Melitophili*, comprehending the genera *Trichius*, Fab., *Goliath*, Lam., and *Cetonia*, Fab., which are again variously divided.

SCARFING. from Sax. *searf*, a piece. The jointing and bolting of two pieces of timber together transversely, so that the two may appear as one, and serve the same purpose. Scarfing is resorted to when timber is required of longer lengths than can be procured in single pieces.

SCARIFICATION. from *scar*, and *facio*, to make. In *surgery*, a superficial incision made with a lancet, or other surgical instrument (see *SCARIFICATOR*), for the purpose of taking away blood, letting out fluids, &c.

SCARIFICATOR. In *surgery*, an instrument in form of a box, with ten or more lancets fitted in it exactly in the same plane. The lancets are all connected with a spring, and being, as it were, cocked, and the box applied to the part to be scarified, they are discharged by means of a trigger, and are all driven equally deep into the part at the same instant.

SCARLATINA. from *scarlatto*, the Italian word for deep red. The scarlet fever, a disease characterised by contagious fever, the face swelling, and a scarlet eruption appearing on the skin in patches, which after three or four days ends in desquamation of the cuticle.

SCARLET OAK. The *Quercus coccifera*, or kermes oak, producing small granular excrescences called *kermes* or *scarlet grain*.

SCARP. Fr. *escarpe*, a slope. 1. In *fortification*, the inner talus, or slope of the ditch, next to the place at the foot of the rampart.—2. In *heraldry*, the scarf which military commanders wear for ornament, borne somewhat like a baton sinister, but broader, and continued to the edges of the field.

SCARUS. Scar. A genus of thoracice

fish. The *S. labrus*, Lin., was asserted by the ancients to feed on herbs, and chew the cud, and by Gessner to sleep.

SCLEOTYRBE (Lat.), from *σκληρός* leg, *τυβή*, disturbance. 1. A disease described by Galen as a species of atony, or paralysis. — 2. Sauvages makes *scleotyrbē* an order of diseases, including chorea, shaking palsy, and three other species.

SCENE, Lat. *scena*, from *σκηνη*. In the drama, a division of an act. A play is divided into acts, and acts into scenes: the scene including all that passes between the same persons in the same place.

SCENOGRAPHY, from *σκηνη*, a scene, and *γραφω*, to describe. The art of painting on several planes, so that all the different surfaces shall only represent one design, and have the same effect on the eye as if delineated upon one plane.

SCETICS, Gr. *σκηπτικαι*, doubters. In philosophy, another name for the Pyrrhonists. In theology, disbelievers in the divine origin of Christianity; doubters of the truth of revelation.

SCHEDULE, Lat. *schedula*, from *scheda*, a leaf of paper. In law, a scroll of paper or parchment, containing some writing, as an inventory of goods, &c., annexed to a document, as a will, lease, or other deed, and more especially to a statement of bankrupts' effects.

SCHÉELE'S GREEN. Arsenite of copper, used as a pigment, and applied by double decomposition to cloth, &c. It is highly poisonous.

SCHELLING, THE PHILOSOPHY OF, teaches the identity or indifference of the ideal and real.

SCENE, Lat. *schœnos*, Gr. *σχῆνος*. An Egyptian measure of length, equal to 60 stadia, or about 7½ miles.

SCHÊSIS, Gr. from *σχῆν*, to hold. Habit: general state or disposition of the body or mind, or of one thing with regard to other things.

SCHILLER-SPAR, Ger. *schillern*, glistening. A genus of spars comprising four varieties: common schiller-spar, hemiprismatic schiller-spar (brownite), prismatic schiller-spar (hypersthene), and prismatic schiller-spar (anthophyllite). Lustre, metallic, pearly.

SCHINUS, *σχῖνος*, the Greek name of the mastich tree (*Pistacia lentiscus*). A genus of trees and shrubs. *Diœcia*—*Decandria*. South America. The *S. molle* yields the Peruvian mastich, and a sort of wine is made of its berries.

SCHISMA, Gr. *σχίσμα*. In music, an interval equal to half a comma.

SCHIST, Lat. *schistus*, from *σχιζω*, to split. Slate: a rock of a fissile character.

SCHISTOSE. Of the nature of schist: slaty; fissile.

SCHISTOSE MICA. Mica slate.

SCHNEIDERIAN MEMBRANE. The lining membrane of the nose, first described by Schneider.

SCHœNUS. The Bog-rush: a genus of perennial plants. *Triandria*—*Monogynia*. Name from *σχῶνος*, a rush. The species are peculiar to Europe: three are British plants.

SCHœLIASIS. The old critics who wrote annotations on the margin of the manuscripts of classical authors.

SCHœLIUM (Lat.). In geometry, an explanatory observation.

SCHOOL, Lat. *schola*, from *σχολη*, leisure.

1. A place of education, as a university, college, academy, &c.—2. A system of doctrine taught by particular teachers. Thus we say the Socratic school, the Platonic school, the Peripatetic or Ionic school, &c., by which we understand all those who adopt and adhere to a particular system of opinions. There are also many schools of painting, meaning thereby the styles practised by particular masters, and imitated by succeeding painters.

SCHœNER, Ger. *schoner*. A vessel with two masts, whose main-sail and fore-sail are suspended by gaffs, like a sloop's main-sail, and stretched below the booms.

SCHORL. A dark-coloured variety of tourmaline, named from *Schorlau*, a town in Saxony, near which it was first found. It occurs imbedded in granite, gneiss, &c., in Scotland and Cornwall. It is harder than hornblende, but less hard than quartz.

SCHORLITE. A mineral, the schorlous beryl of Jameson. It is of a straw colour: occurs in quartz and mica at Altenburg in Saxony.

SCHWEINFURTH GREEN. A beautiful and velvety green pigment, which may be procured (not however of the best quality), by digesting Scheele's green in acetic acid. It is poisonous, and takes its name from its having been discovered, in 1814, by MM. Rusz and Sattler, at Schweinfurth.

SCIENA. A genus of acanthopterygious fishes, type of the family *Scienides*, Cuv. The absence of palatine teeth distinguishes the sciænæ from the perches.

SCIAGRAPHY, from *σκια*, a shadow, and *γραφη*, description. 1. In astronomy, the art of finding the hour by the shadows of objects caused by the sun or moon: the art of dialling.—2. A section of a building, exhibiting its internal structure.

SCIAT'IC. Appertaining to the ischium.

SCIAT'ICA. Two very different diseases have been confounded under this name—rheumatic gout of the hip-joint, and neuralgia of the sacro-sciatic nerve.

SCI'ENCE, Lat. *scientia*, from *scio*, to know. Knowledge reduced to system.

Abstract science is the knowledge of reasons and their conclusions; **natural science** is the knowledge of causes and their effects, as regards the laws of nature. Mathematics is *pure science*; chemistry is *experimental science*.

SCIENO'IDES. A family of acanthopterygious fishes, closely related to the Percoides. Type, the genus *Sciæna*. The king-fisher of the American seas is an example.

SCILL'A. Squill. A genus of perennial plants. *Hexandria—Monogynia*. Name from *σπιλλα*, to dry, on account of its property of drying up the humours of the body when used medicinally. There are two British species: the officinal squill (*S. maritima*) is a native of the South of Europe. It is of great use in the materia medica: its active principle is a white transparent acrid alkaline substance, called *scillitine* or *scillitite*.

SCINCO'DEA. A family of Saurians, founded on the genus *scincus*, Daudin. The Scincoideans are known by their short feet, non-extensible tongue, and equal scales, which cover the body and tail like tiles.

SCIN'CUS. A genus of Saurians resembling serpents, and forming the type of the family *Scincoidea*, Cuv. Several species are found in the French Antilles, in the Moluccas, and in New Holland.

SCINTILL'ATION, Lat. *scintilla*, a spark. In *astronomy*, the twinkling or tremulous motion of the light of the larger fixed stars.

SCIOG'RAPHY, *σκια*, a shadow, and *γραφω*, I describe. In *painting*, &c., the art of casting shadows with truth and mathematical accuracy.

SCIO'LTO, It. *free*. In *music*, a term applied to notes that are not tied together.

SCIOPT'IC, from *σκια*, a shadow, and *οπτομαι*, to see. 1. Pertaining to the camera-obscura, or the art of exhibiting images through a hole in a darkened chamber.—2. A sphere or globe with a lens made to turn like the eye: used in experiments with the camera-obscura.

SCI'RE FA'CIAS (Lat.). In *law*, a judicial writ, summoning a person to show cause to the court why something should not be done; as, to require sureties, to show cause why the plaintiff should not have execution against them for debt and damages, or to require a third person to show cause why goods in his hands by replevin, should not be delivered to satisfy the execution, &c.

SCIROC', } (Ital.). In *Italy*, a south-Scirocco, } east wind, very hot and suffocating, blowing from the burning deserts of Africa. The name is also given in the north-east of Italy to a cold bleak wind from the Alps.

SCIRR'HUS, } from *σκιρσσω*, to harden.

SCIRR'HOSIS, } These terms have been applied to any very hard glandular tumour, but they are now commonly restricted to the early or occult stage of cancer.

SCIS'SEL. The clippings of various metals produced in several mechanical operations.

SCITAMIN'EÆ. The name of an order of plants in Linnæus' Natural Method, consisting of those which have an herbaceous stalk, broad leaves, and the germen obtusely angled under the irregular corolla, as *Amomum*, *Cauna*, &c. Name from *scitamineus*, dainty, cordial, aromatic, in allusion to their seasoning qualities.

SCIUR'US. The squirrel: a genus of Mammalia: order *Rodentia*. Name from *σκια*, a shadow, and *ουρα*, a tail. There are many species, all light and active creatures, living on trees, and feeding on fruits. The common squirrel (*S. vulgaris*, Buff.), is of a lively red on the back, has a white belly, and ears terminated by a tuft of hair. Those of the north in winter become of a beautiful ash colour, producing the fur called *minever*, when taken from the back, and *vair* by the French, when it consists of the whole skin. The cat squirrel (*S. cinereus*, Lin.), and the grey squirrel (*S. carolinensis*, Lin.), appear to be peculiar to America. The ground squirrel (*S. striatus*, Lin.), is found throughout all Asia and America, particularly in pine forests. The flying squirrels have been separated from the genus *Sciurus*, Lin., by Cuvier. See *PTEROMYS*.

SLAVO'NIAN. Pertaining to the Slavi, a people who inhabited the country between the rivers Save and Drave, or to their language. Hence the word came to denote the language which is now spoken in Poland, Russia, Hungary, Bohemia, &c.

SCLERI'ASIS, } from *σκληρος*, hard. A **SCLERO'SIS**, } hard tumour: a scirrhus. Written also *scleroma*.

SCLERODER'MI. A family of fishes of the order *Plectognathi*, Cuv., easily recognised by their pyramidal snout, prolonged from the eyes and terminated by a small mouth. Name from *σκληρος*, hard, and *δερμα*, skin; the skin being usually rough, and invested with hard scales. The Mediterranean file-fish (*Balistes cariscus*, Lin.), is an example.

SCLER'OPHTHALMY, from *σκληρος*, hard, and *οφθαλμος*, the eye. A dry painful state of the eyes and eyelids, accompanied with swelling and hardness.

SCLEROT'IC, from *σκληρος*, hard, from *σκληρσσω*, to harden. Applied to a membrane of the eye.

SCLEROT'IC COAT. *Tunica Sclerotica*. *Sclerotitis*. A membrane of the eye, situated

immediately under the conjunctiva. It is thus named from its hardness.

SCOLOPAX. A genus of birds. Order *Grallariæ*, family *Longirostres*. Name *σκολοπαξ*, a snipe or a woodcock. These are the only birds included by Cuvier in the genus *Scolopax*, but, according to Linné, the genus comprehends besides the Ibis, the Curlews (*Numenius*, Cuv.), the Godwits (*Limosa*, Bech.), the Sandpipers (*Calidris*, Cuv.), the Sanderlings (*Arenaria*, Bech.), the Ruffs (*Machetes*, Cuv.), the Turn-stones (*Streptilas*), and a great number of birds foreign to Europe, as *Rhynchæa*, Cuv., *Pelidna*, Cuv., *Euriorhynchus*, Nilson, *Phalaropus*, Brisson, *Himantopus*, Brisson, and *Totanus*, Cuv., the species of which are found throughout almost the whole globe.

SCOLOPEN'DRUM. The hart's-tongue or spleenwort: a genus of ferns. Name from *σκολοπενδρεα*, the earwig, which its leaves resemble. One species found on most shady banks, walls, &c. Britain.

SCOMBER. A genus of acanthopterygious fishes, forming the type of the family *Scomberoides*, Cuv. Name *Σκόμερος*, common to the mackerel and tunny. The *Scomber*, Lin., is now subdivided into *Scomber*, Cuv., comprising the mackerels, and *Thynnus*, Cuv., which receives the tunny.

SCOMBEROIDES. A family of acanthopterygious fishes: type, the genus *Scomber*. This family is composed of a multitude of fishes with small scales, a smooth body, and whose tail and caudal fin in particular are extremely powerful. The family is of the greatest utility to man, on account of the size and flavour of its species, and their inexhaustible reproduction, which brings them periodically into the same latitudes, where they constitute the object of the most extensive fisheries.

SCONCES. In *fortification*, an obsolete name for small forts, for the defence of a pass, &c.

SCOOP-WHEEL. A certain description of wheel, which is formed of cast-iron, and employed in conveying a stream of water from one pond to another situated above it. Scoop-wheels are therefore employed in a contrary way to water-wheels, since, instead of being acted upon by the impulse of the water, they operate upon it, being turned by the aid of a steam-engine.

SCOPIPEDUS, Lat. *scopæa*, broom, and *pes*, foot. A tribe of melliferous insects, having the tarsi of the hind feet furnished with a brush of hairs.

SCOPUS. In *ornithology*, the generic name given by Brisson to the *Umbre*, an African bird, about the size of our crow, and of an amber-colour. Order *Grallariæ*: family *Cultrirostres*. Name from *σκωτος*, a sentinel.

SCORBI'ULATE. Pitted: *scorbiculus*, a depression or cavity. Applied in *natural history* to denote that a surface is closely marked with little depressions.

SCORE. In *music*, the original and entire draught of a composition, or its transcript.

SCOR'RIA, Lat. from *σκαγια*, rejected matter. 1. Dross: the oxide formed on the surface of metals, when kept for a length of time in a state of fusion.—2. *Scoriæ*, plural of *scoria*, is commonly used to denote the cinders of volcanic eruptions, and the vitrified earthy materials, which are produced in the smelting of ores.

SCORP'ENA. A genus of acanthopterygious fishes, belonging to the family *Buccon Loricatæ*, Cuv. Head mailed and roughened, but compressed on the sides; body covered with scales; several rays in the branchiæ, and but a single dorsal fin.

SCOR'PIO, {1. In *entomology*, a genus **SCOR'PION.** { of arachnides: order *Pulmonaria*: family *Pedipalpi*. Body elongated, and suddenly terminated by a long slender tail, formed of six joints, the last of which terminates in an arcuated and excessively acute point or sting, which affords issue to a venomous fluid, contained in an internal reservoir. The scorpions inhabit the hot countries of both hemispheres, live on the ground, conceal themselves under stones and other bodies, most commonly in ruins, dark and cool places, and even in houses. They use their tail for the purposes both of attack and defence, and the wound occasioned by the sting of some of the species, the *occitanus* for instance, is not without danger. The remedy employed is the volatile alkali, used externally and internally.—2. In *astronomy*, the eighth sign of the zodiac, and the second of the southern signs, containing 44 stars, of which one, *Antares*, is of the first magnitude, marked M .

SCORZONE'RA. Viper's-grass. A genus of plants, mostly perennials. *Syngenesia*—*Poly. æqualis*. Name from *scurzo*, the old Spanish word for viper, because it is said to be a specific for the bite of all venomous animals. Most of the species are esculent.

SCOT, Sax. *scat*, a part. 1. In *law* and *English history*, a customary tax or tribute, laid on subjects according to their ability; also a tax or custom paid for the use of a sheriff or bailiff.—2. *Scot* and *lot* are parish payments. When persons were taxed unequally, they were said to pay *scot* and *lot*.

SCOT'IA, Gr. from *σκιος*, shady. In *architecture*, the hollow moulding in the bases of Ionic columns; also the groove

or channel cut in the projecting angles of the Doric corona. The Greeks called the *scotia* of the base, trochilon (τροχίλον).

SCO'TISTS. An old scholastic sect, the followers of Duns Scotus.

SCOTODINE, Gr. σκοτεινός, from σκοτος, darkness, and δινος, giddiness. Giddiness with impaired sight: commonly symptomatic of disorder of the digestive organs.

SCOWER'ING POWER. In engineering, the stream of water employed to carry away the shingle from the mouth of a harbour, river, &c.

SCRATCH'ES. In farriery, a disease in horses, consisting of dry chaps, rifts, or scabs, generated between the heel and pastern joint.

SCRATCH-WORK. A kind of fresco, with a black ground, covered with a coat of white, which is afterwards scratched with some pointed instrument, so that the black appears through the scratches.

SCREECH-OWL. A name which has been applied to several species of the owl (*strix*), on account of the harsh, disagreeable cry which these birds utter at night.

SCREDS. A term used, in architecture, for wooden rules used in running mouldings.

SCREEN, Fr. écran for écran. 1. In architecture, a partition, usually wrought with rich tracery, &c., placed before small chapels and tombs, or behind the high altar. In old parish churches, oaken screens, richly carved, often divide the nave from the chancel.—2. An instrument, consisting of three wooden ledges,

joined in a rectangular frame at the bottom, the upper part of which is filled with wire-work: used for sifting sand, clearing corn of dust and dross-grain, &c.

SCREW, Dan. skruve, skrue. A cylinder with a spiral channel, cut in such a manner that it is equally inclined to the base of the cylinder throughout the whole length. The screw is either *male* or *female*, according as the spiral channel is cut upon the external surface of a solid cylinder, or within a cylindrical hole. The female screw is adapted to admit a male screw. When a female screw is very short, and made to screw upon a male screw, it is called a *nut*. The spiral projection appearing as if wound round

the cylinder is called the *thread*, and the number of revolutions which the thread

makes in a given length determines the fineness, and, in conjunction with the diameter of the cylinder, the *power* of the screw. The screw is usually regarded as one of the simple or mechanical powers, but it is in reality nothing more than a beautiful modification of the inclined plane.

SCREW-NAILS. The name given in Scotland to what are in England termed *wood-screws*. They are a

description of screws, used by carpenters and other mechanics, for fastening wood, or wood and metal together. Immense quantities of the smaller sorts are made of wire.

SCRIBES. The copyists and interpreters of the law, in Jewish history.

SCRIB'ING. In joinery, fitting the edge of a board to any surface, as of the skirting of a room to the floor; Also the fitting of one piece

of wood to another, so that their fibres may be perpendicular to each other, the two edges being cut to the angle to join.

SCRIP, Lat. scriptum, from scribo, to write. A certificate in evidence of some property or interest possessed, as in Bank-stock. The term is much used in America. Stockbrokers sell Bank-scrip, railway-scrip, land-scrip, &c., &c., the scrip, duly subscribed, being the evidence on which the parties holding the scrip claim interest in the property.

SCRIV'ENERS, Lat., from scribo, I write. Anciently, a respectable class of men in London, who acted as money-brokers.

SCROFULA. A disease named by the Greeks *χολερα*, of which Scrofula, a little sow, is a Latin translation, implying *swine-evil*, or *swellings*, from a notion that pigs were liable to the disease. It is *vul-*

is known in this country by the name of *King's-evil*, and *crewels* or *cruels*, and is characterised by hard, scirrhus, and often indolent, tumours in the glands of the neck, under the chin, in the arm-pits, &c., which after a time suppurate and degenerate into ulcers from which, instead of pus, a white crudled matter like the coagulum of milk is discharged. The disease is most common in climates which are moist and coldish, and very changeable, as England and Holland; in warm and very cold countries, where the air is dry, it is very rare. The word is sometimes written *scrophula*.

SCROLL, from the same root as *roll*. 1. A roll of paper or parchment.—2. In *heraldry*, the ornament placed under the escutcheon, containing a motto, or short sentence, alluding to the bearings, the bearer's name, or some deed, saying, &c., attributed to the bearer or ancestor.—3. In *architecture*, see *VOLUTE*.

SCROPHULARIA. The Figwort. An extensive genus of plants, mostly perennial. *Didynamia*—*Angiospermia*. Name from *scrofula*, the king's-evil, because of the unequal tubercles upon its roots, like scrofulous tumours. The water figwort or betony, common figwort, balm-leaved figwort, and yellow figwort, are the British types of the genus.

SCROTAL HERNIA. Protrusion of any of the contents of the abdomen into the scrotum.

SCROTUM, Lat. *quasi scrotum* a leather coat. *Bursa testium*, the bag containing the testes.

SCRUBSTONE. A provincial name for a species of calcareous sandstone, much used in some parts for scrubbing the surfaces of hewn stones, flag-floors, flights of steps leading to a front door, &c.

SCRUPLE, Lat. *scrupulus*, dim. of *scrupus*, a draught man. An apothecary-weight equal to the third part of a drachm. It is 20 grains Troy.

SCUD. In *meteorology*, clouds of a blackish colour moving quickly through the atmosphere; thus named by mariners. To *scud*, is to keep directly before the wind in a gale.

SCULL. A short kind of oar, two of which are used by one rower, one on each side of the boat.

SCULPTURE, from *sculpo*, to carve. The art of carving stone, wood, or other solid substances, into statues and other ornamental designs. Figures so cut are called *sculptures*, and casts taken from them are named *models*.

SCUPPERS, } Channels made
SCUPPER-HOLES, } through the water-ways and sides of a ship, close to the upper surface of the deck, to allow the water to run off. The leather pipe attached by *scupper-nails* to the mouth of the scuppers

of the lower deck, to prevent the water from entering, is called the *scupper hose*, and the mouths of the scuppers are occasionally stopped by *scupper-plugs*. The *scupper-nails* are simply broad-headed nails, and cover a large part of the surface of the hose.

SCURF (Saxon). Small dry exfoliations of the cuticle, which form naturally on the scalp, and often take place after an eruption on the skin, a new cuticle being formed beneath during the exfoliation.

SCURVY, from *scurf*; *scurvy* for *scurfy*. *Scorbutus*. A disease characterised by extreme debility, complexion pale and bloated, spongy gums, livid spots on the skin, breath offensive, oedematous swellings in the legs, hæmorrhages, foul ulcers, fetid urine, and extremely offensive stools. Scurvy is found to prevail most commonly among sailors, and persons deprived of due exercise, nourishing food, and excitement; and exposed to a cold and moist atmosphere. Whatever depresses the nervous energy predisposes to scurvy. Fruits containing a native acid, as oranges, lemons, &c., are the best preventatives, after cleanliness, generous diet, and proper exercise of the body and mind.

SCUTAGE, Lat. *scutagium*, from *scutum*, a shield. In *English history*, a contribution levied upon those who held lands by knight-service. It was originally a composition for personal service, which the tenant owed to his lord, but afterwards had levied as an assessment.

SCUTATE, Lat. *scutum*, a shield. In *zoology*, when a surface is protected by large scales.

SCUTELLA'RIA. Scull-cap. A genus of plants. *Didynamia*—*Gymnospermia*. Name from *scutella*, a cap, in allusion to the little concave appendage which crowns the calyx. Of 22 species all are perennial except one, and all are hardy plants. Two species are indigenous to Britain, the small and the common scull-cap, which last is very common in our hedges and ditches, and is used in medicine against a species of ague.

SCUTIBRANCH'IATA. An order of mollusca: class *Gasteropoda*. Name from *scutum* and *branchus*; the shells being open, without any operculum and most of them without the slightest turbination, so that they cover the animal, and particularly the *branchiæ*, in the manner of a shield. There are two genera, *Haliotis*, Lin., and *Fissurella*, Lamouroux.

SCUTIFORM, Lat. *scutiformis*, shield-like: *scutum*, a shield, and *forma*, likeness.

SCUT'LE. 1. Sax. *scutel*, *scuttel*, a dish. A broad shallow basket; also a receptacle for coals.—2. Sax. *scytel*, a bolt or bar; a small hatchway or opening in the deck of a ship, large enough to admit a man,

and with a lid to cover it; also a like hole in the side of a ship, and through the coverings of her hatchways, &c.—3. To scuttle a ship is to sink it by cutting scuttles or holes in the bottom to admit the water.

SCUT-TLE-BUTT, } A butt or cask having
SCUT-TLE-CASK. } a square piece cut out of its bilge, and lashed upon the deck of a ship: its use is to hold fresh water.

SCUTUM SOBIESKI. Sobieski's shield. A constellation formed by Hevelius; 7 stars.

SCYL'LA. A rock opposite to the whirlpool Charybdis. It was reckoned very formidable among the ancient mariners, but has few terrors for modern sailors.

SCYPHIFORM, Lat. *scyphiformis*, goblet-shaped. Applied to the fructification of some lichens.

SCYPHUS, *σκυφος*, a cup. The cup of a narcissus; in lichens, a dilatation of the podetium.

SCYTHE. In agriculture, an instrument for mowing. It consists of a thin bent steel blade, of about 3½ feet in length, joined nearly at right angles to a *med*, 6 or 8 feet long, on which are two handles by which the mower wields the instrument.

SCYTODEPSIC, Gr. *σκυτοδψικος*, from *σκυτοδψω*, to tan; *σκυτος*, a hide, and *δψω*, to soften. Appertaining to the business of a tanner. *S. principle*, tannin; *S. acid*, gallic acid.

SEA, Sax. *sæ*. 1. In geography, a large body of water, nearly inclosed by land, as the Mediterranean. Seas are properly branches of the ocean, and upon the level of the ocean; lakes are large bodies of water inland, situated above the level of the ocean; (2.) The term *sea* in the plural, *seas*, is often used as a general name for the ocean, as "*on the high seas*," meaning—in the open ocean, the highway of nations; (3.) *Sea* among seamen is often employed to denote a billow, as, "the vessel shipped a *sea*," and also the swell of the ocean in a tempest, or the direction of the waves, as, "the ship was logged with a strong *sea* a-head."

SEA-ADDER. A fish, the fifteen-spined stickleback (*Gasterosteus spinachia*, Cuv.)

SEA-ANEM'ONY. The animal flower.

SEA-BELTS. The sweet fucus (*Fucus saccharinus*), which grows upon stones and rocks by the sea-shore, is so called from the resemblance of its leaves to a belt or girdle.

SEA-BOAT. A term applied (with the epithet *good* or *bad*) to a vessel, as respects her qualities in bad weather.

SEA-BREAM. Red Gilt-head. A fish; the *Ragellus centrodonatus*, Cuv. Yarr. Its length about 15 inches. Found plentifully in the Mediterranean.

SEA-CABBAGE, } An indigenous peren-
SEA-COLEWORT. } nial plant, the *Crambe maritima*.

SEA-CALF. The common seal. The *Phoca vitulina*, Lin.

SEA-CHART. A marine map, on which the line of the shore, isles, shoals, harbours, &c., are delineated. The term is unnecessary, as we now use the word *chart* for a representation of the sea-coast, soundings, &c., and *map* for a representation of the land.

SEA-COW. 1. A mammiferous animal, the *Trichechus rosmarus*, Lin., which inhabits the Arctic seas and attains a length of 20 feet. It is sought after for its oil and tusks.—2. A name common to the *dugong*, called also siren, maid of the sea, &c.; and the *manati* (the *lamantins* of the French), called also mermaids, tritons, &c. See MANATUS and HALICORE.

SEA-COR'MORANT. The great black-backed gull: (*Larus marinus*, Lin.). The name is also applied to the common gull (*L. cyanorhynchus*, Meyer), and the sea-crow (*L. glaucus*, Lin.).

SEA-DEVIL. Devil-fish or fishing-frog. The *Lophius piscatorius*, Lin. Cuv. Yarr., called also toad fish, wide-gape, mirring, and angler, by Pennant. This fish attains a length of 5 feet, but it is rarely caught of that size: average length 2½ to 3 feet. It bears a close resemblance to a frog in the tadpole state; and the long filaments on the upper and anterior part of the head, with which it seizes its prey, have procured it some of the names which it bears: while its ugliness and voracity have procured it some others. It is found in all the seas of Europe, and is particularly common round the British coasts. Its flesh is reckoned good.—2. The name *sea-devil* is also given in the West Indies to a colossal ray or skate, 15 feet in length exclusive of the tail.

SEA-EEL. The conger-eel.

SEA-GRASS. An aquatic species of ruppia, which grows chiefly on the sea-shores.

SEA-GULL. A name common to several species of the gull. See LARUS.

SEA-HARE. A name common to the species of the gasteropods of the genus *Aplysia*, Lin., but denotes particularly the *A. fasciata*, Lin., and *A. punctata*, Cuv., common in the European seas. See APLYSIA.

SEA-HORSE. 1. A fish, the *Syngnathus hippocampus*, Lin.—2. A name sometimes given to the *Hippopotamus*, or *River-horse*, and the *Walrus*, or *Morse*.

SEAL. 1. In zoology, the common name, or the species of the genus *Phoca*, Lin., all of which are amphibious animals. The best known are the common Seal, or *Phoca vitulina*, Lin., very common in Europe; the Monk, or *Ph. monachus*, Gm.

from 10 to 12 feet in length, found among the Grecian and Adriatic Islands; the Elephant Seal, or *Ph. leonina*, Lin., from 20 to 25 feet in length, common in the southern latitudes of the Pacific Ocean, where it constitutes an important object of the fisheries; the Sea-lion, or *Ph. jubata*, Gm., from 15 to 20 feet in length, common also in the Pacific Ocean. There are other species. See PHOCA.—2. In *Gem sculpture*, a stamp cut on stone, capable of impressing any soft substance.

SEALED EARTH. *Sigillata terra*. An old name for medicinal earths, which were made up into cakes, and stamped or sealed.

SEALING-WAX, Ger. *siegellack*. The wax used to seal letters, legal documents, &c. It is composed of gum-lac, and resin, coloured with some pigment, as vermilion, verditer, ivory-black, &c.

SEA-LION. A name given by Steller, Pernetty, and others, to a large species of seal, the *Phoca jubata*, Gm. See SEAL and OTTAR.

SEAMS. The spaces between the edges of planks. In *geology*, thin layers which separate thicker strata.

SEA-MAID. Another name of the Dugong. See HALICORE.

SEA-MOSS. A name common to the *Conferva rupestris* and the *Corallina officinalis*.

SEA-NEED'LE. Another name of the Gar-fish, or Gar. See ESOK.

SEA-NET'TLE. Another name of the Sea-anemone.

SEA-OAK. The *Fucus vesiculosus*; called also Sea-wrack, and Bladder-wrack. When burned in the air it yields the black powder known as *vegetable ethiops*.

SEA-ON'ION. The *Scilla maritima*.

SEA-OT'TER. The *Mustela lutris*, Lin., a species of otter, nearly double the size of the European species; its blackish velvet fur is highly valued, and, to obtain it, the English and Russians hunt the animal throughout the northern parts of the Pacific Ocean.

SEA-PERCH. Another name of the Bass (*Labrax lupus*, Cuv. and Yarr.), but placed by Linné in the genus *Perca*.

SEA-PIKE. Another name of the Gar-fish.

SEARCH WAR'RANT. In *law*, a grant made by a justice of the peace to search for stolen goods, on the oath of a credible witness.

SEA-ROCK'KET. In *botany*, a name common to the *Cakile maritima*, an indigenous annual plant, and the several species of the genus *malcomia* (q. v.).

SEA-SALT. Chloride of sodium obtained by evaporation of sea-water.

SEA-SER'PENT. An enormous marine serpent, said to have been seen frequently on the coasts of America. Its existence,

however, is at present doubtful; though there is certainly no physical impossibility standing in the way of that existence.

SEA-SICK'NESS. An intense nausea, with violent retching, which varies in respect to duration in different persons upon their first going to sea, and which seems to arise from a depressing effect upon the brain, produced by the motion of the vessel. The only remedy for it is to lie perfectly still with the head low.

SEA-SWAL'LOW. A name common to the Terns, (see STERNA), derived from their long and pointed wings, and their forked tail, which render their flight and carriage analogous to those of the swallows.

SEA-U'NICORN. The *Narwhal*.

SEA-UR'CHIN. See ECHINUS.

SEBA'CEOUS, from *sebum*, suet; suety. Applied to glands which secrete a suety humour; and also to the matter secreted.

SEBAC'IC ACID. Acid of suet (*sebum*) obtained by distilling tallow, and agitating the product in boiling water. It crystallises, from its boiling aqueous solutions, in white needles having a pearly lustre. It is destitute of taste and smell.

SECA'LE. Rye. A genus of gramineous plants. *Triandria—Digynia*. Name according to De Theis, from Celtic *segal*, from *sega*, a sickle, whence *seges*, the Latin appellation of all grain that is reaped with sickles. There are two species, the *S. cereale*, an annual, which affords the rye-corn, so valuable as a bread-corn in some parts; and the *S. cornutum*, a biennial, which affords the medicinal poison called *ergot of rye*.

SE'CANT, Lat. *secans*, from *seco*, to cut. In *geometry*, a term sometimes used to denote a line which cuts any other whatever; in a more restricted sense, it may be defined a right line cutting a curve, but in its most common received sense, it is a right line cutting a circle. In *trigonometry*, a secant implies a right line A B drawn from the centre of a circle, which, cutting the circumference, proceeds till it meets another right line, which is a tangent to the same circle.

SECE'DERS. In *Scotland*, a numerous body of presbyterians, who seceded from the established church, about 1733.

SECO'ND. The sixtieth part of a minute of time or of a degree: an hour is divided into 60 minutes, and each minute into 60 seconds; a degree is in like manner divided into 60 minutes, and each minute into 60 seconds.—2. In *music*, an interval of a conjoint degree, being the difference between any sound and the nearest sound, above or below it.

SEC'ONDARY. 1. In *geology*, an epithet for those strata, rocks, or formations, beginning with the chalk, and ending with the graywacke; at the former the tertiary strata begin, and at the latter the primary formations terminate.—2. In *astronomy*, the *secondary circles* or *secondaries* are those circles which pass through the poles of any of the great circles of the sphere, perpendicular to the planes of these circles.—3. *Secondary qualities* of bodies are those which are inseparable from them, but which proceed from casual circumstances, such as colour, taste, odour, &c.—4. *Secondary planets*. See **SATELLITES**.—5. *Secondary quills*, in birds, are the large feathers of the wing, which arise from the bones of the forearm.

SEC'RETARY, Fr. *secrétaire*, from Lat. *secretus*, secret. A person employed by a public body, a company, or an individual, to write orders, letters, dispatches, records, &c., &c. Thus legislative bodies have secretaries, ambassadors have secretaries. The *Secretary of State* in Britain is a high officer of the crown, who conducts the affairs of a particular department of the government. There are three principal secretaries of state: the Secretary for Home Affairs, the Secretary for Foreign Affairs, and the Colonial Secretary.

SEC'RETION, Lat. *secretio*, from *secretus*. A function in a living body, arranged by physiologists under the head of natural actions. It is by this function that a part of the blood escapes from the organs of circulation, and diffuses itself without or within; either preserving its chemical properties or dispersing, after its elements have undergone another order of combinations.

SEC'TILE, Lat. *sectilis*, that may be easily cut. A term used in mineralogy, to denote a character standing midway between malleable and brittle: the mineral being cut with a knife, the particles do not fly off in splinters. Soapstone is a sectile mineral.

SEC'TION, Lat. *sectio*, from *seco*, to cut; a part cut off. 1. Thus in *writings* and *books*, a distinct part or portion, often called a paragraph, or article.—2. In *geometry*, a side or surface appearing, of a body or figure cut by another; also the place where lines or surfaces cut each other.—3. A section of a building, machine, or engine, is a view as if cut down the middle, showing the construction or disposition of the interior. This kind of drawing is called *sciagraphy*.

SEC'TIO PLANOGRAPHY. A method of laying down the section of engineering works upon the plan recently introduced by Mr. Macneil, and required by the standing orders of the House of Commons,

for all proposed railways, &c. It is performed by using the line of direction laid down on the plan as a datum-line, the cuttings being plotted on the upper part, and the embankments upon the lower part of the line.

SEC'TOR, Lat. from *seco*, to cut. 1. In *geometry*, the space between two radii and the part of the circumference which they include: it is a mixed triangle, formed by two radii *ac* and *bc*, and an arc *ab*, of the circle of which they are radii.—2. A mathematical instrument so marked with lines of sines, tangents, secants, chords, &c., as to fit all radii and scales. It is used for finding the proportions between quantities of the same kind. It is founded on the fourth proposition of the sixth book of Euclid, which proves that similar triangles have their homologous sides proportional.—3. An instrument for determining the zenith distances of stars passing within a few degrees of the zenith.

SEC'ULAR GAMES were festivals celebrated at Rome, every hundredth year; but frequently much oftener.

SECULARIZA'TION (Lat.). The appropriation of church property to secular uses.

SEC'ULAR REFRIGERA'TION. The periodical cooling and consequent consolidation of the crust of the globe.

SECUN'DINE. 1. In *botany*, the outermost but one of the enclosing sacs of the ovulum, immediately resting upon the primine.—2. In *zoology*, the foetal membranes are so called.

SECUN'DUM ARTEM. According to art, or the rules of art. A term used in medical prescription, and denoted by the letters S.A., which are usually affixed when the making up of the recipe requires great care or skill.

SECURIFERA, Lat. from *securis*, a hatchet, and *fero*, to bear. Hatchet-bearers: a family of Hymenopterous insects composed of two tribes, the *Tenthredineæ* or saw-flies, and the *Urocerata*, Lat., form of the genus *Sirex*, Lin. They take the family name from the females being provided with a peculiarly formed and serrated ovipositor, which they use in preparing a place to deposit their eggs in.

SECURIFORM, Lat. *securiformis*, hatchet-shaped: *securis*, a hatchet, and *forma*. Applied to leaves, &c.

SED'ATIVE, from *sedo*, to assuage. A term applied, adjectively and substantively, to medicines or other means which diminish the animal energy, without destroying life.

SE DEFENDEN'DO. In defending himself.

The plea of a person charged with murder, who alleges that he committed the act in his own defence.

SEDGE. 1. An aquatic plant, the *Iris pseudacorus*.—2. The sedge bird or reed bunting (*Sylvia phragmitis*), a species of warbler which builds its nest on the sedgy banks of rivers.

SED'LITZ POW'DERS. These consist of two different kinds of powders, one of which is wrapped in blue paper, and the other in white, in order to distinguish them: one consists of a mixture of tartarate of soda $3\frac{1}{2}$ and bi-carbonate of soda, $\frac{1}{2}$; the other consists of tartaric acid, $\frac{1}{2}$ grs., these are dissolved in water, the former in about a pint, and the latter in a wine-glassful, and the solutions are then mixed, and the draught taken during effervescence. These powders take their name from a supposed resemblance of ingredients to the celebrated saline mineral waters of Sedlitz, Seidlitz, or Seydtschutz, a village of Bohemia, in the circle of Saatz. The Sedlitz water is, however, a solution of sulphate of magnesia (Epsom salt), sulphate of soda (Glauber's salt), and sulphate of lime, with some carbonates of lime and magnesia and resinous matter. This water is reckoned highly medicinal.

SE'DUM. Stone-crop. An extensive genus of plants. *Decandria—Pentagynia*. Name from *sedo*, to assuage, because it allays inflammation. There are eleven species indigenous to Britain, among which are the wall-pepper, English stone-crop, and common orpine. They are all perennial plants.

SEED, Sax. sæd. The substance, animal or vegetable, which nature prepares for the reproduction and conservation of the species. The seeds of plants are a deciduous part, containing the rudiments of a new vegetable, and in some cases constitute the fruit or valuable part of the plant, as in the case of esculent grain; sometimes also the seeds are inclosed in the fruit, as in apples, melons, &c. The seed-bud of a plant is called the *germen* (q. v.); the seed-coats are the *arilli* (see *ARILL*, *ARILLUS*); the seed-lobes are *cotyledons* (see *COTYLEDON*), and the seed-vessels are termed *pericarps* (see *PERICARP*).

SEE'LING, from Fr. *sceller*, to seal. In *falconry*, the running of a thread through the eyerids of a hawk, when first taken, to prevent her seeing well, and thereby to prepare her to endure the hood.

SEG'GAR (written also *saggarr*). The cylindrical case of fire-clay, in which fine stone-ware is inclosed while being baked in the kiln.

SEG'HOL. ▲ Hebrew vowel-point, marked thus \cdot and indicating the sound of *e* in *men*.

SEG'MENT, Lat. *segmentum*, from *seco*, to cut. 1. A part cut off.—2. In *geometry*, that part of a circle contained between a chord AB and an arc ACB of the circle,

or so much of the circle as is cut off by the chord.—3. The segment of a sphere is a part of a sphere, terminated by a portion of its surface, and a plane which cuts it off,

passing somewhere out of the centre; being more properly called the section of a sphere.

SEGREGA'TA, Lat. from *segrego*, to set apart. 1. In *malacology*, the name of a family of molluscs: order *Acephala nuda*. The family comprises those genera in which the individuals which compose them are insulated, and without any mutual organic connection (*Cuvier*).—2.

In *botany*, applied as an adjective to the last order of the class *Syngenesia*, order *Polygamia segregata*, in which the flowers are doubly compound, each floret or assemblage of florets having a partial calyx. There is no British type.

SEGUE, It., it follows. In *music*, prefixed to a movement which is immediately

to follow the last note of the preceding movement.

SEIG'NIORAGE. 1. An old prerogative by which the English kings claimed a portion of the gold and silver brought in the mass to the mint to be exchanged for coin.—2. The term is sometimes used to denote the right or authority of a *seigneur* or lord of a manor, but this is now usually written *seignior*.

SEIG'NIORT. In *Lower Canada*, the right of feudal superiority in real estate.

SEISMOM'ETER, Gr., from *σεισμος*, an earthquake, an instrument for measuring the shock of earthquakes and other concussions.

SEI'ZIN, Fr. *saisine*. In *law*, possession. This is of two sorts: *seizin in fact* implying actual possession, and *seizin in law*, implying that something is done which the law accounts possession or *seizin*, as enrolment, or when the lands descend to an heir, but he has not yet entered upon them. In this case the law regards the heir as *seized* of the estate, and should any other take possession he is a *disseisor*.

SEJ'ANT. In *heraldry*, applied to a beast in a sitting posture. *Sejant rampant*, sitting with the fore-feet lifted up.

SELEN'IC ACID. An acid discovered in 1827 by *Mitcherlich*. It has not yet been isolated. Its aqueous solution may be

concentrated by evaporation till its temperature reaches 536°, but if the process be carried further, oxygen gas is evolved, and the acid is changed to the selenious. It forms *seleniates* with salifiable bases.

SELENIET. A compound formed by the union of selenium with a metallic base. The best known is *seleniellated hydrogen*, a gaseous compound, which bears a strong analogy to sulphuretted hydrogen, but it acts with greater energy.

SELENIOS ACID. A volatile and crystallisable acid, formed by burning selenium in oxygen gas, or by heating it in nitric or nitro-muriatic acid. It was formerly called *selenic acid*.

SELENIIO-CYANOGEN. A compound of selenium and cyanogen, discovered by Berzelius. It has not yet been obtained in a separate state.

SELENITE, Gr. *σεληνιτης*. 1. A subspecies of sulphate of lime of two varieties, massive and acicular.—2. A compound of selenious acid with a base.

SELENIUM, from *σελήνη*, the moon. A metalloid principle, obtained by Berzelius from the pyrites of Fahlun, and which from its chemical properties he places between sulphur and tellurium. It has, however, more properties in common with the former than with the latter substance. Selenium, after being fused and slowly cooled, is of a bluish-grey colour, with a glistening surface, but it is of a reddish-brown when quickly cooled, and has a distinct metallic lustre. It is brittle, but not hard, and has a tendency to assume a crystalline form. Sp. gr. 4.3, melting point, 225° F., but assumes a pasty consistency at 212°.

SELEUCIDÆ. In *chronology*, the Syro-Macedonian era: a computation of time commencing from the establishment of the Seleucidæ, a race of Grecian kings, which reigned in Syria as successors of Alexander the Great; the Jewish rabbins call it the era of contracts, and the Arabs the era of two horns. It began B.C. 310?

SELF-ACT'ING. A term applied to several automatic contrivances for superseding the manual labour which was previously necessary to manage a machine of the same nature.

SELTZER WATER. A mineral water of Neider Seltzer, a place in Germany, about ten miles from Frankfort-on-the-Maine. It contains muriate of soda, carbonates of magnesia, soda, lime, and a large quantity of free carbonic acid.

SEL'VAOE, } Dutch, *self-kant*, self-bor-
SEL'VEDGE, } der. In *manufactures*, the edge of cloth where it is closed by completing the threads.

SEMAPHORE, *σημα*, sign, and *φερα*, I bear. A telegraph.

SEME' (Fr.), sown. In *heraldry*, strewed with figures, as stars and the like.

SEMECAR'FUS. The Marking-nut tree. A genus. *Pentandria*—*Trigynia*. Name from *σημαίνω*, to mark, and *καρπος*, a fruit, on account of the use that is made of its nut in the East Indies, to mark table-linen and articles of apparel. The *S. anacardium* was supposed to be the tree which affords the Malacca bean; which, however, is the produce of the *Anacardium Indicum*.

SEMEIOT'ICS, from *σημαίω*, a sign. That part of medicine which considers the signs of disease. It comprehends *diagnosis* and *prognosis*.

SEMEIN ADJOW'AEN. Adjowan seed. A seed, the produce of the *Ammi copticum*, imported from India. It is used in medicine for its exciting and carminative virtues.

SEM'I. A Latin prefix signifying *half*. It answers to the Greek *hemi*, and French *demi*.

SEM'I-ARIANS. In *church history*, a branch of Arians who, in appearance, condemned the errors of Arius, but acquiesced in some of his principles, disguising them under milder terms. Thus, they admit the Son to be like the Father by a *peculiar privilege*.

SEM'IEREVE, from *semi* and *breve*. In *music*, a note of half the duration or time of the breve. It is equal to two minims, or four crotchets, or eight quavers.

SEM'ICOLON, from *semi* and *colon*. In *grammar*, a point marked thus (;), denoting a pause in reading greater than the comma, and of less duration than the colon, and of half the duration of the period.

SEMICU'BICAL PARABOLA. In *analysis*, a curve of the second order, defined by the equation $y^2 = ax^2$. It is the evolute of the common parabola.

SEMI-DIAPA'SON, from *semi* and *diapason*. In *music*, an imperfect octave.

SEMI-DIAPEN'TE, from *semi* and *diapente*. In *music*, an imperfect fifth.

SEMI-DIATES'SARON, from *semi* and *diatessarion*. In *music*, an imperfect fourth.

SEMI-DI'TONE, from *semi*, for *hemi*, and *ditone*. In *music*, a lesser third, having its terms as 6 to 5.

SEMI-FLOS'CULOSE, Lat. *semiflosculosus*. In *botany*, a compound flower is so designated, when its florets have the limb of the corolla produced in a ligulate shape on the outer side only. The dandelion and hawkweed are examples.

SEMI-MET'AL. An old name for such metals as are not malleable; e.g. bismuth, arsenic, nickel, antimony, zinc, cobalt, manganese, tungsten, molybdenum, uranium, &c.

SEMIN'IMA. In *music*, a *half-minim* or crotchet.

SEM'INAL LEAVES. The leaves of a plant which first sprout forth from the sown seeds.

SEMI-O'PAL. A variety of opal. Colours white, grey, green, red, brown, blue, rarely yellow.

SEMI-OR'DINATE. In *conic* sections, a line drawn at right angles to, and bisected by, the axis, and reaching from one side of the section to the other.

SEMIFAL'MATE, Lat. *semi*, half, and *palm*, hand. In *zoology*, when the toes are connected by a web extending only half their length.

SEMI-PELAGIANS. In *ecclesiastical history*, a sect retaining some of the doctrines of Pelagius.

SEMI-PRO'TOLITE. The name given by Kirwan to minerals partaking of the nature of primary and secondary rocks: *πρωτος*, first, and *λιθος*, stone. It ought to be *hemiprotolite*.

SEMI-QUAD'RATE, } An aspect of the pla-
SEMI-QUAR'TILE, } nets, when distant from each other half a quadrant.

SEMI-QUA'VER. In *music*, a note of half the duration of the quaver.

SEMI-QUIN'TILE. An aspect of the planets, when distant from each other half of the quintile, or 36°.

SEMI-SEX'TILE. An aspect of the planets, when distant from each other the twelfth part of a circle, or 30°.

SEM'TOSPIRO (It.). In *music*, a small pause, equal to the eighth part of a bar in common time.

SEM'I-TONE. In *music*, half a tone; an interval of sound, as between *mi* and *fa* in the diatonic scale, which is only half the distance of the interval between *ut* and *re*, or *sol* and *la*. It is the smallest interval admitted in modern music.

SEM'I-VOWEL. In *grammar*, a half-vowel; an articulation which is accompanied with an imperfect sound, as *l*, *m*, *n*, which do not demand a total occlusion of the mouth.

SEMNOPITHECUS. The generic name given by F. Cuvier to certain monkeys, which differ from the long-tailed monkeys (*Cercopithecus*, Erxl.), only by having an additional small tubercle on the last of the inferior molares. They inhabit eastern countries. The best known is the *Simia nemus*, Lin., remarkable for its lively and varied colouring. It inhabits Cochin China. The *S. nasica*, Lin., of Borneo, is remarkable for the extraordinary form of its nose.

SEMPERVIRENT, Lat. *sempervirens*, ever-green. Applied to plants whose leaves are permanent throughout one, two, or more years.

SEMPERVIVUM. The House Leek. An extensive genus of plants. *Dodecandria*—*Dodecagynia*. Name from *semper*, always, and *vivo*, green. The British type is the

common house-leek, or sengreen (*S. tectorum*), a perennial.

SEMUN'CIA. A Roman coin, one twenty-fourth of the Roman pound.

SEN'ATE, Lat. *senatus*, assembly of elders. The deliberative assembly of the Roman people. In many modern republics, the upper house of the national assembly has been so called.

SEN'ECA-ROOT, } The root of the rattle-
SEN'EGA-ROOT, } snake milk-wort (*Polygala Senega*), formerly much esteemed as a specific against the poison of the rattle-snake. It is used in decoction. See *SENEGA*.

SENE'CIO. Groundsel. An extensive genus of plants. *Syngenesia*—*Polygamia superflua*. Name from *senesco*, to grow old, because it has a greyish down upon it like the beard of an old man. There are nine species natives of Britain, among which are the common, wood, and squalid groundsel, the common and the marsh ragwort, or St. James's-wort, and the bird's-tongue—all herbaceous plants.

SEN'ECA. A plant, a species of polygala, so named because the Seneca or Senegaw Indians use it against the bite of the rattlesnake. See *SENECA-ROOT*.

SEN'EGAL GUM. See *ACACIA* and *GUM*.

SEN'ESCHAL. A French title, answering to that of high steward in England.

SEN'NA. In the *materia medica*, the leaves of the *Cassia senna*, an annual plant, which grows plentifully, (and best), in the valleys of Nubia, where it is called *Abyreyga*. It grows also in Arabia, and is imported thence into India, under the name of *Sāna*, and is imported from Calcutta and Bombay under the name of East India senna.

SENSA'TION. When an impression made on the extremity of a nerve is communicated to the sensorium, so as to excite the consciousness of the mind, it is called a *sensation*. When the impression is made by the action of a foreign body on an external part, it is called an *external* sensation; when it proceeds from some change taking place within the living system, and arising from its own actions, it is an *internal* sensation. There are, however, sensations belonging to neither of these classes. The vehicles of impressions giving rise to sensations, are the nerves: the organs by which they are primarily received, are termed the organs of the senses. See *SENSES*.

SEN'SES. The channels of communication by which the mind derives the materials of thought from the external world, and the exercise of which depends on the property of sensibility, modified by particular organs to especial ends. Man is usually considered to be endowed with five senses: sight, hearing, smell, taste, and touch. To these Dr. Thomas Browne,

late Professor of Moral Philosophy at Edinburgh, has added a sixth, *muscular sense*, by which the individual takes cognizance of the action of his own muscles. This appears, however, to be referable to the sense of touch. Some powers of the mind, as imagination, the passions, &c., have been termed *internal senses*.

SENSIBILITY. That faculty of living parts by which they are capable of receiving impressions, and increase, diminish, alter, and suspend their actions. Sensibility is usually divided into *animal sensibility*, which gives rise to sensations, and organic sensibility, which calls into action the organic contractility.

SENSITIVE PLANT. The *Mimosa sensitiva*. A biennial plant of Brazil, &c. The leaves shrink from the touch, and fall on being slightly touched.

SENSORIUM. The Brain. The common centre at which all the impressions of the senses are received.

SENSUALISM. In *philosophy*, the theory which resolves all our mental acts into various modifications of mere sensation.

SENTECE, Lat. *sententia*, from *sentio*, to think. In *law*, a judgment pronounced by a court or judge upon a criminal. Strictly, sentence is only used for the declaration of judgment against one convicted of a crime. In *civil cases*, the decision of the court is called a *judgment*.

SENTICOSÆ. The name of an order of plants in the Natural Method of Linné, consisting of such as are thorny (*senticosus*), or resemble the bramble, rose-bush, &c.

SENTINEL. Sentry. Fr. *sentinelle*, from Lat. *sentio*, to perceive. A soldier set out to watch and guard a place against surprise, by giving notice of approach of danger.

SENZA, (It.). In *music*, a prefix meaning without; as *senza stromenti*, without instruments.

SEPAL. A word invented by botanists to distinguish the parts of the calyx from those of the corolla.

SEPARATISTS. A religious sect which originated in Dublin in 1803.

SEPARATORY, Lat. *separatorium*, from *separo*. 1. A chemical vessel for separating essential parts of liquids.—2. A surgical instrument for separating the pericranium from the skull.

SEPIA. 1. The Cuttle-fish. A genus of cephalopodous molluscs, comprehending, according to Linné, the *Argonauta*, Lin., and the *Sepia*, Lam. This last is the cuttle-fish, properly so called. It is distinguished by two long arms, and a fleshy fin, extending along the whole length of each side of the sac. The shell is oval, thick, convex, and composed of numerous

and parallel calcareous laminae, united by thousands of little hollow columns running perpendicularly from one to the other. This structure renders it friable, and causes it to be employed for polishing various sorts of work.—2. The *ink* of the cuttle-fish. This is a black juice, secreted by certain glands of the fish, and is ejected to darken the waters when it is pursued. One part of it is capable of rendering 1000 parts of water nearly opaque. It is used as a pigment.

SEPIUM. The internal shell of the cuttle-fish.

SEPTARIÆ, Lat. from *sepes*, a hedge. The name of an order of plants in Linnæus's Natural Method, consisting of woody plants, which have a hedge-like appearance, with flowers, mostly thymus or panicle.

SEPOY'S. The name given in the East Indies to the native infantry in the British service. They are about 200,000 in number?

SEPT. A clan: used of the races of families in Ireland.

SEPTA. In *conchology*, &c., plural of *septum* (q. v.).

SEPTARIA, Lat. from *septa*, partitions. Lenticular concretions of ferruginous clay, anciently named Helmont's quoits (*ludi Helmontii*). They are intersected by veins of calc-spar, and when calcined and ground to powder form the excellent hydraulic cement called *Parker's cement*.

SEPTEMBRISTS. The name given to the agents in the dreadful massacre, during the French Revolution, that took place in Paris on the 2nd September, 1792.

SEPTIC, Gr. *σηπτικός*, from *σηπαι*, to putrefy. 1. Relating to putrefaction.—2. A substance having the power to promote or produce putrefaction in bodies.

SEPTUAGESIMA, Lat. *septuagesimus*, seventieth. The third Sunday before Lent, or before Quadragesima Sunday, supposed to be so called from its being about 70 days before Easter.

SEPTUAGINT, Lat. *septuaginta*, seventy. A Greek version of the Old Testament, so called because it was the work of 70 (rather 72) translators. This translation is supposed to have been made in the reign and by the order of Ptolemy Philadelphus, king of Egypt, about 270 years before Christ.

SEPTUM, Lat. a partition, from *septo*, to separate. Applied in *anatomy* and *natural history*. 1. The *S. auris* is the drum of the ear. The *S. cerebelli* is a process of the dura mater, dividing the cerebellum perpendicularly into two parts. The *S. cordis* is a partition between the two ventricles of the heart. The *S. lucidum* is the thin and tender portion of the brain, dividing the lateral ventricles from each other. The *S. narium* is the partition be-

tween the nostrils.—2. The plates dividing the chambers of multilocular shells are called *septa*.

SE'QUENCE, Lat. *sequentia*. In music, a similar succession of chords.

SEQUESTRA'TION, from low Lat. *sequestro*, to sever. In law, the act of separating a thing in controversy from the possession of both parties, until the right be determined.

SE'QUIN' (sometimes written *zerhin* and *chequin*). A gold coin. That of Genoa is worth 9s. 5½d., those of Milan and Piedmont are worth 9s. 4½d., that of Naples is worth 6s. 7½d., that of Rome is worth 9s. 3d., that of Tuscany the same, and that of Venice about a farthing more. In Turkey the old sequin is worth 7s. 8d., whereas the *sequin focondi* is worth only 7s. 6½d.

SERAGLI'O. The palace of the Turkish Sultan, in Constantinople.

SER'AI. A place of accommodation for travellers in the East, thus named in India and Tartary; but the Turks call them *Khans*, and the Persians *Caravan-serais*, which is the name commonly employed in Europe.

SER'APHINE. A musical wind instrument of the organ species, adapted to the size of a chamber.

SER'APHS. In the celestial hierarchy, the angels of the highest rank.

SERAS'KIER. A Turkish general, or commander of land forces.

SERENA'DE, Lat. *serenus*, clear. Originally music performed in the open air on a serene evening; latterly, a nocturnal exhibition by gallants under the window of some favourite lady; the custom was formerly common in Spain and Italy.

SERENA'TA. A piece of music of a vocal description.

SERGE, Fr. *serge*, Sp. *xerxa*, It. *sergia*. A woollen quilted stuff of various kinds. It is worked with four treddles.

SER'GEANT, Fr. *sergent*, It. *sergente*. 1. A lawyer of the highest rank, under a judge.—2. Formerly this title was borne in England by an officer answering to our modern bailiff of the hundred; and also by an officer whose business was to attend on the king and the lord high steward in court, to arrest traitors and other great offenders: the same is now called *Sergeant-at-arms or mace*.—3. At present, several petty officers have the name of *sergeant*.

SER'ICEOUS, Lat. *sericeus*, silky; *sericum*, silk. Applied, in botany, to the fine down of some plants.

SER'IES (Lat.), sequels; order; course. 1. In chronology, &c., a continued succession of things of the same order, and which have some relation or connection with each other.—2. In analysis, a succession of terms, or progressive quantities, connected together by the signs *plus* and

minus, and proceeding according to some law or determinate relation. See PROGRESSION.

SER'ON. A buffalo's hide, used for packing drugs, &c.

SER'PENS. In astronomy, a northern constellation.

SER'PENT. 1. A venomous reptile. See SERPENTIA and OPHIDIA.—2. A musical brass wind instrument, bass to the horns or cornets.

SERPENTA'RIA. 1. The name of a genus of plants now distributed among the genera *Arum*, *Aristolochia*, and *Scorzonera* (q. v.).—2. The plant called snake-root, a species of *Aristolochia*.

SERPENTA'RIOUS, Lat. from *serpens*, a serpent. 1. In ornithology, the snake-eater or secretary, an African bird of prey. It forms one of the divisions of the genus *Milvus*, Bech.—2. In astronomy, a constellation of the northern hemisphere, named also *Ophiuchus*.

SERPEN'TIA. Serpents. A family of reptiles of the order *Ophidia*. Name from *serpo*, to creep. The true serpents comprise the genera without a sternum, and in which there is no vestige of shoulder, but where the ribs still surround a great part of the circumference of the trunk, and where the body of each vertebra is still articulated by a convex surface to a cavity in the succeeding one. They are subdivided into two tribes, the *Amphisbænes*, founded on the genus *Amphisbæna*, Lin., and the *serpentes*, or serpents properly so called. These again are divided into venomous and non-venomous: to the former belong the boa, anaconda, python, crotalus (rattlesnake), and viper.

SER'PENTINE. A mineral of the magnesian family: the *ophites* or *serpent stone* of the ancients. It is usually of a green colour, with many tints (like a serpent's skin): sective, tough, and therefore easily cut into ornamental forms. It sometimes forms whole rocks, as at Lizard Point, in Cornwall. It differs from hornblende in containing more magnesia and less iron. When intermixed with patches of marble it constitutes the stone called *verde-antique*.

SERPI'GO. In surgery, the ringworm or tetter, from *serpo*, to creep. See HERPES.

SER'PULA, a genus of Articulata; order *Tubicola*. Animal, a terebella; shell a tubular univalve, which twines round and covers stones, shells, and other submarine bodies. Species numerous. Their petrified remains are called *serpulites*.

SERRA'NUS. The name of a genus of acanthopterygious fishes of the perch family. The genus contains a vast number of species, and is divided into several subgenera.

SER'RATE, Lat. *serratus*, from *serra*, a saw. Toothed like a saw.

SERRAT'ULA. The Saw-wort. A genus of perennial plants. *Syngenesia—Polygamia equalis*. Name from *serra*, a saw, on account of its serrate leaves. There are three British types; the common and the Alpine saw-wort, and the corn or way thistle.

SERRICOR'NES. A family of pentamerous coleoptera. Name from *serra*, a saw, and *cornu*, a horn; the antennæ, with some exceptions, being dentated either like a saw or a comb, or even like a fan, and in this respect are most developed in the males.

SER'ULATE, Lat. *serrulatus*, from *serula*, a little saw. Minutely serrate.

SERTULA'RIA. A genus of coralliferous polypi belonging to the family *Tubularia*. The sertularia have a corneous stem, sometimes simple, but often ramous, on the sides of which are cells, extremely various in form, which are occupied by the polypi, all connected with a gelatinous stem, which traverses the axis, like the medulla of a tree.

SER'UM, Lat., from *serus*, late. 1. The whey of milk.—2. The yellowish and somewhat greenish fluid which separates from the blood when cold and at rest.

SER'VAL. An animal of Malabar, of the feline tribe. It resembles the lynx in form and size, and the panther in spots.

SERVITOR, Lat., from *servio*, to serve. In the *University of Oxford*, a student who attends on another for his maintenance and learning: called at Cambridge a *sizer*.

SES'AME, } The Oily-grain. A genus
SES'AMUM, } of plants. *Didynamia—Angiospermia*. Name *σπασαμ*, from an Egyptian root. The species are natives of India, &c. The *S. orientale* affords the seeds called oily-grain, which are much esteemed as an article of food. It is cultivated in South Carolina under the name of *bene*.

SES'AMOID, from *σπασαμ*, *sesamum*, and *ειδος*, likeness. Like the sesamum seed. Applied, in *anatomy*, to several parts, from their shape.

SES'QUI. 1. A Latin prefix, signifying a whole and a half. In the *doctrine of definite proportions*, it is used to designate compounds in which an equivalent and a half of one ingredient combines with another; e. g. *sesqui-oxide*, *sesqui-carbonate*.—2. In *music*, the term was used by the old masters, to distinguish different kinds of measure.

SESQUIAL'TER, from *sesqui*, and *alter*, other. 1. In *music*, an organ-stop implying a whole and a half.—2. In *arithmetic*, a ratio where one quantity contains another one time and half a time. Thus $\frac{3}{2} = 1\frac{1}{2}$ is a sesquialteral ratio.

SES'QUITONE. In *music*, a minor third: an interval of three semitones.

SESSILE, Lat. *sessilis*, sitting close. Applied, in *botany*, to parts of plants which are not elevated on any kind of stalk.

SES'SION, COURT OF. The supreme civil court of Scotland, having jurisdiction in all questions, of whatever nature.

SES'SION OF PARLIAMENT. The period between its meeting and prorogation.

SES'TERCE, Lat. *sestertius*. A Roman coin, or denomination of money, in value the fourth of the denarius, and originally containing two asses and a half (about 2d.). The *sestertium*, i. e. *sestertium pondus*, was two pounds and a half, or 250 denarii (about 8d.). One qualification of the Roman knight was the possession of an estate worth 400,000 sesterces; of the senator, 800,000 sesterces.

SETA'CEOUS, Lat. *setaceus*, bristly; *seta*, a bristle. Applied to parts of plants, &c.

SET'IFORM, Lat. *setiformis*, bristly; *seta*, a bristle, and *form*. Applied to parts of plants.

SET-OFF, in *law*, is where the defendant acknowledges the justice of the plaintiff's demand, but sets up a demand of his own, to counterbalance it in whole or in part.

SE'TON, Lat. *setaceum*, from *seta*, a bristle. In *surgery*, an artificial sinus made under the skin by means of an instrument called the *seton-needle*, which carries with it a portion of thread or silk. The thread, which is of considerable length, is allowed to remain, and a new portion is drawn through daily, to keep up a constant irritation. In *farriery*, this operation is called *rovelling*.

SE'TOSE, Lat. *setosus*, bristly, from *seta*, a bristle. Applied to parts of plants.

SETTE'E, from *sit*. 1. A sort of large easy chair.—2. A description of vessel used on the Mediterranean. It has two masts, one deck, a very long and sharp prow, and lateen sails.

SET'TER. Among *sportsmen*, a dog that beats the field to start birds.

SETT-OFF. In *architecture*, the horizontal projections left in carrying up a wall, the thickness of which is diminished by steps.

SEV'ENTH. In *music*, an interval.

SEXAGES'IMA, Lat. *sexagesimus*, sixtieth. The second Sunday before Lent, so called as being about the sixtieth day before Easter.

SEXAGES'IMAL. Pertaining to the number 60. *Sexagesimal notation* is the method of computing by sixties, as that which is used in dividing degrees into minutes, and these into seconds.

SEX'TANT, from *sextans*, a sixth. 1. An instrument much used in surveying, for measuring horizontal angles. It is formed like the quadrant, except that it is only 60°, or the sixth part of the circle.—2. In *astronomy*, a constellation of the southern hemisphere, containing 41 stars.

SEX'TILE, Lat. *sextilis*, from *sex*, six. A term denoting the position of planets when distant from each other 60° or two signs: marked *.

SEX'TON, Lat. *sacrista*. A church officer, the keeper of holy things belonging to divine worship.

SEX'UAL. Appertaining to the sexes. The *sexual system of plants* is that method of distinguishing plants, founded on the parts of fructification, invented by Linnaeus.

SFORZATO. In *music*, an Italian term, denoting that the note over which it is placed must be struck with force.

SFUMA'TO, It., smoky. In *painting*, a style wherein the tints are so blended that the outline is scarcely perceptible.

SGRAFIT'TO, It., scratched. In *painting*, a style in which a white coat is laid upon a dark ground of stucco, and the shadows worked out.

SHAB'RACK. A military term, of Hungarian origin, used for the cloth furniture of a cavalry officer's troop-horse.

SHAD. Twáite shad. A migratory fish, the *Alosa finta*, Cuv. and Yarr. Ordinary size about 12 or 14 inches long. Inhabits the North Atlantic, the Mediterranean, and the Caspian Seas; and enters the rivers in spring to spawn.

SHAD'DOCK. The fruit of the *Citrus decumana* or shaddock-tree; so named after the person who introduced it in the West Indies from China.

SHAFT. 1. In *architecture*, the shaft of a chimney is the stone or brick turret above the roof. The shaft of a king post is the part between the goggles. The shaft of a column is the part between the base and the capital.—2. In *mining*, a vertical sinking or well, excavated or dry, for the purpose of working and ventilating mines. The principal shaft is usually termed the *engine-shaft*.—3. In *machinery*, the term shaft is applied to a large axle.

SHAGREEN, Fr. *chagrin*, Ger. *schagrin*. A description of grained leather, prepared chiefly at Astracan in Russia, from the skins of horses, wild asses, and camels. It used formerly to be prepared from the skin of a species of squalus or hound-fish called *shagree* (?)

SHAH. A Persian title equivalent to king.

SHAKE. 1. In *music*, a trill. A rapid reiteration of two notes, comprehending an interval not greater than one whole tone, nor less than a semitone.—2. A fissure in timber, caused by its being dried too suddenly, or exposed to too great heat. Any timber when naturally full of clefts or splits is said to be *shaky*.

SHAK'ERS. In *ecclesiastical history*, a sect who arose in 1747, in Lancashire, being, it is said, a secession from the Quakers.

SHALE, Germ. *schale*. 1. Slate clay. Indurated slaty clay. Shale is almost always found among the coal measures.

—2. Kemmeridge coal is sometimes called bituminous shale: it is a mixture of clay, bitumen, and carbon.

SHALLOON. In *manufacture*, a light woollen stuff, said to be named from Châlons, in France.

SHAL'LOP, Fr. *chaloupe*, Ger. *schaluppe*.

1. A small light vessel, with a small mainmast and foremast, with lug-sails.

—2. A description of large boat rigged like a schooner.

SHAL'LOT, Fr. *échalotte*. The *Allium ascalonicum*; a useful esculent root, possessing all the virtues of garlic, with less pungency.

SHAM'ANISM. A general name for the religions of a number of barbarous tribes of the Finnish race.

SHAMMY. Chamois leather. A kind of leather prepared from the skin of the chamois goat. See CHAMOIS.

SHAMPOO'ING. A name in the East for a mode of relieving pain in the joints by friction.

SHAM'ROCK. The name given in Ireland to the three-leaved grass, or trefoil. The original *shamrock*, or rather *shamroy*, appears from old authors to have been the wood-sorrel, not the white clover which now bears the name.

SHANK'LIN SAND. Lower greensand. A marine deposit of siliceous sands and sand-stones, of various shades of green, red, brown, yellow, grey, and white, with subordinate beds of chert and siliceous limestone. It forms the lowest member of the cretaceous group, intervening between the gault above and the weald clay below.

SHANK PAINTER. The rope or chain which passes round the shank of an anchor, and confines it to the ship's bow.

SHARP. 1. In *music*, a note artificially raised; a semitone, opposed to *flat*.—2. The mark denoting a sharp, ♯.

SHAS'TER. A sacred book among the Hindoos, containing the dogmas of their religion.

SHAWM, } Ger. *schalmeie*,
SHALM, } from *schallen*,
to sound. A hautbois or cornet. This instrument was used in the sacred music of the Hebrews.

SHEARS differ from *scissors* chiefly in being larger. The name *shears* ought, perhaps, to be confined to such instrument as that used for shearing sheep. In which the blades are not connected by a pin, as in the common scissors, but by a spring (as in the figure), and to those instruments where one of

the blades is fixed and the other moveable, used in cutting iron plate, &c.—2. An instrument for raising weights. *See* SHEERS.

SHEAR'WATER. A name of two birds. 1. The *Procellaria puffinus*, Lin., found on the coasts of Great Britain and Ireland.—2. The *Larus niger*, Lin., or black gull.

SHEATH. In botany, a name applied to a petiole, embracing the branch from which it springs, or to a rudimentary leaf which wraps round the stem.

SHEATH'ING. In ship-building, a sort of covering nailed all over the outside of a ship's bottom, to protect the planks from the ravages of worms. Formerly, this sheathing consisted only of boards, tarred and payed over, but now copper is resorted to, not merely as a substitute, but as an additional covering.

SHEAVE. 1. The wheel contained in pulley-blocks.—2. A name given on railways worked by fixed engines to the friction-rollers or pulleys on which the rope is borne up.

SHEER. 1. In nautical language, the longitudinal curve or bend of a ship's deck or sides.—2. The position in which a ship is sometimes kept at single anchor, to keep her clear of it. To *break sheer* is to deviate from that position and risk fouling the anchor.

SHEER-DRAUGHT. In naval architecture, the side view or projection on the plane of the keel, on which are laid off the heights and length of the parts of the keel, the position and rake of the stem and sternpost, the principal timbers of the sides, the posts, decks, channels, place of greatest breadth of midship frame, stations of masts, &c.

SHEER-HULK. In the navy, an old 74 cut down to the lower deck, and fitted up with a pair of sheers for the purpose of taking out the lower masts of ships preparing for sea.

SHEERS. A contrivance consisting in the

erection of two long spars or pieces of timber, fastened together near the top, so as to cross each other at their upper ends, and have their lower ends far apart: from the upper end a tack depends for raising weights. When sheers are employed on land, three spars are usually set up.

SHEET. In nautical language, a rope fastened to one or both the lower corners of a sail, to extend and retain it in its proper situation.

SHEET-AN'CHOR. The largest anchor of a ship.

SHEET'ING. A description of linen fit for making bed sheets of.

SHEET-PI'LING. Piles are sometimes driven in close rows, to form the faces of wharfs, banks of rivers, piers for the sea, to protect foundation walls from the effects of water; also in the construction of coffer-dams, sluices, &c., this is called *sheet-piling*, and when the piles consist of planks, it is termed *pile-planking*. The piles are sometimes mortised into each other by dove-tail joints.

SHEIK (Arab.) A title of dignity belonging to the chiefs of Arabian tribes.

SHE'KEL. An ancient Jewish silver coin, equal to four Attic drachms, in value about 2s. 6d. A shekel of gold was worth 36s. 6d.

SHELDRAKE. An aquatic fowl, the *Anas tadorna*, Lin., originally from South America, where it perches on trees.

SHELL. 1. The hard covering or external skeleton of testaceous and crustaceous animals, and of some insects. The shells of the *testaceous mollusca* consist chiefly of carbonate of lime and animal matter; those of the *crustaceans* of a mixture of carbonate and phosphate of lime with animal matter.—2. In gunnery, a hollow cast-iron ball; it is filled with powder and thrown out of mortars, &c.; a fusee fixed firmly into a hole in the shell being kindled by the discharge of the gun. This fusee is made of such length, that it will have burned to the powder by the time the shell has reached its destination and explode it, the fragments dealing death and destruction around.

SHELL-MARL. A deposit of calcareous earth and clay containing shells.

SHEL'TIE. Shetland Pony. A small variety of the horse, produced in Shetland.

SHEMIT'IC LAN'GUAGES. The Chaldee, Syriac, Hebrew, Samaritan, Ethiopic, and old Phœnician—all sprung from the same stock.

SHERAR'DIA. The Field Madder; a genus of annual plants. *Tetrandria—Monogynia*. The corn-field madder is common in Britain; the wall-field madder is peculiar to the Italian Alps.

SHERBET, Arab. *sharâba*, to drink. A cooling summer drink, prepared from the juice of fruits and water, variously sweetened and flavoured. Sherbets are much used in India and other hot countries.

SHER'IFF, SAX. *scir-gerefa*, from *scyre*, a shire, and *gerefa*, a reeve, count, steward, or bailiff, *shire-reeve*. An officer in each county, to whom is entrusted the execution of the laws.

SHER'RY,) A species of wine, so called
SHER'RIIS,) from Xeres in Spain, where it is made.

SHIELD. In heraldry, the *escutcheon*,

on which are placed the bearing. in coats of arms.

SHIFT. A change. A term used with reference to relays of workmen employed in mines, on railways, or other work.

SHILL'ING, Sax. *scilling*; Ger. *schilling*. An English silver coin, worth 12 pence, or the 20th part of the sovereign. It contains 80.727 grs. pure silver, or 87.27 grs. of standard silver (11 oz. 2 dwts. silver + 18 dwts. alloy).

SHIN'GLE, Ger. *schindel*, from *scheiden*, to divide. 1. In *house-building*, shingles are small oaken boards, used like slates, for roofing, and sometimes for covering the body of buildings.—2. The loose water-worn pebbles on the sea-shore.

SHIP. Strictly, a vessel having three masts, each consisting of a lower mast, a top-mast, and a top-gallant mast, with their appropriate rigging; but, in familiar language, the name ship is employed to designate any large vessel, however rigged, and frequently as a general designation for all vessels navigated with sails.

SHIP-MON'Y. In *English history*, an imposition formerly charged on the ports, towns, cities, boroughs, and counties of England, for 'providing and furnishing certain ships for the king's service. Abolished by Stat. 17 Car. II.

SHIP'S-PAPERS. The papers or documents required for the manifestation of the ship and cargo, &c. They are of two sorts:—(1.) Those required by the law of a particular country, as certificate of registry, license, charter-party, bills of lading, bill of health, &c.; and (2.) Those required by the law of nations to be on board neutral ships, to vindicate their title to that character.

SHIRE, Sax. *scyre*, from *sciran*, to divide. A division of territory: otherwise called a county. The shire was originally a division under the jurisdiction of an earl or count, whose authority was entrusted to the sheriff (*shire-reeve*), on whom the government ultimately devolved. See **COUNTY**.

SHIRE-CLERK. An officer who assists the sheriff in keeping the county court.

SHIRE-MOTE, Sax. *scir-gemote*, shire-meeting. An ancient county-court in England.

SHIT'TIM WOOD. A sort of precious wood, mentioned in Scripture. Not ascertained.

SHIV'ER, Ger. *schiefer*, a splinter. 1. A variety of clayey schist.—2. Among *seamen*, a sheave: the little wheel in which the rope of a pulley runs.

SHOAD. In *mining*, stones containing ore mixed with rubbish in a loose soil, and sometimes near the surface.

SHOAR,) Sax. *score*. A prop of timber,
SHORE,) acting as a brace in the side

of a building; the upper end resting against that part of the wall on which the floor is supported. Timber plates are usually placed at each end of the shoar, and the junctions are tightened by wedges. A *dead shoar* is an upright piece, built up in a wall, which has been cut or broken through for the purpose of making some alteration in the building.

SHOE. Among *plumbers*, the part of the bottom of a leaden pipe, or water-trunk, which is intended to turn the course of the water.

SHOOT'ING. Among *joiners*, planing the edge of a board straight and out of wind-ing.

SHOOT'ING BOARD. Two boards which are joined together, with their sides lapped upon each other, so as to form a rebate for making short joints.

SHOT. Properly whatever is discharged from fire-arms or cannon by the force of gunpowder. The shot used in war is of various kinds; as *round-shot* or *ball* (the larger sort for cannon made of cast-iron, the small for muskets and pistols, of lead); *double-headed* or *bar-shot*, consisting of a bar with a ball on each end; *chain-shot*, consisting of balls chained together in pairs; *grape-shot*, consisting of small balls strongly corded in canvas on an iron bottom, so as to form a sort of cylinder adapted in diameter to the bore of the gun; *cass* or *canister-shot*, consisting of a great number of small bullets in a cylindrical tin-box; *langrel* or *langrage*, consisting of pieces of iron of any shape. *Small-shot* denotes musket and pistol bullets. Besides these, there are other sorts of more pernicious nature, used by privateers, pirates, &c.

SHOT-WRACKS or **SHOT-LOCK'ERS.** In *ships*, wooden frames, bolted to the crampings and head-ledges round the hatchways on the decks, to contain the different shot.

SHOUL'DER. 1. Among *carpenters*, the plane transverse to the length of a piece of timber from which a tenon projects.—2. The *shoulder of a bastion* is the place where the face and flank meet.

SHOUL'DERING PIECES. In *joinery*, see **BRACKETS**.

SHRAP'NEL SHELLS, in *gunnery*, are shells filled with a quantity of musket balls, which, when the shells explode, are projected 150 yards from them.

SHRED'INGS. In *architecture*, slight short pieces fixed below the roof as bearers in old buildings, and forming a straight line with the upper part of the rafters: called also *furrings*.

SHRIMP. A crustacean, the *cancer crangon*, Lin., reckoned delicious food.

SHRINE, Lat. *scrinium*, a cabinet. The receptacle of the remains or relics of a saint.

SHROUDS (of a ship). A range of large ropes, extending from the head of a mast to the right and left side of the ship, to support the mast; as the main *shrouds*, fore *shrouds*, mizen *shrouds*. There are also futtock *shrouds*, bowsprit *shrouds*, &c.

SHROVE-TIDE, } Confession time;
SHROVE-TUESDAY, } Confession Tuesday: the Tuesday after Quinquagesima Sunday, or the day immediately preceding the first of Lent or Ash-Wednesday, on which day Roman Catholics make confession of their sins; after which they dine on pancakes and fritters, during the ringing of the *pancake-bell*. Much of the latter part of the duties are still kept up in England. The term *shrove* is the preterite of *shrive*, to confess.

SHRUB. 1. In *botany*, a plant with a permanent woody stem, but of a more humble and slender growth than a tree. — 2. A liquor consisting of acid fruits, sugar, and various substances to give flavour, digested in rum or brandy.

SHWAN PAN. The calculating instrument of the Chinese.

SHUTTLE. In *weaving*, the instrument with which the woof or weft is thrown through the open lease or shot of the warp before the reed. There are many varieties of shuttles as to size, but only two marked by different kinds: the *hand-shuttle* which has no wheels to run upon, and is thrown directly by the hand, and the *fly-shuttle*, which has two cylindrical

FLY-SHUTTLE.

wheels to run upon, and is thrown by means of an apparatus attached to the ends of the lathe. The figure shows the under side of the fly-shuttle.

SI. In *music*, the seventh sound.

SIEBENS. **SIVVENS**. A disease which is endemic in some of the western counties of Scotland. It strikingly resembles yaws in many respects.

SIE'ERITE. Rubellite or red tourmaline.

SIE'XLINE BOOKS. Documents supposed to contain the fate of the Roman Empire.

SIE'XLS. In *antiquity*, certain women supposed to be endowed with the gift of prophecy. They resided in various parts of Persia, Greece, and Italy.

SIDE'LING GROUND. A line of country whose cross-section is inclined or sloping.

SIDE-POSTS. In *carpentry*, a kind of truss-posts placed in pairs, each disposed at the same distance from the middle of the *truss*, for the purpose of supporting

the principal rafters, braces, crown, and camber-beams, as well as for hanging the tie-beam below.

SIDE'REAL DAY. The period in which any fixed star apparently completes a revolution, and comes to the same point in the heavens, which is 23 hours, 56 min., 4'6 sec. *Sideralis*, from *sidus*, a star.

SID'ERITE, Lat. *siderites*, from *sidngos*, iron. An old name for the loadstone.

SID'ERITES. Iron-wort. A genus of plants. *Didynamia*—*Gymnospermia*. Name from *sidngos*, iron, being supposed efficacious in healing wounds made by iron weapons. Warm and temperate climates.

SIDEROGRAPHY, from *sidngos*, iron, and *grafa*, to write. The art or practice of engraving on steel.

SID'EROSCOPE, from *sidngos*, iron, and *skopta*, to view. An apparatus proposed by the French chemists, for detecting iron in minute quantities in any substance.

SIDE-TIM'BERS, } Among *builders*, other
SIDE-WA'YERS, } names for purlins.

SID'ING. Passing place or Turn-out. A short length of additional tractway on railroads, laid by the side of a line of rails, and connected therewith at each extremity by suitable curves; the rails being constructed and disposed in such a manner that the carriages can either proceed along the main line or turn into the siding, as may be required.

SIE'NITE, } A granular aggregated com-
SY'ENITE, } pound rock, named from Siena or Syene, a town in Egypt, near which it was extensively quarried by the Romans for architectural purposes. It consists essentially of felspar and hornblende, with sometimes quartz and mica in small quantity. The colour of sienite is usually gray, of different shades.

SIER'RA. A word meaning a *saw*, introduced into geography by the Spaniards to designate a ridge of mountains or craggy rocks.

SIES'TA (Span.). In hot countries, the practice of resting two or three hours in the middle of the day.

SIGHT. In the *arts*, an aperture, or point, fixed to guide the eye in making an observation; as the sights of a quadrant, theodolite, circumferentor, &c.

SIGILLA'RIA. The name given by Brongniart to certain large and extinct forms of vegetation discovered in the coal measures, from *sigillum*, on account of the peculiar impressions on the stems, like seals. About fifty species are already described.

SIG'MOID, from the Greek letter **Σ**, sigma, and *u*dos, likeness. Resembling the Greek letter sigma. Applied, in *anatomy*, to several parts on account of their forms.

SIGX. In *astronomy*, a constellation con-

taining the twelfth part of the zodiac, or 30°. The signs are reckoned from the point of intersection of the ecliptic and equator, at the vernal equinox, and are named respectively, Aries, Taurus, Gemini, Cancer, Leo, Virgo, Libra, Scorpio, Sagittarius, Capricornus, Aquarius, Pisces.—2. In *algebra*, a character indicating the relation of the quantities of an expression, and the operations to be performed upon them; as + (*plus*), denoting addition, and — (*minus*), denoting subtraction. See **POSITIVE** and **NEGATIVE** also **QUANTITY**. There are also signs of *Multiplication* and *Division*, of *Equality*, of *Greater* and *Less* (or *Inequality*), q.v.

SIG'NALS, NAVAL. A system of symbols addressed to the eye, as flags, lights, &c., for communicating intelligence at distances too great for the human voice.

SIG'NATURE, from *signo*. 1. In *printing*, a letter put at the bottom of the first page of each sheet, as a direction to the binder in folding, gathering, and collating.—2. In *music*, the flats or sharps placed after the clef, at the beginning of the staff.

SIG'NET. A seal. The *Clerk of the Signet* is an officer in attendance upon the principal Secretary of State, and who has the royal signet in his keeping, for the signing of letters, grants, &c.

SIGN-MAN'UAL, in *law*, is used to signify a writing signed by the sovereign's own hand.

SIL'ENE. The Catchfly. A very extensive genus of caryophyllous plants. *Decandria—Trigynia*. There are twelve British types, among which are the Bladder and the Moss Campions, English, Dover, Nottingham, Spanish, Lobel's, and Nautical Catchfly. There are upwards of 100 species in all.

SIL'EX. The Latin word for *flint*. An oxide of silicium or silicon, constituting the greater part of all the rocks of which the crust of the earth is composed. See **SILICA**.

SIL'HOUETTE. In the *fine arts*, the representation of an object in a black colour, lightened to represent the prominent features, and touched with gum to indicate the shadows.

SIL'ICA, from *silex*. One of the primitive earths (strictly an acid), constituting the principal portion of the scintillating stones and minerals, which compose the crust of the globe, and occurring nearly pure in flint, rock-crystal, quartz, agate, calcedony, jasper, &c. The only acid that dissolves silica is the hydrofluoric, but it is soluble in alkaline solutions, and combines with many of the metallic oxides: hence it is regarded by chemists as an acid, and called the *silicic acid*. It is obtained perfectly pure, and in the finest state of comminution, by passing silicated fluoric acid gas through water; the silica

is precipitated, and may be separated by filtration. The silica thus obtained, being well washed and ignited, is a white and exceedingly light powder. It consists of 48·04 silicon, and 51·96 oxygen. It melts, before the flame of the oxy-hydrogen blowpipe, into a colourless glass.

SIL'ICATE. A compound of the silicic acid (*silica*) and a base, such as alumina, lime, magnesia, potash, soda, &c. The silicates are abundant in nature. Thus felspar and leucite are silicates of alumina and potash; albite and analcime are silicates of alumina and soda; stilbite, prehnite, mesolite, labradorite, mica, &c., are silicates of ammonia and lime; steatite and serpentine are silicates of magnesia; augite and hornblende are silicates of lime and magnesia (*Ure*). The various kinds and qualities of glass are all silicates.

SIL'ICEOUS. Flinty, containing silic.

SILICICAL'CE. The name given by Brongniart to a mineral substance which occurs in amorphous masses in thin beds, under strata of compact limestone, in Provence: it is a mixture of flint (*silica*) and carbonate of lime.

SILICIFICATION. Conversion of a substance into stone, by the infiltration of siliceous matter; *petrification*.

SIL'ICIUM, } The basis of silica. By

SIL'ICON. } passing the vapour of potassium over silica in an ignited tube, Sir H. Davy obtained a dark-coloured powder, which he supposed to contain *silicium*, or the basis of the earth. This has since been obtained in a pure state by Berzelius, who places it among the simple non-metallic combustibles. It appears to have a great analogy to boron. For this reason it has been named *silicon*.

SILIC'ULA, } Lat. dim. of *silicula*. In
SIL'ICULE. } *botany*, a pouch or pod, scarcely longer than it is broad.

SILICULO'SA. The name of the first order of plants in the class *Tetradynamia* of the Linnæan system, containing such as have a broad and short pod, or whose fruit are siliculæ. Epithet *siliculose*.

SIL'LIQUA, Lat., from *silo*, a snub nose. A pod: a long, dry, membranaceous pericarp, or seed-vessel of two valves, separated by a linear receptacle, along the edges of which the seeds are arranged alternately.

SIL'LIQUO'SA. The name of the second order of plants in the class *Tetradynamia* of the Linnæan system, containing such as have long pods (*siliquæ*).

SIL'LIQUO'SÆ. The name of a natural order of plants in the natural method of Linné, consisting of such as have a *siliqua* or *silicula*, with a tetradynamic and cruciate flower.

SILK. A fine glossy thread or filament, spun by various species of caterpillars of the genus *Phalænæ*, Linn., especially the

Ph. atlas, which produces it in largest quantity; and the *Ph. bombyx*, which is the silkworm generally known in Europe. The silkworm feeds on the leaves of the mulberry, and spins an oval cocoon of a close tissue, very fine, usually of a yellow colour, and sometimes white. A variety is now preferred, which yields the latter. The bombyx which produces it was originally from the northern provinces of China. According to Latreille, the city of Turfan, in Little Bucharia, was for a long time the rendezvous of the western caravans, and the chief entrepôt of the Chinese silks. It was the metropolis of the Seres of Upper Asia, or of the Serica of Ptolemy. Driven from their country by the Huns, the Seres established themselves in Great Bucharia and in India. It was from one of their colonies, Ser-hend (*Ser-indi*), that the Greek missionaries, in the reign of Justinian, carried the eggs of the silkworm to Constantinople. At the period of the first Crusades the cultivation of silk was introduced into Naples from the Morea, and, several centuries afterwards, under the administration of Sully particularly, into France, to which it is now a great source of wealth. Silk was formerly sold for its weight in gold.

SILK'-THROWER.) One who throws
SILK'-THROWSTER.) silk. *Thrown silk* is formed of two, three, or more *singles*, according to the substance required, to be twisted together in a contrary direction to that in which the singles of which it is composed are twisted. The singles are the reeled threads, twisted in order to give strength and firmness; and the process of *throwing* the singles is termed *organizing*; and the silk so twisted is called *organzine*. The art of throwing was long kept a secret in Italy; and becoming known in this country, the silk-throwsters were reckoned a superior class, and united (1562) into a fellowship.

SILK'-WORM. See **SILK**.

SILL. 1. Among *builders*, the timber or stone at the bottom of a door; one of the bottom pieces supporting quarter and truss partitions.—2. Among *miners*, a name in Devonshire for a variety of shell, found in some mines. It is used for making a peculiar sort of fire-brick.

SILLON. In *fortification*, an elevation of earth raised in the middle of a moat, to defend it when it is too wide.

SIL'PHA. A genus of coleopterous insects belonging to the family *Clavicornes*, now divided into various subgenera, known by the general name of *Carriion-beetles*, from their habit of burying the bodies of moles, mice, and other small quadrupeds.

SILT. Mud: the alluvial soil washed down and deposited upon the bottoms and sides of rivers by the action of the tides.

The term is also indicative of any soft light description of soil.

SILU'RIDÆ. A family of malacopterygious abdominal fishes, founded on the genus *Silurus*, Lin. The family is distinguished from all others of the order by the want of true scales, having merely a naked skin or large osseous plates.

SILU'RIAN. In *geology*, the name given by Mr. Murchison to an upper subdivision of the sedimentary strata found below the old red sandstone, on account of the strata composing this group being best developed in that portion of England and Wales formerly included in the ancient British kingdom of the Silures.

SILU'RUS. The name of a genus of fishes. Order *Malacopterygii abdominales*: family *Siluridæ*. Name from *silu*, to move or shake, and *urus*, a tail. The species are numerous, and are easily recognised by their nudity, by the mouth being cleft in the extremity of the snout, and by the strong spine which forms the first ray of the pectoral. They are properly named *Cat-fish*. The *S. glanis*, Lin., or *Sly*, is the largest fresh-water fish of Europe, and the only one of the genus found in it. It is found in the German and Hungarian rivers, and in the lake of Haarlem. The *S. electricus*, Lin., is an inhabitant of the rivers of Africa.

SIL'VAN. An old name for the metal tellurium.

SIL'VER. Ger. *silber*; Goth. *silubr*. One of the precious metals, nearly white when pure; superior to gold in lustre, but inferior to it in malleability, though it may be beaten into leaves not exceeding the 100,000th of an inch in thickness. It is highly ductile, and surpasses gold in tenacity, but in this respect is inferior to iron, copper, and platinum. Its hardness is between gold and copper; it melts at about 1000° F.; has a sp. gr. of 10.47; and is not oxidated by exposure to the atmosphere. Europe has some silver-mines; but the metal has hitherto been found in greatest abundance in South America. Silver is hardened for domestic purposes, and for coinage, by an alloy of copper: *standard silver* consists of 11 oz. 2 dwts. of silver and 18 dwts. of copper. See **SMILLING**.

SIL'VERING. 1. The art of covering the surfaces of bodies with a thin film of silver. The processes are nearly the same as gilding.—2. The silvering upon the back of the glass-plates of mirrors is, however, an amalgam of tin.

SIL'VER-LEAF. Silver beaten out into thin leaves for silvering, exactly in the same manner as gold-leaf.

SIL'VIC ACID. That portion of resin which remains undissolved when turpentine, freed from its oil, is digested in cold alcohol of 0.867, has been called

sine acid by Unverdorben, and resin beta by Berzelius.

SIMAROU'BA. The name of a genus of plants. *Decandria—Monogynia*. The *S. officinalis*, or mountain damson, is the tree which yields the *Simarouba* bark. It is a native of Carolina, South America, and the West Indies. Its bitter principle is named *Quassine*.

SIM'IA. The *Ape*: a genus of quadrupeds, comprising the monkeys, properly so called; the ourangs (*Simia*, Erxl.—*Pithecus*, Geoff.); the gibbons (*Hylobates*, Illig.); the patras (*Cercopithecus*, Erxl.); the kah-an (*Semnopithecus*, F. Cuv.); the macaques (*Macacus*); the dog-headed monkeys (*Cynocephalus*, Cuv.); the mandrills, the howling monkeys, sapajous, and the sajous (*Lagothrix*, Geoff.); the saimiri, the yarkes, fox-tailed monkeys, the sagouins, and the douroucoulis.

SIM'ILITE (Lat.). In like manner. In law, the form by which either party, in pleading, accepts the issue tendered by his opponent.

SIM'ITUDE. In geometry, the relation of figures similar to each other.

SIM'ILOR. A golden-coloured variety of brass.

S'IMONY. In law, the illegal buying or selling ecclesiastical preferment, denounced in Stat. 31 Elizabeth, c. vi., where it is called a crime.

SIMO'OM. A hot suffocating wind, which occasionally blows in Arabia and Africa; generated by the extreme heat of the sandy deserts and parched plains.

SIM'PLE. Lat. *simplex*. 1. In botany, applied to roots, leaves, &c., when undivided.—2. In chemistry, applied to undecomposed substances, of which there are 55, called *elementary substances* or *elements*. Of these the metals are examples.

SIMPL'ICIA. The name of an order of Acalephous zoophytes that float and swim in the ocean by the alternate contractions and dilatations of their body, which is gelatinous and without apparent fibres. The medusa is an example of the simple acalepha.

SIN'APINE. A substance extracted from the seeds of the *Sinapis alba* and *nigra*, (white and black mustard); at first called *sulphosinapisin*. It is white, bulky, and light; has a bitter taste, and dissolves with a yellow colour in water and alcohol.

SIN'APIS. Mustard. The name of a genus of plants, mostly herbaceous. *Tetradynamia—Siliquosa*. So called from *cruis apas*, it hurts the eyes. There are 27 species, all hardy plants, except the shrubby mustard of Madeira. The white and black mustard plants are natives of Britain, where they are much cultivated.

SIN'APISM. A mustard poultice: *sinapis*, mustard.

SIN'CIPT (Latin). The part of the head from the forehead to the coronal suture.

S'INE. Lat. *sinus*. In trigonometry, the right sine of an arc is a line, *ts*, drawn from one end of the arc *tA*, perpendicular

to the radius *CA*, drawn through the other end, being always equal to half the chord of double the arc. The *versed-sine* is the line *ts*; the cosine is the sine

of the complement of the arc, and the *covered-sine* is the cosine of that complement.

S'INE DI'E (Latin). Without day. An adjournment *sine die* is an adjournment without fixing the time for resuming the business. When a defendant is suffered to go *sine die*, he is dismissed the court.

S'INE PA'RI (Latin). Without fellow. Applied to muscles, veins, &c., which are without a fellow.

SINGLE. Among builders, a term of frequent use; e.g. *single frame* and *naked*, is applied to a floor which has only one tier of joists; a *single joist floor* is one that has no binding-joists *single-hung*: when only one sash of a window is moveable in the same vertical plane, the sashes are said to be *single-hung*. *Single-joists* are such joists as are employed singly in a floor; *single measure*, a door which is square on both sides; if it be moulded on both sides it is *double measure*, and if moulded on one side and square on the other, it is said to be *measure and half*.

SIN'GLES. In the silk manufactures. See *SILK-THROWER*.

SIN'ISTER (Latin). Left: on the left hand: opposed to *dexter*, applied in heraldry. A *sinister aspect*, in astrology, is the appearance of two planets happening according to the succession of the signs; as Saturn in Aries, and Mars in the same degree of Gemini.

SIN'ING FUND. In finance, a term appropriately applied to a portion of the public revenue, set apart to be applied to the reduction of the national debt.

SIN'NET. In nautical language, yarn bound round ropes to prevent them from galling.

SIN'OPER, } Lat. *sinapis*, Gr. *civaxis*. A **SIN'OPLE,** } ferruginous quartz, which occurs crystallised and in masses that resemble some varieties of jasper.

SIN'TER. A German name for the scale which files from iron when hammered: applied in mineralogy, *Calcareous sinter* is a variety of carbonate of lime, composed

of a series of successive layers, concentric, plane, or undulated, and nearly or quite parallel. It appears under various forms, stalactical, tuberoso, reniform, globular, cylindrical, &c. *Pearl sinter* is a quartzose or siliceous mineral, brittle, porous, and fibrous; when compact it is reckoned a variety of opal.

SIN'UATE, Lat. *sinuatus*, indented. Applied to leaves when they are deeply scalloped, the lobes standing apart as if part of the leaf were cut away.

SIN'UOUS, Lat. *sinuosus*. In the *fine arts*, of an undulating form.

SIN'US (Latin). A bag; a cavity or depression; a groove; a bay of the sea. In *anatomy*, the veins of the dura mater are called sinuses, &c. In *surgery*, the name sinus is given to a long, narrow, hollow track, leading from some abscess, diseased bone, &c.

SIPHON, Σίφων. A tube. In *hydraulics*, a bent pipe used to draw off wine and other liquors from vessels containing them, without disturbing the sediment which may be deposited, or where other modes may not be applicable. The operation of the siphon is simple; being filled with water and the shorter leg immersed in the liquid to be run off (as shown in the figure), the atmosphere,

acting continually upon the surface of the fluid, will force a continuous stream through the siphon, provided the highest point does not exceed 34 feet in the case of water, and proportional heights for other fluids corresponding to their specific gravities.

SIPHONARIA. A genus of gasteropods of the order *Pectinibranchiata*; and family *Cypuloida*. Named from the animal being furnished with a siphuncle or hydraulic apparatus.

SIPHONIA. 1. The generic name of the elastic gum-tree (*S. elastica*), class *Monoecia*; order *Monadelphica*. It yields the *gum-elastic*.—2. A genus of sponge-like fossil exhibiting a tubular structure.

SIPHONOTOMA. The name of a family of *parasitical crustaceans* of the order

Pacilopoda, now divided into two tribes, the *Calagides*, comprising *Argulus* and *Caligus* (fish-louse), and the *Lernaeiformes*, comprising *Dichelestium* and *Nicothoe* (lobster-louse). Name from σίφων and στόμα, a siphon or sucker fulfilling the functions of a mouth.

SIPH'UNCLE, dim. of *siphon*. A hydraulic apparatus belonging to chambered shells, passing through the several chambers, terminating in a large sac, which surrounds the heart of the animal. Its use appears to be to increase or diminish the specific gravity, so that the animal may rise or descend at pleasure.

SIR'EN. 1. In *antiquity*, a goddess who enticed men into her power by the charms of music, and devoured them. A mermaid. —2. The name given by Linnaeus to a genus of *Batrachians*, of which the *S. lacertina*, which inhabits the rice swamps of Carolina, is the best known species. It attains a length of three feet; has four toes on each foot, and the tail compressed into an obtuse fin. It lives in the mud, feeds on lumbrici, insects, &c. There are other two small species.—3. See **MAN-AT-UTS**.

SIRE'NE. In *acoustics*, an instrument for determining the velocity of aerial vibration, corresponding to the different pitches of musical sounds.

SIR'ASIS, Lat. from σίρας, the cavity of the fontanel. An inflammation of the brain, said to be peculiar to children, and attended with hollowness of the eyes and depression of the fontanel.

SIR'IUS, Σείριος, the Dog-star. A very brilliant star of the first magnitude, in the mouth of the constellation *Canis Major* or the Great Dog. This is the brightest and probably the nearest of the fixed stars.

SIROCCO (Ital.). } See **SCIROC**.

SIROC'O (Span.). }

SIS'TRUM, σίστριον, to shake. A kind of timbrel, used at the Egyptian festivals of Isis.

SISTY'BRIUM. The Cress: a genus of herbaceous plants. *Tetradynamia*—*Sili-quosa*. Name from σισυός, fringed, be- cause of its fringed roots. The common and the broad-leaved *sisymbrium*, the water-cress and the fixweed, or herb sophia, are British types.

SIR'TA. The nuthatch: the name of a genus of passerine birds, of the *Tenuirostrine* family. The beak is straight, prismatic, and pointed, and is employed in perforating the bark of trees, in search of larvae.

SIR'UM. The water-parsnip: a genus of perennial plants. *Pentandria*—*Dioecia*. Name from σίω, to move, on account of its agitation in water. There are four British species.

SIVA. In *Hindoo mythology*, the Supreme Being, in the character of destroyer.

SIXTH. In *music*, a hexachord: an interval of two kinds; the *minor sixth*, consisting of three tones and two semitones major; and the *major sixth*, composed of four tones and a semitone.

SI'ZARS. The lowest class of students at Cambridge.

SIZE. A glutinous substance, prepared from different materials, as shreds and parings of leather, hides, parchment, vellum, &c., used by painters, plasterers, and others.

SI'ZEL. In *coinage*, the residue of bars of silver, after the pieces for coins are cut out.

SKATE. In *ichthyology*, a species of ray-fish, the *Raja batis*, Lin., Yarr., common on all parts of the British coast, and known by various names, as *blue-skate* in Scotland, *grey-skate* in England, and *tinker* in Lyme Regis, on account of its dusky colour.

SKERN, or RAP. A quantity of cotton-yarn after it is taken off the reel. The skein contains 80 threads of 54 inches, and 7 skeins make a hank, 18 hanks a spindle.

SKEL'ETON. Σκελετόν. An assemblage of the bones of an animal, cleaned, dried, and preserved in their natural position. When the bones are retained in their proper positions by their natural ligaments, the skeleton is said to be *natural*; but when they are retained in their respective situations by means of wires, the

skeleton is *artificial*. The figure shows the principal parts of the human skeleton: *a*, the os frontis (frontal bone); *b*, the os temporis (temporal bone); *c*, *e*, clavicle;

d, the cervical vertebræ; *f*, *g*, scapula; *h*, humerus; *i*, the ribs; *k*, lumbar vertebræ; *l*, os innominatum; *m*, great trochanter; *n*, ulna; *o*, radius; *p*, phalanges of the fingers; *r*, femur; *s*, external condyle of the femur; *t*, tibia; *u*, fibula; *x*, the ankle; *y*, the tarsal bones.

SKEW BACK, or AS'KEW BACK. The course of masonry forming the abutments of a segmental arch, or to the cast-iron ribs employed in bridges.

SKEW BRIDGE. In *engineering*, a kind of bridge introduced upon railroads, when the line intersects any existing communication at right angles.

SKIM'MER. Black skimmer. A bird, the *Rhynchops nigra*, Lin., so named from its mode of feeding, which is by skimming its aliment from the surface of the water with the lower mandible, while on the wing.

SKIN. 1. In *anatomy*, the skin consists of two substances, placed one above the other, in the form of laminae or layers: the inner is called the true skin; the outer is named the cuticle, epidermis, or scarf skin.—2. In *commerce*, the term is used to denote the skins of those animals, as calves, deer, goats, sheep, &c., while the term *hide* is used to designate the skins of the ox, horse, &c.

SKIP. In *music*, a passage from one sound to another by more than one degree at a time.

SKIRT'ING. In *architecture*, the narrow vertical board at the bottom of the wall in an apartment.

SKOL'EZITE. A mineral. *Thomsonite*, thus named because, when placed in the flame of the blowpipe, it twists like a worm (σκοληξ), becomes opaque, and is converted into a blebby colourless glass.

SKOR'ADITE. } A native arseniate of iron,
SKOR'ODITE. } of a leek-green colour (sometimes brown), so named because before the blowpipe it fuses and gives out a smell like that of garlick (σκαροδον).

SKUNK. An animal of the weasel-tribe, pre-eminently remarkable for its horrible and suffocating stench. There are several species. See *MEPHITIS*.

SKY-ROCK'ET. See *ROCKET*.

SKY-SCRA'PERS. Small triangular sails, sometimes set above the royals.

SLAB, Wel. yslab, a thin stripe. 1. A plane, or table of stone.—2. The outside plank cut off a tree, which is of unequal thickness.—3. *Slabs of tin* are the lesser masses, into which the workers cast the metal: these are run into moulds of stone.

SLAB-LINE. A small rope by which seamen truss up the main or fore-sail.

SLACK. Small coal under the size of an egg.

SLAG, Dan. slagg. The vitreous mass

which covers the fused metals in the smelting-hearths. The slag of iron-works is usually called *cinder*, and is commonly bi-silicate of lime and magnesia, with a mixture of some metallic oxides.

SLAM. The name given in some parts to the refuse of alum-works.

SLAT. A stretcher. See **SLOAT**.

SLATE, Fr. *éclater*; It. *sglata*. In *mineralogy*, a genus of which the species are—1. *Mica-slate*, a mountain rock, of vast extent, and of schistose texture. It is sometimes employed for covering houses.—2. *Clay-slate*, a simple schistose mass, of a bluish-grey or greyish-black colour, of various shades, extensively distributed in Britain, and much used for covering houses; and hence called *roofing-slate*. The finer straight foliated varieties are employed as *writing-slates*; and the softer and more compact varieties are made into *slate-pencils*. It is closely connected with the mica-slate.

—3. *Whet or hone slate* is a slaty rock, containing a large proportion of quartz, used as a whet-stone or hone. It occurs in Saxony, Bohemia, and the Levant, (whence it takes the name of *Turkey-hone*), and also in the valley of Llanberris in North Wales.—4. *Polishing-slate* is a siliceous slaty mineral, found in Bohemia. It is supposed by some to be formed of microscopic shells.—5. *Drawing-slate*, or *black-chalk*, is of a bluish-black colour, occurs in mass, and the longitudinal fracture is slaty and glimmering. It contains about 11 per cent. of carbon, and is used in crayon-drawing, and for writing on paper and other materials. The best comes from Italy, Spain, and France; but it also occurs in the Island of Islay of fair quality.—6. *Adhesive-slate* is of a greenish-grey colour, and adheres to the tongue.—7. *Bituminous-slate* is a soft species of scitile-slate clay, impregnated with bitumen.—8. *Slate-clay*, or *shale*, is a stratified member of the coal-measures. It is simply indurated clay. There are several varieties of these species, as chlorite-slate, alum-slate, grauwacke-slate, &c.

SLATER. 1. One whose business is to cover the roofs of buildings with slates.—2. In *entomology*, see **MILLEPED** and **ONISCUS**.

SLATE-SYS'TEM. In *geology*, comprehends the Plynlimmon rocks, the Bala-limestone, and the Snowdon rocks. In the strata of this system are found the most ancient organic remains.

SLED. } A description of vehicle which

SLEDGE. } moves on runners, much used for conveying heavy weights, as timber, stones, &c. over soft ground, or where there are no proper roads. In England the name *sledge* is commonly used; in the United States of America *sled* is the

term. The *sleigh* is somewhat different, resembling the vehicle called in Scotland a *car*. The *sled* has properly no trams, but is dragged like a harrow by means of chains or the like; the *sleigh* or Scottish *car* differs from a cart or waggon only in being *slighter* made and having no wheels.

SLEEP'ERS. 1. Among *builders*, timbers laid upon dwarf walls for supporting the ground-joists of floors.—2. Generally, cross horizontal timbers for fixing plank-ing or the like where it is necessary to fill under, in order to make a secure foundation. The sleepers upon some railways are of stone; but wood is preferable as being more elastic.

SLEET. 1. In *meteorology*, a fall of rain and hail or snow together.—2. In *gunnery*, the part of a mortar passing from the chamber to the trunnions for strengthening that part.

SLEETCH. The thick mud lying at the bottom of rivers.

SLICH, } The ore of any metal, but par-
SLICK, } ticularly gold, when it has
been pounded and prepared for further working.

SLICK'ENSIDES. In *mineralogy*, a provincial name of a variety of galena, found in Derbyshire. It takes this name from its peculiarly polished surface.

SLIDE. In *music*, a grace used in Germany, consisting of two small notes moving by degrees.

SLID'ING-RULE. A mathematical instrument, having one or more *slides* or parts, which slide into grooves in the stock of the instrument. It is much used

in gauging, and other kinds of mensuration, and is often very convenient, as the computations are performed by it without the aid of compasses, merely by the sliding of the parts of the instrument, one by another, the lines and divisions of which give the answer or amount by inspection. The instrument is variously contrived and adapted to particular purposes: for instance, Everard's sliding-rule is used in cask-gauging; and Coggeshall's in measuring the superficies and solidity of timber, masonry, brick-work, &c.

SLID'ING-KEEL, used in small boats. A false keel let down through the bottom to hold against the wind.

SLIP. 1. Slipping of the earth of an embankment, cut, &c., arising from want of stability of the soil, badness of foundation, &c.—2. A place having a gradual descent on the bank of a river, harbour, &c., convenient for ship-building.—3. Matter, such as that found in the

trough of grindstones after the grinding of edged-tools; any finely-ground material of an insoluble kind, diffused in water.—4. A twig separated from the main stock for planting out as a set.

SLIT DEAL. Inch-and quarter deal, cut into two boards.

SLITTING MILL. A mill or machine where iron-bars are slit into nail-rods, &c.

SLOAM. Layers of clay between those of coal.

SLOAT. A narrow piece of timber which stretches between and holds together larger pieces, as the *sloats* of a cart, called in some parts *slat*, as the *slats* of a chair.

SLOOP. Dut. *sloop*, *sloopschip*, Dan. *sluppe*. A small one-masted vessel, the mainsail of which is attached to a gaff above, and to a long boom below. The name is popularly applied to any small ship.

SLOPE. The name given to any inclination, but applied more particularly to those of excavations and embankments; the term *gradient* being adopted for the inclinations of the rails upon railways.

SLOPS. The name among seamen for all species of wearing apparel, bedding, &c., belonging to or supplied to a ship's crew.

SLOUGH. 1. In *natural history*, the skin which a serpent casts off at its periodical renovation.—2. In *surgery*, the portion that separates from a foul sore.

SLUE. In *naval usage*, to slue is to turn round a cylindrical piece of timber without shifting it from its place.

SLUG. A popular name common to all those gasteropods of the Pulmonean order, which are not provided with any apparent shell. They form the genus *Limax*, Lin.

SLUICE. Dut. *sluys*. A water-gate: called tautologically a *sluice-gate*. The common sluice is a description of sliding valve, set in a frame of timber, stone, or other matter, and is worked by a rack and pinion. It is used in hydraulic works, either to prevent the passage of water, or to allow it to escape, as may be required.

SLUR. In *music*, a mark like the arc of a circle, drawn over two or more notes, indicating that they are to be sung to the same syllable, or made into one continued breath of a wind instrument, or played with one stroke of a stringed instrument.

SMACK. A vessel with one mast commonly rigged as a sloop; used in the coasting trade.

SMALL-POX. Variola. An eruptive disease, characterised by acute fever. Red pimples appear on the third day; these contain pus on the eighth day, and subsequently fall off in crusts. Before the discovery of vaccination, small-pox was one of the greatest scourges of Europe.

SMALL WARES. The name given to textile articles, such as tapes of various sorts, braid, plaited sash cord, fringe, &c.

SMALT, } Powder-blue. A vitreous substance obtained by melting
SMALTZ, }
SMALTS. } together zaffre, potash, and siliceous matter, and grinding the product to a fine powder. It is of a deep and beautiful blue colour, not affected by fire, and is consequently much employed in painting earthenware, &c. It is chiefly manufactured in Germany and Norway.

SMARAG'DINE. The colour of smaragd or emerald: a pure green colour.

SMART TICK'ET. A certificate of a seaman's having been disabled.

SMELTING. The operation by which the ores of iron, copper, lead, &c., are reduced to the metallic state.

SMIL'ACINE. An alkaline principle obtained from the root of the *Smilax sarsaparilla*, or *sarsaparilla* of the shops. See *SASSEPARINE*.

SMI'LAX. Rough bindweed. An extensive genus of plants. *Diccia*—*Hexandria*. Natural order *Sarmentaceæ*. Name *σμύλαξ*, from *σμιλλω*, to cut, on account of the roughness of its leaves and stalk. The China-root tree and the sarsaparilla plant are species of this genus.

SMOKE SAIL. A small sail hoisted to screen the quarter-deck from smoke.

SMORZATO, Ital. *extinguished*. In *music*, signifies that the violin bow is to be drawn to its full extent, but gradually lighter till the sound be nearly lost.

SMUT. In *husbandry*, a disease of corn, in which a foul black substance forms on the grains. Sometimes the whole ear is blasted and converted into *smut* (foul matter). The disease often attacks maize, sometimes wheat, rarely oats.

SMYR'NIUM. Alexanders. A genus of perennial plants. *Pentandria*—*Digynia*. Name from *σμύνα*, myrrh, the smell of the seed resembling much that of myrrh. Temperate climates.

SNAKE. 1. A popular name for the smaller species of ophidians.—2. Among seamen, to snake a rope is to wind a small rope round it spirally, the small rope laying between the strands of the main rope. This is also called *worming*.

SNAKE'ROOT. In *botany*, a name common to two plants, the *Aristolochia serpentaria*, and the *Polygala senega*. See *SERPENTARIA* and *SENECA*.

SNAKE STONES. A popular name of those fossils otherwise called Ammonites.

SNAKE'WOOD. *Colubrinum lignum*. The wood of the *Strychnos colubrina*, a tree which grows on the Isle of Timor, and some other parts. It is said to be a specific for the bite of the hooded serpent.

SNATCH-BLOCK. A block having an opening in one of its sides, wherein to catch the bight of a rope. It is also named a *rouse-about-block*.

SNEEZE'WORT. An indigenous species of

milfoil, the *Achillea ptarmica*. It is so called because the powder of the dried root excites sneezing when applied to the nose.

SNIFE. In ornithology, see SCOLOPAX.

SNOW, SAX. *snaw*, Goth. *snaiws*. 1.

Frozen vapour.—2. A vessel equipped with two masts, resembling the main and foremasts of a ship, and a third small mast just abaft the main-mast, carrying a try-sail.

SNUFF. Pulverised tobacco, variously prepared, scented, and distinguished by numerous names.

SOAPS. Chemical compounds of fats and oils with soda and potash, distinguished into two sorts, *hard* and *soft*. The former is made of soda and tallow or oil, and the latter of similar oily matters and potash. When prepared of soda and tallow only it is *white* soap: when the tallow is mixed with a large proportion of rosin, palm-oil, &c., it is *yellow* soap. A great many *fine varieties* of soap are prepared for the toilet; all these, however, differ from each other, chiefly in the kind of perfume and colouring matter which they contain, and are generally inferior to good *white* soap.

SOAPSTONE. Another and descriptive name for steatite (q.v.).

So'AVE, } (It.). Sweet, sweetly. In

SOAVEMENT'E. } *music*, denoting that the music is to be played sweetly.

So'BRIQUET (Fr.). A burlesque appellation or nickname.

Soc, } SAX., from *socan*, to follow.

SOKA. } 1. Properly the sequela, secta, or suit, of the body of suitors; hence the power or privilege of holding a court in a district, as in a manor: jurisdiction of causes, and the limits of that jurisdiction.

—2. Liberty or privilege of tenants excused from customary burdens.—3. An exclusive privilege, claimed by millers, of grinding all the corn growing within the manor in which the mill stands, or of being paid for the same as if actually ground. The payment is claimable in kind.

SOC'AGE, } From *soc*. A tenure of lands

SOC'AGE. } and tenements by a certain and determinate service, distinct from knight-service. It is of two kinds: *free socage*, where the services are certain and honourable; and *villen socage*, where the services, though certain, are of a base nature.

SOCI'ETY, Lat. *socius*, a companion. An association formed for the promotion of some object, literary, religious, benevolent, political, or convivial. Societies formed for commercial purposes are termed *companies*.

SOCIN'IANISM. The tenets or doctrines of Socinus, who held that Christ was merely a man inspired, denied the divinity and atonement, and the doctrine of original depravity.

SOCK'ET CHISEL. A chisel used in mortising.

So'CLE (French). A plinth. See ZOCLÉ.

So'DA (Arabic). The mineral alkali. Pure soda is an oxide of sodium. See SODIUM. It is not, however, found in nature in this state, being always in combination. Like potash, it is procured in an impure state, by lixiviating the ashes of burned plants, but only from those which grow upon the seashores, as the different species of *salsola* and *salicornia*. See BARIUM and KELP. It is now, however, almost entirely procured by the decomposition of sea-salt (chloride of sodium). The salt is first converted into sulphate of soda (Glauber's salt), which by a subsequent process is converted into a crude carbonate of soda, which, by lixiviation, &c. is converted into a dry white *soda-ash*, or into crystallised carbonate of soda. Soda is of great use in the arts, in the manufacture of glass, soap, &c., and has, to a great extent, superseded potash. Its most common salts are the acetate, borate, carbonate and bicarbonate, phosphate, sulphate, tartrate, and common culinary salt, which when dry is a chloride, and when in solution is a hydrochlorate.

So'DALITE. A variety of lapis lazuli, which contains about 25 per cent. of soda. It is found in Greenland, and at Vesuvius.

So'DA POW'DERS are sold as an extemporaneous substitute for soda-water. Like Seidlitz-powders, they are put up in two papers, and managed in the same way, but their solution is a tartrate of soda, and although they form a saline and refreshing draught, their frequent use is not commendable.

So'DA WA'TER. A refreshing drink, formed by dissolving carbonate of soda in water, and super-saturating the solution with carbonic acid under pressure.

SOD-BURN'ING. Burning the turf of old pasture lands for the sake of the ashes as manure, &c.

SODIUM. The metallic basis of soda, discovered by Sir H. Davy in 1807, a few days after the discovery of potassium. It is procured exactly in the same way as potassium; and bears a great analogy to that metal. It is white like silver, possesses great lustre, and is a good conductor of electricity. It fuses at 200° F., and when heated strongly in oxygen or chlorine, it burns with great brilliancy. When thrown upon water, it effervesces strongly, but does not inflame, unless the water be raised to the temperature of 120°, or so. Like potassium, it is best preserved under naphtha. Sp. gr. 0.972 at 59° F.

So'FA. An elegant long seat, usually with a stuffed bottom, and mahogany or rosewood frame of six feet in length. The sofa of the Orientals, from whom we have

borrowed the name, is a sort of alcove, raised half a foot above the floor, where visitors of distinction are received. The name is also given to a covered seat on the side of a room.

Sor'FIT, } The underside of an over-
Sor'ITE, } hanging erection, as the in-
trados of an arch, the underside of a cor-
nice, &c. The term is more particularly
applied, in architecture, to that part of
the corona or larmier which was called by
the ancients *lacunaria*, and which is
termed by the French *plafond*, and by us
the *drip*. The term is from the Italian
soffita.

Sor'FI. A Persian word signifying a
religious person, or dervish.

Sor'ISM or **Su'ISM.** The mystical doc-
trines of the Mohammedan Sufis.

SOIRÉE (Fr.). Evening. An evening-
party of ladies and gentlemen, at which
refreshments are served up, occasional
addresses delivered on miscellaneous sub-
jects, and other means of entertainment
offered.

SOIL, Lat. *solum*. The common name
for that accumulation of various sub-
stances which lies upon the surface of the
globe, and furnishes nutriment to plants,
or which is particularly adapted to the
purposes of agriculture.

SOILS. Among *builders*, a provincial
term for the principal rafters of a roof.

SOL. In *music*, the fifth note of the gamut.

SOLA'NEÆ, } A natural family of plants,
SOLA'NACEÆ, } of which the genus *sola-*
num is the type. It includes the deadly
nightshade, henbane, belladonna, to-
bacco, &c.

SOL'AN-GOOSE. Gannet. The common
booby (*Pelicanus bassanus*, Lin.), an aqua-
tic fowl, nearly the size of the domestic
goose, found on the coast of Great Bri-
tain and elsewhere. See **BOOBY**.

SOL'ANINE. The narcotic principle of
the *Solanum dulcamara*, the woody night-
shade or bitter-sweet of the hedges. It
has also been found in several other spe-
cies of *solanum*, as in the berries of the
S. nigrum, and in the fruit of the common
potato. It is a pearly-white powder, al-
kaline, acrid, and exceedingly poisonous.
It exists in the potato after germination.

SOLA'NUM. Night-shade. The name of
a very extensive and important genus of
plants. *Pentandria* — *Monogynia*. Nat.
order *Lurideæ*. Name from *solor*, to com-
fort, because some of its preparations give
ease by their narcotic qualities. The bit-
ter-sweet or woody nightshade, a climb-
ing shrub, and the common or garden
nightshade, found in waste places, are the
native types of the genus; but the po-
tato plant (*S. tuberosum*), the love-apple
or tomatia, mad-apple or egg-plant, the
winter cherry and some other species, are
now well known.

So'LAR CY'CLE. A period of 28 years.

So'LAR Sys'TEM. In *astronomy*, the orer
and disposition of the several heavenly
bodies (planets, moons, and comets) that
revolve about the sun (*Sol*) as the centre
of motion.

SOLDANEL'LA. The name of a genus of
perennial plants. *Pentandria* — *Monogy-*
nia. Name a *solidando*, on account of its
use in healing fresh wounds: *soldanella*,
a little conqueror, dim. of *soldan*, sultan.
The species are all hardy natives of
Europe.

SOL'DER, } from *solidus*. A metallic com-
Sol'DER, } position for soldering or join-
ing together other metals. As the metals
to be united vary, the solders must of
course vary likewise. Thus tin-plates,
zinc, and lead, are soldered with an alloy
of tin and lead; pewter is soldered with
an alloy of tin, lead, and bismuth: iron,
copper, and brass, are soldered with an al-
loy of zinc and copper; silver sometimes
with pure tin, but generally with an al-
loy of silver, copper, and zinc; gold with
an alloy of silver and gold, or of copper
and gold. Platinum with pure gold.

SOLE, } In *ichthyology*, a well-known
SOAL, } marine fish, the *Solea vulgaris*,
found to inhabit the Baltic, the whole of
the British shores, and as far southwards
as the Mediterranean. It frequents sandy
ground.

SO'LEA. The sole. The name of a ge-
nus of fishes, characterised by having the
eyes both on the right side: dorsal fin
commencing over the upper lip, and
reaching to the caudal. This genus was
included by Linné in the genus *Pleuro-*
nectes. The name is Latin from *solum*.

SO'LEN. The razor-shell or spout-fish
of Scotland. A genus of molluscs. Order
Acephala testacea. Family *Inclusa*. Ani-
mal an ascidia. The shell is cylindrical,
the foot is conical, and enables the ani-
mal to bury itself in the sand, which it
excavates with considerable rapidity on
the approach of danger.

SOL'ENOID, *σολήν* and *ειδής*, appearance.
In *electro-dynamics*, a name given by Am-
père to a species of small electric currents.

SOL'FA'ING. In *music*, the naming of
the intervals, *ut, do, re, mi, fa*, &c., in the
first lessons of singing. The Italians ex-
press this by the word *solfeggiare*.

SOLFATA'RA. The name of an extinct
volcano, near Puzzuoli, which constantly
emits aqueous vapour, and sulphureous
and muriatic exhalations. Hence the
word is now applied to any volcanic vent
which emits similar exhalations.

SOLIC'ITOR, from *solicit*. In *law*, one
who petitions for another; one who does
in Chancery the business that is done by
attorneys in other courts.

SOL'ID. In *geometry*, a body which has
length, breadth, and thickness. A *solid*

angle is one formed by three or more plane angles, which meet in a point; a *solid problem*, in *geometry*, is one which requires the application of conic sections.—2. In *physics*, a name for all bodies, the particles of which cohere so firmly as not to be separated without some degree of force; in contradistinction to *fluid*.—3. In *anatomy*, the solids are the bones, ligaments, membranes, muscles, nerves, and vessels.

SOLIDA'GO. Golden rod. The name of an extensive genus of perennial plants. *Syngenesia*—*Poly. superflua*. Nat. order *Composite*. Name from *solido*, to make firm, in allusion to its uses in healing wounds. The common golden rod (*S. virgaurea*), is a native of Britain.

SOLIDUN'GULA. whole-hoofed: *solidus*, solid, and *ungula*, a hoof. Applied to animals of the equine genus, which have the hoof undivided.

SOLIPID'IAHS. In *theology*, those who maintain that faith alone is sufficient for salvation: *solus* and *fides*, faith.

SOLI'FEDES. A family of mammalia, of the order *Pachydermata*, having only one apparent toe and a single hoof on each foot; *solidus* and *pes*, a foot. One genus only is known, *Equus*, Lin.

SOLITARY. Lat. *solitarius*, from *solus*, alone. In *natural history*, applied to parts and to individuals when they exist singly. Thus peduncles are *solitary* when there is only one on the same plant; birds are *solitary* when they live alone. Most of the ferocious animals are *solitary*.

SOLLICITO. It. *afflicted*, in *music*, signifies that the music is to be performed in a mournful manner: also that it is to be done carefully.

SOL'LO. Ital. from Lat. *solus*, alone. A tune, air, or strain to be played by a single instrument, or sung by a single voice.

SOL'STICE. Lat. *solstitium*, from *sol*, the sun, and *sto*, to stand. In *astronomy*, the point of the ecliptic at which the sun ceases to recede from the equator, either north in summer, or south in winter. There are, consequently, two such points: the *summer solstice*, when the sun enters Cancer, on the 21st of June (the longest day); and the *winter solstice*, when the sun enters Capricorn, on the 22nd of December (the shortest day).

SOLSTITIAL POINTS—of the ecliptic. Those at which the sun arrives at the time of the solstices.

SOLUT'ION. Lat. *solutio*, from *solvo*, to melt. 1. A term applied to a very extensive class of phenomena. When a solid disappears in a liquid, the compound retaining perfect transparency, we have an example of *solution*, and the word is applied both to the *act* of combination and to the *result* of the process. *Solution* is the *result* of attraction or affinity be-

tween the fluid and the solid. This affinity continues to operate to a certain point, where it is overbalanced by the cohesion of the solid; it then ceases; the fluid is said to be *saturated*; the point where the operation ceases is called *saturation*; and the result is a *saturated solution*. The dissolving fluid is called a *menstruum*, or solvent.—2. In *arithmetic*, &c., the answer to a question.—3. In *surgery*, the separation of connection, or connected substances or parts, is termed *solution of continuity*.

SOM'ATIST. from *σωματιστος*, corporeal, from *σωμα*, body. In *theology*, one who admits the existence of corporeal or material beings only.

SOMATOLOG'Y. from *σωμα*, body, and *λογος*, discourse. The doctrine of material substances.

SOMNAM'BULISM. from *somnus*, sleep, and *ambulo*, to walk. A term applied to sleep-walking; and also to a particular state induced by what is termed animal magnetism.

SONA'TA. An Italian term meaning a *tune*, but used to designate solos for single instruments.

SON'NET. Ital. *sonnetto*. A short poem, consisting of 14 lines; two stanzas of 4 verses each, and two of three each, the rhymes being adjusted by a particular rule.

SONOM'ETER. from *sonus*, sound, and *μετρον*, measure. An instrument for measuring sounds, or the intervals of sounds.

SOOT. Sax. *sot*. The pulverulent matter condensed from smoke. It consists principally of charcoal; that from wood is pungent, nauseous, and bitter, and is found to contain some sulphate and carbonate of ammonia, an empyreumatic oil, a fixed alkali, and an insipid earth; and that from pit-coal contains besides some bituminous matter.

SOPH. from *sophista*. A title given in universities to a student in his second year.

SOPH'IST. from *sophista*, from *σοφες*, wise. A name at first given to philosophers, or men remarkable for their wisdom; next to rhetoricians; and subsequently to such as devoted their time to verbal niceties and logical quibbles. In this sense the term may be said to be in some measure applicable to all the schoolmen of the middle ages.

SOP'RA (It.). Above. In *music*, a term of description, thus, *nella parte di sopra*, in the upper part.

SOPRA'NO. in *Italian music*, means *supreme*, or the highest vocal part.

SOR'BIC ACID. Another name for *malic acid* (q. v.), because it may be obtained, most readily and in greatest purity, from

the berries of the mountain-ash or roan-tree (*Sorbus aucuparia*).

SORBON'NE. A college, at Paris, for the study of theology, named from the village of Sorbonne, the birth-place of its founder.

SORBUS. The service tree: a genus. *Icosandria—Trigynia*. Name from *sorbeo*, to dry up, because its fruit stops fluxes.

SORDES (Latin). Foul matter. The matter discharged from ulcers is thus named when it is viscid, glutinous, and of a brownish-red colour.

SOREDIA. In *botany*, heaps of powdery bodies found in lichens lying upon any part of the thallus.

SOREX. In *zoology*, the generic name of the *Shrews*: class *Mammalia*: order *Carnaria*: family *Insectivora*. The animal lives in holes, which it excavates in the earth; and feeds on worms and insects. There are several species; the *Saraneus*, Linn., is our common Field-mouse; and the rat-tailed Shrew is celebrated as being one of the animals which the Egyptians were in the habit of embalming.

SORI, sages, a heap. Small heaps of reproductive granules growing upon the fronds of polypodiaceous ferns.

SORITES. Σωρίτης. A heap. In *logic*, an agreement, where one proposition is accumulated on another.

SOSPINO (It.). A sigh. In *music*, the same as *rest* (q. v.).

SOSTENUTO. An Italian word for *sustained*, used in music to denote the continuing of sounds, and uniting them to each other, in opposition to *spiccato*, detached.

SOTHIC YEAR. The Egyptian year of 365 days; so called from Sothis, the Dog-star, at whose rising it was supposed to commence.

SOTTO VOCE. In *Italian music*, implies soft or piano voice.

SOUBAHDAR'. The viceroy or governor of a province in India; also the title of a native sepoy officer.

SOUGH. A small drain, placed at the top of an embankment, for the purpose of conveying the surface-water to the side-drain. The term is also applied to an adit in some parts of the country.

SOUND. 1. In *surgery*, a probe: an instrument for feeling what is beyond the reach of the fingers.—2. In *geography*, a shallow sea, such as may be sounded or fathomed.—3. In *ichthyology*, the air or swimming-bladder of fish: the *vesica natantia* of Willoughby.—4. In *acoustics*, the sensation produced by the vibrations of air or other medium upon the ear with which it is in contact. A *sound-board* is a thin board placed over the head of a public speaker to strengthen the sound of his voice.

SOUP, PORTABLE. A sort of cake, formed of concentrated broth, freed from fat, and, by long continued-boiling, from all the putrescent parts, and thereby reduced to the consistence of glue, which, in reality, it is.

SOUTH ERNWOOD. A shrubby species of wormwood, the *Artemisia abrotanum*, a native of the South of Europe.

SOV'EREIGN. 1. In *politics*, a person or body of persons in whom the legislative authority rests in every state.—2. An English coin of the value of 20s., and weighing 123·374 troy grains.

SOWANS. The very nutritious article of food distinguished in Scotland by the name of *sowans*, and in England called *summers*, "is made" (says Dr. Thomson), "from the husk of oats, by a process not unlike that by which common starch is made. The husk of the oat (called seeds), is separated from oatmeal by the sieve. It still retains a considerable portion of farinaceous matter. It is mixed with water, and allowed to remain for some days, till the water has become sour. The whole is then thrown upon a sieve. The milky water passes through, but the husk remains behind. The water thus obtained is loaded with starchy matter, which soon subsides to the bottom. The sour liquor is decanted off, and about an equal quantity of fresh water is added. This mixture, when boiled, forms a very nourishing article of food; and the portion of the sour water which adheres to the starch gives the whole a pleasant acidity." The popular opinion in Scotland, regarding the nutritious qualities of sowans, is very different from that of Dr. T. Thomson.

SOY. A kind of sauce prepared in China and Japan, from a small bean, the fruit of the *Dolichos soja*. It is eaten with fish, cold meat, &c. The Japan soy is the best.

SPA. A general denomination for a mineral spring: it is derived from a town in the kingdom of Belgium, famous for its mineral water.

SPACE, Fr. espace, Lat. spatium. 1. Space in the abstract is mere extension; in relation to bodies, it is the interval or distance between two or more objects.—2. In *geometry*, the area of a figure.—3. Among *printers*, a slip of wood or metal, to make a space between words or lines.—4. In *music*, the void between the lines of a staff.

SPADIX (Lat.). A term in *botany* for an elongated receptacle, or flower-bearing spike, which emerges mostly from a spathe or sheath, and on which the sessile flowers are very crowded. The inflorescence of palms and some other plants, is a branched spadix.

SPAHIS, or SIPAHIS. A part of the Turkish cavalry were so called.

SPA'LAX. The generic name given by

Guiden to the Rat moles. Class *Mammalia*, order *Rodentia*. The *S. typhus* (Zanni, Slepaz, Blind rat mole), is the most known. It is a singular shapeless animal, lives under ground like the moles, subsists on roots, has a large triangular head, short legs, no apparent eye; is rather larger than our rat; has smooth fur of an ash colour approaching to red. It is the blind mole of the ancients.

SPAN. 1. The space from one end of the thumb to the end of the fingers when extended: as a measure 9 inches.—2. In *nautical language*, a small line, the middle of which is attached to a stay.—3. In *architecture*, &c., the extent of an arch between its piers or abutments.

SPAN'DREL, *It. spandere*, to spread. In *architecture*, the space above the haunches of an arch.

SPAN'DREL BRACKETING. Brackets placed between curves.

SPAN'DREL WALL. A wall built on the back of an arch.

SPAN'ISH-WHITE. A white earth from Spain used by painters.

SPANK'ER-BOOM. A boom projecting from the mizzen-mast beyond the taff-rail.

SPANK'ER, or DRIV'ER. The gaff-sail set on the mizzen-mast of a ship.

SPAN'NER. A screw-key, an iron instrument for tightening up screw-nuts.

SPAN-PIECE. In *building*, the name given in some places to a collar-beam.

SPAN' ROOF. A common roof, formed by two inclined planes.

SPAR. 1. A small beam or rafter. This name is usually given to the round pieces of timber used for the yards and top-masts of ships.—2. In *mineralogy*, spar is applied by the working miners of England to all crystallised minerals that have a shining lustre. The term has been adopted by mineralogists, and applied synonymously with German *spath* to an order of crystallised minerals, which easily break into rhomboidal, cubical, or other forms, with polished surfaces, but without regard to the nature of the constituents, which renders a specific epithet necessary, as *calcareous spar*, *gypseous spar*, &c.

SPAR'ROWHAWK. The name of *sparrowhawk* (*Nisus*, Cuv.), is generally appropriated to those hawks whose tarsi are high and scutellated. The common sparrowhawk (*Falco nisus*, Lin.), is coloured like the goshawk, but its legs are longer, and it is a third less in size. It is used in falconry.

SPAR'RY-IRON ORE. Steel-ore. A valuable iron-ore found in metalliferous and common veins, in primary and secondary rocks. It consists chiefly of carbonate of protoxide of iron, and may with facility be converted into excellent steel. Its colours are grey, yellow, brown, black, &c.

SPARSE, *Lat. sparsus*, dispersed: irregularly scattered. Applied to leaves, flowerstalks, glands, stars, &c., &c.

SPARTIUM. Broom. A genus. *Diadelphia*—*Decandria*. Name *σπαργιον* of Dioscorides, from *σπαργον*, a rope. According to Don, the Spanish broom is the only species; but, according to others, the common and white broom, with 17 or 18 species of genista, belong to the genus.

SPASM. *Σπασμος*, from *σπασω*, I draw.

A violent, involuntary, and continued contraction of the muscular fibres. Spasms are distinguished into *clonic* and *tonic* spasms: the clonic spasms are true convulsions; the contractions and relaxations are alternate; but in *tonic spasms* the member remains rigid.

SPATHACEÆ. A natural order of plants, comprehending the narcissus and such as have their flower protruding from a spathe.

SPATHE, *σπαθη*, *spatha*. A sheath or covering of an immature flower, which bursts longitudinally, and is more or less remote from the flower.

SPAT'ULA, *Lat. dim. of spatha*. An apothecary's instrument for spreading plasters, &c.

SPATULATE, *Lat. spatulatus*, battledore-shaped. Applied to leaves, &c., of a roundish figure, tapering into an oblong base.

SPA'VIN. In *farriery*, a disease of horses, a bony excrescence or crust that grows in the inside of the hough. There is also a *blood-spavin*.

SPEAK'ER (of the House of Commons), a member of the house, elected by a majority of votes, to act as chairman or president in putting questions, keeping order, reading briefs of bills, &c. He votes only when the house is equally divided.

SPECIALTY. In *law*, any instrument in writing under seal.

SPEC'IE. A term used for gold and silver coin, in contradistinction to *paper money*.

SPEC'IES, *Lat. from specio*, to see. Individual animals, plants, or minerals, agreeing in their appearances or their composition. Their similarity gives rise to the establishment of species. Individuals or species, differing in circumstances arising from accident; in plants and animals, from soil and climate; in diseases, from constitution, &c.; in minerals, from locality, are termed *varieties*. The circumstances which are common to one or more species give rise to a division, or the formation of a genus. A *species* is a collection of all the individuals which resemble each other more than they resemble anything else; which can, by mutual fecundation, produce other individuals;

and which reproduce themselves, by generation, in such a manner that we may from analogy suppose them all sprung originally from one single individual.

SPECIFIC. 1. A medicine possessed of sovereign efficacy in the cure of a particular disease.—2. An epithet applied to a medicine which acts on some particular organ more than on others.

SPECIFIC GRAVITY. The relative weight of equal portions (as to bulk) of different kinds of matter. See GRAVITY.

SPECIFIC NAME; is now used for the name which, appended to the name of the genus, constitutes the distinctive name of the species.

SPECTRES. A family of orthopterous insects, comprehending such as have an attenuated body.

SPECTRUM, Lat. plural *spectra*, from *specto*, to behold. 1. A visible form; an image.—2. The image formed on any white surface by a ray of solar light passing through a small hole into a dark chamber, when refracted by a triangular glass prism. The ray is divided into seven, exhibiting the seven colours observable in the rainbow; the image is called the *spectrum*, and, because it is produced by means of a prism, it is further termed the *prismatic spectrum*, and the colours making up the spectrum are the *prismatic colours* (q. v.).—3. An *ocular spectrum* is an image of a bright object, such as the setting sun, which continues for some time visible after closing and covering the eyes.

SPECULUM, Lat. from *specio*, to view. 1. A mirror.—2. A metallic reflector, made use of in catadioptric telescopes, instead of the object-glass used in the dioptric telescopes. The *speculum metal* is an alloy of copper and tin.—3. A surgical instrument for opening or obtaining a view of parts.

SPEISS, } A compound ore of nickel and
SPEISE, } antimony

SPELT. A name of that species of Triticum called otherwise *German wheat*.

SPELTER. The commercial name of zinc (q. v.).

SPERMACETI, from *σπέρμα*, seed, and *κητος*, the whale. A product obtained from the brain of the *Physeter macrocephalus*, or long-headed whale, which inhabits the southern ocean. The brain being dug out of the cavity of the head, and the oil separated from it by dripping, the residue is crude spermaceti, which is purified and used in the manufacture of candles, in medicine, &c.

SPERMOPHILUS. The generic name given by Fred. Cuvier to those marmots that have cheek pouches. The superior lightness of their structure has caused them to be called *ground squirrels*. East-

ern Europe produces one species, the *souslik* or *zizel*; America produces several of them.

SPHA'CEL, from *σφακα*, to destroy; complete mortification.

SPHACEL'ISM, from *σφακελίζω*, to gangrene. 1. A gangrene.—2. An inflammation of the brain.

SPHAG'NOUS. Mossy; containing peat-moss.

SPHAG'NUM PALUS'TRE. A kind of moss, the decayed roots of which constitute the greater part of peat-moss.

SPHENE, from *σφην*, a wedge. A mineral, a silicate of titanium and lime. Its colours are commonly greyish, yellowish, reddish, and blackish brown, with various shades of green. It is found amorphous and in crystals.

SPHENO'ID, from *σφην*, a wedge, and *ειδος*, likeness. Wedge-like: applied to a bone of the skull (*sphenoides os*), because it is wedged in among the other bones of the head.

SPHENO-MAX'ILLARY. Relating to the sphenoid and maxillary bones.

SPHENO-PAL'ATINE. Relating to the sphenoid and palate bones.

SPHENO-PARI'ETAL. Relating to the sphenoid and parietal bones.

SPHENO-TEM'PORAL. Relating to the sphenoid and temporal bones.

SPHERE, Lat. *sphæra*, Gr. *σφαίρα*. A globe: a solid generated by the revolution of a semicircle about its diameter, which remains fixed. The centre of a sphere is equidistant from every point of its surface, and all its radii are equal.

SPHERICAL EXCESS is the sum by which the three angles of a triangle, on the surface of a sphere or spheroid, exceeds two right angles.

SPHERICS. The doctrine of the sphere and spheroid. The solid contents of a sphere or spheroid is found by multiplying the square of the equatorial diameter by the axis of rotation and the product by 5236.

SPHEROID, from *σφαίρα*, a sphere, and *ειδος*, like. A solid approaching the figure of a sphere, formed by the revolution of a semi-ellipsis about its axis. When it is generated by the revolution of a semi-ellipsis about its transverse or longest diameter, it is an *oblong spheroid*; when about its conjugate or shortest diameter, it is a *prolate spheroid*. The fixed axis of the ellipse is called the *axis of rotation*; the circle described by the semi-axis of the ellipse is the *equatorial circle*.

SPHERO'METER, *σφαίρα* and *μετρον*, measure. An instrument for measuring the thickness of small bodies, the curvature of optical glasses, &c.

SPHEX. The solitary or savage wasp:

a genus of hymenopterous insects belonging to the family *Fissores*, Cuv.

SPHIGMOMETER, σφίγμων, the pulse. An instrument for counting the arterial pulsations.

SPHINCTER, from σφίγγω, to contract. The name given to certain muscles, whose office is to contract the part in all directions, drawing it together, as the mouth of a purse is contracted by a string passing round it.

SPHINX, Lat. from σφίγξ. 1. A fabulous monster of Egypt, having the body of a lion, and the face of a young woman.—2. In *entomology*, the hawk-moth: a genus of lepidopterous insects. Family *Crepuscularia*. It is so named from the attitude of several of the caterpillars, which resembles that of the fabled monster.

SPHRAGISTICS, σφραγισ, a seal. The science of seals, their history, peculiarities, and distinctions.

SPICA VIRGINIS. A star of the first magnitude in the constellation Virgo.

SPICE, Fr. *épice*. A name which includes all those vegetable productions which are fragrant to the smell, and pungent to the taste, as cloves, allspice, &c.

SPICATE. 1. Eared like corn: *spica*, an ear of corn.—2. Having spikes.

SPICCATO, It. *divided*. In *music*, nearly synonymous with *staccato* (q. v.).

SPICULE. A spikelet or spiket; *spicula*, dim. of *spica*, a spike. Applied to grasses that have many florets on one calyx: such florets ranged on a little stalk constitute the spikelet.

SPIGELIA. Worm-grass. A genus of plants. *Pentandria—Monogynia*. Named by Linné, in commemoration of Adrian Spigelius, who wrote *Isagoge in Rem Herbarium*, in 1606. West Indies and America.

SPIKE. *Spica*. 1. An ear of corn.—2. A species of inflorescence in which sessile flowers are alternate, on a common simple peduncle, as in wheat and rye, lavender, &c.—3. A long nail; also a piece of pointed iron, like a long nail, inserted with the point outwards, as on the tops of walls, gates, &c., to prevent people from passing over them.

SPIKE'NARD. A plant, the *Nardus indica*.

SPI'NA. A thorn originating from the substance of the wood: aculei or prickles are only affixed to the bark.

SPIN'CIA. Spinage. A genus of one species, an annual plant. *Diœcia—Pentandria*. As an article of food it is similar to cabbage and other oleraceous plants.

SPIN'DLE. In *mechanics*, a term synonymous with axes. When several axes occur it is usual to denominate the subordinate or smaller axes as spindles.

SPINE. 1. In *botany*, see *SPINA*.—2. In *anatomy*, the *spina dorsi*, or bone of

the back, reaching from the head to the os sacrum. It is a series of 24 vertebrae in the human subject.

SPINEL, Fr. *spinelle*. A sub-species of corundum, which occurs in regular crystals, and sometimes in rounded grains. It is coloured red, black, blue, brown, &c. by oxide of chromium, chromic acid, oxides of iron, &c.

SPINEL'LANE. A variety of dodecahedral zoolite which occurs on the banks of the river Laach, near Andernach. Its usual colour is blackish-brown, and its form a six-sided prism, terminated by three-sided summits, with alternate, but different, faces. It is a silicate of alumina and soda, with some oxide of iron.

SPIN'ET, Ital. *spinetto*. A musical instrument, thus named from *spina*, a thorn or quill, the tone being produced by a crow's-quill, inserted in the tongue of a little machine called a jack.

SPIN'NERS, or **SPIN'NERETS**. Organs with which insects spin their silk or webs.

SPIN'NING - GENIE, improperly spelt *jenny*. A machine for spinning cotton, &c., invented about 1767, by James Hargreaves, a weaver, near Blackburn, in Lancashire. It was long ago superseded by the *mule*, a machine which, combining the principles of the genie and water-frame, has in a manner superseded both.

SPIN'OZISM. The principles of Spinoza, a native of Amsterdam, consisting of a mixture of Atheism and Pantheism.

SP'I.O. A genus of annulata: order *Dorsibranchiata*. The species are small, worms, from the Arctic ocean, that inhabit membranous tubes.

SPIR'ACLE, Lat. *spiraculum*, a breathing hole. The spiracles are the external orifices of the air-tubes of insects: also called stigmata.

SPI'RAL. 1. A curve, of a circular kind, which in its progress recedes from its centre. The common cork-screw is a good example.—2. In *botany*, spiral vessels are membranous tubes lined with an elastic fibre, twisted spirally, for the conveyance of air.

SPIRE, Gr. *σπείρα*, twisting. 1. In *geometry*, a line drawn progressively round the same axis with a distance between each circle: also a curved line; anything wreathed or contorted.—2. In *architecture*, a spire among the ancients was the base of a column, and sometimes the astragal or torus; but among the moderns, it designates a steeple, which diminishes as it ascends, either pyramidally or conically.

SPIR'IT. 1. *Spiritus*. This name was formerly given to all volatile substances collected by distillation. Three principal kinds were distinguished: inflammable or ardent spirit; acid spirits; and alka-

Fine spirits. The word *spirit* is now almost exclusively confined to the various preparations of alcohol and ether.—2. In *commercial language*, the name of spirits comprehends all inflammable liquors obtained by distillation; as brandy, rum, geneva, whisky, &c. *British spirits* are such as are manufactured in Britain, as whisky and gin.

SPIR'IT OF SALT. An old name for muriatic or hydrochloric acid.

SPIR'IT OF WINE. *Espirit de vin.* Pure spirit, so called because formerly obtained only from wine. See ALCOHOL.

SPIR'IT LEVEL. An instrument for ascertaining the deviation of any surface from the plane of the horizon. See LEVEL.

SPIRITOSO, } (It.). With spirit. In
SPIRITO, } *music*, denotes a spirited manner of performing.

SPIRITUALISM. That system, opposed to materialism, according to which all that is real is spirit.

SPIR'KETING. In *ship-building*, the plank on the side between the water-way and the port-sill.

SPIR'OIL. In *chemistry*, the supposed base of the volatile oil extracted from the flowers of the *spiræa ulmaria*. The oil itself is a compound of $C_{12}H_5O_4$.

SPIRO'RATE. A compound formed by the spiroilic acid with a base. All the spiroilates fulminate when heated in the air, and when mixed with a combustible body and heated they detonate.

SPIROIL'IC ACID. An acid discovered by M. Löwig, by treating the hydrospiroilic acid (volatile oil of *spiræa ulmaria*) with nitric acid. The oil is changed into a solid crystalline mass, which is spiroilic acid. It has scarcely any smell, is tasteless, but produces a violent feeling of irritation in the pharynx, dissolves readily in alcohol and ether, and shows a tendency to crystallise.

SPIR'ULA. The name of a genus of multilocular shells. Some of the species still inhabit tropical seas, where they float on the surface of the ocean; others are only found fossil.

SPLANCHNOLOGY, from *σπλαγχνον*, an entrail, and *λογος*, discourse. The doctrine of the viscera.

SPLAYED. In *architecture*, signifies an angle cut off.

SPLEEN, Lat. *splen*, Gr. *σπλην*. A spongy viscus, of a livid colour, and so varied in form, situation, and magnitude, that nothing general can be determined regarding them. In its normal condition it is always placed on the left side, in the left hypochondrium, between the eleventh and twelfth false ribs.

SPLEN'ALGY, from *σπλην*, the spleen, and *αλγος*, pain. A pain in the spleen or its region.

SPLEN'ITIS. Inflammation of the spleen, from *σπλην*, the spleen.

SPLENIUS. A flat muscle at the back of the neck.

SPLEN'DENT, Lat. *splendens*, shining. A term applied to minerals as regards their degree of lustre. The smooth surface of most of the metals are splendid.

SPL'ING. The process of joining the ends of a rope together, or of uniting the end of a rope to any part thereof by interweaving the strands in a regular manner. There are several kinds of splicing, according to the services for which it is intended, all characterized by particular epithets. The joining is called a *splice*. To *splice the main brace*, is to have an extra allowance of spirits in cases of cold and wet.

SPLINT. In *surgery*, a long piece of wood, tin, strong pasteboard, or the like, employed for preventing the ends of broken bones from moving so as to interrupt the process by which fractures unite.

SPLINT-BONE. A name for the fibula.

SPLINT'ERY. A term in mineralogy, applied to a particular fracture of minerals. The fracture is *splintery* when the surface produced by breaking the mineral is nearly even, but exhibits little *splinters* or scales somewhat thicker at one extremity than the other, and still adhering to the surface by their thicker extremities.

SPLIT-CLOTH. In *surgery*, a bandage which consists of a central portion, and six or eight tails; used principally for the head.

SPO'DIUM. *Σποδιον*. An old name for many powders obtained by calcination; as ivory black, metallic calces, &c.

SPODUMENE. In *mineralogy*, the name given by Jameson to the Triphane of Haüy. It is a rare mineral, found in the iron mine of Utö, in Sweden, and in some primary rocks in Ireland. Name from *σπόδιον*, to reduce to ashes: *σποδιον*, spodium, because before the blowpipe it exfoliates into little yellowish or grayish scales. It consists of silica, alumina, lime, potash, and oxide of iron.

SPOIL. Spoil-bank. The surplus excavation which is laid by the side of a line of railway, canal, or other work, to save the expense of removal, and which occurs when the amount of cutting upon the line exceeds that of the embankment.

SPOKE (of a wheel). The spokes are the small bars which are inserted into the nave, and which serve to support the rim or felly.

SPOKE-SHAVE. A sort of plane used in dressing the spokes of wheels and for other curved work where the common plane cannot be applied.

SPOLIATION, Writ *or*, in *English ecclesiastical law*, is obtained by one of the

parties to a suit suggesting that his adversary has wasted the fruit of his benefice.

SPON'DEE, Lat. *spondæus*. A poetic foot of two long syllables, as *Amnis*.

SPON'DYLE, Lat. *spondylus*. A joint of the spine; a vertebra.

SPON'DYLIS. The name given by Fabricius to a genus of tetramerous coleoptera, belonging to the family *Longicornes*, Cuv. Named from its globular and spinose thorax.

SPON'DYLUS. The name of a genus of marine shells found attached to rocks, coral, &c., and remarkable for their spines and rich colouring; whence the name.

SPONGE, } Lat. *spongia*, Gr. *σπογγία*. A
SPUNGE, } marine production, very soft, light, and porous, and highly compressible; readily imbibing water and as readily giving it out again. It is found adhering to rocks, particularly in the Mediterranean Sea, about the islands of the Archipelago, and in the Red Sea. It was formerly supposed to be a vegetable production, but it is now classed among the zoophytes, and when analysed affords the same principles as animal substances generally.

SPONGE-TENTS are employed by surgeons to dilate fistulous cancers, &c. These are prepared by dipping sponge into some hot cerate, and pressing it between two iron plates; when cold it may be cut into any desired forms.

SPONGIA. **Sponge**. A genus of zoophytes. Order *Coraliferi*; family *Corticati*. The species are numerous, and assume innumerable shapes, as shrubs, horns, tubes, vases, fans, globes, &c. &c. The common sponge is the *S. officinalis* of naturalists. See **SPONGE**.

SPONGIFORM QUARTZ. A name of Float-stone. It is light and porous like sponge.

SPONGIOLE. In *vegetable physiology*, an organ situated at the extremity of the root, and thus named from its peculiar texture. It is by the spongioles, thus situated, that plants are enabled to absorb. They are constructed of common cellular spongy tissue, and they imbibe the fluids which are in contact with them partly by capillary action, and partly by a hygroscopic power.

SPONSIONS, in *international law*, are authorised engagements made on behalf of states.

SPONTON. A military weapon borne by officers of infantry: a sort of half pike.

SPOOL, Ger. *spule*. A hollow cylinder on which yarn is wound. It is larger than the *pin* on which the yarn is wound for the shuttle.

SPON'DRIFT. In *nautical language*, a spray swept from the surface of the agitated water during a tempest.

SPON'DIC, from *σπείω*, to sow. An

epithet applied to diseases which are not epidemic, but occur here and there from causes affecting only the individual.

SPOR'ULE, from *σπορά*, seed. The organ of reproduction in cryptogamic plants.

S. P. Q. R. In *antiquity*, an abbreviation of the words *Senatus Populusque Romanus*, the Senate and the Roman people.

SPRAIN. A subluxation; an excessive strain of the ligaments of a joint, without dislocation.

SPRAT. A small fish, the *Clupea sprattus*, Cuv. and Yarr., found to frequent the whole of the British Coasts. The sprat rarely reaches 6 inches in length. It feeds on small crustaceous animals, and itself forms an agreeable and cheap food.

SPRAY. Water driven from the top of a wave, &c. by the wind: *spray* is only occasional; *spoon-drift* is continuous.

SPRING. 1. In *mechanics*, an elastic body which, when distorted or compressed, has the power to restore itself. Thus the spring of a watch is a fine piece of tempered steel, coiled up in a cylindrical case; by stretching itself it puts the wheels, &c. in motion.—2. In *navigation*, a rope passing out of one extremity of a ship, and attached to a cable from the other, to bring her broadside to bear on the object.—3. In *astronomy*, one of the seasons: that commencing, in the northern hemisphere, when the sun enters Aries, about the 21st of March. In common language, we reckon spring from the 1st February.—4. In *hydraulics*, a fountain of water rising out of the ground.

SPRINGS. Nooses of horse-hair, &c. to catch birds.

SPRING'ING. In *architecture*, the lowest part of an arch, or the point from which it springs or rises.

SPRING-TIDES. The tides that follow the new and full moon: in distinction to *neap-tides*.

SPRIT. A small boom, pole or spar, which crosses the sail of a boat diagonally, from the mast to the upper aftermost corner, which it is used to extend and elevate.

SPRIT-SAIL. 1. The sail extended by a sprit.—2. A sail attached to a yard which hangs under the bowsprit.

SPRUCE. 1. A species of fir, the *Pinus abies*.—2. A fermented liquor called *spruce-beer*, being made of treacle or molasses, and the "essence (decoction) of spruce."

SPUN-YARN. Among *seamen*, a line formed of three rope yarns twisted.

SPUR-ROYAL. *Spur-rial*, or *royal*. A gold coin first struck in the reign of Edward IV. It was worth 15s. in the reign of James I.

SPUR'LING-LINE. Among *seamen*, the line which forms the communication between the wheel and the tell-tale.

SQUADRON. A body of cavalry, of from 100 to 200 men. Also, a detachment of ships employed on an expedition.

SQUALL. The sea term for a gust of wind.

SQUALOID, from *squalus*, a shark. The squaloid division of fossils are related to the shark tribe. The species abound in the tertiary strata.

SQUALUS. The name given by Linné to the true shark. Order *Chondropterygii* *Branchiis fixis*, family *Selachi*. There are numerous species, several viviparous. The most celebrated is the white shark (*S. carcharias*, Lin.), which attains a length of 25 feet. It inhabits every sea. See *CARCHARIAS*. The basking shark (*S. maximus*, Lin.), is the largest of all the squali, but it has none of the characteristic ferocity of the tribe. The blue shark, angel fish, or monk, sea-fox, or long-tailed shark, hammer-headed shark, or balance-fish, are species of less note.

SQUAMIPENNES, from *squama*, a scale, and *penna*, a wing or fin. The name given to a family of acanthopterygious fishes, because the soft and frequently the spinous parts of their dorsal and anal fins are covered with scales. The species are abundant in the seas of hot climates, and are adorned with the most beautiful colours. They frequent rocky shores, and are eaten. They form the genus *Chaetodon*, Lin.

SQUARE. In *geometry*, a quadrilateral figure, with right angles and equal sides.

SQUARE MEASURES. The squares of the lineal measures.

SQUARE NUMBER. The product of a number multiplied by itself.

SQUARE-RIGGED. An epithet applied to a ship that has long yards, at right angles with the length of the deck, in contradistinction to sails extended obliquely by stays or lateen yards.

SQUARE-ROOT. In *arithmetic*, &c., the second power of any number or the product arising from the multiplication of a number into itself. See *INVOLUTION* and *EVOLUTION*.

SQUARE-SAILS, are such as are extended by a yard, distinguished from others, extended by booms, stays, lateens, and gaffs.

SQUARING THE CIRCLE is attempting to make a square that shall be equal to a given circle.

SQUARROSE, } Lat. *squarrosus*, rough,
SQUARROUS, } scabby, scurfy, scaly,
from *squarra*, roughness of skin. Applied chiefly in *natural history*, when the body is invested with scales widely divaricating.

SQUILL. Sea Onion. A plant with a large bulbous root, the *Scilla maritima*, which grows spontaneously on the sandy shores of Spain and the Levant. The root is one of the most powerful and useful remedies in the *Materia Medica*.

SQUIRREL. The several species of

squirrel form the genus *Sciurus*, Lin. They are light, active creatures; live on trees, feed on fruits, and are particularly marked by their long bushy tail. See *SCIURUS*.

STACCA'TO (It.), separated. In *music*, denoting that the notes to which it is affixed are to be detached in a striking way from each other.

STACK. Corn in the sheaf piled up in a circular or rectangular figure, brought to a point or ridge at top.

STAC'TE. Στακτη, from σταζω, to distil. 1. That kind of myrrh which distills or falls in drops from the trees.—2. A very liquid species of amber.

STADIUM. Σταδιον. 1. An ancient Grecian measure of length, containing 125 geometrical paces, or 625 Roman feet; consequently it corresponded nearly to our furlong.—2. Also a race-course for men and horses, and the ground on which the wrestlers and athletes exercised.

STAFF. Fr. *estafette*, It. *staffetta*. An express, a courier. 1. In the army, an establishment of officers, in various departments, attached to the commandant of an army. It consists of a quarter-master-general, adjutant-general, and major of brigade. The *regimental staff* consists of the adjutant, quarter-master, chaplain, surgeon, &c.—2. In *surgery* (Sax. *staef*, a stick, a crook, prop, or support), a grooved steel instrument, introduced through the urethra into the bladder, to guide the knife in the operation of lithotomy.—3. In *music*, the five lines upon which the music is written.—4. In *architecture*, a *staff-angle* is a square rod of wood, standing flush with the wall on each of its sides, at the external angles, to prevent their being damaged.

STAG'GERS. In *farriery*, a disease of horses, cows, and sheep. It is said to be a kind of apoplexy, in which the animal reels or staggers. It appears rather to be a species of hydrocephalus.

STAG'YRITE. An appellation given to Aristotle, from Stagira, a town of Macedonia, where he was born.

STAINED GLASS. Glass on which pictures have been painted with metallic oxides, chlorides, &c., ground up with proper fluxes, and fused into its surface by the application of heat. The colours are all transparent.

STAITH. The line of rails forming the extremity of a railway, and generally occurring next rivers, being laid down upon high platforms, for the purpose of discharging coals, &c. into the holds of the vessels, or receptacles prepared for them.

STALAC'TITE, σταλακτις, from σταλαζω, to drop. A concretion of carbonate of lime, pendent from the roof of a cavern,

and produced by the percolation and dripping of water holding in solution, or super-saturated with, carbonate of lime. The mode of formation of a stalactite resembles that of an icicle.

STALAGMITE, from *σταλαγμος*, a dropping. A concretion of carbonate of lime, originating from the same cause as stalactite, but formed upon the floor of a cavern or grotto, by the dropping of the lime-water from the roof, which, under these circumstances, is usually covered with stalactites. It sometimes happens, that the stalactites increasing downwards, and the stalagmites increasing upwards, the two become united, and form a column extending from the floor to the roof. Some caverns have been completely filled in this manner, and present a solid mass of carbonate of lime, which in some instances, as at Carrara, has been placed among the finer marbles.—2. The name of a genus of plants. *Polygamia—Monocia*. The species yield a sort of bastard gamboge; whence the name from *σταλαγμος*, distillation, the gum escaping as if by distillation.

STALK, stem, Lat. *caulis* and *scapus*. 1. That part of a plant rising immediately from the root, and which usually supports the leaves, flowers, and fruit. The *culm* is the stalk of grasses.—2. In *architecture*, an ornament resembling a stalk, in the Corinthian capital, from which the volutes spring.

STALK'ING. A sporting-term, applied to a kind of screen (which is sometimes a horse), to hide the sportsman till he gets within shot.

STALL. In *church rituals*, the seat of a dignified clergyman in the choir.

STALL'AGE. A duty paid for being permitted to set up a stall, in a fair or market.

STAM'EN. The male organ of plants, found generally with the corolla near the pistil, consisting of two parts, the filament and the anther. The plural is *stamens* or *stamina*.

STAM'INA. 1. A term applied in *physiology* and *pathology* to the degree of strength and vigour in the constitution.—2. The simple original particles which exist in the embryo or seed, by whose augmentation the animal is subsequently formed.

STAMINIFEROUS, Lat. *staminiferus*, stamen-bearing. Applied to flowers and florets which contain one or more stamens and no pistils.

STAMP. 1. Any instrument for making impressions by pressure or mere force on other bodies; also the impression so made.—2. A kind of large pestle for *stamping* or pounding or beating ores, &c.—3. A paper or parchment, on which a tax is paid.

STAMP'DUTIES. A general name for all those taxes which bear evidence of the payment in the stamp impressed on the paper, or parchment. Most legal instruments are drawn on *stamps*, that is paper or parchment which has paid a certain amount of tax.

STAMP'ING MILL. A machine in which ores are pounded by means of a stamp.

STAN'CHIONS. The sea term for upright supports in general.

STAND. A sea term, used variously.—A sail *stands* well or ill; a ship *stands* on her course; and so on.

STAN'DARD. 1. An ensign of war: a staff with a flag or colours.—2. That which is established by a competent power, as a rule or model, as *standard* weights and measures.—3. In *coinage*, the proportion of weight of pure metal and of alloy established by authority. Our standard for gold and silver coins is $\frac{11}{12}$.—4. In *ship-building*, an inverted knee placed upon the deck, instead of beneath it, with its inverted branch turned upward from that which lies horizontally.—5. In *botany*, the upper petal of a papilionaceous corolla, called also the *banner*.

STAN'NARIES. Tin-mines and works: from *stannum*, tin.

STAN'NIC ACID. A name which has been given to the peroxide of tin (*stannum*), because it is soluble in acids.

STAN'ZA (Italian). 1. In *poetry*, a number of lines or verses, connected with each other, and ending in a full-point or pause; a part of a poem containing every variation of measure or relation in that poem.—2. In *architecture*, an apartment or division in a building.

STAPES. A stirrup, in *quo pes stat*. The name of a bone of the internal ear, and somewhat like a stirrup.

STAPHYLO'MA, } Lat. from *σταφυλη*, a }
STAPHYLO'SIS, } gripe. A disease of the }
eye-ball in which the cornea loses its }
natural transparency, rises above the }
level of the eye, and successively even }
projects beyond the eye-lids in the form }
of an elongated whitish tumour, which }
is attended with a total loss of sight.

STAPH'YSINE. A solid substance, of an alkaline nature, and an exceedingly acrid taste, obtained from *Delphinium staphysagria* or *stavesacre*, a biennial plant, which grows plentifully in the south of Europe.

STA'PLE, Sax. *stapel*, *stapul*, a stake. 1. In *commerce*, a settled mart or market; an emporium. Formerly the king's *staple* was established in certain ports or towns; and certain goods could not be exported without being first brought to these ports to be rated, and charged with the duties payable to the crown. Hence

the words *staple commodities* came in time to signify the principal commodities produced by a country for exportation or use.—2. The thread or pile of the textile articles, cotton, wool, and flax. Thus, Sea-island cotton is of a fine long *staple*.—3. A loop of iron formed with two points to be driven into wood, &c.

STAR. Stars are fixed or planetary. 1. The *fixed stars* are known by their twinkling, and by their being always in the same position in relation to each other. The planets shine with a steady light, and are constantly changing their position with regard to the other heavenly bodies. The *pole star* is a bright star in the tail of the little Bear (*Ursa minor*), and is so called from its being very near the North pole.—2. The figure of a star: a radiated mark in writing or painting: called also an asterisk, and marked thus *. It is used as a mark of reference, or to fill a blank where letters are omitted.

STAR'-AF'-PLE. The fruit of a species of *Chrysophyllum*, which grows in the warm climates of America. It is an olive-shaped fleshy fruit, eaten by way of dessert.

STAR'-BOARD. In navigation, the right-hand side of a ship, looking forward, as larboard is on the left-hand side.

STARCH. A white pulverulent substance, consisting of microscopic spheroids, containing amylaceous matter. It exists in a great many plants. Potatoes yield it in large quantity; it exists abundantly in the stems of some monocotyledonous plants, especially of the palm tribe; and all the edible grains, as wheat, rye, rice, &c.; and siliqueous seeds, as beans and peas, afford in it such quantity that the preparation of it from these is now an extensive manufacture. Wheat is the grain commonly employed for making starch.

STAR-CHAM'-BER. Formerly a court of criminal jurisdiction in England. It was abolished by Stat. 16 Charles I.

STAR'-FISH. Sea-star. A name common to a genus of zoophytes, from the shape of the animals. See *ASTERIAS*.

STAR'-FORT. In fortification, a work with several faces, and salient and re-entering angles. A *star-redoubt* is built of the same form.

STAR'-LING. 1. In ornithology, see *STURNUS*.—2. In engineering, see *CUTWATER*.

STAR'-OSTS. Polish noblemen who possessed certain castles and domains, called *starosties*.

STAR-SHOOT. The *Tremella nostoc*, an indigenous greenish jelly, which is edible.

STAR-THISTLE. 1. The *Carlina aculis*.—2. The *Centaurea calcitrapa*, an indigenous perennial. The Jersey Star-thistle is another species of centaury found in Jersey.

STAR'-TER. An ancient Greek coin.

STAR'-TICE. The Sea Drift. A genus of plants. *Pentandria*—*Pentagynia*. Name from *statu*, to stop, on account of its supposed efficacy in restraining fluxes. The marsh-rosemary of America, and the sea-lavender or red behen, are examples.

STAT'-ICS, from *statos*, standing. 1. That branch of mechanical science which treats of the equilibrium, pressure, weight, &c. of solid bodies when at rest.—2. The science which considers the weight of bodies.

STAT'-ION. 1. In astronomy, a planet is at its *station*, or is *stationary*, when its motion in right ascension ceases.—2. In surveying, the place of observation for measuring angles.—3. In the *Romish Church*, *station* is applied to churches in which indulgences are granted on certain days.—4. In railway economy, halting-places along the line, for taking-up and setting-down passengers, the extremes being named *termini*.

STAT'-IONARY. Fixed, not progressive or regressive. The sun is *stationary* in Cancer. The Court of England, which was formerly itinerary, is now *stationary*. Steam-engines which work permanently at the same place are *stationary*, as distinct from *locomotives*. Some railways are worked by *stationary-engines*.

STAT'-IONERY. Writing-paper and the general contents of a stationer's shop.

STAT'-ION POINT'-TER. In maritime surveying, an instrument for laying down on a chart the position of a place, from which the angles subtended by three known distant objects are measured.

STATIS'-TICS, Lat. *status*, condition. The science which determines the condition of a country, in reference to its extent, population, industry, wealth, power, and the like.

STAT'-TUARY. The art of carving images, or representations of life; also one who practises or professes the art of making statues. Statuary is a branch of sculpture.

STAT'-UE, Lat. *statua*, from *statuo*, to set. Statues are figures of men, and other objects, formed out of marble by the chisel.

STAT'-US QUO. In politics, a treaty between two or more belligerents, by which each party is restored to the same state as before the war, possessing the same territories, fortresses, &c.

STAT'-UTE, Lat. *statutum*, from *statuo*, to set. An act of the legislature of a state, which extends as law to all the subjects of that state; as distinguished from an act, which relates only to an individual or company. *Statutes* are positive law, and distinguished from *common law*: the former owe their binding force to a positive declaration of the supreme power; the latter owes its binding force to the principles of justice, and long use and consent of the people.

STAVE. 1. A narrow piece of wood of which casks, &c. are made.—2. In *music*, the five horizontal and parallel lines on which the notes of tunes are written or printed: written now more commonly *staff*.

STAY. In the *rigging of a ship*, a long strong rope, employed to support the mast, by being extended from its upper end to the stern of the ship. The *fore-stay* reaches from the foremast-head towards the bowsprit-end; the *main-stay* extends to the ship's stem; the *mizzen-stay* is stretched to a collar on the main-mast, above the quarter-deck, &c. *Stays*, in *seamanship*, also implies the operation of going about, or changing the course of a ship, with a shifting of the sails. *To be in stays*, is to lie with the head to the wind, and the sails so arranged as to check her progress.

STEAM. In a general sense, this word is used to signify the visible cloudiness arising from the condensation of aqueous vapour, expelled by heat; but in a stricter sense, it is the aqueous vapour arising from water when heated to 212° and upwards. To account for the force of steam, it must be observed, that water is composed, like other bodies, of particles or atoms held together by the force of cohesive attraction, which heat has the power of decreasing; or, rather, of imparting a repulsive force, which is intense in proportion to the degree of heat applied. Thus the pressure of steam from water at 212° is equal to a column of mercury of 30 inches; from water at 320°, it is equal to a column of 135: the first is 14lbs. 11 oz., the latter 66lbs. 1 oz.

STEAM'-BOAT, } A vessel propelled by
STEAM'-VESSEL, } the force of steam.
Perhaps the first vessel of this sort was that of the Marquis de Jouffrey, upon the Saône, at Lyons, in 1782; the next was that of Mr. Miller, upon the Forth and Clyde canal, in 1789; but the first steam-vessel which ran as a regular packet-boat was that of Mr. Rob. Fulton, the Vermont, launched at New York in 1807, and plied between that and the city of Albany, a distance of 150 miles.

STEAM BOILER. A vessel in which water is converted into steam for the supply of steam-engines or for other uses.

STEAM CARRIAGE. A locomotive engine adapted to run upon a common road.

STEAM'-ENGINE. An engine worked by the power obtained from the expansion and contraction of steam from boiling water; that is, by the property which water possesses of expanding to vapour under the force of heat, and the suddenness with which the expanded water returns to its original bulk, on the application of cold. These properties of water were known to the ancients, but it was

not till the early part of the 17th century that this power was made available for the working of machines. A mining engineer, named Savery, is said to have been the first who constructed and publicly exhibited an engine, acting by the expansive force and subsequent condensation of steam, and which he applied to the raising of water in 1699; but it is certain that the Marquis of Worcester preceded him in doing this. Dr. Papin next introduced the safety-valve to an engine of his contrivance in 1707, and Mr. Newcomen, in the same year, made various improvements and modifications, producing what are known by the name of *atmospheric engines*, subsequently rendered more efficient by Messrs. Breighton and Smeaton. Mr. James Watt followed next, and introduced the *condenser* one vessel placed in another of cold water, and exhausted of air and other fluids, and connected with the steam cylinder by a pipe through which the whole of the steam from the cylinder escapes, and is thus speedily condensed. He introduced various other improvements, and may be said to have perfected this most perfect and valuable of all engines. He found it only the "miner's friend," he left it applicable to every kind of work and the never-tiring friend of the human race.

STEAM'-GAUGE. A contrivance connected with the boilers of steam-engines, and employed to indicate the pressure of the steam. It usually consists of a bent tube, with one end secured to the boiler, and the other open to the atmosphere. It contains a sufficient quantity of mercury to counteract the pressure of the steam, and the level of the mercury, varying as the steam pressure, shows at all times the elastic force upon the boiler.

STEAM'-GUN. A contrivance for projecting balls by means of steam. It bears some analogy to the air-gun, but requires too much extraneous apparatus ever to be conveniently movable. It is barely probable that it will at some future time be rendered available aboard of ships, but it seems to be highly available for forts and other similar defensive works.

STEAM NAVIGATION. The art of applying steam power to the propulsion of vessels in general, whether in inland waters or on the open sea.

STEAM-PIPE. The pipe communicating with the upper part of the boiler through which the steam passes in its way to the cylinders.

STEAM'-WHEEL. Another name for a rotatory steam-engine.

STEAM'-WHISTLE. A device, attached to locomotives, for giving warning to the passengers and others when the engine is starting. It consists of a pipe situated at the top of the boiler, with a cock to the

same, and surmounted by a hollow cup. The steam escapes at the top, and passing round the thin edge of the cup, strikes the same with considerable force, and thereby produces a loud shrill whistle, heard at a distance of many miles.

STEARIC ACID (see **STEARINE**). The solid constituent of fatty substances, as of tallow and olive oil converted into a crystalline mass by saponification with alkaline matters, and abstraction of the alkali by an acid. By this process fats are converted into three acids, the stearic, margaric, and oleic: the first two are solid, the last liquid.

STEARINE,) from *στιας*, fat, the sub-
STEARONE,) stance of which factitious
wax candles are now made. It consists of the stearic and margaric acids combined.

STÆTITE. Soapstone. A mineral of the magnesian family, usually of a greyish-white colour, often marked by dendritic delineations. It has a coarse, splintery fracture, and a dull fatty lustre, and feels like soap to the touch, whence the name from *στιας*, soap. It is found in contemporaneous veins, traversing serpentine, as at Portsoy, in Shetland; in the limestone of Icolmkill; in the serpentine of Cornwall; in Anglesey; in Saxony, Bavaria, Hungary, &c. It is used in the manufacture of porcelain; in polishing marble, &c.; as the basis of cosmetic powders, in the composition of crayons, &c. When steatite occurs in lamellar forms it is named *talc*.

STEATOME, from *στιας*, fat. An encysted tumour, the contents of which are of a fatty consistence.

STEEL, Sax. *stȳle*. A carburet of iron: the best, hardest, finest, and closest grained iron, combined with carbon by a particular process.

STEEL'YARD. *Statæra Romana*. A description of balance consisting of a short arm, from which a required weight is suspended, and a long graduated arm, to which an invariable movable weight is

attached. Equilibrium is attained when the weights are reciprocally proportioned to their distances from the point of suspension.

STEERING OF STEAM'ING. The brick or stone lining of a well.

STEER'LE-CHASE. A hunt, in which the sportsmen agree to follow the fox directly over the country, regardless of all obstructions, as hedges, ditches, rivers, &c. *Steeple-races* are sometimes got up on the same plan.

STEER'AGE. In a ship, an apartment forward of the great cabin, from which it is separated usually by a bulk-head. In ships of war it serves as an anteroom to the great cabin. In steam vessels, the great cabin and steerage are separated by the whole space occupied by the machinery, &c.

STEER'ING. In nautical language, directing or governing a ship or other vessel in her course. The *steersman* manages the helm by means of the *steering-wheel*, which is connected with the rudder.

STEEV'ING. In nautical language, the angle of elevation which a ship's bowsprit forms with the horizon.

STEGANOGRAPHY, *στηγανος*, covered, and *γραφω*, I write. The art of writing in cypher.

STEL'ECHITE. The name given to a fine variety of *Storax*, in larger pieces than the calamite.

STEL'ULATE, Lat. *stellatus*, star-like. Applied to plants and parts of plants.

STEL'LERUS. The name of a genus of herbivorous cetacea. One species only is known, and it is confined to the north part of the Pacific Ocean.

STEL'LITES. Fossil star-fish. See **ASTERITES**.

STEL'LIFORM, Lat. *stelliformis*, star-like. Radiated.

STEL'LULAR. Having marks resembling *stellæ* or stars. Applied in natural history.

STEM. 1. In botany (see **STALK**).—2. In navigation, the prow or foretimber of the ship, which comes bending up from the keel.

STEM'MATA. In entomology, three smooth hemispheric dots, generally on the top of the head; chiefly observable in hymenopterous insects.

STEMMATOPUS. The generic name given by Fred. Cuvier to the hooded seal (*Ph. cristata*, Gm.), from the Arctic Ocean: *στημμα* and *οψς*, the animal being furnished with a loose skin on the head, which it can inflate at pleasure, and which is drawn over the eyes on the approach of danger, the nostrils then being inflated like bladders.—2. In music, the upright line appended to the notes.

STEM'PLES. In mining, the cross-bars of wood in the shaft of a mine.

STEN'CIL. A piece of thin leather, or oil-cloth, used in painting on walls to imitate paper. The pattern is cut out on the leather, &c., which is then laid flat

on the wall, and the colour brushed over it.

STENCILLING. A method of painting on walls with a stencil, so as to imitate the figures of paper-hangings.

STENOSAURUS. A genus of fossil saurians, thus named by M. Geoffroy St. Hilaire, from *στίος*, narrow, and *σαυρος*, a saurian.

STENOGRAPHY, from *στίος*, short, and *γραφη*, writing. Short-hand writing.

STEPPE. The name used in Russia to designate very extensive flat uncultivated plains.

STEPS. 1. In *ship-building*, large pieces of timber into which the heels of the masts are fixed.—2. In *architecture*, the degrees or gradients of a stair, composed of two parts, the *tread* or horizontal part, and the *riser* or vertical part. Steps round the circumference of a circle are called *winders*, and when they proceed straightforward they are named *flyers*.

STERCULIA. A genus of plants. *Monodelphia*—*Polyandria*. Name from *stercus*, dung, on account of the foetid odour of the flowers.

STEREOGRAPHY, from *στίγιος*, solid, and *γραφω*, to describe. The art of drawing solids upon plane surfaces.

STEREOGRAPHIC PROJECTION, *στιγιος*, solid, *γραφη*, description. The projection of the sphere upon the plane of one of its great circles, the point of view being at the pole of that circle.

STEREOMETER, *στίγιος*, and *μετρον*, measure. An instrument for measuring the specific gravity of liquids, porous bodies, and powders, as well as of solids.

STEREOMETRY, from *στίγιος*, solid, and *μετρίω*, to measure. The mensuration of solids.

STEREOTYPE, from *στίγιος*, solid, and *τυπος*, a type. Literally, a fixed metal-type: hence one entire solid plate of metallic type for book-printing, made by taking an impression in stucco, of one or more pages composed of movable types, and casting a reverse from this impression, by pouring upon it, in a melted state, a metallic composition, very nearly approaching type-metal, in the proportions of its ingredients. The process of making such plates is called *stereotype-founding*, or *stereotyping*; the plates so cast are *stereotype-work*; the art of printing from them is *stereotype-printing*; and books so printed are said to be *stereotyped*.

STERLING. 1. A term probably from *Easterling*, used to distinguish English money of account, as £10 *sterling*.—2. English money.

STEERN (of a ship). The hinder part where the rudder is placed: the *steer-place* or *helm-place*.

STERNAL'GIA, from *στίγιος*, the sternum, and *αλγος*, pain. 1. Pain about the sternum.—2. A name of the pectoral angina (*angina pectoris*).

STERNOPTYX. A genus of small fishes, with a very elevated and compressed body, and having a series of small fossulae along each side of the pelvic crest, which has been considered as a festooned duplication of the sternum; whence the name *sternoptyx*. They frequent the warm parts of the Atlantic ocean.

STERNUM. *Pectoris os*. The breast-bone; the oblong flat bone placed at the fore-part of the thorax.

STETHOSCOPE, from *στήθος*, the chest, and *σκοπιω*, to explore. An instrument invented by Laennec, to aid auscultation. It is made of cedar-wood, of a cylindrical form, about eleven inches long, and about an inch and a half in diameter, and has a cylindrical perforation through its whole length. It is a highly useful instrument.

STEW'ARD, Sax. *steward*, from *sted*, a place, and *ward*, a keeper. 1. A man employed in great families, to superintend the household generally, to keep accounts, collect rents, &c.—2. In *law*, a title of several officers of distinction. Thus, the greatest officer under the crown is the *lord high steward of England*. The office was anciently the inheritance of the earls of Leicester, till forfeited by Simon de Montfort. The office is now, in a measure, abolished: a lord high steward being made only for particular occasions, as a coronation, the arraignment of a peer for high treason, &c. There is also a *lord steward* of the royal household, who is chief officer of the court, &c.—3. In a *ship of war*, an officer appointed by the purser, to distribute provisions to the officers and crew. In *common ships*, a man who supplies the table and superintends the provisions.—4. In *colleges*, the person who superintends the concerns of the kitchen.

STHENIA, Lat. from *σθινος*, strength. In *nosology*, strength is opposed to *asthenia* or debility.

STIBIUM. The ancient name of antimony.

STICHOMANCY, from *στιχος*, a line, and *μαντεια*, prophecy. Divination by lines or passages in books taken at hazard.

STICK, GOLD. The colonels of the Life Guards are so called.

STIGMA. *Στιγμα*, from *στιζω*, to mark. 1. In *botany*, that part of the female organ of a plant which is placed at the summit of the style.—2. In *pathology*, a small red speck on the skin, occasioning an elevation of the cuticle. When stigmata assume a livid colour, they are termed *petechiae* and *purpura*.

—3. An impression, such as that made by branding with a hot iron.

STIG'MATA, plural of stigma. Spiracles from which the tracheæ of insects commence.

STIL'BITE, from *στίλβω*, to shine. A mineral, the radiated zeolite of Jameson, thus named from its shining lustre. It occurs in the secondary trap-rocks of Scotland, Norway, &c. It is commonly white, but sometimes grey, yellow, &c.

STILE. In architecture, the vertical piece in framing or panelling.

STILL. The name of the principal vessel in which distillation is conducted. The liquid is vaporised by heat in the part called the *cucurbit*, and the vapours are condensed in another part called the *refrigeratory*. Stills are of many forms, the simplest of which consists of a retort and receiver. The term is commonly derived from Latin *stillo*, to drop, the root of *distill*.

STILT BIRD. The name of the *Himantopus melanopterus*, having long slender legs.

STIM'ULANT, from *stimulo*, to stir up. Possessing the power of exciting the animal energy. Medical stimulants are *general* when they affect the whole system, as mercury; and *topical*, when they affect only a part, as mustard applied to the skin.

STIM'ULUS, (Lat.) from *στυγμός*. In pathology, that which rouses the action or energy of a part. In botany, a sting. The nettle is furnished with *stimuli*.

STING. In entomology, an apparatus in the form of a little barbed spear, furnished by nature to some insects as a weapon of defence. In most instances it is a tube through which a poisonous liquid is projected, which influences the part *stung*, and in some cases proves fatal to life.

STINK'STONE. The name given to a variety of limestone, which gives out a foetid odour when rubbed. The black marble of Kilkenny is an example.

STINT. In coal mines, a measure of work, two yards long by one broad, which each miner clears before he removes to another place.

STIFE, Lat. *stipes*, from *στυγος*. The stem of a fungus, fern, or palm.

STIF'END, Lat. *stipendium*. Originally the pay of soldiers. In law, a salary or allowance for work done. In Scotland, the term is confined to denote the salaries of clergymen.

STIF'ILATE, Lat. *stipilatus*, standing on a pillar or pedicle. See STIFE.

STIF'PLING. 1. A mode of engraving on copper by means of dots, as contradistinguished from engraving in continuous lines.—2. The term is likewise applied to the mode adopted by some artists in drawing, of putting in tints and shadows

of black lead or crayon, by means of the end of a piece of colled paper charged with the pigment, with which it is *stippled* or stamped on to the surface of the paper. Good artists generally despise this process.

STIF'ULA, } In botany, a leafy appendage to proper leaves or their footstalk. The stipulæ often approximate closely to the appearance of real leaves.

STIF'ULATE, Lat. *stipulatus*. Having stipules; producing stipulæ.

STIR'UP, Sax. *stirge-rapa*, step-rope; *stigan*, to step up. 1. A kind of ring, horizontal on one side to receive the foot of the rider, and attached to a strap which is fastened to the saddle. The first stirrups appear to have been ropes.—2. In ships, stirrups are short ropes, having their upper ends plaited and nailed round the yards, and eyes made in their lower ends, through which the horses are reeved, to keep them parallel to the yards. A piece of timber put under the keel, when some part of it is lost, is also denominated a *stirrup*.

STI'VER, } A Dutch coin about the value of a halfpenny sterling. It is also a money of account in Holland and Flanders.

STOCK. 1. In botany, see MATHIOLA and CHEIRANTHUS.—2. In agriculture, the domestic animals, as horses, cows, sheep, belonging to the owner of a farm.—3. Living beasts shipped to a foreign country or distant market.—4. The capital of a commercial insurance or banking company, also the goods on hand of a merchant or trading company. See STOCKS.—5. A carpenter's tool. See STOCK and BIT.

STOCK'ADE, } Ital. *stocco*. In fortification, a sharp stake or post set in the earth, more properly a line of such posts set up as a fence or barrier.

STOCK AND BIT. An instrument used by carpenters. The *stock* A is a tool with

a crank, so contrived as to rest with one end against the breast of the workman, while with the one hand he guides the boring end B, and with the other turns

the crank. The steel borers are called *bits*, and the whole instrument is commonly called a *stock and bit*, or centre-bit.

STOCK-BROKER. A broker who deals in the purchase and sale of *stocks* or shares in the public funds.

STOCK-EXCHANGE. The building where the public *stock* is bought and sold (see *STOCKS* and *EXCHANGE*.) The *Stock-Exchange*, situated in Capel-court, was opened in 1802. Formerly the place of rendezvous for persons transacting business in the stocks was Jonathan's Coffee-house, in Change-alley, Cornhill; and it is from this circumstance that the term *alley* is familiarly used for *stock-exchange*, and that a petty speculator in the funds is styled a "dabbler in the alley."

STOCK-DOVE. The wild pigeon of Europe, *Columba oenas*, Lin., long regarded as the *stock* of the domestic pigeon, but now regarded as a distinct species.

STOCK-FISH. Cod-fish dried hard without salt.

STOCKINGS. The clothing of the legs and feet, anciently made of cloth or milled stuff, sewed together, but now invariably knitted. Stockings are made of wool, cotton, and silk.

STOCKING-FRAME. An implement of the hosier, for weaving or knitting stockings, &c. It is a somewhat complicated machine, invented by William Lee, A.M., of St. John's College, Cambridge, in 1589; but receiving little encouragement, and being in indigent circumstances, he went to France, where, meeting with further disappointment, he died of a broken heart, like many other inventors before and since his time. The machine has, during the course of the last century, been much improved.

STOCK-JOBING. Speculating in the public funds; a species of gambling.

STOCK-LOCK. A lock fitted into a wooden case. The larger locks for doors are generally of this sort.

STOCKS. 1. A frame erected on the shore of a river, or of the sea, and the large establishments in the inside of docks, for the purposes of ship-building. It generally consists of a number of solid wooden blocks, ranged parallel to each other, at convenient distances, upon a very firm foundation, and with a gradual declivity towards the water.—2. The public funds of the nation, or government securities, instituted for the purpose of paying the interest upon loans. See *FUNDS*.—3. A machine consisting of two pieces of timber, with holes in which the legs of offenders are confined.

STOICS. Disciples of the philosopher Zeno, who taught that men should be free from passion, unmoved by grief or joy, and submit without complaint to the un-

avoidable necessity by which all things are governed. The name *Στωικοί* is from *στοα*, a porch in Athens, where Zeno lectured.

STOLO (Latin), a sucker. A runner or shoot from the root of a plant, which takes root in the earth. The *stolos* are said to be *supraterraneous* when they run on the surface of the ground, and *subterraneous* when they run under the surface.

STOLONIFEROUS, Lat. *stoloniferus*, putting forth suckers; *stolo*, a sucker or scion, and *fero*, to produce.

STOMACH, Gr. *στόμαχος*, from *στομα*, the mouth, and *χασ*, to pour. A membranous receptacle, the organ of digestion in animal bodies. It prepares the food for entering into the several parts of the body, for its nourishment.

STOMACH-PUMP. An instrument for withdrawing poisons from the stomach, and introducing cleansing or other liquids. It resembles the syringe, except that it includes two passages, the *sucking* and *forcing*, and has two orifices near its extremity.

STOMAPODA. An order of marine crustaceans, having the shell divided into two portions, the anterior of which supports the eyes and intermediate antennae, or composes the head without giving origin to the foot-claws. These organs, as well as the four anterior feet, are frequently approximated to the mouth on two lines that converge inferiorly, and hence the denomination of stomapoda, *στομα* and *ποδς*.

STOMATA. Passages through the epidermis of plants, universally regarded as spiracles or breathing-pores.

STONE-BORER. A molluscous animal, inhabiting a bivalve shell, which mechanically perforates or bores into rocks.

STONE-FRUIT. Fruit of which the seed is covered with a hard shell, enveloped in the pulp. See *DRUPE*.

STONE-GALL. The name given by workmen to a roundish mass of clay, often occurring in variegated sandstone. Stone-galls lessen the value of stones for architectural purposes.

STOOL. The root of a timber-tree which throws up shoots.

STOP-PLANKS. A certain description of dam, employed on canals and other hydraulic works. In order to prevent the loss of water on canals, &c., it is usual to contract the water-way at certain points, and carry up wing-walls from below, making vertical grooves in the face of the masonry upon each side, corresponding with each other, for the insertion of hatches or *stop-planks*. Provision is made for stop-planks in most hydraulic works; for instance, grooves are made at each end of a lock, on the outside of the cham-

ber, in order that the water may be kept out during any repairs.

STORAX. The most fragrant of all the resins. It is obtained from a tree, the *Styrax officinalis*, which grows in the Levant. The best is imported in red tears, but the common sort in large cakes. This last is the most fragrant, though very impure.—2. The Peruvian balsam is sometimes called *white storax*. See, also, **STYRAX**.

STORTEING. The parliament of Norway.

STORY. In *architecture*, a subdivision of the height of a house, comprehended by one flight of stairs.

STORY-POSTS. Upright timbers used in sheds, workshops, and old wooden houses, to support the floors or superincumbent walls.

STORY-ROD. A rod equal in length to the height of a story of a house, and divided into as many parts as there are intended to be steps in the stair, for measuring and laying them off with accuracy.

STOUP. A basin for holy-water in a niche at the entrance of a Catholic church.

STOVE, Sax. stofa. 1. A place in which a fire in dwelling-houses, churches, public rooms, &c., is made, and so contrived that it may heat the air of the apartment, and lead the smoke up the chimney. Stoves are of various constructions, and numerous patents have been taken out for inventions and improvements upon them. Franklin's stove, which is much used in France, is one of the best. The German stove, recently brought into notice in this country by Dr. Arnott, has the peculiar advantages of thoroughly avoiding smoke and of burning little fuel. When a stove allows the burning coals to be seen, it is called a *stove-grate*.—2. In *horticulture*, a structure in which plants are cultivated that acquire a considerably higher temperature than the open air.

STRABISM. Lat. *strabismus*, from *στραβίζω*, to squint. Squinting: an affection of the eye, by which a person sees objects in an oblique manner, from the axis of vision being distorted.

STRAIGHT ARCH. In *architecture*, the arch over an aperture, whose intrados is straight.

STRAIGHT JOINTED FLOOR. A floor in which the joints are continued from one end to the other, and the heading joints are not in the same straight lines as folding floors.

STRAINING PIECE. Strutting piece. A beam placed between two opposite beams, to prevent their nearer approach, as rafters, braces, struts, &c.

STRAIT. In *geography*, a narrow pass or frith separating one country from another.

STRAND (of a rope). One of the twists or divisions of which the rope is composed. When one (or more) of the strands of a rope is broken, the rope is said to be *stranded*.

STRAND'ING. In *navigation*, the running of a ship on shore, beach, or strand, by which she is wrecked (in this case said to be *stranded*).

STRAN'GLES. In *farriery*, a collection of foul humours in the body of a colt; generally voided by the nostrils.

STRAN'GURY, Lat. *stranguria*, from *στραγγέ*, a drop, and *ουρον*, urine. A disease in which there is pain in passing the urine, which is excreted by drops.

STRAP. In *carpentry*, an iron plate, securing the junction of two or more pieces of timber, into which it is bolted or keyed.

STRAFFA'DO, Ital. from *strappare*, to pull. A military punishment formerly practised. It consisted in drawing the offender to the top of a beam, and letting him fall, by which means a limb was sometimes dislocated.

STRASS. The basis of factitious gems or pastes. See **PASTE**.

STRATA, Lat. pl. of *stratum*, a bed. In *geology*, the thicker layers of mineral matter, forming the crust of the globe: the thin layers are commonly called *beds*. The strata present very different characters when compared with each other, yet they are composed of but comparatively few primary elements, so concentered as to produce considerable variety. Most of them also contain foreign matters, fragments of other rocks, shells, animals, and plants. Rocks arranged in layers are said to be *stratified*, and the order of their arrangement is termed *stratification*.

STRATH. In *Scotland*, generally signifies a valley of considerable size.

STRATUM (Lat.). A layer or bed. See **STRATA**.

STRATUS. Fall-cloud. A name applied to fogs, mists, and other extensive sheets of clouds, that rest on the earth's surface.

STREAK, Ger. *striche*. A term in *mineralogy* for that appearance of a mineral which arises from its being scratched by a hard sharp instrument. It is said to be *similar* when the powder obtained by scratching the mineral is of the same colour as the mineral; and *dissimilar* when the colours differ.

STREAM-TIN. Among *miners*, tin ore found beneath the surface of alluvial ground, and separated from the earthy matters by passing a stream of water over it.

STRETCH'ING COURSE. In *building*, a course consisting wholly of *stretchers* that is, bricks, stones, or the like, laid lengthways in the longitudinal direction of the wall.

STRETTO, *It narrow*. In music, signifies that the measure is to be played short and concise; opposed to *largo*.

STRIÆ, Lat. pl. of *stria*, a streak. 1. In conchology, fine thread-like lines in the exterior surface of many shells, longitudinal, transverse, or oblique.—2. In botany, fine lines running in parallel directions.

STRIMATE, } Lat. *striatus*, scored, streak-
STRATED, } ed, channelled, fluted,
chamfered. Applied chiefly in natural history.

STRIDOR DENTII (Lat.). Grinding of the teeth (in sleep). A symptom, in children, of intestinal irritation from worms, and of irritation of the brain in adults during fever.

STRIGA. 1. A species of pubescence on plants, white, bristle-like with broad bases, mostly decumbent.—2. In architecture, the flutings of a column. *Fasciola*.

STRING-BOARD. In architecture, a board placed next to the well-hole in wooden stairs, and terminating the ends of the steps.

STRING-COURSE. In architecture, a narrow moulding, or projecting course, continued along the side of a building.

STRING-PIECE. In architecture, a piece of board placed under the flying-steps of a wooden stair for a support, and forming, as it were, the soffit of the stair.

STRIX. The Owl. A genus of nocturnal birds of the accipitrine order, now divided into various sub-genera, according to their tufts, the size of their ears, the extent of the circle of feathers which surrounds their eyes, &c., as *otus*, *syrium*, *bubo*, *scops*, and *noctua*.

STRONGYLUS. The name given by Müller to a genus of intestinal worms: order *Nematoidea*. One of the species is said to be found in the human kidney.

STRONTIA, } A greyish-white-coloured
STRONTIAN, } alkaline earth, of a pungent and acrid taste, first found in the state of carbonate, in a lead-mine at Strontian, in Argyleshire, Scotland. In its chemical characters it closely resembles baryta. The nitrate is much employed in fire-works, to communicate a red colour to flame. Its base is *strontium*.

STRONTIANITE. Native carbonate of strontia. When ignited with charcoal-powder it affords the earth strontia. It resembles carbonate of baryta, but is said not to be poisonous, which that mineral is.

STRONTIUM. The metallic basis of strontia, first procured by Sir H. Davy, in 1808. It is analogous to barium, but has less lustre.

STRONTITES. The name given to strontia by Dr. Hope, who discovered that earth in 1787. Klaproth modified the name for the sake of uniformity of nomenclature, which is always desirable.

STROPHÆ. *Στροφε*, from *στρέφω*, to turn. In Greek poetry, a stanza: the first member of a poem. The strophe is succeeded by a similar stanza, called *antistrophe*.

STROPHOLE. *Strophium*. A little curved gland-like part near the scar or base of some seeds, particularly of the papilionaceous genus.

STROPHULUS. A papulous eruption peculiar to infants, and exhibiting a variety of forms known popularly as *red-gum*, *white-gum*, *tooth-rash*, &c.

STRUCTURE, Lat. *structura*. 1. A term in mineralogy denoting the particular arrangement of the integrant particles or molecules of a mineral.—2. The manner of organisation of animal and vegetable bodies.—3. A building.

STRUMA. 1. A glandular swelling.—2. *Bronchocele*: an induration of the thyroid gland. *Struma*, according to Dr. Good, is from *στρομα*, *congestion*, or from *struo*, to heap up, or *à struendo*, because *strumæ* grow insensibly.

STRUMARIA. The name of a genus of perennial plants. *Hexandria—Monogynia*. Cape of Good Hope.

STRUMOUS. Having *strumæ* or swellings of the glands: *scrofulous*.

STRUT. In architecture, a brace or oblique stay.

STRUTHIO. The Ostrich: a genus of birds. Order *Grallatoria*: family *Brevipennes*. There are two species. (1.) The ostrich of the eastern continent (*S. camelus*), celebrated from the earliest ages. It attains the height of 6 or 8 feet, lives in great troops, lays eggs weighing nearly 3 lbs., feeds on grass, grain, &c., and runs faster than any other animal. (2.) The American ostrich (*S. rheæ*), is one-half smaller than the oriental species; its few feathers are greyish. It is common in South America, and is easily tamed when taken young. The eggs are hatched by the male.

STRUT-BEAM. In carpentry, an old name for a collar-beam.

STRUTHIOLA. A genus of trees and shrubs. *Tetrandria—Monogynia*. Cape of Good Hope.

STRUTHIONIDÆ. *Struthio*, the type. A family of terrestrial birds, with short wings and strong legs; the *brevipennes* of Cuvier.

STRUTS. In carpentry, oblique framing pieces, joined to the king-posts, or queen-posts, and the principal rafters; sometimes called *braces*.

STRUTTING-PIECE, see **STRAINING-PIECE**.
STRYCHNIA, } An alkaline base ex-
STRYCHNINE, } tracted from the bean
of the *strychnos nux vomica*. It acts most powerfully upon the animal system when taken into the stomach. The eighth of a

grain is a fatal dose for a strong dog. Like most other poisons, it is reckoned a valuable medicine.

STRYCHNIC ACID. An acid obtained like strychnia from the bean of the *strychnos nux vomica*, and also from *St. Ignatius's Bean*; called also *Igasuric acid*.

STRYCH'NOS. The name of a genus of plants. *Pentandria—Monogynia*. Name *στυχνης*, used by the Greeks to designate a species of nightshade. The species, of which there are two, are natives of India; one, the *S. nux vomica*, affords the poison-nut, or *nux vomica* of the shops, one of the most powerful of the vegetable poisons; the other species, *S. peltatum*, which affords the cleaning-nut, is less known. Formerly the plants which afford *St. Ignatius's bean*, *Jesuit's bean*, and *Upas ticulé*, one of the strongest Java poisons, were comprised in this genus.

STUCCO. A name indefinitely applied to the finer kinds of calcareous plasters. We usually give this name to plaster of Paris, which is calcined calcareous gypsum, mixed with water to the consistence of cream; but the common stucco, for architectural and sculptural purposes, is composed of pulverised white marble, mixed with plaster of lime, the whole sifted and worked up with marble. This composition, in process of time, becomes as hard as stone, and takes a fine polish.

STUDDING-SAIL. A sail which is set beyond the skirts of the principal sails of a ship. The studding-sails are only set during light winds. They appear like wings upon the yard-arms.

STUDIES. 1. In *painting*, these signify works which a painter undertakes in order to acquire a practical knowledge of his art, and facility of execution.—2. The term is also applied to the parts taken separately, which the artist afterwards transfers to the picture.

STUDS. In *carpentry*, a term applied to posts or quarters which are placed in partitions, about a foot distant from each other.

STUD'WORK. In *building*, a wall of brick-work built between studs.

STU'FA (Italian). A jet of steam issuing from a fissure of the earth in volcanic regions.

STUFF. Applied to various woollen fabrics; especially to a light woollen cloth, formerly much used for curtains and bed-furniture.

STUFFING-BOX. In *mechanics*, a piece secured to the end of a cylinder-pipe or other vessel through which a rod passes: used in pumps, steam engines, &c., where the piston-rod requires to move freely, yet to be air-tight.

STUM. Wine not yet fermented. *Stum* is frequently added to vapid wines, to excite fermentation anew

STU'DY. In *farriery*, a disease of frequent occurrence among sheep, attended with stupor and blindness. It generally proves fatal.

STU'GEON. A large, valuable, and well-known fish, which ascends certain of the European rivers, and is an object of important fisheries. There are several species. The sturgeon properly so called (*Accipenser sturio*, Parnell) called the sharp-nosed sturgeon, found in vast abundance in some of the American rivers, but rarely in those of Britain. It attains a length of 5 or 6 feet; (2.) The broad-nosed sturgeon (*Accipenser latirostris*, Parnell), some specimens of which have been taken in the rivers of Scotland, between 7 and 8 feet in length; (3.) The sterlet (*Accipenser ruthenus*, Lin.), a delicious fish, rarely more than two feet long. Its caviar is reserved for the Russian court, and there is reason to believe that it is the *Elops* and *Accipenser*, so highly celebrated among the ancients; (4.) The great sturgeon or beluga (*Accipenser huso*, Lin.), which is frequently taken 15 feet in length, and weighing 1200 lbs., and one specimen was taken which weighed nearly 3000 lbs. It is found in the Po. There are some other species less known. See *ACCIPENSER*.

STUR'IONES. Sturgeons. An order of Chondropterygious fishes (*Chondropterygii*, with *free branchiæ*), closely allied to the ordinary fishes in their gills. The sturgeon is the type of the order. *Sturio* (whence *sturgeon*) is modern, and is probably the German name *stoer* latinised.

STYLE, Lat. *stylus*, Gr. *στυλος*. 1. Anciently a sharp-pointed instrument, to write on hard substances without ink; an antique pen. Hence the metaphorical use of the term to denote a particular manner of writing as regards the mode of expression, choice of words, &c.—2. In *botany*, the shaft of a flower which proceeds from the germen, and bears the stigma.—3. In *surgery*, a probe.—4. In *dialling*, the gnomon of a dial.—5. In *chronology*, a particular manner of reckoning time with regard to the Julian and Gregorian calendars. *Style* is *old* or *new*. The *old style* follows the Julian manner of computing the months and days, or the calendar as established by Julius Caesar, in which the year is reckoned 365 days, 6 hours. The *new style* was introduced by Pope Gregory XIII., who reformed the calendar, reckoning the year 365 days, 5 hours, 48 minutes, 45 seconds, which is very nearly the true solar year. At the reformation of the calendar it was found necessary to retrench 11 days from the old style. This was acted upon in Germany in 1700, and adopted by act of parliament in Britain in 1752, when the 3rd of September of

that year was reckoned the 14th. The difference between the old and new styles is now 12 days. See CALENDAR.—6. In literature, the distinctive manner of writing of an author.—7. In the *fine arts*, the mode in which an artist forms and expresses his ideas on and of a given subject.

STYLIFORM. Shaped like a bodkin or style.

STYLITES. In ecclesiastical history, a sect of solitaries, who distinguished themselves by standing motionless on columns and pillars, for the exercise of their patience! whence the name, from *στυλος*, a column.

STYLO. In anatomy, names compounded of this word belong to the muscles which are attached to the styloid process of the temporal bone.

STYLOBATE, Lat. *stylobatum*. In architecture, a name for the whole uninterrupted basis between the columns.

STYRAX. 1. The name of a genus of trees. *Decandria—Monogynia*. Name *στυραξ*, a reed, because it was usual to preserve the gum storax in reeds. The gum-benzoin is the produce of the *S. benzoin*, a tree formerly placed in the genus *Laurus*; the solid or official storax is the produce of the *S. officinalis*, a tree which grows in Italy and the Levant.—2. A name of storax.

SUB. 1. In composition, signifies a subordinate degree.—2. In chemical nomenclature, when *sub* is prefixed to the name of a salt, it denotes an excess of base, and deficiency of acid.

SUBAH. In India, a province or viceroyship.

SUBALTERN, in the army, are officers below the rank of captain.

SUB-APENNINE. A term introduced into geology by Brocchi, to denote a series of strata of the older pliocene period, resting unconformably upon the inclined beds of the Apennine range. They are composed of sand, clay, marl, and calcareous tufa, and are all tertiary deposits.

SUBAXIL'ARY. Placed under the axil or angle formed by a branch of a plant with the stem, or by a leaf with the branch.

SUB-BRACHIANS, Lat. *sub*, and *brachium*, arm. An order of Malacopterygious fishes, having the ventral fins either beneath, before, or behind, the pectoral fins.

SUBCARBONATE. A carbonate in which the base predominates. See *SUB* and *CARBONATE*.

SUBCLAVIAN. That which is or passes under the clavicle; as the *subclavian* veins and arteries.

SUBCONTRARY. A term applied in geometry, when two similar triangles are so placed as to have a common angle

at their vertex, and yet their bases not parallel.

SUBDOMINANT. In music, the fourth note above the tonic, being under the dominant.

SUBDUPLICATE RATIO of two numbers, is that of their square roots.

SUBER'IC ACID. A white pulverulent acid, obtained from cork (*suber*) by digesting it with nitric acid. It has also been obtained in crystals, which sublime in white vapours when heated. It consists of $C_6 H_6 O_3$.

SUBERINE. The name given by Chévreul to a peculiar substance obtained from cork (*suber*) by treating it in the same way as is done with wood, in order to procure lignine.

SUB'EROSE, Lat. *suberosus*, slightly or sub-gnawed. Applied, in botany, to parts which appear as if a little gnawed.

SUBINF'UDATION, from *sub* and *infudation*. A term, in law, for the act of enfeoffing by a tenant or feeoffee, who holds lands of the Crown: the act of a greater baron, who grants lands, or a smaller manor, to an inferior person.

SU'BITO (It.). suddenly. In music, a term of direction, as *colle subito*, turn (the leaf) quickly.

SUBJECT, Lat. *subjectus*. 1. In grammar, the nominative case to a verb passive: this is the subject of the verb.—2. In the *fine arts*, that which it is the aim of the artist to express.—3. In logic, the subject of a proposition is the term of which the other is affirmed or denied.

SUBJUNCTIVE, Lat. *subjunctivus*. In grammar, a term designating the fourth mood of verbs, because usually subjoined to other verbs or words expressing condition, hypothesis, or contingency; as *Si fecerint æquum*, If they should do what is just.—2. The term is often used as a noun denoting the subjunctive mood.

SUBLAPS'ARIAN. 'from *sub*, and *lapsus*, a fall. A term, in theology, for that doctrine which maintains that the sin of Adam's apostasy being imputed to all posterity, God, in compassion, decreed to send his Son to rescue a great number from their lost estate, and to accept of his obedience and death on their account. The decree of reprobation, according to the *sublapsarians*, is nothing more than a preterition or non-election of persons whom God left as he found, involved in the guilt of Adam's transgression, without any personal sin, when he withdrew some others as guilty as they. The term *sublapsarian* is opposed to *supralapsarian* (q. v.).

SUB'LIMATE. 1. Anything which is sublimed: the result of a process of sublimation.—2. The corrosive sublimate (*bichloride of mercury*) is sometimes called simply *sublimate*, by way of eminence.

SUBLIMATION. A process by which volatile particles of solid substances are driven off by heat, and again condensed in a solid form; often a crystalline mass. The process differs from evaporation only in being confined to solid matters. It is usually performed for the purpose of purifying certain substances, but sometimes for the purpose of reducing the solid into vapour, to facilitate its chemical combination with some other substance. When the sublimed matter concretes into a solid hard mass, as bichloride of mercury and sal-ammoniac, it is commonly called a *sublimate*; if into a powdery form, as sulphur and benzoïn, it is popularly named *flowers*.

SUBLIME, Lat. *sublimis*. In the *fine arts*, high or exalted in style; that which in art is raised above the higher standard of nature.

SUBMAXILLARY, from *sub*, and *maxilla*, the jaw-bone. Situated under the jaw. Thus the salivary glands, situated one on either side, immediately within the angle of the lower jaw, are termed *submaxillary glands*.

SUBMEDIAN. In *music*, the sixth note, or middle note between the octave and subdominant.

SUBMULTIPLE. In *arithmetic*, a number or quantity which is contained in another, a certain number of times, or is an aliquot part of it. Thus 4 and 7 are a *submultiple* of 28, and 28 is a common multiple of 4 and 7; also 4 and 7 are the aliquot parts of 28. The term is in some measure superfluous.

SUBNORMAL. In *geometry*, a line which determines the point of the axis of a curve, where the normal or perpendicular, raised from the point of contact of a tangent to the curve, cuts the axis.

SUBORDINARY. In *heraldry*, an ordinary which is less than one-fifth of the whole shield.

SUBORNATION, Fr. from *suborner*. 1. In *law*, the crime of procuring a person to take such a false oath as constitutes perjury.—2. The crime of procuring one to do a criminal action.

SUBPENA, } Lat. from *sub*, and *pœna*,
SUBPENA, } penalty. A writ commanding the attendance in court of the person on whom it is served, as witness, &c., under a penalty. The person so summoned is said to be *subpœnaed*.

SUBROGATION, from *subrogo*. In *civil law*, the substituting of one person for another, and giving him the rights of that other.

SUBSALT. A salt in which the base is not saturated by the acid: opposed to *supersalt* (q. v.).

SUBSEMITONE. In *music*, the leading note, or sharp seventh of the scale.

SUBSIDY, Lat. *subsidiũ*, from *subsido*.

Something furnished for aid. Formerly *subsidiũ* was a tax, for the benefit of the kings of England, on persons in respect to their reputed estates, after the nominal value of 4s. the pound for lands, and 2s. 8d. for goods.—2. In *international policy*, a sum of money paid by one nation to another, to purchase the service of additional troops, or other aid in war, &c. Thus Britain paid heavy *subsidies* to Austria and Prussia, during the last European war, to engage them to resist the progress of the French. These subsidies, moreover, generally found their way into the coffers of Napoleon, being usually paid over by the bribed for a little respite.

SUBSOIL. Under-soil: the bed of earth which lies between the surface-soil and base of rocks on which it rests: *substratum*.

SUBSPECIES. A division of a species.

SUBSTANTIVE. Lat. *substantivus*. 1. In *grammar*, a noun. The part of speech which expresses something that exists either materially or immaterially. Adjectives and even pronouns are sometimes used *substantively*, and we have *substantive verbs*, or verbs betokening existence.—2. In *dyeing*, *substantive colours* are such as remain permanent on the fabric, without the intervention of other substances.

SUBSTITUTION, from *substitute*. 1. In *law*, the designation of another heir to enjoy, in default of a former heir, or after him.—2. In *algebra*, the replacing of one quantity by another which is equal, but differently expressed.—3. In *music*, *chords of substitution* are those of the ninth major and minor.

SUBTRACTION. In *law*, the withdrawing (*subtracting*), or withholding of some right. Thus the *subtraction* of a legacy is the withholding or detaining it from the legatee by the executor, for which the law gives a remedy.

SUBSTYLE. Substyle Line, in *dialling*, is a right line on which the gnomon or style is erected, at right angles with the plane.

SUBSULTUS TENDINUM. In *nosology*, weak convulsive motions or twisting of the tendons, observed in the extreme stages of debility, produced by low nervous and typhus fevers. They are usually the harbingers of a fatal termination.

SUBTANGENT. In *geometry*, the part of the axis contained between the ordinate and tangent drawn to the same point in a curve: the line which determines the intersection of the tangent in the axis prolonged.

SUBTENSE, from *sub* and *tensus*. The chord of an arc: something extended under.

SUBTRACTION, from *subtrahō*. In *arithmetic*, &c., the taking of one number from another of the same kind or denomina

tion: the operation by which is found the difference between two sums, or a number equal to that difference.

SUB'TRAHEND, from *subtrahō*. In *arithmetic*, the number to be subtracted or taken from another.

SUB'ULATE, Lat. *subulatus*, awl-shaped. Applied, in *botany*, to leaves, &c., which taper from a thick base to a point.

SUCCIN'AMIDE. A white solid substance, which crystallises readily in rhomboids from its solutions: obtained by the action of ammoniacal gas on anhydrous succinic acid, at an elevated temperature. Discovered and thus named by M. Darcet.

SUCCIN'IC ACID. Acid of amber (*succinum*), obtained by subjecting that substance to dry distillation. It sublimes and crystallises, into the upper part of the apparatus; but it must afterwards be purified by solution and recrystallisation, repeated until the crystals become transparent and shining.

SUCC'INITE. A mineral thus named from its amber-yellow colour (*succinum*, amber). It occurs in small roundish masses about the size of peas. Some mineralogists refer it to idocrase; others to the garnet.

SUCC'INUM. The Latin name for amber: from *succus*, juice, because it was thought to exude from a tree. The Greeks called it *ηλεκτρον*, whence our word *electricity*.

SUCCORY or CHICORY. Wild endive (*Cichorium intybus*). A plant which grows on calcareous soils in most countries of Europe. The root which, when new, is white and fleshy, is dried and ground on some parts of the continent as a substitute for coffee. It has of late been similarly used in England, particularly to adulterate coffee, it being much cheaper than that article.

SUCCUS'SION. In *nosology*, a mode of exploring the chest, which consists in shaking the patient's body, and listening to the sounds thereby produced.

SUCKER. 1. In *botany*, see STOLO.—2. In *mechanics*, a name sometimes given to the bucket, piston, or raising valve of a pump.—3. In *ichthyology*, the lumpfish: also the name of a common river-fish in New England.

SUC'TION. In *hydraulics*, see PUMP.

SUDAM'EN, Lat. from *sudor*, sweat. Sudamina are vesicles like millet seed, which appear suddenly on the skin without fever, especially in the summer time.

SUDATORY. A sweating-room. *Sudor*, sweat.

SUDATORY FEVER. *Sudor anglicus*. The sweating sickness, an extraordinary epidemic which made its appearance in England in 1485, and carried off vast numbers.

SUDORIFICS, from *sudor*, sweat, and *facio*, to make. Medicines which produce sudation. See DIAPHORETIC.

SUFFOLK CRAIG. A marine deposit of the

older pliocene period, consisting of sand and gravel with shells and corals.

SUF'FRAGAN, from *suffragans*, assisting. A bishop considered as an assistant to his metropolitan.

SUFFRUTICOSE, Lat. *suffruticosus*. Somewhat woody, nearly shrubby. Applied in botany.

SU'GAR, Lat. *saccharum*, Gr. *σακχαρος*, Pers. *sakkar*, Arab. *sukhir*, Sans. *sarkara*, Slav. *zakar*, Fr. *sucré*, Ger. *zucker*, Dut. *suiker*, Dan. *sokker*, Swed. *socker*. Wel. *sugyr*. A well-known granulated substance, manufactured chiefly from the sugar-cane, *Arundo saccharifera*, but procured also from a great variety of other plants, as maple, beet, parsnep, birch, &c. The sugar is contained in the juice: this saccharine liquor is concentrated by boiling, which expels the water; lime is then added to neutralise any vegetable acid which may be present; the grosser impurities rise to the surface, and are separated in the form of scum; and finally, as the liquor cools, the sugar separates from the molasses in grains. It is then put into hogsheds (called *potting*), with holes in their bottoms, through which the molasses drain off into cisterns below, leaving the sugar in the state known in commerce by the name of *raw* or *muscovado sugar*. This, when further purified, takes the name of *refined sugar*, *double refined sugar*, &c., according to the degrees of purification. Sugar is a proximate element of the vegetable kingdom, and is found in most ripe fruits, and many farinaceous roots. By fermentation it is converted into alcohol, and thence forms the basis of those substances which are used for making intoxicating liquors, as grapes, malt, apples, molasses, &c. &c. The ultimate elements of sugar are carbon, oxygen, and hydrogen, resolvable into charcoal and water.

SUGAR-CAN'DY. Sugar clarified and crystallised. It is made by boiling a solution of sugar till it becomes thick, when it is removed into a heated room and sticks or threads are put into it, on which it crystallises.

SU'GAR-CANE. The *Arundo saccharifera*, from which sugar is chiefly manufactured.

SU'GAR-HOUSE. A building in which sugar is refined.

SU'GAR-MAN'GEL-WUR'ZEL. A biennial plant, a variety of the silver beet (*Beta cida*), which grows in the south of Europe.

SU'GAR-MILL. A machine for expressing the juice of the sugar-cane.

SU'GAR OF LEAD. Acetate of lead. Poisonous.

SUIT. 1. In *law*, an action for the recovery of a right or claim.—2. To bring *suit* formerly meant to bring *secta* or witness, to prove the plaintiff's demand;

but now it means simply to institute an action.

SUIT AND SERVICE. In *feudal law*, the duty of feudatories to attend the courts of their lords or superiors, in time of peace; and in war to follow them, and perform military service.

SUIT-COVENANT. In *law*, a covenant or agreement to sue at a certain court.

SUITOR. 1. In *law*, one who sues or prosecutes a demand of right.—2. A party in a suit, whether as plaintiff, defendant, petitioner, appellant, witness, juror, or the like.

SUL'A. The Booby: a sub-genus of palmipede birds, included in the genus *Pelicanus*, Lin. *Sula* is the name of the common species of the *Feros Islands*, but extended to all the tribe by Brisson. See BOOBY and PELICANUS.

SUL'CATE. Lat. *sulcatus*, furrowed: marked with deep lines running lengthways. Applied to stems, leaves, seeds, &c., of plants; and to shells.

SULPHAMETHYLENE. A crystallisable compound, obtained by treating methylene with liquid ammonia. It is very deliquescent.

SULPHAMIDE. A white light powder, obtained by combining dry ammoniacal gas and anhydrous sulphuric acid. When heated, it melts into a clear liquid, which concretes on cooling into a bisulphate of ammonia.

SULPHATE. A salt formed by the union of the sulphuric acid with a salifiable base. The sulphates are an important class of salts, the principal ones of which are—(1.) *Alum*, sulphate of alumina and potash; (2.) *Blue vitriol*, sulphate of copper; (3.) *Green vitriol* or *copperas*, sulphate of iron; (4.) *Epsom salt*, sulphate of magnesia; (5.) *Glauber's salt*, sulphate of soda; (6.) Sulphate of potash; (7.) *White vitriol*, sulphate of zinc; (8.) Sulphate of mercury; (9.) Sulphate of ammonia; (10.) *Gypsum*, *selenite*, *plaster of Paris*, *alabaster*, sulphate of lime; (11.) Sulphate of antimony; (12.) Sulphate of quinine, much used in medicine; (13.) Sulphate of manganese, used by calico-printers.

SULPHITE. A salt formed by the combination of a definite quantity of the sulphurous acid with a base.

SULPHOBENZIDE. A substance obtained in regular colourless crystals, by treating benzene with sulphuric acid. It consists of two atoms of benzene combined with one atom of sulphuric acid.

SULPHOCETIC ACID. An acid formed by placing ethal in contact with sulphuric acid, and applying heat: the substances combine and form the acid in question. It is thus named because the basis appears to be hydrate of cetene composed of two atoms of cetene and one atom of water.

SULPHOCYANIC ACID. Sulpho-prussic acid. Sulphuretted cyazic acid. A colourless, transparent liquid acid, possessing a strong odour, somewhat resembling acetic acid, obtained from *sulphocyanate* of potash by a tedious process.

SULPHOGLYCER'IC ACID. An acid which may be obtained by treating glycerine with sulphuric acid. It has not yet been insulated.

SULPHO-INDIGOT'IC ACID. A solid, dark-blue substance, soluble in water, of an acid and astringent taste, obtained by the action of sulphuric acid on indigo. The process is laborious and intricate. The *hypo-sulpho-indigotic acid* is very similar to the sulpho-indigotic.

SULPHOMETHYL'IC ACID. A crystallisable acid, readily obtained from sulphomethylate of baryta. This again is formed by passing anhydrous sulphuric acid into pyroxilic spirit, and supersaturating the liquid with barytes. The sulphomethyl'ic acid may perhaps be regarded as a bisulphate of methylene.

SULPHONAPHTHALIC ACID. A crystallisable acid, considered as a compound of two atoms of sulphuric acid and one atom of naphthaline. It forms salts called *sulphonaphthalates*. The *hyposulphonaphthalic acid* is obtained in the form of a white powder from the sulphonaphthalate of baryta.

SULPHO-SALTS. These are merely double sulphurets, many of which may be prepared by passing a stream of sulphuretted hydrogen into a solution of an oxisalt. the hydrogen of the gas unites with the oxygen of the base, forming water, and the sulphur of the gas takes the place of the oxygen, converting the base into a sulphuret instead of an oxide.

SULPHOVINIC ACID. Cæthionnic acid. A peculiar acid generated during the process for obtaining sulphuric ether.

SULPHUR. Brimstone. A well-known simple combustible substance, found very abundantly in depositions, in sublimed incrustations, on the surface of certain waters near volcanoes, and in combination with many metals. It is found in greatest abundance and purity in the neighbourhood of volcanoes, modern or extinct, as at Solfatara in Italy: but all those ores known by the name of *pyrites*, of which there are a vast variety, are combinations of sulphur with different metals. That which is manufactured in this country is obtained by the roasting of pyrites. When melted (at 226° Fah.), and cast in cylindrical moulds, it is termed *rough* or *roll sulphur*; when this is purified by sublimation, it is called *sublimed sulphur*, and often *flowers of sulphur*, and is in the form of a bright yellow powder. When sulphur is melted and allowed to cool in the air it is yellow and very

brittle, but when poured into water it is white and viscid. Sulphur is of great importance in the arts. It is used extensively in the manufacture of gunpowder and of sulphuric acid.

SULPHURATION. The name given to the process by which woollen, silk, and cotton goods and straw hats are exposed to the vapours of burning sulphur or sulphurous acid gas, to whiten or bleach them. The process requires the utmost care.

SULPHURET. A combination of sulphur with a simple base.

SULPHURETTED HYDROGEN. A deleterious gas composed of one part of hydrogen and 16 parts of sulphur, by weight. It is the active constituent of the sulphurous mineral waters. Its sp. gr. is 1191, air being 1000.

SULPHURETTED CHLORAZIC ACID. See SULPHOCYANIC ACID.

SULPHURIC ACID. Oil of vitriol; vitriolic acid. An acid which, when pure, is without smell or colour, and of an oily consistence. It is most violently caustic, and so acid that a single drop of it will give a gallon of water the power of reddening blue litmus. If four parts be mixed with one of water at 50°, the temperature instantaneously rises to 300° F., and the same quantity will raise one of ice to 212°. On the contrary, four parts of ice, and one part of the acid sinks the thermometer 4° below 0. The sulphuric acid of Nordhausen is prepared by distilling dried copperas: it comes over as a brown-coloured liquid, varying in sp. gr. from 1'842 to 1'896. By redistillation in a glass retort, into a receiver surrounded with ice, it comes over in white fumes, and is deposited in silky filaments, like asbestos, tough and difficult to cut. This anhydrous acid consists of one equivalent proportion of sulphur and three of oxygen, or, by weight, 16 of the former and 24 of the latter. But the acid prepared in this country by the combustion of sulphur with access of atmospheric air, is colourless, and in its most concentrated state has a sp. gr. of only 1'842 (though it is sometimes found in commerce of a sp. gr. of 1'845, in consequence of impurities). In this state it contains 81½ per cent. of dry acid, and 100 parts of it are neutralised by 143 of dry carbonate of potash, or by 110 of dry carbonate of soda. The best test for sulphuric acid in solution is the hydrochlorate of baryta (the nitrate is generally recommended). The salts formed by the sulphuric acid with bases are termed *sulphates*.

SULPHURIC ETHER. A highly volatile, fragrant, inflammable, and intoxicating liquid, produced by distilling a mixture of equal weights of sulphuric acid and alcohol.

SULPHUROUS ACID. When sulphur is heated to 180° or 190°, in an open vessel, it melts and soon afterwards emits a bluish flame, visible in the dark, but which in open day-light has the appearance of a white fume. This fume has a suffocating smell, and has so little heat that it will not set fire to flax. The suffocating vapour given off is a gas composed of one equivalent proportion of sulphur and two of oxygen, or, by weight, of 16 of each: it is *sulphurous acid gas*. It is, moreover, readily imbibed by water, forming the liquid formerly called *volatile vitriolic acid*, and now *sulphurous acid*. It has a strong sulphurous smell, but, when it is exposed for a time to air, it loses this smell by imbibing another atom of oxygen, and is thereby changed into *sulphuric acid*. The salts formed by the sulphurous acid are termed *sulphites*.

SULPHUR SALTS. This term is applied to *double sulphurets*. The sulphurets of the most electro-positive bases, such as the protosulphurets of potassium, sodium, &c., have been termed *sulphur bases*; and the sulphurets of arsenic, antimony, &c., the bi-sulphuret of carbon, and sulphuretted hydrogen have been termed *sulphur acids*. The compounds of one of the former class with one of the latter are *sulphur salts*.

SUL'TAN, Arab. *sultaun*, mighty. A general title of Mohammedan princes.

SUMACH', Fr. *sumac*, Ger. *schumack*, SHUMAC'. Rus. *sumak*, Arab. *su'mak*, from *samak*, to be red. The common sumach is the *Rhus coriaria*, a shrub which grows spontaneously in Spain, Portugal, the Bannat, and the Illyrian Provinces. The young fustic is the *Rhus cotinus*, cultivated in Italy; and the *ridou* or *rodou* is the *Coriaria myrthifolia*, which grows in the neighbourhood of Montpellier. The shoots of these plants are cut yearly quite to the root, and being carefully dried, they are chipped or reduced to powder by a mill, and are then prepared for the purposes of dyeing and tanning, and sold under the general name of *sumach*. The colouring matter is yellow.

SUM'MER. 1. One of the four seasons of the year.—2. In *architecture*, any large timber supported on two posts, serving as a lintel to a door, window, or the like.

SUM'MER-FALLOW. Naked Fallow. Land ploughed, but lying bare of crop in summer.

SUM'MERSET. In *gymnastics*, a high leap, in which the feet are thrown over the head. The word is a corruption of the French *soubresaut*.

SUMMONS, Lat. *submoneas*. In *law*, a citation to appear in court, to answer the demand of the plaintiff.

SUM'OOM. A pestilential wind of Persia, &c. See SIMOOM.

SUMP. 1. A pond of water, reserved for salt-works, &c.—2. In *mining*, a pit sunk below the bottom of the mine.—3. In *metallurgy*, a round pit of stone, lined with clay, for receiving the metal on its first fusion.

SUMPTUARY LAWS. *Leges sumptuariae.* Laws relating to expense (*sumptus*), regulating the expense of citizens in apparel, food, furniture, and other personal matters. Such laws have been enacted, and what is more singular, have been attempted to be executed!

SUN. In *astronomy*, the great luminary and centre of our system, having all the planets and comets revolving around him, at different distances, and in different periods of time, and giving light and heat to all. His apparent diameter at the earth is 32' 36" when nearest (92,000,000 miles); when most distant (95,000,000 miles); and, taking the mass of the earth as 1, his mass is 1,384,472. He revolves about his axis in 25½ days, with his equator inclined 7° 30' to the plane of the earth's orbit. Several hypotheses have been advanced regarding the emission of light and heat by the sun, but none of them are satisfactory.

SUN'NAH (Arab.). A troop. The orthodox sect of Mussulmans.

SUPER. A Latin preposition signifying *above, over, excess*. 1. Used, in *composition*, to denote on the top, more than enough, more than another. 2. In *chemistry*, this word, when prefixed to the name of a salt, denotes an excess of acid. See **SUPERSALT**.

SUPERCARGO. A person in a merchant-ship, whose business it is to manage the sales, and superintend all the commercial concerns of the voyage.

SUPERDOMINANT, Lat. *super*, and *dominant*, governing. In *music*, in the descending scale, the sixth of the key.

SUPEREROGATION (WORKS OF). In *theology*, good works of men, beyond what are necessary for salvation; which, among Roman Catholics, are believed to be meritorious in the sight of God.

SUPERFICIAL MEASURE. See **SQUARE MEASURE**.

SUPERFICIES, from *super*, upon, and *facies*, face. The surface, consisting of length and breadth, but without regard to thickness.

SUPERFLUA. *Polygamia superflua.* In *botany*, one of the orders of the class *Syngenesia*, characterised by a compound flower, in which the florets of the disk are hermaphrodite and fertile, and those of the ray, though female, or pistilliferous only, are also fertile. See **POLYGAMIA** and **SYNGENESIA**.

SUPERIOR. In *law*, one who has made an original part of heritable property, with reservation of the rent and service.

SUPERSALT. A salt having an excess of acid to the base: opposed to *sub-salt* (q.v.). This class of salts are now generally distinguished by the prefix *bi*; thus the *super-tartrate of potash* is now called the *bi-tartrate of potash*, and so of others. In like manner, *sub* is denoted by the prefix *di*; thus the *sub-chromate of lead* is denominated the *di-chromate of lead*. These prefixes are more precise than *super* and *sub*, and are, therefore, to be preferred.

SUPERSCAPULAR, from *super*, and *scapular* (q.v.). Placed above the shoulder-blade: opposed to *subscapular*.

SUPERSEDEAS. In *law*, a writ of *superseedeas* is one superseding the powers of an officer in certain cases, or to stay proceedings.

SUPERTONIC. In *music*, the note next above the key-note.

SUPINATORS. A name given to those muscles which turn the palm of the hand upwards.

SUPPLEMENT, Lat. *supplementum*, from *sub* and *pleo*, to fill. 1. In *trigonometry*, the quantity by which an arc or angle falls short of 180°, or of a semicircle.—2. In *literature*, an addition made to any work or treatise, with a view of making it more complete.

SUPPLICAVIT. In *law*, a writ, issuing out of the Queen's Bench, or Chancery, for taking surety of the peace, when one is in danger of being hurt in the body by another.

SUPPORTERS. In *heraldry*, figures standing on the scroll, and placed by the side of the escutcheon, such as the *lion* and *unicorn* in the British arms.

SUPPOSED BASS. In *music*, the bass of a chord, when it is not the note of the common chord.

SUPPOSITORY Lat. *suppositorium*, from *sub* and *pono*, to put. In *medicine*, a substance put into the rectum, there to remain and dissolve gradually.

SUPPURATION, from *suppurate*, from *sub* and *pus*. In *surgery*, the formation of pus.

SUP'RA. A Latin preposition, meaning *above*; used as a prefix.

SUPRACRETA'CEOUS ROCKS. In *geology*, applied to the *tertiary strata*, which lie upon the chalk.

SUPRALAPSARIANS. Those who assert that the fall of Adam, with its pernicious consequences, were predestinated from eternity.

SUPRANATURALISTS. A name given, in Germany, to a middle party of divines, between the Rationalists and Evangelical party.

SUPREMACY. The *oath of supremacy* is an oath taken by the established clergy, &c., acknowledging the supremacy of the sovereign in spiritual affairs, and abjuring the pretended supremacy of the pope.

SUR. A prefix from the French, contracted from Latin *super*, *supra*, over, above, &c.

SUR'BASE. In *architecture*, the mouldings immediately above the base of a room.

SURBASEMENT (French). The trait of any arch, or vault, which describes a portion of an ellipse.

SURCIN'GLE. Fr. from *sur*, and Lat. *cingulum*, a belt. A belt, band, or girth, which passes over a saddle, or the like, on a horse's back, to bind it fast.

SUR'CVLUS. In *botany*, a Latin name, used to designate the stem of mosses, or the shoot which bears the leaves. Plural *surculi*.

SURD. from *surdus*, deaf. In *algebra*, a quantity which is incommensurable to unity; otherwise called an *irrational quantity*.

SURETY. Fr. *sûreté*. In *law*, one that is bound with, and for, another, to answer for that other's appearance in court, for his payment of a debt, &c., and who, in case of the failure of the principal, may be compelled to pay the damages specified, or the debt.

SURFACE. from *sur* and *face*. See **SURFACES**. A surface which may be cut by a plane through any given point, so that the intersect of the plane and surface may be a curve, is called a *curved surface*. If the curve bend inwards, it is a *concave surface*; if outwards, it is a *convex surface*. Some surfaces are *concave-convex*, that is, compounded of the two surfaces, concave and convex.

SURGE. Lat. *surgo*, to rise. 1. In *ship-building*, the tapering part in front of the whelps, between the chocks of a capstan, on which the messenger may surge.—2. To surge, among *seamen*, is to let go a portion of a rope suddenly.

SURGEON (corrupted from *chirurgion*). In ancient *medicine* the business of the surgeon was confined to the treatment of such diseases as required manual operation. Such is still regarded as the legitimate object of surgery; but the surgeon has now superadded much of the business of the physician, and prescribes for internal as well as external diseases.

SUR'GERY. A branch of therapeutics, which has for its object the treatment of all diseases requiring manual operation, or which are external or local in their nature: the business of a surgeon.

SURMOUNT'ED. 1. In *architecture*, an arch higher than a semicircle.—2. In *heraldry*, when one figure is laid over another.

SURMUL'LET. In *ichthyology*, a name common to all the species of the genus *mulus*. The red surmullet (*M. barbatus*, Lin.), inhabits the Mediterranean, and attains a length of 15 inches. It was ex-

travagantly esteemed by the Romans. The striped surmullet (*M. surmuletus*, Lin.), is somewhat smaller, but equal to the red surmullet in delicacy.

SURREBUTTER. In *law-pleadings*, the plaintiff's reply to a defendant's rebutter.

SURREJOIN'DER. In *law-pleadings*, a plaintiff's answer to a defendant's rejoinder.

SURREND'. In *law*, the yielding of an estate by a tenant to the lord, for such purposes as are expressed by the tenant in the act.

SUR'ROGATE. Lat. *surrogatus*. In *law*, one substituted for, or appointed in, the room of another.

SURSOL'ID. 1. In *mathematics*, the fifth power of a number; thus, $3^5 = 243$ is the sursolid of 3.—2. A *sur-solid problem* is one which can only be solved by curves of a higher kind than the conic sections.

SURTUR'BAND. A name given to the bovey or brown coal. The term is Icelandic.

SUR'VEY. Fr. *sur* and *voir*, to see. A measured plan and description of any tract or line of country, the operation of making which is termed *surveying*. A survey is either made by Gunter's chain, both angles and distances being taken with it, or the angles are taken with instruments adapted to that purpose, and the distances by the chain. In large surveys, the distances are also sometimes calculated, in which case it is called a *trigonometrical survey*, being performed by extending a series of triangles over the country to be delineated.

SURVIVOR. In *law*, the longest liver of two joint tenants, or of two persons who have a joint interest in anything. The survivor then inherits by right of *survivorship*.

SUS. The hog. A genus of mammiferous animals, of the order *Pachydermata*, and family *Ordinaria*. The wild hog, *S. scrofa*, Lin., is the parent stock of our domestic hog and its varieties. The body is short and thick, ears straight, hair bristled and black, but, when young, striped black and white. Naturalists have separated from this genus the Peccaries, under the subgeneric names of *Phacochærus* and *Dicotyle*.

SUSPEN'SION BRIDGE. A bridge suspended from inverted bows, by means of rods, usually of iron; the bows being supported by stone piers erected at each end, and from thence carried down and secured to the ground.

SUSSEX MARBLE occurs in layers, varying in thickness from two inches to fifteen. The layers are separated from each other by seams of clay, loose friable marl, &c. It bears a high polish, and is extensively used for architectural and ornamental purposes. Its common appear-

ance is a blueish gray, mottled with green and yellow.

SUTT'E. 1. A female deity of the Hindds. —2. A widow, in India, who immolates herself on the funeral pile of her husband.

SUTURE, Lat. *sutura*, from *suo*, to join.

1. In *surgery*, the uniting of the edges of wounds by sewing. —2. In *anatomy*, the word suture is applied to the union of bones by means of dentiform margins, as in the bones of the cranium. —3. In *botany*, it is applied to that part of a capsule which is a kind of furrow on the external surface, in which the valves are united.

—4. In *entomology*, the line at which the elytra meet, and are sometimes confluent. —5. In *mammalogy*, the line formed by the converging series of hairs of the integument.

SWAB. 1. A large bundle of old yarns, swung right and left, to dry the deck.

—2. In *metal-founding*, a small taper tuft of hemp, charged with water, for touching up the edges of the moulds.

SWAMP differs from a bog or marsh only by supporting vegetation of a larger species.

SWAMP-ORE. In *mineralogy*, see **BOG-ORE**.

SWAN. In *ornithology*, see **CYGNUS**.

SWAN-PAN. The Chinese abacus.

SWEEP-WASHER. The person who extracts from the sweepings, potsherds, &c. of refineries of gold and silver, the small residuum of precious metal.

SWEETBRIAR. A sweet-scented species of the rose-tree, the *Rosa rubiginosa*.

SWELL. 1. In *music*, a set of pipes in an organ, acted upon by a key-board, and capable of being increased by the action of a pedal. —2. At *sea*, a succession of waves in a particular direction.

SWIETENIA. Mahogany-tree. A genus. *Decandria—Monogynia*. Named after Van Swieten. There are two species: the common mahogany-tree, *S. mahagoni*, of South America and West Indies (see **MAHOGANY**), and the red-wood tree, *S. febrifuga*, of India. The wood of this last is hard and durable, and affords a red dye, and its bark has been proposed as a substitute for cinchona, and appears to have some febrifuge power.

SWIFT. The largest and strongest of the swallow tribe which visit this country; the *Hirundo apus* of Linnaeus.

SWIFTER. In a *ship*, the foremost and aftermost shrouds, which are not rattled with the rest.

SWILLEY. A provincial name for a small coal-field.

SWIMMERS. The web-footed or aquatic birds. Also a tribe of spiders which live in water.

SWINEPOX. A variety of the chicken-pox, in which the vesicles are pointed, and the fluid remains clear throughout the disease.

SWINE'S-STONE. A name given by Kewan to the fetid carbonate of lime. See **STINKSTONE**.

SWING. A ship at anchor *swings* when it changes its position at the turn of the tide.

SWING'-BRIDGE. } A moveable bridge, **SWIV'EL-BRIDGE.** } consisting of two parts, which meet midway between the abutments, each turning upon a centre-pivot, to admit the passage of shipping, when required.

SWIN'GLE, } A sort of wooden **SWIN'GLING KNIFE.** } instrument, like a large knife, about two feet long, with one thin edge. Used for cleaning flax of the shives.

SWING'LING. The process of beating and cleaning flax.

SWING'LING TOW. The coarse part of flax, separated from the finer by the processes of swingling and hatcheling.

SWING'-TREE, } A cross-bar by which **SWIN'GLE-TREE.** } a horse is yoked to a carriage, plough, &c.; usually three in number when two horses are yoked.

SWITCH (of a railway). That portion of moveable rails forming the junction of the siding with the main line, which are usually shifted by means of an eccentric movement. The use of switches is to allow a vehicle, engine, or train to be transferred from one line of rails to another.

SWIV'EL. A kind of ring, or link of a chain, that is capable of being turned round, when jointed to the next by means of a pin or axis, forming a *swivel-joint*. The term is also used as the name of a small cannon, provided with a similar joint. The swivel is usually fixed on a ship's side, stern, or bow, in such a manner as to be turned in every direction. Shot $1\frac{1}{2}$ lb.

SWIV'EL-HOOK. A hook that turns in the end of an iron block strap, for the ready taking of the turns out of a tackle.

SWORD'FISH. The *Xiphias gladius*, Lin. One of the largest and best fishes of the European seas, frequently attaining the length of 15 feet. It is characterised by the form of the beak, which is horizontally flattened and trenchant, like the broad blade of a sword. See **XIPHIAS**.

SWORDS OF STATE. There are four swords used at the coronation of a British sovereign, (1.) The sword of state; (2.) The sword of mercy; (3.) The sword of spiritual justice; (4.) The sword of temporal justice.

SYCAMORE, } 1. A species of the ficus or **SYCOMORE.** } fig-tree: from *συκας*, a fig, and *μαρον*, a mulberry, because its leaves are like those of the mulberry-tree. —2. The name is sometimes improperly applied to the *Acer majus* or maple.

SYCEE SILVER. A silver currency among the Chinese.

SYCO'SIS, } 1. A wart or excrescence on
SYCO'MA, } the eyelid, &c., resembling a
fig (*συκον*).—2. A cutaneous disease,
which consists in an eruption of inflamed
but not hard tubercles, occurring on the
bearded portion of the face and on the
scalp, usually clustered together in irre-
gular patches.

SY'ENITE. See **SIZENITE.**

SYL'LABLE, *συλλαβή*. A simple or com-
pound sound, pronounced, with all its
articulations, by a single impulsion of the
voice.

SYL'LABUS, *συλλαβός*. An abstract or
compendium containing the heads of a
discourse, course of lectures, book, &c.

SYLLEP'SIS, *συλληψις*, substitution. A
figure in grammar by which the sense of
a word is modified by being put in the
place of another word. Also the agree-
ment of a verb or adjective, not with the
word next it, but with the most import-
ant in the sentence, as *rex et regina beati*.

SYL'LOGISM, *συλλογισμός*, from *συν*, and
λογω, to speak. A form of reasoning
or argument consisting of three proposi-
tions, of which the two first are called
premises, and the last the *conclusion* which
must arise necessarily from the premises,
so that if the first two propositions are
true, the conclusion must be true, and the
arguments amount to a demon-
stration. *Example:*

Plants have not the power of	} <i>premises.</i>
locomotion . . . Major	
A tree is a plant . . . Minor	} <i>conclusion.</i>
Therefore a tree has not the	
power of locomotion . . . Conclusion.	

SYLPH, Gr. *σίλφν*. A kind of insect.
The name given to the spirits of air in the
nomenclature of Rosicrucians and Caba-
lists.

SYL'VANITE. An ore of tellurium found
in the mine of Mariahilf, in the moun-
tains of Fatsbay, near Zalethna, in Tran-
sylvania. It is of a bluish-white colour
and metallic lustre, and contains 92½ of
the metal.

SY'MBOL, *συμβόλον*. A type. That
which contains in its figure a represen-
tation of something else.

SYMPATHE'TIC INK. A name for those
inks with which the writing does not ap-
pear until some re-agent gives it opacity.
Thus writing is invisible with, (1.) A
weak solution of galls, till the paper is
moistened with a solution of sulphate of
iron; (2.) With a dilute solution of prus-
siate of potash, till wetted with a solu-
tion of sulphate of iron; (3.) With ni-
trate of cobalt, till heated; (4.) With
solution of gold or silver, till exposed to
the light of the sun; (5.) With a solution

of equal parts of sulphate of copper and
sal ammoniac, till heated, &c.

SYMPATHE'TIC NERVE. The intercostal
nerve.

SYM'PHONY, Lat. *symphonia*, Gr. *συμ-
φωνία*, from *συν* and *φωνη*, voice. 1. In
music, a consonance or concert of instru-
ments.—2. An overture or other com-
position for instruments.—3. A musical
instrument mentioned by French writers.

SYM'PHYSIS, Lat. from *συμφω*, to grow
together. Mediate connection. Applied
in anatomy to a genus of the connection
of bones in which they are united by
means of an intervening body. It com-
prehends synchondrosis, syssarcosis, syn-
neurosis, and syndesmosis.

SYM'PHYTUM. Comfrey. A genus of
perennial plants. *Pentandria—Monogy-
nia*. Name from *συμφω*, to unite, be-
cause it was considered good for promot-
ing cicatrisation of wounds. The offici-
nal and the tuberous comfrey are the
British types of the genus. All the spe-
cies are perennial and hardy.

SYMPIESOM'ETER. A kind of barometer
contrived with a bent glass tube contain-
ing oil in the shaded part,
and hydrogen gas in the
unshaded part; the tube
is open at *a*, but close at
b. The pressure of the
atmosphere is known by
the space which the hy-
drogen occupies in the
tube. The instrument is
useful, but inferior in accuracy to the
common barometer.

SYMPTOMATOLOGY, from *συμπτωμα*, and
λογος, discourse. The doctrine of symp-
toms.

SYNARTHRO'SIS, from *συναρθρον*, to ar-
ticular. A mode of connection of bones
in which they do not admit of motion on
each other.

SYNCHONDRO'SIS, from *συν* and *χονδρος*,
a cartilage. A species of symphysis in
which the bone is united with another
by means of an intervening cartilage, *e. g.*,
the vertebræ.

SYNCHOR'ESIS, *συνχωρησις*. Concession.
A rhetorical figure, wherein an argument
is scoffingly conceded, for the purpose of
retorting more pointedly.

SYN'CHRONISM, from *συν*, together, and
χρονος, time. A concurrence of events
happening at the same time.

SYNCLIN'ICAL LINES. In *geology*, lines
which form ridges and troughs, running
nearly parallel to each other.

SYNCOPE'ATION, from *syncope*. 1. The
construction of a word by the omission
of a letter: called also *synaresis*.—2. In
music, an interruption of the common

measure; an inversion of the order of notes; a prolonging of a note begun on the unaccented part of a bar to the accented part of the next bar; also a driving note, when a shorter note, at the beginning of a measure, is followed by two or more longer notes before another short note occurs equal to that which occasioned the driving, to make the number even.

SYNCOPE. Συγκοπή. A cutting down. 1. In *nosology*, fainting or swooning.—2. In *grammar*, an elision of one or more letters from the middle of a word.—3. In *music*, the same as synecopation. Also the division of a note, introduced when two or more notes of one part answer to a single note of another.

SYNCRETISM, συνκρησις, mixture. In *philosophy*, the blending of the tenets of different schools into a system.

SYNDESMOSIS, from συνδισμος, a ligation. A species of symphysis in which the bones are united by means of the intervention of a ligament, as the radius with the ulna.

SYNDIC, Lat. *syndicus*; Gr. συνδικος, from συν and δικη, justice. An officer of government, invested with different powers in different countries; a kind of magistrate intrusted with the affairs of a city or community. In Geneva, the *syndic* is the chief magistrate. Almost all the companies in Paris, and most of the universities, &c., have their *syndics*.

SYNECDOCHE, Συνεκδοχή. A rhetorical figure, or trope, by which the whole of a thing is put for a part, or a part for the whole; as the genus for the species, or the species for the genus, &c.

SYNGENESIS, Lat. from συν, together, and γένεσις, generation. The name of a class of plants in the sexual system of Linnæus, consisting of such as have the anthers united in a tube, the filaments on which they are supported being mostly separated and distinct. The flowers are compound. The orders are *Polygamia aqualis*, of which the thistle is an example; *Polygamia superflua*, of which the tansy, daisy, and wormwood are examples; *Polygamia frustranea*, of which the sunflower and knapweed are examples; *Polygamia necessaria*, of which the marigold is an example; and *Polygamia segregata*, of which there is no British specimen.

SYGNATHUS. The Pipe-fish. A numerous genus of fishes of the order *Lophobranchi*, characterised by a tubular snout, formed by the prolongation of the ethmoid, vomer, tympanals, preopercula, subopercula, &c., and terminated by an

ordinary mouth, but cleft almost vertically at its extremity. The name is from συν and γνάθος, a jaw, i. e., united jaws. There are three subgenera, viz., *Hippocampus* (Sea-horse), *Solenostomus*, and *Pegasus*.

SYNEURO'SIS, from συν and νευρον, a nerve. A term synonymous with *syndesmosis* (q. v.).

SYNOCHA, (Lat.) from συνεχω, to continue. In *nosology*, inflammatory fever, as distinguished from putrid fever. *Synochus* is mixed fever.

SYNOD, from συν and οδος, a way. 1. In *church government*, an assembly, especially of ecclesiastics.—2. In *astronomy*, a conjunction or concurrency of several of the heavenly bodies.

SYNODAL. A pecuniary rent, formerly paid to the higher ecclesiastics, at the time of their Easter visitation.

SYNO'DICAL MONTH, or LUNATION, denotes the period of time (29 days, 12 hours, and 44 minutes 2'283 seconds), in which the moon, departing from the sun after a conjunction, returns to him again.

SYNOPSIS, συνοψις. A general view, or collection of things or parts, so arranged as to exhibit the whole or principal parts in a general view.

SYNOVIA. A term coined by Paracelsus, to denote an unctuous fluid, secreted from certain glands in the joints of animals, where it is contained. Its use is to lubricate the cartilaginous surfaces of the articulatory bones, and to facilitate their motions.

SYNTAX, Lat. *syntaxis*, Gr. συνταξις, from συν, and τασσω, to join. A system: a number of things put or joined together. In *grammar*, that branch which teaches the due arrangement of words in sentences, according to established usage. It includes *concord* and *government*.

SYNTENOSIS, from συν, and τέναν, a tendon. A species of articulation when the bones are connected together by tendons.

SYNTHESIS, συνθεσις, combination, from συν, together, and τιθημι, to place. The composition of a whole from its parts. In *mathematics*, the process of reasoning out new principles from those already established. Opposed to *analysis*.

SYNTONIC, from συν, and τονος, tone. A term in *music*, for sharp or intense.

SYPHILIS. The venereal disease. According to some, this term is derived from the name of a shepherd who tended the flocks of King Alcinous; according to others, it is from σιφλος, deformed. Dr. M. Good says, that it was probably invented by Fracastorio, from συν, and φιλιαι, importing "mutual love," for such is the title by which he has designated his cele-

brated and very elegant poem on this very inelegant subject.

SYR'IAN. The language of Syria, especially the ancient language of that country.

SYR'IAN OIL. A fragrant essential oil, obtained by distilling the canary balsam plant, or moldavica.

SYR'INGE, from *σειγξ*, a pipe. A pipe through which water or other liquid may be squirted. It is used by surgeons, &c., for washing wounds, for injecting fluids into animal bodies, and other purposes.

STRINGODEN'DRON. The name given by Count Sternberg to certain species of Sigillaria, on account of their parallel pipe-shaped flutings: *σειγξ*, a pipe, and *δενδρον*, a tree. The trunks, many of which are of the size of forest trees, are without joint, and fluted from one end to the other.

SYRINGOT'OMY, from *σειγξ*, a fistula, and *πινω*, to cut. The operation of cutting for fistula.

SYR'INX, *Σειγξ*, a pipe. 1. In *surgery*, a fistula.—2. In *music*, an instrument composed of reeds, of different lengths, tied together.

SYSSAR'COSIS, from *συν*, and *σαρξ*, flesh. A species of union of bones, in which one is united to another by means of an intervening muscle.

SYS'TEM, *συστημα*, composition. In *logic*, (1.) any combination of things acting together; (2.) a scheme which reduces many things to regular dependency or co-operation; (3.) a scheme which unites many things in order; (4.) an assemblage or chain of principles and conclusions. In *astronomy*, the word *system* denotes a hypothesis, or supposition of a certain order and arrangement of the several parts of the universe, according to which philosophers explain all the phenomena of the heavenly bodies, their motions, changes, &c. &c. Thus, the *Ptolemaic system* places the earth at rest in the centre of the universe, and makes the heavens revolve round it, every 24 hours, from east to west, carrying along the heavenly bodies, stars, planets, &c. The *Copernican system* makes the sun the centre of the *solar system*, and makes the earth and other planets revolve round the great luminary as a centre. In *music*, a *system* is an interval compounded, or supposed to be compounded, of several lesser intervals, as the fifth octave, &c., the elements of which are called diastema.

SYS'TOLE. *Συστολή*, contraction. A term used to denote the contraction of the heart, by which the blood is forced into the arteries. The reverse of *diastole* (q. v.).

SYS'TYLE, from *συν* and *στυλος*, a column.

In *architecture*, that kind of intercolumniation which has two diameters between the columns.

SYZ'YGY. *Συζυγία*, conjunction, from *συν*, together, and *ζυγω*, to join. A term used in astronomy both for the conjunction and opposition of a planet with the sun. Thus the syzygies of the sun and moon occur at the time of full and new moon.

T.

T, the 20th letter of the English alphabet, stood as a numeral among the Latins for 160, and with a dash over it, **T̄**, for 160,000. In *music*, **T** is the initial, of tenor vocal and instrumental, of *tacet* for silence, as *adagio tacet*, when a performer is to rest during the whole movement. In concertos and symphonies, it is the initial of *tutti*, the whole band, after a solo. It sometimes stands for *tr.* or *trillo*, a shake.

T BAND'AGE. A bandage, so named from its shape, used to support dressings after certain surgical operations.

TABAN'DES. The name given by Latreille to a family of dipterous insects, characterised by a salient proboscis, usually terminated by two lips, with projecting palpi; by the last joint of the antennæ being annulated; and by a sucker composed of six pieces. It comprises the genus *Tabanus*, Lin.

TABA'NUS. The ox or horse-fly: a genus of dipterous insects, comprising the family *Tabanides*, Lat. The tabani appear towards the end of spring, and are very common in the woods and pastures. They are much dreaded by beasts of burden; these, having no means of repelling their attacks, are sometimes covered with blood from the wounds they inflict. They even attack man to suck his blood. The *T. bovinus*, Lin., is the best known species in Britain: it is the *cleg* of Scotland.

TAB'ARD. A sort of mantle, which covers the body, reaching rather below the loins, but open at the sides from the shoulders downward.

TABASHE'ER. A Persian word, used to designate a siliceous concretion, found in the joints of the bamboo. It is in high repute with Eastern physicians, as a specific for bilious vomitings, bloody flux, &c. It has peculiar optical properties.

TAB'BY, Fr. *tabis*. In *manufacture*, a variety of thick silk stuff, usually waved or watered by a peculiar process of calendering. It is manufactured like taffeta.

TAB'YING. The process of giving stuffs a wavy appearance in the calender, like that given to tabby: called also *watering*.

TA'BES. A Latin word of doubtful origin, used to designate a wasting of the body, characterised by emaciation, weakness, and fever, but without cough or spitting.

In the absence of fever, it differs from atrophy, and in the absence of cough and spitting, from phthisis.

TAB'LATURE, Lat. *tabula*, table. In music, the use of letters or other characters, for expressing the notes of a composition.

TAB'LE. 1. In mathematics, a system of numbers calculated, to be ready for expediting various computations. Thus there are logarithmic tables, tables of powers and roots, &c.—2. *Astronomical tables* are computations of the motions, places, and other phenomena of the planets.—3. In architecture, &c. (see **TABLE**, **TABLET**).—4. In physical geography, table land is an extensive series of planes, with steep acclivities on every side.

TAB'LE. } 1. In architecture, a flat surface.
TAB'LET. } generally rectangular, charged with an ornamental figure. A table

which projects from the naked wall is termed a *raised table*; when it is perpendicular to the horizon it is a *raking table*; and when the surface is rough it is a *rustic table*. A *corbel table* is a horizontal ornament, used for a cornice in Gothic buildings.—2. A *table of glass* is the original circular plate before it is cut, of which 24 make a case.—3. *Tablet* is also used by Rickman to denote projecting mouldings or strings, among which he includes the cornice and drip-stone.

TAB'LING. Among *Scotch builders*, is used to designate the coping of very common houses.

TABOO'. A term most extensively used throughout the islands of the Pacific Ocean, to denote a kind of religious interdiction, during which all intercourse with persons, places, or things, is *tabooed* or prohibited.

TAB'OR, } *Tabourine*. A small drum
TAB'OUR. } used as an accompaniment to a fife or pipe. The term is French, and is the same which in some languages is written *tambour* and *timbrel*. The *atabal* of the Spaniards is of the same family.

TAB'ULAR, Lat. *tabularis*, from *tabula*, a table. Having a flat square surface like a table, formed in large plates or laminae. A *tabular crystal* is one in which the prism is very short. *Tabular spar* is a silicate of lime, which occurs crystallized in rectangular four-sided tables. It occurs in primary rocks, in Norway, and some other places.

TACAMAHAC'CA, } 1. A resinous substance,
TAC'MAHACA. } of a yellowish brown colour, slightly aromatic taste, and fragrant smell; obtained from the *Fagara octandra*, a tree which grows in South America, Madagascar, and the West Indies. The name is of Indian origin.—2. *Tacamahac in the lump* is supposed by some to be the produce of the *Populus balsamifera*, a tree of North America,

often planted in our gardens, as an ornament, and commonly called *Tacamahac*.

TAC'ET, Lat. *taceo*, silence. In music, a term denoting silence.

TACHOM'ETER, from *ταχος*, speed, and *μετρος*, measure. An instrument for indicating minute variations in the velocity of machines.

TACHYPE'TES. The generic name given by Vieillot to the frigate bird, the *Pelicanus aquilus*, Lin. This bird is particularly remarkable for the strength and length of its wings (10 to 12 feet when expanded). It flies to immense distances from all land, principally between the tropics, darting upon the flying fish, and striking the boobies to make them disgorge their prey.

TACK. 1. In navigation, a rope used to confine the foremost lower corners of the courses and stay-sails, when the wind crosses the ship's course obliquely; also a rope employed to pull the lower corner of a studding-sail to the boom.—Hence, 2. The part of a sail to which the tack is usually fastened, the foremost lower corner of the courses.—Hence, 3. The course of a ship in regard to the position of her sails, as the *starboard tack*, the *larboard tack*; the former when she is close-hauled with the wind on her starboard; the latter when close-hauled with the wind on her larboard.—Hence, 4. To *tack*, is to change the course of a ship, by shifting the tacks and position of the sails from one side to the other. See also **TACKLE**.

TACK, } A small nail. The *tack* has
TACK'ET. } usually a thin head, and is used for nailing slightly any covering, as tin-plate, canvass, &c.; the *tacket* has a large and thick head, and is driven into coarse shoes to prevent the soles from wearing rapidly.

TACK'LE, Ger. and Dut. *tackel*; Sw. *tacks*. 1. A term used to designate a pair of pulley blocks and ropes, used for raising or removing weights.—2. The rigging and apparatus of a ship. The *ground-tackle* consists of anchors with their cables, &c.; the *gun-tackle*, the instruments for hauling cannon in and out. *Tack-tackle*, a small tackle for pulling down the tacks of the principal sails.

TACTICS, Gr. *τακτικός*, from *ταξις*, order. The science and art of disposing military and naval forces in order for battle, and performing military and naval evolutions.

TÆ'DIUM VITÆ. Weariness of life. A mental disorder.

TAL'EL. A Chinese weight for gold and silver; used also in the East Indian Archipelago.

TÆ'NIA. The Tape-worm: a genus of entozoa, characterised by a long, flat, and

jointed body. Order *Parenchymata*: family *Tænioidæ*, Cuv. Name *tænia*, signifies a fillet or tape. The common species found in the human subject is the *T. lata*, Rud., or *T. vulgaris*, Gm. It is frequently upwards of 20 feet in length, and it has been found upwards of 100 feet, and an inch broad. It is extremely injurious and tenacious, and the most violent remedies often fail to expel it. The *T. solium*, Lin., is usually from 4 to 10 feet in length, but much larger ones are sometimes met with. It is one of the most dangerous of the intestinal worms, and the most difficult to expel. There are many other species.

TÆNIOIDÆA. A family of parenchymatous intestinal worms, comprising those species in which the head is provided with two or four suckers, placed around its middle, which is itself sometimes marked with a pore, and sometimes furnished with a proboscis. The type is the genus *Tænia*, Lin.

TÆNIOIDES. A family of acanthopterygious fishes, closely connected with the scomberoides. Named from *tænia*, a tape, or riband; the species being elongated, and flattened on the sides.

TAFEREL, } Taffrail. The upper part
TAFARIL, } of a ship's stern, usually
ornamented with carved work. The Dutch have *taffereel*, from *tafel*, a table.

TAFETA, } Fr. *tafet*, *taffetas*; It.
TAFETY, } *taffetta*. A fine, light, smooth stuff of silk, having usually a remarkably fine gloss. Taffetas are of all colours.

TAFIA. A variety of rum.

TAGLIACOTIAN OPERATION. The operation for restoring a lost nose. See **TALIA-COTIAN**.

TAIL, Fr. *tailleur*, to cut off. In law, an estate in tail is a limited fee: an estate limited to certain heirs, and from which the other heirs are precluded.

TAIL'AGE, Fr. *tailleur*, to cut off. A portion cut out of a whole: a share of a man's substance paid away by way of tribute.

TAILLE', Fr. *tailleur*, to cut off. In law, the fee that is opposite to fee-simple, because it is not in the free power of the possessor to dispose of it, but is by the first giver cut, or divided, from all other, and tied to the issue of the donée.

TAIL'LOIR (Fr.). In architecture, the same as *abaqus* (q. v.).

TAIL-PIECE (of a violin). A piece of ebony attached to the end of the instrument to which the strings are fastened.

TAIL'ZIE, or **EN'TAIL,** Fr. *tailleur*, to cut off. In Scottish law, a deed, whereby the legal course of succession is cut off, and a new one substituted.

TAL'APOIN. In Siam, the name (1) of a priest, (2) of a monkey.

TAL'BOT. A variety of the dog, noted for his quick scent and eager pursuit of game. The figure of this dog is said to be borne in the arms of the Talbot family.

TALC. 1. A mineral genus, the *talc* of Werner, and the *talc* of Brongniart. There are three species, the earthy talc, or talc of Kirwan, of a greenish-white colour (usually), a glistening pearly lustre, and an unctuous feel. It is frequently confounded with agaric mineral.—

2. Common or Venetian talc. Colours, greenish-white, pale apple-green, silvery, reddish, and yellowish-white. Occurs, massive, rarely crystallised, in minute hexagonal tubers confusedly grouped together. Found in primitive mountains, particularly forming beds and veins in serpentine, in the mountains of Tyrol and Salzburg. It is employed as a basis for coloured crayons, and for the finest rouge for the toilette.—3. Indurate talc, or talc-slate, of a greenish-white, commonly, but sometimes, snow-white. It occurs in mass: has a bright shining lustre, between pearly and greasy, passing sometimes into semi-metallic. Its fracture is curved and lamellar, and its fragments are blunt-edged plates. It is translucent, and in thin pieces semi-transparent; is very soft, sectile, smooth and unctuous to the touch. It forms beds in mountains of argillaceous and micaceous schist, of gneiss, and the newer serpentine, in the Alps, in Stiria, Austria, and Hungary, and in Breadalbane and the Shetland Isles. Talc is a silicate of magnesia and alumina, usually with some oxide of iron and water.

TALC. In commerce, a weight for gold and silver, in China, and some parts of the East Indies. It is also a money of account. See **TALC**.

TAL'ENT. A Grecian weight, much used in computing money.

TAL'ES, Lat. plural of *talīs*. In law, an additional number of men for those empanelled on a jury of inquest, and not appearing, or that are challenged on either side.

TALIA-COTIAN OPERATION. A surgical operation for the restoration of noses and other parts, by partially detaching a portion from the arm, moulding it into a proper shape, causing adhesion, and, after a time, finally detaching it from the arm, and leaving it adhering in its new situation. Operations of this sort are called taliacotian, from their discoverer Caspar Taliacotius, who published a work in 1598, detailing the processes and the results of his experience.

TALIO. *Lex talionis.* *Pœna talionis.* The law of retaliation, as an eye for an eye, a tooth for a tooth, &c.

TAL'ISMAN. An oriental word, which has been long used to denote a figure cut

or carved under certain superstitious observances of the configuration of the heavens, which were supposed to communicate magical influence to it, to prevent the attacks of certain diseases, &c.

TAL'LOW. The concrete fat of quadrupeds. That of the ox consists of 76 parts stearine and 24 parts oleine. The fat of the hog is termed *lard*, and contains much more oleine.

TAL'LOW-TREE. The *Stillingia sebifera*: a tree of China, and other parts. It takes this name from its producing a substance like tallow, and which is applied to the same purposes.

TAL'LY, Fr. *tallier*, to cut off. A piece of wood, on which notches are made, as the marks of number. Before the general introduction of writing, the only way of keeping accounts was for the purchaser and seller to be provided each with a *tally*, having a series of notches, corresponding in number to the quantity of goods delivered; and these tallies were received as evidence in courts of justice. Written *tallies* are now substituted for the notched sticks.

TAL'LYING. In *seamanship*, hauling aft the corners of the main and fore-sail.

TAL'LY TRADE. A system of retail dealing, carried on in London and other large towns, by which shopkeepers furnish certain articles on credit to their customers, who agree to pay the stipulated price by certain weekly or monthly instalments, (usually a shilling a week per pound.)

TAL'MUD. The body of the Hebrew laws, traditions and comments of Jewish doctors; also the book containing them. The term is Hebrew, from the Chaldaic verb *lamad*, to teach.

TAL'ON. In *architecture*, a French term for the same moulding which is otherwise called an *ogee*.

TAL'PA. The mole, which forms a genus. Class *Mammalia*: order *carnaria*: family *Insectivora*. The common mole (*T. europæa*, Lin.), is well known from its subterranean habits, and its vexatious depredations on cultivated grounds. Its form is admirably adapted to its mode of living; and it is well provided with the means of hunting under ground for its food, which consists of worms, insects, and some soft roots. The mole of America forms the genus *Condylura* (q. v.).

TAL'US. Lat. from *taxis*, a small die? 1. In *anatomy*, the ankle; also the bone of the ankle or *astragalus* (q. v.).—2. In *architecture*, the inclination or batten of a sloping wall, or a wall which is thicker at the bottom than the top.

TAM'ARIN. A small monkey; the *Simia Mida*, Lin., of South America. It is remarkable for the size of its ears, and is hence called the great-eared monkey.

TAMARIN'DUS. The Tamarin-tree and

its fruit. Natural order *Lomentaceæ*. Name, Sp. *taimarindo*, It. *taimarindi*, from Arab. *tamar*, a date, and *indus*, for India. There is only one species of the tree, and it is found in both Indies, in Arabia, and Egypt. The preserve called *tamarind* consists of a pulp, with the seeds concreted together by numerous tough strings or fibres.

TAM'ARIX, } The name of a genus
TAM'ARISK, } of trees. *Pentandria*—*Trigynia*. Named from Heb. *tamarik*, absterion, on account of certain real or supposed properties in purifying the blood. The French tamarisk-tree, *T. Gallica*, is found in Britain.

TAMBAK', TOMBAK', } A name common
TAMBAK', TOMBAK', } to two alloys of copper. 1. The white copper of the Chinese, consisting of copper 40, nickel 31, zinc 25, and iron 3. It is silver white, very sonorous, and malleable at all temperatures up to a cherry-red heat, but brittle at a red-white heat.—2. Red brass, which contains more copper and less zinc than the common brass.

TAMBOUR', from *tabour*. 1. In *manufactures*, a species of fancy-work in threads (sometimes of gold and silver), worked by needles of a peculiar form, into leaves, flowers, &c., upon a stuff (sometimes silk), stretched over a circular frame, called also a *tambour*, on account of its resemblance to a drum.—2. In *architecture*, the naked part of a Corinthian or composite capital; the wall of a circular temple which is surrounded with columns; a place inclosed with folding-doors at the entrance of a church, &c.

—3. In *mechanics*, see *DRUM*:

TAMBOUR'NE. 1. A lively French dance, formerly in vogue at operas.—2. One of the most ancient musical instruments. It is mentioned in scripture under the name of *timbrel*; and it is still retained, as a sort of national instrument, by the Biscayans, who accompany all their national songs and dances by the *gingle* of the *tambour de Basque*. In this country, it is only to be met with in the possession of our street-musicians, where it ought to be.

TAMF'ING. Among *miners*. 1. The operation of filling the hole bored in a rock for the purpose of blasting it with gunpowder.—2. The matter put in above the powder, in blasting rocks, &c.

TAM'FION, } Fr. *tampon*. The stopper of
TOM'FION, } a cannon or other piece of ordnance, usually consisting of a cylindrical piece of wood.

TAM'TAM. A large sort of drum or gong, used by the Hindoos and Chinese. It is made of an alloy of 100 copper, and 25 of tin, which is peculiarly sonorous.

TAN. See *TANNIN*.

TAN'AGRA. The Tanager. A genus of birds. Order *Passerinae*: family *Dentiro-*

tres. There are several species, all resembling the finches in their habits; feeding on grain, and also on berries and insects, and are particularly remarkable for their bright colours.

TAN'GENCIES (PROBLEM OF). An ancient problem, the object of which was to describe a circle passing through given points, and touching given straight lines, the number of data being, in any case, three in number.

TAN'GENT, from *tangens*, touching. In *geometry*, a right line perpendicularly raised on the extremity of a radius, which touches a circle, but does not cut it or come within the circumference. In *trigonometry*, the tangent of an arc *ab* is terminated by a secant passing through the other extremity of that arc.

TAN'ISTRY. In *law*, a tenure of lands in Ireland, by which the proprietor had only a life-estate, and to this he was admitted by election. The Celtic term is *tanaisteachd*, from *tanaiste*, a lord or governor of a country; from *tan*, a region or territory. The primitive meaning of *tanistry* seems to have been that the inheritance should descend to the oldest, or the most worthy of the blood and name of the deceased, without regard to proximity, or in other words to the strongest candidate. It occasioned many bloody feuds in families.

TANK. In the *navy*, a case of sheet iron for holding water. In *gardening*, a cistern for collecting rain-water.

TAN'NER'S BARK. The bark of oak, and other trees abounding in tannin.

TAN'NIC ACID, } Tan, or tanning prin-
TAN'NIN. } ciple. A peculiar vegetable principle, obtained from nut-galls, and so named because it is the effective agent in *tanning*, or the conversion of skin into leather. Pure tannin is colourless, has an excessively astringent taste, without bitterness, but no smell. Water dissolves it in great quantity, and the solution reddens paper stained with litmus. It decomposes the alkaline carbonates with effervescence, and forms, with most of the metallic solutions, precipitates which in reality are *tannates*. Tannin is found in several vegetable substances besides gall-nuts, as oak-bark, tea, &c.

TAN'SY. In *botany* (1.) A name common to all the species of the genus *Tanacetum*. (2.) The *maudlin tansy* is the *Achillea ageratium*. (3.) For wild *tansy*, see **POTENTILLA**.

TAN'TALITE. The name given by Ekeberg to the ferruginous oxide of tantalum. Since tantalum and columbium have been

ascertained to be identically the same metal, this ore has been called columbite. Its colour is nearly iron-black. It contains 80 of oxide of tantalum, 12 of oxide of iron, and 8 of oxide of manganese.

TAN'TALUM. A metal extracted from tantalite, at first supposed to be distinct, but now ascertained to be identical with columbium (q. v.).

TAN'TALUS. The Wood Pelican. A genus of birds. Order *Grallatoræ*; family *Cultrirostres*, Cuv. *Tantalus* is the Latin name for the heron. This genus, according to Cuvier, has only one species, the *T. loculator*, Lin., about the size of a stork. It inhabits both Americas, arriving in each country about the rainy season, and frequents muddy waters, where it chiefly hunts for eels. But, according to Gmelin, the genus *Tantalus* includes those birds which form the genus *Ibis*, Cuv.

TAP'ESTRY, Fr. *tapisserie*, hangings. An ornamental figured textile fabric, of worsted or silk, for lining the walls of apartments, &c.

TAPE'WORM. See **TENIA**.

TAPI'O'CA. The starch yielded by the Cassava root (root of the *Jatropha manihot*) after its poisonous principle has been destroyed by roasting. See **JATROPHA**.

TAP'IR. A genus of mammiferous pachydermatous animals. For a long time only one species was known, the *T. Americanus*, Lin., or American tapir; about the size of an ass; skin brown, and nearly naked; common in wet places, and along the rivers of the warm parts of South America. The flesh is eaten. A second species, belonging to the eastern continent, has recently been discovered in the forests of Malacca and Sumatra. It is larger than the American species, and of a blackish brown colour. More lately still, a third species has been discovered in the Cordilleras. Fossil tapirs are also scattered all over Europe, and among others is a gigantic species, the *T. giganteus*, Cuv., which, in size, must have been nearly equal to the elephant.

TAP'ROOT. In *botany*, the principal root of a plant, which shoots directly downwards.

TAR, Sax. *tare*. A thick, viscid, brownish black, resinous, oleaginous substance, chiefly obtained from the pine and other turpentine trees, by subjecting the wood, in close vessels, to destructive distillation. It contains, according to Reichenbach, the proximate principles, *Paraffine*, *Eupion*, *Creosote*, *Picemar*, *Pittacal*, *Pyretine*, *Pyroline*, and some vinegar. The tar of Europe is the best. *Mineral tar* is a variety of bitumen.

TAR'ANTISM. A disease. See **TARENTISM**.

TARAN'TULA. 1. The name given by Fabricius to a genus of arachnides belonging to the family *Pedipalpi* of the order

Pulmonariae. All the species have eight eyes, of which three on each side form a triangle, and two near the middle of the anterior margin are placed on a tubercle on each side. They are all confined to the hottest portions of America and Asia, and are now divided into two subgenera, *Phrynus*, Ollivier, and *Thelyphonus*, Latreille.—2. The *tarentula* (q. v.). It is from the *tarentula* or *tarantula* that the genus is named; although this is a species of a different genus of spider. See TARENTULA.

TARDIGRADA. The name of a family of tardigrade animals, of the order *Edentata*, Lin. The only existing genus is the *Bradypus*, or Sloth.

TARDIGRADE, from *tardus*, slow, and *gradus*, step: slow-paced. Applied in natural history.

TAR'DO. A term in Italian music to denote a slow movement similar to *largo*.

TARE. 1. In commerce, an abatement, or deduction, made from the weight of a parcel of goods, on account of the weight of the chest, cask, bag, &c., in which they are contained. The *real tare* is the actual weight of the box, bag, &c. containing the goods; the *customary tare* is the supposed weight of such package, according to the custom of the trade; the *average tare* is the medium allowance, estimated by taking the real tare of a few of the packages.—2. In botany, a plant, the *vicia sativa*, much cultivated in England for its stem and leaves, which are used as fodder; and also for its seed, which is much used for feeding poultry. It is also called *etch*, and sometimes *fitch*, by farmers.

TAR'ENTISM. The disease produced by the bite of the *tarentula*.

TAREN'TULA. A species of spider, belonging to the genus *Lycosa*, (Latr.). It is one of the largest of the *Lycosæ*; and the poisonous nature of its bite is thought to produce the most serious consequences, being followed by *tarentism*, a disease which was reckoned susceptible of relief only by dancing to the sound of a flute, or other musical instrument, till the patient fell down quite exhausted. This affection once prevailed in Italy to such an extent as to constitute an epidemic mania, which, like St. Vitus's dance, seems to have originated in morbid imagination, and to have been kept up by quackery. The real effects of the bite of the *tarentula*, as ascertained by modern experiment, are very similar to those of the common scorpion. The animal takes its name from the city of *Tarentum*, now *Taranto*, in the kingdom of Naples, and in the environs of which it is common.

TAR'GUM. The title of a paraphrase, or translation of the Pentateuch, in the

Chaldee language. The word is strictly Chaldaic, and means *interpretation*.

TAR'IFF, Fr. *tarif*; It. *tarifa*; Sp. *tarifa*, a book of rates or prices. A table, alphabetically arranged, specifying the various duties, drawbacks, bounties, &c., charged and allowed on the importation and exportation of articles of foreign and domestic produce.

TARPAU'LIN, } A piece of canvass, well
TARPAW'LING, } daubed with tar, used to cover the hatchways at sea, to prevent the penetration of the rain or sea-water, which may at times rush over the decks.

TARPE'IAN. An appellation given to a steep rock, at Rome, from which, by the law of the twelve tables, those guilty of certain crimes were precipitated. It was named after Tarpela, the daughter of Tarpeius, the governor of the citadel of Rome, who promised to open the gates to the Sabines, provided they gave her their gold bracelets.

TAR'ASS, **TER'ASS**, **TRASS.** A volcanic product, resembling puzzolana, used as a water cement. The *tarrass mortar* is made by covering a previously prepared mass of quick-lime with an equal quantity of powdered tarrass, and beating the composition together with water. It is highly durable in water.

TAR'SUS, *ragros*. 1. The instep, or that part of the foot which is between the leg and the metatarsus: it is composed of seven bones, viz., the astragalus, os calcis, os naviculare, os cuboides, and three ossa cuneiformia.—2. The thin cartilage situated at the edges of the eyelids, to preserve their firmness and shape.

TAR'TAN. In navigation, a small coasting vessel of the Mediterranean, with one mast, a bowsprit, and a large lateen sail.

TAR'TAR, Lat. *tartarum*, from *τραγερος*, infernal. 1. The concretion which fixes to the inside of hogsheds containing wine: named also *argal*, or *argol*. It is the crude bitartrate of potash, which exists in the juice of the grape, precipitated during the fermentation, in proportion as the alcohol is formed, in consequence of its insolubility in that liquid. It is white or red, according as it is let fall by white or red wine. When purified, it forms *cream of tartar*, or pure bitartrate of potash.—2. The earthy substance which in some cases deposits upon the human teeth from the saliva.—3. In pharmacy, an old name for any preparation containing tartaric acid.

TARTAR'IC ACID. The acid of tartar, which may be procured in needle-like or laminated crystals from its solutions. Its taste is very acid and agreeable, so that it may supply the place of lemon juice

By distilling nitric acid off the crystals, they are converted into oxalic acid, and the nitric acid passes to the state of nitrous.

TARTROMETH'YLIC ACID. An acid obtained by treating tartaric acid with pyroxylic spirit, and distilling the liquid. It is white, destitute of smell, has an acid, but at the same time sweetish, taste. It is heavier than water, but crystallises in four-sided prisms with right bases. It consists of two atoms tartaric acid, one atom methylene, and one atom water.

TARTROVIN'IC ACID. An acid obtained by the reaction of tartaric acid and alcohol (spirit of wine) on each other. It has a fine white colour, is destitute of smell, and has a sweetish agreeable acidulous taste. It is heavier than water, and crystallises in oblique four-sided prisms. It is composed of two atoms tartaric acid and one atom ether combined with one atom water.

TARTUFFE. A common French nickname for pretenders to devotion.

TAR-WATER. Water impregnated with tar; formerly a celebrated remedy for many chronic affections, especially of the lungs.

TASTU'RA, Ital. *tasto*, a touch or key. A term used to designate the whole range or set of keys in an organ, harpsichord, virginal, spinet, clavichord, and pianoforte.

TATTOO'. In *military affairs*, the beat of drum by which soldiers are warned to quarters.

TATTOO'ING. An operation practised by the South Sea Islanders, to mark their bodies with figures of various kinds. It is performed by puncturing the skin, and rubbing a black colour into the wounds.

TAUNT. Among *seamen*, a term signifying too high or tall, as the masts of a ship.

TAU'RUS. The bull. In *astronomy*, one of the signs of the zodiac, the second in order of that next to Aries. Taurus contains 141 stars.

TAUTO'CHROME, *ταυτος*, the same, and *χρονος*, time. In *mechanics*, a curve line, such that a heavy body descending along it will always reach the lowest point in the same time, from whatever point in the curve the body begins to descend.

TAW'ING. The art of preparing the skins of sheep, lambs, kids, and goats, in white, for various sorts of manufactures, especially gloves.

TAX'IDERMY, from *ταξις*, order, and *δερμα*, skin. The art of preparing and preserving specimens of animals by stuffing, &c.

TAXIS, *ταξις*, order. This term is used by surgeons to denote the operation by which those parts which have quitted

their natural situation, are replaced by the hand without the assistance of instruments, as in reducing hernia, &c.—2. In *architecture*, the fitness of the parts to the end for which a building is erected.

TAXON'OMY, from *ταξις*, order, and *νομος*, law. Classification: a term used to designate the arrangement of animals and plants according to certain principles in divisions and groups.

TAX'US. The yew-tree. A genus of trees of three species. *Diaccia—Monadelphica.* Nat. order *Coniferae*. One species is a native of Britain, another of Ireland, and a third of China.

T BANDAGE. In *surgery*, a bandage so named from its figure.

TEA, Chinese *te* and *cha*; Malay *teh*; Hind. *cha*; Rus. *tschai*. 1. The leaves of the tea-tree or shrub (*Thea viridis*). This plant ordinarily grows to the height of from 3 to 6 feet, and has some resemblance to the myrtle of the south of Europe. Its blossom is white, like those of the dog-rose; its stem has numerous leafy branches. The sorts of tea are *black teas* (produce of *Thea bohea*), comprehending bohea, congou, souchong, and pekoe.—2. *Green teas* (produce of the *Thea viridis*), comprehending twankay, hyson skin, young hyson, hyson, imperial, and gunpowder. The qualities of these teas are in general dependent on the period of the season at which the leaves are gathered, the age of the plants, and other particular causes of that sort, and also on the locality where the plants grow. The finest teas are hardly known in the English market.

TEAK'WOOD. Indian oak. The wood of the *Tectona grandis*, a large forest tree which grows in dry and elevated districts of Asia and the Asiatic isles. The wood is porous, but hard and durable, is easily seasoned, and shrinks little. It is of an oily nature, and therefore does not injure iron. The wood called *African teak*, so largely imported into England from the west coast of Africa, is an inferior article.

TEANT, TAWNY, or BRUSE. In *heraldry*, a colour between yellow and red; it is reckoned a dishonourable colour.

TEA'SEL. Fuller's thistle. The *Dipsacus fullonum*, a biennial plant, much cultivated in England for the sake of the awns of the head, which are of considerable importance to clothiers, to raise the nap of woollen cloths. For this purpose they are fixed round the periphery of a large broad wheel, against which the cloth is held while the machine is turned.—2. In *botany*. See *DIPSACUS*.

TEB'ETH. The tenth month of the Jewish ecclesiastical year, and the fourth of the civil. It answers to our December.

TECH'NICAL, *τεχνικος*, appertaining to the arts: *τεχνη*, art. A technical term is one which is not in common use, but belongs to some art, profession, science or calling.

TECHNOL'OGY, from *τεχνη*, art, and *λογος*, word. Explanation of technical terms.

TECTIBRANCHIATA. An order of gastropods, approaching the Pectinibranchiata in the form of the organs of respiration, and like them inhabiting the ocean. Name from *tectus*, covered, and *branchus*, the branchiæ being more or less covered by the mantle, in which a small shell is generally contained.

TECTO'NA. The generic name of the teak-wood tree or Indian oak. *Pentandria—Monogynia*. Name from *τικτονικος*, from *τικω*, to build, in allusion to the use of the wood in ship-building, &c. One species, a forest-tree of India, &c. See TEAK-WOOD.

TE DEUM. A hymn to be sung in churches or on public occasions of joy: so called from the first words of the Latin version.

TEETH are usually divided into three classes: the *incisores* or cutting-teeth; the *canini* or canine teeth; and the *molars* or grinders. The *incisores* are the four teeth in the front of each jaw; the *canini* or *cuspidati* are the longest of all the teeth, deriving their name from their resemblance to a dog's tusk. The *molars*, of which there are ten in each jaw, are so called because from their size and figure they are adapted for grinding the food. The last grinder of each jaw, from its coming latest, sometimes not appearing till the individual is advanced in life, is called *dens sapientie* or wisdom tooth.

TEE-TOTALLERS. A whimsical denomination, assumed by those abstinent who professedly eschew all liquors stronger than tea and coffee, or who are pledged to abstain wholly from spirituous liquors. This is *tee-totalism*. The origin of the word *tee-total* is not well ascertained. It was formerly used by soldiers, &c., as a slang term for *total*. "He was *tee-totally* puzzled." "He got a *tee-total* milling" (beating, flogging). "He was *tee-totally* bugged" (drunk). It probably originated with some notoriously incorrect articulator, who instead of pronouncing *total*, at once, said *te-te-tee-total*. Some, who are apparently not aware that the word is old, suppose it to be a corruption of *tea-total*, the *tee-totalers* confining themselves to tea and coffee.

TEINDS. In Scotland, the same as *tithes* in England.

TEI'NOSCOPE, from *τενω*, to extend, and *σκοπειν*, to see. An optical instrument

for observing objects in a state of extension in one direction.

TELAMO'NES, *τελαω*, I bear up. In *architecture*, figures of men used for supporting entablatures.

TEL'EGRAPH, from *τηλι*, distantly, and *γραφω*, to write. A machine adapted for communicating intelligence rapidly at a considerable distance, by means of certain signals previously arranged. Galvanic telegraphs are now coming rapidly into use, instead of the old plan of elevating signals on towers, &c., to be seen and recorded at some other similar establishment. The following will give some idea of the nature of the galvanic telegraph: if a magnetised needle be freely suspended by a fibre of untwisted silk, it will place itself in a direction nearly due north and south; and it will return with a certain force to that direction if it be drawn aside from it. When such a needle is suspended within a coil of copper wire or ribbon, the direction of the length of the coil coinciding with that of the needle, and if one end of the coil be connected by a wire of any length with a copper plate, while the other end is connected by a similar wire with a zinc plate, so soon as the copper and zinc plates are immersed together into a diluted acid, the needle in the coil will change its direction, and place itself across the coil. The needle will then be more or less east and west, instead of north and south. The instant that the zinc and copper plates are taken out of the acid, the needle returns to its original position. This deviation of the magnetic needle is caused by the copper wire and coil being thrown into a peculiar state by the electricity excited when the copper and zinc plates are immersed in the acid. The species of electricity thus produced is known by the name of galvanism; and the copper wire and coil which unite the zinc and copper plate may be said to be galvanised. The greater the extent to which the wire and coil are thus galvanised, the greater will be the extent to which the needle placed in the coil will deviate from its natural position. The deviation of the needle is therefore used as a measure of the amount of galvanism; and the needle and coil thus constitute what is called a Galvanometer. It is this little instrument, the galvanometer, or magnetic needle suspended in a copper coil, which, in connection with a copper and zinc plate immersed in weak acid, and called a galvanic battery, forms a principal element in the construction of every galvanic telegraph. As has been already said, the wires by which the coil of the galvanometer is connected with the galvanic battery may be of any length, and as each wire becomes

galvanised throughout its whole length at the same instant, there is no appreciable interval of time between the connection being made at the one end, and the needle being affected at the other, at least for all terrestrial distances. The effect of distance is not to diminish perceptibly the rapidity with which the effect on the needle is produced, but merely to lessen the quantity of that effect. This latter effect of increased distance, however, may be compensated by increasing the thickness of the wire, which forms the medium of communication, or by making the galvanometer more sensitive, and the battery more powerful. By such means this peculiar influence could be made sensible at the greatest terrestrial distances. The further improvement of this instrument, and a more familiar acquaintance with its use, may ultimately lead to connections being made between the most distant countries in the world for the transmission of intelligence; and posterity may perhaps witness the receipt of news from India, by means of a galvanic telegraph, in as many minutes as there are weeks now occupied in the conveyance of a despatch.

TELEOSAURUS. A new genus of fossil saurians, thus named by M. Geoffroy St. Hilaire, from *τηλε* or *τηλος*, and *sauros*.

TELESCOPE, from *τηλε*, at a distance, and *σκοπεω*, to see. An optical instrument employed in viewing distant objects, as the heavenly bodies. It assists the eye in two ways; first, by enlarging the visual angle under which a distant object is seen, and thus magnifying the object; and secondly, by collecting and conveying to the eye a larger beam of light than could have been collected by the naked organ, and thus rendering the object more distinctly visible. Telescopes are divided into two general kinds, *refracting* and *reflecting*. A *refracting telescope* consists of several lenses through which the objects are seen by rays *refracted* by them to the eye. A *reflecting telescope*, besides lenses, has a metallic speculum within its tube, by which the rays proceeding from an object are reflected to the eye. The forms of both sorts have been frequently varied, and they are sometimes distinguished by the names of their inventors, as the Galilean and Newtonian telescope; sometimes by the particular use for which they are best adapted, as the *land telescope*, the *night telescope*, the *astronomical telescope*, &c.

TELESCOPIUM. The telescope. A constellation situated south of the Centaur and Sagittarius. It contains nine stars, all, except one, less than the fourth magnitude.

TELESCOPIUM HERSCHELII. Herschel's

Telescope. A new asterism, inserted in honour of Dr. William Herschel, the astronomer.

TELLER. An officer in the Exchequer (in ancient records called *tallier*), whose duty is to receive all sums due to the Crown, and to give the Clerk of the Pells a bill to charge him therewith. There are four tellers in the Exchequer.—2. A person in a bank, whose business is to receive and pay money for bills, orders, &c.

TELLINA. The limpet: a genus of marine and fresh-water bivalve shells, inhabited by a tethys. The shells of this genus are known by the irregular fold on the forepart; in the one valve the fold being convex, and in the other concave. About 100 species are known, upwards of 20 of which are found in the seas of our coasts. Some species are also found fossil in alluvial deposits.

TELLURETTED HYDROGEN. A singular elastic fluid, consisting of hydrogen holding tellurium in solution. It is soluble in water, forming a claret-coloured solution; it combines with alkalies, and burns with a bluish flame, depositing oxide of tellurium. Its smell is strong and peculiar, not unlike that of sulphuretted hydrogen.

TELLURIC ACID. The peroxide of tellurium which combines with many of the metallic oxides acting the part of an acid, and producing a class of compounds called *tellurates*.

TELLURIUM, from *tellus*, the earth. 1. The name given by Klaproth to a metal extracted from several Transylvanian ores. It is of a tin-white colour, verging on lead-grey, with a high metallic lustre, has a foliated fracture, and is so brittle as to be easily pulverised. It is oxidised and dissolved by the principal acids.—2. *Tellurium* is also the name of a machine for illustrating the motions of the earth.

TELLUROUS ACID. The protoxide of tellurium, which, if precipitated from its solutions by an alkali, carries down with it a portion of the precipitate, forming with it a compound termed a *tellurite*.

TEMPERAMENT. Lat. *temperamentum*, from *tempero*, to mix. 1. In the ancient physiology, the different mixture of the four cardinal humours, and the predominance of one or the other, gave rise to four distinct temperaments, viz., the *sanguine*, the *choleric*, the *phlegmatic*, and the *melancholic*. The constitution of every individual was supposed to be conformed to some one of those temperaments, or to a mixture of two or more of them. To the temperaments noticed by the ancients, modern physiologists add a fifth, viz., the *nervous*.—2. In music, the adjustment of the imperfect concords, in instruments whose sounds are fixed, so as to transfer to them part of the music of perfect concords.

TEMPERATE ZONE. The space of the earth, between the tropics and the polar circles, where the temperature is lower than in the tropics, and higher than in the polar circles.

TEMPERATURE, Lat. *temperatura*. The state of a body with regard to heat and cold, as indicated by the thermometer. Thus we say a *high* temperature to denote a manifest intensity of heat, and a *low* temperature to designate the reverse. The temperature of the human body while it lives (in health) is 98° F.; the temperature of boiling water at the level of the sea is 212° F., and at the top of Mont Blanc it is 189° F., giving a *range of temperature* between these two levels of 23°.

TEMPERING. In *metallurgy*, the preparing of steel or iron, so as to render them harder or softer, as may be required.

TEMPLEARS. Knights of the Temple. A religious military order, first established at Jerusalem, in favour of pilgrims travelling to the Holy Land. The order originated with some persons who, in 1118, devoted themselves to the service of God, promising to live in perpetual chastity, obedience and poverty, after the manner of canons. In 1228 the order was confirmed, in the council of Troyes. It flourished, became immensely rich and insolent, and was in consequence suppressed by the council of Vienne in 1312. The order was denominated from an apartment in the palace of Baldwin II., in Jerusalem, near the Temple.

TEMPLE. A sort of mould employed in cutting and setting masonry and brickwork. It consists of a thin piece of iron, cut to the exact cross section of the moulding, or other feature to be worked.

TEMPLE, Lat. *templum*. 1. A public edifice, erected in honour of or for the worship of some deity. Originally, temples were open places, as the Stonehenge in England. At ancient Rome, the open temples were called *sacella*, and those which were roofed were called *ædes*.—2. In *England*, the temples are two inns of court, so called because they were anciently dwellings of the knights templars. See INN.—3. In *anatomy*, the temples are the lateral and flat parts of the forehead, so called because the ravages of time are often first perceptible by the hair on these parts becoming grey.

TEMPLET. 1. A short piece of timber placed in a wall (chiefly brick-walls), to receive the end of a girder.—2. The same as *template* (q. v.).

TEMPO. The Italian word for *time*. Applied in music.

TEMPORAL. In *anatomy*, appertaining to the temples, as the *temporal artery*, a branch of the carotid, which gives off the frontal artery; the *temporal bones* situated on each side of the head, and all of a very

irregular figure; the *temporal muscle* is a muscle of the lower jaw, situated on the temple.

TENACULUM. A surgical instrument, with a hooked extremity, for seizing and drawing out the mouths of bleeding arteries, to secure them by ligaments.

TENA'IL, Fr. *tenaille*. In *fortification*, an outwork resembling a hornwork, but, having only in front a re-entering angle without flanks; a *double* or *flanked* tenail has two re-entering angles.

TENA'ILLON, from *tenail*. In *fortification* a work constructed on each side of the ravelins, like lunettes, but having one of the faces in the direction of the ravelin, whereas that of the lunette is perpendicular to it.

TEN'ANT, Fr. from *tenir*, to hold. In *law*, a person holding land, or other real estate, under another, either by grant, lease, or at will: one who has temporary possession of lands, &c., the titles of which are in another, as *tenant in tail*, *tenant in common*, *tenant by courtesy*, *tenant in parcenary*, &c. A *tenant in capite* is a tenant in chief, or one who holds directly of the Crown. Tenants in capite have the fee of the land, and permanent possession.

TEN'DER. 1. A small vessel employed to attend one or more larger ones to supply stores, &c.—2. A wagon built for the purpose of accompanying a locomotive engine for the conveyance of fuel, water, &c.—3. In *law*, an offer either in money to pay a debt, or of service to be performed, in order to save a penalty which would be incurred by non-payment or non-performance.

TEN'DO ACHILLIS. The large tendon which passes from the muscles of the calf to the heel.

TEN'DON, from *tendo*, to extend or stretch. The white and glistening extremity of a muscle.

TENE'BRIQ. The name of a genus of heteromorous coleoptera. The species are very numerous, and are very common under the bark of trees, on old walls and the uninhabited parts of houses. The *T. molitor* is the favourite food of the nightingale in its captive state.

TEN'EMENT. In *law*, any species of property which may be held by a tenant. In common parlance, the term means a building for habitation.

TENNE'. In *heraldry*, tawny or brusk. A colour made by red and yellow mixed together, and is expressed in engraving by lines diagonal from the sinister chief and traverse. In blazoning by celestial things, it is called the dragon's-head, and by precious stones, the hyacinth.

TEN'ON. In *carpentry*, &c., the square end of a piece of wood which is fitted to a mortise for insertion, or inserted for

fastening two pieces of timber together. The term is from French *ténir*, or Lat. *teneo*, to hold.

TE'NOR, Ital. *tenore*. A term in music, implying the natural pitch or *tenor* of a person's voice in singing.

TENSE, corrupted from Fr. *temps*, from Lat. *tempus*, time. In *grammar*, time, a particular form of a verb, or a combination of words, used to express the time of action, or of that which is affirmed. The primary or simple tenses are three, *past*, *present*, and *future*; but these admit of modifications which differ in different languages.

TEN'SION BRIDGE. Another name for a bowstring bridge.

TEN'SOR. In *anatomy*, a muscle, the office of which is to extend the part to which it is fixed.

TENTACLES, } Feelers. The exploring

TENTACULA, } organs of various animals. The term was originally applied to those organs or appendages of the mouth which have no articulation, but it is now understood as applicable to organs in its vicinity, used as precursors or feelers and antennæ. The tentacula are only motive organs of the fixed polypi, as in the cephalopods; they are used as arms for prehension, as legs for locomotion, as sails for wafting their possessors over the boundless deep, as oars for passing through its waves, as a rudder for directing their course, and as an anchor for fixing themselves.

TENTER. 1. A hook for stretching cloth on a frame.—2. In *factories*, a manager of the works of a floor or particular department.

TENTH. In *music*, the octave of the third, comprehending ten sounds diatonically divided.

TEN'THREDO. The saw-fly. A very extensive genus of hymenopterous insects belonging to the family *Securifera*, Cuv. Named from the serrated ovipositor of the female. The larvæ live on the leaves of the plants on which they feed.

TENTHS. The tenth part of the yearly value of all benefices, which was anciently paid, with the first fruits, to the pope.

TENTO'RIMUM. In *anatomy*, a process of the dura mater, separating the cerebrum from the cerebellum.

TENUIROSTES. A family of passerine birds comprising those which have a long slender beak, whence the name, from *tenuis*, slender, and *rostrum*, a beak.

TE'NURE, from *teneo*, to hold; a holding. All the species of ancient tenures may be reduced to four; (1.) Tenure by knight service, which was reckoned the most honourable; (2.) Tenure in socage, which was either free and honourable, or villain and base; (3.) Tenure by copy or court-roll, or copyhold tenure, (4.) Te-

nure in ancient domain. The tenure of free and common socage has now in great measure absorbed the others.

TEREBEL'LA. A genus of *annulata* belonging to the order *Tubicola*, Cuv. These animals are found in shallow water on the coasts. They inhabit artificial tubes composed of grains of sand and fragments of shells. Name from *terebellum*, dim. of *terebra*.

TEREBEL'LUM. The name of an oblong shell with a narrow aperture, without plicæ or wrinkles, and increasing regularly in width to the end opposite the spire; hence the name *terebellum*, a little auger. The animal is unknown. Cuvier places the genus in the class *Gasteropoda*; order *Pectinibranchiata*; family *Buccinoida*.

TER'EERA, Lat. from *τερω*, to bore. 1. In *surgery*, a trepan or trephine; also an instrument called a *perforator*.—2. In *conchology*, a genus of turreted marine univalve shells. Two species are found fossil in the environs of Paris.

TEREBRAN'CHIA, Lat. *terebro*, I bore. A section of hymenopterous insects, provided with an anal instrument for making perforations.

TEREBRAT'ULA. The name given by Bruguières to a genus of *Brachiopoda*. The shell is bivalvular; the valves are unequal and united by a hinge; the summit of the one is more salient than the other, and perforated to permit the passage of a fleshy pedicle, which attaches the shells to rocks, madrepores, other shells, &c. Hence the name from *terebatus*, pierced. Many *terebatulæ* are found fossil.

TERE'DO. A genus of testaceous acéphala, belonging to the family *Inclusa*, Cuv., and *Tubicolaria*, Lin. Name *teredo*, a worm which perforates wood: *τερεδών*, from *τερω*, to bore; and the species when quite young penetrate and establish their habitations in submerged pieces of wood, such as piles, ships' bottoms, &c., perforating and destroying them in all directions. The *T. navalis*, Lin., is justly celebrated. It is thought to have been imported into Europe from the torrid zone. It is highly destructive in our ports, and has more than once threatened Holland with ruin, by the destruction of its dikes. It is upwards of six inches in length.

TERGEM'INUS, Lat. *tergeminus*, doubly twin-forked. Applied to a leaf-stalk when it has two leaflets at the end of each, and two more at the fork.

TERM, Lat. *terminus*, from *τεμα*, a limit. 1. In the arts, &c., a word, which, besides its popular and grammatical meaning, has a peculiar force or import in the language of some particular art, science, trade, &c. A word becomes a *term* when

the idea it expresses is rendered more insulated and peculiar.—2. In *geometry*, a point or line that limits: a point is the *term* of a line, a line is the *term* of a surface, and a surface is the *term* of a solid.

—3. In *architecture*, a kind of statues or columns, adorned on the top with the figure of a head, either of a man, woman, or satyr. Terms are sometimes used as consoles, and sustain entablatures; and sometimes as statues to adorn gardens, &c.—4. In *algebra*, a member of a compound quantity. Thus *a* and *b* are the terms of *a + b*.—5. In *logic*, a syllogism consists of three terms, the major, the minor, and the middle.—6. In *law*, the time during which a court is held or open for the trial of causes: the rest of the year is called vacation. In England there are four terms, viz., *Hilary term*, which begins on the 23rd of January, and ends on the 21st of February; *Easter term*, which begins 18 days after Easter, and ends on the Monday next after Ascension day; *Trinity term*, which begins on the Friday after Trinity Sunday, and ends the Wednesday fortnight after; and *Michaelmas term*, which begins on the 6th November, and ends on the 28th of November.—7. In *agreements*, the terms are the conditions; propositions stated or promises made, and when assented to or accepted by another, settle the contract and bind the parties.

TERMITES. In *entomology*, the *Termites* form an extensive genus of neuropterous insects. They inhabit the countries situated between the tropics, or which are adjacent, and are known by the name of *white ants*, *poux de bois*, *caria*, &c., from their manner of living in communities, destructive habits, &c. They live under cover in the ground, and destroy trees and all sorts of ligneous articles, as furniture and the planks, timbers, &c., of houses. The larvæ are the *working termites* or *labourers*; another sort are the *neuters* or *soldiers*, which defend the domicile and compel the labourers to work. The perfect insects leave their original retreat, flying off during the night in incalculable numbers. At sunrise they lose their wings, which are dried up, fall to the ground, and are mostly devoured by birds, lizards, and their other enemies.

TERMINAL. Lat. *terminalis*, growing at the *terminus* or extremity. Applied, in *botany*, to flowers and umbels which proceed from the extremity of the stem or branches.

TERMINI. pl. of *terminus*, limit. In *architecture*, columns having a head for a capital, and ending below in a sort of sheath or scabbard. See **TERM.**

TERMINTEUS. In *surgery*, a black ardent pustule, which attacks the legs; so

named from its resemblance to the fruit of the *regiusbos* or turpentine tree

TERMINUS (Lat.), termination. Applied technically to the extreme point at either end of a railway.

TERMS or **EQUATIONS.** The parts of which they are composed.

TERNA FOLIA. In *botany*, leaves growing three together in a whorl.

TERNARY. Lat. *ternarius*, proceeding by threes; consisting of three. Applied to things arranged in order by threes, as a flower having three sepals, three petals, three stamens, &c., or twice or thrice as many.

TERNATE. 1. Lat. *ternatus*, from *terni*, three. Applied to a leaf which has three leaflets, as that of the trefoil.—2. Lat. *ternus*, by threes. Applied to leaves when there are three together.

TERRA-COTTA (Latin). Baked earth. Many ancient temples were built of *terracotta*; and it was very generally adopted for statues and architectural ornaments, as those of friezes. It is still used for similar purposes. The materials are potter's clay, and fine white sand, as that of Reigate, with pulverised potsherds.

TERRA SIENNA. A brown bole or ochre from Sienna in Italy, used as a pigment.

TERRACE. Fr. *terrasse*, from Lat. *terra*. 1. In *architecture*, a balcony; also the flat roof of a house.—2. In *gardening*, a raised bank of earth with sloping sides, laid with turf, and gravelled on the slope for a walk.

TERRÉ-PLEIN (French). In *fortification*, the top platform or horizontal surface of the rampart on which the cannon are placed.

TERRÉS-TRES, Lat. *terra*. A section of the class *Aves*; also of a family of pulmonated gasteropods, and of a division of isopodous crustaceans.

TERRÉVERTE (French). Green earth: an earth of a green colour, found in Germany, France, Italy, and North America. It is ground with oil, and used as a pigment.

TERRIER, from *terra*, earth. 1. A little dog used to hunt animals which burrow.—2. In *law*, originally, a collection of acknowledgments of the vassals or tenants of a lordship, containing the rents, services, &c., they owe to the lord. At present, a book or roll, in which the lands of private persons, corporations, &c., are described by their sites, boundaries, extent, &c.—3. From *iero*, to bore, an auger.

TERTIARY, third; *tertius*, three. Applied in *geology* to those formations which have been deposited subsequently to the chalk formation. The most remarkable feature of the tertiary strata is that they consist of repeated alternations of marine deposits and those of fresh water.

TETRONCIUS. An ancient Roman coin, one-fourth of an *as*.

TERZA RIMA. It. *triple rhyme*. A complicated system of versification borrowed by the early Italian poets from the Troubadours.

TET'SERA, from *τετρας*, four. A name of the four-sided or cuboid bone. In *Roman antiquities*, a six-sided die, like modern dice.

TET'SULAR. A term applied to a system of crystallisation in which the form is unalterable and determined, as the cube, &c.

TEST, from *testor*, to try. In *chemistry*, any substance which being added to a substance indicates by special characters the chemical nature of that substance simple or compound. Tests are usually called re-agents.

TESTA'CEA. A name given by Linné to that order in the class *vermes*, wherein the animals are furnished with true shells: distinct from *crustacea*. The shells of the testaceans are carbonate of lime; those of the crustaceans are phosphate of lime. Linné divides the testaceans into 36 genera, all of which are popularly known as shell-fish.

TESTACEL'LUS, Lat. *testa*. A genus of slugs, provided with a small shell, which acts as shield to the heart.

TEST'ING. In *metallurgy*, the operation of refining gold and silver.

TET'STONE. A silver coin of Italy (Papal States) worth 1s. 3½d.

TET'STOON. A silver coin of Portugal. The testoon of 1799 is worth fully sixpence; that of 1802 is worth rather less: in the one case $6\frac{1}{10}$ d.; in the other $5\frac{9}{10}$ d.

TESTU'DO. 1. The Tortoise: a genus of reptiles, comprising the terrestrial species of the order *chelonia*. According to Linné, the genus comprised also the aquatic species, which are much more numerous than the land tortoises. See *CHELONIA* and *TRIONYX*.—2. In *surgery*, a melicerous tumour of the scalp, of a flattened shape, fancifully supposed to resemble a tortoise.

TET'ANUS, *τῆτανος*, from *τείνω*, to stretch. In *nosology*, a disease characterised by general spasmodic rigidity of the muscles.

TETRACAU'LODON. An extinct animal allied to the mastodon, discovered at Epplesheim in Germany. It is referable to the miocene period.

TETRA'CHORD, from *τετρα*, four, and *χορδή*, chord. A term in the ancient music denoting a series of four sounds, of which the extremes constitute a fourth.

TETRADACTYLOUS, *τετραδάκτυλος*. Having four toes.

TETRADIAPA'SON, from *τετρα*, four, and

diapason (q.v.). Quadruple diapason or octave; a musical chord, otherwise called a quadruple eighth or twenty-ninth.

TETRA'DORON, Gr. In ancient architecture, a brick used by the Greeks in private buildings, of four palms in length.

TETRADRACHM. A silver coin of the ancient Greeks—four drachms.

TETRADYNAM'IA, from *τετρα*, four, and *δυναμος*, power.

The name of the fifteenth class of plants in the Linnæan sexual system; comprising such plants as have six stamens in one flower, two shorter than the rest, indicating the superiority of four stamens over the other two. The orders are: (1.) *Siliculosa*, of which *colewort* is an example; (2.) *Siliquosa*, of which the cuckoo-flower and worm-seed are examples.

TETRAE'DRON, }
TETRAHE'DRON, }

from *τετρα*, four and *ἰδῆα*, a side.

In *geometry*, one of the five regular bodies. It is comprehended under four equilateral and equal triangles. It is therefore a pyramid.

TETRAETE'RIIS. In *Grecian chronology*, a cycle of four years, invented by Solon to make the lunar year equal to the solar.

TET'RAGON, from *τετρα*, four, and *γωνία*, an angle. 1. In *geometry*, a figure having four angles.—2. In *astrology*, an aspect of two planets with regard to the earth, when they are distant from each other 90°, or one fourth of a circle.

TETRAGYN'IA, from *τετρα*, four, and *γυνή*, a wife. The name of an order of plants in several of the classes of the sexual system of Linnæus, consisting of plants which to the classic character, whatever it is, add the circumstance of having four pistils.

TETRAM'ETER, from *τετρα*, four, and *μετρον*, measure. A verse consisting of four measures.

TETRA'NDRIA, from *τετρα*, four, and *ανδρ*, a male. The name of the fourth class of plants in the sexual system of Linnæus, comprising such as have four stamens. The orders are: (1.) *Monogy-*

nia, of which the teasel and scabicus are examples; (2.) *Digynia*, of which the dodder is an example; (3.) *Tetragynia*, of which the holly and pondweed are examples.

TETRAO. An extensive genus of gallinaceous birds. Name Plin. 10, 12. The genus is characterised by a naked and most generally red band, which occupies the place of the eyebrow. The sub-genera are the grouse (*Tetrao*, Lath.), the ptarmigan (*Lagopus*, Cuv.), the partridges (comprising *Perdix*, Briss., and *Francolinus*, Tem.), and the quails (*Coturnix*).

TETRAPETALOUS, Lat. *tetrapetalus*, four-petalled. Applied to flowers which consist of four single petals.

TETRAPHYLLUS, Lat. *tetraphyllus*. Four-leaved.

TE'TRAPLA. The name of a bible containing four Greek versions, arranged by Origen.

TE'TRARCH, Lat. *tetrarcha*. Among the ancient Romans, the governor of the fourth part of a province.

TETRASPERMUS, Lat. *tetraspermus*. Four-seeded.

TE'RASTYLE, from *τέτρας*, four, and *στυλος*, a column. A portico consisting of four columns.

TE'RODON. In *ichthyology*, a genus of branchiostigious fishes, which have the power of inflating the body at pleasure. The sun-fish is an example.

TEU'TONIC. 1. Pertaining to the Teutons, a people of Germany, or to their language.—2. As a noun, the language of the Teutons, the parent of the German, Dutch, and Anglo-Saxon or native English.—3. The *Teutonic order* was a military religious order of knights, established towards the close of the twelfth century, in emulation of the Templars and Hospitallers, and so called because it was composed chiefly of Teutons or Germans, who marched to the Holy Land during the crusades.

TEXT, Lat. *textus*. 1. In *logic*, that on which a comment is written or spoken.—2. In *old theology*, the four gospels, by way of eminence.—3. *Text or text-hand* is large hand in writing, so called because it was formerly the practice to write the text of a book in a large hand and the notes in a smaller hand.

TEXTURE, Lat. *textura*, from *texo*, to weave. Disposition of the parts of bodies. A texture means anything which is woven, and is therefore aptly enough applied metaphorically to various solids of the living body, as the cellular membrane, bone, muscular fibre, &c.

THAL'AMUS, *θαλαμος*. A bed, 1. In *anatomy*, a part of the brain, from which the optic nerve derives its origin.—2. In *botany*, the receptacle of the parts of fructification of plants.

THALIC'TRUM. The Meadow Rue. A genus of perennial plants. *Polyandria—Polyginia*. Name from *θαλλω*, to flourish. The poor man's rhubarb, the great, small, and alpine meadow rue, are the British types of the genus.

THAL'LUS, *θαλλος*. A green leaf or olive bud. A term, in *botany*, for the foliage or frond of a lichen, whether of a leafy, scaly, or crustaceous nature.

THAM'MUZ. 1. The tenth month of the Jewish civil year. It contains 29 days, and answers to a part of our June and July.—2. The name of a deity among the Phœnicians.

THANE, Sax. *thægin*, a minister, *thenian*, to serve. The thanes of England were formerly persons of some dignity. Of these there were two orders; the king's thanes, who attended the Saxon and Danish kings in their courts, and held lands immediately of them; and the ordinary thanes, who were lords of manors. At the Conquest, the title was superseded by *baron*.

THAUGHTS, } The benches of a boat on
THWARTS, } which the rowers sit.

THAU'MATROPE, *θαυμα*, a wonder, and *τροπε*, I turn. An optical toy, the principle of which is the *persistency* of vision. This principle is exemplified by the rapid whirling round of a burning stick, which produces an *apparent* circle of fire.

THAUMATUR'GUS, *θαυμα*, a wonderful thing, and *εργον*, work. A miracle-worker. A title given by the Roman Catholics to some of their saints.

THE'A. The Tea-tree or plant. A genus of shrubs. *Monadelphia—Polyandria*. Natural order, *Columniferae*. Name Latinised from tea. There are two species; the *T. bohea*, which produces the black tea; and *T. viridis*, the green tea. China, Assam. See **TEA**.

THE'BAN YEAR. The Egyptian year, of 365 days 6 hours, was so called.

THE'CA, from *τιθημι*, to place. A case, sheath, or box. 1. In *anatomy*, the canal of the vertebral column.—2. In *botany*, the capsule or dry fructification, adhering to the apex of a frondose stem.

THECADACT'YL. A genus of saurians belonging to the family *Gekkonida*. Name from *theca*, a furrow, and *dactylus*, a toe, the toes being widened throughout, and furnished beneath with transverse scales, divided by a deep longitudinal furrow, in which the nail is concealed.

THEFT-BOTE. In *law*, the receiving of a man's goods again from a thief, or com-

pensation for the same: *bote*, compensation.

THEI'NA, } A saline base, consisting of
THEI'NE, } snow-white acicular crystals, of a beautiful silky lustre, extracted from tea. It appears, however, to be identical, in its composition and characters, with caffeine.

THE'ISM, from *Θεός*, God. The belief or acknowledgment of the existence of a Supreme Being; opposed to *atheism*, and differing from *deism*, which, though it acknowledges the existence of a God, denies revelation, which theism does not.

THE'NARD'S BLUE. Cobalt Blue. A blue pigment, of which arseniate or phosphate of cobalt and alumina are the bases.

THEOBRO'MA. A genus of shrubs. *Polyadelphia—Decandria*. Name from *θεός*, a god, and *βρωμα*, food, on account of the deliciousness of its fruit. The Chocolate-nut-tree, or tree which affords the Coconut, is the best known species. South America.

THEO'C'RACY, *Θεός*, God, and *κρατία*, I rule. The government of a state immediately by God.

THEO'C'RASY, *Θεός*, God, and *κρασις*, mixture, anciently signified the intimate union of the soul with God in contemplation.

THEO'L'OLITE. An instrument used in surveying, for measuring angles. It is mostly used in determining particular stations, and in running base lines, being the most perfect of all the angular instruments.

THEO'G'ONY, *Θεογονία*. The generation of the Gods. That branch of heathen theology which taught the genealogy of the deities.

THEO'OGY, from *Θεός*, God, and *λογος*, doctrine. Divinity: the science which treats of the existence, character, and attributes of God, his laws and government, the doctrines we are to believe, and the duties we are to practise. It consists of two parts, *natural* and *revealed*.

THEOR'BO, Ital. *tiiorba*. A musical instrument, like a large lute, except that it has two necks, the second and longer of which sustains the four last rows of chords, which are to give the deepest sounds. The theorbo has 8 bass or thick strings, twice as long as those of the lute, which excess of length renders the sound exceedingly soft and long continued.

THEOREM, *θεωρημα*, from *θεωρεω*, to see. A demonstrative proposition: a proposition in which some property is asserted, and the truth of it required to be proved. It differs from a *problem*, which requires something to be done.

THEORY, *θεωρία*, from *θεωρεω*, to see.

A collected view of all that is known on any speculative subject. A *theory* is properly a collection or set of theories, established on independent evidence: an *hypothesis* is a proposition assumed to account for certain phenomena, and has no other evidence of its truth than that it affords a satisfactory explanation of those phenomena. These terms are very frequently confounded, both in speaking and writing, but should be kept perfectly distinct, as they are both required in these speculative days.

THEO'SOPHISTS, *θεός* and *σοφία*, wisdom. Those who pretend to derive their knowledge of God from direct inspiration.

THERAPEUTICS, *θεραπευτική*, from *θεραπεύω*, to cure. A branch of pathological science, which considers the application of the remedies and means employed, with a view to prevent and to cure diseases.

THER'MAL, from *therma*, a warm spring: *θερμός*, warm. A term chiefly applied to warm springs, as the Geysers.

THER'MO-ELECTRICITY. Electricity developed by heat (*θερμη*).

THERMOMETER, from *θερμη*, heat, and *μετρον*, a measure. An instrument for measuring the variations of the sensible heat of bodies. It consists essentially of

a hollow glass tube, hermetically sealed, and blown at one end in the shape of a small globe. This bulb part of the tube is filled with mercury, which is the only fluid that expands equally at all temperatures between 39° and 600°. When, for instance, the bulb is immersed in boiling water, the mercury expands, and rises in the tube to a height which, in the common thermometer, is denoted by 212°; when again it is immersed among pounded ice, the mercury contracts, and falls in the tube to a point in like manner marked 32°. The space between these points is divided into 180 equal degrees, and these points, with any others that may be wanted, being marked upon a scale (usually ivory), and the glass tube being attached to it, a Fahrenheit's thermometer is made. In England, Fahrenheit's thermometer is commonly used, but on the Continent, particularly in France, the Centigrade thermometer is almost exclusively used. In this instrument, the interval between the freezing and boiling points of water is divided into 100°, so that a degree on the scale of Fahrenheit's thermometer is equal to 5-9ths of a degree on that of the Centigrade. *Reaumur's thermometer* is in use in Germany:

the scale contains 80° between the freezing and boiling points of water. The Centigrade thermometer is decidedly the most convenient.

THERMOSCOPE, from *θερμη*, heat, and *σκοπος*, to view. An instrument for exhibiting the effects of heat.

THERMOSTAT, from *θερμη*, heat, and *στατος*, standing. The name of an apparatus for regulating temperature in distillation, hot baths, hothouses, &c., patented by Dr. Ure in 1831. It operates on the well-known principle, that when two metallic bars, differently expansive, are rivetted or soldered faceways together, any change of temperature in them will cause the compound bar to bend in one direction or the other; and these movements are made to operate in regulating valves, stop-cocks, stove-registers, &c., so as to regulate the temperature of the media in which the compound bars are placed.

THESIS, *Θεσις*. 1. A position or proposition, which a person advances and offers to maintain.—2. In logic, a subject is divided into *thesis* and *hypothesis*; thesis contains the thing affirmed, and hypothesis the conditions of the affirmation or negation.—3. In music, the depression of the hand in beating of time

THYTHYS. The name given by Linn. to a genus of gasteropods, of the order *Nudi-branchiata*, Cuv. The *T. fimbria*, Lin., a beautiful species from the Mediterranean, is well known.

THURGY, *θεος* and *εργον*, work. The working of miracles.

THIMBLE. In nautical language, an iron ring, with a hollow or groove round its circumference, to receive the rope which is spliced round it.

THIN-OUT. A term in geology for the gradual thinning of a bed or stratum, till it wholly disappears.

THIRD. In music, an interval containing three diatonic sounds; the major composed of two tones, and the minor consisting of a tone and a half.

THIRLAGE. In law, a contract or power to prevent the tenants of certain districts from carrying their corn to be ground any where else than at a particular mill.

THIS'LE. 1. In botany, (see *CARDUUS*, *SERRATULA*, *CENTAUREA*, and *CARLINA*).—2. A Scottish order of knighthood.

THLASPI. The Bastard-cress: a genus of herbaceous plants: *Tetradynamia*—*Sili-culosa*. Name from *θλαω*, to break, because the seeds appear as if they were bruised. There are four British species, of which the penny-cress or treacle mustard (*T. arvense*) is the best known.

THOLEZ, } Sax. *thol*, a peg. 1. The **THOWLES**, } pins inserted into the gun-wale of a boat to keep the oars in the rowlocks when used in rowing.—2. The handles of a scythe.

THO'MISTS. Followers of Thomas Aquinas, in opposition to the Scotists.

THOR. In mythology, the god of thunder; a deity worshipped by the northern nations, and from which our *Thursday* derives its name. By our Saxon ancestors he was believed to have extensive dominion in heaven, and that all nations of the earth owed him divine honour and service; that he governed the winds and clouds, and showed his displeasure by causing lightnings, thunders, and tempests, with excessive rains, hail, and stormy weather; but being well pleased by adoration and sacrifice, he bestowed upon his supplicants fair and seasonable weather, and caused plenty of corn and fruits to grow

THORACIC. 1. Appertaining to the thorax or chest. Thus the trunk of the absorbents is named the *thoracic duct* from its position.—2. In ichthyology, belonging to the order *Thoracici*.

THORACICI. The third order of bony fishes in the system of Linné, respiring by means of gills only, and having the ventral fins under the pectoral, i. e. under the thorax.

THORAX. The chest, or that part of the body between the neck and abdomen: from *θορω*, to leap, because in it the heart leaps. The thorax is divided by imaginary lines into certain regions. These are the right and left *humeral*, a right and left *subclavian*, a right and left *mammary*, a right and left *axillary*, a right and left *subaxillary*, a right and left *scapulary*, a right and left *intrascapulary*, and a right and left *subscapulary*.

THORINA. A primitive earth discovered in 1823 by Berzelius, in the mineral *thorite*, of which it constitutes 58 per cent. It is a fine white powder, the basis of which is *thorium*.

THORINUM. The metallic basis of thorina. It is obtained in an iron-gray powder, the particles of which have a metallic lustre. Like aluminum it appears to be malleable, and is not oxidised by water, even when heated; but when heated in the open air it takes fire, burns with much splendour, and is converted into thorina. The earth thus formed is snow-white, and exhibits no traces of fusion.

THORITE. A black mineral, like obsidian, discovered by Esmark of Christiana, in Norway, and thus named by Berzelius, who analysed it. It occurs in the syenite of the isle of Løv-ön, near Brevig, in Norway, and is very scarce.

THORN'BACK. A fish, the *Raja clavata*, Cuv. and Yarr.; the maiden skate of Scotland. It grows to about two feet long, is very voracious, feeding on every kind of small flounder, herrings, sand-eels, and crustaceous animals, as crabs and lobsters. It is common in some of the British rivers and on the coasts.

THO'ROUGH. Among builders. See **PER-BEND**.

THO'ROUGH-BASE. } In music, the basso
THO'ROUGH-BASS. } continuo of the Ita-
 lians, and the accompaniment of the French. *Thorough base* on the harpsichord, organ, &c., consists in the execution of a complete and regular harmony, by seeing only the notes of one part of the harmony; and this part is called the *base*, being in reality the basis of the whole composition. This base is played with the left hand, and the harmony with the right.

THRALL. The Saxon word for *slave*: whence *thraidom*, slavery.

THRAVE. Threave of corn. Twenty four sheaves or four shocks (*stooks* in Scotland), of six sheaves to the shock.

THREAD. Sax. *thred*, *thraed*. 1. A small line made up of a number of fibres of some vegetable or animal substance, such as flax, cotton, or silk, whence its name of linen, cotton, and silk thread.—2. The filament of any fibrous substance, as of bark; the filament of a flower.—3. The prominent spiral part of a screw.

THRIPS. The name given by Linnæus to a genus of homopterous hemiptera, from *θηψ*, a moth, from *τριψω*, to bore. The species live on flowers, plants, and under the bark of trees.

THROAT'WORT. In botany, (1.) The throatwort of Britain is a species of the bell-flower, the *Campanula trachelium*, a perennial of several varieties; (2.) The trachelium of two species. See **TRACHELIUM**.

THROS'TLE. 1. In cotton-spinning, the machine otherwise called the *water-frame*, because it requires considerable power to put it in motion, and could only be worked, before the application of the steam-engine as a moving power, in such factories as had water-power. It takes the name *throstle* from the peculiar noise (like the singing of a *throstle* or thrush!), which it makes in working. The yarns spun by it are much harder than those spun by the jenny, and on that account it is better adapted to the spinning of warps. It is now, however, in a great measure superseded by the mule.—2. In ornithology, the song-thrush or mavis (*Turdus musicus*, Lin.), the finest of our native singing birds.

THROT'TLE-VALVE. In steam-engines, a valve contrived to regulate the supply of steam in the cylinder. It is brought into

operation by the action of the governor, and takes its name from its enlarging or diminishing the *throat* of the engine so as to allow a wider or narrower passage for the steam, as a greater or less velocity is required.

THRUM'ING. A nautical term, signifying the inserting in a sail, mat, &c., through small holes made by a bolt-rope, needle, or a marlin-spike, a number of small pieces of rope or spun-yarn.

THRUSH. 1. In ornithology, see **TURDUS**.—2. In nosology, small ulcerations which appear first in the mouth, but often affect the alimentary duct: technically called *aphthæ*.

THUGS. A numerous class of professed assassins and robbers among the Hindoos. They form a society, proceed upon fixed principles, and are with difficulty detected.

THUM'MIM. A Hebrew word denoting perfections. See **URIM** and **THUMMIM**.

THUN'DER. Sax. *thunder*, Pers. *thondhor*. The sound which follows an explosion or discharge of electricity in the atmosphere. The snapping noise which the electric spark makes in passing through a portion of the atmosphere, is due to the sudden compression of the air; and there can be no doubt that the awful *thunder-clap* itself is produced by the same action. The report is in this instance modified by a variety of circumstances, such as distance, echo, &c.; and the sudden dying away and return of the sound may be accounted for on well-known principles. Sound travels in air at a velocity of only 1130 feet in a second, but light at the rate of 195,000 miles in the same period of time. The time in which the flash of lightning reaches us from the different parts of its course may therefore be taken as instantaneous; but the time which the explosion occupies will be very appreciable, and will vary with the distance of the several parts of the long zig-zag which the discharge traverses. By a calculation, founded upon the interval between the flash and the sound, and the duration of the thunder-clap, it has been found that a flash of lightning frequently traverses a space of nine or ten miles, and when we take into account the irregular course which it follows, its alternate approach and recession will account for the phenomena in question. Such would be the effect produced upon an observer, placed at the end of a long file of soldiers, who were to discharge their muskets at the same instant. He would not hear a single report but a succession of reports, which would produce an irregular rolling sound.

THUN'DER-BOLT. 1. The lightning of an electric discharge in the atmosphere.—2. In mineralogy, thunder-bolts are crys-

tals of iron pyrites, of a cylindrical form, found in the chalk beds: also fossil echinites, of the family Cidaris.

THUNDER-HOUSE. An instrument employed in electrical experiments, to illustrate the manner in which buildings receive damage by lightning.

THURLS. Short communications between the adits in mines.

THURS'DAY. The fifth day of the week. *Thor's-day*, the day consecrated to *Thor* (q.v.).

THUS. In *pharmacy*, frankincense, from *bus*, to sacrifice. See **BALSAM** and **FRANKINCENSE**.

THWARTS. Among *seamen*, &c., the benches of a boat, on which the rowers sit.

THYM'ELÆ, Θυμαλη. The place in the Greek theatres where the musicians were seated. These were called *Thymelici*, in consequence.

THYM'AM. Musk-wood, from *θυμα*, odour, because of its odoriferous smell. Thymiam is a bark (supposed to be of the liquid storax-tree), brought in small brownish-grey pieces from Syria, and some other oriental parts. It has an agreeable balsamic smell, not unlike liquid storax, and a subacid, bitterish taste.

THYM'US. Thyme. 1. A genus of plants. *Didymia*—*Gymnospermia*. Name from *θυμα*, odour, because of its fragrant smell. The wild and the basil thyme are the only two species indigenous to Britain: our garden thyme belongs to the south of Europe. The exotic species, of which there are 23 known, are mostly hardy and permanent, though small plants.—2. In *surgery*, a small, fleshy, indolent tubercle, like a wart, arising about the anus, resembling the flower of thyme.—3. In *anatomy*, a glandular body, situated behind the sternum, in the duplicature of the mediastinum. It is large in the fœtus, but constantly diminishes after birth till it wholly disappears (generally) in the adult. Its use is unknown. In calves this is called the *sweetbread*.

THYN'US. In *ichthyology*, the Tunny, a fish of the Mediterranean, which attains the length of from 15 to 18 feet. From its abundance it constitutes a great source of wealth to Provence, Sardinia, Sicily, &c. It is considered by Cuvier a subgenus of the genus *Scomber*, Lin. The name is Latin, from the Greek name *θυνας*.

THYR'OID, from *θυρος*, a shield, and *ειδος*, like. Resembling a shield. Applied, in *anatomy*: 1. The *thyroid cartilage* constitutes the anterior, superior, and largest part of the larynx, forming the *pomum Adami*, or Adam's apple, in man.—2. The *thyroid gland* is situated upon the cricoid cartilage, trachea, and horns of the thyroid gland. Its use is not known.

THYRSE, Lat. *thyrsus*, a young sprout. A name, in *botany*, for a species of inflorescence, consisting of a dense and close panicle, bunch, or cluster, more or less of an ovate form.

THYSANOD'RA. The name of an order of apterous insects, supported by six feet, experiencing no metamorphosis, and having, besides, particular organs of motion, either on the sides or the extremity of the abdomen. The order comprises the *Lepismene* and *Podurellæ* of Latreille.

TIARA, Τιαρα. 1. An ornament of dress for the head, worn by the ancient Persian kings, nobles, and priests.—2. The pope's triple crown. The tiara and the keys are the badges of the papal dignity: the tiara marks the civil rank of the pope, and the keys his ecclesiastical jurisdiction. It was originally a round high cap, encompassed first by one crown, and then by another.

TIB'IA. In *anatomy*, the largest bone of the leg. The term is supposed to be a corruption of *tubia* from *tuba*, a tube, on account of its pipe-like shape.

TIB'IAL. Belonging to the tibia, as the *tibial arteries*, which are the principal branches of the popliteal artery.

TIC DOLOUREUX. A French term signifying a painful spasm, and used to designate facial neuralgia.

TICK. 1. In *entomology*, see **ASCARUS**.—2. In *manufactures*, Tick or Ticken is a strong textile fabric, used as covering to hold the feathers, down, or other materials of which beds are made.

TIDES. In *hydrography*, the alternate ebb and flow of the sea, which takes place twice in 24 hours, 56 m., 28 sec. of solar time. The tides depend on the action of the sun and moon, but their explanation is one of the most difficult of astronomical problems. The hypothesis of Sir I. Newton is by no means satisfactory.

TIDE-GAUGE. A mechanical contrivance for registering the state of the tide continuously.

TIDE-LOCK. Guard-lock. A lock situated between an entrance-basin and a canal, harbour, or river, and forming a communication between them. It is furnished with double gates, whereby craft can pass them either way, at all times of the tide.

TIDE-MILL. A mill consisting of a water-wheel connected with other machinery, and moved by the ebbing and flowing of the tide. Tide-mills admit of great variety in the essential parts of their construction. 1st. The water-wheel may turn one way when the tide rises, and the contrary way when the tide falls. 2nd. The water-wheel may be made to turn always in one direction. 3rd. The water-wheel may be made to rise and fall as the tide ebbs and flows. 4th. The

axle of the water-wheel may be so fixed that it shall neither rise nor fall, though the rotary motion shall be given to the wheel, while at one time it is only partly, at another time completely, immersed in the fluid.

TIDE-WAITER. An officer who has charge of the landing of goods, for securing the payment of the custom duties on the same.

TIE. 1. In *architecture*, a piece of timber or metal, placed in any direction, to bind together two parts which have any tendency to separate.—2. In *music*, an ancient character ~ for connecting syncopated notes divided by a bar.

TIER. 1. A rank or row, particularly when two or more rows are placed one over another.—2. The *tiers* of a cable are the ranges of fakes or windings of the cable, laid one within another when coiled.

TIERS. Fr. from *tiers*, three. 1. A liquid measure, equal to the third part of a pipe.—2. A weight by which provisions are sold, particularly in Ireland. The tierce of beef for the navy is 304 lbs., and for India 336 lbs.—3. In *heraldry*, applied to the field when divided into three parts.

TIERS'LET, dim. of *tierce*, a third. A name used by falconers to distinguish the male hawk as being a third less than the female.

TIGER. In *zoology*, the *Felis Tigris*, Buff., an animal as large as the lion, is the most cruel of all quadrupeds, and the scourge of the East Indies. The body is longer than that of the lion, and the head rounder. The skin is a lively fawn-colour above, a pure white below, irregularly crossed with black stripes. Such is the strength of the animal, and the velocity of his movements, that, during the march of armies, he has been seen to seize a soldier while on horseback, and bear him to the depths of the forest without affording a possibility of rescue. He is moreover a coward.

TILES. Plates of clay baked in a kiln, and used instead of slates for covering the roofs of houses. They are named according to their shape and especial uses; as *plane* or *crown-tiles*, of a rectangular form; *ridge*, *roof*, or *hip-tiles*, formed cylindrically to cover the ridges of houses; *gutter-tiles* are about the same size and shape as the ridge-tiles, used for making gutters; *pan-tiles* have a rectangular outline, with a surface both concave and convex, so that the edge of the one tile may overlap the edge of that next to it in the process of *tiling*.

TILIA. The lime-tree: a genus of nine species. *Polyandria—Monogynia*. Name from *τιλιά*, the elm-tree. There are five British species of the lime or linden-tree.

TILL. 1. In *botany*, the *Sesamum orientale*, an East India oil plant.—2. A kind of clayey earth, forming the sub-soil of some inferior lands; called in some parts *till*.

TIL'LER. The bar or lever used to turn the rudder in steering a vessel. The *tiller-rope* forms a communication between the tiller and the wheel.

TIL'MUS, *τίλλω*, I pluck. A picking of the bed-clothes: a symptom of the approach of death in some disorders.

TILT. A small canopy or awning extending over the stern-sheets of a boat, as a defence against rain, &c. Also a like covering over a cart or other vehicle.

TILT-BOAT. A boat protected by a tilt or tarpawling against the inclemency of foul weather.

TILT-HAM'MER. A large hammer, used in iron-works, and put in motion by a water-wheel or steam-engine.

TILT'ING (of steel), is the process by which blister-steel is rendered ductile. This is done by beating with the tilt-hammer.

TIM'BER. A term used to designate any large tree squared or capable of being squared, and fit for being employed in carpentry. A load of unhewn timber is 40 cubic feet; of square timber 50 cubic feet.

TIM'BERS. In *ship-building*, the ribs of a ship, branching outwards from the keel in a vertical direction.

TIM'BER. In *heraldry*, denotes the crest of an armory, or whatever is placed at the top of the escutcheon, to distinguish the degree of nobility, as a coronet, mitre, &c.

TIM'BREL. *Tambour de Basque*. A musical instrument. See *TAMBOURINE*.

TIME. 1. A portion of infinite duration.—2. In *music*, an affection of sound, by which we denominate it long or short with regard to its continuance.

TIMOC'RACY, from *τιμη*, worth, and *κρατος*, to govern. Government by men of property, who are possessed of a certain amount of income.

TIM'OTHY-GRASS. In *agriculture*, a grass cultivated in America, and said to be a species of phleum or cat's-tail grass.

TIN (Saxon). A beautiful white metal, closely resembling silver: the *stannum* of the Latins, and the *Jupiter* of the alchemists. It is one of the few metals known in the time of Moses; and it appears to have been dug from the mines of Cornwall before the time of Herodotus. It is there, and in Devonshire, that tin is yet procured in greatest abundance; though it is also met with in the mines of Bohemia, Saxony, in Malacca, and some parts of the East Indies. Tin is considerably harder than lead; scarcely at all

sonorous; very malleable; but not very tenacious. Sp. gr. 7.29. Melting point 442° F. It enters into fusion with other metals; as with lead, forming *pewter* , and with copper, forming the various sorts of *bronze* , and *bell-metal* .

TIN'AMOUS. } A genus of American birds

TIN'AMOUS. } remarkable for a very long and slender neck, covered with feathers, the tips of whose barbs are slender and slightly curled, which gives a very peculiar air to that part of the plumage. Order *Gallinacea* , Cuv. The species vary in size from that of a pheasant down to that of a quail, or even smaller. They either perch on low trees, or hide among long grass. The generic name is Latinised from the native name *tinamous* .

TIN'CAL. A name of crude borax, as it is imported from the East Indies, in yellow greasy crystals.

TINCTURE, Lat. *tinctura* , from *tingo* , to dye. A term used by apothecaries to designate a solution of any substance in dilute alcohol, or alcohol impregnated with the active principle of a vegetable or animal substance.

TR'NEA. The name of a genus of nocturnal Lepidoptera. The caterpillars of the true *tineæ* construct portable sheaths or habitations from the materials on which they reside. Name *ταινία* , a moth-worm.

TIN'FOIL, from *tin* and *folium* , a leaf. Tin extended under the hammer into thin leaves.

TIN-GLASS. A name of bismuth.

TIN-PLATE. White iron. Thin sheet-iron coated with tin. In this case the tin forms in some measure an alloy with the iron.

TIN-PYRITES. A native sulphuret of tin, containing usually some copper and sometimes iron. This ore of tin is of a yellowish-gray colour, metallic lustre, and a fibrous structure.

TIN-STONE. A native oxide of tin, found only in Cornwall. This is perhaps the richest ore of tin, yielding sometimes 80 per cent. of the metal. It occurs both massive and crystallised.

TIP'ULA. The Crane-fly: a genus of dipterous insects of the family *Nemocera* . The *tipula* of the Latins was a species of aquatic spider. The legs of the tipulæ are disproportionately long, as is well seen in the *T. silvestris* or Father-long-legs.

TIRE. In *mechanics* , a band or hoop of iron, used to bind the felloes of wheels, to secure them from wearing and breaking.

TIRO'NIAN NOTES. The short-hand of Roman antiquity.

TIS'RI. The first Hebrew month of the civil year, and the seventh of the ecclesiastic: it answered to a part of our September and October.

TIS'SUE, Fr. *tissu* , woven, from *tisser* to weave. 1. Cloth interwoven with gold and silver, or brilliant-coloured yarns.—

2. A term introduced by the French into anatomy, to express the textures which compose the different organs of animals.

TITAN'IC ACID. A name for the peroxide of titanium, which exists combined with a little oxide of iron and manganese. is the mineral known by the names of *titanite* and *rutile* .

TITANIUM. A rare metal discovered by the Rev. Mr. Gregor, in menachinite, in 1791, and by Klaproth, in red schorl, in 1795. Gregor named it *menachine* , from the mineral in which he discovered it, and Klaproth named it *titanium* , from *τιτάνες* . The metal may most readily be

procured from its chloride, by passing a continuous stream of ammoniacal gas over it. When thus prepared it is a fine powder, which, on being heated in the air, takes fire. It is sometimes observed crystallised in small cubes, in the slag of the hearth in the great iron smelting furnaces. These crystals are very brittle, and so hard as to scratch steel. Sp. gr. 5.3. Traces of titanium may be discovered in many irons, wrought as well as cast.

TITHE. The tenth part of anything: appropriately the tenth part of the increase annually arising from the profits of land and stock, allotted to the clergy for their maintenance. Tithes are *personal* , when accruing from labour, art, trade, and navigation: *predial* when issuing from the earth; and *mixed* when accruing from beasts fed on the ground. The term is Sax. *teowa* , from *teogewa* , a tenth.

TIT'HING. In *law* , a decennary: a company of ten householders, who, dwelling near each other, were held free pledges to the king for the good behaviour of each other. The institution of tithings in England is ascribed to Alfred.

TIT'ULAR. In *ecclesiastics* , a person invested with the title to a benefice.

TME'SIS, from *τιμω* , I cut. In *grammar* , a figure by which a compound word is separated into two parts by the intervention of one or more words, as *quæ meâ cinque* , for *quæcunque meâ* .

TOAD'STONE. A provincial name for a variety of trap rock, found very abundantly in Derbyshire. It takes this name from a supposed resemblance in its general aspect to the exterior of a toad. It may, however, be a corruption of the German *todstein* , which in mining language means a rock unproductive of mineral treasure: a character applicable to toadstone.

TOBAC'CO. The dried leaves of the *Nicotiana tabacum* , a plant indigenous to America, but which may be advanta-

geously cultivated in many parts of the Old World. It takes its name from *Tobago*, the island whence it was first brought. The green leaves possess very little odour or taste, but when dried their odour is strong and narcotic, their taste bitter and acrid. When distilled they yield an essential oil, on which their virtue depends, but which is highly poisonous.

TOCCATA, Ital. from *toccare*, to touch. In music, a prelude.

TOC'SIN. An old French word signifying an alarm-bell.

TOD. A weight used in weighing wool. It contains 28lbs. avoirdupois.

TOD'DY. 1. A sweetish juice drawn from various palms in the East Indies, and which acquires intoxicating qualities by fermentation.—2. A mixture of spirits and water sweetened.

TO'GA. A sort of woollen gown or mantle worn by the Romans.

TOG'GEL. A small wooden pin, from four to six inches in length, and usually tapering from the middle towards the ends; used in ships instead of a hook in fixing tackle, &c.

TOISE. A long measure in France equal to six French feet.

TO'KAY. A sort of wine produced at Tokay, in Hungary, from white grapes. It is distinguished from other wines by its aromatic taste.

TO'LA. A weight for gold and silver in India. It differs in different parts.

TOLU'. Tolu balsam. A brownish-red balsam, extracted from the stem of the *Toluifera balsamum*, a tree of South America, which grows in the province of Tolu. It is brought to us in little gourd-shells. See *TOLUIFERA*.

TOLUIF'ERA. The generic name of the tree which affords the tolu balsam. *Decandaria—Monogynia*. Name from *tolu* and *fero*, to yield.

TOMA'TO. A name of Indian origin, applied to the love-apple or *Solanum lycopersicum*.

TOMBAC'. A white alloy of copper and arsenic.

TO'MENT, from *tomentum*, a flock of wool. A term used to designate: (1.) In anatomy, the small vessels on the surface of the brain; (2.) In botany, a species of pubescence, very soft to the touch, and giving the surface a downy appearance.

TOMENTO'SE, Lat. *tomentosus*. Downy, woolly, cottony. Applied to stems, leaves, &c.

TOM'PIONS. In gunnery, wooden cylinders put into the mouths of cannon to keep the inside dry and clean.

TON, Sax. *tunna*. An English weight of 20 cwt.

TONE, from *tonos*, sound. A modification of sound 1. In music, an interval of

sound. Tones are distinguished into major and minor. The major tone is in the ratio of eight to nine, and results from the difference between the fourth and fifth. The tone minor is in the ratio of nine to ten, and results from the difference between the minor third and fourth.

—2. In pathology, from *tonos*, extended; the healthy and natural tension of the muscular fibre.

TON'IC. 1. In pathology, from *tonizeo*, from *teneo*, to draw. A rigid contraction of the muscles, which lasts for some time without relaxation, is termed a *tonic spasm*.—2. In medicine, from *tonico*, to strengthen. A term applied to medicines which increase the tone of the muscular fibre, and impart vigour to the system.

The *mineral tonics* are iron, zinc, copper, arsenic, silver, bismuth, mercury, and the mineral acids. The *vegetable tonics* consist chiefly of bitters.

TON'KA BEAN, } The fruit of the *Dip-*
TON'QUIN BEAN, } *terix odorata*, a shrub-
by plant of Guiana. By digestion in alcohol it affords a crystalline volatile oil called *stearoptene* and *coumarine* by the French. This bean has a peculiarly agreeable smell, and is employed in the scenting of snuff.

TON'NAGE. In commercial navigation, the number of tons which a ship can carry; also an impost on ships according to their tonnage or burden.

TON'SIL, Lat. *tonsilla*. In anatomy, the tonsils are two oblong, sub-ovate glands, situated on each side of the fauces, and opening into the cavity of the mouth by a great many excretory ducts.

TON'SURE, Lat. *tonsura*, from *tonsus*, shaved. In the Romish Church, (1.) the first ceremony used for devoting a person to the service of God and the Church: the first degree of clericate given by a bishop, who cuts off a part of the hair, uttering prayers and benedictions. (2.) The corona or crown which priests wear as a mark of their order, and of their rank in the church.

TONTINE' (Fr.), from *Tonti*, an Italian, who invented the scheme. An annuity or survivorship; a loan raised on life annuities, with the benefit of survivorship. Thus the annuity is shared among a number, on the principle that the share of each at his death shall go to the benefit of the survivors, until at length the whole goes to the last survivor and his heirs, or to the state.

TOOTH'ING. In architecture, bricks or stones left projecting at the end of a wall, that they may be bonded into a continuation of it when required.

TOP. In ship-building, a sort of platform, surrounding the head of the lower

mast, and projecting on all sides. It serves to extend the shrouds.

TOP ARMOUR. A rail extending the width of the top of a ship, on the after-side, supported by stanchions, and equipped with a netting.

TO'PAZ. A gem; different, however, from the *topazios* of the Greeks, a name derived from *Topazos*, an island in the Red Sea, where the ancients used to find precious stones. The topaz passes from pale wine yellow to yellowish white, greenish white, mountain green, and sky blue: from deep wine yellow into flesh red, and crimson red. Sp. gr. 3.46 to 3.64. The highly crystallised and transparent varieties are termed precious topaz. The finest varieties are obtained from the mountains of Brazil, and the Uralian Mountains; and the topaz generally occurs in primary rocks. General constituents—alumina, silica, and fluoric acid, coloured with oxide of iron.

TOPAZ'OLITE, from *topaz*, and *λίθος*, stone. A pale yellow sub-variety of garnet, so named because it resembles the topaz in colour.

TOP-CHAINS. Chains used in action, by which the lower yard is hung, in case the slings be shot away.

TOP-CLOTH. In a ship, a large piece of canvass, used to cover the hammocks, which are lashed to the top when the ship is prepared for action.

TOP-GALLANT-MAST. The mast next above the top-mast. On this are extended the *top-gallant-sails*.

TOPH. A word originally from the Hebrew. Used, in surgery, to denote (1) a soft swelling on a bone; (2) a concretion in the joints. It is also used, in *mineralogy*, to designate any calcareous deposition, resembling, in lightness of texture, the *tophus*, or material thrown out of volcanoes.

TO'PHET. A polluted, unclean place, near Jerusalem, into which the Jews used to throw dead carcasses, &c.

TOP-LAN'TERN. A large lantern, placed in the after-part of a top in any ship where an admiral's flag or commodore's pendant is flying.

TOP-MAST. The second division of a mast, or that part next above the lower mast.

TOP'PING. In nautical language, the act of putting one extremity of a yard higher than the other.

TOP'PING-LIFT. A large strong tackle, employed to suspend or top the outer end of a gaff, or of the boom of a mainsail, in a brig or schooner.

TOP-ROPE. In a ship, a rope to sway up a top-mast, or top-gallant-mast, to fix it in its place.

TOP-SAILS. Large sails extending across

the topmasts by the *top-sail-yards* above, and by the lower yards beneath.

TOP-TAC'KLE. In ships, a large tackle hooked to the lower end of the topmast top-rope, and to the deck, in order to augment the mechanical power in hoisting the topmast.

TORREUMATOLOGY, from *τορευμα*, sculpture, and *γραφω*, I describe. The science or art of sculpture, or a description of it.

TORMENTIL'LA. Tormentil or Septfoil. A genus of indigenous perennial plants.

Icosandria—Polygynia. Name from *tormentum*, pain, because it was supposed to relieve pain in the teeth. There are two species; the official or upright, and the creeping. The root of the former is still admitted into pharmacopœias, and has been used as a substitute for bark in the process of tanning, it being a powerful astringent.

TORMENTOR. In agriculture, an instrument something like a harrow, but supported on wheels, and each tine is furnished with a hoe or share, that enters and cuts up the ground.

TORNA'DO, Sp. and Port. *tornado*, a return. A violent gust of wind, rising suddenly, and distinguished by its veering round all the points of the compass, like a hurricane. Tornadoes are usually accompanied by much thunder and rain, but are of short duration, and have a narrow compass.

TORPE'DO. The Electric Ray, or Cramp-fish. A subgenus of fish of the genus *Raia*, Lin. Name Latin, from *torpeo*, to benumb, on account of the peculiarly powerful galvanic shock which the fish communicates when touched. The body is smooth, and the teeth small and sharp. It is taken on the coasts of France and England, and in the Mediterranean, in about 40 fathoms water. The space between the pectorals, head, and branchiæ is fitted on each side with a peculiar apparatus, formed of little membranous tubes, placed close together like a honeycomb, subdivided by horizontal diaphragms into small cells, filled with a sort of mucus, and traversed by numerous nerves, proceeding from the eighth pair. It is in this apparatus that resides the electric or galvanic power, which has rendered the torpedo so celebrated.

TORRICEL'LIAN. Pertaining to Torricelli, an Italian philosopher, who discovered the true principle of the barometer. The tube of this instrument is named after him the *Torricellian tube*; and the vacuum produced in such a tube by filling it with mercury, and allowing it to descend till it is counterbalanced by atmospheric pressure, is called the *Torricellian vacuum*.

TOR'RID. Parched. *torridus*, from *torreo*.

to roast. The *Torrid Zone* is that broad belt of the earth included between the tropics about $23^{\circ} 28'$ on each side of the equator, called also the *Tropical Zone*.

TOR'SION, from *torqueo*, to twist. The force of torsion is the term used by Coulomb to denote the effort made by a wire or thread which has been twisted, to untwist itself. On this principle Coulomb constructed his *torsion-balance*, of which the *torsion-electrometer*, and the *torsion-galvanometer* of Dr. Ritchie, are merely modifications, for particular purposes.

(1.) **TOR'SION-BALANCE**. This consists of a stand T supporting a hollow vertical rod, ST, which, in the balance of Coulomb, was of pewter, that all magnetic and electric influence might be avoided. On this rod there are two sliding-pieces, CA, and SP; the lower of which carries a plate A with a circle, divided like a dial-plate, upon it; and the upper a piece P, to which the torsion wire or thread is to be fixed: N is a small bar-piece, with a screw which clips the extremity of the wire whose torsion is to be experimented on, to which a weight, or an index, or

TORSION-BALANCE.

both, may be attached. The following are the results:—1. The wire, being loaded with different weights, did not rest in the same position of the index, but in a different position, with every different weight. 2. The oscillations of the index were isochronous, whether the deflection was great or small.

(2.) **TOR'SION-ELECTROMETER**, or **ELECTRIC-BALANCE**. This consists of a thread, *a b*, of silk or spun glass, from which a needle of shell-lac, *c*, is suspended. It is attached to a screw *b*, by which it can be

twisted round its axis. The needle carries a gilt ball of pith, or a disc of paper, at one extremity, which is balanced by a counterpoise at the other; *d* is a metallic wire, passing through the glass-shade, and terminated by a metallic ball at each end. The ball of the needle, and the interior brass ball of the wire, are brought into contact by turning the screw *b*, and the index then points to 0 on the scale, which is marked upon the circumference of the glass.

(3.) **TOR'SION-GALVANOMETER**. *ns* is the lower needle, surrounded by a coil of wire, and connected with the upper needle NS by a piece of straw

axis. The needle

TORSION-ELECTROMETER.

TORSION-GALVANOMETER.

which passes through the upper part of

the horizontal coil, and through a circular card placed above it, on which a graduated circle is drawn. It is then attached to the torsion filament, which is fixed to a screw A, supported by the frame of the instrument. The filament may be of glass, and the angle of torsion may be easily measured upon the graduated card. The wires of the coil are to be connected with the plates of the circuit by means of small mercury cups, *a b*.

TOR'SO, Fr. *torse*. A name given by artists to all mutilated statues, of which nothing remains but the trunk. The term is also applied by architects to columns with twisted shafts.

TORT. *In law*, a personal injury done to another.

TORTOISE. All tortoises are placed in one genus, *Testudo*, by Linnæus, but Brongniart and others have subdivided them, chiefly according to the forms and teguments of their shell, and their feet. The land tortoises form the genus *Testudo*; the fresh-water tortoises, the genus *Emys*; and the sea tortoises, the genus *Chelonia*. Merrem has further distinguished by the name of *Sphargis* those chelonæ whose shell is destitute of plates, and merely covered with a sort of leather. The *Testudo imbricia*, Gm., found in Guiana, has been placed in a subgenus, *Chelys*, by Dumeril; and the soft-shelled tortoises have been arranged in a genus, *Trionyx*, by Geoffroy. To this belongs the tyrse of Egypt; and the soft-shelled tortoise, which inhabits the Carolinas, Georgia, the Floridas, and of Guiana, so highly esteemed for its flesh.

TORTOISE-SHELL. The yellowish-brown scales of the *Testudo imbricata*, Lin., a species of the tortoise, which inhabits tropical seas. It is extensively used in the manufacture of combs, snuff-boxes, &c., and in several kinds of ornamental work. It is worth in the London market from forty to sixty shillings per lb.

TORTULOUS, Lat. *tortulosus*. Bulged out at intervals, like a cord having several knots on it. Applied in Natural History.

TOTUS. In *architecture*, a large semi-circular moulding, used in the bases of columns, &c.

TOTIES QUOTIES. So often as a thing shall happen. A legal phrase.

TOTIPALMA'TE, from *totus*, complete, and *palmaris*, palmate. A family of palm-pede birds, remarkable for having the thumb united with the toes by one single membrane, a mode of organisation which renders their feet complete like ours. They nevertheless perch on trees. The pelican is an example.

TOUCH. In *naval affairs*, sails are said to *touch* when the wind comes edgeways upon them.

TOUCH-STONES. Small masses of gold

silver, and copper, each pure, and in all the different combinations, proportions, and degrees of mixture, prepared for the trial of gold and silver, on the touch-stone, by comparison of the mark they respectively leave on it.

TOUCH-STONE. A variety of extremely compact siliceous schist, almost as close as flint, used for ascertaining the purity of gold and silver by the streak impressed on the stone by the article tried.

TOUR'MALINE. A mineral of the gem order, of many varieties, which occurs imbedded in granite, gneiss, mica-slate, &c., in Scotland, Sweden, Spain, France, Siberia, and many parts of America, as Massachusetts and Brazil. The fundamental form of the crystal is a rhombohedron. Lustre, vitreous; colour, brown, green, blue, red, white, frequently black, generally dark, and scarcely ever bright. Streak white. Transparent. Hardness 7 to 7.5. Sp. gr. 3.1. Constituents, silica, alumina, soda, coloured by oxide of manganese when red, and with oxide of iron when black. The green, blue, &c. varieties contain usually both these oxides. Plates, particularly of the brown tourmaline, if cut parallel to the axis, absorb one of the polarised pencils of light. The name is a corruption of the Ceylonese name *tourmalal*.

TOUR'NIQUET, Fr. from *tourner*, to turn. A surgical instrument, used for stopping the flow of blood into a limb, by compression of the main artery.

TOW. (Sax.) 1. The coarse and broken part of flax or hemp, separated from the finer part by the hatchel or swingle.—2. A rope.

TOW'ING. Drawing a vessel forward in the water by means of a rope or *tow* attached to another vessel or boat. Steam-vessels are often employed to *tow* sailing vessels up rivers, &c.

TOXICOL'OGY, from *τοξικος*, a poison, and *λογος*, a discourse. The study of poisons, a treatise on poisons.

TOX'OTES. The generic name given by Cuvier to a fish characterised like the *Chatodon rostratus*, by spouting water on insects which frequent aquatic plants, to beat them down, and thereby bring them within its reach.

TRABEA'TION, Lat. *trabes*, a beam. In *architecture*, the same as *entablature*.

TRAB'ICULE, Lat. *trabacula*. A little beam. A term applied by anatomists to designate the thread-like processes in the longitudinal sinus of the dura mater.

TRACHE'Y, *τραχηια*. 1. The windpipe.—2. In *natural history*, the air-tubes of plants are by botanists called *tracheæ*, and the same term is applied by entomologists to those vessels which receive the arterial fluid, and distribute it to every

part of the interior of the body, and thus remedy the want of circulation.

TRACHEARIA. An order of Arachnides, characterised by radiated or ramified *trachee*, so that the organs of respiration receive air through two stigmata, in the absence of an organ of circulation. The order comprises the *Pseudo-scorpiones*, *Pycnogonides*, and *Holetra*.

TRACHEOC'ELE, from *trachea*, and *κηλη*, a tumour. An enlargement of the thyroid gland: bronchocele or goitre.

TRACHEOT'OMY, from *trachea*, and *τεμνω*, to cut. See BRONCHOTOMY.

TRACHINUS. The name given by Linnaeus to a genus of acanthopterygious fishes of the percoid family. There are several species from the Atlantic, &c., of which the dragon-weever (*T. draco*, Lin.), is best known. The flesh is esteemed.

TRACHYTE, from *τραχυς*, rough. The name of a kind of volcanic porphyry, which usually contains crystals of glassy felspar, and is exceedingly rough to the touch.

TRAC'TION, from *traho*, to draw. In practical mechanics, the amount of power necessary to overcome the resistance to a carriage upon a road; a boat upon a canal, &c. The power applied is termed the *tractive power*.

TRAC'TORS, METALLIC. Small bars of metal, supposed to possess certain magnetic powers of curing painful affections and tumours, by being drawn over the affected parts.

TRAC'TORY or TRAC'TRIX, Lat. *traho*, I draw. In geometry, the curve having the property that the tangent is always equal to a given line.

TRADE-WINDS. The monsoons or periodical winds between the tropics, supposed to favour trade.

TRAG'ACANTH, from *τραγας*, a goat, and *ακανθος*, a thorn. A species of gum, the produce of the *Astragalus tragacantha*, a thorny shrub, which grows in Persia, Crete, &c. See GUM.

TRAG'EDY, τραγυδια. A dramatic poem representing some signal action, performed by illustrious personages. A tragedy must necessarily have a fatal issue, and commonly one or more of the dramatic personæ is a villain, by whose machinations the catastrophes are brought about.

TRAG'ICUS. A muscle of the ear which pulls the tragus forward.

TRAG'US. In anatomy, the small cartilaginous eminence at the entrance of the external ear.

TRAJEC'TORY, from *trajectus*. A curvilinear path described by a body, as the orbit of a comet.

TRAM. A local name given to coal-waggons in the neighbourhood of New-

castle-upon-Tyne: hence the word *tramway* was given to the road prepared to receive them.

TRAM'MEL. A sort of large net either for fishing or catching birds.

TRAM'MELS. 1. In mechanics, a joiners instrument for drawing ellipses. One part consists of a cross, with two grooves at right angles; the other is a beam carrying two pins, which slide in those grooves, and also the describing pencil.—2. A kind of shackles for a horse.

TRAM'ROAD, } A plate-railway. A de-

TRAM'WAY. } scription of railway, consisting of narrow track-plates, or rails of wood or iron, the same being prepared to receive the wheels of carriages, or *trams*, as waggons were formerly called, whereby the transit of the latter is much facilitated.

TRANSCEN'DENTAL, from *trans*, beyond, and *scando*, to climb. Surpassing; rising above. In geometry, a transcendental curve is one which cannot be defined by any algebraic equation. Transcendental quantities are indeterminate ones, which cannot be expressed by any constant equation.

TRAN'SEPT, from *trans* and *septum*. An open passage across the body of a church, in the direction of north and south, either on the eastern or western side of the nave, and sometimes on both.

TRANSFUS'ION, from *trans* and *fundo*. The transmission of blood from the veins of one living animal into those of another, by means of a canula; an operation which has often been performed with success and singular advantage on the human subject.

TRAN'SIT, Lat. *transitus*, from *trans*, beyond. In astronomy, the passing of one heavenly body over the disc of another and larger one, as Mercury and Venus over the face of the sun. The reverse, or the passage of the small body behind the larger body, is an *occultation*.

TRAN'SIT-INSTRUMENT. A telescope formed at right angles to a horizontal axis, which axis is so supported that the line of collimation may move in the plane of the meridian. This instrument is used for observing the transits of Venus and Mercury over the discs of the sun, and a modification of it, bearing the same name, is employed in the formation of tunnels, for the purpose of ranging the shafts straight together.

TRANSITION ROCKS, series or formations. See ROCKS.

TRAN'SITIVE, Lat. *transitivus*. In grammar. A verb transitive is that which signifies an action, conceived as having an effect upon some object.

TRANSLUCENCY, from *trans*, through, and *luceo*, to shine. A term used in mineralogy, &c. to express the property which

some bodies possess of permitting the passage of rays of light, but without sufficient transparency to perceive the definite outline of objects through them.

TRANSMUTATION, from *trans* and *muto*, to change; change into another nature or substance. The great object of Alchemy was the transmutation of base metals into gold.

TRAN'SOM, Lat. *transenna*. 1. A beam across a double-lighted window.—2. The lintel over a door.—3. A timber extending athwart the stern post of a ship, to fortify it and give it form.—4. The vane of the instrument called a cross-staff.

TRANSPPOSITION, from *trans* and *position*. A changing of the place of things, as, 1. In algebra, the bringing of a term of an equation to the other side. Thus $ax + x = b = bx - d$ by transposition becomes $x + (a - b)x = b - d$.—2. In grammar, a change in the natural order of the words of a sentence.—3. In music, a change in the composition, either in the transcript or performance, by which the whole is removed into another key.

TRANSUBSTANTIATION, from *trans* and *substantia*; change of substance. In the Romish theology, the supposed conversion of the bread and wine in the eucharist into the body and blood of Christ. The doctrine of the *real presence* assumes that the body and blood of Christ are really present with the bread and wine.

TRANSUDATION, from *transudo*. Passing off through the pores of a substance. This term should be distinguished (in physiology), from perspiration, which implies a function by which the perspired fluid is secreted from the blood, whereas by transudation a fluid merely oozes through unaltered.

TRANSVERSE AXIS. In conic sections, the diameter which passes through both foci.

TRANSVERSAL. In geometry, a line which intersects any other lines.

TRAP. Trap Rocks. A name given by Kirwan, from Sax. *trapp*, a stair, to basaltic rocks, on account of the stair-like appearance which their vertical edges exhibit. All the rocks of the trap-family are of igneous origin, and bear a close analogy, in their nature and composition, to the products of the active volcanoes erupted in our own time, and especially to the beds of old lava.

TRAPEZIUM, *τραπεζίον*, a little table. 1. In geometry, a quadrilateral figure, whose four sides and angles are unequal, but two of its sides parallel.—2. In anatomy, a bone of the second row of the carpus, so called from its shape.

TRAPEZIUS. A trapeziform muscle, which serves to move the scapula in different directions. It is situated under the integuments of the posterior part of the neck and back.

TRAPEZOID, from *trapezium* and *ωδον*, like. An irregular figure, which has all its four sides and angles unequal, and none of its sides parallel.

TRAPPISTS. A religious order still extant in Normandy.

TRAP-TUFF. A variety of trap. A considerable portion of Arthur's Seat, near Edinburgh, is formed of this rock.

TRAU'MATE. The name given by the French geologists to Grauwacke.

TRAUMAT'IC, from *τραυμα*, a wound. In surgery, relating to wounds, hence traumatic balsams.

TRAV'ELLER. In navigation, a description of thimble, whose diameter is much larger in proportion to the breadth of its surface than the common ones. The travellers are intended to facilitate the hoisting and lowering of the top-gallant-yards at sea.

TRAVERSE, from *transverse*. 1. In geometry, the same as *transverse*.—2. In fortification, a trench, with a little parapet, sometimes two, one on each side, to serve as a cover from the enemy that might come in flank.—3. In architecture, gallery of communication in a church, or other large building.—4. In law, traverse denotes the denial of some matter of fact, alleged to be done in a declaration or pleading; upon which the other side maintaining that it was done, issue is joined, for the cause to proceed to trial. To *traverse* an indictment, is to deny some chief point of it, and take issue thereon.—5. In navigation, traverse sailing implies a compound course, in which several different courses and distances are made and known. To find the real course in this case, *traverse tables* have been calculated, where all the differences and departures are given for any distance in 100 miles.

TRAVERTINO. An Italian name for a calcareous tufa, deposited by water holding bicarbonate of lime in solution. In Italy, immense masses of this substance are constantly being formed, and the process appears to have been in operation since a very early period of the world's physical history. The Coliseum, St. Peter's, and indeed most of the public buildings of Rome, are composed of travertino.

TRAVES'TIE, Fr. *travestir*, to disguise. A word synonymous with parody.

TREA'CLE, Lat. *theriaca*. The brown viscid syrup which drains from sugar-refining moulds.

TREAD. In architecture, the horizontal surface of a step.

TREAD'LE,) That part of a loom, turn-
TREAD'LE,) ing-lathe, or other analo-
gous machine, on which the foot is set to put it in motion.

TREAD'MILL,) A wheel exactly simi-
TREAD'WHEEL,) lar in its principle to

an over-shot water-wheel, but having *tread-boards*, of considerable length, upon its circumference, to allow of sufficient standing-room for a row of from 10 to 20 persons, by whose weight the wheel is moved round. It is an invention of the Chinese, who use it to raise water for the irrigation of their fields. It has been introduced into some of the prisons of England, for the exercise of criminals condemned for short periods to hard labour. The engraving exhibits that erected at Brixton for grinding corn.

TREASURE TROVE. In law, money, or other treasure, found hidden, and the owner unknown, in which case it belongs to the crown. *Trove* is from the French word *trouver*, to find, *trouvé*, found.

TREASURY, BOARD OF. The board which has charge of the sovereign's civil list, or other revenues.

TREBLE, Lat. *triplex*. In music, acute: the highest and most acute of the four parts in symphony. This is divided into *first or high treble*, and *second or base treble*.

TRECK'SCHUYT. A Dutch track boat.

TREE-NAILS, is now commonly written *trenails* (q. v.).

TREE-TOAD. A species of *Rana*, found in North America, often on trees.

TREFOIL, from *trifolium*, *tres* and *folium*, a leaf. 1. In botany, see *TRIFOLIUM* and *LOTUS*.—2. In Gothic architecture, an ornament, consisting of three cusps in a circle, like the leaf of the trefoil plant.

TREMAN'DO. In music, one of the harmonic graces, from the Italian, *trembling*.

TREMEL'LA. A genus of algæ, of which the only species is the *T. nostoc*, an indigenous greenish jelly, which is edible. Name from *tremo*, to tremble, being a tremulous substance.

TREMOLITE. A variety of hornblende, or straight-edged augite, so named from its having been first found in Tremola, a valley of St. Gothard. There are several sub-varieties of this mineral, as the common glassy and fibrous tremolite and

baikalite. It is found only in primary rocks.

TRE'NAILS, } (A corruption of *tree-*
TREN'NELLS. } *nails*.) A name for such wooden pins as are employed to connect the plank of a ship's sides and bottom to the corresponding timbers; and also for those hollow oak pins, or *plugs*, usually driven into blocks of stone, when anything is to be secured to them.

TRENCHES. In fortification, are ways hollowed in the earth, and in form of a fosse, having a parapet towards the place besieged, called *lines of approach*, or *lines of attack*; or a work raised with fascines, gabions, wool-sacks, &c., to cover the men from the fire of the besieged.

TREND. In navigation, to trend is to lay in a perpendicular direction.

TREPAN, Lat. *trepandum*, from *τετραναι*, to perforate. A surgical instrument, bearing some resemblance to a wimble, and worked in the same manner. It is used for sawing a circular portion of bone out of the skull. See **TREPINE**.

TREPINE. An instrument generally used by English surgeons, instead of the trepan, which is used on the continent. It consists of a circular saw, with a handle placed transversely, like that of a gimlet, and has a perforating or central pin, which is fixed into the skull, and forms an axis on which the circular edge rotates.

TRES'PASS. In law, unlawful entrance on another's grounds.

TRES'SLE-TREES, } In ship-building, two.

TRE'STLE-TREES. } strong bars of timber, fixed horizontally on the opposite sides of the lower mast-head, to support the frame of the top, and weight of the top-mast.

TRESURE. In heraldry, a border running parallel with the sides of the escutcheon.

TRET, } In commerce, an allowance to

TRETT. } purchasers, for waste or refuse matter, of 4 per cent. on the weight of some commodities.

TRI'AD. In music, a compound of three sounds, which has received the name of the *harmonic triad*. It is formed of a third, a fifth, and the bass.

TRIAN'DRIA, from *τρεῖς*, three, and *ἀνδρῶν*, a male. 1. The third class of plants in the sexual system of Linnæus, comprising plants which have hermaphrodite flowers, with three distinct stamens. The orders are monogynia, digynia, and trigynia.

—2. The name of several orders of plants in the Linnæan sexual system, which, besides their classic characters, have three stamens.

TRI'ANGLE, from *tres* and *angulus*. 1. In geometry a figure bounded by three lines, and having consequently three

angles.—2. In *astronomy*, a constellation in the northern hemisphere.—3. In *music*, a small steel triangular instrument of percussion, open at one of its corners, and struck with a small steel rod.

TRIANGULAR COMPASSES. Compasses having three legs, which open so as to take off any three points.

TRIBOMETER, from *τριβω*, to rub, and *μετρον*, measure. An instrument for measuring the amount of friction in rubbing surfaces.

TRIBUNAL. A judgment seat in the forum at Rome: applied to any judgment seat.

TRICEPS, Lat. from *tres* and *caput*; three-headed. Applied to muscles.

TRICHECUS. The morse: a genus of amphibious mammalia of the order *Carnaria*. Name invented by Artdi. Only one species is known, the Sea Cow (*T. rosmarus*, Lin.), which inhabits the Arctic seas, and surpasses the largest ox in size. It lives on fucus and animal matters, and is much sought after for its oil and tusks. See SEA COW.

TRICHLASIS, from *τριχ*, hair. 1. A disease of the eyelashes, in which they are turned inwards.—2. A disease of the hair: plica.

TRICHOPTERUS. A genus of acanthopterygious fish, belonging to the family *Tenoides*. Name from *τριχ*, a hair, and *ουρα*, a tail: the tail being drawn out into a long slender filament like a hair. The species resemble beautiful silver ribands.

TRICHOPTERANS, from *τριχ* and *πτερον*, a wing. The name of an order of insects having four hairy membranous wings.

TRICHO'SIS. *Τριχωσις*, from *τριχ*, hair. A generic name for all diseases of the hair.

TRICHURIS. A genus of intestinal worms: named *le ver à queue* by the French, two-thirds being tail.

TRICOCCE. A natural order of plants, comprising such as are three-seeded (*triccoccus*.)

TRICOLOR. The national French banner of three colours, blue, white, and red, adopted on the occasion of the first Revolution.

TRICOC'COUS, Lat. *triccoccus*, three-seeded.

TRICUSPID, } Lat. *tricuspidatus*,

TRICUSPIDATE. } three-pointed.

TRICUSPID VALVE. The right ventricle of the heart.

TRIDACTYLOUS, Lat. *tridactylus*, three-todd.

TRIDENT, from *tridens*, three-toothed. The three-forked sceptre of Neptune.

TRILENS. A Roman copper coin, worth one-third of an as

TRIETERIS. A Grecian cycle, consisting of 12 months of 30 days each.

TRIFID, Lat. *trifidus*, three-cleft.

TRIFOLIATE, Lat. *trifolius*, three-leaved.

TRIFOLIUM. Trefoil. A genus of papilionaceous plants. *Pentandria—Monogynia*. Name from *tres* and *folium*, because it has three leaves on each stalk.

TRIFO'RIUM. In Gothic architecture, an arched story, between the lower arches and the clerestory, in the aisles of a church.

TRIGAMOUS, from *τρις*, three, and *γαμος*, marriage. Plants containing three sorts of flowers in the same head.

TRIGEMINI. *Nervi innominati*. The fifth pair of nerves.

TRIGLYPH, from *τριγλωφος*, a three-sculpture ornament. An ornament of the Doric frieze, consisting of three parallel niches, and supposed by some to represent the ends of beams.

TRIGON. *Τριγωνος*. A triangle.

TRIGONELLA. Fenugreek. A genus of papilionaceous plants. *Diadelphia—Decandria*. Temperate and cold climates. Name dim. of *trigona*, in allusion to its little triangular flower.

TRIGONIA. The name given by Bruguières to a genus of testaceous acephala of the oyster family. Living trigoniae are nearly related to the cockle, but the fossil species differ considerably. Named from the trigonal shape of the shell.

TRIGONOCEPHALUS. Serpents which have a horny conical process at the tip of the tail.

TRIGONOMETRY, from *τριγωνος*, a triangle, and *μετρον*, measure. The science which teaches the mensuration of triangles, whether plane or spherical.

TRIG'NIA, from *τρις*, three, and *γυνη*, a female. The name of an order of plants in the Linnæan system, distinguished by the flowers having three styles or pistils.

TRIHILATE, Lat. *trihilatus*. Having three *hila* or scars. Applied to seeds.

TRILAT'ERAL, from *tres* and *latus*, a side. Having three sides.

TRILL, Ital. *trilla*. In music, a plain shake upon a simple note.

TRILLO, Ital. In music, to beat quickly on two notes, in conjoint degrees, alternately one after the other.

TRILOBATE, Lat. *trilobatus*. Three lobed.

TRILOBITES. A family of fossil crustaceans, long confounded under the name of *Entomolithus paradoxus*, and still named by some naturalists *Entomostracites*. Brongniart has divided them into five genera: *Agnostus*, *Calymene*, *Asaphus*, *Ogygia*, and *Paradoxides*. They are, according to Cuvier, the original stock of

the articulata, and were annihilated by some ancient revolution of our planet. They take their name from being divided into three lobes, or rather three ranges of parts or lobes, by longitudinal sulci. They are found in various parts of the world.

TRI'LOCULAR, Lat. *trilocularis*. Three-celled.

TRI'LION, from *tri-million*. The product formed by multiplying a million twice by itself: the third power of a million. Thus, $1,000,000 \times 1,000,000 \times 1,000,000 = 1,000,000,000,000,000$. In the French notation, however, the square of 1,000,000, or 1,000,000,000,000, is named a trillion.

TRI'OGY, from *τρεις*, three, and *λογος*, discourse. The plays of Æschylus and Shakspeare's Henry VI., are examples of a trilogy.

TRIM. The position of the keel of a ship with respect to the horizontal line.

TRIMMER. In *carpentry*, a small beam, into which are framed the ends of several joists. The two joists, into which the ends of the trimmer are framed, are called *trimming joists*.

TRINE, from *trinus*. Three-fold. A term in *astrology*, for an aspect of the planets, distant from each other 120° , forming the figure of a trigon or triangle.

TRINER'VATE, Lat. *trinervis*. Three-nerved.

TRIN'GLE, French. A term in *architecture* for a small member, fixed exactly upon every triglyph, under the platband of the architrave, from whence hang the guttæ in the Doric order: called also a *ringlet* or *listel*.

TRINITY. The three persons in the Godhead, comprising Father, Son, and Holy Ghost.

TRINITY HOUSE. A kind of college, incorporated by Henry VIII., in 1515, for the promotion of commerce and navigation, by licensing pilots, ordering and erecting beacons, light-houses, &c.

TRINO'MIAL, from *tres*, and *nomen*, a name. A term in *algebra* for any expression having three terms, as $a + bx - cx^2$.

TRI'O, } A vocal composition in
TERZETTO. } three principal parts, exclusive of accompaniment.

TRIOCTILE, from *tres* and *octo*. A term in *astrology* for an aspect of two planets, when they are three octants or eighth parts of a circle apart, i.e., 135° degrees.

TRIO'CIA, from *τρεις*, three, and *οικος*, a house. The name of the third order of plants in the class *Polygamia*, comprising plants with unisexual and bisexual flowers on three separate plants; or having flowers with stamens only on one, pistils on another, and bisexual flowers on a third. The fig-tree and fan-palm are examples.

TRIOLET. A stanza of eight lines, the first of which is thrice repeated.

TRIO'NES. In *astronomy*, the seven principal stars in the constellation Ursa Major.

TRION'YX. A sub-genus of *Testudo*, Lin., comprising the soft-shelled tortoises. See *TORTOISE*.

TRIP'ARTITE, Lat. *tripartitus*. Divided into three parts.

TRIPETALO'DÆE. The name of the fifth natural order of plants established by Linné, comprising plants having tripetalous flowers.

TRIPET'ALOUS. Three-petalled: *tres* and *petalus*.

TRIPH'THONG, from *τρεις*, three, and *φθγγη*, sound. A coalition of three vowels in one compound sound, or in one syllable, as in *adieu*.

TRIPHYL'LOUS, Lat. *triphyllus*. Three-leaved.

TRIPIN'NATE, Lat. *tripinnatus*. Triply pinnate. Applied to a pinnate leaf of which the secondary petioles produce tertiary petioles, on which the leaflets are implanted.

TRIP'LE TIME. In *music*, is that in which each bar is divided into three measures or equal parts, as three minims, three crotchets, three quavers, &c.

TRIP'LE SALTS. In *chemistry*, these are formed by the combination of an acid with two bases; e.g., microcosmic salt.

TRIP'LET. 1. In *poetry*, three verses rhymed together.—2. In *music*, three notes sung or played in the time of two.

TRIP'PLICATE RATIO. The ratio which cubes bear to each other.

TRIP'OLI. Rotten-stone. A mineral of an earthy fracture, and yellowish-grey colour, brought from Tripoli, in Barbary. M. Ehrenberg has shown that it consists almost entirely of the siliceous exuvia of microscopic animals of the genera *Cocconeum*, *Gonphonema*, &c. It is found at Billen, in Bohemia, at Santaflora in Tuscany, in the Isle of France, &c.

TRIP'PING. In *nautical language*, loosening an anchor from the ground.

TRIQUET'ROUS, Lat. *triquetrus*. Three-sided.

TRIR'EME, Lat. *triremis*. An ancient galley with three banks of oars.

TRISEC'TION, Lat. *trisectio*. Dividing anything into three parts. The *trisection of an angle* was a problem of great celebrity among ancient geometricians. It cannot be accomplished by plane geometry, and requires the use of conic sections or some other curve.

TRISEP'ALOUS, Lat. *trisepalus*. Having three sepals.

TRIS'MUS. Lock-jaw, from *τριζω*, to gnash.

TRISYL'LABLE, from *tres*, three, and *syllabus*, syllable. A word of three syllables.

TRITERNATE, Lat. *tritermatus*. Having three biternate leaves: a species of super-decompound leaf.

TRITICUM. Wheat. An extensive genus of grasses. *Triandria—Digynia*. Name from *tero*, to thrash. The awned and the rush-leaved wheat, and the couch-grass, are the indigenous species of this genus; but the species cultivated are the *T. hybernum* or winter-wheat, the *T. æstivum* or summer wheat, and the *T. spelta* or spelt. See WHEAT.

TRI'TON, } 1. In *mythology*, a demi-
TRITO'NIA. } sea-god, the trumpeter of Neptune.—2. A genus of gasteropods of the order *Nudibranchiata*, shell spiral.—3. A genus of perennial plants. *Triandria—Monogynia*. Cape of Good Hope.

TRI'TONE. In *music*, an interval of four degrees, containing three tones between the extremes.

TRITOX'IDE, from *τρίτος*, third, and *oxide*. An oxide of the third degree.

TRIUM'PHAL ARCH. An architectural monument in the form of an arch, erected in honour and to the memory of some successful commander. The archivault of the Roman triumphal arch was usually adorned with figures of victory holding palms, crowns, &c.

TRIUM'PHAL CROWN. A crown usually

awarded by the Romans to their victorious generals. It was first made of wreaths of laurel, and afterwards of gold.

TRIUM'VIRI (of Rome), were three men who jointly obtained the sovereign power. The first of these were Cæsar, Crassus, and Pompey. Their government was a *triumvirate*.

TRIV'IAL NAME. A *specific* name: that which is added to the generic name to distinguish species.

TRO'CAR. The name of a surgical instrument used in tapping for the dropsy, corrupted from French *un trois quart*, a three quarters, in allusion to the three sides from which the point is made.

TROCHAN'TER, from *τροχάω*, to run. A

name in *anatomy* for two processes of the thigh-bone, distinguished into the greater and less. The muscles inserted into these processes perform the office of running.

TROCHE, from *τροχος*, a wheel. The name in *pharmacy* for a medicine composed of powders, made up with glutinous substances into little cakes and afterwards dried: troches are now called *lozenges*.

TRO'CHEE, *τροχαιος*. A rhythmical measure, consisting of two syllables, a long and a short.

TRO'CHILUS, *τροχίλος*, a small bird. A name applied by Linnæus to the genus of *humming-birds*.

TROCHIT'ICS, from *τροχος*, a wheel. A term in *mechanics* for the science of rotatory motion.

TROCH'LEA, *τροχλία*, a pulley, from *τροχάω*, to run. In *anatomy*, a kind of cartilaginous pulley, through which the tendon of one of the muscles of the eye passes. This muscle is named the *musculus trochlearis*, and the nerve which serves it, the *trochleator*.

TRO'CHOID, from *τροχος*, a wheel, and *ειδος*, like. Wheel-like. In *geometry*, a figure which is described by a circle that rolls in a straight line, with a pointer pin in the circumference, on a fixed plane parallel to or in the plane of the moving circle.

TROCHO'IDES, from *τροχος*, a wheel, and *ειδος*, like. A species of moveable connection of bones, in which one bone rotates upon another.

TRO'CHUS. The name given by Linnæus to a genus of gasteropods of the family *Trochoida*, from *trochus*, a top, in allusion to the conical shape of the shell. About 150 species are known, many of which are fossil. The recent species are generally found near coasts.

TROG'LODITES, from *τρωνήλη*, cave, and *δωω*, I enter. Men who dwell in subterraneous caverns.

TRO'GON. The generic name given by Linné to the *Couroucous*: scansorian birds which build in the hollows of trees, feed on insects, and live solitary in marshy forests. Some part of the plumage is usually of a metallic lustre. Found in both Continents.

TROM'BONE. In *music*, a wind instrument blown by the mouth, resembling in form the military trumpet, of which it is the base. The name implies *great trumpet*.

TRO'NA. A native sesqui-carbonate of soda, found at Lukena, in Africa.

TRON'AGE. Formerly a duty paid for weighing of wool.

TROPÆ'OLUM. Indian cress. A genus of herbaceous plants. *Ocandria—Monogynia*. Name dim. of *trapæum*, or *εμπρακίον*,

a warlike trophy. South America. This fanciful but elegant name was chosen by Linnaeus for this singular and striking genus, because he conceived the shield-like leaves and the brilliant flowers, shaped like golden helmets, pierced through and through, and stained with blood, might well justify such an allusion.

TROPE, Lat. *tropus*, Gr. τροπος, from τρεπω, to turn. In rhetoric, an expression used in a different sense from that which it properly signifies. Tropes are of four kinds, metaphor, metonymy, synecdoche, and irony.

TROPICS, from τροπη, a turning. 1. In astronomy, the circle of the sphere which bounds the sun's declination, south or north: the line drawn through the two solstitial points, at which the sun returns back. The northern extremity is termed the tropic of cancer, and the southern the tropic of capricorn.—2. In geography, the two circles of the globe drawn parallel to the equator, through the beginning of cancer and of capricorn, 23° 28' north and south of the equator.

TROU'ADOURS, Fr. *trouver*, to find. A school of poets who lived from the 11th to the end of the 13th century, in the south of France, Catalonia, Arragon, and the north of Italy.

TROUGH OF THE SEA. The hollow between two waves.

TROUT. A well-known fish, the *salmo fario*, which grows to about a foot in length. It is much modified by the kind of stream or water in which it lives, and hence has arisen an opinion that a great many species exist. The *Lockleven trout* (the *salmo califer*, Parn.), is a distinct species, as is also the *salmon trout* (the *salmo trutta*, Lin.). The Northern charr (*salmo umbla*, Cuv., Yarr.), is also sometimes confounded with the *salmo fario* or common trout. See SALMO.

TRO'VER, Fr. *trouver*, to find. In common law, an action which a man has against one that having found any of his goods, refuses to deliver them up.

TROY WEIGHT. One of the most ancient of the different weights used in Britain, said to have been named from Troyes, in France, where it was first adopted in Europe, being brought from the East during the Crusades. The English Troy pound contains 12 ounces of 480 grains each. Used for weighing gold, silver, &c., and in the compounding of medicines.

TRUCE OF GOD. *Treuga Dei*. A suspension of arms, which occasionally took place in the middle ages, putting a stop to private hostilities.

TRUCK. 1. In navigation, a circular piece of elm, with a small sheave on each side, fixed upon the upper end of a flag-

staff, and used to reeve the halliards.—2. In gunnery, a round piece of wood, formed like a wheel, and fixed on the axle of a carriage, to move heavy ordnance.—3. As applied to railways, a step or platform, running upon wheels, and used for the conveyance of ordinary stages, coaches, and carriages, which are placed upon it.

TRUCK-SYSTEM. A name given to a practice in mining and manufacturing districts, of paying the wages of workmen in goods instead of money.

TRUFFLE. The root of the *Lycoperdon tuber*, which grows abundantly in the warmer parts of Europe. Truffles are reckoned a great delicacy.

TRUMPET, Germ. *trompette*. A wind instrument of music, much used in martial exercises. It is the loudest of all wind instruments. It is commonly made of

brass. There are also speaking and hearing trumpets, which are simply tubular bodies, with a trumpet-shaped mouth.

TRUN'CATE, Lat. *truncatus*, lopped. Appearing as if cut off with a pair of scissors.

TRUNCA'TIFENNES. In entomology, a tribe of Carabici, consisting of *Anthia*, *Graphipterus*, *Aptinus*, *Brachinus*, *Casnonia*, &c. They are so called, because the extremity of their elytra is almost always truncated. See CARABUS.

TRUN'DLE. 1. A little wheel.—2. A low cart with little wheels.

TRUNK, Lat. *truncus*. 1. In architecture, the same as shaft.—2. In animals, that section of the body between the head and the abdomen.

TRUN'NION, Fr. *trognon*. The trunnions of a piece of ordnance are two knobs, which project from the opposite sides, and serve to support the piece on the cheeks of the carriage. The trunnion-plates are the two plates in travelling-carriages, mortars, and howitzers, which cover the upper parts of the side-pieces, and go under the trunnions. The trunnion ring is the next before the trunnions.

TRUSS. 1. In surgery, a bandage for hernia.—2. In carpentry, when girders are very long, or the weight which a floor is destined to support is very great, they are trussed: that is, for a simple beam is substituted a frame so constructed that the pressure is thrown more upon the walls, and the possibility of the beam being broken is prevented. This frame is called a truss. A truss-partition is one formed by a truss.—3. In navigation, a truss is a machine to pull a lower yard

close to its mast, and retain it firmly in that position.—4. In *botany*, a truss is a tuft of flowers formed at the top of the main-stalk of some plants.

TRUS'ING. In *carpentry* and *ship-building* a series of diagonal braces, disposed in triangles, the sides of which give to each other a mutual support or counteraction.

TRUST. In *law*, an estate held for the use of another.

TRUS'TEE. In *law* (1.), one who holds an estate in trust; (2.) one to whom is confided the management of some property, in trust for the benefit of others.

TRUTH. In the *fine arts*, a faithful adherence to the models of nature.

TRY-SAIL. Strain-sail. A sail used by a ship in a storm.

TUE'BER. The name given in Cornwall to a mining instrument, called in other parts a *beele*.

TU'BER. Lat. *tumescere*, to swell. 1. An excrescence.—2. In *botany*, a round turgid root, as that of a turnip. Also the name of a genus of fungi, now included in the genus *Lycoperdon* (q.v.).

TU'BERCLE. Lat. *tuberculum*, dim. of *tuber*. In *pathology*, a peculiar morbid production, which occurs in various textures of the body, in connection with scrofula. It occurs in isolated roundish masses. The matter is unorganised.

TU'BER'CLAR. Lat. *tubercularis*, }
TU'BER'CLATE. Lat. *tuberculatus*. }
Tubercled. Having small warts or tubercles. Applied, in *natural history*.

TU'BEROSE. 1. Tuberosus.—2. A plant. See **POLYANTHUS**.

TU'BEROUS. Lat. *tuberosus*. Knobbed. Applied to parts of plants.

TUBICINEL'LA. A genus of tubular shells, not spiral; placed by Lamarck among the sessile cirrhipedes. Name dim. of *tubicen*, a trumpeter. The species are found imbedded in the blubber of whales.

TUBIC'OLA. The name given by Cuvier to an order of Articulata, comprising Serpula, Sabella, Terebella, Amphitrite, Syphostoma, and Dentalium. The shell is a calcareous tube; whence the name, from *tuba*, and *cola*, an inhabitant.

TUBICOLA'RIÆ. The name given by Lamarck to a genus of Infusoria, of the order *Rotifera*. Name from *tuber*, and *cola*, a dweller, because the species secrete themselves in little tubes, which they construct of foreign molecules.

TUBICOR'NIA. Lat. *tubus cornu*, a horn. A family of ruminants, which have the horns composed of an axis enveloped in a sheath.

TU'NIPORA. } Organ-pipe coral, consist-
TU'NIPORE. } ing of parallel tubes of a strong substance, each containing a polypus. There are several species. Order *Coralliferi*; family *Tubulariæ*.

TUBULA'RIA. A genus of coralliferous polyp, which construct simple or branched tubes of a horny substance. The genus is now subdivided. The sub-genera are *Tubularia marina*, found in salt water; *Tibiana*, Lamour., inhabiting zigzag tubes; *Cornularia*, Lamar., of which the tubes are conical; *Anguinaria*, Lamar., of which the tubes are cylindrical; and *Campanularia*, Lamar., the tubes of which are bell-shaped.

TU'BULATED. *tubulatus*. Synonymous with *tubulous*. A retort which has a small tubular production, like the mouth of a phial, with a stopper adapted to it, is called a *tubulated retort*.

TUES'DAY. The third day of the week: Saxon *Tiwæsdæg* or *Tuesdæg*, from *Tuisco*, the Mars of our ancestors. Hence Tuesday is court or combat-day.

TU'FA. Fr. *tuf*, It. *tufa*. 1. A calcareous deposit from water. See **CALCAREOUS**. **TUFA.**—2. *Tuf*, *tuff*, *volcanic tufa*, are names applied to several different substances, products of volcanic eruptions. Generally it is an aggregate of sand and volcanic ashes and fragments of scoria and lava.

TUIS'CO. In *mythology*, the god of war or the Mars of the northern nations. Tuesday was appointed for his adoration.

TU'LA METAL. An alloy of copper, silver, and lead.

TU'LIPA. } An extensive genus of peren-
TU'LIP. } nial plants. *Hexandria*—*Monogynia*, Nat. order, *Coronariæ*. The yellow tulip is the only indigenous species, but many others are found in the gardens.

TUM'BLE HOME. Applied to the falling in of the upper timbers of a ship's side.

TUM'BRIL. In *gunnery*, a two-wheeled carriage, used in carrying the tools of the pioneers and miners, and occasionally the money and ammunition of the army.

TU'MOUR. Lat. *tumor*, from *tumescere*, to swell. A swelling of a permanent kind, divided into *sarcomatous*, which are firm and fleshy, and *encysted*, which have a sac containing matter more or less fluid.

TU'MULUS (Latin). A small conical hill of earth, raised as a memorial over the remains of the dead, by the early nations of antiquity.

TUN. 1. A large cask.—2. A wine measure containing two pipes of 4 hogsheads, or 252 gallons. It varies, however, in different countries.

TUNE. *tonos*. In *music*, the relation of notes to each other, and the distances between them, whence arises melody.

TUNG'STEN. } from Swed. *tung*,
TUNGSTENUM. } heavy, and *sten*, stone. A greyish-white metal, very brittle and very hard, and fusible in the most intense heat only. The name was originally given by the Swedes to the ore of the

metal, which Scheele first analysed. The same ore has since been discovered in Cornwall and in Bohemia. The base is lime, and the metal combines with it in the form of an acid, the *tungstic acid*; a yellow oxide, differing from the brown in having three atoms of oxygen. Ores are also found of which the bases are manganese, lead, &c., sp. gr. of the metal 17.3. Tungsten is insoluble in acids, and unites with most other metals, but not with sulphur.

TU'NIC, Lat. *tunica*. A garment worn by the Romans under the toga, next to the skin.

TU'NICARIES. A class of acephalous mollusca, in Lamarck's arrangement. Animal gelatinous or leathery, and covered with a double tunic. The external one distinctly organized and provided with two apertures; the interior one analogous to the mantle, provided also with two apertures, the one oral and the other anal. These animals are found both single and aggregate, fixed and floating.

TUN'KERS or DUN'KERS. A subdivision of the Baptists, chiefly in Pennsylvania.

TUN'NEL. A subterranean passage cut through hills, and sometimes under water, as in the case of the Thames tunnel.

TU'NNY. Spanish mackerel. A fish, the *Scomber thynnus*, Lin. See **THYNNUS**.

TUR'BAN. The usual head-dress of the Turks, Persians, and other eastern nations.

TURBIDE. A family of molluscs. Shell solid and spiral; aperture entire, closed by an operculum. Order *Phytophaga*. Named from *turbo*, a top.

TURBINATE, Lat. *turbinatus*. Of a spiral oblong form.

TURBINELLA. The typical genus of the turbinellineæ. Name dim. of *turbo*, a top, in allusion to the form of the shell, which is ponderous, smooth, or slightly nodulous; spire short, papillary; pillar with strong plaits in the middle.

TUR'BITH ROOT, } The cortical part of
TUR'PETH ROOT, } the *Convolvulus turpethum*, brought from several parts of India. Used in medicine. The name is of Indian origin.

TUR'BITH MINERAL, } The yellow sub-
TUR'PETH MINERAL, } or disulphate of mercury.

TUR'BO. A genus of mollusca. Order *Phytophaga*: family *Turboideæ*: sub-family *Turbinae*. Shell turbinate. About 160 species are known, of which about 70 are British. The periwinkle is well known.

TUR'BOT. A well-known and highly esteemed fish, the *Pleuronectes maximus*, Lin. There are large quantities caught on our coasts; yet the London market is almost entirely supplied by the Dutch.

TUR'DUS. The thrush: a genus of passerine birds, belonging to the family *Dentirostres*. Regimen frugivorous, habits

solitary. The name thrush is more particularly applied to the song thrush, or throstle (*T. musicus*, Lin.). The Mocking-bird of North America is also a well-known species.

TURF, Sax. *tyrf*. 1. The upper vegetable mould, with its grass and roots cut into parallelograms (of about 15 inches in length, 6 inches in breadth, and 3 inches in thickness,) with a common spade used to cope dikes, &c.—2. The upper stratum of mossy ground, pared off with a *turf-spade* and used for burning as peats are, but regarded as inferior.

TUR'KEY-RED. A brilliant red dye produced on cotton by madder.

TUR'LUPINS. In *French ecclesiastical history*, one of the numerous by-names by which the sectaries of the 14th century were distinguished.

TUR'MERIC. Indian saffron. The root of the *Curcuma longa*, brought from Bengal, Java, China, &c. It is used in dyeing, affording a beautiful yellow, which however is extremely fugitive.

TUR'MERITE. A rare mineral, consisting of alumina, lime, and magnesia, coloured yellow by oxide of iron. It is so named because its colour approaches to the yellow of turmeric.

TUR'N-PLATE, } On railways, a contri-
TUR'N-TABLE, } vance for removing carriages from one line of rails to another. It is composed of an iron framing, upon which iron grating or wood planking is laid, thereby forming a table or platform, two pair of rails being fixed to the upper surface, crossing each other at right angles, and of corresponding gauge with those laid down upon the line. The platform is further made to turn upon a centre pivot, which rests upon another iron framing set in masonry.

TUR'NIP. 1. A well-known tuberous plant, the *Brassica rapa*, of which there are several varieties.—2. The *Swedish turnip* is the *Ruta baga*.

TUR'NSOLE. Heliotrope. See **HELIO-TROPISM**.

TUR'PENTINE, Lat. *terebinthina*; Fr. *terebenthine*; Ger. *turpenthin*. A resinous substance, obtained by making incisions in the stems of several species of pines. The common turpentine is obtained from *Pinus sylvestris*, or Scotch fir; the Venice turpentine from the *Pinus larix*, or larch; the Candian turpentine or balsam from the *Pinus balsamea*, or balsam pine of the cold parts of North America; the Chian or Cyprus turpentine is got from the *Pistacia terebinthus*, which is cultivated in Chios and Cyprus, and grows only in warm climates. All the turpentines dissolve in rectified spirits or pure alcohol, and by distillation give similar oils, which, from their being procured by distillation, are called *spirits* of turpentine. If the distil-

lation be performed with water, the product is an essential oil, the common oil, essence, or spirit of turpentine of the shops; and if the distillation be performed in a retort, without water, the product is very volatile and pungent, and is termed *ethereal spirit of turpentine*. It is hardly possible to obtain oil of turpentine pure from the shops. Sp. gr. when pure 0·870; as sold 0·876, and often higher.

TURQUOIS, Fr. *turquoise*; Ger. *türkiss*. A gem of a greenish-blue colour, found in opaque and roundish masses, from the size of a pea to that of an egg. Sp. gr. 3·13. The finest specimens are found in Persia, in clay slate.

TURTLE, Sax., from Lat. *turtur*. 1. The turtle dove is the *Columba turtur*, Lin., celebrated for its connubial constancy and affection.—2. The edible sea turtle is the green tortoise (*Testudo mydas*), Lin., found from six to seven feet in length, and weighing from 700 to 800 lbs. Its flesh and eggs are highly esteemed, and furnish a wholesome and palatable supply of food to the mariner in every latitude of the torrid zone. See **TESTUDO** and **TORTOISE**.

TUSCAN ORDER. An order of architec-

ture which admits of no ornaments and

the columns are never fluted. It is not found in any ancient buildings.

TUSK. In *carpentry*, a bevel shoulder made above a tenon, to strengthen it.

TUSSILA'GO. Colt's-foot. A genus of herbaceous plants. *Syngenesia*—*Poly. superflua*. The common and the bastard colt's-foot and the butter-bur are indigenous species. All the exotic species are, however, hardy. Name from *tussis*, cough, because it (*T. farfara*) relieves coughs, and is used as tea for diseases of the chest.

TU'TENAG. 1. In *commerce*, a Chinese word, used to designate the zinc or spelter of China.—2. The metallic compound brought from China, called Chinese copper, or *packfong*.

TU'TIA. A Persian name for the grey oxide of zinc: *Cadmia*, or *Cadmia factitia*, popularly *tutty* (q. v.).

TU'TI, } An Italian term, used in *music*,
TU'TO, } to signify that all the parts are to be played together in full concert.

TU'TY (from *tutia*). The grey oxide of zinc, generally formed when zinc, blende, &c., are subjected to a high heat in a furnace: the *tutty* sublimes and enerusts in the chimney.

TWICE-LAID COR'DAGE. In *ship-rigging*, cordage made of the cast rigging worked up again.

TWINE. A strong thread composed of three strands twisted together.

TYM'BAL. In *music*, a kettle-drum. This consists of two metallic globes, covered with parchment, and beaten with two round mallets.

TYM'PAN. Tympanum. 1. A drum: hence the barrel or hollow part of the ear, behind the membrane of the tympanum.—2. In *architecture*, the area of a pediment, being that part which is on a level with the naked of the frieze. Also the part of a pedestal called otherwise the trunk or dye. The *tympan* of an arch is a triangular tube or space, placed in its corners, usually hollow, and enriched with ornaments as foliage, &c.—3. In *printing*, a frame covered with parchment, on which the blank sheets are put in order to be laid on the form to be impressed.—4. In *botany*, a membrane stretched across the mouth of the theca of a moss.

TYM'PANI. Tympanites. Drum-belly. An elastic distension of the abdomen, which sounds like a drum (*tympanum*) when struck; attended with costiveness and atrophy.

TYPE, Lat. *typus*; Gr. *τυπος*. A sign, symbol, or mark of something. 1. The term is applied in *natural history* to the most strongly characterised species or genus of a group of plants or animals.—2. In *printing*, letter-casting in *type-metal*. Types are named according to their sizes;

Double-pica, Paragon, Great-primer, English, Pica, Small-pica, Long-primer, Bourgeois, Brevier, Minion, Nonpareil, Ruby, Pearl, and Diamond. The first sort gives 4½ lines per foot, the last 205 lines.—3. In the *fine arts*, the model in nature of a pattern used; as a tree, which is the type of a column.

TYPE-METAL. A compound of lead and antimony, in the proportion of 3 to 1, used for making printing-types. Copper is sometimes added.

TY'PHLOPS. The name given by Schneider to a genus of serpents, from τυφλωψ, an earth-worm, because blind; the species being small, and resembling at first glance earth-worms.

TY'PHOID. Like typhus.

TYPHOMANIA, from τυφος, stupor, and μανια, madness. A term expressive of the delirium which accompanies typhoid fevers.

TY'PHOON. A violent hurricane in the Chinese seas.

TY'PHUS, from τυφος, stupor. A form of continued fever, characterised by extreme depression of the nervous powers, and imperfect re-action of the vascular system, giving rise to changes in the circulating fluids, and remarkable disorder of all the secretions.

TYPO'ITES, from τυπος, a type, and λιθος, stone. An old, general name for fossil remains and minerals, having impressions of plants, &c. upon them.

U.

U is the 21st letter and the 5th vowel of the English alphabet.

U'BICUITA'RIANS. A sect of Lutherans, who sprung up in Germany in 1590, and maintained that the body of Jesus Christ is omnipresent (*ubique*).

UKA'ISE. In *Russia*, a proclamation or imperial order.

UL'CEB, Lat. *ulcus*, eris, from ἔλκος. A purulent solution of continuity of the soft parts of an animal body. There are many kinds.

ULE-TREE. The name given to a Mexican tree, a species of *Castilla*, which affords an elastic gum, called *ule* in the country.

UL'LEX. Furze. A genus of bushy shrubs. *Diandria—Decandria*. There are three species, two of which are natives of Britain.

UL'LAGE. In *commerce*, what a cask wants of being full.

UL'MIC ACID. A vegetable substance obtained first from bark of the elm-tree (*ulmus campestris*) by Dr. Thomson, and called by him *ulmin* (q. v.). It combines

with different bases, which it neutralizes, forming *ulmates*. It constitutes the principal part of peat and amber, and is a constituent of vegetable manures.

UL'MIN, (This was the name given to the *ulmic acid* (q. v.), but it is now applied to a black insoluble matter, obtained by boiling the *ulmic acid* with one of the strong acids. There is a brown exudation found upon the bark of trees, and especially of the elm, hence called *ulmin*, which contains a matter similar to *humus*, which contains a matter similar to *humine* (moder of the Germans, *gine* of Berzelius), combined with potash. The action of heat, acids, alkalis, and some other chemical agents upon a variety of organic products is attended by the production of more or less of a similar matter. Boullay represents *ulmin* or *ulmic acid* as a compound of 56.7 per cent. carbon, and 43.3 hydrogen and oxygen in the proportions to form water: he considers it the most important ingredient of the soil as regards its nutritive powers. The substance thus called *ulmin* and *ulmic acid* may be obtained by digesting rotten leaves, bog-earth, turf, and especially the brown exudation of the elm in a boiling or a weak alkaline solution, and precipitating by an acid.

UL'MUS. The elm-tree: an extensive genus of trees. *Pentandria—Digynia*. There are four species found native in Britain: the common elm is the *U. campestris*. The inner bark yields a juice highly useful as an application to burns.

UL'NA, ὀλίνη. The cubit: the large bone of the fore-arm.

ULTIMA'TUM (Lat.). 1. The ultimate, a final proposition or condition.—2. In *diplomacy*, the final propositions, conditions, or terms, offered as the basis of a treaty.

UL'TRA. In *politics*, those who carry to their farthest point the opinions of their party.

ULTRAMAR'INE, from *ultra*, beyond, and *marinus*, sea-colour. 1. Azure stone or lazulite.—2. A beautiful blue pigment, obtained from lazulite (*lapis lazuli*). This is now, however, prepared artificially, and consists of silicate of alumina, and soda, with sulphuret of sodium. It used to be sold at from 5*l.* to 10*l.* per oz.

ULTRAMAR'INE ASHES. The residuum of lazulite, after the ultramarine is extracted. It is comparatively a very inferior pigment, but was formerly used for coarse work.

ULTRAMONTANE. A name applied by Italians to theologians and jurists of countries beyond the Alps.

UL'VA. Laver. A genus of *Algæ*. Name from *ulgo*, ozinecs. Some of the species are edible, and are indeed regarded as

delicacies, as the oyster green laver and shield laver.

UMBEL, } A species of inflorescence,
UMBELLA, } consisting of several flower-
stalks, nearly equal in length, spread
from one centre, their summits forming a
level, convex, or even globose surface. It
is called *rundle* by some authors.

UMBELLATE. One of Linnæus' natural
classes of plants, comprising such as have
the flowers growing in umbels. Parsley
is an example.

UMBELLULE, } A partial or little umbel.
UMBELLULA, }

UMBER. Brown ochre. 1. In *ornitho-
logy*, an African bird, the *Scopus umbretta*,
Brisson, so named from its amber or
brown colour.—2. An earthy mineral
of a brown colour, found in Cyprus. It is
used as a pigment.

UMBILICAL CORD. In *botany*, an elon-
gation of the placenta in the form of a
cord.

UMBILICUS. 1. The navel.—2. In *bo-
tany*, formerly the generic name of the
wall pennywort, and yellow navel-wort,
now placed in the genus *Cotyledons*.—
3. In *geometry*, synonymous with *focus*.—
4. In *conchology*, the depression in the
centre, round which the shell is convo-
luted.

UMBO. 1. The pointed boss of a shield.
—2. In *botany*, the knob in the centre
of the pilus, or hat of the fungus tribe.

UMBRA. A shadow. In *astronomy*, ap-
plied to the dark cone projected from a
planet or satellite, on the side opposite
the sun.

UMBRELLA. 1. A well-known article
of defence against rain, &c. The name
is the Latin dim. of *umbra*, a shade.—
2. A genus of sea-slugs.

UMPIRE, Lat. *imperium*. 1. A person to
whose sole decision a controversy or
question between parties is referred.—
2. A third person called in to decide a
question submitted to arbitrators, when
the arbitrators do not agree in opinion.

UN'CIA (Lat.). The twelfth part of any-
thing. The term was formerly applied
both to an ounce and an inch.

UNIFORM, from *uncius*, a hook, and
forma, a likeness; hook-like. Applied to
bones. The *unciform bone* is the last bone
of the second row of the carpus.

UNCOMMON CHORD, in *music*, is another
term for the chord of the sixth.

UNCONFORMABLE. Not conformable.
Applied in *geology* to strata lying in a
different plane from the subjacent strata,
upon which they rest.

UNDECAGON, from *undecim*, eleven, and
gonia, angle. A geometrical figure of
eleven angles and sides.

UN'DERSHOT-WHEEL. In *hydraulics*, a
wheel with a number of *flat boards* which
receive the impulse of the water con-

veyed to the lowest part of the wheel by
an inclined canal, in contradistinction to
an *overshot wheel*.

UN'DERPIN'ING. In *architecture*, bring-
ing a wall up to the ground-sill. It
usually denotes such alterations as are
made on the foundations of walls as re-
quire them to be supported by strong tim-
ber shoars and needles.

UN'DERTOW. A current below the sur-
face of water different from that above.

UN'DERWRITER. An insurer. See IN-
SURANCE.

UN'DULATE, Lat. *undulatus*, waved.
Having a waved surface. Applied to
leaves whose margins are waved obtusely
up and down.

UNDULATION. In *physics*, a species of
motion transmitted successively through
different parts of a medium, without ten-
dency to continue that motion without
renewed impulses. Sound proceeds by
undulations in the atmosphere.

UN'DULATORY THEORY. In *optics*, the
hypothesis according to which light is
transmitted by the undulations of an
elastic medium.

UN'FORMED STARS. In *astronomy*, such
as are not included in any of the constel-
lations.

UN'GUAL, from *unguis*, a nail or claw.
An epithet applied to bones which have
attached to them a nail or claw.

UNGUIC'ULATA. A primary division of
the class *mammalia*, having the digits
armed with claws.

UN'GUIS or CLAW. The narrow part of
the base of a petal. A measure of length
equal to half an inch.

UN'GULA, Lat. *hoof*. In *geometry*, a solid
formed by cutting off a part of a cylinder,
cone, &c., by a plane cutting the base ob-
liquely.

UNGUL'ATA. An order of *mammalia*
having the feet *ungulate* or enveloped in
hoofs.

UN'GULATE. 1. Hoofed: *ungula*, a
hoof.—2. Shaped like a hoof.

UNICAP'SULAR, Lat. *unicapsularis*, hav-
ing one capsule to each flower.

UNICORN. An animal with one horn:
unus, one, and *cornu*, a horn. The unicorn
is nowhere else to be found than as a
supporter of the British arms.—2. The
narwhal is sometimes named the *sea-
unicorn*.

UNIFORMITY. The act of *uniformity* is
an act of parliament by which the form
of public prayers, administration of sacra-
ments and other rites, is prescribed to be
observed in all the churches.

UNIO. 1. A pearl.—2. A genus of tes-
taceous acéphala belonging to the family
Mytilacea, commonly called fresh-water
muscles. The unios inhabit fresh water,
preferring running streams. Numerous
species, remarkable for size or form,

Inhabit the lakes and rivers of the United States of America.

U'NION BY THE FIRST INTENTION. A phrase applied by surgeons to the healing of wounds by adhesion, without suppuration or granulation.

UNIP'AROUS, Lat. *uniparus*. Producing one only at a birth.

U'NISON, from *unus*, and *sonus*, sound. A term in *music*, implying that a string, &c. gives a sound coincident with another, proceeding from an equality in the number of vibrations made in a given time by the sonorous body. If two strings of the same material have equal length, thickness, and tension, their sounds will be in *unison*. The term is applicable whether the sounds be produced by instruments or the organs of the human voice.

U'NIT. 1. Lat. *unus*, one; *unitas*, unity. One.—2. A determinate quantity, by the constant repetition of which any other magnitude of the same kind is measured.

UNITA'RIANISM. In *theology*, the doctrine of Unitarians, who contend for the unity (*unitas*) of the Godhead, in opposition to the Trinitarians, and who, of course, deny the divinity of Christ.

U'NITY. 1. In *mathematics*, the abstract expression for any unit whatever.—2. In *poetry*, the principle by which a uniform tenor of story, and propriety of representation, is preserved. In the *drama*, the unities are three; the unity of *action*, of *time*, and of *place*.

U'NIT JAR. A small insulated Leyden jar, placed between the electric machine and a larger jar or battery, to announce the number of discharges which have passed into the larger jar.

U'NIVALVE. 1. One-valved: univalvular.—2. A shell which is complete in one piece.

UNIVER'SALISM. In *theology*, the doctrine that all mankind will be saved or made happy in a future state.

UNIVER'SITY. An establishment for the purposes of instruction in science and literature, and having the power of conferring honorary dignities or degrees.

U'PAS. The name given in Java to several deadly poisons, of which the *Bohon upas* and the *upas tienté*, are the most celebrated. They belong to different genera, and owe their poisonous properties to different principles. The *Bohon upas* is a bitter gum-resin, which exudes from incisions in the bark of a large tree, called *antiar* or *antsar* by the Javanese, and *Antiaris toxicaria*, or *Ipo toxicaria* by botanists. It is a quick and rapid poison. The *Upas tienté* is the produce of the *Strychnos tienté*, and owes its deadly effects to strychnia. The natives of Java and the neighbouring islands used these poisons to render their arrows more deadly.

U'PUA. The hoopoe: a genus of passerine birds belonging to the family of *Tenuirostres*. The species are characterised by an ornament on the head, formed of a double range of long feathers, which they can erect at will.

U'RANITE. Pechblende. One of the ores of uranium, in which the metal is combined with sulphur and a portion of iron, lead, and silex. Colour greenish-black. See URANIUM.

URA'NIUM. A very rare metal, discovered by Klaproth in uranite or pechblende, found in the mine near Johann-Georgen-Stadt, in Saxony. Another ore, called *green uranite*, *uran-mica*, *chalcidite*, &c., occurs in Cornwall. The ores are reduced by various devices; but the metal when procured has so little lustre, that its metallic nature can hardly be recognised by the naked eye. Sp. gr. about 9.

URANOL'OGY, from *ουρανός*, heaven, and *λογος*, discourse. The science of the heavens: astronomy.

URANOS'COPIUS. The star-gazer: a genus of acanthopterygious fishes of the percoid family, so named from *ουρανός*, heaven, and *σκοπεω*, to view, because the eyes are placed on the superior surface of the nearly cubical head.

URANUS, from *ουρανός*, heaven. The name now generally adopted for the planet discovered by Dr. Herschel, and called by him the *Georgium sidus*.

URCE'OLATE, Lat. *urceolatus*. Pitcher-shaped: bellied out like a common jug.

UR'CHIN. 1. The hedge-hog (q. v.).—2. The name *sea-urchin* has been given to the *Echinus* (q. v.).

U'REA. A constituent of urine. It crystallises in four-sided prisms, which are transparent and colourless, with a slight pearly lustre.

U'RETER, from *ουρ*, urine. A name in *anatomy* for the membrane canal which conveys the urine from the kidney to the bladder.

URE'THERA. The canal by which the urine is voided.

U'RIA. The guillemot: a genus of birds, separated from the genus *Colymbus*, Lin., by Brisson. The wings are shorter than those of the divers; but they are chiefly characterised by the absence of the thumb. They live among rocky precipices, and feed on fish.

U'RIC ACID. See LITHIC ACID.

URN, Lat. *urna*. 1. A sort of antique vase, which was chiefly used to preserve the ashes of the dead, and hence called *Cineraria*.—2. In *mosses*, it is the hollow urn in which the spores are lodged.

UNOS'COPY. The judgment of diseases founded on an inspection of the urine.

UROPO'GIUM, *ουρα*, a tail, and *πογ*,

behind. The base of the tail in animals and birds.

UR'sa. The bear. In *astronomy*, the *Ursa Major*, or Great Bear, a constellation north by Camelopardalis and Draco, east by Canes Venatici, south by Leo Minor, and west by Lynx and Camelopardalis, popularly called *Charles's Wain*, and in some places the *Plough*. According to some, the Great Bear is Calisto, an attendant of Diana, the goddess of hunting. *Ursa Minor*, the Little Bear, called by the Greeks *Cynosura*, or the Dog's-tail, is the north-pole constellation, easily distinguished by 7 stars in the same form, but in a contrary position, to those of the Wain in the Great Bear.

UR'sus. The bear. A genus of plantigrade mammalia, of the order *Carnaria*, and family *Carnivora*, Cuv. The bears are stout-bodied animals, with thick limbs, and a very short tail. They excavate dens, and construct huts, in which they pass the winter in a state of somnolency, more or less profound, and without food. It is in these retreats that the female brings forth her young. The species are not easily distinguished, yet the genus is much divided. There is the European Brown Bear, the North American Black Bear, the Polar Bear, the Thibet Bear, the Malay Bear, the Grisly Bear; and India has several species of Black Bears, among which is the Thick-lipped Bear, which is a great favourite among the Indian jugglers, on account of its ugliness.

UR'tica. The nettle: an extensive genus of plants. *Monocia*—*Tetrandria*. Name *ab urendo*, because it excites a painful heat like that of burning. The common, small, and Roman nettles, are natives of Britain.

URTICA'tion. The whipping of a benumbed or paralytic limb with nettle (*urtica*), in order to restore its feeling.

U'sANCE. In *commerce*, a period of time after the date of a bill of exchange allowed for payment of the same: it answers to our *three days of grace*, but differs according to the custom or *usage* of different places, where the bill may be drawn.

USE. In *law*, imports a trust and confidence reposed in a man for the holding of lands granted and limited to A for the use or benefit of B. Stat. 27, Henry VIII., c. 10, unites the use and possession.

US'n'ER, Fr. *huissier*, a door-keeper; *huiss*, a door. The title of several officers, whose business it is to introduce strangers, execute orders, walk before persons of rank, &c. There are four *gentlemen-ushers* in the royal household, one in the exchequer, &c. Schoolmasters have assistants denominated *ushers*, probably because they are entrusted with the younger

classes, and introduce them into the higher branches of scholarship.

USQUEBAU'GH. An Irish word, meaning *mad-water*, originally and appropriately used to designate the pure spirituous liquor distilled from malt, &c., and now generally known as *whiskey*, a term corrupted from *usquebaugh*. The term *usquebaugh* is, however, now applied technically to a strong compound spirit, distilled from cinnamon, coriander, nutmeg, mace, aniseed, citron, thyme, balm, savory, mint, rosemary, Spanish liquorice, sugar candy, raisins, and dates infused in brandy!

USUCA'TION, from *usus*, use, and *capio*, to take. A term in *civil law*, having the same meaning as prescription in common law; the acquisition of the title of right to property by the uninterrupted and undisputed possession of it for a certain term prescribed by law.

UT. In *music*, the first of the musical syllables.

UTERINE, Lat. *uterus*, belly. In *civil law*, an uterine brother or sister is one born of the same mother.

UTERINE. Appertaining to the uterus or womb.

UTERUS. The womb.

UTILITA'RIANS. A sect of politicians, who would try the excellence of modes of government, &c. simply by their utility.

UTI POSSIDE'TIS. In *politics*, a treaty by which belligerent parties are left in possession of what they have acquired during the war.

UTRICLE, } Lat. *utriculus*, from *uter*,
UTRICULE, } a bottle. A little bag, bladder, or vesicle. Applied in *botany* to a sort of capsule which never opens, but falls off with the seed.

U'VEA, from *uva*, grape. The black pigment of the eye on the back part of the iris.

U'VULA, dim. of *uva*, a grape. The conical fleshy substance hanging over the root of the tongue.

U'VULA-SPOON. A surgical instrument, like a spoon, for conveying any substance into the cavity behind the uvula.

V.

V, the twenty-second letter of the English alphabet, as a numeral stands for 5, and with a dash over it, \bar{V} , for 5,000.

VA. An Italian word used in musical compositions as a direction to proceed, as *va crescendo*, go on increasing.

VACCIN'IUM. A very extensive genus of permanent plants. *Octandria*—*Mono-gynia*. Name *quasi vaccinium*, in allusion to the berries produced by various of the species. The bleaberry, bogwhortle berry, and the bilberry are natives of Britain. Most of the species are hardy plants.

VADÉ ME'CUM (go with me). A Latin phrase, used as the title of a book that is very familiar and concise in its instructions or directions. The little *hand-book*, brought from the Greek *Enchiridion*, has been of late more fashionable than *Vadé Mecum*.

VAGAN'TES, Lat. *vago*, I wander. A tribe of spiders, which run after and seize their prey with agility.

VAGI'NA, Lat. *sheath*. The leaf-stalk of those plants in which it rolls round the stem.

VAGINATE, Lat. *vaginatus*. Sheathed.

VAGINOPEN'OUS, from *vagina*, a sheath, and *penna*, a wing. Sheath-winged.

VAIR. In *heraldry*, a kind of fur or doubling, consisting of divers little pieces, argent and azure, resembling a Dutch U or a bell-glass.

VALE'SIANS. An ancient sect of heretics.

VALHALLA. In *Scandinavian mythology*, the palace of immortality.

VAL'AR CROWN. A crown bestowed, among the Romans, on him who first entered an enemy's camp.

VAL'LUM. The trench and parapet with which the Romans fortified their camps.

VALONIA. A modern Greek name, adopted in *commerce* for a species of acorn exported from the Morea and the Levant, for the use of tanners. The oak which produces it is named *velanida*. The acorns are worth, in London, from 12*l.* to 16*l.* a ton.

VALVE, Lat. *vales*, folding-doors. 1. In *mechanics*, a lid contrived to open one way to admit a fluid, gas, steam, &c., into a tube, but which shuts, when pressed from the other side, to prevent the return of the fluid. Valves are of various forms, as *hinge valves*, *conical valves*, *sliding valves*, *revolving valves*, &c.—2. In *anatomy*, a kind of membrane which opens in certain vessels to admit the blood, and shuts it to prevent its regress.—3. In *conchology*, the shell. When the whole shell is in one piece it is called a *univalve*, when in two pieces a *bivalve*, and when of more than two pieces, the shell is a *multivalve*.

VAM'BRACE. In *plate armour*, a protection to the arm below the elbow.

VAM'PIRE. 1. In *zoology*, a species of large bat, the *Vespertilio vampyrus*, Lin., called the *Ternate Bat*. It inhabits Guinea, Madagascar, the East India isles, New Holland, and New Caledonia. It at-

tacks sleeping animals, piercing a vein so gently that they do not awake, and sucks their blood.—2. The same name is sometimes given to a large bat of South America, the *V. spectrum*, Lin.

VANA'DIUM. A scarce metal, recently discovered in Sweden, and thus named after Vanadis (an appellation of Freya), the principal female deity of ancient Scandinavia. It has only as yet been obtained from iron, and the scoriae of iron furnaces, and in some of its properties bears some relation to chromium, and in others to uranium.

VANE. A weathercock. In *ships*, a piece of bunting is used for the same purpose, and has the same name.

VANGS. In a *ship*, braces to steady the mizzen-gaff.

VANILLA. A Spanish name, adopted in *commerce*, for the oblong narrow pod of the *Epidendrum vanilla*, a species of vine, extensively cultivated in Mexico, and some of the warm parts of America. It is aromatic, and is much used by chocolate-makers, confectioners, perfumers, distillers, &c.

VAN'ISHING FRACTIONS. In *algebra*, are those fractions which, by giving a certain numerical value to any variable quantity which enters into them, both numerator and denominator become zero, and consequently the fraction itself becomes $\frac{0}{0}$.

V'APOUR, Fr. *vapeur*. 1. The state of a fluid or solid rendered aeriform by application of heat, and capable of being condensed or brought back to the liquid or solid state, by reducing the temperature. The vapour of water is particularised by the name of *steam* (q. v.).—2. In *meteorology*, all substances which impair the transparency of the atmosphere, are popularly named *vapours*, though this term is only applied technically to the invisible and condensable product of vaporisation.

V'APOUR-BATH. A place in which a body is subjected to the steam of hot water.

V'ARIANCE. A term in *law*, when there is a difference of statement between two material documents in a cause.

VARIABLE QUANTITIES. In *mathematics*, are such quantities as are continually increasing or decreasing. They are usually denoted by *x*, *y*, *z*, whereas the constant quantities are denoted by *a*, *b*, *c*, &c.

VARIATION. 1. Of the *compass*, the deviation of the magnetic needle from its parallel with the meridian, or east and west of the true north and south poles.

—2. *Variation of curvature*, in *analytical geometry*, is the change which takes place in the curvature, in passing from one point of a curve to another.—3. *Variation*, in *music*, a difference in perform-

ing the same air, either by subdivision of its notes, or by the addition of graces.

—4. *Variation of the moon*, in astronomy, is an inequality of the moon's motion, depending on the angular distance of the moon from the sun.

VARIOLLA, dim. of *variola*. The chicken-pox or water-pox. A well-known eruptive disease, consisting of vesicles scattered over the body.

VARIIFORM. Resembling a varix.

VARICOSE, from *varix*, and *πλην*, a tumour. A swelling of the veins of the scrotum.

VARIETY. In natural history, a term used to designate animals, shells, plants, &c., which differ in some circumstances from others of the same species, but not so essentially or permanently as to warrant their being separated as distinct species.

VARIOLA, from *varius*, changing colour. The small-pox.

VARIOLOID, } Resembling variola or
VARIOLOUS, } small-pox.

VARIORUM. In literature, an abbreviation of *cum notis variorum*, with the notes of different authors. Used in characterising an edition of a classic author, with annotations by different hands.

VARIX. In surgery, a permanent dilatation of a vein.

VARNISH, Fr. *vernis*, low Lat. *vernix*. A solution of resinous matter, which is made to be spread over the surface of any body, in order to give it a shining, transparent, and hard coating, capable of resisting, in a more or less degree, the influence of air and moisture. The common solvents are alcohol and turpentine; but the resins are numerous, as are consequently the sorts of varnishes.

VASCULAR, from *vasculum*, dim. of *vas*, a vessel. Consisting of vessels within which fluids are confined, and by which their course and their velocity are regulated.

VASE, Lat. *vas*. 1. In architecture, a name given to the bell or naked form of the Corinthian capital, on which the leaves are disposed.—2. An ornament of sculpture, placed on socles and pediments, representing such vessels as the ancients used in sacrifices. Antique vases are of great value among antiquarians, and many of them, both Etruscan

and Grecian, have been dug up in Italy. The figure represents a Grecian vase.

VAS'SAL, Welsh, *gueds*, a young man or page. The holder of a fief by fealty and service, of a feudal lord.

VAS'TUS. In anatomy, a name given to certain muscles of the thigh.

VATI'CAN. One of the hills on which the city of Rome is built; on this stands a celebrated palace of the Pope, that bears the same name; and at the foot of the hill is the Cathedral of St. Peter.

VAU'DEVILLE (Fr.). A species of song, in French poetry, frequently of a satirical turn, consisting of several couplets and a refrain, introduced into theatrical pieces.

VAULT, Ital. *volto*. An arched roof so contrived that the stones which form it sustain each other. There are numerous kinds of vaults, named according to their form, as cylindric, surmounted, rampant, conic, spherical, annular, simple, compound, cylindro-cylindric, and groined vaults.

VE'ADER. The 13th month of the Jewish ecclesiastical year.

VECTIS (Lat.). Synonymous with lever.

VEDAN'TA. A Hindoo sect, whose philosophy is founded on the Vedas.

VE'DAS. The Hindoo sacred writings.

VEDET'E (Fr.). A sentinel on horse-back.

VEER'ING. Wearing. A term in navigation for the operation to which a ship, in changing her course from one board to the other, turns her stern to windward: in opposition to *tacking*, wherein the bow is turned to the wind and the stern to leeward.

VEGETABLE EARTH. Soil in which decayed vegetable matter is much more prevalent than the primitive earths.

VEGETABLE KING'DOM. That department of nature which embraces the various organised bodies to which we indifferently give the names of vegetables and plants. The natural history of this department is *botany*, which, in its widest sense, embraces the anatomy, physiology, chemical composition, economical uses, and scientific classification of plants.

VEIL. The horizontal membrane in fungi, connecting the margin of the pileus with the stipes.

VEIN, Lat. *vena*. 1. In anatomy, a long membranaceous canal, which continually becomes wider, does not pulsate, and returns the blood from the arteries to the heart.—2. In geology and mineralogy, fissures in rocks, filled up by mineral or metallic substances, differing from the rocks in which they are situated. It is in veins that metallic ores are commonly found.

VEIN-STONES, or **GANGUES**, are the mineral substances which accompany and often inclose the metallic ores.

VEL'NI. See VALONIA.

VEL'LA, Lat. *velum*, a sail. A genus of aculeophes, possessing a vertical crest or sail, by which they are wafted along the surface of the ocean.

VEL'UM, Fr. *velin*, from Lat. *velo*. A fine sort of parchment (q. v.).

VELO'CE, It. *swift*. In music, signifies a rapid manner of performing.

VELO'CIPED. A vehicle consisting originally of a piece of wood resting on two wheels, and so constructed, that an individual might seat himself upon it as upon horseback, yet so that the rider could propel the machine by pressing his feet slightly against the ground. He could in this way travel at the rate of ten miles an hour. This rude first idea has now been completely superseded by the more modern BICYCLE, by which the front wheel is converted into a driving wheel or propeller, by means of a crank handle on each side of it, which the rider works with his feet. By this improved arrangement a greatly increased velocity may be achieved, with much more comfort and ease to the rider. Tricycles or vehicles with two wheels behind and a driving wheel in front, and capable of carrying luggage, may be also used on this improved principle; or even four wheels and a driving wheel might be employed and made useful for the conveyance of infantry with their personal baggage in time of war, and they might be armed with a rifle-proof shield, and provided with a bed of Mackintosh cloth, to be either swung or laid on damp ground with impunity, saving soldiers both fatigue and exposure.

VELO'CITY. In dynamics, the ratio of the quantity of linear extension that has been passed over in a certain portion of time; or it is the ratio of the time that has been employed in moving along a determinate extension.

VEL'VET, Ital. *velluto*, from Lat. *vellus*, hair or nap. A rich silk stuff, covered on the outside with a close, fine, short shag or nap. The same name is also given to cotton stuffs manufactured in the same way.

VE'NA CAVA. Hollow vein. A large vein (the largest in the body), which transmits the blood from the extremities to the heart.

VE'NA POR'TA. A great vein, so named from its being situated at the entrance of the liver. It receives the blood from the abdominal viscera, and carries it into the substance of the liver.

VEN'EER. In cabinet work, a thin piece of a more valuable kind of wood, for covering furniture, &c., which is made of a more common kind.

VENETIAN. Appertaining to Venice. *Venetian blind*, a peculiar blind for windows, formed of slips of wood set in a frame, each slip being moveable on end-

pins, and so disposed that they may be made to overlap each other when close, and show a series of open spaces, for admission of air and light in the other position. These movements are managed without trouble by means of two cords. *Venetian door*, a door which is lighted at each side. *Venetian window*, a window in three separate apertures. *Venetian chalk*, steatite.

VENETIAN SCHOOL. In painting, its distinguishing characteristic is colouring, and a consummate knowledge of chiaro-scuro, in which all is spirit, grace, and faithfulness.

VE'NIAL SIN, Lat. *venia*, forgiveness. In *Romish theology*, a sin which does not destroy sanctifying grace.

VENI'BE FACIAS. A judicial writ, in law, directed to the sheriff, to cause a jury to come or appear in the neighbourhood where a cause is brought to issue, to try the same.

VENTA'LE. The visor of a helmet.

VEN'TER (Lat.). In insects, the lower part of the abdomen.

VENTILA'TOR. In mechanics, a machine by which noxious air may be discharged from places where it is stagnant, as hospitals, gaols, &c., and replaced by fresh air.

VEN'TRICLE, from *venter*. A term applied by anatomists to the cavities of the brain and heart.

VEN'TRICOSE, Lat. *ventricosus*, bellied, venter, a belly. Distended, bellying. Applied chiefly in botany.

VENTRIL'OUISM, from *venter*, the belly, and *loquor*, to speak. The formation of the voice within the mouth, in such a way as to imitate other voices than that which is natural to the person, and so as not to be seen to move the lips. This art depends on the organs of speech being very perfect, but requires no organisation different from that which is commonly found in man. A *ventriloquist* is a professor of ventriloquism.

VEN'UE, Lat. *vicinetum*, neighbourhood. In law, the county in which an action is to be tried, which is specified in all material allegations in the pleadings.

VENUS. 1. In mythology, the goddess of beauty and love among the Romans; the Greeks called her *Aphrodite*.—2. In the old chemistry, copper.—3. In malacology, a genus of testaceous Accephala, belonging to the *Cardiacea*.—4. In astronomy, one of the planets, situated between the Earth and Mercury, and never distant from the Sun more than 45°. Diameter, 9330 miles; distance from the Sun, 68,891,436 miles: year, 224 days and 17 hours. Designated by ♀.

VEPRE'GULE. The 31st natural order of Linné, comprehending plant shrubs, as the bramble (*repres*), a tumble growth

VER'ATRIA. } An alkaline principle,
VER'ATRINE. } extracted from the white
 hellebore (*Veratrum album*), and some
 other plants. It is white and pulverulent,
 has no smell, but is very acrid.

VER'ATRUM. A genus of perennial
 plants. *Polygamia—Monœcia*. Name
 probably from *verè atrum*, truly black, be-
 cause the root is extremely of that colour.
 The white and the black hellebore are
 European species. The first is much used
 in medicine.

VERB. Lat. *verbum*. In *grammar*, a part
 of speech which expresses action, motion,
 being, suffering, or a request or com-
 mand to do or forbear. The verb affirms,
 declares, asks, or commands.

VERBAS'COM. Mullein. A genus of her-
 baceous plants. *Pentandria—Monogynia*.
 Name *quasi barbascom*, from its hairy
 coat. There are seven British species.

VERBA'TIM. A Latin word signifying
 "word for word;" used of translations.

VERBE'NA. Vervain. An extensive ge-
 nus of herbaceous plants. *Didynamia—*
Angiospermia. Name *quasi herbena*, a dis-
 tinction for all herbs used in sacred rites.
 The only British species is the official
 vervain, formerly much used in medi-
 cine.

VERDE-AN'TIQUE. In *mineralogy*, an ag-
 gregate of serpentine and white crystal-
 lised marble, irregularly mingled. It
 takes a fine polish, and is much used for
 ornamental purposes.

VER'DICT. In *law*, the answer of a jury
 to the court on the matter of fact in any
 cause committed to their trial.

VER'DIGRIS. Lat. *viride æris*. A rust of
 copper, formed by the corrosion of the
 metal by an acid. It is chemically a di-
 acetate of copper. Poisonous.

VER'DITER. *Terre vert.* A pigment of a
 blue or blueish green colour, called *Bre-
 men green*, from its having been first ma-
 nufactured at Bremen. Its base is copper.

VERGE OF THE COURT. The bounds of
 the jurisdiction of the lord-steward of the
 king's household: so named from the
 verge, or rod of office, of the marshal.

VER'GER. from *virga*, a rod. 1. He who
 carries the mace before the bishop, dean,
 &c.—2. An officer who carries a white
 wand before the justices of either bench
 in England.

VERGETTE'. In *heraldry*, 1. A pallet.—
 2. A shield divided with pallets.

VER'JUICE. Fr. *ver, jus*, the juice of green
 fruits. An acid liquor prepared from
 grapes or crabs; principally used in sauces
 and ragouts.

VER'MES. Worms. The sixth class in
 Linneus's arrangement of the animal
 kingdom. It comprised all those inverte-
 bral animals divided into annular sections,
 without antennæ, legs, distinct head,
 true blood, or voice. The orders are In-

testina, Mollusca, Testacea, Zoophyta,
 and Infusoria.

VERMICEL'LI. Ital., from Lat. *vermiculi*,
 little worms. A species of wheaten paste,
 formed into long, slender, hollow tubes
 or threads; used in soups. Vermicelli is
 the same substance as macaroni, the only
 difference being that the latter is in
 larger tubes. It is prepared in greatest
 perfection at Naples.

VERMIC'ULAR. Lat. *vermicularis*. (1.)
 Shaped like or having the characters of
 a worm. (2.) Having a motion like that
 of a worm, as the peristaltic motion of
 the intestines performed by contraction
 from above downwards.

VERMIFUGES. Lat. *vermifugus*, from
vermis, a worm, and *fugo*, to drive away.
 Anthelmintic medicines.

VERMIL'ION. Cinnabar. A bi-sulphu-
 ret of mercury. It occurs in nature, as
 an ore of quicksilver, and is prepared
 by the chemist as a beautiful red pigment.
 The name is Italian, *vermiglio*, from Lat.
vermiculus, from *vermis*, which has been
 applied to Kermes. The native bi-sul-
 phuret of mercury is commonly called
cinnabar, and the factitious *vermilion*.

VER'MIN. Quadrupeds, reptiles, worms,
 or insects, which are injurious to cul-
 tivators.

VERNA'TION, from *ver*, the spring. A
 term in *botany* for the manner in which
 the leaves are folded or wrapped up, and
 expanded in the spring.

VER'NIER. A graduated index, which
 subdivides the smallest division of any
 scale with greater accuracy than can be
 obtained by simple estimation of a frac-
 tional part, as indicated by a pointer. It
 is the same as the *wininus*, and named
vernier, from the inventor.

VER'UCOSE. Lat. *verrucosus*, full of
 warts: *verruca*, a wart. Applied in natu-
 ral history.

VERSED SINE (of an arc). The portion
 of the diameter of the arc intercepted be-
 tween the sine and the commencement of
 the arc. See *SINE*.

VERST. A Russian measure of length,
 equal to 3500 feet or 1166 $\frac{2}{3}$ yards.

VERT. Fr. *green*. In *heraldry*, one of
 the tinctures employed in blazonry.

VERTE'BRA. from *verto*, to turn. 1. A
 joint of the spine or back-bone of an ani-
 mal.—2. In the plural, *vertebræ*, the
 term is often used to designate the whole
 spine.

VERTE'BRATA. Lat. *vertebra*. A pri-
 mary division of the animal kingdom, in-
 cluding animals having a vertebral co-
 lumn connected to the brain.

VERTE'BRATE. Lat. *vertebratus*. Having
 an osseous spinal column.

VERTICAL. Perpendicular to the plane
 of the horizon. In *astronomy*, the *verti-*

cal point is that point immediately over the head of the observer: it is the *zenith*. The *vertical circle* is a great circle passing through the zenith and nadir. The meridian of any place is a vertical circle, and these vertical circles are termed *azimuths*. The *prime vertical* is likewise a great circle of the sphere, perpendicular to the horizon, and passing through the zenith and the east and west points. In *perspective*, the *vertical plane* is a plane perpendicular to the geometrical plane, passing through the eye and cutting the perspective plane at right angles.

VERTICILLUS. A ring for organs of any kind placed round a stem upon the same plane, called also a *whorl*.

VERTICIL, Lat. *verticillum*. A whorl. The botanical name of a species of inflorescence in which the flowers surround the stem in a sort of ring.

VERTICILLATE. The 42nd of the Linnean natural orders of plants, including those whose flowers grow in the form of a whorl (*verticillus*) round the main stem, as the mint.

VERTICILLATE, Lat. *verticillatus*, whorled. Growing in rings or whorls. See **VERTICIL**.

VESANIA, Lat. pl. of *vesania*, madness. An order of diseases in the class *Neurosis*, comprising those in which the judgment is impaired, without coma or pyrexia.

VESICATORY, Lat. *vesicatorius*. Having the property when applied to the skin of raising a bladder (*vesica*), by causing a fluid to collect between the cuticle and cutis: blistering.

VESICLE, Lat. *vesicula*, dim. of *vesica*, a bladder. An elevation of the cuticle of an organised body, like a little bladder.

VESPA, a wasp. A genus of hymenopterous insects, belonging to the family *Diptera*, Cuv. Some of the *vespariæ* form communities, composed of three sorts of individuals, males, females, and neuters; the females and neuters are armed with an extremely powerful and venomous sting. All the larvæ and nymphs which cannot complete their metamorphosis before the month of November, are put to death and dragged from their cells by the neuters or labourers. These last perish along with the males on the approach of winter. Some of the females survive, and become the founders of new colonies. Wasps feed on insects, viands of various sorts, fruit, &c. Their habitations differ according to the species.

VESPER. *Hesperus*. The evening star. The planet Venus when eastward of the sun, and consequently setting after him.

VESPERS. In the *Romish church*, that part of the service which is rehearsed in the afternoon, answering to our evening prayers.

VESPERTILIO. The bat. A genus of mammalia: order *Carnaria*: family *Cheiroptera*. The arms, forearms, and fingers of the bats are excessively lengthened forming, with the membrane that occupies their intervals, true wings, possessing even a greater extent of surface than those of birds, and consequently enabling the animal to fly very high, and with great rapidity. The genus is numerous, and offers many subdivisions, as *Pteropus*, Bris., of which there are numerous species, found throughout the south of Asia; *Molossus*, *Noctilio*, *Vampirus*, &c., &c., distinguished by the absence or presence of a tail, &c.

VESTA. 1. In *mythology*, a goddess of fire among the Romans, the daughter of Rhea and Saturn, and sister of Ceres and Juno.—2. In *astronomy*, a small planet, discovered by Dr. Olbers, in 1807. It revolves round the sun in 3 years and 68 days, and has the appearance of a star of the eighth magnitude.

VESTAL VIRGINS. The six virgin priestesses of the goddess *Vesta*.

VESTIBULE, Lat. *vestibulum*. 1. A porch.—2. In *anatomy*, a cavity of the internal ear, between the cochlea and semicircular canals.

VESTMENTS, or **VESTURES.** Articles of dress or ornament worn by Roman Catholic priests during divine service.

VESTRY, Lat. *vestiarium*. 1. A room appendant to a church, in which the sacerdotal garments and consecrated things are repositied.—2. A parochial assembly, commonly convened in the vestry.

VETERAN, Lat. *vetus*, old. An ancient Roman soldier, who had passed the legal age of military service, forty-six,—or, in later times, who have served in twenty-five campaigns.

VE'LO. I forbid: a prohibition. The sovereign has a *veto* upon every act of parliament. The General Assembly of the Church of Scotland passed a *veto act*, by virtue of which they pretend to have given power to congregations to prohibit the introduction of ministers presented by patrons. It has, however, been found that the assembly had no power to make such an act.

VE'IL, Lat. *veillum*. A standard applied to designate the upper large petal of a papilionaceous flower.

VEXILLARI. Veteran troops in the Roman army.

VEXILLUM, or **STANDARD.** In *botany*, the upper petal of a papilionaceous corolla.

V'ABLE. A term adopted from the French, to signify that the organisation of a *fœtus* is sufficiently developed to sustain independent life.

V'ADUCT, from *via*, a way, and *duco*, to

lead. A structure made for conveying a carriage-way from one road to another, either by perforating through hills, by levelling uneven ground, by a series of arches, or by raising mounds, &c., &c.

VI'A LACTEA. The milky-way.

VIAT'ICUM (Lat.). Perquisites for a journey. In *ecclesiastics*, the sacrament given to a dying person.

VIBRA'TION (from *vibro*). Reciprocal undulation. In *mechanics*, a regular reciprocal motion of any body, such as a pendulum, occasioned by the force of gravity. In *music*, the undulation of any body by which sound is produced.

VIB'RIO. The name given by Müller to a genus of *Infusoria*, of the order *Homogenea*. The body is round and slender, like a bit of thread. The vinegar and paste eels are examples.

VIBRI'SA (Lat.). A whisker. In *mammalogy*, the stiff bristles which grow from the upper lip, and other parts of the head.

VIC'AR, Lat. *vicarius*. A substitute: the incumbent of a benefice.

VICE. 1. Lat. *vice*, in the turn or place of. A term used in composition to designate one *qui vicem gerit*, who acts in the place of another, as *viceroy*, a governor of a country who rules in the name of the king (*roi*) with regal authority.—

2. Dut. *vij*s. A small iron press, with screws, used by workmen for holding an article, while it is being filed, &c.

VI'CE VER'SA. A Latin idiomatic phrase, signifying on the contrary.

VIC'IA. The vetch: an extensive genus of papilionaceous plants. *Diadelphia—Decandria*. Name from *vincio*, to bind. There are seven native species, among which are the common vetch, or tare; but the pea-vetch is a native of Germany; and the garden-bean, which is also a species, is a native of Egypt.

VIDE'LICET. Viz. A Latin word signifying to wit; that is; namely.

VIELLE'. A musical instrument, the tones of which are produced by friction of a wheel, acting the part of a bow, against the strings, which are pressed by

the fingers or keys. It has two strings which always sound like the drones of a bagpipe, and is familiarly named in consequence *Hurdy-gurdy*.

VI'GIL, Lat. *vigilium*, a watch. An ecclesiastical usage on the eve of a feast-day.

VIGNETTE', Fr. from *vigne*, a vine. An ornament placed at the beginning of a book, preface, dedication, &c.: a head-piece.

VIGORO'SO, It. vigorous. In *music*, signifies that a movement is to be performed with strength and firmness.

VIL'LA (Latin). 1. A country seat, or a farm of superior character.—2. The statute of Exeter, 14 Edward I., mentions *entire-vills*, *demi-vills*, and *hamlets*. In this sense the term is a contraction of *village*, a small assemblage of houses, not sufficient to make a town.

VIL'LAGES, or VILL, Lat. *villa*, a country house. In *law*, a subdivision of a parish; a whole parish; a manor; most commonly, the out-part of a parish, being a few houses separated from the rest.

VIL'LENAGE. A tenure of lands by base services. The ancient *villains* were of two sorts, those annexed to the manor, and *villains in gross*, who were annexed to the persons of their lords, and transferrable from one lord to another.

VILLO'SE, } Lat. *villosus*, shaggy. Ap-

VIL'LOUS, } plied in *anatomy* to a velvet-like arrangement of fibres or vessels, as the villose coat of the intestines; and in *geology* and *botany* to parts covered with a shaggy pubescence.

VIL'LUS. In *botany*, a species of hairy pubescence of plants.

VI'MEN. In *botany*, a slender and flexible twig: *vicio*, to bind.

VIN'CVLUM (Latin). A bond or band. In *algebra*, a character in the form of a line or stroke drawn over an expression, when compounded of several letters or quantities, in order to connect them; thus, $a + b \times$ shows that the sum of a and b is to be multiplied by x . The expression is more neatly written $(a + b) x$.

VINE. In *botany*, see VITIS and BRYONIA.

VIN'EGAR, from *vin*, wine, and *aigre*, sour. Dilute and impure *acetic acid* (q. v.), formerly prepared only from wine; now from an infusion of malt.

VINOVS FERMENTATION. Under this name is comprehended every species of fermentation which terminates in the formation of an intoxicating liquid.

VI'OL, Ital. *viola*. A musical instrument of the same form as the violin, but larger, and having six strings. It is played also with a bow.

VI'OLA. Violet. A very extensive class of campanaceous plants. *Pentandria—Monogynia*. Named from *leo*, because it

was first found in Ionia. There are seven indigenous species, of which the sweet-scented violet, with its seven or eight varieties, is the greatest favourite. The pansy or heart's-ease is also well known.—2. In music, a viola is a tenor violin.

VIOLA'CEOUS, Lat. *violaceus*. An epithet designating a bluish purple colour like that of the violet.

VI'OLET. 1. In botany, see **VIOLA**.—2. Violet colour. A mixture of red and blue.

VIOL'IN. A common musical instrument. less than the viol.

VIOLONCEL'LO. The Italian name of our fifth violin, which comes between the *viola di braccio* (arm viol) and the double bass, both as to tone and size. The notes for the violoncello are written on the F or bass clef, and it generally accompanies the double bass.

VIOL'ONE (Ital.). The English double bass viol, the largest musical instrument played with a bow. It is principally used to sustain the harmony.

VI'PERA, Viper. A genus of true serpents (*serpentia*). There are several species. The minute viper (*V. brachyura*, Cuv.), is celebrated for the intensity of its poison, and is truly one of the most terrible of the genus. The Asp of Egypt, or Cleopatra's asp, (the *Coluber naja*, Lin.), was held in great veneration by the Egyptians. The jugglers, by pressing on the nape of the neck with the finger, throw it into a kind of catalepsy, which renders it stiff, or turns it into a rod, as they term it.

VI'RGO. Virgin. The sixth sign of the zodiac.

VI'RTUAL. 1. A term signifying potential, and understood of something which acts by a secret invisible cause, in opposition to what is sensible and palpable.—2. In mechanics, if any number of forces applied to the different parts of a system be in equilibrium, and the circumstances of their mutual relation and dependance remaining unaltered; and further, if the nature of the system, and the forces applied to it, be such that the points of application being thus altered according to certain conditions, the equilibrium remains; then there exists the following remarkable relation between the forces and the distances through which these points of application have been made to move. If from either extremity P of the line PP' representing the exceeding small displacement of any point of application P, a perpendicular Pm be drawn from the direction P, of the force

before its displacement; and the line P'm intercepted between the foot of the perpendicular m, and the point P, be called the virtual velocity of the force P; then, each force of the system being multiplied by its virtual velocity, similarly taken, the sum of these products in respect to the points of application which are made by the displacement of the system to move towards the direction of the forces impressed upon them, shall be equal to the sum of those taken in respect to those points which are made to move from that direction. This very important principle is called that of virtual velocities.—3. In optics, the point from which rays, having been rendered divergent by reflection or refraction, appear to issue.

VIRTUO'SO, (Ital.). A man skilled in matters of antique curiosity, fine arts, &c.

VI'RUS. A poison. The term applies in pathology, to designate the matter of a disease capable of producing that disease in a healthy individual by inoculation or absorption.

VIS. A Latin word for power. *Vis a tergo*, a moving power acting from behind. *Vis vitalis*, the vital power or energy. *Vis inertia*, the power of inertness; the force with which matter resists change of place. *Vis insita*, innate force essential to the natural state of a body.

VISC'ERA, Lat. pl. of *viscus*. In anatomy, the organs contained in any of the three great cavities, especially the thorax and abdomen.

VIS'COUNT, Lat. *vicecomes*. In heraldry, a title of nobility next to earl. In law, a sheriff.

VIS'CUM. The mistletoe. A genus of parasitical plants. *Dioica*—*Tetrandria*. Name from *ῥίζα* or *βίσα*; the fruit of the *V. album*, found in Britain. The *V. quercinus* was held in high esteem by the Druids. See **MISTLETOE**.

VISH'NU. In *Hindú Theology*, the second person of the Trinity.

VIS'ION, from *visus*. The function which enables us to perceive the magnitude, figure, colour, distance, &c., of bodies. The organs which compose the apparatus of vision enter into action under the influence of the particular excitant which we call light, generally regarded as an excessively subtle fluid, emanating from bodies denominated luminous, as the sun, fixed stars, bodies in a state of ignition, &c.

VIS'UAL. In perspective, the visual point is that in the horizontal line in which all the ocular rays unite. Visual rays are then imagined to come from the object to the eye.

VI'TAL VES'SELS. Applied by Schultz to certain vessels in plants, especially near the surface, conveying latex, which he calls a vital fluid. Also, the milk-vessels of spurge.

VITILIGO. Veal skin: from *ritulus*, a calf. In *nosology*, leprosy: a cutaneous disease in which the skin has a white and glistening appearance, like the flesh of a calf.

VITIS. The vine: a genus of *hedera-ceous* plants. *Pentandria*—*Monogynia*. The species cultivated for the sake of its fruit (*grapes*) is the *V. vinifera*, which appears to have a very wide geographical distribution.

VITREO-ELECTRIC. Exhibiting positive electricity, such as is exhibited by rubbing glass.

VITREOUS ELECTRICITY. See **ELECTRICITY**, POSITIVE, and NEGATIVE.

VITRIFICATION, } from *vitrum*, glass,
VITRIFICATION, } and *facio*, to make.
Conversion of a substance into glass by the aid of heat.

VITRIOL. Oil of vitriol. Sulphuric acid. *Blue vitriol* or *Roman vitriol* is sulphate of copper; *green vitriol* is sulphate of iron; *red vitriol* sulphate of cobalt; *white vitriol* is sulphate of zinc; *sweet spirit of vitriol* is sulphuric ether.

VITRIOLATED ALKALI. Sulphate of potash.

VITRIOLIC ACID. Sulphuric acid.

VITTA. In *numismatics*, the diadem on a medal.

VIVA'CE, Ital. *lively*. In *music*, denotes a lively manner of performing.

VIVA VO'CE. By word of mouth.

VIVERA. The Civet: a genus of digitigrade and carnivorous mammalia. The genus was established by Linné, but is now subdivided: *Fivera*, Cuv., comprehending the true civets, the civet of Africa and the zibet of India; *Genetta*, Cuv., comprising the genets; *Paradoxurus*, Fr. Cuv., formed on the pougouné of India; *Mangusta*, Cuv., or *Herpestes*, Ill., to which belongs the ichneumon of the ancients; *Ryzæna*, Ill., comprising the surikates, and *Crossarchus*, Fr. Cuv., allied to the surikates.

VIVES. A disease of horses and some other animals, seated in the glands under the ear, where a tumour is formed, which sometimes suppurates.

VIVIPAROUS, } 1. In *zoology*, an animal

VIVIPARUS, } which brings forth its young alive and perfect, is termed viviparous, in distinction to one which is *oviparous* or lays eggs.—2. In *botany*, viviparous is applied to stems or stalks which produce bulbs that are capable of vegetation.

VIX'EN. Fixen. The cub of a fox.

VIZ. A contraction of *videlicet* (q. v.).

VIZIER. *Ar. vazhara*, to support. The chief minister of the Turkish empire.

VOCATION, Lat. *voco*, I call. In *theology*, the call of the Holy Spirit, by which persons are believed to be initiated into the clerical order.

VOCATIVE CASE. In *grammar*, the case used in calling, relating, &c.

VOIRE DIRE, Fr., corrupted from *vrai dire*, to speak truth. In *law*, an objection to the competency of a witness, in a trial at common law, could only be taken according to the ancient practice, on a preliminary examination, in which the witness was sworn to speak the truth, and then examined respecting his interest in the cause at issue.

VO'LANT. Flying. Applied in *heraldry* to a bird drawn with the wings spread.

VOL'ATILE, Lat. *volatilis*, flying; *volo*, to fly. In *chemistry*, substances, the particles of which have a tendency to evaporate, or diffuse themselves through the air, at ordinary temperatures, are called *volatile* substances, as ammonia, ether, and essential oils.

VOLCA'NO, Ital. from *Vulcan*. An opening in the earth's surface, whence issue vapour, smoke, flame, stones, lava, and other products, ejected by internal fire. Such are Etna and Vesuvius in Sicily and Italy, and Hecla in Iceland. Volcanoes are perhaps to be regarded in the light of safety-valves.

VOL'ENS NO'LENS. Willing or not willing.

VOLTA. In *Italian music*, denotes that the part is to be repeated.

VOLTA-ELECTRIC INDUCTION. The electricity induced by a proximate electric current.

VOLTA'IC. Galvanic (q. v.). The *voltaic pile*, a column formed by successive pairs of metallic discs, as copper and zinc, or silver and zinc, with moistened cloth between each contiguous pair. *Voltaic battery*, see **GALVANIC BATTERY**.

VOL'TAISM. Galvanism is sometimes so called, from Volta, whose experiments so successfully conducted to establish this department of science.

VOLTAMETER, from *volta*, and *μετρον*, measure. An instrument contrived by Mr. Faraday, for measuring the amount of electricity passing in a current through it. It consists of two platinum plates, immersed in water acidulated with sulphuric acid, and the quantity of the mixed gases (oxygen and hydrogen) evolved, that is the quantity of water decomposed, is a measure of the current. In the smaller forms of the instrument the gases are received in a graduated glass tube; if the instrument be of a larger form, they are conveyed to a separate vessel, graduated, as in the case of the tube, to indicate the quantity.

VOL'TATYPE. See **ELECTROTYPE**.

VOL'TI SU'BITO, in *Italian music*, is a direction to turn over the leaf quickly.

VOL'UBLE, Lat. *volubilis*. Easy to be rolled, twining. Applied to stems of plants which twine round other plants.

VOLUME. 1. The apparent space occupied by a body: bulk.—2. A book.

VOLUNTARY. Relating to the will. Some of the animal functions are *voluntary*, or dependent on the will; others are *involuntary*, or independent of the will. In *music*, an extemporary performance on the organ.

VOLUTA. A genus of Gasteropods. Order *Pectinibranchiata*; family *Buccinoida*. The genus was established by Linnaeus. From it Brugueir first separated *Oliva*, and the remainder was afterwards separated into five genera by Lamarck; they are *Volcraia*, *Voluta*, *Marginella*, *Mitra*, and *Canellaria*.

VOLUTE, from *volvo*, to roll. In *architecture*, a spiral scroll, which forms the principal characteristic of the Ionic and composite capitals.

VOLVA, for *valva*. In *botany*, the curtain, wrapper, or covering of the fungus tribe of plants. It is of a membranous texture, conceals the parts of fructification, and in due time bursts forth and forms a ring upon the stalk.

VOLVOX. A genus of globular animalcules. To the presence of some of the species stagnant waters owe their green colour.

VOLVULUS, Lat., from *volvo*, to roll up. Convolution. A term in medicine synonymous with *iliac passion*. Applied to a vomiting of bilious and fecal matter, in consequence of obstruction of the intestinal canal.

VOMER, Lat. for *ploughshare*. The name given by anatomists to the slender thin bone which separates the nostrils from each other.

VOMITORIA, Lat., from *como*. In *ancient architecture*, the openings of gates, and doors of the theatres, and amphitheatres, which give ingress and egress to the public.

VORTEX, Lat., from *verto*. An eddy or whirlpool; a body of water running rapidly round, and concave within the circle of motion, towards the centre. Also a whirlwind. In the *Cartesian philosophy*, a system or collection of particles of matter, moving the same way, and round the same axis.

VORTICEL, } A microscopic animal.
VORTICELLA, } cule, which derives its name from its being provided with vibratile organs, by the rotatory action of which they produce around them little whirlpools, into which are drawn any particles of food within reach.

VOTIVE MEDALS. In *numismatics*, such medals as were struck in grateful commemoration of some auspicious event. Votive medals of several of the Roman emperors are still preserved.

VOUCHER. In *law*, (1.) a witness; (2.) one called in to make good his warranty of title: more correctly a *vouchee*; (3.) a

document which serves to vouch the truth of accounts; (4.) the tenant in a writ of right; sometimes written *couchor*.

VOUSOIRS. In *architecture*, vault-stones, or those which immediately form the arch of a bridge, vault, &c., and are cut somewhat in the shape of a truncated pyramid. Their undersides form the intrados or soffit. The middle voussoir is called the keystone.

VOWEL. In *grammar*, a letter which can be uttered by itself, as, *a, e, i, o, u*.

VULCAN. In *Latin mythology*, the god of fire, and the divinity who presided over the working of metals, answering to the Hephaestus of the Greeks. He was the son of Jupiter and Juno, and the husband of Venus. In *sculpture*, he is represented as bearded, with a hammer and pincers, and a pointed cap, but not lame as the poets describe him.

VULCANIC THEORY, of the earth. See **PLUTONIC THEORY**.

VULGATE. An ancient translation of the Bible, rendered almost verbatim from the Septuagint, for the use of the Latins, soon after their conversion to Christianity. It is called also the *Old Italic*, or *Vulgar Latin Bible*, and is the only version acknowledged to be authentic by the Church of Rome.

VULPES (Lat.), a fox. A subgeneric name, distinguishing the foxes from the dogs and jackals. See **CANIS**.

VULTUR (Latin), a vulture. A genus of accipitrine birds, placed among the *Diurnal* by Cuvier. The vultures are a cowardly genus, feeding oftener on carrion than living prey. Their strength and their talons do not correspond in power with their size, and they must make more use of their beak than their claws. The most known species are the Condor of South America, famous for exaggerated reports of its size, though it is really the largest flying animal; the Turkey-buzzard; the Urubu, or Carrion Crow; and the Læmmergeyer, which last is the largest bird of prey on the eastern continent.

W.

W, a letter found only in the alphabets of modern languages. It is formed of the letter *V* doubled, and is identical with *U* in the Latin, and in the early form of the English language. When it commences a syllable it is a consonant, and a vowel in all other positions.

WACKÉ. A massive mineral, intermediate between indurated clay and basalt, and included among the trap-rocks. The *wacké* of the Germans, from whom we have borrowed the term, is a soft earth variety of basalt.

WAD, } A provincial name of plum-
WADD, } bago, in Cumberland, and of

an ore of manganese in Derbyshire and Devonshire, consisting of peroxide of the metal associated with oxide of iron. Sometimes called *Black-wad*.

WAD'ING. In *manufactures*, a soft spongy web, made with a fleece of cotton prepared by the carding-machine, for lining various parts of ladies' dresses, &c.

WADERS. In *ornithology*, the English name of the *Grallatores*, an order of birds remarkable for the length of their legs from the lower extremity of the tibia downwards. By this they are adapted for wading in the margins of rivers, low shores, and marshy places.

WAD'SETT, from Sax. *wæd*, a pledge. In *Scotch law*, a species of mortgage of property, for the recovery of money borrowed.

WAGER. In *law*, the *wager of battle* or *battel*, was a mode of trial by single combat, where, in appeals of felony, the appellee might fight with the appellant, to prove his innocence. This relic of barbarism has only been recently abolished. The *wager of law* is an offer, on the part of the defendant, in an action of debt by simple contract, to take an oath in court, in presence of eleven compurgators, that he owes the plaintiff nothing in the manner and form he has declared.

WAG'TAIL. A beautiful small bird which frequents the margins of ponds and water-courses, and takes its name from its continually elevating and depressing the tail. The Wagtails constitute the sub-genus *Motacilla*, Cuv., of the genus *Motacilla*, Lin. See *MOTACILLA*.

WAHABEES'. A Mussulman sect founded by Abd-el-Wahab, a learned Arabian.

WAIFS. *Bona wariata*. Goods stolen and thrown away by the thief in his flight, on which event they belong to the crown. The term now comprises all goods found of which the owner is not known.

WAIN. Sax. *wæn*. A waggon. In *astronomy*, a constellation; *Charles' wain*.

WAIN'SCOT. In *carpentry*, the inner wooden lining of a wall, generally in panels. The wood originally used in this work was a foreign oak known by the name of *wagescote*, and hence the name by degrees came to be corrupted and applied to the work itself.

WAIST. In *ship-building*, the space between the quarter-deck and fore-castle.

WAITS. These were formerly attendant musicians on great personages, mayors, and bodies corporate, generally furnished with appropriate dresses. They have fallen from their high estate, and sunk into itinerant musicians, who, in their nocturnal perambulations, give notice of the approach of Christmas.

WAIVER. A term in *law*, signifying that a person declines or refuses to accept or to avail himself of something.

WAKE. The track which a ship in motion leaves in the water.

WALDEN'SES. A religious sect named from Peter Waldo, who attempted to effect a reform in doctrinal matters about the year 1180. They still exist as a church, notwithstanding many severe persecutions; are strictly Calvinistic; adhere to the Presbyterian form of church government, and have given the right hand of fellowship to the new dissenting church of Scotland.

WALES. In *ship-building*, an assemblage of strong planks extending along a ship's side, serving to reinforce the decks, and forming the curves of the vessel. See *CHAIN WALES*.

WAL'ERITE. The name given by Cleaveland to a variety of clay found in compact masses about the size of a nut, white and opaque, or yellow and translucent.

WALL-EYE. An opacity of the cornea of the eye.

WALL-PLATES. In *carpentry*, pieces of timber which are so placed as to form the supports to the roof of a building.

WAL'RUS, from Ger. *wall*, and *ross*, a horse. The morse or sea-horse. See *TRICHECHUS*.

WALTZ. A modern dance and tune, the measure of whose music is triple: three quavers to a bar. The waltz is the national German dance. *Waltz*, says Hamilton, is the name of a riotous and indecent German dance, derived from *waltzen*, to roll, wallow, or welter in the mud, dirt or mire.

WAMP'UM. A sort of broad belt formed of strings of shells, and worn as an ornament or girdle by the North American Indians. This name has also been given to the interior parts of the clam shell, formerly used as money among them. The native name is *wampampeague* or *wampumpeague*.

WANGHEES'. Japan canes. Canes imported from China.

WAP'ENTAKE. A territorial division in Yorkshire. The name was applied by the Danish inhabitants, and is derived from *wapen*, a weapon.

WAR'BLER. In *farriery*, small hard tumours on the backs of horses, occasioned by the heat of the saddle in travelling, or by the uneasiness of its situation.

WARD'-MOTE. A court in each ward of the city of London, having the power to present defaults in matters of police, &c.

WARMTH. In *painting*, a tone of colour arising from the use of colours expressive of heat.

WARP. 1. In *manufactures*, the thread extended lengthways on the loom, across which the woof is passed by means of a shuttle.—2. In *naval affairs*, signifying rope laid out for the purpose of moving a ship.

WAR'PING, Fr. *guerpier*. 1. A mode of increasing the fertility of land on the banks of rivers liable to overflow, by allowing them to deposit their mud, called *warp*, upon the surface overflowed.

—2. In *architecture*, see **CASTING**.

WAR'RANT. 1. In *law*, a writ conferring some right or authority.—2. A writ giving an officer of justice the power of caption.

WAR'RANT OFFICERS, in the *navy*, are the gunner, the boatswain, and carpenter.

WAR'RANTY. In *common law*, signifies a promise made in a deed by one man to another, for himself and his heirs, for the enjoying of anything agreed on between them.

WAR'REN. In *law*, a franchise next in degree to a park. A forest is the highest in dignity, and comprehends a chase, a park, and a free warren.

WASH. In *distillation*, a name by which wort is distinguished.

WASH'ER. In *mechanics*, an iron ring interposed between the surface of wood, &c. and the head or nut of a bolt to protect the wood from damage during the process of screwing up.

WASP. In *entomology*. See **VESPA**.

WASTE WEIR (of a canal). A cut constructed through the side for carrying off surplus water.

WATCH. 1. A well-known machine for measuring time.—2. The portion of a ship's crew on duty at a time.

WATER. Sir Isaac Newton defines water, when pure, to be a very fluid *salt*, volatile and void of taste and smell. Modern chemists regard it as an *oxide of hydrogen*, being a compound of oxygen and hydrogen in the proportion by weight of eight of the former to one of the latter. *Mineral waters* are those impregnated with foreign substances, as sulphuretted hydrogen and various salts.

WATER-BAILIFF. An officer in port towns, whose business in general is the searching of ships.

WATER-CLOCK. In *mechanics*, see **CLEPSYDRA**.

WATER-COLOURS. In *painting*, are those which are diluted with gum water only, in contradistinction to *oil colours*. When water colours only are used, it is *limning*, when oil colours, *painting*.

WATER OF CRYSTALLIZATION. In *chemistry*, the proportion of water necessary to retain certain salts in a crystalline form.

WATER-LINE (of a ship). A horizontal line, supposed to be drawn above the ship's bottom, at the surface of the water. This line alters according to the depth of water necessary to float the vessel.

WATER-LOG'ED. In *nautical language*, a vessel is said to be *water-logged*, when, by leaking and receiving a great quantity

of water into her hold, she has become so heavy as not to be manageable by the helm, but is tossed about like a log by the waves.

WATER-MEADOWS. Meadows on low flat grounds, capable of being fertilised by the overflowing of neighbouring streams.

WATER-MEL'ON. In *botany*, the *Cucurbita citrullus* and its fruit, which is highly valued in hot countries, where it grows to great perfection.

WATER-OR'DEAL. In *old law*, a sort of trial of persons accused of crimes, especially witchcraft. The person was thrown into the water, and if he floated he was adjudged guilty, but if he sank he was drowned and declared innocent.

WATER-SPOUT. At *sea*, a vertical column of water, raised from the surface of the sea and driven furiously by the wind.

WATER-STATION (on a railway). A small reservoir of water connected with a well, from which tanks may be replenished.

WATER-TABLE. In *building*, a string course, moulding, or other projection, placed to carry off water.

WATER-WAY. In a *ship's deck*, a piece of timber, forming a channel for conducting water to the scuppers.

WATER-WHEEL. A wheel moved by water. There are four distinct sorts of water-wheels: the *undershot*, the *overshot*, the *breast wheel*, and the *horizontal wheel*. The water acts vertically on the three first sorts, and horizontally on the last, which is very inferior and little employed. The "Barker's Mill" is also a description of water-wheel, much improved of late by Mr. Whitelaw, of Greenock.

WATER-WINGS. The walls erected on the banks of a river, next bridges, to secure the foundations from the action of the current.

WATER-WORKS. The name applied to all descriptions of works employed for raising or sustaining water, as water-mills, wheels, sluices, and various other hydraulic works; but it is not generally understood at the present time to refer to any other than works erected for the purpose of supplying cities and towns with water for the daily use of the inhabitants.

WAT'LE. 1. The fleshy excrescence which grows under the throat of some fowls, as the turkey, and also of some fishes.—2. A twig; and hence a texture wrought with twigs.

WAVED. 1. In *heraldry*, an indented outline, indicating honours originally acquired at sea.—2. In *natural history*, variegated: undulated.

WAVELLITE. A rare mineral, first discovered in Devonshire by Dr. Wavell. It is sometimes pure white, sometimes tinged with green, or yellow; lustrous silky. It is strictly a hydrate of sil-

mina, with sometimes a trace of iron, silica, &c.

WAX. Germ. *wachs*. 1. The substance which forms the cells of bees.—2. *Mineral wax* is a solid brown substance, of various shades, and fusible like bees wax. Candles are made of it in the Levant.

WAY. The sea term for the progress of a ship.

WAYS AND MEANS. In *parliament*, when a supply has been voted and the *quantum* determined, the House of Commons resolve themselves into a committee to consider the *ways and means* to raise the supply voted.

WEALD-CLAY. A tenacious blue clay, containing subordinate beds of sandstone and shelly limestone, with layers of septaria of argillaceous ironstone. It forms the subsoil of the wealds of Sussex and Kent, and separates the Shanklin sand from the central mass of the Hastings beds.

WEALDEN STRATA. These comprehend the Weald-clay, the Hastings sands, and the Purbeck beds, or Ashburnham beds.

WEAR. To turn a ship round with her stern to the wind.

WEATHER. The sea term for that side on which the wind blows. *To weather*, is to pass to windward of an object.

WEATHER BOARDING. Feather-edged boarding, nailed upright, the boards lapping over each other to keep out rain, &c.

WEATHER-GAGE. In *navigation*, when a ship is to windward of another, she is said to have the *weather-gage* of her.

WEAVING. The act of forming cloth in a loom by the intertexture of threads.

WEDGE. In *mechanics*, a simple machine, which may be considered a modification of the inclined plane, differing only in this, that the body to be moved is drawn along the surface of the plane: but in the wedge, the plane is made to move by percussion beneath the body to be raised, or between the surfaces to be separated.

WEDNESDAY, SAX. *Wodensdag*, Woden's day. See **WODEN**.

WEEVIL. In *entomology*, a small animal of the beetle tribe, rather larger than a louse, and very destructive in corn magazines. See **CERCEUS**.

WEFT. The yarn or threads which run from selvage to selvage in a web.

WEIGH. To take the anchor off the ground.

WEIGHT. In *physics*, the gravity of bodies, or that property by which they tend towards the centre of the earth.

WEIR. An erection carried across a river or rivulet, for the purpose of damming up the water for the convenience of irrigation, and for other purposes.

WELD, Dyer's weed. A plant, the

WOLD. *Roseda luteola*, the flowers and leaves of which yield a yellow dye. It is, however, too expensive to be extensively used.

WELD'ING. In *metallurgy*, the process of joining two pieces of metal together, by the aid of heat. The capability of iron to be welded is one of its most important properties.

WELL (of a ship). 1. A partition to inclose the pumps from the bottom to the upper decks, to render them accessible, and prevent their taking damage.—2. See **ARTESIAN WELL**.

WELL-HOLE. A hole connected with some mechanical contrivance, and adapted for the reception of some counterbalancing weight, and for other purposes.

WELT'ING. In *manufactures*, a sewed border or edging.

WEN'LOCK STRATA. These comprise the *Wenlock limestone*, and the *Wenlock shale* or *slate*, which is the lowest member of the formation.

WERNERIAN THEORY. See **NEPTUNIAN THEORY**.

WESLEY'ANS. The chief denomination of the methodists, from John Wesley, their founder.

WET DOCK. See **DOCK**.

WHALE. In *ichthyology*, see **BALÆNA**. In *astronomy*, see **CETUS**.

WHALE'BONE. The name given, in *commerce*, to a substance of the nature of horn, adhering in thin parallel laminae to the upper jaw of the whale; varying in size from three to twelve feet in length. When above six feet it is *size bone*.

WHEAT. 1. The seeds of the *Triticum hibernum* and *æstivum*, which, when ground, constitutes bread-flour. *Turkey*, or *Indian wheat* is another name for *maize* (q. v.).—2. In *botany*, see **TRITICUM** and **POLYGONUM**.

WHEEL. 1. An agent extensively employed in machinery. *Toothed-wheels* are generally described as *cog-wheels*; the cogs (originally made of wood) are supposed to be fixed upon the circumference; but when both are of one piece, the *cogs* are called *teeth*; the teeth of a pinion are again called *leaves*; and those of a trundle *staves*. The wheel which communicates motion to another, is termed the *driver*, or *leader*, and that acted upon, is the *drover*, or *follower*.—2. The wheel of a carriage is commonly a circular frame, consisting of three parts, the *nave*, which is the centre or *hub* into which the *spokes* or *radii* are fixed; and the *periphery*, or *circumference*, usually

formed of several circular pieces called *felloes*. The peripheries again are encircled by *tires* of flat bar-iron.—3. *Wheel and axle*, one of the mechanical powers.—4. In a *ship*, the wheel and axle by which the tiller is moved.

WHELPS. Short upright pieces placed round the band of the capstan, to afford resting points for the hawsers.

WHETSLATE. } A massive mineral, of a
WHETSTONE. } greenish-grey colour, feebly glimmering, fracture slaty or splintery; occurs in beds of primitive slate and transitive slates. The finest varieties are brought from Turkey, called *honestones*, from their being much employed for sharpening steel instruments.

WHIMS. In *mining*, large capstans connected with the shafts of mines, and worked usually with several horses.

WHINSTONE. A provincial name for the fine bluish-black species of trap rock.

WHIRLING-TABLE. A machine intended to represent the several phenomena in philosophy and nature; as the principal laws of gravitation, and of the planetary motions.

WHIRLS (for the spinning of yarn for ropes). Small hooks fastened into cylindrical pieces of wood, which communicate by means of a leather strap with a spoke-wheel, whereby three of them are set in motion at the same time.

WHIRLWIND. In *meteorology*, a wind which rises suddenly, and is exceedingly rapid and impetuous when risen, but is soon spent. The whirlwind is of various kinds, distinguished by different names, as *prester*, which breaks forth with flashes of lightning; *typho*, a true whirlwind, called generally a hurricane; *exhydria* bursts forth with a deluging rain; *travado* is sudden and impetuous, and common in the Ethiopic sea, and particularly about the Cape of Good Hope. It is the *ecnephas* of the Greeks.

WHISKY. } Dilute alcohol, distilled
WHISKEY. } from the fermented worts of malt or grain. The name is a corruption of the Irish word *usquebaugh* (q. v.).

WHIST. A well-known game at cards, so called because it requires silence and attention.

WHITE-BAIT. In *ichthyology*, the *Clupea alba*, Yarr., found plentifully in the Thames. It is a small fish, and was long regarded by naturalists as the young of the shad.

WHITE COPPER. An alloy used by the Chinese under the name of Pakfong, composed of copper, zinc, nickel, and iron.

WHITE LEAD. Ceruse. A carbonate of lead, in general used for the painting of wood and plaster white. It is prepared for painting with boiled linseed oil.

WHITE PRECIPITATE. Carbonate of mercury.

WHITE PYRITES. A sulphuret of iron which sometimes occurs in the form of stalactites.

WHITE-STONE. Felspathic granite called by the French *Eurite*, and by the Germans *weiss-stein*.

WHITE-SWELLING. In *surgery*, a chronic enlargement of a joint, without alteration of the colour of the skin.

WHITE VITRIOL. Sulphate of zinc. See SULPHATE and VITRIOL.

WHITING. 1. In *ichthyology*, the *Merlangus vulgaris*, of Cuv. and Yarr., or the *Gadus merlangus* of Lin. and Penn. It grows to about two feet in length, is gregarious, and is distinguished from the cod, haddock, and brassy, by having no barbule on the chin. It is one of our most delicate and wholesome fishes.—2. The name is also given to the *Pollack* (q. v.), and the name *whiting-pout* is often conferred on the brassy, bib, blinds, or pout (*Morrhua lusca*, Yarr., *Gadus fuscus*, Lin. and Penn.—3. Chalk purified of all stony matter, and made up into cakes.

WHIT'LOW. In *surgery*, an inflammation affecting one or more of the phalanges of the fingers, and generally terminating in an abscess.

WHIT'SUNTIDE. The feast or season of Pentecost, so named because the converts newly baptized appeared from Easter to Whitsuntide in white garments.

WHORL. 1. In *conchology*, each complete turn of the spire of a spiral shell is termed a *whorl*: the last, which terminates with the aperture, is the *body* or *basal whorl*; the rest are *spiral whorls*.—2. In *botany*, see VERTICIL.

WICK'LIFITES. Followers of Wickliffe, the English reformer.

WILL. A testament. In *law*, the legal declaration of a man's intentions as to what he wills to be performed after death.

WIL'LOW. 1. In *botany*, see SALIX.—

2. In *manufactures*, a machine for cleaning cotton-wool. Several sorts have been tried, but that in common use is made in the form of a cone, inclosed within a concentric case, with a row of spikes on each side of the case, and four rows on the cone placed at right angles to each other. The cotton is put in with the hand, by an opening right above the smaller end of the cone, and carried rapidly round, until it is thrown out of the larger by the centrifugal force. The machine is also called the *wool-mill*, but commonly *scilly* or *wil'low*, probably a corruption of *winnow*. It is also the first machine to which all sorts of clothing wool are subjected.

WINCH. In *mechanics*, the crank-handle by which the axis of machines are turned.

WINCHESTER BUSHEL. The original English standard measure of capacity, given by king Edgar, and kept in the town-hall of Winchester. See BUSHEL.

WIN'ING-MACHINE. The dyer's reel, which he suspends horizontally, by the ends of its iron axis in bearings, over the edge of his vat, so that the line of the axis, being placed over the middle partition of the copper, will permit the piece of cloth which is wound upon the reel, to descend alternately into either compartment of the bath, according as it is turned by hand to the right or to the left.

WIND'AGE. In *gunnery*, the difference between the diameter of the bore and that of the ball.

WIND'GAGE. An instrument for ascertaining the velocity and force of the wind.

WIND'-GALL. In *farriery*, a soft flatulent tumour, full of corrupt jelly, which grows on each side of the fetlock joints, and on hard ground makes a horse halt.

WIND'LAS. } 1. A machine for raising

WIND'LESS. } great weights, consisting of a cylinder moving on an axis, and turned by shifting levers, with a rope or chain attached to the weight and the cylinder.—2. A crank-handle is also sometimes called a *windlas*.

WIND'MILL. } A mill of any sort

WIND-ENGINE. } which acquires its power from the impulse of the wind. Windmills are of two kinds, *vertical* and *horizontal*. The vertical are those almost invariably used. They have four cross vanes or arms, fixed at the extremity of an axis lying in a horizontal position. Horizontal windmills are worked by sails set horizontally, the axis being in a perpendicular position. These have not, however, above one-third or one-fourth the power of the vertical.

WIND'SAILS. In *ships*, a sort of ventilator, consisting of a wide tube of canvass, shaped like a funnel, to convey a stream of fresh air downwards to the hold and lower decks of a ship.

WINE. The fermented juice of the grape, or berries of the vine (*vitis vinifera*), a plant which appears to be indigenous to Persia and the Levant, but is now found in most temperate regions, and grows in every sort of soil. The ancient wines were the Lesbos and Chios among the Greeks, and the Falerian and Cecuban among the Romans. The moderns use Port, Sherry, Claret, Champagne, Madeira, Hock, Marsala, Cape, and many varieties of these. They also prepare several sorts of *berry wine*.

WINGS (of a ship). Narrow passages along the sides between the fore and aft cock-pit.

WIPER. In *constructive mechanics*, a lever fixed upon, or intended to turn, a shaft which admits of revolving motion. The term is commonly applied to cooms, when these are long, as in fulling-mills, stamping-mills, and the like, where *wipers* are fixed upon a horizontal axle, and

serve to raise the stampers to a certain height, when losing hold of them, the stampers descend by their own weight to be again thrown up by the next wiper brought in contact with them by the motion of the wiper-shaft.

WINE-STONE. Another name for argal or crude tartar, which settles on the sides and bottoms of wine-casks.

WINZE. In *mining*, a small shaft, sunk from one level to another, for the purpose of ventilation.

WIRE-DRAW'ING. The art of extending the ductile metals into wire.

WITH'ERITE. Native carbonate of barryta, first discovered at Anglesark, in Lancashire, by Dr. Withering. It is called also *barolite* (q. v.).

WITH'ERS. In *farriery*, the jointing of the shoulder-bones at the bottom of the neck and mane.

WITH'ER WRUNG. In *farriery*, an injury caused by a saddle, when the bows being too wide, they bruise the flesh against the second and third vertebrae of the back, which forms the prominence that rises above the shoulders.

WOAD. In *botany*, the *Isatis tinctoria*, an herbaceous plant which was formerly much cultivated for the sake of the permanent blue dye which it affords. It is now however well nigh superseded by *indigo*.

WO'DEN. In *mythology*, the chief deity of the northern natives from which Wednesday takes its name. He was the god of war, and had human sacrifices offered on his altars to propitiate his favour: to him all prayers were directed before battle, and when the victory was obtained the prisoners were his share of the booty.

WOLF'-FISH. The *Anarrhichas lupus*, Cuv., Yarr., called also sea-wolf, sea-cat, swine-fish, and catfish. It sometimes grows to the length of six feet, and is the most savage and powerful of all the British fishes.

WOLF'RAM. In *mineralogy*, the native tungstate of iron and manganese, which occurs in primitive formations, along with ores of tin, antimony, and lead. The Cornish miners call it *mock-lead*.

WOLLASTONITE. Prismatic augite is thus named in honour of Dr. Wollaston.

WOLVER'ENE. In *zoology*, the *urus luscius*, Lin., an animal of North America, which differs very slightly from the common glutton. See *GULO*.

WOM'AT. } In *zoology*, a little animal
WOM'EAT. } which is nearly allied to our opossums. It is found in New Holland.

WOOD-GROUSE. In *ornithology*, the *Tetrao urogallus*, Lin.; named also the cock of the mountain. It is now extinct in Britain, but is still kept by some in aviaries.

WOOD-OPAL. Opalised wood. A variety

of opal, which occurs in various vegetable forms. It is in reality opalised vegetable matter. Found in Hungary.

WOOD'ROCK. In *mineralogy*, a name for ligniform asbestos.

WOOD'SCREW. An iron screw, of which the body tapers but the thread continues straight to the extremity.

WOOD-TIN. The fibrous oxide of tin, found only in Cornwall and Mexico. Its common colours are chesnut, brown, and reddish-brown, owing to the presence of peroxide of iron.

WOODY-FIBRE. Slender membranous tubes, tapering at each end, in the tissue of plants: they form hemp and flax.

WOOF. The threads thrown across the warp of a web by the shuttle in forming cloth.

WOOL. Germ. *wolle*. A term applied to the fine hair of animals, and to fine vegetable fibres, as cotton. In general, however, it is confined to the wool of sheep.

WOOL'ING. 1. Among *seamen*, the act of winding a piece of rope about a mast or yard.—2. The rope used for binding masts and spars.

WOOL'SACK. The seat of the Lord Chancellor of England in the House of Lords, from its being a large square bag of wool, without back or arms, covered with red cloth.

WOORARA. Ourari. A very destructive poison of Guiana, which contains strychnia. The plant from which it is prepared is not ascertained, but it most likely belongs to the genus *strychnos*, or some one nearly allied to it.

WOOTZ. The Indian name for steel.

WORM. In *distillation*, a spiral tube, which makes a great many revolutions in a large vessel of cold water, called a *refrigeratory*, to cool and condense the vapour.

WORM'ING. The removing of a ligament from under the tongue of puppies, the effect of which is to break them of their habit of gnawing.

WORST'ED. In *manufactures*, woollen yarn twisted rather harder than ordinary. The name is taken from Worsted, a town in Norfolk.

WORT. 1. A termination to the names of many plants. Sax. *wyr*, Fr. *vert*, answering to Lat. *viridis*, green. The word seems to have been a general name for an herb, especially of the cabbage tribe.

—2. The fermented infusion of malt or grain. It is the muddy liquor which remains in the distiller's mash-tun, after the grains have sunk to the bottom.

WOULFE'S APPARATUS. In *chemistry*, a series of vessels, connected by tubes, for the purpose of condensing gaseous products in water. Named after the inventor.

WOZRALI-POISON. A peculiar poisonous

composition prepared by the Macousant Indians. The juice of a species of vine called *wourali* is the fundamental ingredient; but snake-fangs, some bulbous roots, and other things, are also ingredients.

WRACK. In *botany*, a marine plant, the *Fucus vesiculosus*, called also sea-oak and sea-tangle. It is used in places near the sea-coast as a manure.

WRAN'GLER. A technical term, in the University of Cambridge, for the students who pass the best examination in the senate-house. The best is the *senior wrangler*, and those who make the second, third, and best appearances, are denominated *second, third, &c. wranglers*.

WRASSE, } A name common to several

WRASS. } fishes of the genus *Labrus*, Lin., as the red wrasse (*L. carneus*, Yarr. Cuv.); the ancient wrasse (*Labrus tinca*, Lin.) the ballan wrasse (*L. maculatus*, Yarr.).

WREN. In *ornithology*, a bird of several species forming the sub-genus *Troglodytes*, Cuv., of the genus *Motacilla*, Lin.

WRIT. 1. Anything written: Scripture is called *sacred writ*.—2. In *law*, a judicial process or precept in writing issued from some court to the sheriff, &c.

WRITER TO THE SIGNET. In *Scottish law*, a denomination equivalent to attorney in England. But the Scottish writers to the signet are under stricter regulation than the English attorneys.

WROUGHT. In *architecture*, any material brought to a fair surface.

WYVERN. In *heraldry*, a kind of flying serpent, sometimes represented in coats of arms.

X.

X, the 24th letter of the English alphabet. It is found in Saxon words, but begins no word of the English language. X as a numeral stands for 10; when laid horizontally, thus X, it stands for 1000; and with a dash over it, thus X̄, it denotes 10,000. As an abbreviation X stands for *Christ*, Xn for *Christian*, and Xm for *Christmas*.

XAN'THIC ACID. An acid discovered by M. Zeise, and named from ξανθος, yellow, because it gives a yellow precipitate, with solutions of several metallic salts. The acid is liquid, transparent, and colourless. Constituents S₄, C₆, H₆ O.

XAN'THIC OXIDE, ξανθος, yellow. A yellow substance found by Dr. Marcet, composing a urinary calculus.

XAN'THINE, from ξανθος, yellow. The name given by Kuhlmann to the yellow colouring matter contained in madder.

XANTHORRHŒA. The generic name of the grass-tree of New South Wales, from ξανθος, yellow, and ρῖς, to flow, on ac-

count of the yellow gum which exudes from it. The Botany Bay gum. It belongs to the tribe *Asphodelidæ*.

XEBEC'. A small three-masted vessel without bowsprit, navigated principally in the Mediterranean.

XE'NOS. The generic name given by Ross to two insects, one of which lives on the wasp, called *gallica*, and the other on an analogous wasp of North America, the *Polistes fulata*, Fab.

XEROCOLLYR'IUM, from *ξηρος*, dry, and *collyrium* (q. v.). A dry collyrium, or eye-salve.

XEROPHTHAL'MIA, from *ξηρος*, dry, and *ophthalmia* (q. v.). A dry inflammation of the eyelid, with diminished secretion of tears.

XIPH'IAS. The sword-fish. A genus of acanthopterygious fishes of the Scombroide family, distinguished by the ensiform beak, which terminates their upper jaw. Name *ξίφιας*, from *ξίφος*, a sword. The flesh is esteemed. See **SWORDFISH**.

XIPH'OID, from *ξίφος*, a sword, and *ειδος*, likeness. Sword-like. Applied in anatomy.

XIPHO'SURA, *ξίφος*, and *ουρα*, a tail. A tribe of crustaceans, of which the body terminates in a long sword-shaped appendage.

XY'LANTHRAX, from *ξύλον*, wood, and *ανθραξ*, coal. Wood or bovey-coal.

XY'LO-ALOES. Lignum aloes. Aloes wood.

XYLOS'OPA. The humble-bee. A genus of hymenopterous insects, separated from the *Apis*, Lin., by Latreille, and thus named because the female bores a hole usually in wood for her nest. The *X. violacea*, Lin. is the most known species. It is about an inch long, velvety, black, and violet-black wings. The male is distinguished by a russet ring round the antennae.

XYLOS'RAPHY, *ξύλον*, wood, and *γραφω*, I draw. The art of wood-engraving.

XYLOPH'AGI. Wood-eaters. A family of coleopterous insects of the tetramerous division, comprising several genera.

XYLO'PHILI, *ξύλον*, and *φιλεω*, I love. A tribe of beetles living in decayed wood.

XYLOS'TROMA. A genus of fungi, of which the oak-leather is a species. Name from *ξύλον*, wood, and *στρομα*, a layer, because it forms indeterminate expansions like cloth or leather.

XYLOT'ROGI, *ξύλον* and *τραγωω*, I gnaw. A tribe of semicorn beetles which perforate timber.

XYPH'OID. See **XIPH'OID**.

XYS'TER, from *ξύστρον*, from *ξύω*, to scrape. A surgical instrument for scraping bones.

XYST, or **XYS'TOS**, from *ξύω*, I polish. A court of great length, for athletic exercises, in Greek and Roman architecture.

Y.

Y, the 25th letter of the English alphabet, taken from the Greek *υ*. **Y**, as a numeral, stands for 150, and with a dash over it for 150,000.

YACHT, Ger. *yacht*. A vessel of state usually employed to convey princes, ambassadors, and other great personages. The royal yachts are generally rigged as ketches, except the principal one for the sovereign, which has three masts like a ship.

YAG'GERS, Germ. *hunters*. Light infantry armed with rifles, in Prussia and Austria.

YAKS. In zoology, the *Bos grunniens*, Lin., or grunting ox of Thibet, &c.

YAM. A large esculent root which grows in tropical climates. See **DIOSCOREA**.

YAN'KEE. A corruption of the word English by the North American Indians. The popular name for New Englanders in America; applied also by English people to the inhabitants of the United States.

YA'PON, } The South Sea tea, the *Plex*
YU'PON. } *cassine* of the southern States of America.

YARD. 1. A measure of 36 inches or 3 feet.—2. In ships, a long slender piece of timber, nearly cylindrical, suspended upon the mast, by which a sail is extended. The portions extending on both sides of the mast are denominated the *yard-arms*.

YARN, Sax. *yearn*. 1. Woollen thread; but the term is now applied also to other species of thread, as to cotton and linen.—2. In rope-making, one of the threads of which a rope is composed. It is spun from hemp.

YARROW. In botany, the milfoil (*Achillea millefolium*). The name is supposed to have originated from the Spanish word *yerba*, a herb.

YAW. At sea, a temporary deviation from a ship's course.

YAWL. A boat usually rowed with four or six oars.

YAWS. The popular name of a severe cutaneous disease, which is endemic in Africa and elsewhere, and technically called *Frambesia*, from the French *fram-boise*, a raspberry.

YEAR. The solar year is the time which the sun takes in passing over the twelve signs of the zodiac, which is 365 days, 5 hours, 48 minutes, and 48 seconds. The civil year, is 365 days, 6 hours, or rather, 365 days for three years in succession, and every fourth year 366 days. The sidereal year is 365d., 6h., 6m., 18's. The anomalistical year is 365d., 6h., 14m. The lunar astronomical year is 354d., 8h., 48m., 36s., or 12 lunations.

YEAST. The froth of fermenting wort.

YEL'LOW DYE. The principal vegetable yellow dyes are annatto, dyer's broom, fustic, fustel, Persian and French berries, quercitron bark, saw-wort, turmeric, weld, and willow leaves. Those of the mineral kingdom are chromate of lead, iron-oxide, nitric acid (for silk); sulphuret of antimony, and sulphuret of arsenic.

YEL'LOW EARTH. A variety of argillaceous iron ore.

YEL'LOW FEVER. Black vomit. A malignant fever of warm and moist climates, which often suffuses the skin with a yellowish colour.

YEL'LOWHAMMER. In ornithology, a species of Bunting, the *Emberiza citrinella* or *lutea*, well known from its yellow throat and head. It is the *Piet*, or yellow *Piet* of some parts of Scotland.

YEL'LOW-ROOT. In botany, a name common to the *Xanthorrhiza* and the *Hydrastis* (q. v.).

YEL'LOWS. In farriery, a disease to which horses are subject. It owes its origin to obstructions in the gall-pipe, or of the little ducts leading into the pipe.

YE'NITE. A mineral of a greenish-black colour, found in the Isle of Elba, and in Norway, both crystallised and massive. It is a silicate of lime and iron; sp. gr. 4. Named from Jena.

YEO'MAN, (Angl.-Sax.), Ger. gemein, common. 1. The next class to gentleman, according to Camden.—2. In the royal household, a middle place between sergeant and groom.—3. On board a ship, a seaman who attends to the store-rooms.

YEO'MANRY CAVALRY. The troops of horse which were embodied during the revolutionary wars of France. Several troops are still kept up.

YEW-TREE. A large tree, of which one species is found in Britain, and another in Ireland. The nut-bearing yew grows in China. See *TAXUS*.

YOKE. A light frame of two arms attached to a boat's rudder instead of the tiller, having two yoke-lines attached to

the arms, by pulling on which the boat is steered.

YOKED-LEAF. A conjugate leaf. See CONJUGATE.

YTTRIA. *Yttria*. An earth discovered in 1794, by Professor Gadolin, in Gado-linite, a mineral brought from Ytterby, in Sweden. Yttria is white, insipid, and inodorous; sp. gr. 4.842. Insoluble in water. Strictly it is an oxide of yttrium.

YT'TRIUM. The metallic basis of yttria, discovered by Wöhler, in 1828.

YT'TROCE'RITE. A mineral; a fluoride of calcium, yttrium, and cerium. Its colour is violet-blue.

**YT'TROCOLUM'BITE, } Names for the
YT'TROTAN'TALITE. }** yttrious oxide of columbium or tantalum, found in the quarry of Ytterby, in Sweden, in reniform masses of a shining metallic lustre.

YU (Chinese). Nephrite or jade.

YUC'CA. Adam's Needle. A genus of plants. *Hexandria—Monogynia*. America. *Yuca*, *yucca*, or *yuca* is the name used by the North American Indians to designate the *Y. gloriosa*, the thick and tuberous root of which they employ as bread, after reducing it to a coarse flour.

YULE. *Sax. gehul*, a feast; Celtic *guyl*, a holiday. The old name for Christmas.

YUNX. The Wryneck. A genus of birds. Order *Scansoria*. The wryneck is very closely allied to the woodpeckers, and in some respects to the cuckoo. In England it is a bird of passage, and arrives a few days before the cuckoo. Its name of *wryneck* is derived from its habit of twisting its neck in a singular manner.

Z.

Z, the last letter of the English alphabet, as a numeral stands for 2000, and with a dash over it, \bar{Z} , for 2,000,000.

**ZAC'CO, } In architecture, the same as
ZAC'CHO. }** *Zocle* (q. v.).

ZAF'FRE. *Saffre*. The residuum of cobalt, after sulphur, arsenic, and other volatile matters of the ore have been expelled by calcination. See *SAFFRE*.

ZANTHOP'ICRIN. A bitter principle obtained from the bark of the *Zanthoxylon Caribæum*.

ZAPOTE'. A generic name, in Mexico, of fruits which are roundish, and contain a hard stone.

ZAR'NICH. A native sulphuret of arsenic.

ZAX. A tool for cutting roofing slates.

ZEA. Maize, or Indian Corn. A genus of bread-grain grasses. *Monocotyledon—Triandria*. Name, borrowed from the Greeks, $\zeta\epsilon\alpha$, which appears to have been a species of *Triticum* or *Hordeum*. There is only one species, the *Z. mays*, of America. See *MAIZE*.

ZEBRA. In zoology, the *Equus Zebra*, Lin., an animal nearly allied to the Ass, but marked regularly with black and white transverse stripes. South of Africa.

ZEBU. In zoology, the *Bos Indicus*, Lin., or Indian ox. This species of the ox is very small, something not larger than a mastiff.

ZECH'-STEIN. } In geology, the second
ZETCH'STEIN. } member of the red sandstone series, in the ascending order. It is a magnesian limestone.

ZED'OARY. The root of the *Kempferia rotunda*, which grows in Malabar, Ceylon, &c. The root is brought here in small oblong pieces, but rough and angular; and also in roundish pieces about an inch in diameter. It is used in medicine.

ZEINE. A yellow substance, like wax, obtained from maize, or seeds of the *Zea mays*.

ZEMINDAR'. In India, a feudatory, or landholder, who governs a district of country.

ZEND. The language of the magi and ancient fire-worshippers of Persia.

ZENDAVES'TA. The sacred book of the guebres, or modern fire-worshippers.

ZEN'ITH. In astronomy, that point in the celestial hemisphere which is vertical to the spectator; and from which a right line, passing through the spectator, would proceed to the centre of the earth: opposed to *nadir*. The term is Arabic.

ZEN'ITH DISTANCE. The distance of any celestial object from the zenith.

ZEN'ITH SECTOR. An astronomical instrument for measuring accurately the zenith distances of the stars passing near the zenith.

ZEOLITE, from ζῆα, to foam, and λίθος, a stone. A family of minerals, all characterised by the property of fusing before the blow-pipe, with much ebullition, into a whitish spongy enamel. The subgenera are—(1.) Trapezoidal zeolite, or leucite; (2.) Dodecahedral zeolite, or lapis lazuli; (3.) Hexahedral zeolite, or anacime; (4.) Paratomous zeolite, or cross-stone; (5.) Rhombohedral zeolite, or chabasite; (6.) Diatomous zeolite, or laumontite; (7.) Prismatic zeolite, or mesotype; (8.) Prismatoidal zeolite, or stilbite; (9.) Hemiprismatic zeolite, or heulandite; (10.) Pyramidal zeolite, or apophyllite; (11.) Macrytopous zeolite, or brewsterite. There is also a species of zeolite, containing soda, termed *natrolite*, from natron, or soda. Zeolite is found in granite and gneiss, and also in cellular basalt and primitive greenstone, in Scotland, Iceland, the Feroe Islands, Sweden, and various parts of Germany, and is particularly abundant in some of the South Sea Islands.

ZEPHYR, Lat. *zephyrus*; Gr. ζέφυρος. The west wind; and poetically a soft wind.

ZER'DA. An animal of the canine genus, found in the desert of Sahara, beyond Mount Atlas.

ZERO. 1. The commencement of a scale marked with a cipher 0, for nothing. —2. A cipher.

ZEST, from Arab., *zistan*, to peel. 1. A piece of peel of orange or lemon, used to give flavour to liquor.—2. The woody skin quartering the kernel of a walnut.

ZETA. 1. The Greek letter ζ.—2. A little closet, or withdrawing-room.

ZETET'IC METHOD. In mathematics, is that used in investigation, or the solution of problems. *Zetetic* is from ζήτησις, to seek: that proceeds by inquiry.

ZUG'MA, Gr. ζυγμα, a yoke, from ζυγναι, to join. A figure in grammar, by which an adjective or verb which agrees with a nearer word is by way of supplement referred to another more remote, as *Hic illius arma, hic currus fuit*.

ZEUS. The dory: a genus of acanthopterygious fishes, belonging to the family *Scomberidae*. The John Dory, (*Z. faber*, Cuv., Yarr.), which grows to about a foot in length, is well known on our coasts.

ZEYLANITE. In mineralogy, another orthography of *Ceylanite*.

ZIBET. In zoology, the Indian civet, of an ash colour, spotted with black. See *VIVERRA*.

ZI'MOME, from ζυμη, ferment. A principle supposed by Taddie, an Italian physician, to exist in the gluten of wheat flour. Later chemists have not recognised it.

ZINC, Germ. *zink*. A metal of a bluish-white colour, with a fine granular fracture. It does not occur native, and was not reduced from its ores till the sixteenth century, though these had been long previously used in the formation of brass, of which it is an ingredient. Its principal ores are—(1.) *Calamine*, a carbonate of zinc, of which there are some varieties; (2.) *Blende*, which is a sulphuret of zinc, and the most abundant ore; (3.) *Zinc-ore* is a mineral consisting of oxide of zinc combined with oxide of iron and manganese; (4.) *Sulphate of zinc* is found efflorescent in the form of stalactites. Zinc is known in commerce under the name of *spelter*.

ZIN'OBER. Ginger. A genus of perennial plants. *Monandria—Monogynia*. Name from ζυγνιστες, borrowed by the Greeks from the Arabians, when they got the plant. There are 12 species, all natives of hot climates; but the root of the *Z. officinale* of India only is known in our shops under the name of ginger.

ZIR'CON. A rare mineral or gem, first brought from the island of Ceylon, but has since been found in various parts of Europe. There are two species, *Z. jargoon*

and *Z. hyacinth*. Both are silicates of zirconia, coloured with oxide of iron. It possesses a double refractive power, by which it is readily distinguished from idocrase, garnet, and staurolite.

ZIRCO'SIA. An earth which forms the basis of zircon. It is a fine white powder, without taste, or smell, and is insoluble in water; yet, when slowly dried, it coalesces into a semi-transparent yellowish mass like gum-arabic, which retains one-third its weight of water. In *chemical language* it is an oxide of Zirconium.

ZIRCO'NIUM. The metallic basis of zirconia, discovered by Berzelius, in 1824. Zirconium, however, more resembles charcoal-powder than a metallic substance, and burns with almost explosive violence.

ZIZA'NIA. Canada rice. A genus of perennial plants. *Monœcia*—*Herandria*. Name *Ζιζανιον*, the lolium of the Latins. The grain of the *Z. aquatica* is valued.

ZOAN'THUS. A genus of *Polypi*, of the order *Carnosi*, separated from the *Actinæ* by Cuvier. Name from *ζωον*, an animal, and *ανθος*, a flower; the animals being united, in considerable numbers, on a common base, and having a broad surface like a flower.

ZO'CLE. In *architecture*, a low square member, used instead of a pedestal, to support a column. The *socle* differs from a pedestal, in being without base or cornice.

ZO'DIAC, Gr. *ζωδιακος*, containing living creatures, from *ζωον*, an animal. 1. In *astronomy*, the tract of the sun through the twelve signs.—2. A broad circle of the sphere containing the twelve signs, the middle of which is the ecliptic, from which the sun never deviates.—3. Two circles, parallel to the ecliptic, which bound and comprehend the excursions of the planets north and south, never exceeding 20°, which is the utmost breadth of the zodiac.

ZODI'ACAL LIGHT. In *meteorology*, a brightness sometimes perceived in the heavens at certain times of the year, after sunset and before sunrise; supposed to be an effect of the solar atmosphere.

ZOI'SITE, } A variety of epidote of a grey,
ZOI'ZITE, } brown, or yellowish colour: so named after Baron Von Zois.

ZO'HAN, Heb. *splendour*. A Jewish book, highly esteemed by the rabbis, and supposed to be of great antiquity.

ZONE, *ζωνη*. 1. A girdle.—2. In *geography*, a division of the earth with respect to the temperature of different latitudes. The zones are five: the *torrid zone* (q. v.), the two temperate zones, situated between the tropics and the polar circles; and two frigid zones, situated between the polar circles and the poles.

ZO'OCTYST, from *ζωον* an animal, and *οκτυς*, a cyst or bladder. An animal, formed of a membranous cyst, distended with an aqueous fluid.

ZOOO'GRAPHY, from *ζωον*, an animal, and *γραφω*, to describe. Zoology.

ZO'OLITE, from *ζωον*, an animal, and *λιθος*, stone. A petrified animal.

ZO'ÖLOGY, from *ζωον*, an animal, and *λογος*, a discourse, i. e., the science of animals. This science, then, teaches the nature and properties of animals, their classification, their order of succession, and their distribution over the earth.

ZOON'IC ACID. Acetic acid combined with animal matter, obtained by distilling any animal substance. Berthollet gave it this name, supposing he had discovered a new acid.

ZOON'OMY, *ζωον* and *νομος*, law. The science of the laws of animal life.

ZOOPH'AGA, from *ζωον*, an animal, and *φαγω*, to eat. A name given to that tribe of animals which attack living animals and devour them.

ZOOPH'ORUS. In *architecture*, a name given by the Greeks to the frieze, because it was in general covered with figures of animals: *ζωον*, an animal, and *φρεω*, to bear.

ZOOPH'YTA. Zoophytes. Radiated animals: *ζωοφυτα*, from *ζωον*, an animal, and *φυτον*, a plant. Animal-plants. These names refer to a multitude of animals, whose organization is always evidently very simple; and, although they differ widely among themselves, agree in one point, viz., their parts are arranged on an axis, and on one or several radii, or on one or several lines extending from one pole to the other. The classes of this division are *Echinodermata*, *Entozoa*, *Acalepha*, *Polypi*, and *Infusoria*. Zoophytes are either free in the sea, or attached for life to some substance.

ZOOPHYTOL'OGY, from *ζωοφυτα*, zoophyte, and *λογος*, discourse. That branch of natural history which treats of the structure, habits, &c., of zoophytes.

ZOOT'OMY, from *ζωον*, an animal, and *τιμνω*, to cut. The dissection of animals.

ZORIL'LE, } A foetid animal of the weasel
ZORILL', } tribe found in South America. The name is Spanish, *Zorillo*, the cub of a fox.

ZOS'TERA. The grass-wrack: a genus of piperitæ. Named from *ζωστια*, a girdle, on account of the girdle-like appearance of the leaves.

ZOTH'E'CA. A small apartment, separated from a larger one by movable curtains.

ZU'MIC, pertaining to leaven: *ζυμη*, ferment. The *zumic acid* is said to be

produced or developed in all vegetable substances, in the processes of acetous fermentation, especially in rice. The existence of such a compound is, however, still doubtful.

ZYMOLOGY, from ζυμη, ferment, and λογος, discourse. The doctrine of fermentation.

ZYMOSIMETER, from ζυμωσις, fermentation, and μετρεω, to measure. An instrument invented by Swammerdam, for ascertaining the degree of fermentation, occasioned by the mixture of different liquids, and the degree of heat which becomes sensible during the fermentation.

ZYMA. A genus of lepidopterous insects of the family *Crepuscularia*, Cuv., The caterpillars live exposed on various

leguminous plants. Also, a genus of cartilaginous fishes of the shark tribe.

ZYODACTYLOUS, from ζυγω, to join, and δακτυλος, a finger. Having the toes joined in pairs. Applied to birds having the toes disposed in pairs, as the parrot.

ZYGOMA, from ζυγος, a yoke. The name given by anatomists to the cavity under the zygomatic process of the temporal bone and os mala.

ZYGOMATIC. Appertaining to the zygoma. *Zygomatic process* is the apophysis of the os jugale; and another of the temporal bone, is so called.

ZYTHOGALA, from ζυθος, beer, and γαλα, milk. A mixture of beer and milk; the old beverage known by the name of *potus-drink*.

SUPPLEMENT.

N.B.—In every instance in which a reference is made or implied in the explanations, the body of the work must be consulted, where the matter referred to is not found in the Supplement.

A.

AARD-VARK, one of the edentate insectivorous animals found in South Africa, *Orycteropus Capensis*, allied to the armadillo.

AARDWOLF, a carnivorous animal allied to the hyena.

AAVORA, the fruit of one of the West Indian palms.

ABABILO, a fabulous animal mentioned in the Koran, with feet like a dog, and a beak like a bird.

ABACA, a flax found in the Philippine Islands, from *Musa textilis*, a kind of plantain.

ABACAY, one of the parrot tribe; a calangay.

ABACISCUS, a square compartment of a Mosaic pavement, or any flat member in architecture.

ABADA, a large African deer with three horns; two on the forehead and one on the nape of its neck.

ABANDONEE, in law, he to whom a thing is abandoned by another called the *abandoner*.

ABANDUM, a thing confiscated or forfeited, in old law.

ABBREVIATIO Placitorum, an abstract of ancient pleadings made before the year-books in legal history.

ABELIAN equations, irreducible algebraic equations, one root of which may be expressed as a rational function of a second, which the mathematician Abel discovered could always be solved by the solution of a second equation of lower degree.

ABER, a Celtic term for the mouth of a river, as Aberystwith, the mouth of the Ystwith.

ABERDEVINE, the *Carduelis Spinus* of Cuvier, the European siskin, a small green and yellow finch, closely allied to the goldfinch.

ABERRANT, a term applied in botany to groups or species with any marked difference from the type.

ABICHITE, native arseniate of copper, so called after Prof. Abich.

ABIETINÆ, the division of the Coniferous order of plants which includes the true pines, firs, and Araucariæ.

ABI GENESIS, the beginning of life or being, synonymous with Archigenesis.

ABOUHANNES, a bird found in Africa, supposed to be the ancient Ibis.

ABRAMIS, a sub-genus of soft-finned abdominal or malacopterygious fishes without barbels or spines, exemplified by the bream.

ABRAXAS, the supreme deity of the Basilidians, who, they taught, had 365 inferior deities under him, to whom was committed the government of that number of celestial orbs; also the name given to an antique stone or gem with the word "Abraxas" engraved upon it.

ABSORBENT ground, or absorbing ground, in painting, a ground so prepared that the colours are absorbed in it, and especially the oil, leaving the surface tints vivid. In the absorbed pictures of the French connoisseurs the colours are left flat and the touches indistinct; the effect being expressed by the word *chilled* among English dealers.

ABSORBING well, a shaft sunk down till it reaches permeable and absorbing strata capable of carrying off water thrown into it without the water-level at the bottom rising. It is a dangerous mode of drainage, exemplified by the dead wells of Southampton, and liable to generate all the pestilential influences arising from choked drainage, when the substrata require to be subsequently penetrated.

ACADIALITE, a variety of chabazite found in Nova Scotia, formerly called Acadia.

ACAJOU, the name given to mahogany by the French; also the cashew-nut, *Anacardium occidentale*.

ACAMPTOZOMES, from ἀκαμπτος, "I bend not," and σωμα, "the body;" an order of Cirripeds with compound shells incapable of being unfolded or protruded.

ACANTHOIDE, from *ακανθα*, "a spine," a mineral occurring in whitish silky needles in the Vesuvian lava of 1821, and in dark brown and reddish fibres in other lavas.

ACANTHOPHIS, a genus of Australian serpents belonging to the vipers, with a peculiar horny sting-like spine at the extremity of the tail.

ACANTHURUS, a genus of fishes with spiny fins, and especially a powerful moveable spine on each side of the caudal extremity, capable of inflicting serious wounds.

ACCUMULATION of Power, one of the elements for consideration in the construction of machinery, the efficiency of which depends much on its power to resist the force which its action does not relieve or give full effect to, and which in consequence accumulates against the machinery itself.

ACERACEÆ, a small order of polypetalous exogens, of which the acer is a typical genus.

ACERA, or **ACERANS**, *ἡ κερα*, without a horn, a family of apterous insects without antennæ; also a family of gasteropodous molluscs without tentacles.

ACERDESE, grey oxide of manganese.

ACETAL, an inflammable liquid obtained from the action of spongy platinum on alcoholic vapour. It is colourless, and under slow combustion is converted into acetic acid.

ACETAMIDE, a white crystalline body, soluble in water, obtained by the replacement in ammonia of an equivalent of hydrogen by acetylene.

ACETANILIDE, a solid crystalline body, soluble in hot water, obtained by replacing in aniline one atom of hydrogen by acetylene.

ACETIC Ether, a compound of acetic acid and ether with an odour like apples, obtained by distilling alcohol and oil of vitriol with acetate of potash. It is a flavouring of various wines.

ACETINES, oily bodies prepared by combinations of acetic acid with glycerine.

ACETONITRILE, a former name of cyanide of methyle.

ACETUREIDE, urea in which acetylene has replaced hydrogen.

ACETYLA, Diethylenia, or Acetylamine, an organic base obtained by the replacement of two double equivalents of hydrogen by two of ethylene in a double atom of ammonia.

ACETYLE, the hypothetical radical of acetic compounds composed of four atoms of carbon and three of hydrogen. $C_4 H_3$.

ACETYLENE, one of the hydro-carbon gases remarkable for containing the smallest proportion of hydrogen.

ACHIEVEMENT, a shield of armorial bearings in heraldry, but more particularly the *hatchment*, or funeral shield.

ACHILLEINE, the bitter principle of *Achilleæ Millefolia*.

ACHMATITE, a variety of pistacite or lime and iron Epidote found at Achmatowsk.

ACHROITE, the colourless varieties of tourmaline, from *α χροια*, without colour.

ACOLLE, (from *col*, the neck, signifying collared,) animals with collars are so described in heraldry; also two things joined together; or swords, spears, &c., placed saltire-wise behind the shield.

ACONITIC Acid, or citridic acid, a crystalline acid body found in aconite, the river Equisetum, &c.: whence called also equisetetic acid. It is artificially procured from the residue of the distillation of citric acid: hence one of the above names.

ACORACEÆ, the natural order of plants of which Acorus is the typical genus.

ACRE fight, a single combat, engaged in on the English and Scottish borders during the period of border warfare.

ACRIDIA, a family of orthopterous insects, of which Acridium, or Acridium, is the typical genus.

ACRODACTYLUM, the upper surface of each digit in zoology.

ACRODUS, a genus of fossil sharks with large polygonal obtuse enamelled teeth at the extremity of the jaw.

ACROLEINE, an acrid volatile product of the destructive distillation of fat oils, resulting apparently from the decomposition of glycerine.

ACROLITHOS, in the statuary of the ancient sculptors, any statue in which the drapery was made of wood, and the nude portions of marble.

ACROPODIUM, the upper surface of the entire foot in zoology.

ACROPOLIS, the citadel or upper town of Greek cities, and generally the portion first built.

ACROTARSUM, the upper surface of the tarsus in zoology.

ACRYLE, the hypothetical radicle of the hydride *acroleine*.

ACRYLIC Acid, acroleine oxydized.

ACTINISM, the effect produced by the sun's rays or artificial light employed in photography, by which chemical decompositions and combinations result; distinguished from the light-and-heat-giving powers of the same rays.

ACTINOCRINITES, a sub-genus of encrinites, with rows of angular plates articulated by their edges.

ACTINOGRAPH, an instrument constructed by Mr. Hunt for recording the variations in the actinic power of the sun's rays. It is a fixed cylinder, covered with photographic paper, enclosed in a metal cylinder, which completes a revolution round it every twenty-four hours. The photographic paper is exposed through a triangular opening in the outer cylinder to the solar light, the opening being divided by fifty bars.

ACTINOMETRA, an ingenious invention of

Sir John Herschel for ascertaining the force of solar radiation. It is fully described in the Report of the President and Council of the Royal Society on the Objects of Scientific Inquiry in Physics and Meteorology for 1840. Professor Forbes used the instrument to ascertain the difference of solar radiation at the top and bottom of the Faulhorn, Switzerland.

ACULEATE, a botanical term, signifying prickly, or covered with prickles. *See* **ACULEUS**.

ACULEATES, a tribe of hymenopterous insects, the females and neuters of which have a sting concealed in the last segment of the abdomen.

ADAMSITE, a lamello-granular variety of mica, found at Derby, Vermont, of an ashy grey colour.

ADDITION, in law, the personal description or rank of a man in addition to his name, as gentleman, esquire, &c.

ADELPHOLITE, a tantalate of iron and manganese, or niobate, from Rajamaki, Finland. It contains about ten per cent. of water.

ADIPIC Acid, a solid fat produced from the action of nitric acid on oils.

ADIPIC ETHER, a compound with the flavour of rennets, produced by the combination of adipic acid with ether.

ADJUDICATION, a form of legal procedure in Scotland, now considerably simplified, whereby titles to lands could be perfected by decree of the Supreme Courts without conveyance or the ordinary process of transmission. Adjudications are general, special, and in implement.

ADULTERINE, offspring of adultery, excepted by law from subsequent legitimation by marriage of the parents.

ADULTERINE Guilds, certain persons who without charter traded as corporations, preferring to pay an annual penalty for their violation of the corporate privileges.

ADVERSA, a numismatic expression, signifying that two heads confront each other on the coin or medal.

ADY, a Malabar palm tree, found on the Island of Thomé, with an aromatic kernel yielding an oil, from which a kind of butter is made.

ÆGIRINE, a variety of pyroxene, from Brevig, Norway, allied to Arfvedsonite.

ÆOLE, a genus of oranges yielding the Marmelos or bhel fruit.

ÆPYORNIS, a fossil genus of colossal cursorial birds, found in the Pliocene strata of Madagascar. The egg of this bird is estimated to have been equal to one hundred and fifty hens' eggs.

ÆRIAN, the lowest degradation inflicted on a Roman citizen, short of loss of liberty.

ÆRIUM, the treasury of the Roman Plebs, which was under the care of the quaestors. Under the empire it was kept

separate from the *fiscus* or treasury of the emperor.

ÆSCHYNITE, a titanate of Cerium and Zirconia, from the Feldspar of the Ilimen mountains, Siberia.

ÆSTMNETE, those of the Greek tyrants who, being invested with supreme power and the command of the army for a period to meet some public emergency, became despots for the remainder of their lives by retention of their authority.

ÆTHOGEN, a compound of boron and nitrogen, which yields an intense light under the blow-pipe.

ÆΤΙΑΙΟΙ, from *ÆΤΟΣ*, a pediment, the Greek name for the slabs forming the face of the tympanum of a pediment.

AFFILIATION, the fixing of the paternity of an illegitimate child, by law.

AFFILIATED SOCIETIES, societies scattered over districts, but depending on a central society for direction.

AFTER-DAMP, or Choke-damp, the name given by miners to the carbonic acid gas so destructive to life after an explosion, by means of which it turns the oxygen into carbonic oxide.

AFTERMATH, grass mown after the first crop of hay, and carried from the field.

AGAMA, the first section of the Iguanion Sauria, or *Agamida*, distinguished by the want of palatal teeth.

AGAMOUS, cryptogamic, but specially applied to the lichens, fungi, and confervae.

AGAPE. *See* **AGAPE**.

AGATHOTES, a genus of the gentian family of plants.

AGGLUTINATE LANGUAGES, the Tauranian family of languages, so called because the affixes by which the conjugation and declension are effected can still be used separately and distinct from the roots, and retain their individual powers as separate parts of speech.

AGILIA, the family of rodents which includes dormice and squirrels.

AGIOTAGE, manœuvring in the public funds, or in reference to them, for the purpose of affecting their price.

AGIOSMANDRUM, a wooden instrument used in Christian churches under the dominion of Turkey as a substitute for bells, which were prohibited.

AGMINATE GLANDS, the name given to the glands of Peyer aggregated in groups in the small intestines; they are commonly oval groups and of various sizes.

AGNESITE, a steatitic earthy mineral from Huel Coates, St. Agnes, Cornwall.

AGNOETE, (from *ἀγνοεω*, "I do not know.") two early sects of the Church, the earlier of which questioned the Divine omniscience; and the later in the sixth century held that the Messiah in His humanity was ignorant of many things, such as the time of the Day of Judgment. The latter

error arose from the reading of the passage, "But of that day and hour knoweth no man, but the Father," without the correlative passage, "I and the Father are one."

AGNOSTUS, (*αγνωστος*, "unknown,") the name given to an obscure genus of trilobites with reniform or semicircular-shaped bodies.

AGUTI, the native name of certain herbivorous rodent quadrupeds of South America belonging to the genus *Dasyprocta*.

AICH'S METAL, or *Sterro Metal*, a kind of gun-metal of superior ductility and tenacity, being an alloy of iron with zinc and copper.

AIGRETTE, the pappus or calyx of composite in botany.

AIKINITE, a synonym for acicular bismuth or needle ore.

AL ARAR, a Mohammedan middle state or place of confinement of departed spirits not admitted to Paradise nor condemned to Hell.

ALABANDINE, the Ethiopian carbuncle, so called by Pliny from their being cut and polished at Alabanda; the manganese glance or manganblende of modern mineralogists.

ALABARCHES, the name of the chief magistrate of the Alexandria Jews. His duty was to raise and pay the taxes. The word is supposed to be a corruption of Arabarches.

ALANIN, a crystalline white body obtained from hydrocyanic acid and aldehydammonia. It is converted into lactic acid by hyponitrous acid.

ALABRIA, a genus of seaweed or algae, of which the badderlocks or henware, *A. esculenta*, is an example.

ALBARIUM OPUS, a superior stucco used for the ceilings of baths, for which *tectorium opus* appears to have been substituted by the Romans. See *VITRUVIUS*, chap. x. It was by some critics mistakenly supposed to be only a name for whitewash.

ALBATA, an alloy of brass with nickel or tin, to which iron is sometimes added, so called from its white colour.

ALBATI, a sect of Christian hermits who lived and slept on the highways, so called from their white linen dresses.

ALBERTITE, or Albert Coal, a bituminous coal of Hillsborough County, New Brunswick. Similar coal has also been found in Ross-shire in the old red sandstone formation.

ALBIN, a Bohemian variety of apophyllite of a white opaque appearance, found at Aussig.

ALCARSIN, the oxide of cacodyl, a liquid, called also Cadet's fuming liquid. It has an intense stench, and is formed by heating together arsenious acid and acetate of potash. It is highly poisonous and volatile.

ALCORNINE, a crystallisable body obtained from alcornoque bark.

ALCYONS. See **ALCEDO**.

ALGERITE, an altered scapolite in slender square prisms, found in the calc spar of Franklin, New Jersey.

ALGODONITE, a native compound of arsenic and copper in the proportion of 1634 arsenic, 8366 copper. It has a silver like colour, but becomes tarnished under atmospheric action.

ALGORITHM, a system of computation peculiar to some subject or method, as the algorithm of differential calculus.

ALIEN WATERS, a name given to waters carried over any irrigated field or land without being employed in the irrigation of it, or water not employed for the uses of the land through which it is carried.

ALIGNMENT, the line of position of a fleet in naval tactics.

ALKARSINE. See **ALCARSIN**.

ALLANTURIC ACID, a product of allantoin under the action of heat.

ALLEMONTITE, the arsenical antimony of Allemont, Dauphiny.

ALLITURIC ACID, one of the products of alloxan boiled with hydrochloric acid.

ALLOMERISM, the permanence of particular crystalline forms maintained by certain compounds when the proportions of the components are varied.

ALLOMORPHITE, a variety of sulphate of baryta found at Rudolstadt, Schwarzburg, in scaly masses.

ALLOTROPY, the variability of certain bodies when subjected to different temperatures, such as that exhibited by the elementary body phosphorus, which as first used in the manufacture of lucifer matches was found to be poisonous and injurious to the health of those engaged in the manufacture, but, by discovery of its allotropic properties, is now prepared in a perfectly harmless form. Allotropy affects the colour, texture, fusibility, and solubility, &c., of various bodies.

ALLOXAN, a product of the action of nitric acid on uric acid. It gives a purple tinge to the cuticle. Its composition is $C_8 H_4 O_{10} N_2$.

ALLOXANIC ACID, a product of the action of caustic baryta and heat on alloxan.

ALLAUDITE, hydrated double phosphate of soda, peroxide of iron, and protoxide of manganese, from Chanteloupe, near Limoges, France.

ALLYLE, ($C_6 H_5$) the supposed bases of the volatile oil of garlic.

ALMAGREHTE, a native anhydrous sulphate of zinc found in crystals isomorphous with sulphate of baryta at Barranco Jaroso, in the Sierra Almagrera, Spain.

ALMACANTAR, an old astronomical term for a small horizontal circle of the sphere.

ALMERY or **AMBRY**, a niche in a wall near an altar, to hold the articles pertaining to it; also, more comprehensively, a closet for containing plate, deeds, &c.

ALNAGER, an officer appointed to examine into the assize of cloth and collect the alnage duty by a statute of Edward III. The duty has been long abolished.

ALOEXYLON, the aloes wood, lign-aloes or eagle-wood.

ALOIN, the active principle of aloes.

ALOPECIA. See **ALOPECY**.

AL-SIRAT, the Mohammedan name given to a bridge said to cross the abyss of hell, forming the way to heaven, and to be as narrow as the edge of a sword.

ALTHEIN, a white crystalline body found in althea root, the same as asparagin.

ALTHIONIC ACID, supposed to be a compound of isethionic acid with sulphuric acid, with the latter of which it is isomeric.

ALUMOCALCITE, an impure milky opal inclining to blue; found in ironstone veins in Saxony, and composed of 2 per cent. of alumina and 6 of lime.

ALUNITE, alumstone.

ALUNOGENE, hydrous sulphate of alumina, found native in New South Wales and North and South America.

ALURNUS, a genus of coleopterous insects, with four to six very short palpi, short filiform antennæ, and short horny maxillæ.

ALVITE, a mineral found in crystals in Norway, composed of lithia, silica, alumina, glucina, thorina, peroxide of iron, and water.

AMALFIAN CODE, a code of maritime laws compiled about the latter part of the eleventh century by the Amalfians, and recognised in Mediterranean navigation.

AMALIC ACID, a crystalline substance obtained by the action of chlorine on caffeine: the same as demethyl-alloxantin.

AMANDIN, the casein of sweet and bitter almonds.

AMANSITE, a grey or greyish-white compact felspar, found at Ådelfors, Sweden.

AMARYTHRIN, a body produced by the oxidation of orsellin ether.

AMASATINE, a product of the action of ammonia on isatin.

AMAUSIS, the same with gutta serena, or loss of vision from defective action of the optic nerve.

AMBRY. See **ALMERY**.

AMBUBALE, the name given in Syria and Arabia to certain Syrian girls who maintained themselves in Rome by the public performance of music.

AMBUSCADE, from *imboscata*, Ital., a snare of any kind for an enemy.

AMBUSTION, a burn or scald. Medical term.

AMIA, (*Amia calva*, Linn.) a genus of abdominal fresh-water fishes found in Carolina, North America, exemplifying the sauroid fishes of Agassiz, the air-bladder of which is like the lung of a reptile.

AMICABLE NUMBERS, numbers in relation to each other of which each is equal to the sum of the aliquot parts of the other.

AMIDO-ACIDS, a series of organic acids formed by expelling two equivalents of water and replacing them by one equivalent of ammonia and one of the hydrate of a dibasic acid.

AMIDOGEN, a compound not yet isolated, but traceable in combination with compounds known as amides, q. v. It is composed of one atom of nitrogen and two of hydrogen. Symbol, NH_2 .

AMINES, chemical compounds similar to amido acids and amides, but combined with basic radicals, and called monamines, diamines, triamines, &c., from the presence of a single, double, or triple atom of ammonia, and primary, secondary, tertiary, in relation to the proportion of hydrogen one-third, two-thirds, &c., replaced by radicals.

AMISATINE, a crystalline product obtained from indigo.

AMMELIDE, a white neutral compound obtained by the action of strong acids on ammeline.

AMMELINE, a white crystalline body, weakly basic, obtained by the action of alkalis or acids on melam.

AMMIOLITE, a red powder composed of antimonide of mercury mixed with oxide of iron and clay, found in the quicksilver mines of Chili, &c.

AMMOCETES, a genus of cyclostomous fishes exemplified by the stone grig or pride, one of the lowest of the organised vertebrate animals.

AMMONIA-ALUM, hydrated sulphate of alumina and ammonia, found in the brown coal of Tschermig, Bohemia, in octahedrons and thin layers.

AMMONIACUM, a medicinal gum resin, said to be exuded from *Dorema ammoniacum*. It is a mildly stimulating expectorant, though not very certain in its action.

AMMUNITION, a military expression for all sorts of warlike stores, and more particularly that necessary for loading and firing of guns.

AMNESTY, in political language, exemption from penalty, such as rebellion, treason, &c.

AMCEBA, (αμοιβή, "alternation,") Ehrenberg's *Amceba diffuens* is an acrite of the order of Rhizopoda in the lowest state of organisation known to zoology, being a mere rounded gelatinous mass, but suspected to be an embryonic condition of higher Rhizopoda. It can emit lobes and processes from all points of its body, and withdraw them at pleasure.

AMPELIC ACID, a white solid, obtained from the action of nitric acid on coal tar.

AMPELIN, a liquid found in coal tar, similar to creasote.

AMPELIS, a Linnæan genus of passerine birds, with straight convex beaks, of which the upper mandible is subincurved, and emarginate on both sides, and longer than the lower. The *Ampelis garrulus*, or Bo-

Æmian chatterer, is an example, though now referred to the subgenus *Bombycilla*.

AMPHIBIOLITE, the Linnean name of parts of amphibia, or fragments of reptiles found in the fossil state.

AMPHIBOLI, a family of scansorial birds, of Illiger, including those with external and versatile posterior toes.

AMPHIBOLOGY, an equivocal expression or sentence, in Rhetoric, admitting of more than one interpretation.

AMPHICELIAN, a term to signify that both articular surfaces of the central vertebrae are concave, as in the backbones of fish, &c.

AMPHICYON, a genus of carnivorous plantigrade mammals, found in the Miocene deposits of the south of France and Darmstadt, allied to the *Wah* or *Ailurus*.

AMPHILESTES, a genus of insectivorous Mammalia, found in the Oolitic formation.

AMPHIOXUS, a genus of fishes sharp at both ends, with a gelatinous dorsal chord supporting a nervous axis.

AMPHIPODS, an order of Crustaceans in the system of Latreille, being the third, and remarkable as the only one having sessile eyes, and subcaudal natatory feet.

AMPHITHERIUM, a fossil genus of insectivorous Mammalia found in the Oxford Oolite, for a time suspected to be Marsupial.

AMPHITROPAL, in botany any embryo curved upon itself, so as to present both its extremities at the same point.

AMPHIUMA, a genus of true amphibious reptiles, with palatal teeth in two longitudinal rows, an elongated body, with four rudimentary extremities divided into two or three toes, and a persistent branchial orifice on each side of the neck.

AMPHODELITE, a variety of anorthite, found in reddish crystallised masses in Finland and Sweden.

AMPILIFICATION, in Rhetoric, the expansion of a subject by dwelling on its details and the language of description.

AMYGDALIC ACID, an organic acid obtained by the elimination of ammonia from amygdaline and assimilating water.

AMYGDALINE, a crystalline principle found in bitter almonds, yielding hydrocyanic acid under the action of emulsine and water. It is $C_{40}H_{27}O_{22}$.

AMYLENE, or **AMYLE**, the hydrocarbon base of Amylic alcohol, or hydrated oxide of Amyle.

AMYLUREA, urea in which the radical Amyle replaces hydrogen.

AMYRINE, a resin obtained from the white canary wood of the Philippine Islands.

ANACARDIC ACID, an acrid, fatty matter, contained in the fruit of the cashew nut, *Anacardium Occidentale*.

ANACOLYTPA, an Indian plant whose juice is said to be an antidote to the bite of the cobra.

ANACYCLUS, a genus of Mediterranean compositae resembling chamomile.

ANADYOMENE, a name of Aphrodite, referring to her rising from the sea.

ANÆSTHESIA, want of consciousness of touch, or weakened consciousness to the sense of pain, in medicine.

ANÆSTHETICS, any substances which weaken or suspend the susceptibility to touch or pain, such as ether, chloroform, &c.

ANAGLYPHIC, the opposite of diaglyphic, being raised or embossed in opposition to sunk or depressed work.

ANAGLYPTOGRAPH, an instrument for enabling the engraving of any embossed work to be copied or executed by means of a diamond point passed over the surface of the medal, &c., sought to be represented. The invention is due to Mr. Bate.

ANALYSIS OF LIGHT, a new branch or department of science, for which see *Spectrum Analysis*.

ANAMIRTA, a genus of Menispermaceæ, from which the *Cocculus Indicus* is obtained. *A. Cocculus* grows as a climbing shrub in Malabar, Ceylon, and the islands of the Indian Archipelago.

ANARMIRTIC ACID, the acid of a neutral fat found in *Cocculus Indicus*.

ANAMORPHOSIS, those characteristics of plants or animals on which certain doctrinaires founded their theories of the development from a lower to a higher condition, which, however, is opposed by the fact that all the so-called lower species of an order are equally fitted for their particular function and place in the economy of nature with those supposed to be developed beyond them. The more correct application of Anamorphosis, therefore, would be nature's power of adapting organic bodies to the conditions in which they have to maintain their vitality for the time being. In art, anamorphosis is applied to drawings so executed that when viewed in the ordinary way they appear confused, or represent objects dissimilar to those they represent at other points of view, or when reflected in curved mirrors, &c.

ANAPHORA, the Rhetorical name given to the repetition of words or expressions at the beginning or end of verses, sentences, &c.

ANAPOPHYSIS, a process in vertebrate animals which recedes from the dorsal region above the transverse process or diapophysis to the side of the centrum, and projects more or less backward as the vertebrae come nearer to the sacrum. Some of the rodents, as the hare, have it well developed.

ANASTATICA, the rose of Jericho, *A. Hierochuntina*, which is much admired for the singular property that when it ripens from the condition of a trivial herb with white flowers it rolls itself up into a ball and becomes detached from the soil, being blown about by the wind till it reaches some moist place, when it unrolls itself into its natural form. Under the alternate influence of

drought and moisture, this little vegetable curiosity maintains this power for many years.

ANASTROPHE, certain inversions in the order of words receive this name in Philology, such as *vobiscum* for *cum vobis*, &c.

ANAUXITE, a greenish white mineral, composed of silica and alumina, with a small quantity of magnesia, and protoxide of iron, and 11.5 per cent. of water.

ANCHUSINE, or **ANCHUSIC ACID**, a red colouring matter found in alkanet root, and soluble in fats and oils.

ANCILE. See *Ancyle*.

ANCISTROCLADEE, a natural order of Fungi, consisting of one genus, the *ancistrocladus*.

ANCONA, an expression found in old Venetian documents, signifying an image, picture, or altar-piece; from the Greek *εἰκών*.

ANDESINE, a felspar, resembling albite, composed of lime and soda, and found in the Andesite rocks of the American Andes.

ANDIRONS, the fire dogs used on hearths where wood was burnt. In the middle ages they were frequently works of art.

ANDREACEE, an order of moss-like plants, with four-valved spore cases, differing from the true mosses by the absence of a peristome and operculum.

ANDREASBERGOLITE, a former name given to Harmotome found at Andreasberg in the Harz.

ANELLATA, or Anellides. See *Annelides*.

ANELYTROUS, a term applied to insects without elytra or wing sheaths.

ANEMONIC ACID, an organic solid found in the wood anemone.

ANEROID Barometer, from *α* and *μηρος*, "without damp," sometimes called the Dry Barometer, in contradistinction to the Mercurial Barometer. An instrument for barometrical purposes, consisting of a corrugated metal box, enclosing a partial vacuum, capable of compression by the pressure of the exterior atmosphere. A spiral spring within the box connected with an external index by a simple mechanical arrangement shows the amount and variation of the compression on a graduated dial, marked at the appropriate points with the usual words, Rain, Fair, Much Rain, &c.

ANGEOLOGY. See *Angiology*.

ANGIOSPOROUS, such fungi as have their spores in a hollow bag or shell.

ANGLARITE, fibrous compact phosphate of iron, from Anglar, France.

ANGLE IRON, iron rolled into the shape of the letter L.

ANGLEMETER, an instrument used by geologists for measuring the inclination or dip of strata, &c.

ANGLESITE, sulphate of lead obtained from the decomposition of galena.

ANGUILLIFORM, eel-shaped; from *anguilla*, "an eel"

ANILES, aniline in which one atom of a diatomic radical replaces two of hydrogen.

ANILIC ACID, a white crystalline and fusible product of the action of nitric acid on indigo, called also Indigotic Acid and Nitrosalicylic Acid.

ANILIDES, aniline in which an electronegative radical replaces one atom of hydrogen.

ANILINE, from *anil*, the indigo plant, a product of the distillation of various organic bodies, among others indigo, but now chiefly from benzole, one of the constituents of coal tar. It is much employed in preparing the aniline dyes, magenta, mauve, &c.; and was formerly called Crystalline, $\text{—C}_{12}\text{H}_7\text{N}$.

ANILOCYANIC ACID, cyanic acid in which phenyl replaces hydrogen.

ANILOTIC ACID, a body obtained from the action of nitric acid on salicin.

ANIMA MUNDI, a supposed spirit or metaphysical essence, at one time held to be diffused through nature, as an organising and actuating influence.

ANISAMIDE, ammonia in which an atom of the negative radical anisyl replaces an atom of hydrogen.

ANISANILIDE, anisamide in which phenyl replaces an atom of hydrogen.

ANISE, the aromatic fruit of *Pimpinella Anisum*, an oriental umbelliferous annual, chiefly used for dyspepsia. The Star Anise is obtained from one of the Winteraceae, *Illicium anisatum*.

ANISETTE, a liqueur, made in France by distilling anise, coriander seed, and fennel with brandy, which is afterwards sweetened.

ANISIC ACID, a crystalline product of the action of nitric acid on aniseed.

ANISIC ETHER, a compound of anisic acid and ether.

ANISODYNAMOUS. See *Anisobryous*.

ANISOIN, a resinous product of the action of oil of vitriol on oil of aniseed.

ANISYL, the hypothetical radical of anisic acid.

ANKER, a liquid measure for wines and spirits, equal to eight and a half imperial gallons.

ANKERITE, a crystallised Dolomite or Magnesian limestone found in the Orkneys.

ANNABERGITE, hydrated arseniate of nickel, found at Annaberg.

ANNIHILATOR, or Fire annihilator, a modern invention for the extinction of fire, more especially useful in cases in which water would not prevent the combustion, as in the case of spirits, petroleum oils, tar, &c., which would burn though floating on water. It is a portable reservoir in which incombustible gas may be rapidly generated, such as carbonic acid evolved from the action of oil of vitriol on marble or carbonate of lime. As carbonic acid, however, is instantly destructive to human life, recent improvements have so combined the incombustible gases

with others not injurious to vitality, that this invention may now be safely applied to the extinction of fire in inhabited houses, without injury to the occupants.

ANNIVITE, a variety of impure grey copper found with iron pyrites in Anniviers, Switzerland.

ANNUAIRE, the French name for French publications which appear annually.

ANNULAR ECLIPSE, an eclipse of the sun in which, the moon being concentric with the sun to the observer's line of vision, and her disc not sufficient to exclude his wholly from view, the margin of the solar disc is visible all round and outside that of the moon.

ANOBIUM, a Fabrician genus of Coleopterous insects, with a nearly round unmarginated thorax, clavate palpi, filiform antennae, and entire labium.

ANODYNE, any medicine for relieving pain, such as narcotics, sedatives, &c.

ANOMIA, a Linnean genus of Vermes testacea, now confined to a genus of acephalous molluscs, with two thin irregular and unequal valves, one of which is flatter than the other, and notched at the principal margin, long labial tentacles, &c. They are found on the shells of the oyster and other molluscs.

ANOMODONTIA, an order of extinct reptiles, including the *Dicynodontia*, *Cryptodontia*, and *Cynodontia*.

ANOREXY, loss of appetite.

ANORTHOSCOPE, an instrument invented by M. Plateau, of Brussels, consisting of two rotating discs, one behind the other being transparent and having figures upon it which are seen through narrow slits in the opaque body of the other. The figures which are drawn distorted thus appear in various combinations and actions as correct and amusing pictures. This kind of anamorphosis has been accomplished in various manners by recent toys of great ingenuity, such as the Phantoscope, Phenakistoscope, &c., and especially by some of the arrangements of the Magic Lantern.

ANOSMIA, loss of the sense of smell.

ANSE DE PANIER, (French,) an exceedingly elegant series of arches now much used in bridge-building. They are elliptical curves in section, and give great lightness and grace in their effect.

ANTALGIC, relieving pain.

ANTARCTIC Region. This region, composed partly of continent, partly of ocean, has yet been very little explored. The land appears to be much more elevated and of greater extent than that of the Arctic Circle, but it is all but unapproachable from the more continuous barrier of ice hitherto presented to all explorers. The Ocean contains about two millions of square miles within the Circle, but the ice advances further from the Pole than in the Northern regions, and the climate is more intensely cold through-

out. The *Antarctic Current*, beginning at the coast of Victoria Land, proceeds north-east and east to the shores of South America, carrying vast quantities of ice, which melts as the current proceeds, though the drift ice frequently reaches between fifty and sixty degrees of latitude. These influences cool the South American coast-line.

ANTE-FIXE, heads of animals and other ornaments under the eaves of temples, through which the water from the roof is allowed to flow off, similar to the Gothic gargouilles; also used to designate the upright ornamental terminations of the joint tiles or harmi on the edge of the eaves.

ANTEPILANI, two classes of Roman soldiers, the *Principes* and *Hastati*, so called because they were drawn up before the *Triarii*, who were armed with the long spear or pilum.

ANTHELMINTICS, medicines which expel or destroy intestinal worms.

ANTHEMION, the ornamentation of Greek and Roman decoration derived from flowers, such as the honeysuckle, &c.

ANTHESIS, the period of the expansion of flowers when the fertilization occurs.

ANTHOZOA, synonym of *Actinozoa*.

ANTHROPOLOGY, the science of mankind, or the human race, and its various subdivisions. It includes Ethnology, or the consideration of various races; Ethnography, or the study of their works; and Archaeology, or the traces and remains of man's past existence.

ANTIARINE, the poisonous principle or antjar poison found in the upas tree of Java, *Antiaris Toxicaria*, which belongs to the genus *Artocarpaceae*.

ANTI-ATTRITION, synonymous with Antifriction.

ANTIBRACHIUM, the fore-arm between the elbow and hand.

ANTICHTHON, an imaginary region of Pythagorean philosophers, nearer to the central fire than this earth.

ANTICOUS, an anther whose lobes face the style, or a petal on the side of the flower facing the observer as it grows.

ANTI-FRICTION, anything which diminishes the friction of machinery when in motion, such as lubricants, and certain metallic alloys, as aluminium, bronze, which, when employed as sockets, give the minimum of metallic resistance to motion.

ANTILEGOMENA, those books of the New Testament of the authority of which disputes existed at one time, though now received into the canon of inspiration. They included the Epistle to the Hebrews, Second Epistle of Peter, Epistles of James and Jude, and the Second and Third Epistles of John, as also the Apocalypse.

ANTILOIMIC, those remedies which were employed in averting or curing the plague.

ANTIMONITE, grey antimony ore, or native sulphide of antimony.

ANTIPATHIA, that system of medicine which consists in employing remedies which produce symptoms or results opposite to those of the disease, on the maxim, *Contraria contrariis opponenda*.

ANTIPEDES, the anterior pectoral extremities arising from the diverging appendages of the occipital segments of skulla.

ANTIPELARGIA, an ancient law, which made the children when grown up chargeable with the support of the *raged* parents. The stork, or Cicoula, being remarkable for its attention to its parents, the law was called *Lex Cicouariarum*.

ANTISCORBUTIC, any medicine which cures or prevents scurvy.

ANTECI, those so geographically situated as to be on the same meridian, but at equal distances from the equator on opposite sides of it. The longest day of the one is the shortest day of the other, and their summer and winter are opposite.

ANTONOMASIA, that figure of speech by which proper names are used as appellatives: as, He is a Cicero; for, He is a distinguished orator, &c. Or conversely; as when Claude is called the Prince of Landscape Painters.

APATELITE, a mineral similar to copiapite, found at Meudon, France.

APAUME, in heraldry, an open hand with the fingers and thumb extended and the palm shown, as on the armorial bearings of a baronet.

APEX, the highest point especially of a tapering object; the point of a cone.

APIINE, a gelatinous body found in parsley: it gives a blood-red colour in solution with sulphate of iron.

APODICTIC JUDGMENTS, indisputable, as distinguished from experimental or empirical judgments. Kant employs the term in his philosophy, having adopted it from Aristotle.

APODOSIS, the second part of a period in grammar and rhetoric.

APOLLONICON, the name given to a chamber organ constructed by Messrs. Flight and Robson, London, in the beginning of the nineteenth century.

APOSTILL, a marginal note to any work, in literature.

APOTHECIUM, the flat disc or shield enclosing the asci of lichens.

APOTHEME, an old chemical name for various extractive matters.

APOZEM, an old chemical name for a decoction.

APPENTIS, a kind of lean-to roofs supported by brackets or columns to protect a wall.

APPRAISEMENT, a valuation of goods sold under distress.

APYREXIA, intermission of febrile diseases.

APYROUS, an old term signifying bodies which resisted change under great heat.

AQUA ARDIENTE, a Mexican alcohol obtained from fermented juice of the agave.

AQUEOUS ROCKS, the sedimentary rocks, or those stratified deposits of geology which are due to the action of water; they include all the fossiliferous rocks, and they appear to be all more or less metamorphosed or changed by the action of heat and hydrostatic pressure combined.

AQUETTA, a poison used at Rome under the pontificate of Pope Alexander VII. It was also called *Aqua Toffana*, after a woman of that name who manufactured it at Naples; supposed to be a preparation of arsenic.

AQUILA ALBA, a name given to calomel by the alchemists, who called various sublimates by the name of Aquila.

ARABIN, a variety of gums, of which Gum Arabic is the most familiar example. They are all soluble in water.

ARAGONITE, a variety of carbonate of lime, from Aragon, Spain.

ARAKI, an Egyptian drink made from dates.

ARBUSTUM, an old name for a vineyard or orchard.

ARCHÆUS, or Spiritus Archæus, the occult cause of certain phenomena according to the old physicians and chemists.

ARCHIGENESIS, the beginning of life or being.

ARCOGRAPH, an instrument used to draw curves and arcs of circles without compasses.

ARDISIACEÆ, a former name for the botanical group now called Myrsinaceæ.

ARENACEOUS, a term applied, especially in geology, to anything sandy, or having the qualities of sand. Thus the Arenaceous Rocks are the Old and New Red Sandstone, &c.

ARENATION, any cure effected by sprinkling hot sand on the body of the patient.

ARGENTITE, silver glance, or native sulphide of silver.

ARGENTOMETER, an instrument for ascertaining the quantity of silver in a solution. It consists of a graduated tube, into which an ascertained quantity of chloride of sodium in solution is introduced.

ARMOUR-PLATING, the covering used to protect ships of war, consisting of plates or shields of strong iron, generally on an under lining of teak wood.

ARRACHE, the representation in heraldry of a plant torn up by the roots.

ARTIODACTYLA, "even-toed," an order of Mammalia with hoofed toes, always of even number, as two or four: they include the hippopotamus and many other living and extinct genera.

ARVIL FEAST, a funeral supper in the northern counties of England.

ARYAN LANGUAGES, the great class of

languages which apparently belong to the Japhethic races, including Celtic, Hellenic, Indic, Iranic, Italic, Slavonic, and Teutonic. They were, according to Bunsen, disseminated from Iran in Bactria.

ASBOLANE, earthy cobalt.

ASBOLIN, a pitchy resinous substance found in the soot of wood.

ASEXUAL, without sexual organs: a term erroneously applied to the cryptogamic plants, in all the great divisions of which sexual organs have since been discovered.

ASHERA, round towers.

ASIARCH, the title of the highest ecclesiastic of Ephesus and the surrounding district of Asia Minor. He resided at Ephesus, and had spiritual care of the Roman province of Asia Minor.

ASSAMAR, a constituent of burnt sugar, of the flavour of toasted bread, which is said to be due to its presence.

ASTIGMATISM, a defect of the eye, shown by the varying inaccuracy of its vision at different distances; as, when a small round hole is presented between it and the light in a perforated card, this hole if perforated round should appear round when the card is held transverse to the line of vision at all distances; but under Astigmatism the eye sees it round when near, but elongated in various directions at varying distances within the limit of distinct vision.

ASTOMOUS, such mosses as have no aperture in the theca are so called.

ATHANOR, an alchemic furnace which supplied itself with fuel.

ATHERMANOUS, translucent or transparent bodies, which, though admitting the passage of light, obstruct that of heat.

ATTENUANTS, medicines which thin or dilute the blood.

ATTRIBUTE, synonymous with "predicate" in logic. Adjectives are called attributes by some grammarians because of their affirming or denying something concerning that to which they are applied.

ATTRIBUTES, in art, those symbols by which character or rank is indicated in the delineation of a figure; such as the orb in the hand of a king, &c.

ATTWOOD'S MACHINE, a machine used in illustrating the laws of uniformly accelerated motion, consisting of a pulley whose pivots are rested on wheels for the purpose of reducing the friction of rotation.

AULA REGIA, a court of law established by William the Conqueror, and subsequently regulated by Magna Charta, latterly merged in the Court of Queen's Bench.

AURA, the element in the particles of pollen in which the power of fertilising has been supposed to reside.

AURIFUGMENTUM, "gold paint," a name given to yellow sulphide of arsenic.

AUTHENTIC MELODIES, those melodies the

principal notes of which do not range beyond the key-note and its octave.

AUTOCRAT, a name now confined to the Emperor of Russia, the only absolute sovereign of modern Europe. It is derived from the title *αυτοκρατωρ*, given to those generals of the Athenians who had plenary authority vested in them by the republic.

AVES, a class of birds, including the *Raptores*, *Incessores*, *Scansores*, *Rasores*, *Cursores*, *Grallatores*, and *Natatores*.

AXIS of Elevation, a geological term for the line of direction in which stratified rocks have been elevated from their originally horizontal position.

AXOLOTL, a genus of perennibranchiate amphibians found in the lake of Mexico.

AYAPANA, or *Eupatorium Ayapana*, a sudorific remedy for snake-bites.

AZOTIC ACID, nitric acid.

AZULINE, one of the aniline dyes. It is a beautiful permanent blue.

B.

BABBLING FAUVETTE, or *BABILLARD*, the nettle-creeper or lesser white-throat, *Carruca garrula*, a small frugivorous bird of the passerina tribe.

BABIANA, a genus of South African Iridaceæ, with spikes of crocus-like flowers and sword-shaped leaves; so called by the Dutch Boers from the fondness of the baboon for their tuberous roots.

BABINGTONITE, silicate of iron and lime, found in Norway on albite and on Shetland quartz in blackish green laminated crystals of vitreous lustre.

BACK AND FILL, a mode of sailing by which a vessel keeps in the centre of a stream, and is carried by the current when the wind is contrary. It consists of moving ahead from one shore, and after crossing the current moving back into it from the opposite shore.

BACULITES, a fossil genus of tetrabranchiate cephalopoda, with straight-chambered shells with sinuous partitions and margins lobated. They differ from the Orthoceratites, and are by the peculiarity mentioned allied to the Ammonites.

BADISTER, a genus of coleopterous insects, consisting of carnivorous beetles belonging to the Harpalidæ.

BAGRATIONITE, a variety of Allanite, so called after Count Bagration.

BAIKALITE, a crystalline sahliite found at Lake Baikal, Siberia, at the mouth of the river Sijumanka.

BALENICEPS, an African bird found near the White Nile, with a robust broad bill terminated by a strong hook, lower mandible truncated at the tip, and very strong wings.

BALANCE OF ROBERVAL, an invention of

Roberval the mathematician to illustrate the mechanical theory of couples. It involves a curious paradox, which was first satisfactorily explained by Poinot in his "Éléments de Statique."

BALAUSTR, a leathery-rinded fruit, with superior calyx, and irregular cells containing numerous drupaceous seeds. The pomegranate is an example.

BALNEUM, a bath, or bathing chamber, at one time distinguished from the public bath, which was called *Balneo* though the distinction disappeared latterly, when hot water came to be introduced, and *Balneo* and *Therma* were used as synonyms.

BALSA, a raft used on the South American coast, to land goods through the surf. Its floating properties consist of two air-tight bags connected by a tube, into which the conductor can conveniently blow additional air to replace what may have escaped. This is attached to the front of the raft, which is made generally triangular, and composed of sticks covered with matting, and capable of carrying four persons or a corresponding weight of goods.

BAMBOCCIA, the term given to signify Dutch paintings of low life, from the Italian nickname given to Peter Laer who first distinguished himself for that class of subjects. They were called "dirt-painting," or "rhy perography," by the Greeks.

BANNEROLE, a small flag used at reviews to mark positions to be occupied by the flanks of regiments in the manoeuvres.

BAOBAB, the *Adansonia digitata*, a remarkable tree of Abyssinia and Western Africa, which grows to a great age and extraordinary thickness compared with its height. They are frequently thirty feet in diameter, and not more than double that high. Adanson saw some which he calculated must have been six thousand years old. Though this has been doubted, there remains in support of it the great botanical fact that there is no limit to the life of an exogen, if it be supplied with an adequate amount of fertilising soil to enable it to maintain its vigour.

BAPHIA, a genus of leguminous trees, one of which, *B. nitida*, supplies the barwood or camwood used as a dye-wood.

BARBADOS NUTS, the violent purgative fruit of *Jatropha Curcas*.

BARBICAN, a watch tower; also, a tower or fort at the end of a bridge, to guard the passage, or the outer work for the defence of a fortification. The name is also given to loopholes or apertures in the walls of fortifications from which the enemy may be fired at.

BARKING IRONS, a series of instruments consisting of knives and chisels of appropriate shapes for separating bark from trees or scrub-wood, for the use of tanners, &c.

BAROSCOPE, an alternative name given to

the Barometer, but more suitable for such barometers as are qualified to show variations merely without any graduated scale.

BAROSELENITE, heavy spar or sulphate of baryta. This is a misnomer, founded on resemblance of crystals to those of selenite.

BARRIS, the name given to a large kind of baboon found on the coast of Guinea.

BARYTO-CELESTIN, a native compound of sulphate of baryta and sulphate of strontia found crystallised in Canada and Switzerland.

BARYTO-CALCITE, a native compound of carbonate of lime and carbonate of baryta, found in the mountain limestone of Cumberland in the proportions of 33.7 carbonate of lime and 66.3 carbonate of baryta.

BASICYNIUM, a stalk with an ovarium at its apex proceeding from above the origin of the calyx.

BASSO CONTINUO, synonymous with Thorough Bass in music.

BASTARD SUGAR, a refuse sugar left in the process of refining, the purifying of which would not remunerate the cost. It is known commercially by the name of "pieces."

BASTARD TUCK POINTING, a common imitation of tuck pointing in brickwork, done by scraping out the joinings of the courses, and putting in blue mortar, over which a pointing of white mortar is put.

BAT HORSES and **BAT MEN**, men and horses employed in the carriage of officers' luggage during campaigns.

BATARDEAU, a water-tight gate with a sluice-gate, used in dividing the wet and dry portions of the ditch of a fortification.

BATH METAL, an alloy composed of copper and zinc, in which the proportion of zinc is greater than in brass.

BATHYBIUS, a name given to a supposed protoplasmic covering found in deep sea beds, though, possibly, only an organic sediment in a state of decomposition, acted upon by some aquatic fungoid.

BATHYMETRIC ZONES, a series of zones of relative depth or elevation under recent scientific investigation for defining the various altitudes or depths at which vital organisms are distinctively distributed both on land and in water. These zones are a good deal modified by local circumstances, but they are pretty well defined in most instances. The terms employed in defining aquatic zones are, Littoral, Circumlittoral, Median, Inframedian, and Abyssal; taking the first in order downwards.

BATONNIER, a name given in France to the president elected by any fraternity or society, especially that of the Society of Advocates, from whose practice of carrying the baton or staff of their society, with the flag of St. Nicholas upon it, the name arose. It is doubtless to the same origin we owe the epithet applied to lawyers of "Clerks of St. Nicholas," and possibly "Old Nick," from their being looked on as the devil's servants.

BATT, a fine bituminous shale found interstratified with coal, known also provincially as Black Slag and Black Bass.

BATTA, allowances to troops given in India in the form of Wet Batta and Dry Batta; the latter being money, the former goods.

BATTOLOGY, unnecessary repetition, in rhetoric.

BAVINS, faggots of brushwood-dipt in tar or other combustible substance, and placed in fire-ships, formerly used in setting fire to an enemy's fleet; now of little effect against iron armour.

BECHICUS, a medicine of any kind to soften or alleviate a cough; a cough-mixture.

BECKETS, the hooks and other arrangements by which the spars and tackle of ships are kept in their places.

BED OF JUSTICE, or **LIT DE JUSTICE**, the procedure of the French kings before the revolution, when the Parliament resisted their decrees or commands. On such occasions, where the king persisted he went to Parliament with his chief officers, and ascending the *lit*, or throne, caused the resisted decrees to be registered before him, after which the Parliament could only record its dissent in the form of a protest.

BEDEGUAR, a gall growing on the brier and other roses, like the oak-gall. It resembles a ball of moss, and was at one time used as a vermifuge and diuretic, and, according to Pliny, its ashes were used in compounding a remedy for baldness.

BEEES, pieces of elm bolted to the upper end of the bowsprit of ships.

BEEKITE, a chalcedony first described by Dr. Beeke, Dean of Bristol, and found enveloping in concentric circles of the small tubercles of fossils.

BELAYING, fastening any part of the tackle of the running rigging of a ship round a belaying pin or cleat.

BELL-METAL ORE, native sulphide of tin, or tin pyrites, found in the Cornish mines, and so called from its resemblance to bell-metal.

BELLS, a nautical term for the half-hourly division of time during the watches on board of ships. The long watches reach the number of eight bells, or four hours; the short or dog watches, four bells, or two hours. The bell strikes one at the end of the first half hour of a watch, two at the end of the second, and so on progressively to the end of the watch.

BELOTES, the acorns of *Quercus Gramuntia*.

BELTIN, or **BELTANE**. See *Beltein*.

BEMBEK, the burrowing sand wasp, a genus of hymenopterous aculeate insects belonging to the *Fossoræ*.

BEN OIL, or **OIL OF BEN**, an antiseptic odorous oil, valuable for extracting essences or fragrance from various flowers. It is the

expressed oil of the nuts of *Moringa Apera*, a tree which also supplies the *lignum nephriticum* used in affections of the kidneys.

BENIC ACID, a constituent of Oil of Ben.

BENZOLE, $C_{12}H_6 + H$, one of the products of the distillation of coal-tar, first found by Faraday among the products of the destructive distillation of whale oil.

BENZULE or **BENZOYL**, $C_{14}H_6O_2$, the hypothetical base of benzoic acid, though more correctly applicable to the hydrocarbon radical $C_{14}H_5$.

BERAUNITE, a native hydrated phosphate of peroxide of iron, found at Beraun, in Bohemia.

BERENGELA RESIN, or **BERENGELITE**, a bituminous mineral found in a sort of pitch lake in the province of St. Juan de Berengela, Peru.

BESIMEN, an old name of the seeds or spores of algae, &c.

B-TON, a French concrete prepared somewhat differently from that of England, being a hydraulic lime slaked before being presented to the sand, which is added after hydration has begun.

BIFURGATE, applied to anything with two fork-like prongs.

BILBERRY, the *Vaccinium Myrtillus* of botanists.

BILGEWAYS, timbers used in the launching of vessels.

BILIFULVIN, the yellow colouring matter of bile.

BILIPHEIN, the brown colouring principle found in bile.

BILIVERDINE, a green colouring body found in ox bile.

BILL OF QUANTITIES, the abstract of the estimate for a building, containing the amounts for the several trades employed in the construction.

BILL-BOARD, a rest or stool on which the flukes of an anchor are stowed on ship-board.

BINDING COAL, a name for caking or close-burning coal.

BIogenesis, a term applied in speculative philosophy to the supposed introduction of new species into the life-forms of the world.

BIOTITE, magnesian mica.

BIRADIATE, having two rays.

BISMUTHITE, native carbonate of bismuth.

BITTER SALT, a common name of Epsom salts, or sulphate of magnesia.

BITTER SPAR, a variety of crystallised cleavable Dolomite.

BIXIN, a colouring principle found in annatto.

BLACK AMBER, a Prussian name for pitch coal.

BLACK ASH, impure carbonate of soda.

BLACK-BAND IRON, a carbonate of iron, or clay ironstone, found inter-stratified with

the coal formation of Scotland and Staffordshire, and also in Westphalia. It is the richest source of the iron of Scotland.

BLACK DROPS, a solution, it is supposed, of opium and verjuice.

BLACK JACK, sulphide of zinc or blend, so named by miners.

BLACK WASH, a lotion of lime-water and calomel.

BLANK CARTRIDGE, a cartridge of powder without ball, used at reviews and drill, and for saluting.

BLANK VERSE, a rhythmical form of poetical composition, consisting in Italian of eleven syllables, but greatly enriched in its musical power and onomatopoeia by Shakespeare's use of it in the English drama, who frequently makes twelve syllables by doubling the short syllable at the end, and also as often reduces it to ten. For intense, and at the same time flexible, expressive power, his lines are the model of English blank verse; and Milton's more uniform adhesion to the ten syllables makes his lines heavy and monotonous in comparison.

BLASTUS, the plumule and radicle of grasses.

BLEPHARITIS, inflammation of the eyelids.

BLEU DE PARIS, one of beautiful permanent blue aniline dyes produced by the action of bichloride of tin on aniline.

BLIND STORY, the triforium, as distinguished from the clerestory in ecclesiastical architecture.

BLINDAGE, a proof roofing over a magazine.

BLOCK PLAN, the first rough ground-plan of a building.

BLOCK-SHIP, a ship of war employed on coast-line duty for local defence.

BLOND METAL, a clay ironstone found in the Staffordshire coal measures.

BOCCIUS' LIGHT, a burner invented by Boccius, consisting of a pair of concentric cylinders of metal so placed over a flame as to direct the current of atmosphere as a supporter of combustion, and increase the illuminating power.

BOG BUTTER, hartite, found in Irish peat-swamps.

BOILER PLATE, a name given to plate-iron, now used for various purposes of construction. Its resistance is about twenty tons to the square inch; the rule of safety in use being to leave three-fourths of the power of resistance in reserve.

BOLOGNA PHIALS, unannealed glass phials which have the peculiarity of at once flying to pieces when scratched by any sharp or angular body, such as a grain of sand, but which will bear the dropping of a lead bullet into them without injury.

BOORT OR BORT, a variety of the diamond apparently twisted and convolved during the process of crystallization, so that it can-

not be cut to any advantage, and is only useful for cutting other diamonds when reduced to powder.

BORNEO CAMPHOR, a camphor obtained from *Dryobalanops Camphora*.

BORNITE, a name of purple copper ore; also of a variety of telluric bismuth.

BOTANY BAY GUM, a gum resin obtained from *Xanthorrhoea resinifera*. (*X. hastilis*.)

BOTRYTIS INFESTANS, a parasitical species of fungus belonging to the genus *Botrytis*; they are microscopical moulds or fungi. *B. Infestans* is the fungus developed in the process of the potato disease, though it may be doubted whether it is not rather the effect than the cause of disease; all unhealthy or decaying vegetable matter being liable to such parasitical visitants. The disease in silkworms called muscardine is characterized by the presence of another species of *Botrytis*, *B. Bassiana*.

BOULE, a name given to the Senate of Athens.

BOULE-WORK OR BUEL, marquetry work of inlaid woods, tortoise-shell, gilt metal, &c. There were two French cabinet-makers, father and son, who excelled in this work during the reign of Louis XIV., and the name of this sort of work was derived from theirs.

BOULES DE NANCY, the *Globuli Martiales* of the old chemists. They are small balls of potassio-pertartarate of iron.

BOYLE'S FUMING LIQUID, a foetid liquid consisting of bisulphide of ammonium.

BOYLE'S LAW OF GASES. This law is, that "the volume of a gas is inversely as the pressure;" or, in other words, the volume of a gas is reduced in the same proportion as the pressure is increased.

BRATTICE, a partition in the main shaft of a mine which divides the upward from the downward current of air. A natural brattice is a shaft in which the upward and downward currents pass each other without obstruction, though there be no partition between them.

BREECH-LOADING, a system of loading guns, &c., reintroduced in modern gunnery. It has many disadvantages, and also many merits, among the more important of which are the facility it gives for rapidity of fire, and the more complete ventilation of the gun.

BREEDING IN AND IN, the close-breeding of race-horses and cattle, or breeding into the same stock.

BREMER GREEN, a green pigment made by mixing the carbonates of copper and lime with alumina.

BRETWALDA, the title of the chief king of Anglo-Saxon England during the Heptarchy. He appears chiefly to have been the leader of the united forces of the various kingdoms against a common enemy.

BRIDGEWATER TREATISES, a series of

scientific works published under the will of the Rev. Francis Henry Earl of Bridgewater, to illustrate the power, wisdom, and goodness of God, as manifested in creation. There are eight of them in all.

BRITANNIA METAL, an alloy of tin with a small proportion of antimony and copper.

BROMOFORM, a heavy volatile liquid similar to chloroform, but in which bromine takes the place of chlorine.

BRONZING LIQUID, a solution for bronzing iron, &c., composed of chloride of antimony and sulphate of copper; also a solution of chloride of platinum for bronzing brass.

BRYONINE, a poisonous bitter principle found in the roots of *Bryonia alba*.

BRYOZOA, an order of polypes of which the sea-mat or *fustra* is an example.

BUDE LIGHT, a burner invented by Mr. Gurney, of Bude, Cornwall, to supply oxygen gas to the combustion of gas or oil. The expense and trouble, however, rendered it impracticable for general purposes.

BUHL WORK. See **BOULE**.

BULBODIUM, an underground stem similar to a rhizome.

BULGE WAYS, timber supports used in supporting the sides of a ship in building and launching, which float away when the vessel is launched.

BUMBELO, a flattened ovoid glass flask, used for the sublimation of camphor.

BURGEE, a flag terminating in two points.

BUTIC ACID, a matter found in combination with glycerine in ordinary butter.

BUTTS, those short unequal ridges which occur in the ploughing of a field whose ridges are not parallel to either of the sides.

BUTYL, the radical or base of butylic alcohol and a number of other compounds.

BYZANTINE HISTORIANS, a series of authors who wrote history during the continuance of the Eastern Empire for the nine centuries preceding the fall of Constantinople. Their works are Byzantine history, general history, and special works on Roman institutions and customs, &c.

C

CACHEXIA, a bad condition or habit of body, giving rise to cachectic affections.

CACODYLE, or *Kakodyle*. See **ALCARSIN**.

CADASTRAL, a term applied to surveys, signifying that they are of an extensive character or on a great scale. Cadastral maps represent the objects in their relative positions and dimensions, and with much greater accuracy than the maps of topographical surveys. The cadastral scale is called the 25-inch scale, being very nearly 25 inches to the mile.

CADET'S FUMING LIQUID. See **ALCARSIN**.

CÆNOZOIC ROCKS, the tertiary rocks have been with doubtful propriety so called by those who believe in the introduction of new life forms into the world during the tertiary epoch. Sir Charles Lyell was compelled in his later works to admit, before the evidences which progressive discovery had brought to light, that there must have been but one period of animated creation. This would certainly make the term *Cænozoic*, or *Kainozoic*, as signifying *new life*, untrue; but the name is convenient.

CÆSIUM, a primary alkaline metallic element, discovered in 1860 by means of spectrum analysis by Kirchhoff and Bunsen in the water of Durekheim and Baden. It was considered one of the most triumphant demonstrations that had been yet found of the minute accuracy of spectrum analysis.

CAINIC ACID, an acid found in the bark of *cainca* root.

CALABAR or **ORDEAL BEAN**, a poisonous bean obtained from *Physostigma Venenosa*. It is used as an ordeal to test guilt in Africa, where, if it produces vomiting in the accused, it is held to indicate innocence; if purging, guilt. Dr. Christison nearly lost his life from eating a fourth of one of them, and some children were poisoned at Liverpool by them.

CALCANTHUM, sulphate of iron or copperas was so called by Pliny.

CALCEDONYX, an agate in which white and greyish translucent chalcedony alternate.

CALCEOLARIA, a genus of shrubby herbaceous South American flowering plants, with flowers resembling an old-fashioned slipper; whence the name, from *calceolus*.

CALCIGRADE, from *calx* and *gradior*, a term signifying that an animal's heel sinks deeper than the other parts of the foot in walking.

CALCILE, a term comprehending all the varieties of carbonate of lime.

CALDERITE, a massive Nepal garnet.

CALIDUCT, a conductor of heat; more particularly any pipe arrangement for heating houses or churches, &c.

CALLUS, the matter by which fractured bones are reunited, being a deposit of new bone.

CALORIFACIENT, non-azotised portions or constituents of food, which are supposed to be required in the maintenance of animal heat, such as sugar, starch, fat, and gummy matters.

CALORIFIC RAYS, the heating but invisible rays of any centre of heat.

CALOTYPE, or **KALOTYPE**, the name given to photographic pictures produced by the action of light on certain salts of silver. See **PHOTOGRAPHY**.

CAM WOOD, a dye wood yielding a finer and more permanent red than Brazil wood. It is the product of an African tree, *Baphia*

Nitida, found in the interior of that continent and at Sierra Leone.

CAMEIATED SHELLS, a characteristic of a series of shells of Cephalopoda, now almost wholly extinct. It signifies that the shells are divided by transverse partitions into a number of chambers traversed by a siphon.

CAMPANULARIA. See PARTHENOGENESIS.

CAMPHENE, or CAMPHOGENE, one of the hydro-carbons, consisting of ten atoms of carbon and eight of hydrogen, whose equivalent is 68; the ten atoms of carbon being = 60. It is thus the same as oil of turpentine.

CAMPHRONE, a volatile product given forth when camphor vapour is passed over red-hot lime.

CANEPHORE, a term signifying "basket-bearers," applied to figures of young persons of either sex bearing on their heads baskets with fruits and other offerings for sacrifice, employed as a feature of architecture.

CANICULAR DAYS. See DOG DAYS.

CANICULAR YEAR, the solar year of the ancient Egyptians, because its commencement was fixed by the helical rising of the Dog Star, *Canicula*, which coincided then with the annual inundation of the Nile.

CANNELURES, the name given to the circular grooves in the cylinders of cylindrocannoidal shot.

CANTILEVER, a wood bracket or support, fitted into the wall of a house, from which it projects to support the eaves with their cornice and moulding.

CAPE WEED, the *Roccella tinctoria*, a lichen, yielding dyeing matter, imported from the Cape de Verdis.

CAPIBARA, sometimes called the Water-hog, a rodent quadruped of aquatic habits, typical of the genus *Hydrocharus*. It is the largest of all known rodent quadrupeds, and is found in the proximity of the South American rivers.

CAPILLAMENTUM, an old synonym of "filament."

CAPO D'OPERA (*PL. CAPI D'OPERA*.) a synonym of the French expression, *chef-d'œuvre*, and English "master-piece."

CAPSILL. This expression of modern engineering is a blundered application of the word "sill," as "window sill," signifying the lower horizontal part of a framing: "cap sill," evidently first used in the sense of "top sill," is now very frequently used to designate the horizontal beam at the top of timber framings, as in bridges, &c.

CAPYBARA. See CAPIBARA.

CARBINE-A-TIGE, a French rifle of special construction, consisting of an iron projection from the breech, in the centre of the bore, so constructed that when the bullet is driven home in loading, it is expanded on this pin, by the force of ramming, into the grooves of the barrel.

CARAIPA, a celebrated cure for the itch is produced from one of this species, *C. fasciculata* of South America, belonging to the genus *Ternstroemiaceæ*, and known as the balsam of Tamacoori.

CARAITES, a Jewish sect distinguished by their rejection of the interpretation of the Rabbis and the Cabbala, and their close adhesion to the letter and original text of the Hebrew Scriptures.

CARCERES, the cells constructed in the buildings of the great circuses of the ancients, at the starting point, for receiving the chariots and horses of the competitors, and so arranged as to facilitate their equal and simultaneous starting in the race.

CARDITIS, inflammation of the heart.

CARDUELIS, a genus of passerine birds, or conirostral perchers, including the *Carduelis elegans*, or goldfinch, and a number of other siskins less arboreal in their habits than the true finches.

CARMINATIVES, medicines to alleviate flatulence and its effects.

CARNEIA, a festival observed at Sparta and other Greek cities in honour of Carneius or Apollo.

CARPADELUM, a botanical term sometimes applied to inferior multi-celled indehiscent fruits, containing one seed in each cell.

CARPAL, applied to the wrist; as carpal bones, the bones of the wrist.

CARPOLITES, fossil seeds and fruits.

CARPUS, the wrist in human anatomy, and the corresponding segment of the skeleton in comparative anatomy. In man it is composed of eight small bones, arranged in the form of an arch for strength and self-protection; they are respectively called *scaphoidea*, *lunare*, *cuneiforme*, and *pisiforme*, composing in their arrangement the first row; and *trapezium*, *trapezoides*, *os magnum*, and *unciforme*, forming the second row.

CARTHAMINE, the colouring principle of safflower.

CASEINE, that nitrous constituent of milk which forms the chief substance of cheese. It is only coagulable by acids, and, so far as yet known, by rennet, the well known curdling matter obtained from the decomposition of the fourth stomach or rennet-bag of calves.

CASELL YELLOW, Turner's Yellow, or Patent Yellow, a yellow pigment composed of chloride and oxide of lead.

CASSIDEUS, the helmet-like upper leaf of a flower petal, such as is seen in the monk's-hood or acornite. It forms the hood from which the former name is derived. (*Lat., cassis*, "a helmet.")

CATACHRESIS, in rhetoric, a trope which uses the name of one thing to express another; a metaphor.

CATAPETALUS, the characteristic of the

petals of a flower held together by stamens growing to their bases; exemplified in the mallow.

CATAFRRACTED, covered with hard bony or horny plates or callous skin closely jointed.

CATAFRRACTI, or *Equites Cataphracti*, the name given to ancient cavalry covered with complete suits of defensive armour.

CATAPULT, an ingenious but mischievous adaptation of the elasticity of vulcanised india-rubber, by which a substitute for the ordinary sling has been produced, easy of construction, and very dangerous in the hands of boys or unprincipled persons. It throws stones with great force and accuracy, and might be utilised advantageously where no other weapon of equal power is at command.

CATEGOREMATIC, a word capable of use in itself as a term in logic, or as a predicate, is so called.

CATHARTIC, medicines which act upon the bowels. Mild cathartics are those which are less severely purgative. Cathartics of a *drastic* character are those violent purgatives, such as croton oil, which can only be justifiably employed in very extreme and exceptional circumstances, unless greatly diluted.

CATOPTROMANCY, divination by mirrors.

CAUDA EQUINA, the origin or roots of terminal spinal nerves contained in the neural canal of the vertebrae, surrounding the filum terminale of the myelon.

CAVENDISH EXPERIMENT, a mechanical contrivance for determining the mean density of the earth by means of the balance of torsion. The suggestion appears to have first originated with the Rev. John Mitchell, though first carried out by Henry Cavendish. See his report in the "Philosophical Transactions" for 1798.

CAVICORNIA, a tribe of Cavicorn Ruminants, including, as the name implies, those with hollowed out horns growing on bony processes of the frontal bone, such as the antelopes.

CEDRIRET, a crystalline body of a reddish orange colour found in creosote.

CELLULOSE, the matter of which the cell walls and vascular tissue of plants are composed. It is chemically inactive and very insoluble.

CEMENTS HYDRAULIC, carbonate of lime and silicate of alumina in varying proportions, of from about 36 to 84 of the former and 16 to 64 of the latter, form a cement which sets very quickly under, and increases in hardness from, the action of water.

CEMENTS PORTLAND, the Portland cements are obtained artificially by the calcination of a mixture of chalk and clay, from which artificial cements of the constituents and proportions of the hydraulic cements

above mentioned are made: they are called *artificial cements*.

CEMENTS ROMAN, the Roman cements are obtained by calcinating natural stones, from which cements similar in constituents and proportions to the Portland cements may then be made, but distinguished from the latter by being called *natural cements*.

CENOBIO, a regular fruit, the acephalous pericarps of which are not marked at their summit by the ordinary stigmatic scar, in consequence of the style being connected with their base.

CENOTAPH, a tomb or monument erected to the memory of some one whose body has not been found for burial, or has been interred elsewhere.

CENTRAL SUN. The sun of our system and all the fixed stars, so far as observation has been able to determine, have direct motions in addition to any orbital motions they may have in relation to the primaries or secondaries of their own particular systems; and M. Mädler, of Dorpat, has endeavoured to assign these direct motions to immense orbits described by them round some common centre. It is certain that all completely ascertained astronomical motions are of an orbital character; and even the parabolic and hyperbolic comets may have only extremely elongated motions of this character round, not our sun, but a greater and more remote central body. M. Mädler has concluded that the central sun with reference to our system is Alcyone, η Tauri, the brightest star of the Pleiades; and assuming this star to be as far from 61 Cygni as the sun is, and adopting the parallax of 61 Cygni as announced by Bessel, he concludes the mean semidiameter of our sun's orbit round Alcyone to be about 34 millions of times as great as the earth's mean distance from the sun. This enormous orbit our sun cannot traverse in less than eighteen millions two hundred thousand years even at the velocity, at which it is proceeding, of one hundred and eight thousand miles per hour.

CENTURIATORS OF MAGDEBURG, the name adopted by certain historical Lutheran writers at Magdeburg, who compiled a great work on Church History from the earliest times to the period of the Reformation.

CEPHALANTHIUM, the capitata inflorescence or head of a composite plant.

CEPHALITIS, inflammation of the brain.

CEPHALUM, a woolly peculiar mass which grows at the apex of the stem, and out of which the flowers of the *Melocactus* issue.

CEPHALOTHORAX, the first segment of crustaceans and arachnids.

CEPHALODIUM, synonymous with *Tuberculum* in treatises on the lichens. It signifies a convex shield like figure without an elevated rim.

CERACEOUS, waxy; applied in botany to parts with the texture and appearance of wax.

CERAMICS, all varieties of kiln-burnt potter's work.

CERATIUM, a superior one-celled and many-sided fruit, with two dehiscent valves separating from the replum, differing from the silique by the lobes of the stigma alternating with the placenta.

CEREALS, or **CEREAL GRASSES**, the bread corn plants, including maize, rice, millet, and all the British grain plants.

CEREBRAL LOBES, the several divisions of the brain.

CEREBRIC ACID, a fatty acid found in the matter of brain, and containing phosphorus and nitrogen.

CERINE, a brownish black variety of allanite, found in crystalline masses along with cerite, copper pyrites, and hornblende, at Bastnäs, Sweden.

CERINUS, a term employed in botany to distinguish anything having the colour of yellow, or of a reddish brown yellow wax.

CEROLEIN, a soft fat found in bees'-wax.

CEROSIN, a waxy body exuded from sugar cane.

CERULINE, indigo, after it has been dissolved in sulphuric acid.

CERUMEN, the waxy matter secreted by the ear, composed of an oily matter, bitter colouring matter, and albumen.

CERVIX, an obsolete synonym of the botanical term *Rhizoma*.

CESTROTUM, pictures painted by the cestrum.

CESTRUM, an instrument used by the Greek and Roman painters, pointed at one end and flat at the other, and thereby qualified both to outline and spread the colour on their pictures.

CESTVAEN, *Kistvaen*, or *Cistvaen*, a place or enclosure formed of stone for receiving the bodies of those therein interred, found in the barrows or burial mounds of the ancients. They are usually three stones forming sides, and a stone cover at the east end of the barrow.

CETYL, the radical of a series of organic compounds. It forms salts in combination with negative radicals.

CHALCOTRICHITE, a red fibrous copper ore, or plumb copper.

CHALK LIME, that lime distinctively which is made from the upper strata of the chalk formations. It is very pure, but deficient in hydraulic qualities, and therefore cannot be used alone.

CHAMBERS OF GUNS, the cavity made in the breeches of some ordnance at the bottom of the bore for receiving the charge.

CHAMBRE ARDENTE, a tribunal instituted by Francis I. in France for the condemnation and burning of heretics: also several tribunals appointed by extraordinary com-

missions under Louis XIV. and the Regent Orleans for dealing with certain offences.

CHAMFRON, or **CHAMP-FREIN**, plate armour for protecting the faces of horses.

CHAMPIONSHIP, the office of public champion, at one time in the family of Marmion. It was a condition of the tenure of the manor of Scrivelsby, Lincolnshire. It became extinct on the death of Henry Dymock, whose last appearance in the office was at the coronation of William IV.; he having left no male heirs. It was in the Dymock family from the time of Edward I.

CHANTARELLE, a highly esteemed esculent fungus, *cantharellus cibarius*, found common in the woods of England.

CHARLOCK, the *Sinapis arvensis*, and *Raphanus Raphanistrum*, two of our commonest corn weeds. They have flowers and seeds similar to those of the turnip and cabbage plants.

CHATYANT, the changeable light reflected by various minerals is so called.

CHELE, the claws or forceps-armed extremities of crustaceans, as the lobster, crab, &c.

CHERIMOYER, the fruit of *Anona Cherimolia*, celebrated in Peru for its delicious qualities.

CHIARO-SCURO, that disposition of the lights and shadows of a picture, whether positive or reflected, by which the objects are made to stand out in natural relief.

CHILOMA, the tumid upper lip of certain quadrupeds in continuity with the nostril, exemplified in the camel, &c.

CHINA INK, or **INDIAN INK**, a mixture of finely divided carbon and gelatine, said to be sometimes composed of the ink of the cuttle-fish desiccated. The finest kinds have no grit, and are tested on the teeth to determine their quality. It is now frequently imitated in Europe by various mixtures of lamp black, burnt beans, &c.

CHINA ROOT, the root of *Smilax China*, now almost superseded in medicine by sarsaparilla.

CHINESE SWALLOW'S NESTS, the edible nests formed by a secretion from the mouth of the Chinese swallow, at one time supposed to be made by the bird from some of the sea lichens.

CHIP, a plaiting fibre for hats, obtained from the leaves of the palm, *Thrinax Argentea*.

CHIRAGRA, gout in the hands.

CHIRETTA, or **CHIRATA**, an Indian tonic, obtained from *Agathopes Chirata*, one of the gentian family.

CHITINE, the substance of the shells and wing covers or *elytra* of insects.

CHLAMYPHORUS, a small species of armadillo, analogous in its plate covering and skeleton to the extinct megatherium.

CHLOR-IODOFORM, a liquid derived by one

equivalent of iodine replacing chlorine in chloroform.

CHLORAZOL, a pungent acid liquid of a poisonous character, produced by the action of nitrohydrochloric acid on albumen.

CHLORITE SLATE, the geological name of Chlorite and Ripidolite, when found in mountain masses.

CHLORODYNE, a solution of morphia and Indian hemp with oil of peppermint, chloroform, and ether, &c., is sold as an anodyne under this name.

CHLOROFORM, ($C_2 H Cl_3$), a heavy liquid, also called *terchloride of formyle*, first introduced as a great anæsthetic agent by Sir James Simpson. Care is required that it be pure and its vapour properly diluted with atmospheric air, and also that the cases in which it is applied are of a suitable character for its use, in which cases it has been found an effective and most useful anæsthetic.

CHLOROPAL, an amorphous yellow green mineral, formed of hydrated silicate of iron, found among the Hungarian opals.

CHLOROPHYLL, the green colouring matter of leaves of plants.

CHLOROPICRIN, a pungent oil obtained by the action of chloride of lime on picric acid.

CHLOROUS ACID, ($Cl O_3$), an explosive gas produced by heating chlorate, arsenious acid, and nitric acid together.

CHLOROUS POLE, that pole or electrode of a battery at which chlorine is evolved during the electrolysis of compounds of chlorine. Synonymous with "positive pole."

CHOLAGOUES, medicines which cause the evacuation of bile.

CHOLEIC ACID, a fatty acid forming in combination with soda one of the principal constituents of bile. Its formula is $C_{44} H_{40} O_9 NE$.

CHOLEPYRRHIN, the brown colouring principle of human bile.

CHRISMATINE, a mineral resin found near Halle.

CHRIST, the name given to God manifested in the form of humanity, from *Χριστος*, the Greek synonym for the Hebrew word *Messiah*, signifying "The Anointed."

CHRISTIANITY, the whole scheme of revelation given by the Creator of the universe of those truths concerning the interests and responsibilities of the human soul, which cannot be reached by mere human wisdom or intelligence, but which it is necessary every man should be acquainted with in this life, as an immortal being, whose condition does not end in this world. This revelation is guaranteed not only by the word of God, in which it is announced, but by the Spirit of God, which is freely given to all who receive it for the purpose of guiding them in its true

interpretation and accomplishing its purpose of human salvation in them. Revelation is therefore not only supernatural in its truths, but also in the immediate means provided by God for applying those truths to the mind and heart of man; and they only can disregard it who are themselves ignorant of it; for the natural mind of man, unenlightened by divine grace, can neither judge fully of it, nor understand it.

CHROMATIC THERMOMETER, a philosophical curiosity has received this name, from the circumstance that when a piece of heated metal or other body is applied to the edge of a rectangular plate of glass exposed to a beam of polarized light, the difference between the temperature of the glass and that of the body will cause coloured fringes to appear,—the colour of the central fringe approximately indicating the temperature of the body.

CHROME MICA, an emerald green mica found at Schwarzenstein.

CHROME OCHRE, a greenish substance found in earthy masses in the chromate of iron of Unst, Shetland.

CHROME ORANGE, a dichromate of lead, formed by boiling yellow chromate of lead with lime.

CHROME STONE, a name given to chrome ochre when intimately mixed with rock.

CHROME YELLOW, yellow chromate of lead.

CHROMITE, synonymous with chromic iron or chrome iron, &c.

CHROMO-LITHOGRAPHY, a branch of lithographic colour-printing applied with great success to the fine arts in the reproduction of pictures. It is accomplished by successive printings.

CHROMO-XYLOGRAPHY, letter-press printing in colours by means of wood blocks.

CHRONIC, a medical term, distinguished from acute, signifying those diseases which are of long duration, as compared with those which are more rapid or evanescent.

CHRYSANILIC ACID, a bluish red substance, precipitated by adding an acid to a solution of indigo in potash.

CHRYSELEPHANTINE, those works of the Greek sculptors which were overlaid with gold and ivory. Phidias adopted this mode of treatment in his great colossal work, the statue of Athéné.

CHUSITE, an altered chrysolite found in the Limbourg basalt.

CHYLE CORPUSCLES, extremely minute corpuscles or cells found in chyle. They have sometimes tuberculated surfaces, and are about the two-thousand-five-hundredth part of an inch in diameter.

CICATRIX, the scar or mark left after the healing of a wound.

CILIARY LIGAMENT, the circular ligament which in the eye divides the choroid membrane from the iris.

CILIARY PROCESSES, the white folds at the edge of the uvea, proceeding from it to the crystalline lens of the eye.

CILIATED, an adjective formed from *cilia*, and of co-extensive application. See *CILIA*.

CINCHONIC or **Kinic Acid**, an acid whose formula is $C_{14}H_{11}O_{11}$, HO, found in

Peruvian bark.

CINDER BED, a marine bed composed of oyster-shells, found in the Middle Purbeck formation.

CINGULUM, the neck or constriction of a tooth dividing the crown from the fang.

CINNAMEIN, a fragrant body found in balsam of Peru.

CINNAMYLE, ($C_{18}H_7O_2$), the hypothetical radical of oil of cinnamon.

CINQUECENTO, the styles of ornamentation and painting which prevailed in the sixteenth century, at which period the arts of the revival reached their greatest perfection.

CIPPUS, the name given to such Roman sepulchral monuments as consisted of a small column, rectangular or rounded.

CIRCUMSCISSILE, a transverse circular dehiscence of the ovary or seed-pods of certain plants, as exemplified in *Anagallis*.

CIRRO-STRATUS, a cloud whose form is intermediate between those of the *cirrus* and *stratus*: a modification of it may be observed in those clouds which receive the popular name of "a mackerel sky," and which indicate approaching rain. The *cirro-stratus* is the wane-cloud.

CIRRUS, the curl-cloud.

CIRSOCELE, morbid enlargement of the spermatic veins of the groin.

CITADEL, the strong fort within fortifications which is qualified to become the last resisting point of a garrison.

CITRINE OINTMENT, a lemon yellow ointment containing nitrate of mercury. The *unguentum hydrargyri nitratis*.

CITRONYL, or **CITRENE**, a hydro-carbon, forming the chief constituent of oil of lemons.

CITRULLUS, the well-known cathartic, colocynthis, obtained from the gourds of *C. Colocynthis* of Spain and the Levant, &c.

CLAIRVOYANCE, the name given to a superior power of vision claimed for those under the influence of Mesmerism,—a pretension of great extravagance. The superiority of *instinct* over *reason* is exemplified in all animals, and also in many of the spontaneous actions of man, and when the reason is dormant, a more extended action of the instinct may remain, as exemplified in cases of Somnambulism, but this is the limit of the phenomenon.—[J. A. S.]

CLAUSTHALITE, a selenide of lead, with a portion of the lead sometimes replaced by

silver, found in the Hæmatite of Clausthal and elsewhere.

CLAVICLE, the collar-bone.

CLAY IRONSTONE, compact carbonate of iron, or siderite, with an admixture of clay.

CLAYITE, a variety of galena found in Peru, containing about 25 per cent. of copper, arsenic and antimony, and forming an amorphous coating upon quartz in small dark grey crystals.

CLERESTORY or **CLEARSTORY**, the openings of the gallery above the side aisles of a Gothic building, looking into the upper part or roof of the nave or centre aisle.

CLICHY WHITE, pure white lead, or refined carbonate of lead, manufactured at Clichy, France.

CLINICAL, a term applied to any lecture or instruction given to students at the bedside of a patient: so called from *κλινικός*, "relating to a bed."

CLIPPER, a trading ship constructed for rapid sailing, with finely curved bows, sharp in form, deep keel, and tall spars.

CLOSE-BURNING COAL, the varieties of strong-burning bituminous coal which swell and cake during combustion, receive this name from these peculiarities.

CLOUDS, those visible masses or accumulations of vapour which float at various altitudes in the atmosphere. To Mr. Luke Howard we owe the systematising of their various forms, and the indications of weather thereby more or less prognosticable. The three primary forms are *Cirrus*, *Cumulus*, and *Stratus*; of which the *Cirrus* is a fibrous-looking cloud; the *Cumulus*, a massive cloud presenting rounded or convex upper surfaces; and the *Stratus*, those clouds spread out horizontally and often in strata or apparent layers. The *Cirrus* occupies the higher regions of the atmosphere; and the *Stratus* the lower, and includes mists and fogs. Intermediate between the three primary forms are those clouds which partake more or less of the characteristics of two of the primaries; as the *Cirro-cumulus*, the *Cirro-stratus*, and the *Cumulo-stratus*, also called the "twain cloud." The *Nimbus* is the "rain cloud," or that form in which the others resolve themselves into rain.

CLUB-HAULING, a mode of tacking resorted to when a vessel is in danger of running ashore, and has not sufficient sea room for tacking. It consists in letting go the lee anchor when the wind is out of the sails, and bringing the vessel's head suddenly to the wind with the way upon her; the cable is then cut with a buoy attached to it, to mark the place for its subsequent recovery, and the sails trimmed, by which means the ship will pay off and make considerable headway in much shorter distance than by ordinary tacking.

CLUTCHES, or **Glands**, those couplings of

machinery which are accomplished without coupling boxes.

CLYSSUS, water obtained by the deflagration of nitre with charcoal, generally resulting in the bursting of the vessel employed. This roundabout mode of sometimes getting a few drops of water, resorted to by the alchemists in the earliest infancy of chemical science, was looked upon as quite an occult operation, and the water so obtained invested with no limit of pretentious value and importance.

COACERVATE, an old term signifying "accumulated," and applied to some of the excretions and secretions when long retained.

COAGULABLE LYMPH, the fibrine of the blood is sometimes so called from its peculiar power of spontaneous coagulation.

COAL BRASSES, the iron pyrites found in mining districts in coal and shale, which is frequently used for the manufacture of sulphuric acid.

COAL TAR CONSTITUENTS, a series of important products obtained, by rectification, from coal tar. There are fifty or more of these compounds. The four bases are Picoline, Leucoline, Aniline, and Pyridine. The coal tar colours are obtained from the three products, aniline, phenylic acid, and benzole, all of which contain the organic radical phenyl. Benzole is converted into aniline by heating it with nitric acid, and afterwards with scraps of iron and acetic acid. Magenta is produced by heating aniline with arsenic acid; mauve, by heating it with bichromate of potash and sulphuric acid; and violet and blue, by heating magenta with aniline. Of these dyes coal tar is very productive.

Coca, a narcotic obtained from the leaves of *Erythroxylon Coca*, masticated and mixed with lime, and then formed into small balls called *acullicos*.

COCHLEA, the portion of the internal ear which is shaped like an ordinary snail shell has received this name from its form.

COCKET, the scroll of parchment received by merchants from the officers of customs on entering their goods. It is a certificate that the goods have been customed and may therefore be discharged.

COCYTUS, a branch of the Styx, according to Homer; one of the rivers of Hades.

COEFFICIENTS. See CO-ORDINATE GEOMETRY.

CELIAC ARTERY, the first branch of the aorta in the abdomen.

CELIAC PASSION, a very painful form of diarrhoea, so called by some authors.

CENURUS, the hydatid which by its parasitical action on the brain produces *staggers* in sheep.

COGNOMEN, the third name by which those of any descent or good family were designated in Rome. The first was the *Prænomen*, which served to distinguish the individual; the second was the *Nomen*,

denoting the class or rank to which his family belonged; and the third, or *Cognomen*, signified the *familia*, family or house of which he was a member.

COILS, GUN, the twisted metal of which modern guns are made, consisting of bar metal wound at welding heat round mandrils of appropriate size: the gun metal being so formed in the first stage of the operation is then welded, bored, and turned of the desired dimensions.

COINAGE, that system of minting which gave an authoritative stamp and form to the currency of ancient and modern times. If a parcel of gold be taken to the British Mint in the state of nuggets or bullion, it is first made into ingots, on which the assayers make their report, a certificate being given in the form of a Mint bill, stating the fineness, weight, and value of the ingots, to the owners of them, which are then delivered to the melter, who has the duty, according to the assayer's report, of adding either alloy or fine gold to bring the mass to the standard of currency, being twenty-two of pure gold to two parts of alloy. The gold is then cast into bars, which are next assayed by a sample from both ends of each bar. On the assayer's report approving of them, the bars are then sent to the coining department, and rolled out into plates of suitable thickness, out of which the *blanks* are punched, and the remainder of the plate or *scissel* sent to be remelted. The blanks, or coins in the unstamped state, which amount to about two thirds of the entire plate, are then annealed, and passed through the marking machine, by which the edges are a little raised and smoothed, after which they are blanched or cleaned in hot and dilute sulphuric acid. The final process is then gone through of stamping between two steel dies the obverse and reverse simultaneously upon them, and at the same time the milling of the edge by means of a collar which rises at the time of striking. By means of a proper machinery the blanks are brought to the stamping dies, and thrown off after being impressed; the process being little else than feeding a hopper with the blanks at this point and clearing away the coins. No charge is made for minting, but any one bringing such quantities of bullion as are received by the authorities of the Mint receives his full metal or its equivalent value in coins.

COKING COAL, those bituminous coals which require to be converted into coke before they are suitable for ordinary purposes of combustion. Coke is that condition of charcoal produced by the distillation of coal in the manufacture of gas, or by heating the coal with only a partial access of air; the former being called Gas Coke, the latter Oven Coke.

COLD BLAST, air at its ordinary temperature forced through smelting furnaces, as

distinguished from *hot blast*, or heated air forced through furnaces for the same purpose. The cast iron produced from the hot blast furnace is not equal in toughness to the cold blast iron, but it has some counterbalancing advantages in elasticity and other respects.

COLLIN, the purest form of gelatine. From the slowness with which it diffuses into water it has been taken as the type of all substances of slow diffusion in water, which are thence called Colloids, as distinguished from Crystalloids, which diffuse rapidly in water.

COLLOID. See **COLLIN**.

COLLUM, the point intermediate between the stem and root of a plant from whence both diverge. It becomes obliterated in course of growth.

COLLUTORIUM, a lotion for rinsing the mouth (from *colluo* and *os*, "I wash the mouth").

COLLYRIDIANs, a sect of fanatics of the fourth century who offered little cakes in honour of the Virgin Mary.

COLLYRIUM, a lotion for the eye, or eye-water. At one time the term denoted lotions to restrain or stop inordinate discharges.

COLOBOMA, congenital adhesions of the eyelids, and fissures of the upper eyelid.

COLOGNE EARTH, a variety of umber said to be of vegetable origin. It forms a deep brown pigment.

COLOSSAL, any work, chiefly in sculpture, of extraordinary dimensions. The taste for colossal sculpture appears to have prevailed widely among the ancients. The origin of them has been ascribed to Sesostris.

COLOSTRUM, the first milk given by a cow after calving.

COLUMBARIUM, a pigeon-house or dovecot; also a recess in the wall of a cemetery made to hold cinerary urns.

COLUMBITE, a mineral composed of columbic acid and the oxides of iron and manganese.

COMITY OF NATIONS, those usages or international practices by which the exactions of strict right are modified between civilized nations, and concessions of an amicable and friendly character made.

COMMUNISM, those doctrines as to the rights of property which, though slightly differing from Socialism, have not been very distinctively defined. The theory is that all property is to be held in common or for the common good, and all labour to be diverted in the same direction. The evil is that a system of artificial regulation and interference is insisted on, which is tantamount to the abolition of all individual liberty and all the motives for individual enterprise. The excesses to which such silly theories lead are best illustrated by what occurred in Paris after the Franco-German war of 1873.

COMPLEMENTARY COLOURS, any two colours which when blended together make

whiteness or give white light are said to be optically complementary to each other, as the two colours orange and blue, or green and red.

COMPRESSIBILITY OF BODIES, that quality of bodies by which their volume or magnitude may be compressed into smaller dimensions. Some liquids, more especially water, were long believed to be incompressible; but this has been disproved by later experiments, so that no bodies are absolutely incompressible. A weight of two atmospheres is found to produce the following results of compression:—

Mercury	to	0.000,003 of its bulk.
Sea water	"	0.000,040 "
Olive oil	"	0.000,048 "
Spirits of Wine	"	0.000,066 "

CON BORDINI, a direction in music, generally written C. S., signifying that, if the piece be for the pianoforte, the passage is to be performed with the dampers down; if for the violin, with the mute on.

CONACRE, a system of agricultural payments formerly prevailing in Ireland, of paying wages in whole or in part by small temporary grants of land,—a most degrading and precarious condition of things, which had the effect of tempting the Irish peasantry to cling to the least profitable investment of their industry, as agricultural labour is and always has been in all nations, and to the most degrading condition of their intelligence. The alteration of the Irish land laws under Mr. Gladstone's government only introduced a variation without a remedy. The fact is that there is not enough of land in all Ireland to remunerate adequately those who persist in clinging to its cultivation; and laws impairing the absolute right of property in land can only injure the market value of the article without rendering it to the smallest extent more productive.

CONCEPT, the result of mental conception, as distinct from the process of conception, in logic.

CONCEPTUALISM, the system of Scholastic philosophy held by Abelard, admitting the existence of universals as ideas or mental conceptions; and so differing from the Greek Realism, and the Nominalism of Roscelin, who maintained that universals has no existence except as propositions or words.

CONCERTED PIECE, a piece of music in which several solo instruments or voices take prominent parts.

CONCHIFERA, all molluscs protected by a bivalve shell have been so called by Latreille and others.

CONCRETE TERM, any term in logic which expresses the attribute along with the subject or object, as, "happy," "brave," "patient." Abstract terms are those which express the attributes separately or alone, as, "happiness," "courage," "patience."

CONDUIT, a water-pipe, or passage for the distribution of water. In architecture this expression signifies a narrow and generally subterranean passage, secretly communicating between different parts of a building or separate apartments.

CONE OF RAYS, a similar expression to "pencil of rays," signifying all the rays diverging from a luminous point and falling on a given surface. "Pencil of rays" is a reconverging cone of rays falling on a point of a surface or focus, occasioned by the interposition of some lenticular medium. *Cone* and *pencil* are frequently used as convertible terms.

CONFLICT OF LAWS, that variation of or inconsistency in the laws of different states to which individuals are subject who have acquired legal rights and interests subject to the jurisdiction of different governments.

CONGE, the French name for the quarter round or Echinus moulding, which is called "the swelling congé." "The hollow congé" is the Cavetto.

CONIA, or **CONINE**, an intensely poisonous alkaloid, obtained by distilling hemlock, *Conium maculatum*, with alkaline water. It is a colourless and acrid volatile oil with a very strong odour.

CONOIDAL, shaped like a conoid. It has been much used in modern gunnery in describing detonating shells and shot with a cylindrical body and conoidal point or head.

CONSOLIDATED FUND. The Exchequers of Great Britain and Ireland, which, previously separate, were, on January 5th, 1816, consolidated into one, were on their consolidation accompanied by an Act of Parliament appropriating certain portions of the joint revenue to one fund called thenceforward the Consolidated Fund, out of which the public debts, civil lists, and certain other expenses of both Great Britain and Ireland were paid. The Consolidated Fund includes the greater portion of the revenues of the two kingdoms.

CONSTITUTIONS OF CLARENDON, certain definitions of the limits of civil and ecclesiastical jurisdiction, framed at a Council held by Henry II. of England at Clarendon, near Salisbury.

CONSTITUTIONS ROMAN. The decrees of the Roman emperors, including those by edict or letter, received this name, which was also applied to the decrees of prætors and other duly constituted authorities.

CONSTITUTIONS APOSTOLICAL, a series of regulations of the doctrine and discipline of the Church, collected by Clemens Romanus, and maintained by some, but without the slightest evidence, to have been promulgated by the Apostles. At one period they seem to have been admitted into the Canon of Scripture, but were subsequently rejected. See **TRADITIONS**.

CONTINUITY, LAW OF, a law which Leibnitz claims the merit of having first

announced, that *everything passing from one state to another passes through all the intermediate states*. Galileo, however, had laid down its application to motion, and ascribed it to Plato, though Leibnitz first extended its application to the testing of alleged laws of nature and their consistency.

CONTORNIATI, medals marked with peculiar furrows, called *contorni* by the Italians, and composed of bronze with a flat impression, supposed to have been tickets of admission to the public games, struck in the reign of Constantine the Great and his more immediate successors. They are impressed with figures of emperors and other eminent men.

CONTOUR, the outlines or external lines of a figure.

CONVENTICLE, a term first contemptuously applied to the assemblies of Wycliffe's followers met, for Divine worship, and latterly to the meeting-places of Dissenters. The word was, however, used by the ancient ecclesiastical writers as properly signifying a church.

CONVERSION, a term synonymous with "regeneration" in the system of Christian salvation. It is that spiritual change in the human soul by which it becomes divinely enlightened as to the truths of the Christian atonement, and God's free forgiveness of sin on the ground of that great and finished work of redemption.

CO-ORDINATE GEOMETRY, the system of analytical geometry invented by Descartes, and applied to the solution of geometrical problems, and by which the positions of points are determined, and the forms of curves and surfaces defined and classified by means of Co-ordinates. Some idea of this system, as far as the present limits will allow, may be obtained by a consideration of the following figure, in which the position of a point P is represented with reference to O, called the Origin, by means of Co-ordinates.

The ordination, so to speak, of a series of points may be effected by a double system of ordinates, instead of by a system of ordinates and abscissæ, and in that view, though some distinction is shown in the figure, the lines *PM* and *PV*, or, if so determined, *OM* and *ON*, may be called the co-ordinates of the point *P*. There are many systems of co-ordinates in use, distinguished as the Cartesian (*rectangular*, as in the figure, and *oblique*), Polar, Quadriplanar, Elliptical, Spherical, &c., &c.

COPALINE, a brown fossil resin, resembling copal, first discovered at Highgate Hill in the London clay, and called Highgate Resin.

COPING, the top course of a wall in architecture, generally made broader than the wall for the purpose of clearing it of the rainfall.

COPPER PYRITES, a double sulphide of copper and iron, composed of equal percentages of copper, sulphur, and iron. It is also called Yellow Copper Ore, and, when exhibiting an iridescent tarnish, Peacock Ore. It is the chief copper ore of England.

COPPICE or **CORSE WOOD**, those woods in which the trees are prevented from growing into strong boles or stems by periodical cutting; such as scrub oak. Many of our forest trees admit of this treatment, and become a valuable source of bark for tanners, poles, sticks, hoops, and stakes for crates, and wicker hurdles, hop-poles, walking-sticks, and umbrella-sticks, faggots, &c. Our native singing birds seem to delight in such woods.

COQUILLA NUTS, the seeds of the South American palm, *Attalea funifera*, well known in turnery.

CORAL ORE, a hepatic cinnabar from Idria, Carniola, so named from its singular resemblance to the organic structure of fossil shells.

CORCULUM, the name formerly given to the embryo of a plant.

CORDATE, heart-shaped, applied to any organ having this shape, in botany.

CORDIERITE, a synonym of Iolite.

CORM, a short bulb-like underground stem, such as that of the *Gладиолус*.

CORONAMEN, the "coronet" of veterinary surgeons, or superior margin of a hoof.

CORNET BONE, the second phalanx of a horse's foot.

CORPS D'ARMEE, the various corps of which an army is made up, consisting of *Divisions, Brigades, Battalions, and Regiments*.

CORPUS CALLOSUM, the band of transverse fibres, or commissure, connecting the two hemispheres of the brain.

CORPUS LUTEUM, the yellow mass formed in a Graafian vesicle after the escape of the ovum.

CORPUSCULAR PHILOSOPHY, the molecular or atomic philosophy, which has from time to time endeavoured to explain the

primary molecular, corpuscular, or atomic structure of the material universe. Leucippus and Democritus first announced such a doctrine in Greece, and Epicurus proceeded in the same direction, maintaining that the monads or atoms suggested by them, and which had only the properties of hardness and gravity, were the ultimate principles of all things. Modern atomic theories are a great improvement on this. Among these is one suggested a quarter of a century ago, which has not yet received the attention it deserves: viz., that the molecules of matter are not solid, but are filled with electricity, as the soap bubble is with air, and are capable, like it, of great elastic expansion and contraction and that they are only round, like the soap bubble, when taken singly, but are polyhedral over all their united surfaces of contact, when in clusters. This theory explains how and where electricity, which undoubtedly is present in all bodies, is accommodated within them, and how bodies which, under extreme contraction, are hard, solid, and opaque, become, under increasing expansion, fluid, gaseous, diaphanous, and transparent. It also satisfies the chemical requirement of definite atoms for proportional admixture and combining quantities, and their concurrent expansion and contraction within definite limits in the compounds they form, and explains the great expansion and increase of volume which many compounds undergo under explosion.—[J. A. S.]

CORSAIRS, sea pirates and their ships. The corsairs of the Mediterranean held commissions or authority from the princes of Barbary to attack the merchant shipping of other nations, and were therefore not unlike our merchantmen holding letters of marque in time of war.

CORYMBUS, the foliage, fruit, and garlands by which vases were enriched by the Greeks; also the knot or cluster of hair on the top of the head of the Greeks.

CORYNE, a species of generative polypes, characterised by parthenogenesis. *See* PARTHENOGENESIS.

CORYPHÆUS, in the ancient dramas the leader of the chorus by whom the dialogue of the explanatory chorus was carried on, on the part of the chorus, with the actors in the drama. He also led the choric song.

CORYZA, a copious running from the nose.

COSMETICS, applications to the face for the improvement of the complexion, removal of pimples, freckles, &c. For the latter, a lotion, composed of eight parts of water to one of brandy, and a few drops of muriatic acid sufficient to render the mixture sour to the taste, is efficacious. It forms also an excellent means of destroying parasitical worms and boils by suppression, and might prove valuable even in cases of cancer.

COSMICAL AND ACRONYCAL, any heavenly body which rises or sets at the same time as the sun is said to rise or set cosmically. If it rises when the sun sets, or sets as the sun rises, it is said to rise or set "acronically," or at opposite times.

COSMOGONY. The different theories of the origin of the universe are called "cosmogonies."

COSMOGRAPHY, that branch of science which treats of the figure, construction, and arrangement of all the various parts of the world.

COSSE, RULE OF, the name given to algebra on its first introduction into England. It is supposed to be derived from the Italian *cosa*, "a thing," and to have signified "the rule of the thing," the unknown quantity being called "the thing," or *cosa*. The word *cosmic* in old writers has reference to this.

COSTAL, pertaining to the ribs.

COTHAM MARBLE, a pale grey lias limestone found at Cotham, near Bristol, and elsewhere, and exhibiting curious picturesque dendritic markings when cut transversely.

COTHURNUS, the high buskin of the ancient tragic actors, to increase their height. It is used as an old classical metaphor, signifying the tragic art itself.

COTTABUS, a game played by the ancient Greeks, consisting of throwing wine into little basins of metal from their cups without spilling, and producing particular sounds, &c. The basins were sometimes suspended, and at others floated in a larger basin of water.

COTTIER SYSTEM, a system of Irish land tenure of the most mischievous and socially depressing character, by which the peasant rented a portion of soil from the owner annually, the lots being put up to auction; but so inadequate in amount to the actual wants of the population, that they were bid for far beyond their value; and, the rent not being forthcoming at the end of the occupancy, as much of it was wrung out of the miserable tenant as oppression and extortion could obtain. A cottier has been known, from the extremity to which he was put for land, as the only means of subsistence open to him, to bid as much at auction, in competition with others equally necessitous, as nine times the actual rent value of his farm,—as appears from the report of Lord Devon's Commission.

COTUNNITE, native chloride of lead found in the crater and recent lavas of Vesuvius.

COUGH, the part of a malting floor on which barley is spread out: also the moistened barley spread out for malting upon it.

COUGH GRASS, the *Triticum repens*, a vigorous variety of grass whose propagation by rapidly growing underground rhizomes makes it a very vexatious weed.

COUPLING, mechanical arrangements for connecting and disconnecting parts of machinery

COURTS OF INQUIRY, courts held under royal authority to inquire into the conduct of military and naval officers, distinct from courts martial.

COW TREES, several trees have received this name; as the *Galactodendron utile* or *Brosimum Galactodendron*, the Palo de Vaca of South America; also the *Clusia Galactodendron*, *Ficus Saussureana*, and *Tabernaemontana utilis*.

COWITCH, or **COWHAGE**, the *spiculae* or hairs on the seed-pods of *Mucuna Pruriens* of the West Indies. It has been used as a vermifuge in the form of an electuary, but is inferior to many other remedies for worms.

COXSWAIN, the steersman and commander for the time of a boat's crew.

CREDIT FONCIER, a financial system for supplying sums for the improvement of estates on the joint guarantee of the subscribers to the association and the security of the particular estates.

CREDIT MOBILIER, a great financial scheme sanctioned by the French Government of 1852 for originating trading enterprises of all kinds on the principle of limited liability, buying up existing companies, and, in the case of joint-stock companies, substituting their own scrip and shares for the scrip and obligations of such companies, and also for being bankers and stock-jobbers on the limited liability principle.

CREMATION, the custom of burning the dead, practised by the ancients and attempted to be restored in modern times from sanatory considerations. It was never a practice of nations under the guidance of revelation, and seems to be repugnant to Christian sentiment; and the keeping of cinerary urns proposed by some in connection with it, unless in cemeteries or places publicly provided for the purpose, would be a practical inconvenience apt to degenerate into irreverence. What change it would call for in the funeral service of the Episcopal Churches we are not yet required to contemplate.

CRENEL, the aperture of a battlement in Gothic fortification. See **CRENELLE**. Crenellated parapets became toward the end of the mediæval period common in all kinds of buildings.

CRETINS, a class of idiots afflicted generally with *goitres*. They are numerous in the Valais.

CRIBBLE, a screen, or coarse sieve, also a coarse sort of meal.

CRITICAL PHILOSOPHY, a term sometimes applied to the metaphysical system of Kant.

CUBE ORE, native hydrated arseniate of iron in cube crystals.

CUBERS, the berries of Java pepper, *Cubeba officinalis*. As a stomachic administered in a dose of two to three trachms in

powder, two or three times a day, they have been found a remedy for some forms of gonorrhoea.

CUBICITE, cubic zeolite or Analcime.

CUBIT NATURAL, the length from the elbow to the extremity of the middle finger.

CUBIT OF VITRUVIUS, a geometrical cubit equal to six ordinary cubits.

CUMITUS, the forearm, of which the *ulna* is the *os cubiti*.

CUISSES, CUISSARTS, &c, plate armour to protect the front of the thigh.

CULTRATE, couller-shaped; or straight on the one side or edge, and curved on the other.

CUMIN, the fruit or seeds of *Cuminum Cuminum*.

CUNEATE, wedge-shaped.

CUNEIFORM LETTERS, the wedge-shaped characters of the early Assyrian and Persian bricks and monuments, &c. The unravelling of this form of writing and the translations given of the inscriptions and records preserved in it by Sir Henry Rawlinson and Mr. George Smith have opened up a new era in the investigation of ancient history.

CURCUMIN, a resinous colouring matter found in turmeric root.

CURL, a potato disease so called from its first attacking and curling the leaves, and finally obstructing or stopping the vegetation.

CURTATE DISTANCE, the distance of a planet from the sun reduced to the plane of the ecliptic.

CUSTARD APPLE, the fruit of the *Anona reticulata* of the West Indies.

CYANIN, the colouring matter of blue and red flowers.

CYANOSIS, the blue disease. The administration medically in extreme cases of nitrate of silver frequently gives a leaden blue colour to the exposed parts of the body, as well as more or less to the other parts; but blueness of the body frequently also arises from malformation of the heart.

CYCLOID, COMPANION TO THE, a curve generated by a point always vertically over the point of contact of the rolling circle and its base, and in the same line as the describing point. Roberval by the aid of this solved the quadrature of the cycloid, and showed that the area of the space between the cycloid and its companion is exactly equal to that of the rolling circle; and that the area of the cycloid itself is equal to three times that of the circle.

CYNOSARGES, an academy near the Lycæum in the suburbs of Athens. It had several temples and a celebrated gymnasium. The sect of the Cynics was here instituted by Antisthenes.

CYNOSURE, the northern polar constellation of Ursa Minor. Now poetically applied to the pole star and to any point of guidance or attraction. Literally it signifies "a dog's tail!" (*κυνοσουρα*.)

CYPHELLE, the pale tubercle like spots on the under surface of the *thallus* of lichens.

CYSTICA, or CYSTICS, an order of Entozoa, the bodies of which are terminated by cysts belonging to one or more individuals. It includes the parasitical hyatids which produce staggers in sheep and measles in pork.

CYSTITIS, inflammation of the bladder.

CYTISUS, this plant so frequently mentioned by Greek and Roman writers is supposed to be the *Medicago Arborea* of Linæus, a kind of clover.

CYTOBLAST, the cellule, nucleus, or centre from which the organic cell is developed, in physiology.

CYTOBLASTEMA, the structureless or apparently structureless substance in which the elementary cellules or cytoblasts are contained.

D

DACELO, a large passerine bird of Australia. This name is composed by a transposition of the letters of the word *Alcedo*, the genus including the kingfisher, from which this genus was separated. This mode of forming generic names connected with the genera from which the separation was made was introduced by Dr. Leach, and possesses some obvious advantages.

DACRYOMA, a disease of the lachrymal duct, by which the moisture and tears from the eyes are obstructed in passing through the duct into the interior of the nostril in the usual way, and flow in consequence down upon the cheek, causing a scalding of the face and cutaneous irritation.

DACTYLI, the name of the Phrygian priests connected with the worship of Cybele or Rhea.

DACTYLOGRAPH, the name of the artist inscribed on a gem sculpture was so called by the Greeks.

DACTYLOGRAPHY, the art or science of gem-sculpture or engraving.

DADYL, a hydrocarbon derived from oil of turpentine.

DAIMIO, the title of a feudal lord in Japan, of whom there are 264. They are petty sovereigns within their own territories, and eighteen of them are said to be virtually independent.

DAIS, the raised floor, and also the seat and canopy over it, at the upper end of an old dining-hall.

DANS, small trucks used in coal-workings.

DAPICO, a species of caouchouc obtained from the *Siphonia elastica* of S. America.

DAROO TREE, the Egyptian fig or sycamore, *Sycomorus Antiquorum*.

DASYPUS, "rough-footed," the name given by the Greeks to the hare, but now applied to the armadillo.

DATISCIN, a substance like grape sugar obtained from the *Datisca cannabina*.

DE LUC'S COLUMN, a voltaic pile composed of silver, zinc, and thin paper alternately; called also the Dry pile.

DEAD COLOUR, colour without glossiness, occasioned usually by diminishing the quantity of oil used, and increasing the quantity or proportion of spirits in the pigment.

DEAD PLATE, an iron plate fitted to the bars of a furnace, to allow bituminous coal to form into coke before its complete combustion.

DEAD SEA, the site in Palestine of the ancient cities of Sodom and Gomorrah. It is about 200 miles long by about 20 miles broad. It receives the discharge of the river Jordan, after it passes through the Lake of Tiberias, which is 60 miles further up the Jordan. Its surface is on an average 1,388 feet below the level of the Mediterranean, and 6,000 feet below the level of the intervening table land. Although it has no outlet, the continual influx of the Jordan does not increase its annual volume; the discharge of the accumulating waters being due to evaporation, which is greatly facilitated by its mineral qualities. The saltiness of the Dead Sea is between six and seven times greater than that of the ocean, though it varies to about 22 per cent. at different seasons. Chloride of sodium is the chief saline constituent, though the chlorides of calcium and magnesium are also present in large proportions, and, in a lesser degree, chloride of potassium.

DEAD WELLS, wells into which refuse water and sometimes sewage are allowed to flow and infiltrate into the permeable strata below. They are most pernicious and dangerous contrivances of slovenliness and sloth, calculated to poison the whole spring water of a neighbourhood; and yet, though under special restriction in France, there is no English legislation on the subject.

DEADENING WAY, the progressive abatement of a vessel's speed at sea.

DEADHEADS, those additions of metal in the casting of ordnance, in an upright position, by which the mould is filled to a height above the bore of the gun, and the dross, which would otherwise deteriorate the metal at the muzzle, is carried free of it upwards, and cut off when the casting has cooled.

DEBLAI, the earth excavated from the ditch of a fortification, and employed in forming the rampart.

DEBRIS, the geological name given to fragments of rocks, &c., in heaps, or natural accumulations.

DECALOGUE, the Ten Commandments. The Jews are said to have divided them as the Romish Church now does: but this appears very doubtful, both from the logical structure of the whole Decalogue, which is the

same however divided, and also from the authority of St. Paul, Romans vii. 7, where the Apostle uses the words, "Thou shalt not covet," in their obvious comprehensiveness as one injunction, and not as two, which the Romish division makes it.

DECANDROUS, a plant with ten stamens.

DECANTATION, a process frequently employed in chemistry, when the circumstances admit of its superseding the slower process of filtration.

DECAPITATION, a mode of punishment abandoned in England since the execution of the victims of the insurrection of 1745. It was long before this confined to criminals of high rank in this country, though it is still retained on the continent of Europe in preference to hanging.

DECIDUA, a formation of the mucous membrane of the uterus in which the ovum becomes embedded on its entrance, and which protrudes inward, and becomes more inverted as the ovum enlarges; the part of the decidua which does so being called the *decidua flexa*, the other portion of the membrane being distinguished as the *decidua vera*.

DECIMAL OR METRICAL SYSTEM; the system of weights and measures now made the standard of internal commerce in France, based on the *mètre*, a measure of length equal to the ten-millionth part of the distance between the north pole and the equator, taken from the measurement of an arc of the meridian between Barcelona and Dunkirk. A hundred *mètres* is equal to 119'6046 yards, so that the *mètre* is rather more than the English yard, being 39'3709 inches. The basis of the Superficial Measure is the *Are*, equal to 119'6046 English square yards. The basis of the Liquid or Dry Measure (Measure of Capacity) is the *Litre*, which is equal to 1'7608 pints, or the cube of the tenth part of a *mètre*. The basis of the Solid Measure is the *Sètre*, which is the cube of a *mètre*. And the basis or unit of Weight is the *Gramme*, equal to 15'4327 grains, or to the cube of the hundredth part of a *mètre* of pure water at the temperature of 32° Fahrenheit or 0 Centigrade. In arranging these measures into tables, decimal multiples and divisions have been adopted, the multiples being named from the Greek language, and the divisors from the Latin. That a uniform system of measurement, based on universally recognised and identical standards, would be of great value as a facilitation to commercial intercourse cannot well be disputed; but so would one language for all mankind. Unfortunately, however, the obstacles in the way of adopting the one in a great degree apply also to the other. It requires an amount of achieved civilization and popular intelligence disseminated through all peoples and kindreds and tongues, together with an amount of common consent and reciprocal concession for

the general good, which neither the virtue nor the common sense of cumulative humanity is strong enough for as yet. The metrical system in British currency has been strongly argued for from time to time, and it would not be difficult to achieve; but unless it were done in accord with a similar system simultaneously adopted by all other civilized communities, it is obvious that we might only after all put ourselves to the trouble of changing a perfectly convenient system already understood among us for one, no great improvement on what we have—which is decimal and duodecimal as it is—and yet be still as much outside of an international decimal currency as ever. Even this step therefore cannot be taken without the common consent of many other nations, all simultaneously prepared to adopt the change.—[J. A. S.]

DECIMATION, a system of punishment for mutiny or failure in military duty among the Romans. It consisted in the selection by lot of one man out of every ten in a regiment, &c., to suffer death for the delinquency of the whole. General Cuesta resorted to it in Spain after the battle of Talavera.

DECLARATION, DYING. The evidence of a man dying from mortal injuries, if legally taken down before his death, is admissible as evidence in the court of justice before which any one is on trial for culpably causing his death.

DECLINOMETER, an arrangement for measuring the declination of the magnetic needle, and the influence of terrestrial magnetism in the plane of the horizon.

DECOITS or DACOITS. See DACOITS.

DECOLLATION, literally "taking the head from the neck;" a synonym of beheading or decapitation. The word was used as applicable to the beheading of John the Baptist, and has been almost confined to that event.

DECORATION, a branch of the fine arts of great importance in reference to the progress and prosperity of civilization. In civilized communities the bulk of the national industry ceases to be confined to mere utilitarian employments, such as the production of indispensable food and clothing, and becomes chiefly occupied in those branches of activity under subordination to the superintending influence and direction of taste, which add the beautiful to the essential, and supply what is sometimes indiscriminately called *luxury* to the necessities of life. In a civilized community, were the decorative industries suddenly prohibited by any public law supported in its action by popular fanaticism, the people, unable to find employment or remuneration in the mere necessary industries, would sink into degradation, barbarism, and national distress at once. Therefore it is that, as a question of political importance, the decorative arts demand high consideration and encouragement from

every enlightened and patriotic statesman.

See DEMAND. Decoration, however, considered in itself, is subject to laws of taste which, though in many instances arbitrary, have in most cases a legitimate place in the system; for though, economically considered, all decoration, good or bad, gives employment and remuneration to industry, and that which is least permanent in merit may be said to give employment the most, there can be no doubt that the achievements of high art give and maintain the true stimulus even to all inferior effort. It is therefore necessary that the decoration should be in due and appropriate subordination to the main design of the work.—[J. A. S.]

DECREPITATION, that crackling noise which salt and similar bodies give out when subjected to strong heat, consisting usually of the bursting of the crystals by the expansion of the water they contain.

DECURIO, a Roman officer who had command of ten men. The decurions were municipal as well as military; the municipal decurions being magistrates of the chief towns. The military decurion had originally command of the third of a *turma*, or third of thirty men; though without change of his title, his command was afterwards extended to the whole *turma*.

DEFECATION, the separation of the impure sedimentary matter or dregs from liquids.

DEFILADING, a term of fortification, signifying the arranging of the height of a work, so as to prevent the enemy seeing into it, or so arranging its faces as to prevent the enemy from taking them in reverse or enfilading them.

DEFILE, any narrow passage through which troops must pass in file. As a verb it signifies to reduce the front into file for the purpose of passing.

DEFLECTION OF RAYS OF LIGHT, that degree of bending from their rectilinear direction which rays of light undergo when passing near to an opaque body, called by Newton "diffraction."

DEGLUTITION, the act of swallowing the food.

DEIFICATION. See APOTHEOSIS.

DEINOTHERIUM, a fossil genus of gigantic pachydermous Mammalia with immense tusks projecting downwards from the lower jaw.

DEJEUNER. In most languages of Europe this term is synonymous with the breakfast or first meal of the day. In France it is losing its original application, and now more commonly signifies luncheon, or a second and light repast between the breakfast and dinner.

DELIAN PROBLEM, the problem given to those who went to the temple of Apollo at Delos, to consult the oracle as to the stoppage of the plague at Athens. The answer

was, that the plague would cease when they had doubled the altar of the god. The altar being a cube, this problem involved the *duplicatio* of the cube, *q. v.*

DELITESCENCE, the sudden and unexpected subsidence of a tumour. (From Lat. *delitescere*, "to lie concealed.")

DELPHINIC ACID, a fat acid yielded by the oil of the porpoise, *Delphinus*, on saponification; synonymous with Phocenic Acid. The same acid may also be obtained from the berries of *Viburnum opulus*.

DELPHINITE, a variety of Epidote, from Dauphiny.

DELUGE, the flood described in Gen. vii., viii. There is a great and contemporaneous series of post-tertiary deposits, extending over all known countries, and well marked in Europe, Asia, Australia, and America, which a certain school of geologists have rather evaded than explained, but which do not admit of a complete and united interpretation on any other hypothesis than the submergence of the whole continents of the world after their permanent conformation. Agassiz, one of the most careful, accurate, and unimpeachably honest of modern observers, and unquestionably one of those gifted with the highest intellectual capacity, distinctly declared that he found evidence everywhere that after the permanent upheaval of the European continent and its present arrangements of hill and dale the remains extant on its surface showed that for a period it had been covered with icebergs. The question involved is, whether this could have occurred by any other means than such a general rising of the waters on the surface of the earth as would disengage the Arctic ice from its polar attachments, and float it southward on that current which he found had left simultaneous evidence of its passage over Europe in a south-easterly direction. This is but one fact among many of a concurring character belonging to the same period. Certain geologists have been obliged, when pressed for an explanation, to suggest the possibility of a change in the polar axis of the earth: but this explains one difficulty only by suggesting a greater for which there is no trace of justification. They have also asked, for the purpose of repelling the inquiry, where the water necessary to constitute such a deluge could have been obtained. But surely those who ask such a question must have read Genesis vii. 11 with very little attention. It there says that one of the first features of the deluge was that *all the fountains (or reservoirs) of the great deep were broken up*: and any one who has made himself at all acquainted with the distribution of land and water on the surface of the world does not require to be told that the bulk of the ocean preponderates so much over the bulk of the land above its ordinary level, that a small upheaval of the general

ocean bed would be quite enough to drown the tops of the highest mountains as well as all the continents with which they are connected; and that any serious stoppage of the whole of the existing volcanic vents or safety-valves, as they may justly be called, of the modern world would be quite enough to cause such a calamity at any time, and in just such a direction: for the seabeds are presumably the thinnest portion of the earth's crust, and the most easily upheaved; and the weight of water above them is not equal to the weight of an equal volume of land. *The deluge is therefore, demonstrably, possible on a due consideration of existing conditions*; and, in refutation of the evidences referred to by Agassiz and others, the *onus* lies upon those who maintain an opposite view to show it never occurred.—[J. A. S.]

DEMAGOGUE, strictly a political leader of the people; and originally an honourable epithet, almost synonymous with "patriot." Now it is used chiefly to designate agitators and disturbers of the public peace, who are seeking their own interests and capital by disorder.

DEMAND, in political economy, that feature of commercial operations which is more or less synonymous with the consuming power of the market. One of the most important of the discoveries realized by modern civilization is, that the *supply* in many instances *creates the demand*. In articles of taste this is especially so. Hence, whenever an ordinary supply has satisfied the demand of a market, a further or new demand may be stimulated by change of pattern or fashion, or the production of any ingenious novelty. This is one of the most important features of modern prosperity. See **DECORATION**.—[J. A. S.]

DEMARCATIO, **LINE OF**, the imaginary line through the ocean fixed by Pope Alexander VI. in 1493, to put an end to the differences between Spain and Portugal as to the boundaries of their discoveries in the New World. By this line the continuous boundary of the dominions of each of those powers was decided, and the expression thence came into general use as an equivalent expression for a boundary line separating any space or tract from another.

DEMIURGUS, **DEMIURGE**, or **LOGOS**, in Platonic philosophy, a superior or mysterious agent by whose instrumentality God is said to have created the universe. The Platonizing Christians held that this was the Second Person of the sacred Trinity, or God incarnate; identifying the term "Logos" in Plato's *Timæus* with the "Logos" or "Word" in the first chapter of St. John's Gospel: "In the beginning was the Logos," &c.

DEMOTIC WRITING, a current hand of the ancient Egyptians, wherein they converted the hieroglyphic characters into a nearly alphabetical arrangement of the elements of their language.

DEMULCENT, a medical application to protect any wound or sensitive part from external irritation. Gum and mucilages generally are demulcents.

DENDRITIC or **DENDRITICAL MARKINGS**, tree-like markings on the surface or in the internal structure of minerals; such as the moss agates, &c.

DEXTINAL TUBES, tubes radiating from the pulp cavities of teeth. They are supplied by the *plasma* or colourless fluid of the blood in human teeth.

DENTINE, the chief substance of teeth.

DENTITION, the cutting of the teeth.

DEOBSTRUENT, any medicine which removes obstructions and glandular affections.

DEODORISERS, certain chemical agents which destroy effluvia or mephitic particles suspended in the atmosphere; as chloride of lime, chloride of zinc, (which is Burnett's disinfecting fluid,) carbolic acid, ozone, Condy's fluid, charcoal, &c. Fresh ground coffee, sprinkled through a sick room, is a very convenient and refreshing form of the charcoal disinfectant.

DEPRESSOR MUSCLES, muscles which lower the bone on which they act, as distinguished from the companion or *Elevator* muscles which raise it.

DERM, the true skin or *cutis*.

DERMOHEMAL, those osseous developments by which the fins on the hæmal or ventral side of the body of fishes are attached to the dermo-skeleton.

DERMONEURAL, those ossified developments by which the fins on the neural side of the body of fishes are attached to the dermo-skeleton.

DERMO-SKELETON, literally "skin-skeleton." It is the outer and more or less indurated covering or horny crustaceous or osseous integument of most of the invertebrate and some of the vertebrate animals. In most cases it supplies the place of a hard interior framework.

DESICCATION, such medical applications as dry up the secretions of ulcers, &c.

DESMINE, a foliated variety of zeolite.

DETERGENTS, medical applications which cleanse sores and remove viscid matters.

DETRUSION, (literally "thrusting aside,") a term used to express that pressure of one body against another which tends to thrust it from its place. To "thrust out of place," "out-thrust," or "outward thrust," are all more or less forms or varieties of *detrusion*.

DEUS EX MACHINA, a term now somewhat indefinitely used, which originated with the ancient drama, in which by the aid of a machine the gods were sometimes represented as flying in the air. This being frequently resorted to without adequate requirement passed at last into a proverb, signifying the unnecessary resort to supernatural agency. In a modern work the following meaning is loosely given; "*Deus ex Ma-*

china, Lat. God from a machine; said of help suddenly rendered in an emergency." (1)

DEVITRIFICATION, a peculiar decomposition which takes place in glass under the action of time and certain adverse agencies. From this cause the glass fragments recovered from the ruins of antiquity have become iridescent and decomposed on their surfaces, or dull and without transparency; in fact partially *devitrified*.

DEVONIAN SYSTEM, the middle member of the great Palæozoic rock formations. It lies under the Carboniferous System, and between it and the Silurian System, and includes the Old Red Sandstone, Herefordshire Conglomerates, Russian, Devonian, and Old Rhensish greywacke, the Devonshire shales and limestones, and Herefordshire corn stones, and the Caithness schists, and Arbroath paving stones.

DEVONITE, Wavellite, or Hydrargyllite, from Barnstaple, Devonshire.

DIAGOMETER, an electrical invention for ascertaining the conducting power of fixed oils. It has proved highly useful in detecting the adulteration of olive oil, which, if pure, has the lowest conducting power of all the fixed oils.

DIALECTICS, a synonym of "metaphysics," as used by Plato, though more distinctively applied to the means of conducting metaphysical investigations. It is now more commonly confined to that part of logic which comprehends the rules and modes of correct reasoning, or logical investigation and discussion.

DIALECTRIC, the characteristic of a body which allows electricity to act through it; non-insulating.

DIALOGISM, dialogue so written as to represent the conversation of the speakers in the third person, and not in the first.

DIALYPETALOUS, a synonym of "polypetalous," but more distinctively applied to those plants which have many distinct petals, and not to those with many petals united, or *gamopetalous*, i.e., joined into a monopetalous corolla.

DIAMAGNETIC, the magnetic characteristic of those bodies which are repelled by either pole of a magnet, as distinguished from bodies attracted by either pole.

DIAMIDES, neutral chemical bodies obtained from two atoms of ammonia by replacing successively thirds of the hydrogen by negative radicals.

DIAMINES, alkaloids obtained from two atoms of ammonia by replacing thirds of the hydrogen successively by ethylene and other diatomic radicals.

DIAPHANOUS, synonymous with "transparent," but not *transparent*.

DIAPHORESIS, perspiration.

DIAPHORETIC ANTIMONY, an old name for antimoniate of potassa and peroxide of antimony.

DIAPHRAGM SHELLS, shells made with interior divisions, as the Shrapnel shell.

DIAPHYSIS, the upper transverse process projecting from the sides of the cervical and anterior dorsal vertebrae of the crocodile, corresponding with the sole transverse process usually developed from the neural arch of mammals.

DIASPORE, a native hydrate of alumina

DIATHERMANOUS, synonymous with **DIATHERMAL**, *q. v.*

DIATOMA, a genus of low organised Algae, containing a very large quantity of silic.

DIATOMACEÆ, the group of Algae of which *Diatoma* is the leading genus. The siliceous remains of these plants form the beds of Tripoli, from which the well known polishing material is obtained. They also form the Berg meal or mountain meal of Sweden, which has been frequently resorted to in times of scarcity as an article of food. They are capable of enduring very high temperature and also the utmost extremes of Arctic cold without injury to their vitality.

DICE COAL, a coal which breaks readily into cubical pieces.

DICHLAMYDEOUS, those plants which have both calyx and corolla.

DICHLORANILINE, aniline in which chlorine replaces two equivalents of hydrogen.

DICLINOUS, plants having their pistils in separate flowers or in separate plants from their stamens.

DICOMPOUNDS, a term applied to certain compounds, as dichloride of mercury, dicarbonate of copper, to indicate that they have two atoms of the base or electro-positive element to one of the electro-negative; as two of mercury to one of chlorine, &c.

DICTYOPHYLLUM, any ordinary reticulated fossil leaf.

DIDUS, the genus *Dodo*, recently extinct.

DIDYMIUM, a primary metallic element. It was found associated with cerium in the mineral *Cerite*.

DIDYMOUS, growing in pairs.

DIDYNAMOUS, flowers with four stamens, two of which are shorter than the other pair.

DIGASTRIC MUSCLE, the double muscle between the lower jaw and mastoid process, which pulls the lower jaw downwards and backwards.

DIGENESIS, that form of generation, characteristic of certain Entozoa, in which two forms are alternately produced; the parent never being like the offspring, but the third generation reproducing the form of the first, and the fourth of the second. The term has also been applied to reproduction by two parents, each engaged in the act of generation.

DIGITALIA, a poisonous alkaloid obtained from the leaves of *Digitalis*.

DILUENTS, liquids which dilute the secretions, and promote perspiration and the secretion of urine.

DIMIDIATE, a botanical term applied to

any organ one half of which is so reduced in size as to appear to be wanting.

DIMORPHINE, orpiment found with realgar on Vesuvius. This name was given by Scacchi in error.

DIMORPHISM, the power of acquiring two crystalline forms.

DIMORPHODON, a genus of fossil pterosaurian reptiles, found in the lower lias of Dorsetshire.

DIOECIOUS, or **DIOICIOUS**, having the sexes in different flowers of different individuals, in botany.

DIONYSIUS, a synonym of *Bacchus* or *Iacchus*; whence the *Dionysia*, or Bacchanalian festivals, at which the dramatic representations were produced.

DIOSMIN, a non-azotised substance found in the leaves of *Bucku* or *Bucka*.

DIPHThERIA, a disease attacking the throat, characterised by the formation of a removable membrane, and in serious cases, unfortunately the most frequent of occurrence, proceeding often with such rapidity that suffocation takes place in a very short time. The most effective remedy hitherto found is an immediate gargle of *Condy's Red Patent Fluid*, (a teaspoonful to half a tumbler of water,) which arrests the formation of the membrane in the throat and destroys its vitality. (From *διφθερα*, "a skin or membrane.")

DIPLEIDOSCOPE, an instrument for indicating the passage of any heavenly body across the meridian by the concurrence of two images of the body produced by single and double reflection.

DIPLOPIA. See **DIPLOPY**.

DIPPER, the water-ouzel and some other species of *Cinclus*.

DIPTERAL, temples with a double row of columns on each of their flanks.

DIPTOTE, nouns with only two cases.

DIRIGENTS, certain medical ingredients intended in old prescriptions to direct the operation of the chief remedial medicine and its application to the place affected.

DIRT BED, a geological deposit in the Upper Oolite of England, and in some of the Coal Measures of British North America.

DISCOID, univalveshells with the whorls disposed vertically or in the same plane as a disc.

DISINFECTANTS, substances which destroy contagious influences. They must be more than mere deodorisers, which frequently only conceal the mephitic influences without destroying them. The *deodorisers* mentioned specifically under that head (*ante*) are all of them disinfectants as well and to the list may be added Chloride of Soda (common salt) in solution, and Hypochlorite of Soda, Labarraque's Disinfectant, and also Chlorozone.

DISPENSATORY, a synonym of *Pharmacopœia*.

DISTICHIASIS, or *Trichiasis*, a malformation consisting of a double row of eyelashes;

the innermost row of which maintains a constant irritation of the eye.

DIVARICATE, diverging at an obtuse angle.

DOBEREINER'S LAMP, an invention, of more importance before the manufacture of lucifer matches, by which an instantaneous light could be obtained by a jet of hydrogen brought in contact with spongy platina.

DOCIMASTIC ART, the department of metallurgy which determines the quantity of metal in metallic ores and minerals by assaying.

DODECADACTYLUS, a somewhat arbitrary name given by the early anatomists to that part of the small intestines now better known as the *duodenum*.

DODECAGON, an equilateral and equiangular figure of twelve sides. The area of the dodecagon is exactly three fourths of the square of the diameter of the circle in which it may be inscribed.

DOGMA, a fundamental article of belief in dogmatic theology, usually applied to the essential doctrines of Christianity, but more prominently used in recent times of those spurious pretensions of the Church of Rome to dominion over the faith of others, repudiated by St. Paul, 1 Cor. i. 24, and Gal. i. 7, 8, 9, 11, 12, and especially to the dogma of *Papal infallibility*.

DOG ROSE, the Wild Brier or *Rosa Canina*.

DOG-WOOD, a name given to various woods, and more especially to the shrubby *Cornus* of North America and *Piscidia erythrina* of the West Indies. The *Bedfordia Salicina* of Tasmania is also known by this name.

DOKIMASIA and **EUTHYNE**, two examinations passed through by Athenian magistrates, the first before entering upon office, and the second on retiring from it.

DOLCE, softly and sweetly; an instruction in music.

DOLICHOKEPHALIC, a term signifying "long-headed;" an inaccurate term applied to heads or skulls, the transverse diameter of which to the longitudinal is less than 8 to 10. This term was adopted by Professor Rebzius as expressing a peculiarity calculated to aid classification and establish distinction of race, as he found it in the West African Negro. It is, however, found that no classification can be based on mere length and breadth of skulls.

DOLomite, a general name of magnesian lime stone, and a specific mineralogical name for the rhombohedral carbonates of lime and magnesia.

DOLPHIN, the *Coryphæna Hippurus* of Linnæus, celebrated by the poets for powerful and rapid swimming, and the beautiful and brilliant colours it shows when dying. The name is also given to the genus *Delphis* of Linnæus, a well known cetaceous mammal. See **PORPOISE** and **CETACEÆ**.

DONKEY ENGINE, a small engine employed to do work of minor power, and to supply water to the boilers of larger engines.

DORMITORY, a large sleeping apartment with a number of beds.

DORMOUSE, a genus of rodent mammals, of which the species *Myoxus avellanarius* is the most known in England.

DOUBLE STARS, the popular name of those binary star systems now well known to astronomy, in which it is found that one of the fixed stars, heretofore so called, when situated optically near another, is frequently also so related to it that the one is a secondary to the other. Sirius, or the Dog Star, is so related to a larger but less brilliant primary, round which it performs an orbital motion. There are many others, and there are also ternary and other systems, consisting of three or more of the stars combined in a system, and a great number of multiple star systems in which many of these bodies hold the same relation to each other as the bodies of the solar system.

DOUBLE-ACTING PUMP, a pump which forces water by both the up and down stroke, in consequence of the piston or plunger being solid, and there being two entrance and two exit valves.

DOVER'S POWDER, the *puleis ipecacu anthe compositis* of the dispensatory; a powder used as a successful sedative and sudorific. The ordinary dose is ten grains, consisting of one of ipecacuanha, one of opium, and eight of sulphate of potash.

DRACO MITIGATUS, the old name given to calomel by the alchemists.

DRAGONNADES, the name given to the persecutions of the French Protestants in the reigns of Louis XIV. and Louis XV.

DRAGONNEE, a heraldic animal, the lower half of which resembles a dragon, while the upper resembles some other animal.

DRAMATURGY, a German expression, from the Greek, employed to signify the principles of dramatic representation and literature.

DRASTIC MEDICINES, powerful and rapid purgatives.

DRIFT. See **GLACIAL DRIFT**.

DRIVING WHEELS, in locomotive engines, the wheels whose revolution is directly caused by the engine. In ordinary machinery, the wheel which communicates motion to another or to a series of wheels and pinions.

DRUMMOND LIGHT, an intense light produced by passing a stream of oxygen gas through a flame of alcohol on a ball of quick lime.

DRUSES, a people indifferent to religious ceremonies, and said to be atheists, inhabiting the mountains of Lebanon and as far eastward as Baalbec. They are hospitable, but revengeful when slightly provoked, and have been guilty of several massacres of the Christians in Lebanon under the artful investigation of the Turks.

DRY BAROMETER. See ANEROID.

DRY DISTILLATION, distillation of substances without the aid of water, or *per se*. Coal employed in the manufacture of gas is an example of dry distillation: so is wood, when subjected to heat in a retort for the production of vinegar and other products of its destructive or dry distillation.

DUENNA, the title of the principal lady in waiting on the queens of Spain; more commonly a lady occupying a position partaking partly of the character of governess and companion with a charge over the younger female members of families in the Peninsula.

DULCAMARA, (*Solanum Dulcamara*), the woody nightshade.

DUPLICATION OF THE CUBE, (also called the Delian Problem, *q. v.*), a problem requiring the solution of a cubic equation, and not admitting of solution by elementary geometry. Hippocrates of Chios reduced it to the insertion of two mean proportionals between two given straight lines. This problem Archimedes, Eutocius, and other ancient geometers found modes of constructing by means of the higher curves.

DUTCH LIQUID, an oily liquid product of the action of chlorine on olefiant gas. It is the Chloride of Ethylene.

DYNACTINOMETER, an instrument for determining the intensity of light-producing or photogenic rays, and ascertaining the power of object-glasses in optics.

DYNAMICAL UNIT or DYNAM, the unit or standard of force employed in determining the moveable power of machines. The Dynams most recognised in practical engineering is the unit of *horse power*, defined ultimately by Watt to be the force sufficient to raise a weight of 32,000 lbs avoirdupois one foot high in one second of time.

DYSPEPSIA, a form of indigestion causing great inconvenience and annoyance to those who suffer from it. Its principal characteristic, and that which appears to be the fundamental mode of its development, is fermentation of the food on the stomach from weakness of the gastric fluids, allowing the development of the yeast plant, abundantly present in all human food, to generate the gases of fermentation, and cause continuous excitement and irritation of the nervous system. That which suppresses fermentation, therefore, and causes the food, after being operated upon as far as the power of the gastric fluids will allow, to be discharged in the usual way, is the best mode of alleviating the effects and suppressing the operation or development of dyspepsia. If the food be allowed to go on fermenting, it will remain frequently so long in the stomach that it becomes almost entirely discharged in the form of gas, and persons have been known to be for years suffering in this condition without action of the bowels more frequently than at intervals

of ten days. Dilute Condry's Fluid (the red fluid) taken internally, as prescribed for drinking, destroys the yeast plant, and along with due use of the bath has a very salutary effect.

DYSPHAGIA, difficulty of swallowing.

DYSPNŒA, difficulty of breathing.

DYSURIA, . YSURY, difficulty in voiding urine.

E

EAGLE, BLACK, an order of knighthood founded in Prussia in 1701, and conjoined with that of the Red Eagle, called also the Order of Sincerity, previously instituted by the Margraves of Bayreuth.

EAGLE WOOD, the *Agila* of the Malays, and *Pao d'Agila* of the Portuguese; the wood of *Aloexylon Agallochum*, burnt as incense for its fragrance.

EARTH NUTS, a name given to many underground fruits and edible tubers, as the *Cyperus rotundus* of Egypt, the underground pods of *Arachis hypogæa*, China, and of *Amphicarpea*, *Voandzeia*, and other plants; and of the tubers of umbelliferous *Bunium flexuosum*, and of cyperaceous plants.

EARTH SHINE, the reflection of sunlight thrown on the moon from the illuminated side of the earth.

EARWIG, an insect belonging to the genus *Forficula* of Linnaeus.

EAU DE JAVELLE, a solution of chloride or hypochlorite of soda, used for disinfecting and bleaching.

EBONITE, a compound resembling jet, formed by a mixture of sulphur in varying proportions with caoutchouc or gutta-percha.

EBULLIOSCOPE, an instrument for testing the strength of spirits of wine by the temperature of their boiling point.

ECBOLICS, remedies, justifiable only in the most extreme cases, for hastening delivery by exciting uterine contractions which expel the fœtus. Drastic purges and savin have been reputed ecbolics, but ergot of rye is the only really trustworthy remedy. No practitioner, however, will resort to it while there is a reasonable chance of nature doing its own work.

ECCLESIOLOGY, a recent term, signifying church architecture and symbolism, with their subordinate arrangements and details.

ECCOPROTICS, an old name given to mild aperient medicines.

ECDYISIS, casting or changing of the skin.

ECRIDNA, a mythological being with the body and upper proportions of a man, and the lower extremities like the posterior extremities of a serpent. The name is also given to an Australian quadruped resembling the ant-eater, but covered with spines, and belonging to the order *Monotremata*.

ECHIDNINE, the poisonous secretion formed in the poison glands of vipers and serpents generally. It is a nitrogenous substance, associated with albumen and other matter.

ECOSTATE, leaves without a *costa* or central rib.

ECTHESIS, a decree of the Emperor Heraclius in 639 for terminating the Monothelite controversy. It declared the doctrine of two wills in Christ to be heresy. As it failed to accomplish its object, the Emperor Constant in 648 recalled it, and issued a decree called the *Type*, prohibiting the use of the terms "single" or "double will," and imposing silence on the controversialists on both sides. Martin I. condemned the *Type* at Rome in 649. The *Ecthesis* is supposed to have been framed by the Patriarch Sergius.

ECTROPIUM, eversion of the eyelids, arising from disease.

EDAPHODONTS, a group of fossil fishes, so called from peculiarities of their pre-axillary dental mass.

EDDOES, the edible tuberous stems of several *Araceæ*, used as food in tropical climates.

EDRIOPHTHALMA, a group of malacostraceous crustaceans with sessile eyes.

EFFERVESCENCE, the escape of gas from liquids by chemical action or fermentation.

EFFUSION, the escape of the fluid of one organic vessel into some adjoining organ.

EGG PLANT, the *Solanum esculentum*, the fruit of which has the appearance of eggs.

EGLANTINE, the sweet brier rose, *Rosa rubiginosa* and *Rosa eglanteria*. Milton was in error in applying this name to the honeysuckle.

EGYPTIAN BEAN, the fruit of *Nelumbium speciosum*, considered to be the forbidden bean of the Pythagoreans.

EGYPTIAN PEBBLE, a variety of jasper found in the Desert between Cairo and the Red Sea.

EIDER DUCK, the most important of the *Anatidæ*, and the type of the sub-genus *Somateria*. The down of this duck is of great commercial importance and value.

EIKON BASILIKE, a work the authorship of which was traced by Sir James Mackintosh to John Gauden, Bishop of Exeter, but which had generally been ascribed to Charles I. It gives "the Portraiture of his Sacred Majesty in his Solitude and Sufferings."

ELEIS GUINEENSIS, the oil palm of West tropical Africa, from which the palm oil imported so largely into Great Britain is obtained. It is an exceedingly fruitful palm; and from the outer fleshy coating of its fruits the oil is extracted by boiling in water.

ELEOLITE. (See **EOLAOLITE**.) This variety of nepheline is a silicate of alumina, potash, and soda. The pale blue and partially opalescent specimens are occasionally used as gems.

ELEOMETER, an instrument for testing the purity of olive oil.

ELASTIC BITUMEN, a soft variety of bitumen found in brownish masses in various places, and possessing flexible and elastic qualities, from which it has been also called *Mineral caoutchouc* and *Elaterite*.

ELATERS, loose spiral fibres found along with the sporules of *Marchantia*, *Jungermannia*, &c.

ELATERIUM, a fruit consisting of three or more consolidated carpels, which burst by elasticity when ripe, as in the fruit of *Euphorbia*. A *coccum* or pericarp of dry elastic parts.

ELEATIC PHILOSOPHY, the system of philosophy originated by Xenophanes of Elea or Velia, B.C. 530; who, along with his disciples, confined their attention to the ideas of God and Existence or Being, which they held to be the only true objects of permanent existence. The phenomena of the world which change and pass away they regarded as merely illusory and incapable of explanation.

ELECTRIC FISHES, fishes, such as the *Gymnotus*, or electric eel, torpedo, and *Malapterurus electricus*, or *Silurus*.

ELECTRIC LIGHT. This light is generally produced by partially interrupting a current of electricity passing along the wires of a battery by charcoal points or pencils at the ends of the wires. The magneto-electric light of Wyde produces a light of sufficient intensity and steadiness to be fit for all the purposes of photography, and more reliable for its uniformity than even sunshine, and is sufficient to set fire to articles submitted to the focus of a burning-glass at a distance of more than twenty feet. It is represented to be maintainable at a cost of ninepence per hour.

ELECTRO-BALLISTIC APPARATUS, an arrangement of electricity for ascertaining the velocity of a projectile at various points of its flight. Two screens are interposed between the projectile and the butt or target, one near the gun and the other near the target. In passing through the first of these screens the projectile breaks a current of electricity, and sets at liberty a pendulum which is stopped by the passage of the projectile through the second screen. The time taken by the projectile between the two screens is exactly that of the arc described by the pendulum. Thus, on the first day's experiments with the 81 ton gun at Woolwich, September 17th, 1875, the fifth round, with a charge of 230 lbs. inch-and-half cube powder, propelled a shot of 1260 lbs. weight at the muzzle velocity of 1550 feet per second; the shot penetrating 41 feet into the sand, and the recoil of the gun being 37 feet. The sixth round penetrated three feet further into the sand, with a shot 2 lbs. lighter and a charge of powder ten pounds greater; the muzzle velocity,

being the same, and the recoil of the gun 14 inches more.

ELECTRO-BIOLOGY, a name given to the mental phenomena supposed to be produced by Mesmerism or Animal Magnetism on human beings.

ELECTRO-MAGNETISM, that application of electricity by which artificial magnets and magnetic actions are produced, in contradistinction to **MAGNETO-ELECTRICITY**, (q. v.) by means of which currents of electricity and electric actions and effects are produced from *natural magnets*. Artificial magnets are made by rolling a coil of wire insulated to conduct currents round a core, generally of soft iron, (if of steel, the steel becomes permanently magnetised,) by which means, on the application of a current to the ends of the coil, *vertiginous* or *rotatory magnetism* is produced. See **MAGNETISM**.

ELECTRO-METALLURGY, that branch of electricity, as applied to the manufacturing arts, which consists in the precipitation electro-chemically of various metals.

ELECTRO-NEGATIVES, and **ELECTRO-POSITIVES**. Those electro-chemical decompositions which are attracted to the positive or *anode* pole of the battery are called *Electro-negatives*: and *vice versa* those attracted to the negative or *cathode* pole.

ELECTROMOTOR, or **ELECTROMOTIVE FORCE**, the development of electricity by means of Voltaic arrangements.

ELECTRON, Amber, so called by the ancient Greeks, whence, from its latent electricity being excitable by friction, the name *Electricity*. See **ELECTRUM**.

ELECTROTINT, a mode of making drawings with any substance insoluble in solutions of sulphate of copper. A reverse of designs so made may be obtained fit for printing from by immersing them in these solutions and the precipitation of the copper upon them.

ELECTRO-VITAL CURRENTS, those currents of electricity under the command of the volition by which the motions of the body are performed at will, and the volition connected with the physical action; as also those currents by which involuntary animal motions are produced. There are by some physiologists supposed to be two currents; one proceeding internally from the cerebro-spinal axis; the other external and cutaneous, returning from the extremities to that axis.

ELECTRUM, a native alloy of gold and silver, found in silver white crystals and imperfect cubes in the north of Europe and California, consisting of two proportions of gold to one of silver. This alloy is also called *Electron*.

ELECTUARY, a powder or medicine mixed with syrup of the consistence of honey.

ELECTUARY, **LENITIVE**, powdered senna mixed with coriander seeds, pulp of cassia, prunes, figs, sugar, and decoction of liquorice.

ELISION, the suppression of a vowel or vowel sound, frequent in French, for the sake of euphony. In Greek and Latin the elisions were generally at the ends of words.

ELIXIR, an old term applied to various tinctures, essences, and solutions used in the processes of transmutation. Elixir of vitriol was sulphuric acid with the addition of an aromatic tincture.

ELOGE, a panegyric oration in honour of an illustrious person deceased, generally pronounced now of a predecessor by his successor in the French Academies,—formerly by the secretaries.

ELYTRUM, synon. of *Elytron*. See **ELYTRA**.

EMANATION, SYSTEM OF. Pantheism.

EMBROCCATION, a liquid application to any inflamed or painful part.

EMBRYO, the rudimentary plant in the interior of a seed; the vegetable fœtus, consisting generally of the *plumule*, or part which grows upward, the root or *radicle*, and the cotyledon or cotyledons; also the fœtus *in utero* up to the fifth month of pregnancy.

EMBRYOTOMY, cutting the fœtus out of the womb in cases of obstructed delivery.

EMETICS, medicines which produce vomiting.

EMETIC TARTAR, the oxide of antimony, potassa, and tartaric acid, forming a triple salt. As an emetic, the dose is from half a grain to two grains. As a diaphoretic or purgative, the dose should be less than half a grain. It is soluble in three parts of boiling and eighteen parts of cold water.

EMMENAGOGUES, medicines for promoting menstrual evacuation.

EMOLLIENTS, the opposite of tonics; they relax the fibrous tension.

EMPHASIS, the stress laid on syllables or words in elocution. It is synonymous with accent in music.

EMPHYSEMA, a dilation of the air-cells of the lungs, occasioned by chronic bronchitis, accompanied occasionally by the rupture of two or more of the cells into one. Also, more rarely, a rupture of the lung with escape of air under the *pleura*.

EMPIRIC, a quack or impostor, as now used. Originally, and in a more honourable sense, the term was applied, as its etymology indicates, to those who founded their knowledge on experience, *εμπειρικός*.

EMPLASTICS, medicines which tend to shut up the pores of the body, and produce constipation.

EMPYEMA, purulent matter collected in the cavity of the thorax.

EMPYREUMATIC OILS, oils produced from the distillation of organic matters at high temperatures.

EMULSION, a milky liquid.

ENCEPHALOCELE, hernia of the brain.

ENCRATITES, a sect of the Gnostics opposed to marriage.

ENCYSTATION, the process by which certain infusoria enclose themselves in a cyst previous to fission; on the bursting of the cyst the embryos are allowed to escape.

ENDELLIONITE, a triple sulphuret of antimony, lead, and copper, from Endellion, Cornwall.

ENDERMIC, a method of applying medical remedies to the dermis under or denuded of the cuticle, as morphia, strychnia, &c. The hypodermic application of strychnia, duly diluted, and under medical supervision, is said to have the effect of reinvigorating the eyes, where vision has become seriously decayed, and restoring perfect sight.

ENDIVE, *Cichorium Endivia*, a composite biennial herb.

ENDLESS SCREW, a rotatory combination of the inclined plane and the lever, employed for communicating or extending motion. It may be either a screw with a cog-wheel or a screw acting on the threads of a female screw on the edge of a wheel. The American endless screw is at right angles with the plane of the wheel.

ENDOCROME, the colouring substance of plants.

ENDOPHYLLOUS, young leaves of monocotyledonous plants, enclosed in a sheath.

ENDORSE, the smallest diminutive of the pale in heraldry.

ENDOSMOMETER, an instrument to show how rapidly endosmosis (*q. v.*) takes place. It shows that endosmosis takes place more rapidly than exmosis, that is, that the thinner fluid passes more rapidly into the thicker fluid than *vice versa*.

ENDOSPERM, the albumen of seeds. Synonym of **ENDOSPERMIUM**.

ENDOSTOME, the passage through the inner integument of seeds under the foramen.

ENDOTHECIUM, the cellular fibrous lining of an anther.

ENGRAILED, the edge of an object indented with small semicircles with their concave sides outward. Heraldic.

ENHANCED, bearings placed above their usual position in the shield. Heraldic.

ENOCH, BOOK OF, a supposed book of prophecy left by the patriarch Enoch, on the supposition that one of his prophecies quoted by St. Jude in his Epistle was a quotation from such a book. The Fathers down to the period of Jerome were credulous enough to believe this, though Jude gives no authority for it; and they even mention the existence of such a book. Two Ethiopian copies of the book mentioned by them were brought by the traveller Bruce to Europe in 1773. This work is of some antiquity, dating about fifty years B.C., according to Archbishop Lawrence, but is obviously no genuine production of Enoch.

ENSIGNED, any ornamented charge in heraldry.

ENTOPHYTZ, a plant growing within another.

ENTOYER, a bordure charged wholly with inanimate things.

ENTROPYUM, a diseased turning inwards of the eyelid and eyelashes, causing irritation to the eyeball.

ENZOOON or **EOZOOON CANADENSE**, a fossil found in the clay slate of Canada, being the earliest of the fossiliferous strata heretofore discovered and from hence called the Eozoon, or "Dawn Animal." It is identified with a still living but diminutive species of *Foraminifera*; and its discovery has greatly aided in dispelling the hasty and immature conclusions of speculative geologists as to interruptions to the continuity of animated nature in the world since the first introduction of life,—an extravagant and *per saltum* deduction which its warmest advocates have been at length compelled to abandon before irresistible evidence.

EPENCEPHALIC ARCH, the arched and osseous protection of the epencephalon, being in general anatomy the neural arch of the occipital vertebra.

EPICANTHIS, the angle of the eye.

EPICEDIM, a funeral elegy.

EPIDERMIC METHOD, medicines applied to the skin. Synonymous with *Iatroleptic Method*.

EPIGASTRIC REGION, the Epigastrium, (*q. v.*)

EPIPHORA, a disease resulting from excessive secretion of tears.

EPIPHYTE, a plant which rests or grows upon the surface of another plant, but does not draw any nourishment from it.

EPIPOCELE, hernia from the protrusion of the omentum.

EPISPASTIC, the quality of applications which give rise to blisters on the skin.

EPISTAXIS, bleeding at the nose.

EPULOTIC OINTMENTS, an old term applied to unguents which aided the skinning over of sores.

ERBIUM, a primary metallic element, the oxide of which, *Erbia*, is said to be found native along with Yttria.

ERECT, an animal or part of one placed perpendicularly when the natural position would be horizontal. (Heraldic.)

ERETHISMUS, excessive general excitement, occasioned by the over use of mercury or other agents.

ERGOTIN, the active acrid principle of ergot of rye.

ERGOTISM, two forms of disease, gangrenous and convulsive, occasioned by using diseased rye as food.

ERMINOIS, a fur in heraldry consisting of a field of gold with black tufts or spots.

EROTIC, exciting to love. The Erotic poets of Greece and Rome were those who made love their chief theme.

ERUCIC ACID, a colourless crystalline substance found in oil of mustard.

ERYTHRINE, a substance found in the *Rhus Lichen*, *Roccella tinctoria*.

ERYTHRONIUM, the original name of Vanadium.

ERYTHROPHYLL, the substance which gives the reddish tint to some autumn leaves.

ESCHALOT or **SHALLOT**, the *allium Ascalonicum*, a small variety of onion.

ESCLATTE, shattered by a stroke of a battle axe, in heraldry.

ESSENCE D'ORIENT, the pearl like matter at the base of the scales of a small *cyprinus* fish, the *bleak*, by means of which artificial pearls are made by lining the interior of hollow glass beads with it.

ESSENTIAL OILS, a series of oils forming the odorous principles of plants. They are obtained in a variety of ways, as by pressure, distillation, digesting in alcohol, confinement and absorption of the odour into certain inodorous fixed oils, &c. They are composed of carbon and hydrogen. Some contain oxygen also, and others sulphur in addition.

ESTRADE, the raised portion of a floor for supporting a throne or bed; and generally, any raised floor.

ESTRICH, the fine ostrich down of commerce.

ETHAL. This name is a compound of the words Ether and Alcohol. It is formed in the process of saponifying spermaceti.

ETCHING NEEDLE, a steel tool with a sharp point for tracing on copper.

ETHIORS, a black mineral powder produced when sulphur is rubbed with mercury.

ETHYL (C_2H_5), an organic radical found in alcohol and ether.

ETOILE, a star differing in the number of its points from a mullet. It has four rayant points.

EUCRASY, in a good or well balanced condition of health.

EUERGETES, a title signifying "benefactor," frequently given by the Greeks to eminent servants of the state for the proper discharge of their duties. It is more particularly preserved in connexion with the names of some of the Ptolemies, rulers of Egypt.

EUGUBINE TABLES, bronze tablets found near Gubbio, the ancient Eugubium, in 1444. Five of the inscriptions are in Etruscan and Umbrian characters, and two in Latin. Some progress in their interpretation has been made by Professor F. W. Newman.

EUPESIA, good digestion.

EUSTACHIAN VALVE, the valve separating the right auricle of the heart from the inferior, *vena cava*.

EUTHANASIA, easy death. It is also used as a term in various metaphorical senses by political writers.

EVERSION, overturning, destruction, an overthrow.

EVOCATI, soldiers of the old Roman army who were again called to give military service after having got their discharge or *missio*.

EXACERBATION, increased violence in the symptoms of disease.

EXERESIS, that department of surgery confined to removing portions of the body, as amputations, &c. (An old term.)

EXANGIA, diseases which rupture or perforate the large blood-vessels, or enlarge them without external openings, as Aneurism, Varix, &c.

EXANTHEMATOUS, any eruptive disease accompanied by fever.

EXAUCTORATI, those Roman soldiers who, after sixteen years' service, remained four years longer under a special standard or *vexillum* of their own.

EXAUGURATION, an act performed by the augurs of Rome, whereby, after they had consulted and obtained the consent of the gods, they changed any sacred thing or person to other or profane uses.

EXEGESIS, an interpretation or exposition, more particularly of the Sacred Writings.

EXOSTOME, the passage through the foramen of an ovule.

EXOTHECIUM, the coating of an anther.

EXOTICS, foreign plants requiring to be sheltered during winter. Also anything brought from one country to another by way of introduction. Literally, foreign $\xi\acute{\xi}\omega\tau\iota\kappa\acute{o}\varsigma$.

EXPANSION GEAR, mechanical arrangements for cutting off the steam at the various parts of the stroke for the purpose of modifying the action of an engine to the work required. The effect produced is to admit less steam than usual into the cylinder, and allow it to complete the stroke of the piston by its expansion.

EXPECTORANTS, medicines for increasing the bronchial and tracheal secretions of mucus.

EXPECTORATION, the ejection of matters from the chest.

EXSICCATOR, an arrangement, generally a chamber, through which dry heated air may pass, occasionally charged with certain chemical vapours which absorb aqueous vapour, and thereby dry wet articles.

EXTINE, in botany, the outer membrane of pollen grains.

EXTRACT OF LEAD, a subacetate of lead, formed in an impure state by boiling litharge in vinegar. It is called Goulard's Extract of Lead, after the surgeon who first used it.

EXTRADITION TREATIES, treaties made between different states for surrendering or sending back escaped criminals to meet the demands of public justice.

EXTRAVASATION, fluids out of their proper vessels, as blood extravasated into any portion of the body in which it ought not to be.

EXTORSE, any member or part of a plant turned away from its proper axis or direction is extorse or extorsal.

EXTROVERSION, portions of the body turned wrong side out from malformation.

EYELETEER, a pointed instrument for piercing eyelet-holes.

EYE OF A DOME, the aperture at the top for admitting light.

EYE OF A VOLUTE, the circle in the centre of a volute.

EYE-PIECES, those lenticular arrangements by which the eye is enabled to examine the image formed at the focus of object glasses of telescopes and microscopes, &c.

EYSELE, an old name for vine ar.

EYEBRIGHT, *Euphrasia Officinalis*, a remedy for weak eyes, and one of the ingredients of British herb tobacco.

F

FAGOPYRIUM, a genus of plants indigenous in Central Asia, known as the Buckwheat.

FAK, a single circle of any rope or cable lying coiled.

FALCATED, crescent-shaped; applied to the appearance of the moon in her first and fourth quarter, when she, as described in Hudibras, "on silver horns hangs out her light."

FALCHION, a broad-bladed sword, with convex edge increasing in breadth toward the point. It was more particularly a characteristic weapon of the thirteenth century.

FALCIFORM PROCESS, a process of the *dura mater*, extending from the *tentorium* to the *crista galli*, between the hemispheres of the brain.

FALCULATE, a curved elongated and sharp-pointed claw.

FALLACY IN DICTION, a term in logic applied to that class of fallacies in which the conclusion is not justified by the premises, though at first sight it may appear to be so. A fallacy of this kind occurs in the great aphorism of Epicurus: "Nothing but matter can touch or be touched." Here the premise includes matter and touch, and the conclusion the correlative limitation of the two. The fallacy is in the comprehensive sense in which the word "touch" is here used. Touch in man is not matter, but one of the metaphysical senses exercised through matter. If, therefore, in the contact with matter, as in the case of the hand touching an object, the sense of touch be also present, then the metaphysical is in contact with the physical, or, in other words, matter with the immaterial. The fallacy lies in the words *touch* and *touched*, which Epicurus uses in their most comprehensive meaning, forgetting at the same time that in this comprehensiveness touch is a *sense*, as well as a mere contact of matter with matter. Hence the Epicurean postulate is a *fallacy in diction*, because the metaphysical may touch or be in contact with matter; and something more than matter

may therefore touch matter. This is in fact the connecting point between the metaphysical and the physical, the oversight of which, both by Epicurus and Bishop Berkeley, led to the denial of anything but matter by the former, and the denial of the existence of matter by the latter.—[J. A. S.]

FALLACY EXTRA DICTIONEM, a fallacy which is exterior to the language or terms, and reside in the matter or facts.

FALLOW, an agricultural term applied to arable lands not under crop. A "Naked Fallow" signifies, rested for a whole year without any cropping; a "Winter Fallow" is a resting of the land from the autumnal reaping of one year to the spring seed time of the next. This is also sometimes called a "Green Crop Fallow," when green crop follows grain.

FALLOW DEER, the popular name of the *Cervus Dama*, Lin.

FALSE CADENCE, a cadence in music in which the bass, instead of rising a fourth or falling a fifth, rises only a tone or semitone.

FAMILIA, the household or persons, free or bound, who were under the will and authority of one man, among the Romans, whether in estate or household: also that division of the *gens* which gave the *cognomen* or family name.

FAN VAULTING, the name given to that remarkably fine style of perpendicular Gothic consisting of Voussoirs rising concentrically from the springing up towards the centre, and meeting or cutting into each other, or finished with a pendant forming a sort of similarly ornamented keystone, as exemplified in the Peterborough and Ely cathedrals, &c.

FASTER'S EVE, the name still given to Shrove Tuesday in Scotland.

FEATHERING, turning the blade of an oar into a horizontal position between the strokes in rowing.

FESTÆ, the religious festivals or holidays of the Romans.

FERN ROOT, the medicinal root of the *Aspidium Filix Mas*, a celebrated vermifuge, especially found to be efficacious in cases of tapeworm. The dose is two drachms of the dry root powdered, along with or followed by an active purge.

FERONIA, the elephant or wood apple of India, *F. Elephantum*. Its trunk, when wounded, exudes the East India gum arabic of commerce.

FERRIC ACID, a teroxide of iron, formed in combination with potash. It is unstable, not found free.

FERRUGO, the rust disease in plants, consisting of several species of parasitical fungi of the order *Pucciniae*.

FEUILLEA, one of the climbing *Cucurbitaceæ* of tropical America, *F. Cordifolia*. It is known under the name of Cacaoon, or Sequa, in Jamaica, as an antidote to poisons. It is emetic and purgative.

FEUILLANS, a religious order founded at Feuilant, Languedoc, in 1577; a branch of the Bernardines.

FEUILLANS, CLUB DES, a French political club of the Revolution, which separated from the Jacobines in 1791, and held meetings at the convent of the Feuillaus, till its extinction in the following year.

FICOIDEÆ, the order *Mesembryaceæ*; a natural order of perigynous exogens, allied to the *Cactaceæ*, with perigynous stamens, superior calyx, and embryos curved round mealy albumen.

FIELD-VOLE, the *Arvicola agrestis* of Cuvier, or field-mouse.

FILE, two soldiers, one belonging to the front line and one to the rear.

FILE MARCHING, a line of soldiers two deep, when marching in file, that is, facing right or left, and two abreast.

FILEFISH, a genus of acanthopterygious fishes with rough shagreened skins and deeply serrated anterior dorsal spines. The genus *Balistes*.

FILIBUSTERS, a word said to come from the English word "freebooter," adopted in America through the French corruption *filustier*, and used of any piratical depredators.

FIMBRIÆ, the processes of the abdominal openings of the Fallopian tube.

FISSION, breaking up into parts.

FITCHET, the *Putorius fœtidus*, or Polecat.

FLAGELLA, an old botanical name for the younger shoots or twigs of plants.

FLEA, the *Pulex* of entomology.

FLOATING SCREENS, strips of plaster adjusted to guide the floating rule in plastering or floated work.

FLORETS, the smaller interior flowers in the disc or anthodium of composite flowers, as distinguished from the marginal flowers in the circumference of the disc.

FLOTA, the Spanish synonym of "fleet," applied to those ships which sailed in fleets or under convoy between the Peninsula and the transatlantic possessions of Spain and Portugal.

FLOTILLA, a fleet of small vessels, however numerous.

FLUELLITE, native fluoride of aluminium.

FLUOCERINE, or **FLUCERINE**, native fluoride of cerium.

FLUOBORIC ACID, a gas composed of one atom of boron and three of fluorine; also called Fluoride of Boron.

FÆTUS, the name given to the unborn child between the fifth month of pregnancy and the time of its birth. Previous to this period it is called "the Embryo," *q. v.*

FOOL'S PARSLEY, a poisonous plant distinguished from parsley, for which it is apt to be mistaken, by the involucrels, each having three leaflets always next the circumference of the umbel. The *Æthusa Cynapium*.

FORAMINIFERA, the *Rhizopoda*, a class of *Protozoa* or *Acrita* of which *Amœba* is the type. They are mostly microscopic organisms, and the calcified shells of some of them enter largely into the composition of chalk and other sedimentary strata.

FORCES, composition and resolution of, the accumulation of two or more forces into a mechanically united equivalent.

FORENSIC, relating to courts of justice. *Forensic Medicine* is that branch of medical science which relates to *Medical Jurisprudence*, or medical questions arising before courts of law.

FORMICATION, a creeping sensation of the skin, as if ants (*formicæ*) were creeping over it.

FORMYLE, C_2H , the hydrocarbon base of formic acid.

FOSSULATE, a surface characterised by one or more long narrow depressions.

FOUSEL or **FUSEL OIL**, Amylic alcohol, the hydrate of oxide of amyl, found in potato and corn spirit, and the cause of their harsh taste and offensive flavour. Its formula is $\text{C}_{10}\text{H}_{21}\text{O} + \text{H}_2\text{O}$.

FOWLER'S MINERAL, solution of arsenite of potassa.

FONGLOVE, *Digitalis purpurea*.

FRAPPING, increasing the tension of ropes running parallel or nearly so by drawing and tying them together.

FRATERCULA, the genus which includes the puffins.

FRATRICELLI, a sect of Franciscan Monks, founded by Maurato and Fossombroni about the end of the thirteenth century, but subsequently condemned by Boniface VIII., and persecuted by the Inquisition in the two following centuries, during which it is said more than two thousand of them became its victims. The remainder of the body became Lutherans at the Reformation.

FRAUNHOFER'S LINES, the dark lines of the solar spectrum, first examined by Fraunhofer, and which have latterly led to such important discoveries in spectrum analysis, *q. v.*

FRECKLES, the brownish or dark yellow specks produced by sunshine on the face and skin of fair persons. See **COSMETICS**.

FREEZING MIXTURES. These mixtures have in some instances reduced the temperature to 140° below 0° . Equal parts of sal ammoniac and powdered nitre mixed, in one and a half their quantity of water, reduce the temperature and the thermometer from 50° to 10° . Ice or snow mixed with one half their weight of salt, reduce the thermometer to 0° .

FRENCH POLISH. A solution of shell-lac in spirits of wine is the chief constituent. Linseed oil is used along with it, when applying it, and friction with a ball of cotton wool in a cloth applied rapidly.

Tripp and oil are used in finishing off when dry.

FRENCH WHITE, talc finely pulverised. *See* FRENCH CHALK.

FRENCH ULTRAMARINE, an artificial ultramarine first manufactured from a substance resembling lazulite, found in the ashes of furnaces in France. It is now regularly manufactured by heating to a red heat a mixture of kaolin, carbonate of soda, and sulphur, and perhaps a small quantity of iron; it being found that the colour of ultramarine cannot be produced without the presence of iron.

FRENUM, a ligament or rein. The term is applied to various ligaments anatomically; the ligament of the tongue is called *frenum linguae*.

FRIABLE, capable of being crumbled into powder.

FRIAR'S BALSAM, an alcoholic solution of benzoin, tolu balsam, styrax, and aloes; the compound tincture of Benzoin of the Pharmacopoeia, applied to stimulate ulcers and wounds.

FRIENLAND GREEN, an ammoniochloride or oxychloride of copper, called also **BRUNSWICK GREEN**.

FRITT, a term applied in glass manufacture to the mass previous to fusion, after it has been heated together to expel water.

FRONDLOSE, leaves unusually developed either in their size or number.

FRONTLET, the margin of the head behind the bill of birds.

FRUSTULES, fragments; the joints into which *Diatomaceæ* separate.

FRUTEX, a shrub or perennial plant whose branches proceed from the root direct without any uniting stem.

FULGORA, a genus of hemipterous insects of the family *Cicadariae*, of which the *F. lanternaria*, or lantern fly, of South America, and *F. candelaria*, or candle fly, of China, are species.

FULGORITES, or, as they are sometimes called, **FOSSIL LIGHTNING**, certain tubes formed by the fusing and vitrification of sand by the passage of lightning through the sand.

FULMINATING and **FULMINATES**, *q. v.* Of these bodies the composition of fulminate of mercury, or fulminating mercury, is $2(\text{Hg O})\text{Cy}_2\text{O}_3$; of fulminating silver, or fulminate of silver, $2(\text{Ag O})\text{Cy}_2\text{O}_3$; an exceedingly dangerous compound to handle. Fulminating powder is a compound of three parts of nitre, two of carbonate of potash, and one of sulphur.

FUMARAMIDE, a white powder formed by mixing fumaric ether with ammonia.

FUMARIA, a genus of hypogæous exogens, consisting of herbs closely allied to the *Papaveraceæ*.

FUMARIACEÆ, the natural order of herbaceous plants of which *Fumaria* is the typical genus.

FUMARIC ACID, an acid found in fumitory, *Fumaria officinalis*. It is also obtainable from malic acid by the action of heat.

FUMARIMIDE, a red powder obtained by the action of heat on bimaleate of ammonia.

FUMIGATION, a mode too frequently adopted with the view of disinfecting, and with the result of only concealing bad or pernicious smells. The little carbon liberated by the smoke of fumigation is about the only real disinfecting principle it contains; but that is too small to be of any great service. Disinfectants (*q. v.*) ought to be invariably substituted for fumigation.

FUND. S., the base of any cone-shaped organ, especially the base of the uterus, gall bladder, and urinary bladder.

FUSCIN, a brown colouring body found in empyreumatic oils.

FUSE, or **FUZE**, in artillery, a wooden or metal case used for igniting shells, now generally superseded by the system of detonating shells communicated to the British Ordnance department before the Crimean War, but the authorship of which has never been acknowledged.

FUSEL OIL. *See* **FOUSEL**.

FUSIBLE CALCULUS, a variety of urinary calculus capable of fusion under the blow-pipe, and composed of phosphate of lime, magnesia, and ammonia.

FUSIBLE SALT OF URINE, the old name of the ammonio-phosphate of soda deposited on the evaporation of urine.

FUSINE, the spindle-shells.

FUSION, aqueous, the liquefaction by heat of salts containing water of crystallization.

FUSION, **IGNEOUS**, liquefaction by heat of anhydrous bodies, or bodies without water.

G

G, as used in chronology, is the Seventh Dominical Letter. As a Roman abbreviation, it signifies *gaudium*, *gens*, *gratis*, &c. **G. L.** represents *Genio loci*; **G. P. R.**, *Gloria populi Romani*; **G. V.**, *Genio urbis*.

GABBRONITE, called also fuscite and compact scapolite. A silicate of alumina, soda, and potash, found in the titaniferous iron of Norway.

GABIAN OIL, a mineral naphtha or petroleum found at Gabian in Languedoc.

GAHNITE, another name of Automolite, a native aluminite of zinc.

GAINAGE, in old English law, horses, draught oxen, and agricultural implements, exempted from seizure by law not to impede agriculture.

GAINING TWIST, in gunnery, a spiral grooving of guns which increases as it advances from the breech.

GALACTIC CIRCLE, the great plane of the Galaxy, used astronomically to divide celestial space into two hemispheres.

GALACTIC POLES, two opposite points in celestial space perpendicular to the great plane of the Galaxy.

GALACTOPOIETIC, from *γαλα* and *ποιεω*, "I make milk;" diet and medicine given to promote the secretion of milk.

GALANTHUS, the genus of flowers known as the snowdrop.

GALE, a small fragrant bush growing in boggy places belonging to the order *Myricaceæ*, The *Myrica Gale*.

GALE, a nautical term applied with some gradations distinctively to winds of varying force; as a *fresh gale*, *strong gale*, *hard* or *heavy gale*, or *whole gale*.

GALICEÆ, the natural order of plants of which *Gallium*, *g. v.*, is the typical genus.

GALIPEA, the genus of *Rutaceæ*, from which *Angostura bark* is obtained; sometimes called *Cusparia bark*, from *G. Cusparia*, one of the species. It is used to stupefy fish in Guiana, to which it is native, and has tonic properties medically.

GALVANOSCOPE, a modification of the Galvanometer, *g. v.*, for detecting feeble currents of electricity, but not provided, as in the latter instrument, with arrangements for measuring the angles of deflection of its needle.

GAMBA, the elongated metatarsus of ruminant and soliped mammals.

GAMBIT, an astringent drug, used as a substitute for catechu, obtained from *Uncaria Gambir*.

GAMMARINA, a family of amphipodous crustaceans, of which the *Gammarus* or sandhopper is the typical genus.

GAMOMORPHISM, the stage of development of the germinal or spermatogenic elements of reproductive organisms, in which they are in maturity for fecundation.

GANGLIONEURA, the molluscous and articulate divisions of the animal kingdom, distinguished by the ganglionic character of the nervous system. The articulated section of this arrangement are called *Homogangliata*, from the ganglia being symmetrically arranged along the central line of the body connected by a double chord. The molluscous system are called *Heterogangliata* from the dispersed and frequently unsymmetrical arrangement of the ganglia.

GANGRENE, a diseased condition of the soft portions of the body, nearly approaching *sphacelus*, or mortification or death, (from *γαγγραινα*, "feeding upon or eating away.") *Dry gangrene* is more characteristic of advanced age, or poisoning from ergot of rye. It is generally characterised by ossification of the small arterial trunks, pain, heat, and redness being followed by darkening and drying of the parts, chiefly in the extremities. *Moist gangrene* is accom-

panied by the exudation of serum and extravasation of blood, which coagulates and becomes black, and gases formed by decomposition are emitted. *Hospital gangrene* is a form of disease like the latter, arising from the air of hospitals being poisoned by overcrowding of patients with sores, &c., and defective accommodation and sanitary arrangements. It is needless to say that gangrene, unless it can be arrested in its first stages, is so closely on the verge of mortification, that it rapidly passes into that stage and becomes fatal.

GANOCEPHALA, an order of fossil reptiles with ganoid bony plates covering and defending the head, including the super-temporal and post-orbital plates over the temporal fossæ. They are found in all the carboniferous rocks.

GAPE, a term applied in ornithology to the opening between the mandibles of birds.

GARANCINE, a colouring matter derived from madder.

GARLIC, OIL OF, the sulphide of the radical *allyl* obtained from the distillation of garlic with water.

GASOIGNE'S POWDER, an antidote to poisons formerly in considerable repute, composed of a mixture of absorbent powders with bezoar.

GASOMETRIC ANALYSIS, a process for separating and ascertaining the several constituents of any gaseous mixture by Eudiometers, *g. v.*, or by exploding the gas with oxygen, and observing the volumes after and prior to explosion.

GASTRÆUM, the entire prone or under surface of an animal's body.

GASTRITIS, an inflammation of the stomach accompanied by great irritation, prostration of strength, and danger, indicated by hiccup and other symptoms, and requiring prompt treatment. It is usually traceable to gout or to irritating substances introduced in the form of food or liquids.

GASTRODYNIA, a painful affection of the stomach, which frequently accompanies dyspepsia.

GASTRONOMY, the science of eating and drinking.

GASTROGRAPHY, the surgical operation of sewing up abdominal wounds.

GAZEILLE, the *Antilope Dorcas* of Linnaeus. See **GAZEL**.

GAZOLITES, *aérolites* or meteors.

GEHLENITE, a basic silicate of alumina and lime with iron and magnesia, found in the Tyrol.

GELALEAN ERA, the era of Yezdegird, as reformed by Gelal-Edin, Sultan of Khorassan.

GELATINES, the *Acalephes* of Cuvier and *Radiatares Molasses* of Lamarck, so called by Kirby from their generally gelatinous bodies.

GERMINATION, development or increase by budding.

GENA, the cheek or region between the eye and the mouth.

GENETHLIAC, from γενεθλη, "birth;" a birth or birthday poem in honour of an individual.

GENIOGLOSSI, the pair of muscles by which the tongue is protruded.

GENIPA, the genipap fruit of *G. Americana*, a cinchonaceous plant. It is called the Marmalade Box in Surinam.

GENNE, an order of chivalry founded by Charles Martel in 726, after he had defeated the Saracens at Tours. It was named in honour of St. Martin of Tours, from the Wood Martin, or Gennet, and was the first order of chivalry founded in France.

GENRE PICTURE, those pictures of ordinary and humble life which do not belong to any of the specific departments of art. They are not necessarily vulgar pictures, though some of the cleverest Dutch painters have occasionally made them so, and have even fully merited the name of "dirt painters." But such subjects as Hogarth and Sir David Wilkie have most meritoriously distinguished themselves by painting, come within the denomination of "Genre Pictures."

GENTIANACEÆ, the natural order of plants of which *Gentiana* is the typical genus. See **GENTIAN**.

GENTILE. Though this term became latterly a word of indiscriminate use, it was distinctively employed, both in the Old Testament and by St. Paul in the New, to denote the descendants of Japheth, Genesis x. 5.

GEO THERMOMETER, a thermometrical instrument for ascertaining the Earth's subterranean heat at various depths. The temperature by means of it has been found to increase about 1° Fahr. for every 70 or 80 ft. of descent.

GERMEN, the ovary or *ovarium*.

GERMINAL VESICLE, a nucleated cell forming the first and essential portion of the *ovum*.

GESTURE LANGUAGE, a language much employed by savage tribes for facilitating interchange of meaning, often in cases where their spoken language is defective. It has been found by experiments made in Germany lately that it admits of extensive use, and has general intelligibility in mixed audiences of different civilized nations.

GHEA BUTTER, or **GALAM**, the produce of a West African palm; consisting of a fat similar in constituents to palm oil. It is obtained from the *Bassia Parkii* or *Micadenia*, and is a greyish white solid mass below 97° Fahr.

GILBERTINES, a religious order of England founded by Gilbert of Sempringham, Lincolnshire, in the twelfth century. At the dissolution it had about twenty-five houses in England.

GINKGO TREE, a deciduous tree of Japan,

the *Salisburia adiantifolia*, called also the Maidenhair tree, from its foliage resembling in form and venation that of the Maidenhair fern.

GIROUETTE, a term applied in France to unprincipled and unstable political characters. It is synonymous with Weathercock, and an amusing *Dictionnaire des Girouettes* was published at one time in France, giving the names of the more celebrated revolutionary characters with a number of weathercocks against the names of each, corresponding to the number of their turn-coat manoeuvres in political affairs; a work which has admitted of much enlargement from time to time in that unfortunate and fine country.

GLACE DE MARIF, or **GLACIES MARIE**, the large foliated varieties of mica.

GLACIAL DRIFT, a phenomenon common over the face of northern Europe and America after the post-tertiary settlement of those continents, consisting of drifted boulders and rock fragments mixed with sand and clay in curious heterogeneous heaps, of which gravel is an almost universal component. The phenomenon is partially attributed to the action of *Glaciers*, but it is certain that the greater features of it are due to *Icebergs*. Various explanations have been attempted by geologists with no very clear or exhaustive result in point of intelligibility. See **DELUGE**.

GLACIERES, the name given to Ice Caves, or caves full of ice, by geologists, and found in Alpine regions unconnected with any glacial system; they vary from 50 to 500 feet in depth, and seem so far to form an exception to the increasing temperature of the earth, as ascertained by the geothermometer (q. v.) elsewhere.

GLADIUS, the internal horny plate of the calamaries.

GLAIRIN, a nitrogenous substance found in some sulphur springs.

GLANDS, **BUCCAL**, the glands which secrete the saliva for lubricating the mouth.

GLANS, an inferior indehiscent fruit, represented by the acorn.

GLAUBER'S SAL AMMONIAC, the sulphate of ammonia.

GLAUBERITE, native double sulphate of soda and lime.

GLAUCOLITE, a blue-green silicate of alumina, lime, and potassa, found in Siberia.

GLAUCONITE, the "green earth" of the green sandstone and some trap rocks; a hydrated silicate of alumina and iron with some alkalis.

GLENOID, γληνοειδης, a term applied generally in anatomy to the socket-like surfaces for receiving the articulating extremities of bones, such as the cavity of the shoulder, in which the upper end of the humerus works, &c.

GLOBULINI, a term applied to various

organic substances, as the colourless part of the blood corpuscles; the green globules among the cells of cellular tissues; the cellular or vesicular tissues or granules which Turpin considers to be the organic elements of vegetation; also a modified albumen found in the humour of the eye.

GLOSS, an Aristotelian expression signifying such unusual idioms as may be occasionally and judiciously employed to adorn style in rhetoric, yet in some degree requiring interpretation from the context. A gloss hence came to mean not the idiomatic expression itself, but its interpretation, in which sense it is now most usually understood.

GLOSSARY, a dictionary or vocabulary of exceptional words or phrases often appended to the particular work in which they occur.

GLOSSOPETREÆ, the fossil teeth of some fishes.

GLOTTALITE, a white hydrated silicate of lime and magnesia found on the Clyde.

GLUCIC ACID, an acid body obtained from the spontaneous decomposition of grape sugar with alkalis. Synonymous with Kalisaccaric acid.

GLUCINUM, a primary metallic element, the metallic base of the earth glucina, its oxide. It has little metallic lustre, and is very difficult of fusion. It was discovered by Vauquelin in 1798. Its equivalent is 6.9. Glucina is a rare oxide: it occurs in the beryl euclase and emerald, and is a fine white soft powder when extracted.

GLUT, in political economy, the over production or over supply of goods for sale in a market, causing temporary stagnation of trade or transactions in them, and commercial depression.

GLYCERYL, the radical of glycerine = C_3H_7 .

GLYCOL, a viscid sweetish liquid containing two more atoms of oxygen than alcohol, and = $C_4H_6O_4$. It is soluble in alcohol and water.

GLYPHOGRAPHY, engraving made through a thin film of white wax on a blackened copper-plate.

GMLINITE, synonymous with Hydrolite: hydrated silicate of alumina, potash, and peroxide of iron.

GNATHOTHECA, the integument of the beak in ornithology, whether horny or cutaneous.

GNOMONICS, the art of dialling or constructing dials.

GOBIUS, the genus of osseous fishes of which the three spined goby of England is an example.

GOLDFINCH, the *Carduelis elegans* (Fringilla carduelis of Lin.)

GOMPHIASIS, the disease of the teeth under which they loosen and fall out of their sockets.

GOMPHIOI, the grinders or grinding teeth.

GOMPHOLOBIUM, a beautiful genus of Australian leguminous shrubs. They are poisonous to sheep.

GONIOMETRY, the measurement of angles, as distinct from trigonometry, the measurement of triangles.

GORILLA, the larger species of chimpanzee. This animal sometimes attains a height of nearly 6 feet, and in its anatomical structure more nearly approaches that of man than any of the other species.

GORSE, the *Ulex Europæus*, or common furze, called "whins" in Scotland.

GOSHAWK, the *Astur Palumbartus* of Cuvier.

GOSPEL, the name given to revealed religion from its containing God's revelation of His forgiveness of sins, and His mercy and love to man.

GOTHIC, one of the low German class of languages. It has been preserved in the translation of the Bible into it made by Bishop Ulfilas in the end of the 4th century, and is more primitive in its grammar than the Anglo-Saxon of Beowulf.

GOURDS, the species *Cucurbita*.

GRACIOSO, the buffoon of the Spanish stage.

GRAPHIC ACID, a crystalline body obtained from graphite under the continued action of sulphuric acid and chlorate of potash.

GRAPHOTYPE, a mode of producing engravings for working in letter-press like wood blocks, and said to be an economy. It is done upon a surface of prepared and compressed chalk by an ink which indurates the chalk, allowing the untouched parts to be brushed away with a camel's-hair pencil, or otherwise removed, so as to leave the ink drawing in relief. It is, in fact, an artificial lithography, but does not yet appear to have met with much commercial success.

GREENFINCH, the *Fringilla Viridis* of Linneus.

GREYSTONE, a variety of trap rock consisting of hornblende with imperfectly crystallised felspar in abundance.

GREGORITE, a variety of titanite iron ore.

GREY STONE LIME, a lime so called in London, obtained from the chalk marl of Godstone, Dorking, &c. It contains about 8 per cent. of silicate of alumina, and is similar to clunch lime.

GRIFFITHS' MIXTURE, a tonic containing protocarbonate of iron: the *Mistura Ferri Composita*.

GROUND ICE or **GRU**, ice formed at the bottom of running streams. It is maintained by some that all ice by which running streams become frozen is first formed at the bottom.

GRYPHOSIS, a growing of the nails inwards.

GUIDONS, the silken flags or colours of dragoon regiments.

GULF WEED, the *Sargassum bacciferum*; a mass of seaweed which floats in the Atlantic, and extends over about 250,000 square miles.

GURGOYLE or **GARGOYLE**, the spouts in Gothic architecture, generally passing through the mouths of animals projecting from the side walls, by which the rain from the roof is carried free of the walls.

GUTTUR, the entire under surface of the neck of mammals.

GYN, a machine used for mounting and dismounting ordnance from the gun carriages.

GYRATE, curled inwards like a crozier, in botany. The young fronds of ferns develop from this form.

GYRUDUS, a family of fossil *Pycnodont* fishes found in the Baden oolite.

GYROSE, bent backward and forward, like the anthers of the gourd.

H

HADDOCK, the *Morhua Eglefinus* of the Northern Ocean: a well-known fish of the British coasts, but not found in the Baltic.

HEMATINE, the colouring principle of logwood.

HERESIARCH, or **HERESIAARCH**, the founder of a heretical sect.

HAIR SALT, efflorescent sulphate of magnesia.

HALCYONIDÆ, the family of Fissirostral birds, of which the kingfisher is the type.

HATTI-SCHERIFF, the Turkish name for an edict under the hand of the Sultan.

HELIOGRAPH, an instrument for obtaining photographs of the sun, invented by Mr. Warren de la Rue, consisting of a modification of the equatorial telescope.

HELLADOTHERIUM, a fossil mammal resembling the giraffe, found in Greece. It forms a separate genus from the *Camelopardalis*.

HELLANODICÆ, the name given to the judges who presided in courts martial of the Lacedemonian soldiers; also the judges in the Olympic Games.

HELVINE, a compound of the silicates of glucina, manganese, and iron.

HEMELYTRA, the wing sheaths of tetrapterous insects like those of the *Hemiptera*.

HEMIDESMUS, a genus of *Asclepiadaceæ*. The roots of *H. Indicus* are used as a substitute for sarsaparilla.

HENOCTICON, the Edict of Union of the Emperor Zeno, in A.D. 482, for terminating the Monophysite controversy.

HERPESTES, the generic name of the various species of Ichneumon. Their instinct to destroy serpents, and cure themselves of any bite received in the conflict by

rubbing the wound on the plant *Ophiorhiza Mungos*, is well known.

HETEPOSITE, a native phosphate of iron and manganese.

HETMAN, the head man. The commander of a regiment of Cossacks.

HIEROMANCY, divination from the appearances of sacrificed victims.

HIPPARION, a fossil genus of Miocene *Equides*, differing slightly from the existing horse.

HIPPURIS, the common mare's-tail of botany.

HISINGERITE, a hydrated silicate of peroxide of iron.

HOMINY, a meal of maize or Indian corn.

HOMEOZOIC BELTS, the climatic lines defining the geographical distribution of marine animals.

HORNBEAM, the *Carpinus Betulus*, a white, hard, and heavy timber wood liable to become shaly, and therefore not of much value. It is most valued as a hedging plant, and bears pruning well.

HUMANITARAINS, those who deny the Divinity of Christ.

HYALOID, the transparent membrane investing the vitreous humour of the eye; also applied generally to transparent membrane.

HYBERNATION, the state of sleep into which certain animals fall during the more inclement part of winter.

HYDRIDES, the compounds of hydrogen with other elementary bodies or with radicals.

HYDROCARDIA, dropsy of the pericardium.

HYDROCELE, watery or serous fluid accumulated in the *tunica vaginalis testis*.

HYDROMEL, water sweetened with honey. Mead is formed from it by fermentation.

HYGROLOGY, the doctrine of the fluids or humours of the body.

HYGROSCOPE, a modification of the hygrometer, with the same object.

HYPERÆMIA, congestion of blood in any portion of the body.

HYPERCATHARSIS, excessive purging.

HYPNOTICS, medicines which tend to produce sleep.

HYPOGLOSSAL NERVES, the lingua nerves.

HYPONITRIC ACID, a name now replaced by peroxide of nitrogen. It is a compound of one atom of nitrogen and four of oxygen.

HYPOPHYLOUS BODIES, bodies which grow on the inner side of a leaf.

HYPSOMETRY, the mensuration of heights, relative or absolute, by trigonometry, or by barometric appliances.

HYSTERANTHUS, the appearance of the flowers before the leaves in botany, characteristic of many plants, such as the almond.

I

ICHOLOGY, the doctrine of the secretive and lymphatic systems.

ICHTHIDIN, an albuminous substance found in the roe of some fishes.

ICHTHYOLITES, fossil remains of fishes.

ICHTHYOPHAGI, fish eaters. Certain savages who lived wholly on fish were so called by the ancients.

ICTERUS, the jaundice.

IDRIALINE, an inflammable substance found in the quicksilver mines of Idria, Carniola.

IGASURIC ACID, an acid found in combination with strychnia in *nux vomica*.

ILICIN, a crystalline neutral substance found in holly leaves.

ILMENIUM, a metallic base said to be identical with columbium or niobium. It is found in the Yttrio-ilmenite of the Ilmen Mountains.

ILVAITE, a silicate of iron and lime found in Elba.

ILYANTHUS, a genus of sea anemones. They are non-adherent and large in column comparatively.

IMBIBITION, the absorption of a liquid into the pores of a solid. A property of some importance in organic tissues.

IMPARIPINNATE, odd-winged or leaved; used to signify in botany that there is an odd terminal floret or leaflet, and not an equal number of pairs.

IMPASTATION, binding different matters together by cements in sculpture, so that they can resist the action of fire.

IMPASTO, the body of colour, or thickness of the layer, relatively, in painting. A thin layer of pigment is equal to a thin impasto, &c.

INCANDESCENCE, the luminosity exhibited by any body from interior heat.

INCENSE WOOD, the aromatic resinous wood of certain species of *Iceia*, as *I. Heterophylla*, *I. Guianensis*, &c. The juice of some is also used for incense.

INCINERATION, burning to ashes, sometimes resorted to for the purpose of obtaining the incombustible remains of the substance. Cremation is the name applied to the process when the human body is incinerated for the purpose of obtaining the ashes of the dead.

INCRASSATE, bodies more than usually thick in proportion to their usual dimensions in botany, as in the case of many succulent leaves, &c.

INCUBATION, ARTIFICIAL. This mode of hatching independently of the hen is of great antiquity, having been early practised by the Egyptians and Chinese. It may be effected either by the oven, stove, or steam. The *Eccaleobion*, oregg-hatching machine, of the Crystal Palace, Sydenham, by which the best and most improved breeds of poultry are now regularly produced for sale, is doing

much toward the introduction of a better class of general stock for the whole country. **INCURVED** or **INCURVATE**, curved inward.

INDIAN FIRE, a pyrotechnic mixture of twenty-four parts of nitre, seven of sulphur, and two of realgar, producing a brilliant white light.

INDUCTION, ELECTRICAL, that electric action produced in adjacent bodies by any body under electrical excitement.

INDULT, a form of indulgence or dispensation, or licence to transgress or sin against ordinary law, granted by the Pope.

INDUSIAL LIMESTONE, a freshwater limestone of Auvergne, composed largely of the cases or indusias of the larvæ of *Phryganea*, incrusting by travertin.

INDUVIÆ, the withered remains of leaves not articulated with the stem.

INDUVIATE, covered with induviæ.

INERTES, the order of birds of Temminck which includes the *Apteryx* and *Dodo*.

INFORMED STARS, stars not included in any of the recognised stellar arrangements called constellations.

INITIAL VELOCITY, the velocity of a projectile at the outset, or immediately after it leaves the muzzle of the gun.

INOSIC ACID, an acid found in the juices of the flesh of animals.

INSTANTANEOUS AXES, the series of varying and successive axes on which any non-concentric body moves in the course of its rotation. Motion produces many such axes in bodies, according to the nature of the rotation and its combination with other motions, as, for example, when a body slides as well as rotates, instantaneous sliding axes being thereby produced.

INSTRUMENTAL ERRORS, errors arising from defect of the mathematical instruments employed in measurements, observations, &c.

INTERCOSTAL, between the ribs. An adjective used anatomically of vessels so situated.

INTERMEDIATE SHAFT, the connecting shaft of a pair of marine engines, at the ends of which the two paddle-wheels are fixed.

INTERNODE, between the knots: the space on a branch between the leaves upon it.

INTESTINALIA, a class of animals, intestinal worms or parasites, which infest the interior of other animals. They are arranged under two classes, *Cœlmintha* and *Stereomntha*. Each subdivided into three orders, the first class comprehending *Nematodea*, *Acanthotheca*, and *Syngamoidea*, and the second, *Acanthocephala*, *Trematoda*, and *Tænioidea*.

IODATES, salts of iodic acid.

IODIDES, compounds of iodine with the metals.

IODITE, a native iodide of silver.

IOLITE, a violet-tinted crystalline mineral found native in grains and masses.

INIARTEA, a genus of South American palms. The cylindrical roots of this palm rise in a conical mass above the ground like the stem of a tree.

IRIDEA, one of the rose-spored division of edible sea-weeds.

IRIS, the anterior coloured portion of the choroid coat of the eye with its muscular fibres, in the centre of which is the pupil.

IRISCOPE, an instrument for showing prismatic colours, consisting chiefly of a plate of highly polished black glass, with its surface smeared with a solution of fine soap, and afterwards dried with a piece of chamois leather. When breathed on through a tube, the vapour on its surface displays brilliant prismatic tinted rays or spectra.

IRITIS, inflammation of the iris of the eye.

ISCHIOCELE, hernial tumours at the foramen of the ischium.

ISCHOPHONIA, or **ISCHNOPHONIA**, loss of voice, a weak voice with imperfect speech.

ISCHURIA, retention of urine.

ISERINE, a variety of titaniferous iron, from the Iser, Silesia.

ISLANDS OF THE BLESSED, the Happy Islands of Greek Mythology, supposed to be situated in the Western Ocean.

ISOGENIC LINES, lines of terrestrial magnetism on the surface of the earth, which have the characteristic or definition, that the declination of the magnetic needle, or its inclination to the horizon, is the same throughout any one of them.

ISOPYRE, an amorphous mineral, consisting of silicate of alumina, peroxide of iron, and lime, found in the granite of St. Just, Cornwall.

ISTHIONIC ACID, a body obtained from the boiling of a solution of ethionnic acid. It is isomeric with sulpho-vinic acid.

ITAKA WOOD, the finely-mottled tiger wood of British Guiana, from the timber of *Macharium Schomburgkii*.

ITALIAN JUICE, the extract of Calabrian liquorice, as Spanish juice is prepared from the liquorice of Catalonia. The Solazzi juice of Italy has hitherto been considered to be the finest.

IULIDA, a family of Myriapods, of which the gally-worm, or Iulus, is the type.

IVORY, VEGETABLE, the nuts of *Phytelphas Macrocarpa*, consisting in substance of indurated albumen, and now much used in turnery.

IVY, the *Hedera Helix* of botany.

IXOLYTE, a fossil resin found in the bituminous coal of Oberhart, Austria.

J

JABIRU, a wading bird of the genus *Mycteria*.

JACCHUS, a genus of South American quadrumana or monkeys, characterised by the digits of the fore foot being all in one

direction, while the hind feet have thumbs; and also by other peculiarities, chiefly dental.

JACOB'S LADDER, the garden flower, *Polemonium Cœruleum*.

JAMBOSA, a genus of myrtaceous Indian trees, of which *J. Malaccensis* yields the Malay apple, and *J. Vulgaris* the rose apple.

JAMESONITE, a name of sulphantimonite of lead.

JARRAH, the durable mahogany-like wood of *Eucalyptus rostrata*, a West Australian timber tree.

JERVIN, an alkaloid found in the root of white hellebore, or *Veratrum album*.

JESUITES DE ROHE, secular Jesuits of high rank, bound to the order by vows of obedience, but without taking the spiritual vow. They are part of the most mischievous political organisation of this order, which has been sometimes too much for the endurance even of the Papedom itself.

JETERUS, a disease of plants, characterised by their becoming yellowish, whence it has acquired the name of Vegetable Jaundice.

JEWS' PITCH, a species of asphaltum.

JINJAL or **GINGAL**, a large Oriental musket, used by the Hindoos and Chinese to defend walls.

JOGUES or **YUGS**, four eras of great extent in Hindoo mythology, analogous to those of the Greek mythology mentioned by Hesiod. They are called Sutte, Tirtah, Dwapaar, and Collee.

JUBA, the mane of animals.

JUBILATE, the third Sunday after Easter. So called from the psalm of the day commencing "*Jubilate Deo*."

JUDICA, the fifth Sunday after Lent. So called from the psalm of the day beginning "*Judica me, Domine*."

JUGAL BONE, the cheek bone.

JUGATA, applied to medals with two heads represented side by side, or connected with each other.

JUGULARS, all fishes with ventral fins anterior to the pectoral fins.

JUGULUM, the fore part of the neck between the throat and chest.

JUMPING HARE, a rodent quadruped of the Cape of Good Hope, typical of the genus *Helamys*, in the family *Dipodidae* or Jerboas.

JUNK WAD, a wad of oakum and spun yarn, made to fit the bore of a gun, and to ram down between the projectile and the charge.

JURASSIC ROCKS, a geological formation of limestones and clays, somewhat analogous to the Kimmeridge clay and Portland rocks of England, but with less defined under strata, forming a large portion of the Jura and Alpine Chain.

JUTE, a valuable Indian fibre, obtained from *Corchorus capsularis* and *C. olitorius*. It was chiefly used in India for making coarse cloth and cordage, but is capable of better treatment.

K

KAINOZOIC, the tertiary formation of geology.

KAKOENE, native phosphate of iron.

KALAKAIA, a popular Hungarian dance.

KALAH, SEA, the *Crambe Maritima*.

KAMMERERITE, hydrated silicate of alumina and magnesia found sometimes along with chromate of iron.

KAMPTULICON, a variety of floor-cloth composed of gutta-percha, india-rubber, and cork.

KANEITE, native arsenical manganese.

KARELINITE, an oxy sulphide of bismuth.

KATHETOMETER, an instrument for measuring heights, consisting of a telescope sliding up and down upon a graduated scale, and furnished with cross wires to intersect the field of view. Minute differences in height are thus determinable by sliding the telescope up or down, when two different heights are to be compared.

KEELING, the *Morrhua vulgaris*, or common cod-fish.

KENTISH RAG, part of the lowest cretaceous group of England, yielding a tough and durable building stone.

KERATONYXIS, the operation of couching, as performed by the German surgeons, by introducing a needle through the cornea, and breaking or depressing the opaque lens of the eye. This distinctive name is from *κερας*, "a horn," and *πυξις*, "a puncture,"—puncturing the cornea.

KERMESITE, oxy sulphide of antimony.

KERNED, in typography, letters which have part of their faces hanging over either or both sides of their bodies.

KEROLITE, a hydrated silicate of manganese.

KEUPER, the upper division of the Trias in the Continental geology of Europe.

KHUS-KHUS, the *Andropogon Muricata*, a fragrant grass of India; spelt also "cuscus."

KIESEL SCHIEFER, a siliceous schistose deposit found in the lower division of the upper carboniferous rocks of the Rhine and elsewhere.

KIKKUNEMALO, an excellent varnish resin of America, resembling copal, and in some places used medicinally.

KIMERIDGE CLAY, a thick blue slate-clay deposit of England, containing carbonate and sulphate of lime, at the base of the upper division of the English oolite, and containing the Kimeridge coal, a bituminous shale.

KIRSCHWASSER, an alcoholic liquor produced by fermenting the small sweet black cherry,—the cherry-water of Germany. When distilled and sweetened, and flavoured with the almond flavour of the bruised

kernels, it becomes the liquor known as *noyau*.

KISH, a substance resembling plumbago in appearance, found sometimes in smelting furnaces for iron. It is composed of manganese and carbon.

KITT, the name of a composition used in waterproofing canvas. It consists of 60 parts resin, 55 parts pitch, 55 parts bees' wax, and 15 parts tallow, by weight, boiled together slowly. It also adheres to metal.

KIVI-KIVI, the *Apteryx Australis* of New Zealand.

KLINOMETER, an instrument for measuring the inclination of strata to the horizon.

KNEPH, a ram-headed divinity of the ancient Egyptians called *AMEN-RA*, or by the Greeks *AMMON*.

KOALA, the *Phascogale*, a marsupial quadruped of Australasia.

KOFF, a small two-masted Dutch fishing vessel, with a large sprit sail abaft each mast.

KONIGITE, an emerald-coloured variety of the mineral *Brochantite*.

KOTTIGITE, a native arsenate of zinc with nickel and cobalt, found in Saxony, and containing also a trace of lime.

KREATINE, an organic crystallisable substance found in the muscular fibre of animals = $C_3 H_9 O_4 N_3 + HO$.

KREMnitz WHITE, a very pure variety of carbonate of lead, or white lead. It is the finest flake white pigment of artists.

KRUM HORN, an old cornet-like musical instrument. It is said to have given name to the Cremona stop of the organ; but seeing how the name Cremona is connected otherwise with music, this may be disputed.

KUHNITE, a native arsenate of lime and magnesia.

KUNKUR, a remarkable deposit of the wide-spread peninsula of India, analogous to, and corresponding in character and circumstances with, the glacial drift of Northern Europe and America. It is found as a deposit on all levels, even as high as 3,000 feet above the sea. From the different levels on which it is found it obviously cannot be the result of deposits on an ancient and gradually elevated sea-bed, but must have been deposited after the permanent arrangement of heights and depressions of India.

KUPFERBLENDE, copperblende or Tennantite, with part of the iron replaced by zinc.

KURRAJONG, an Australian fibre and series of fibrous plants, including *Commersonia platyphylla*, *Hibiscus heterophyllus*, *Plagianthus sidoides*, and others.

KYANISE, to preserve timber by Kyan's patent preparation, *q. v.*

KYPHOLITE, a variety of serpentine.

KYROSITE, a variety of marcasite, or white iron pyrites, containing copper and arsenic, found both in South America and in Europe.

L

LABLAE, a genus of leguminous tropical plants. The pulse yielded by *L. Vulgaris* is used as an article of food, and the young pods like kidney beans, as well as those of *L. Cultratus*.

LABRUS, the bream. The typical genus of the *Labridæ*, or bream tribe of fishes.

LACINIATE, having fringe-like margins, in botany.

LACONICUM, a dry bath. Heated air used by the Romans to produce sudorific effects, and said to have been first used in Laconia.

LACTONE, a volatile liquid product of the destructive distillation of lactic acid.

LACTUCIC ACID, an acid somewhat similar to oxalic acid, found in the juice of *Lactuca Virosa*.

LACUSTRINE DEPOSITS. The deposits of fresh-water lakes and pools are so called by geologists.

LADIES' SLATES, a term denoting a particular size of slates for roofing. They are 16 inches by 8 inches.

LAGOMYS, the rat-hares of Siberia, a genus of rodent quadrupeds differing from the true hares in having no tail, nearly equal legs, shorter ears, and nearly perfect claws.

LAGONITE, an earthy ochreous yellow mineral incrustation, found at the Tuscan lagoons.

LAGRIMOSO, a direction in music to perform the part indicated in a plaintive, tearful manner.

LAKE IRON ORE, the bog iron ore of Sweden and Finland, found generally on the slopes declining toward the larger lakes.

LAMANTIN, the manatee, or sea cow.

LAND-FALL, a nautical term signifying the first land seen after a voyage. When it appears as calculated on, it is called a good landfall.

LANIADÆ, the family of shrikes or butcher birds.

LANTERN WHEEL, a pinion wheel with treble or spindle teeth.

LANTHANUM, an elementary metal discovered by Mosander in cerite.

LAVILLI, "little stones," small volcanic cinders.

LAVIN CAUSTICES, caustic potash.

LAPIS DIVINUS, a compound in which alum, blue, and verdigris were melted together, or white vitriol in place of verdigris, with the occasional addition of camphor.

LAPIS INFERnalis, lunar caustic, a fused nitrate of silver.

LAPIS LYDIUS, a siliceous slate called the Lydian stone. It is a touchstone for de-

termining the quality of gold or silver, according to the colour of the streak.

LARARIUM, the apartment in the dwellings of the ancients in which the household gods or lares were kept.

LASURITE, blue carbonate of copper.

LATICIFEROUS TISSUE, one of the vascular elementary tissues of plants, in the tubes of which the latex circulates and is conveyed.

LEAD GLANCE, native sulphide of lead.

LECTERN, a desk or stand for supporting a book for the use of the public readers in churches.

LECTICARII, the bearers of the lectica of the Romans, or litter-bearers.

LEOPARD WOOD, the wood of the South American tree *Brosimum Aubletii*. It belongs to the order *Artocarpaceæ*.

LEPIDOLITE, a silicate of lithia, alumina, and iron with fluoride of potassium.

LETTIC, a division of the Aryan languages, including the Old Prussian and still existing dialects of Livonia, Lithuania, and Courland.

LEVANT, from the Italian word *levante*, "rising," an Italian geographical term for that part of the world which is toward the East or risingsun, but distinctively, in general acceptance, that part of the Mediterranean Sea and shores to the east of the meridian of Candia.

LIBER ALBUS, a book of the ancient laws and customs of the City of London, of great antiquarian as well as practical interest. It has been printed by direction of the Master of the Rolls.

LICH GATE, a shed covering the entrance to a burying ground, where the corpse-bearers rested on the way to interment. From *Leiche*, the German for a corpse.

LIEBERKUEHN, a speculum or concave reflector used with a microscope to throw focal light on the object under examination.

LIGNEOUS, woody, or resembling wood.

FIGURE, a gem stone worn in the breast-plate of the High Priest of Israel.

LI-MONITE, a hydrated peroxide of iron, or brown iron ore.

LINGULA FLAGS, a group of rock deposits belonging to the middle members of the Lower Silurian formation, found in the Cambrian district of England, but not belonging to what is called the Cambrian series.

LIPAROCLELE, a fatty tumour.

LIPPITUDO, bleared eyes. A disease of the eye-lids easily cured, as well as sty, by the application of red precipitate ointment, prepared in a weakened form for the eye by any druggist.

LITHOLOGICAL, the structure, character, and composition of any mineral or stone.

LITHOPHYTES, stony polypes, or those having a stony axis, as distinct from those having a horny axis.

LLANDBILO SLATES or **FLAGS**, a group of dark-coloured sandy grit beds belonging to

the Silurian series of South Wales. They abound with graptolites and other fossils. They correspond with the Utica slates of America and the Angers slates of France.

LODESTAR, the Pole star.

LOGAN STONES, the rocking stones. Many of them are apparently natural and purely accidental results of the deposition of the glacial drift, *q. v.*

LOIMIC, (from *λοιμικός*;) relating to pestilential diseases, such as the plague and other infectious diseases.

LOTOPHAGI, (from *λωτοφαγος*;) the lotus-eaters, the people among whom Ulysses was carried, according to Homer, when trying to double Cape Malea. Those who ate the fruit of the lotus were visited with forgetfulness, and lost all recollection of their country and friends, preferring a quiet life of inaction in the land of the lotus. The legend is unquestionably one of great poetic beauty.

LUDLOW SERIES, a series of deposits consisting of the upper sands and shales of Ludlow, the Aymestry limestone beneath, and under these the lower Ludlow shales and limestone concretions. Together these are the upper member of the English Silurian formation.

LUSIAD, the great epic poem of the Portuguese poet Camoens. A great work, frequently translated.

LUXATION, dislocation of a joint, in anatomy.

LYRA, the Lyre, one of the constellations; also the name given to a lyre-like disposition of the cerebral fibres of the under posterior surface of the *Corpus Callosum*.

M

MACAUOCO, a name used to designate several species of quadrumana of the genus *Lemur*.

MACER, the astringent bark of the root of a Malabar tree, very effective in the cure of diarrhoea.

MACLUREITE, a silicate of magnesia, with some oxide of iron, potash, and fluorine, found in imperfect crystalline masses in New Jersey.

MACRACHENIA, a colossal genus of three-toed or Perissodactyle Mammalia, allied to the Llamas and Camels.

MACROPIPER, a genus of shrubby cordate-leaved Polynesian plants, of which the species *M. Methysticum* supplies the kava or ava root, from which the narcotic beverage kava is obtained.

MAGDEBURG HEMISPHERES, an apparatus originating with Otto Guericke, of Magdeburg, consisting of two hollow hemispheres fitting each other closely at the edges. When the interior air is abstracted by the air pump, they exemplify the force of atmospheric pressure from without by the force with which they are held together.

MAGNETITE, oxydulated iron or magnetic iron ore.

MAHARANGA, a genus of *Boraginaceæ*, of which the species *M. Emodi* yields the rutton roots of Indian commerce, used for colouring oils for staining.

MAIDÆ, the family of crabs, typified by the genus *Maia*, of which the sea spider is an example.

MAIN BEAM, in mechanics the beam which receives its impulse of rotation direct from the piston rod.

MAIZENA, the finer kind of flour prepared from Indian corn or maize.

MAJOLICA, a variety of pottery manufactured by the Moors at Majorca during their possession of that island, consisting of earthenware coated with lead glaze, and highly coloured. *English Majolica* has been produced by Mr. Minton and others.

MALACOLITE, a dark green variety of augite.

MALEIC ACID, an acid product of the distillation of malic acid at a high temperature. It is isomeric with fumaric acid.

MALMSEY, a fine-flavoured variety of Madeira wine formerly made at Malvasia, in the Morea.

MANGINITE, brown silicate of zinc.

MANGANITE, hydrated peroxide of manganese, or grey oxide of manganese.

MANGONEL, an ancient warlike engine for throwing missiles in sieges.

MANTLETS, shields proof against small shot, capable of being moved from point to point, to protect sappers or gunners during sieges.

MAPLE, the *Acer* family of trees, which includes many valuable species, as the sugar maple, *Acer Saccharinum*, common maple, *A. Campestre*, Norway maple, *A. Platanoidea*, &c.

MARASCHINO, a liqueur prepared from the Dalmatian marasquin cherry by fermentation and distillation, the fruit being bruised and the kernels used as flavouring.

MARC, oil cake—the refuse or residue of seeds after oil has been expressed from them. They are frequently used as manures.

MARGARITE, hydrated silicate of alumina, soda, and lime.

MARIONITE, a hydrated carbonate of zinc.

MARMATITE, a blende in which part of the zinc is replaced by iron, and occasionally by cadmium.

MARSH'S APPARATUS, a test suggested by Mr. Marsh in 1836, for the detection of arsenic. It consists of a jet of pure hydrogen inflamed, to the flame of which a surface of white porcelain is subjected. When the hydrogen contains any trace of arsenic, it is revealed by a steel grey deposit of the metal within a dark ring of its suboxide. When the hydrogen is pure, no metallic deposit takes place.

MARTIAL REGULUS, metallic antimony

produced from the decomposition of sulphide of antimony by iron.

MASSTICATORIES, medicines which promote the secretion of saliva.

MASOTHECA, the abdominal pouch of marsupial mammals.

MAURE, a beautiful purple aniline dye, obtained also from benzol.

MEAN SUN, an imaginary sun, assumed to move regularly and uniformly at the mean velocity of the true sun. It thus marks and distinguishes *mean time* from true time, and the *mean solar day* from the true solar day, and thereby affords a measure for reducing observations to practical accuracy.

MECHANISTS, a set of philosophers who considered the changes of the material universe due to the operation of mechanical forces.

MEDLAR, the fruit of a plant common in Central Europe in the wild state, the *Mespilus Germanica*.

MEDULLARY RAYS, the cellular tissue radiating from the centre of the stem outward to the bark of exogens, observable when the trunks of timber trees are cut in transverse sections.

MEGALICHTHYS, a genus of fossil fishes, some species of which are of great size. Dental and other remains of *M. Hibberti* have been found in coal fields of Edinburgh and Fife.

MELAM, a product of the distillation of sulpho-cyanide of potassium mixed with sal ammoniac.

MELANIC ACID, a black amorphous body obtained from hydride of salicyl.

MELANOCHROITE, a chromate of lead found in Siberia, which becomes black under the action of the blow-pipe.

MELANOTANNIC ACID, a dark body resulting from the action of potassa in excess on tannic acid.

MELILITE, or **HONEY STONE**, a silicate of alumina, magnesia, peroxide of iron, lime, potash, and soda.

MELOPSITE, a variety of lithomarge, of a pale greenish or yellowish colour.

MENDIPITE, an oxychloride of lead found in the Mendip Hills.

MENECHINITE, a double sulphide of lead and antimony.

MENILITE, an opaque brownish opal found near Paris.

MERCAPTAN, *Corpus Mercurium captans*, a liquid compound of carbon, sulphur, and hydrogen, so called from its powerful action on mercury.

MERICARP, half of the double fruit of umbellifers.

MESITYLENE, a hydrocarbon product of the action of sulphuric acid on acetone. Its formula is C_9H_{12} .

MESOZOIC ROCKS, the group of rocks usually called Secondary, so called by Professor Phillips from their being supposed to

represent a middle life period in the animated habitation of the world; a distinction which it might have been fairly anticipated subsequent geological discovery and maturer scientific considerations would destroy; and, as might have been expected, though the term may remain, its propriety is already gone. The so-called Mesozoic includes the cretaceous series and the new red sandstone, with all the intervening series.

METACARPUS, the portion of the hand between the fingers and wrist.

METACENTRE, Bouguer's term for the point or centre of stability of floating bodies. The centre of buoyancy and the centre of gravity coincide or vary according to the lading, and the position of the Metacentre or centre of stability depends upon and is subordinate to the relative position of these, and, like them, it varies in intensity or quantity, as well as position.

METALLIC COLOURS, those colours which are obtained from a metallic base, such as the lead, chromium, cadmium, vermilion, and other pigments, as distinguished from animal and vegetable colours, such as cochineal, which is an insect product, and madder, indigo, &c., which are vegetable products.

METALLOCHROMES, a beautiful series of prismatic tints, produced on polished steel plates by Nobili by the depositing upon them, under electrolyte action, thin films of peroxide of lead.

METAXITE, a fibrous serpentine. The name has also been applied to chrysolite.

METHYLATED SPIRIT, alcohol or spirits of wine mixed with a tenth of its volume of wood spirit, and sold duty free for the purpose of facilitating the manufacture of varnishes and other uses in the productive arts.

METOPSCOPY, divination by inspection of the forehead.

MEZZO RILIEVO, in middle relief, or between basso and alto rilievo.

MICHAELITE, a pearly white fibrous variety of opal from the island of St. Michael, Azores.

MILK WEEDS, the genus *Asclepias*.

MISE-EN-SCENE, the getting up of the piece, in dramatic language.

MOHSITE, a crystallised titaniferous iron.

MONILIFORM, like a necklace, applied in botany to certain seed pods.

MONKSHOOD, or **ACONITE**, the *Aconitum Napellus*.

MOSS AGATE, agates with dendritic or moss-like interior arrangements and markings.

MOTHER-CELLS, cells from which other cells are developed.

MOUSING A HOOK, a nautical term, signifying the securing a hook to anything to which it is attached, by passing a piece of spun yarn round the back end point of it.

so as to prevent the thing to which it is attached from slipping out.

MUCRONATE, any organ terminating in a sharp, hard point.

MURCHISONITE, a red and yellow or golden variety of felspar discovered by Sir Roderick I. Murchison.

MURICATE, surfaces covered with short pointed cones not closely set together.

MUSCIDE, the family of dipterous insects, of which *Musca* (the fly) is the typical genus.

MUSKAT, a sweet and fine rich wine from the over-ripe Muscadine grapes of the south of France.

MYCELIA, the flocculent filaments of fungi.

MYDRIASIS, unnatural dilation of the pupil of the eye.

MYELOS, the spinal chord and spinal marrow collectively.

MYTILACEANS, the family of bivalve shells of which the *Mytilus*, or common mussel, is the typical genus.

N

NABONASSAR, ERA OF, an era of Astronomy adopted from the Chaldeans by Hipparchus and Ptolemy. and said to refer the observation of eclipses to the beginning of the reign of Nabonassar. Niebuhr and Sir G. C. Lewis are at conflict as to Nabonassar. Mr. Grote says, in his History of Greece, that the earliest astronomical observation of the Chaldeans known to Ptolemy was a lunar eclipse of March 19th, 721 B.C., the 27th year of the Era of Nabonassar. This is, after all, everything that appears requisite, the era of Nabonassar being held to begin with February 26th, 747 B.C. The date is a sufficiently definite one for astronomical purposes.

NACRITE, a silicate of alumina, consisting of fine talcose pearly scales.

NANDU, the *Rhea Americana*, or American ostrich.

NAOS, the portion of a temple enclosed by the walls. It was situated between the *pronaos* in front, and the *posticum* in the rear, of the edifice. It is the origin of the word "nave," which, however, is applied to the middle portion of Gothic churches, between the two side aisles and to the west of the choir.

NARDOO, the *Narsilia Macropus* or *Salicatrix*, an Australian plant, the seeds or spores and spore cases of which furnish a meal from which the natives make bread and a kind of porridge.

NATATORY, that characteristic of a limb by which it is adapted for swimming.

NATIVE AMALGAM, a native alloy of silver and mercury, sometimes found in perfect crystals.

NATURE PRINTING, an art first practiced by M. Auer, of the Imperial Printing

Office, Vienna, and since brought to great efficiency by Mr. Henry Bradbury and others. The process consists of taking any indented impression, on thin sheets of fresh cut lead, of specially dried plants, or leaves with the juice squeezed out between thick blotting paper. After the plants are separated from the sheets of lead, the latter are subjected to a metallic deposit of copper, which reproduces the impression of the plants in relief. This again is subjected to a second deposit of copper, reproducing the first impression, as taken by the lead, but on a plate sufficiently hard for printing purposes. By this means Nature is made her own draughtsman, and a perfect *fac-simile* is the result.

NAUMANNITE, native selenide of silver.

NAVAL ARCHITECTURE, the designing and draughting of the designs of ships. It involves a consideration of many details and principles, and is in most respects an inversion of house building,—the vessel depending for stability on her floating power from above and her power of resisting pressure from below, while the house depends on the foundation and the power of resisting pressure downwards.

NEGATIVE, in photography, the first impression of an object, from which other impressions are printed.

NEMOPHILA, a genus of flowering annuals belonging to the order *Hydrophyllaceae*, and familiarly exemplified by the garden annual *N. insignis*.

NEOLITE, a massive variety of talc, in which alumina partially replaces silica.

NEOTYPE, a variety of Natrocalcite, so called because of its novelty of form on first discovery, due to its containing barytes.

NEPHROTOMY, the surgical operation of extracting stone from the kidneys.

NEREIDES, the sea nymphs, daughters of Nereus, the son of Ocean and Earth.

NEURICITY or NEURILITY, the fibrous structure of the nerves.

NICKEL BLOOM, arsenate of nickel.

NICTITATION, a nervous affection of the eyelids, consisting of inordinate winking.

NIGGED ASHLAR, rough-dressed stone; the same as hammer-dressed stone. It is used in the basements of various public buildings and private dwellings where stone is employed.

NITRO-CALCITE, native nitrate of lime.

NOOTH'S APPARATUS, an arrangement for introducing carbonic acid gas into water, now superseded by the *gasogene*.

NORRHAGHE, a remarkable series of Sardinian monuments of great antiquity and unknown use, but supposed to be tombs of illustrious individuals. They are elliptical or circular truncated cones, with doors opening to the south-east, and giving access to a corridor communicating with two ranges of chambers, through which the central tower is reached. They are sometimes single, sometimes composed of several united; sometimes,

also, they embrace a considerable enclosure, great service not only in ocular, but in and others of them are surrounded by ap- difficult brain disease, and photographs of parently defensible works. They are very the retina have been obtained.

NORDHAUSEN ACID, a nearly anhydrous sulphuric acid, consisting usually of a brown fuming liquid, formerly manufactured at Nordhausen.

NUPHAR, the water-lily, the well-known aquatic plant which sends up its beautiful flowers from the surface of the British fresh-water streams amid its broad, round, floating leaves.

NUTCRACKER, a British bird of the genus *Nucifraga* and order *Pica*.

O

OBSTETRICS, the science of midwifery.
OCCUPATION ROADS, roads made by the owners or occupiers of land for their own convenience in communicating with the various portions of a property, and therefore not public. Over such roads railways and canals must construct bridges; and where they divide fields in their course, they are bound, for the convenience of the proprietors and their tenants, to construct *occupation bridges*.

ODERITE, a Swedish variety of black mica.

ODIN, the Scandinavian Zeus.

ODONTOLITE, fossil bones and teeth, found in the tertiary of Languedoc, coloured with oxide of copper, called also *Bone Turquoise*.

ODORIN, a product with strong empyreumatic odour, obtained from the distillation of the volatile oil resulting from distilled bone.

ENOMETER, a hydrometer for telling the strength of wines.

ESOPHAGITIS, inflammation of the esophagus.

OLEIC ACID, an acid found along with margaric acid when almond oil is saponified with potash, and the soap decomposed by hydrochloric acid. Its symbol is $C_{18}H_{34}O_2$.

OLERACEOUS, having the nature of or belonging to pot herbs.

OMANDER WOOD, a calamander wood of Ceylon, the wood of *Diospyros Ebenaster*.

OPHTHALMOSCOPE, an instrument for examining the interior of the eye during life, the invention of Helmholtz, and subsequently varied by numerous other inventors. The light placed at the side of the patient's head being reflected by a small mirror into the eye, the illuminated interior is then capable of examination through a small aperture in the centre of the mirror, to which various magnifying powers can be applied. The invention has proved of

ORDER OF THE DAY, the business of the day in Parliament previously set down in the order in which it is to come on and be proceeded with. A motion for the order of the day to be read is a frequent mode of superseding any other matter already before the House, and, if carried, the orders or remaining orders of the day must then be read and proceeded with in the sequence in which they are set down. Such a motion, however, is frequently superseded by a motion to adjourn. The practice of moving the Order of the Day appears to have been first introduced on All Fools' Day, 1747, and many a disappointed politician has since thought the practice worthy of its birthday.

ORGANOGENESIS, the formation of any organ from its origin or first stage of development.

ORLO, the plinth to the base of a pedestal or column.

ORMOLU, the decorative art of copper or bronze gilt.

ORTHITE, a massive and acicular crystalline variety of Allanite.

ORTHOCLASE, or **POTASH FELSPAR**, a silicate of alumina and potash, with frequently the potash partially replaced by soda, lime, magnesia, &c. It is a common constituent of granite, forming a frequently large white, grey, or reddish crystals.

ORTHOMORPHIC, (from *ὀρθος*, "straight," and *μορφή*, "shape,") the normal form or perfect development of organic bodies previous to their germinal condition.

OSCILLATING ENGINE, an arrangement of steam engines by which the cylinder oscillates on trunnions near its base, like those of a piece of ordnance. By this arrangement connecting rods between the piston rod and crank pin are dispensed with, and the space required for their action saved, while the stroke of the piston is more directly applied, and brought more nearly at right angles to the maximum-power points of the crank. They are chiefly valuable in steam navigation, where complete action and compactness are concurring requisites.

OSMIRIDIUM, a native alloy of iridium and osmium, called also *iridosmine*, these terms being mere inversions of each other.

OSTEOGENY, formation and growth of bone.

OSTEOLITE, earthy phosphate of lime, supposed to be altered apatite.

OTALGIA, ear ache.

OTITIS, inflammation of the ear or any part of that organ.

OUZEL WATER, the *Cinclus Aquaticus*, or Dipper, a small English bird of aquatic habits.

OVIDUCT, the Fallopiian tube of mammals, and analogous passage in other animals.

OXALITE, native oxalate of iron.

OYSTER PLANT, the *Steenhammaria Maritima*, so called from the leaves having the flavour of oysters.

OZOKERITE, a variety of mineral and wax-like resin found in Newcastle and Louthgowshire coal, and more abundantly in Moldavia. It is now used for the manufacture of candles, and gives a superior light. It has an aromatic smell, as well as many wax-like qualities: hence its name.

OZONE, an allotropic condition or modification of oxygen. It may be obtained from phosphorus partially covered with water, under the electrolytic decomposition of water, by passing an electric spark through oxygen, and in various other ways. It is insoluble in ether, water, and alcohol. It resumes the condition of ordinary oxygen at a temperature of 500°. It forms an invaluable disinfectant and aid to sanitary arrangements, and has been conveniently reduced to practical use in Condry's Fluid.

OZONOMETRY, a term applied to several modes of testing and determining the quantity and presence of Ozone in the atmosphere, chiefly by specially prepared test papers.

P

PALE, THE, that portion of Ireland within which the practical dominion of the English Sovereigns was maintained for some centuries after the English invasion. The Province of Leinster was the main territory of the Pale, with a varying and fluctuating boundary.

PALLA, the cloak or pallium worn by Roman ladies. It was a rectangular outer garment, which when worn had a portion of it thrown over the left shoulder.

PALMYRA WOOD, the wood of *Cocos Nucifera*, and also that of *Borassus Flabelliformis*.

PAMPEAN SERIES, a series of highly fossiliferous South American deposits, belonging to the more recent tertiaries of geology.

PAMPELMOUSE, a fruit of the citron class, yielded by the *Citrus Decumana*.

PANCREATIC JUICE, the liquid secretion of the pancreas. It has the power to change fats into fat acids and glycerine.

PARACENTESIS, tapping of any part of the body to withdraw an extraneous gathering of fluid.

PARACLETE, the Holy Spirit in His character of Comforter and Intercessor.

PARACHROSTIC, a poem constructed on the principle of giving in the first verse all the letters in their order with which the subse-

quent verses commence, as in the original Sibylline verses according to Cicero.

PARAFFIN or **PARAFINE OILS**, a name given to petroleum oils, as distinguished from benzoline or petroleum spirit.

PARAPHONIA, alteration of voice.

PARKIA, a genus of leguminous plants named after Mungo Park, of which *P. Africana*, or the African locust tree, useful for its edible seeds, is one of the best known examples.

PARONYCHIA, an abscess or whitlow affecting the nail.

PARTURITION, bringing forth or giving birth.

PELIOM, a Bavarian variety of lolite.

PELOKONITE, a South American variety of cupreous manganese.

PENICILLIUM, a genus of moulds or mildews. *P. Glaucum*, one of the species, is present in the vinegar plant, and also in yeast.

PENNINE, a chlorite from the Pennine Alps.

PEPSINE, a principle contained in small quantity in gastric juice along with the acid in which it constitutes the dissolving and digestive power of that fluid.

PERIAGUA, a large canoe of the Pacific made from the trunks of two trees.

PERIDIUM, the outer coat enveloping the sporules of certain fungi.

PERMANENT WHITE, a pigment formed of sulphate of baryta, which retains its whiteness under circumstances in which white lead and zinc white become discoloured.

PERMANGANIC or **HYPERMANGANIC ACID**, an acid composed of seven atoms of oxygen to two of manganese.

PERONEAL MUSCLE, the muscles which connect the fibula with the foot.

PERRY, a fermented liquor from pears, prepared similarly to cider.

PETITION OF RIGHT, the Parliamentary declaration of the liberties of the people, which obtained the royal assent in the third year of Charles I.; also a mode of obtaining restitution or possession from the Crown of real or personal estate, now simplified and regulated by the Act 23 and 24 V., c. 34.

PHANTASCOPE, an instrument for regulating the optical axis of the eyes, invented by Professor Locke, for showing certain phenomena of binocular vision.

PHARMACOLOGY, the science which teaches the properties and uses of drugs.

PHILOSOPHIC CANDLE, a jet of hydrogen gas.

PHOTOGEN, paraffin oil, an inflammable oily product of the distillation of various shales and bituminous coals. It forms a series of hydrocarbons of variable proportions and high illuminating power. It is also obtained by distillation from the natural petroleum.

PHOTOLOGY, the science of light.

PHYCOLOGY, the branch of botany devoted to the *Algae* or sea-weeds.

PICHURIM BEAN, the medicinal seeds of *Nowandra Pichury*, used as a cure for calic.

PINE WOOL, or **VEGETABLE WOOL**, a fibre of the leaves of the *Pinus Sylvestris*, or silver fir, from which a fabric like flannel may be made. It is highly useful and valuable for winter-clothing, being anti-rheumatic and specially healthy.

PISTACITE, a greenish variety of iron and lime epidote, composed of silicate of alumina, lime, and iron.

PLESIOSAURUS, the genus of fossil lizards or marine saurians characterised by their great length of neck.

PLEURITIS, inflammation of the pleura, or pleurisy.

PLUMBUM CORNEUM, fused chloride of lead, formerly called horn lead.

PLYMOUTH BRETHREN, a body of Christians opposed to sectarianism and all its distinctions, and holding adhesion only to what they consider to be vital or essential truths.

PODAGRA, gout affecting the foot.

POLARISCOPES, a variety of instruments for the purpose of detecting the polarisation of light.

POLYGAMOUS, applied in botany to grasses which have spikelets of unisexual and also of hermaphrodite organs.

POLYGAMY, plurality of wives: a custom peculiar to the Semitic and Hamitic races, but apparently never adopted nationally by any of the Japhethites.

POLYONYMY, the description of one object under a variety of names.

POMELLOES, the smaller varieties of shadow-dock, known as the Forbidden fruit.

PORTREEVE, the chief magistrate of a maritime town or port under the Anglo-Saxons. It is a corruption of portgrieve, and is said to have been the title of mayors of seaports.

POSIDONIA SCHIST, a schistose deposit of the lias formation, consisting of bituminous shale full of the remains of a flat bivalve shell, the *Posidonia*. It is rich enough in carbon to be of value for distillation.

POSIOLOGY, the administration of medicine, as regards quantity or doses.

POT METAL, an alloy of copper and lead.

POUDRETTE, a manure composed of dried night soil and clay. The night soil of Paris is so prepared for manure.

PRAAM, a kind of Dutch and Baltic lighter.

PREFLORATION and **PREFOLIATION**, the condition of flowers or leaves in the flower-bud or leaf-bud before expansion.

PRE-RAPHAELITISM, a modern school of painting, which has revived the system of art characteristic of the fifteenth century, with some modifications.

PRETORIUM, the portion of a Roman

camp occupied by the General's tent, raised some feet above the level of the rest of the camp.

PRAKRIT, the old languages or dialects of the lower classes during the period when the older Sanscrit was a spoken language, the Sanscrit itself, or *polished* language, being confined to the educated and upper classes.

PRICKLY PEAR, the *Opuntia* or Indian fig.

PRIMURIES, the pinion feathers or quills in the wings of birds.

PRISTIS, the genus of sharks of which the sawfish, *P. Antiquorum*, is an example.

PROCURATOR FISCAL, an officer in Scotland who makes the preliminary inquiries into crime, and acts as public prosecutor in all the less important criminal prosecutions of the inferior courts of Scotland other than the police courts.

PROEM, a poetical introduction to a larger poem. The word is sometimes used in the same sense as a preface.

PROLUSION, a trial or essay in literature.

PROPER MOTION, the actual motion of stars, as contradistinguished from their apparent motion.

PROTEIN, the azotised base of albumen, casein, and fibrin.

PROTOGENESIS, the first beginning of life; a term intended to signify the development of an organic vitalised body from inorganic and non-vitalised matter. The phenomenon has been sought for, but not found.

PROTOPLASM, the vegetable matter formed on the inside walls of a cell after the cell is formed.

PSOROPHTHALMIA, ulceration and itching inflammation of the eyelids.

PTYALISM, salivation, or an increased secretion of saliva.

PUGMILL, the mill in which brickmakers mix and prepare the materials of which their bricks are made.

PULP, the juicy tissue of fruits and plants; also applied to the macerated fibre from which paper is made.

PULQUE, a drink consisting of the fermented juice of the agave.

PUMPKIN, the esculent gourd *Cucurbita Pepo*.

PUNIC WARS, the wars between Rome and Carthage.

PUPIPAROUS, insects which bring forth their young in the nymph or pupa form.

PURPURE, a tincture or colour in heraldry indicated by lines running diagonally from the sinister side of the shield downwards. It is equal to amethyst among gems and mercury among planets.

PUTAMEN, the endocarpium or stone of fruit.

PYCNITE, a silicate of alumina, in which fluorine replaces about a seventh part of the oxygen. It is a massive variety of topaz.

PYCNOTROP, a variety of serpentine.

PYRAMIDS, MEXICAN. The pyramidal structures of Mexico are very extensive works of remote antiquity, remarkable for their extent of base and truncated forms. Some of them, as that of Cholula, seem to have been merely extensive bases for temples erected upon them after they reached a certain height. Many of them cover a larger area than that of the Pyramids of Egypt.

PYRIDINE, an organic oily base obtained from the distillation of bones.

PYRO ACIDS, acids obtained from some of the organic acids by subjecting them to heat, by which they become altered in their composition. They generally retain the name of the organic acid from which they are obtained, with the prefix "pyro," as pyro-citric acid, pyro-gallic acid, &c.

PYROXANTHIN, a yellow crystalline product of the action of alkalis on wood tar.

Q

QUADER SANDSTONES, two divisions of cretaceous deposits found extensively in Germany. The lower quader corresponds with the upper greenstone and freestones of England, and the upper quader with the English chalk, though chalk is little more than a cement to the quader.

QUADRAGENE, a Papal indulgence extending to forty days.

QUADRANS, one-fourth of a Roman *as*.

QUADRILATERALS, a tribe of crabs, with a nearly square carapace.

QUARTZITE or **QUARTZ ROCK**, a rock occasionally found stratified, composed of only partially crystallised quartz.

QUATERNIONS, CALCULUS OF, a geometrical calculus invented by Sir William Rowan Hamilton.

QUATTROCENTISMO, the Præraphælitism or Italian art purism of the fifteenth century.

QUELLERZ, a German synonym of bog iron ore or limonite. It is the brook iron ore of Germany.

QUERCITANNIC ACID, the tannic acid of bark, as distinguished from that of oak galls.

QUESTION, PREVIOUS, the name given to a motion only competent in the *House*, in Parliament, and not in *Committee*. It is equivalent to the motion in *Committee*: *that the Chairman do now leave the chair*.

QUINCITE, a rich red hydrated silicate of magnesia and protoxide of iron, from Quincy, France.

QUINQUINA, the bark of the various species of Peruvian cinchona.

QUINSEY, inflammatory sore throat, or inflammation of the tonsils. It commences by swelling and local displacement of the tonsils, which, if attended to, can always be cured by the external application of a warm lotion of vinegar and water, accom-

panied with rubbing upward from under the point of the lower jaw over the swollen tonsils to the back of the ear. The tonsils thereby gradually return to their proper place with a sensation of almost immediate relief in swallowing the saliva. The swelling of the tonsils may also be readily reduced in most cases by a strong gargle of alum and water. Some practitioners have been foolish enough to use the knife for swollen tonsils, and others from mismanagement have allowed quinsy to prove fatal by suffocation. It is said to terminate generally in resolution or *suppuration*, but in competent hands it ought never to get into this latter stage.

QUINTAIN, an old pastime of tilting at a board fixed to the end of a crossbeam turning on a pivot, with a sand bag at the other end of it. The dexterity of the sport was to strike the board, and escape the avenging sand bag.

QUODLIBETICAL, (from *quod libet*, "what you please,") not confined to any particular subject.

QUOTA, a proportional part or contribution; a share.

QUOTIDIAN, daily, or of daily occurrence. Applied to those agues or fevers whose paroxysms return daily.

R

RABBIT, the cony, or *Lepus Cuniculus* of Linnaeus, a familiar rodent quadruped.

RACHILLA, the central stem on which the florets of grasses are developed.

RACHITIS, the disease called rickets

RADIATING POINT, the point from which shooting stars or star showers diverge.

RANIDÆ, the family of Batrachian reptiles typified by the *rana*, or frog.

RANULA, a tumour under the tongue, ascribed to the development of a cyst in or near the salivary glands.

RAPHIDES, the needle-like crystals of various salts found in the tissue of plants.

RAPPAREE, the name said to be given to a set of wild plundering Irishmen, from the pike or rapery they carried.

RASPBERRY, the *Rubus Idæus*, a well known and favourite fruit-bearing plant allied to the bramble.

RECIPROCITY, MUTUAL, freedom of commercial intercourse between nations.

RECONNAISSANCE, the examination of the features of a country with reference to military movements and operations.

RECTIFICATION OF THE CIRCLE, the finding of a straight or right line equal to the circumference of the circle, as distinguished from quadrature, which is finding a square equal in its area to that of the circle.

RECTRICES, the tail feathers of birds.

RED FIRE, a pyrotechnic light com-

posed of nitrate of strontia and charcoal, with a little sulphur and chlorate of potassa.

RED PRECIPITATE, a decomposition of nitrate of mercury by heat. It is the peroxide of mercury.

RED SNOW, a phenomenon of Alpine and Arctic regions due to the brilliant scarlet colour of the minute alga *Protococcus Nivalis*.

REEMING IRON, an iron wedge tool used in opening the seams of ships to receive oakum.

REEVING, passing ropes through blocks and pulleys.

REFRACTORY, a term applied to metals and minerals which resist change of character at very high temperature. Thus platina is a refractory metal, and fire clay and porcelain clay are refractory minerals.

REMIGES, the quill feathers of the wings of birds.

RENAISSANCE, those styles of architecture which reproduced the ornamentation of the Greeks, belonging more particularly to the period of the revival of letters.

REREDOS, a screen behind an altar.

RETICULUM, the second cavity of the stomach of ruminants, called also the honey bag.

RETINITIS, inflammation of the retina. **RETUSE**, with a rounded termination depressed in the centre.

ERVALENTA ARABICA or **ERVALENTA**, the flour of a lentil, the *Erum lens*.

REVOLVER, a fire-arm with revolving barrels, or a revolving breech containing several chambers.

RHIZOMA, a creeping underground or prostrate stem, which forms roots and throws up leaves as it extends, so that by cutting the underground connection at any point, separate plants may be obtained. The term is derived from *ρίζα*, "a root."

RIGOR MORTIS, the stiffening of the body in consequence of death.

RINDERPEST or **CATTLE PLAGUE**, a disease now of frequent recurrence in ruminating animals, and the cause of much public and legislative anxiety and interposition. From the report of the Commission of 1866 it would appear to be due to the presence of an interior parasite manifested in minute living particles, which appropriate the pabulum of the tissues, and that the disease is highly contagious.

RIPIDOLITE, a hydrated silicate of alumina, protoxide of iron, and magnesia.

ROMAN ALUM, an alum with more alumina than the ordinary octahedral alum, found in the volcanic rocks of Solfatara.

ROMANCE LANGUAGES, The languages of Italy, Spain, Portugal, the Grisons, France, and Wallachia fall under this denomination, in addition to that of the Troubadours or Provençal, which has ceased to be a distinct spoken language. They are

modifications of the old languages or dialects of Italy.

RUBY WOOD, a synonym of the wood of *Pterocarpus Santalinus*, or Red Saunders wood.

RUTABAGA, the *Brassica campestris Rutabaga*, or Swedish turnip.

RUTHENIUM, an elementary metal somewhat similar to iridium.

RUTTON-ROOT, the root of *Maharanga Emodi*, used in India for its vegetable dye.

RYACOLITE, a greyish or white silicate of alumina, potash, soda, and lime, with a vitreous lustre, found in the ejected matter of Vesuvius.

RYTINA, an exterminated genus of *Sirenia*, all the individuals of which were killed by the whalers for the sake of their oil. They inhabited the northern shores of Siberia.

S

SAADS or **SAAHDS**, an Indian sect of religionists who have become converts to Christianity.

SABADILLINE, a poisonous alkaloid found in white hellebore.

SABOT, a wooden shoe or clog worn by the poorer classes in France; also a wooden wad fixed to a round shell to direct its passage into the gun, and keep the fuse from getting next the charge. The detonating shells have now almost entirely superseded the use of round shells.

SAHLITE, a variety of augite or pyroxene found in the Sahlia silver mine of Sweden and elsewhere.

SAINTFOIN or **SAINFOIN**, a leguminous fodder plant, which thrives in calcareous soils. The *Onobrychis sativa* of botany.

ST. GEORGE'S ENSIGN, a naval flag, called also the White Ensign. It is the sign of an Admiral's presence in command of the fleet, and is carried at the main by his flag ship, so called from that circumstance; and is a red cross on a white field, with the Union Jack in the upper quarter of the field nearest the mast. Vice-Admirals carry it at the fore, and Rear-Admirals at the mizzen, but smaller, and without the Union Jack.

ST. SIMONIANS, the followers of Count St. Simon, whose political tenets were a kind of Socialism.

SAL MIRABILE, the sulphate of soda, or Glauber's salt.

SAL SEIGNETTE, Rochelle salt,—tartarate of potash and soda.

SALIFIABLE BASE, metallic oxides and vegeto-alkalis, which form distinct acids when combined in definite proportions with other acids. Ammonia is also a salifiable base in reference to the same characteristic.

SALIVATION, an excessive secretion of saliva. Sometimes it has occurred naturally;

but it is usually the result of using mercury or some similar remedy for a continuous period.

SALLET, a piece of head armour. The Salade of the fifteenth century.

SALPINX, the Eustachian tube, a trumpet like communication between the mouth and ear (from *σαλπιγξ*, "a trumpet").

SALT OF LEMONS and **SALT OF SORREL**, synonyms for oxalic acid or binoxalate of potassa.

SAND SHOT, shot cast in sand, and not in iron moulds. They are a smaller kind of iron shot.

SAPHENA, (*σαφης*, "distinct,") the large exterior vein of the leg extending over the ankle.

SAPODILLA WOOD, the wood of *Sapota Achras*, a fine cabinet wood of the West Indies.

SAPONIFICATION, the changing of fats into soap by the displacement of glycerine with alkalis.

SAPUCAIA NUTS, the nuts of the *Lecythis Zabucao* of Para. They resemble Brazil nuts, but are much better and less indigestible.

SATIN WOOD, the fine veneering wood of the Indian tree *Chloroxylon Swietenia*.

SCALPRUM, the cutting edge of the incisor teeth of mammals.

SCAPOLITE, a silicate of alumina and lime.

SCARAMOUCH, a military braggadocio of the old Italian comedy.

SCARF SKIN, the epidermis, or cuticle, or outer skin, forming the surface of animated bodies.

SCLEROSKELETON, the tendinous ligaments of animals, approaching the character of true bone in their hardness.

SCOLOPENDRA, the genus of insects comprehending the centipedes.

SCULPSIT, a term frequently found at the foot of engravings after the engraver's name, signifying that he engraved it, in contradistinction to the term **PINKIT**, after the painter's name, signifying that he was the painter of the original work represented by the engraving.

SCUTUM, the shield of the Roman legion.

SEA-HOLLY, a spiny-leaved plant, *Eryngium maritimum*.

SEA-PINK, the *Armeria vulgaris*, or thrift.

SEA-WOLF, the fish *Anarrhichas Lupus*.

SEGMENT SHELL, a shell invented by Sir William Armstrong, consisting of a series of interior segments of iron built up in rings, surrounding a central cylinder for holding the bursting charge.

SELENOGRAPHY, that description and representation of the surface of the moon which corresponds with Geography, as the description of the surface of the earth.

SEMEIOTIC, relating to the symptoms of diseases.

SEMITIC LANGUAGES, the family of languages of the descendants of Shem. They include the Hebrew, Arabic, and Aramaic dialects, and those subsequently based upon them. The Aramaic includes the Chaldee and Syriac. The Arabic includes the Himyaritic inscriptions and the Ethiopic or Gees and Arabic. The Semitic languages differ from the Aryan (q. v.) in grammatical structure, and more prominently in the composition of their root words.

SEMOLENA, a preparation of wheat of a granular character.

SENECA OIL, the name given to the Pennsylvania petroleum.

SENEGAL ROOT, the root of *Cocculus Batis*, a bitter diuretic.

SENSORY, a term of anatomy applied to parts of the neutral axis and to those nerves which convey sensation to them.

SERICULTURE, or **SERICICULTURE**, the cultivation of silk and the silkworm.

SHAKO, the head-dress worn by the infantry of the British Army and by some foreign troops.

SHEA BUTTER, the solid oil of the African Shea tree, *Bassia Parkii*.

SHEAR STEEL, steel bars welded together and again drawn out; wrought steel.

SIALAGOGUE, medicine which increases the secretion of saliva.

SIGURDR, the hero of the Volsunga Saga of Scandinavian mythology.

SINOPITE or **SINOPIAN EARTH**, the mineralogical name of the bole of Sinope.

SIRENIA, the order of mammals which includes the mermaids.

SITOLOGY, alimentary or dietetic science.

SKUNK-WEED, the *Symplocarpus foetidus* of North America.

SLAVONIC or **SLAVE LANGUAGES**, the class of languages which includes the Illyrian and Bulgarian, Polish, Russian, and Lithuanian. Cyril and Methodius translated the Scriptures into the Eastern Slavonic, or Bulgarian and Illyrian, in the ninth century.

SMARAGD, the emerald; a name given however by the Romans to several precious stones, and not very precise therefore in its original meaning.

SMELT, the genus *Osmerus Eperlanus* of Cuvier, *Salmo Eperlanus* of Linnaeus, a fine fish of the salmon family.

SNAIL PLANT, the *Medicago scutellata*, so called from the snail-like appearance of its fruit.

SNAPDRAGON, the *Antirrhinum majus*.

SNOWBALL TREE, the Guelders or Guelder rose, *Viburnum Opulus*.

SODA ALUM, hydrated sulphate of soda and alumina, from the Solfatara, Naples, and other places; synonymous with **SOLEFATARITE**.

SOLVEND, a substance dissolved in a solvent or liquid capable of dissolving it.

SOPORIFIC, anything producing sleep.

SORREL, SALT OF, the binoxalate of potash.

SOUARI WOOD, the timber of *Caryocar zomontorum*, an important Demerara wood.

SPANISH LIQUORICE, the roots of the plant *Glycyrrhiza glabra*.

SPAR, DERBYSHIRE, the fluoride of calcium or fluor spar.

SPECTROSCOPE, an instrument for developing and examining the spectrum of any ray of light emitted by a luminous body, consisting of a pair of telescopes capable of being placed at varying angles to each other on the same plane, with a prism or series of prisms between them. The first telescope is so constructed that an emergent ray from the luminous object under examination may be admitted by a fine slit at the one end of it, in the focus of an object glass placed at the other end nearest to the prism or prisms: the other telescope being so adjusted that, through the eye-piece at its extremity furthest from the prisms, the observer may examine the spectrum developed from the emergent ray by the prism—a micrometer being adjusted to the eye-piece, usually, for ascertaining the position of the dark or bright bands, which will be found dividing the spectrum at various points.

SPONTANEOUS AXIS, the axis formed by a body under the action of an instantaneous force, on which it rotates without progressing in any direction.

SPONTANEOUS GENERATION, an idea which has haunted philosophers in all ages, that inorganic matter is capable of acquiring spontaneous vitality. Extremely minute and crucial experiments have been made by Professor Huxley, Dr. Bastian, Professor Tyndall, and others, under all the advantages of modern science, with the result announced by Professor Huxley, and anticipated by those who have studied the subject on other bases than those of science, but not less absolutely true, that "life can proceed from nothing but life."

SPORADIC, scattered, (from *σποραδίκος*;) applied to solitary shooting stars, and also to diseases which do not become epidemic.

SPORES, the reproductive organisms of cryptogamic plants.

STEREOSCOPE, a well known optical instrument for producing the appearance of solidity in duplicate pictures by means of binocular vision, first suggested by Professor Wheatstone in 1838.

STIPES, the stalks of fern leaves. (Singular, *Stipe*.)

STOLON, a shoot or sucker, which takes

root at various points, and forms new plants.

STOPPAGE IN TRANSITU, the right of a vendor of goods unpaid for to stop them at any point of their journey previous to delivery. The carrier is liable, if he receives intimation to retain the goods in such time as will fairly enable him to warn his subordinates before delivery.

SUPERHEATED STEAM, steam which, by additional application of heat, is raised to a higher temperature than that at which it is formed.

SWEETBREAD, the thymus glands of calves; an excellent food when not over highly cooked.

SYNECHIA, a diseased adhesion of the iris to the cornea of the eye, or to the capsule containing the crystalline lens.

SYNEDROUS, growing on the angle of a stem.

SYNONYMS, words of similar signification. When in different languages, they are translations of each other.

STEAM RAM, a ship of war propelled by steam power, and with a head or bow so constructed as to project a ramming horn or other structure under water, in advance, for the purpose of running into an enemy's ships, and penetrating them below the water line, and sinking them. Such vessels are very formidable auxiliaries to modern maritime warfare with the sinking power of heavy armour plating.

T

TAAG, the fibre of *Crotalaria juncea*, forming the Sunn or Bengal hemp.

TABLEAUX, groups of figures. *Tableaux Vivans* are groups of living figures.

TACTICAL POINTS, points on a battlefield where the operations of the enemy may be obstructed, and those of his opponent facilitated or strengthened.

TAGLIA, a system of fixed pulleys in one block, and of moveable pulleys in another, to which the weight to be raised is attached. The operation of raising draws the second block and its burden up towards the post.

TALA or **TAL**, the *Borassus flabelliformis*, or Palmyra palm.

TALKOID, a crystalline talc spar.

TAMANU, the heavy resin of the *Calophyllum inophyllum* of Society Islands.

TANGENT SCREW, a screw applied to the teeth of a wheel tangentially, by which motion is communicated to the wheel.

TANTALUS CUP, an ingenious toy, consisting of a syphon concealed within the figure of a man placed in the bottom of a cup, so that when water is poured into it the syphon never allows it to rise higher than the chin of the figure, unless poured in more rapidly than the syphon can carry it off.

TARTARATES, salts of tartaric acid in combination with bases.

TASTO SOLO, an instruction to stringed instruments to play single sounds in an accompaniment, until otherwise ordered.

TATTA, bamboo trellis work over windows in India, over which water trickles to cool the air.

TECTRICES, the covering feathers of the wings of birds other than the quill feathers.

TEGUMENTA, the scaly coverings of the leaf buds of deciduous trees.

TEGUMENT or **TEGUMEN**, the skin or covering of a body generally.

TELEGRAM, a telegraphic message.

TELEOLOGY, the doctrine of final causes.

TENSION, the force by which anything is stretched.

TERATOLITE, the *Terra miraculosa Saxonia*, so called from its supposed medicinal qualities at one time. It is hydrated silicate of alumina, peroxide of iron, lime, and magnesia, &c., from the Saxon coal formation.

TERATOLOGY, the department of physiology devoted to the consideration of monstrosities and malformations in organic nature.

TERCE MAJOR, a sequence of the three best cards in card playing.

TERRA JAPONICA, an old name given erroneously to catechu, from its being at one time supposed to be an earthy mineral substance.

TERTIALS, the large feathers of the secondaries of the wings of birds.

TERTIAN FEVER, an intermittent fever, whose paroxysms return every alternate day.

TERZETTO, a musical composition in three parts.

TESSELATED PAVEMENTS, pavements of small square pieces of stone or tesserae of different colours, laid-in in patterns into a bed of cement over a hard substratum: a favourite paving for courts among the ancients.

TETE-DU-PONT, a fortified work for the defence of bridges, usually formed by resting its flanks on the river banks, and generally open at the gorge.

TETRAGRAM, a quadrilateral figure.

TETRAPHARMACON, an ointment of wax, lard, resin, and pitch, so called because it was composed of four remedies.

TETRASPASTON, an arrangement of four pulleys working together.

TEXTILE FABRICS, woven fabrics of texture or cloth.

THALLIUM, a primary or elementary metal discovered by Crookes in 1861, so called from its green line in the spectrum.

THEOLOGIUM, the upper stage of ancient theatres, on which the arrangements for producing celestial appearances were placed.

THERMOTICS, the science of heat.

THESPIAN ART, the tragic art.

THULE, **ULTIMA**, the last of the islands. Some indefinite locality known to the ancient navigators northward from Britain, referred to by Seneca.

TIGER WOOD, the wood of *Machærarium Schomburgkii*, growing in British Guiana. It is a superior wood for cabinet purposes.

TILES, **ENCAUSTIC**, tiles of different coloured clays combined together, showing figures on their surfaces, recently revived by Mr. Wright, of Staffordshire, and Messrs. Minton, from the practice of the mediæval architects.

TIRAILLEURS, irregular soldiers, who separated themselves from the main body of an army and shot at the enemy without firing together. They are now in the French army skirmishers and sharpshooters.

TITANITE, the native oxide of titanium.

TOLMEN or **DOLMEN**, the name given by antiquaries to unhewn stones found resting on stonesupports, supposed to be of Druidical origin, and to have been used as altars. The same name is given by others to large monoliths with holes through them like passages.

TOPHUS, gouty deposit in the smaller joints. Also a soft tumour on a bone.

TORPEDO, a new instrument of destruction introduced into modern maritime warfare, consisting of a conical or other shaped case filled with explosive materials, as gun cotton, dynamite, &c., so constructed that when vessels run against them they explode, and discharge their contents into the hull of the vessel from below. They may be moored, and partially concealed under water, for the protection of harbours or exposed coasts, otherwise open to the landing of an enemy; or towed to sea, and drawn into contact with the various ships of an enemy's fleet; or carried in front of steam rams, or invested with motion and driven against a vessel, so as to blow her to pieces.

TORREFACTION, the roasting of ores, to expel volatile ingredients associated with them. Drugs are also torrefied, when they are dried by partially roasting them, or subjecting them to considerable heat.

TRACTION ENGINE, a locomotive engine for drawing heavy weights on ordinary roads.

TRIAS, the lowest of the Mesozoic or Secondary deposits in geology.

TRIBASIC, a term applied to acids which, in contact with any metallic oxide, replace three atoms of hydrogen by three of the metal or a metallic equivalent.

TRICHINIASIS, the painful and fatal disease induced in the human body by the presence and ravages of the nematoid parasite, *Trichina Spiralis*, of which there is no known cure.

TRICEIOUS, plants which have male flowers on one plant, female flowers on another, and hermaphrodite flowers on a third.

TRIPLE PHOSPHATE, phosphate of ammonia and magnesia.

TULIP WOOD, the beautiful striped wood of *Physocalymma floribunda*, an ornamental wood of a rose colour.

TURNING LATHE, one of the most valuable of our mechanical instruments, now largely employed in the manufacture of other machinery, tools, &c. It is used in the turning and polishing under horizontal rotation of wood, ivory, metals, and stone; and some of the finer rose and eccentric chucks are fitted for turning a great variety of ornamental work, including medallions in bas relief, spirals, bank note plates, &c.

TURRET SHIPS, vessels of modern warfare, first introduced by Captain John Ericsson, of New York, since varied in construction by Captain Coles and others. They consist of an armour-plated screw steamer, with a revolving cupola or turret. Turret ships, however, are open to many objections, and will probably be long on their trial. The limited number of guns (generally only one) which they carry, notwithstanding their facility in turning their fire upon an enemy, is itself an objectionable feature, combined with their great weight and sinking powers, when attacked by a few smaller and lighter vessels with rams and torpedoes. Indeed it would not be very difficult to show how they could be defeated and sunk by a very trifling enemy.

U

UDALLER, a holder of real estate or heritage by udal right or tenure, *i. e.*, without any superior.

UIGITE, hydrated silicate of alumina, soda, and lime.

ULLMANNITE, a sulphide of nickel and antimony, in which arsenic frequently replaces the antimony.

ULNAGERS, public officers appointed after the introduction of the Flemings, or Flemish weavers, into England by Edward I., whose duty it was to protect the customs, and measure and certify the length and quality of each pannus or piece (web) of woollen cloth manufactured, before it could be exposed to sale, and tax it with the ulnage or duty. The customs accounts of the ulnagers are still in the Public Record Office.

ULTIMATE ANALYSIS, the resolution by chemical analysis of any compound body into its ultimate or elementary components, more especially in cases of organic chemistry.

ULTRAMONTANE. Those who believe in the Papal supremacy and infallibility are so called, as opposed to those who hold the supremacy of General Councils, and who

contradistinctively are called *Clementane*. They form two parties in the Roman Catholic Church, which the dogma of infallibility has neither extinguished nor reconciled.

UMBONATE, rounded parts, in botanical language, with a projection in the centre. The pileus of *agaricus* supplies an example. (From *umbo*, a "boss.")

UNCIAL LETTERS, a character suitable for diplomatic correspondence, compounded partly of the capital and partly of the small letters of the alphabet. The *unciales literæ* were in use for about six centuries previous to the tenth century.

UNGUICULATE, petals with a stalk or *unguis*.

UNICORN ROOT, the anthelmintic root of *Helontia dioica*.

UNILOCULAR, one-celled or chambered shells and seed vessels.

UPPERS, the fir poles used as uprights in scaffolding by builders.

URTICARIA, the nettle rash.

USTRINUM, a public place under the Romans, in which the bodies of the poorer classes were burned after death. The remains of an ustrinum were found in Cambridgeshire.

USTULATION. The progressive torrefaction and desiccation of substances was so called by the old chemists.

UTR, an oriental synonym of the otto or attar of roses.

UVA URSI, the bear's berry, *Arctostaphylos uva ursi*, the leaves of which have astringent medical properties in disorders of the kidneys.

UVREA, the posterior lamina of the iris of the eye,—the uveous coat of the eye.

UVEOUS, resembling a grape.

V

VACCINATION, Jenner's great remedy for the dreadful epidemic, small-pox. The success of this most important discovery has been so great, that the hope is justly entertained that its universal adoption will ultimately extinguish this loathsome and too frequently fatal disease; and it has now been made compulsory on parents and guardians of children in England. Some foolish and ignorant resistance has been shown to the operation of the law by one or two individuals; and, to get over such prejudices, a special vaccination direct from the matter of the cow might be ordered by the Court before which they are brought; but this would be really a concession to ignorance and prejudice only, as when the virus is transferred from one healthy child to another it is equally effective and safe from pernicious results.

VALERIC or VALERIANIC ACID, an acid found in *Valeriana officinalis*, giving

a slightly fetid odour to the dried roots. This odour appears to have a fascination for some animals; cats, and even rats, it is said, being powerfully attracted by it.

VALOREM, AD, according to value. A basis of taxation which has sometimes been adopted for general purposes of revenue, though never very satisfactory. It is still in use in several cases, as in certain deeds charged with stamp duties according to the value or purchase price or consideration they express.

VAREC, an impure carbonate of soda, similar to kelp. It is also called *blanquette*, and is chiefly manufactured in Brittany.

VARIOLOUS, any pitted surface marked with impressions like those of small-pox.

VASCULAR SYSTEM, the organic vascular tissue of plants, more especially devoted to the conveyance of air; *i.e.*, spirals or tracheæ.

VECTOR or **RADIUS VECTOR**, the line of direction from a planet to the centre of its orbital motion. As all orbital motions are ellipses, a vector is always one of the radii of an ellipse, hence it is called *Radius Vector*.

VEGETABLE SHEEP, the composite plant *Rauvolfia eximia* of New Zealand, which grows in remarkable woolly-like masses, resembling sheep resting.

VEGETABLE SILK, a fibre obtained from the seed pods of *Chorisia speciosa*.

VEGETABLE TALLOW, a fatty matter yielded by several plants, more especially *Vateria Indica* and *Stillingia Sebifera*.

VENATION, the arrangement of the veins or ribs of leaves, and other botanical organs.

VENESECTIO, bleeding by opening a vein.

VENICE WHITE, or **HAMBURG** or **DUTCH WHITE**, a pigment composed of carbonate of lead and sulphate of baryta.

VENOSE, having many veins, as in certain leaves with complex or reticulated venation.

VENT or **VENT HOLE**, the hole or channel in a piece of ordnance through which the charge is ignited.

VENTRAL, relating to the region of the belly.

VENTRAL FINS, the fins on the belly of fishes.

VENUS' BATH, the plant *Dipsacus sylvestris*.

VENUS' HAIR STONE, transparent rock crystal, containing acicular crystals of titanium.

VENUS' PENCILS or **CUPID'S PENCILS**, a violet quartz, containing brownish gold fibres of oxide of iron.

VERBIUM, a rare elementary metal, found in orthite and gadolinite, in association with erbium and yttrium.

VERDERER, a forester of the royal forests, whose duty was to protect the cover or underwood, or over vert and nether vert, as it was called.

VERMEILLE or **VERMEIL**, a name given to orange-tinted crimson garnet by jewellers.

VERONICA, a legendary fabrication supported by the Church of Rome, which asserts that when our Lord was on His way to be crucified, Veronica put a handkerchief to His face to wipe it, and received a true impression of His likeness upon it. The rag is still exhibited at Rome as St. Veronica's handkerchief, and an engraving of it may be sometimes picked up, which is chiefly remarkable for the skill with which the artist has transferred the likeness to his plate, and completed the whole engraving of it with one single line, commencing on the tip of the nose and winding spirally outwards in a series of irregular rings. (From *vera* and *εικων*, "true image.")

VERRUCÆ, warty-like bodies, in botany, are so called. When *Verrucæ* cover continuously any surface, it is said to be *verrucose*.

VERTEX, the zenith, also the apex or point of a cone, and the point at which the lines of an angle intersect.

VERTIGO, giddiness. It is commonly symptomatic of nervous debility.

VESICANTS, blistering applications for the skin.

VESICATORIN, the blistering principle of cantharides, called also *Cantharidin*.

VETCH, a family of *Leguminosæ*, of which the common tare is an example.

VEXILLARY, a standard bearer, or anything relating to an ensign or standard, also that disposition of the petals of flowers by which one much larger portion is folded over the others. (*Vexillum*, "a standard.")

VIDETTE, a sentry planted so as to be able to watch the movements of an enemy, and forewarn of his approach.

VIKINGS, the sea kings.

VINEGAR PLANT, the *Penicillium glaucum*, developed in liquids undergoing fermentation. It is allied to the Yeast Plant, and is a mould of universal distribution.

VIVISECTION, the partial dissection of living animals with a view to enlarge the knowledge of physiology and vital actions.

VOGLITE, a hydrated carbonate of uranium, copper, and lime.

VOICE, the production of sound by the action of air upon the larynx. Speech is a modification of voice by the combined or alternate influence on the voice of the teeth, lips, and tongue, and the disposition of the mouth. The sustained power of the voice and its perfect intonation depend entirely on the command and regulation of the breath; and unimportant as cultivated elocution appears to most people, it is remarkable how few are capable of accurately and effectively exercising the organs of speech, and how much ill health is the result of slovenly habits in this respect. Cultivation of the voice is essentially and primarily correct cultivation of the breathing power; and when once thoroughly mastered and under-

hood, it is a protection to the lungs and a healthy development of the chest and throat. Stammering or stuttering arises from want of a due reserve of breath, and want of knowledge and experience in storing and economising it, and only strong-lunged and strong-throated people can go on stammering with impunity. Singing from the throat, instead of from the chest, is also occasioned by blundering habits of breathing; and if the vocalist only knew how disagreeable and annoying it is to a discriminating ear, he would never attempt to sing until he had conquered his pernicious and unhealthy error. But so it is also of the oratory of the pulpit, the bar, and the senate, and the elocution of the stage. The great body of men in all these departments of public life, however eloquent in thought and feeling they may be, in reality do not know the physical laws of correct speech, and are feeble often where they might, with very little trouble, acquire the very highest and most impressive power. Any one with sound lungs may acquire the habit, with a little well-advised practice, of sustaining the voice for a full minute on any important passage of music or piece of elocution, and the highest, purest, and most expressive power of intonation will be found to reside in the vocal organs when so sustained, as well as their greatest force and energetic intensity; while the practice of so commanding the vocal faculties will be found to induce the truest and best habits of healthy breathing. Much of the cold, bronchitis, and consumption to which mankind are subject in variable climates is due to the neglect of these important considerations.—[J. A. S.]

VOLSUNG SAGA, the Saga of which Sigurd is the hero.

VORTICELLI, the wheel animalcule, whose anterior vibratile organs attract their food by small whirlpools, into the *vortex* of which it is drawn, whence their name.

VULCANITE, Volcanic Garnet, a synonym of Augite or Pyroxene; also a synonym of Ebonite.

VULVA. An orifice in anatomy is so called; in conchology a spatulate mark in shells of the genus *Venus*.

VULVIFORM, cleft-like with projecting edges.

W

WADS, GUN, the round discs of millboard or other material fitted to the bore of fowling pieces, inserted between the charge of powder and the small shot in loading. Wads are similarly used in artillery, and are called, according to their peculiarities, grummet, junk, papier-maché, and coal dust wads.

WAGITE, a hydrated silicate of zinc, of a varying blue to green colour. found concretionary in the Ural Mountains.

WAR, TREATY or CAPITULATION, an agreement by which the Emperor Elect of Germany bound himself to respect the liberties and maintain the rights of the Empire and its special obligations.

WAINAMÖINEN or KALEVALA, a heroic poem of Finland, recently recovered to literature from purely oral tradition, said to possess merits, and completeness of structure and extent, equal to the *Iliad* of Homer, and remarkable as a composition of the agglutinate stage of language.

WAIWODE, the governor of a small Turkish province or town.

WAKES or VIGILS, revels held on the eve of festivals during the Middle Ages.

WALCHOWITE, a mineral resin from Walchow, Moravia.

WALLFLOWER, the *Cheiranthus Cheiri*.

WALLOWER, a trundle wheel or lantern wheel.

WALMSTEDITE, a native carbonate of magnesia or breunnerite.

WALNUT, literally, the foreign nut, the edible fruit of *Juglans regia*, a valuable and beautiful cabinet-wood tree.

WALPURGIS NIGHT, the German festival of the 1st of May, held in honour of Walburga, the niece of the German Apostle Boniface.

WAMPEE, the fruit of *Cookia punctata*.

WAR, ART OF, or, more properly, SCIENCE OF, for everything of great public concernment becomes science under the light and energy of modern intelligence, and, under these, the whole character and art of ancient warfare, familiar to the student of classical history, have undergone change and renovation. At present what were once called impregnable fortifications and defences would be blown away in a few hours' cannonading under the terrific powers of modern artillery, and cities which were considered safe within their ancient walls down to a late period in modern history can now, in a briefer space of time than it would take to build an ordinary cottage, be desolated by a shower of shell and shot from an enemy placed at the limit of what was once called the potential range of gunnery, *nine miles' distance!* The fate of Paris during the recent war between France and Germany has, there can be little doubt, startled and disturbed the whole security and self-confidence of the present age, and brought terribly near to its most ghastly embodiment that grim prophetic period when, if the passions of man break loose in the misapplication of those formidable resources which greatly increased knowledge has placed at his command, there shall be wars and rumours of wars such as never have been since the world began. Nitro-glycerine, dynamite, fulminates of mercury and silver, gun cotton, and other explosive materials in the charging of detonating shells, torpedoes and other resources of the skill and

of war, with the improvements ever progressing in modern gunnery, seem to render the defensive art powerless against the increasing means of attack. A ship of war may now be surrounded or covered with a flood of blazing petroleum oil, enclosed in detonating shells, and fired against her; or her crew may be suffocated by a shower of carbonic acid gas, easily capable of compression within shells constructed to burst by impact. The best remedy science can suggest is to keep the foe at a distance; and if Paris had done this, and been encircled by a cordon of railway defence twenty miles in diameter, mounted with an adequate service of artillery on locomotive carriages, all the armies of Europe could not have made a complete investment of such a citadel, and less than half her interior force would have been more than sufficient to man and maintain such a line, with its railway means of rapid transition to points of danger. Better defence than all, however, must be that moral principle which under Divine direction makes and keeps society true to itself.—[J. A. S.]

WARD'S PASTE, a medicine which, though of quack pretensions, has acquired some importance as a cure for old and relaxed piles and fistular tendencies, from the presence and active medical influence in it of *black pepper*.

WARWICKITE, borotitanate of iron and magnesia.

WASHINGTONITE, a steel grey titaniferous iron ore.

WATCH ON BOARD OF SHIP, the duration of duty of the subdivision of ships' crews, called the Starboard and Port Watches. A watch is usually four hours; but between four o'clock and eight P.M. the two *dog* or short watches occur of two hours each.

WATER CHESNUTS, the fruits of *Trapa natans*.

WATER CRESS, the *Nasturtium officinale*.

WATER DEVIL, the larva of a species of *Hydrophilus*.

WATER DROPS, round crystals of colourless topaz.

WATER LILY, the *Nymphaea* and *Nuphar* of British streams.

WATER SAPPHIRE, a nearly colourless pale blue variety of the Oriental sapphire.

WATERSHED, the superficial and natural drainage of a district by means of the rivers, streams, and rivulets, is so called in physical geography.

WATER-GLASS PAINTING, a new method of fresco painting, in which, after the painting, the picture is fixed by a coating of what is called *water glass*, which is a preparation of silica reduced to a liquid form by bottling it in alkali, either soda or potash. The frescoes in the Lobby of the House of Lords have been so treated, but with doubtful permanency or success.

WATER WEED, the *Anacharis alismastrum*.

WATERING OF TEXTILE FABRICS, a variegated reflecting surface given to silks, &c., by passing them in a damp state through rollers, which may be engraved with definite patterns at pleasure, or merely indented in various ways. One fold of the fabric over another will also produce the effect.

WATERLANDIAN BAPTISTS, a sect of Baptists of Holland, so named from the district in which they originated. They claim chiefly the distinction of being moderate.

WATERPROOFING, rendering textile fabrics impervious to water, chiefly by means of the Mackintosh process of caouchouc between two layers of fabric. Oiled cloths are another form of waterproofing; and a useful and advantageous waterproofing for ladies' dresses, which has also the merit of rendering them incombustible, except by mere charring, is a solution of equal quantities of acetate of lead and powdered alum, dissolved in hot water separately, and mixed together. When the sediment subsides, and the pure liquid is drawn off, any fabric, however fine, may be dipped in it without injury, and rendered both waterproof and unflammable even after washing.

WAVE, TIDAL, the great wave of the tides which follows the apparent motion of the sun and moon round the world every twenty-four hours in a direction from east to west, and therefore at the great rapidity in equatorial regions of about 1,000 miles per hour. It is not a *current*, but a successive *rise of water level*.

WAX OR WAXY OPAL, an inferior and feebly iridescent variety of opal.

WAYFARING TREE, the *Viburnum lantana*.

WEIR OR WEAR, a caul or dam in a river.

WEBSTERITE, the mineral subsulphate of alumina.

WELWITSCHIA, the *Jumboa* of tropical Africa, forming a genus of *Guetaceae*. According to Dr. Hooker, a remarkable plant of the sandy districts of the South African continent, in which it shoots upward like a small inverted cone between the horizontal leaves, rising from a few inches to about a foot in height, and increasing from a few inches across their upper surface to five or six feet, according to age, forming a series of remarkable wooden blocks.

WENDISH LANGUAGE, the dialect of the Aryan languages spoken in Lusatia.

WEREWOLF, the Lycanthrope, *q. v.*

WERGILD. Compensation for personal injuries was so called by the Anglo-Saxon law, and it was payable either to the injured person, or, in the event of his death, to his next of kin. It was rated differently between noble and ignoble offenders: the former being charged six times the amount of the latter. A similar claim is open

an injured person or his next of kin, within certain limits of propinquity, in the law of Scotland to the present day in the form of what is technically called an action for assythment and damages; for the law rightly holds that a *culpable* (for that is the element of liability) offender does not satisfy the requirements of justice by merely paying the penalty of the criminal law; he must also satisfy the civil law for the injury he has done as far as his means will allow. Thus, if a thief possessed of property steal a hundred pounds from any one, and spend or waste it, to give him sentence of three years' imprisonment would be no compensation to the injured person; he has a right to recover against the criminal's estate for the amount of his loss in his private interest, in addition to the criminal law's exaction for protection of the public interest. This principle forms the complete feature of the Christian atonement, and is thereby fully illustrated. Christ first fulfilled the law which man had broken, and made it honourable,—(i. e., vindicated its justice),—and He next paid the penalty man had incurred for breaking it.—[J. A. S.]

WERNERITE, a synonym of scapolite, a silicate of alumina, oxide of iron, and lime.

WHEEL ANIMALCULÆ, the ordinary name of the Rotifers or *Vorticellæ*, q. v.

WHEEL-ORE, maced Bournonite.

WHERRY, a small boat with both bow and stern pointed.

WHETSTONE, a talc slate containing a mixture of silica. It is a good set stone or hone, though now much superseded by the superior qualities of Arkansas stone and some other of the American marbles.

WHRY, the watery portion of milk separated from the curd, which contains a small proportion of sugar of milk (over three per cent.).

WHITE ANTIMONY ORE, *valentinite*, a native oxide of antimony.

WHITE ARSENIC, arsenious acid, or oxide of arsenic.

WILL or **VOITION**, *freedom of*, a great question of ethics, which has been much obscured by the wordy mystifications of metaphysicians, who have generally mixed it up more or less with *freedom of action*, with which it has absolutely nothing to do; for, (to apply the poet's sentiment,) to the will itself "stone walls do not a prison make, nor iron bars a cage." The will may be perfectly free, though but two alternatives be *actually* before it, for the freedom of the will is not limited in its operation to a restricted sphere of practical action. Thus the amount of actual and perpetrated crime in the world is very far from the true measure of human iniquity. The man who would commit a theft or murder if he were sure of impunity, is quite as morally vile and guilty as if the impunity were assured; for the mere

impunity cannot constitute the innocence or weaken the guilt or *immorality of will* either before or after the act.—[J. A. S.]

WILSONITE, a hydrated silicate of alumina, with potash, and also soda and lime in smaller proportion.

WILUITE, a synonym of grossular.

WISERITE, a hydrated fibrous variety of carbonate of magnesia.

WISTARIA, a genus of leguminous climbing shrubs, of which the *W. Sinensis* of China, and *W. Frutescens* of America, with their beautiful blue racemes, are now well known flowering plants on walls.

WITCH BESOMS, Abnormal growths upon the *Pinus Sylvestris*, distorting the foliage and branches into bunches, occasioned by the attacks of the fungus *Peridermium elatinum*, have received this popular name.

WITCH MEAL or **LYCOPODIUM**, the pollen of the club moss, or *Lycopodium clavatum*, called also vegetable sulphur. It is used as a coating for pills, and also as theatrical lightning, from the rapidity with which it flashes into a blaze when thrown into a flame.

WITENAGEMOTE, the meeting of the councillors of the Anglo-Saxon monarches, representative of the whole nation, as distinguished from the folk-mote or meeting of the nation itself.

WITHAMITE, a ferro-silicate of alumina.

WOHLERITE, a mineral composed of columbate of zirconia, silicate of soda, and silicate of lime.

WOLCHITE, a native arsenio-sulphide of lead, copper, and antimony.

WOLFSBANE, a synonym of monkshood or aconite.

WOODBINE, the *Caprifolium perichlymenum*, or honeysuckle.

WOODRUFF or **WOODROOF**, the *Asperula odorata*, or woodrow.

WOOD SPIRIT, pyroxylic spirit, used in forming methylated alcohol.

WOOTZ, a superior kind of Indian steel, said to have been the source of the celebrated sword-blade manufacture of Damascus. Its production is very ancient, and was made by melting small quantities of wrought iron together with twigs of trees in suitable crucibles, covered with green leaves and closely luted with clay. The nodules of steel produced are little larger than a pigeon's egg, and required to be beaten out into thin ribbon-like pieces, which were welded together, and thus subjected to much hammering and working up for the sword blades which obtained so high a reputation.

WORM BARK, the medicinal bark of the cabbage bark tree, *Andira inermis*.

WORNWOOD, the *Artemisia Absinthium*, from which the bitter medicinal principle *absinthine* is obtained, which is the flavouring element of *creme d'absinthe*.

WRIST DROP, a disease generated among compositors from the lead poison introduced

into their thumb and fingers by the use of new type, and characterised by paralysis of the wrist. The remedy for it is a solution of potassium, in which the hand should be steeped, and expelling the lead.

WULFENITE, molybdate of lead.

WURTZITE, a synonym of spianterite.

X

XANTHEIN, the yellow colouring principle of flowers.

XANTHITE, a mineral composed chiefly of the silicates of alumina and lime.

XANTHOCHYMUS, a genus of arborescent plants belonging to the *Clusiaceae*.

XANTHOCONE, native arsenio-sulphide of silver.

XANTHOPHYLL, the yellow colouring principle of sere leaves.

XANTHOPHYLLITE, a variety of Clintonite (silicates of alumina and magnesia).

XANTHOPICRITE or XANTHOPICRIN, the crystalline bitter principle of the bark of *Xanthoxylon Caribaeum*.

XANTHOPROTEIN, a yellow acid product of the action of nitric acid on fibrine.

XANTHORHAMNIN, a yellow extract from the fruit of *Rhamnus tinctoria* or Persian berries.

XANTHORRHIZA, a genus of plants belonging to the *Ranunculaceae*.

XANTHOTHITE, a yellowish orthite.

XANTHOSIDERITE, a yellowish brown iron ore.

XANTHOXYLACEÆ, the natural order of hypogynous exogens, of which *Xanthoxylon* is the typical genus.

XENELASIA, literally "the expelling of strangers" (*ξενηλασία*). A Spartan ordinance ascribed to Lycurgus, which prohibited strangers from living in the city without leave, and authorized their expulsion.

XENOLITE, a silicate of alumina, forming a fibrous variety of Sillimanite.

XENOTIME, a native phosphate of Yttria, supposed at one time to be a new metal, and called Thorium, instead of the metallic base of Thorite, to which that name is now given.

XIPHIRHYNCUS, a family of Acanthopterygious fishes, typified by the *Xiphias* or sword-fish.

XYLITE, an asbestiform variety of Xylo-lite.

XYLOGRAPHY, wood engraving.

XYLOIDIN, a product of the action of nitric acid on starch and some conditions of lignin, consisting of white grains, with some of the properties of gun cotton.

XYLOL, a colourless hydrocarbon oil found in crude pyroxylic spirit.

XYLOPHYLLA, a genus of euphorbiaceous plants.

XYLOPHIA, a genus of plants belonging to the *Anonaceae*.

XYLORETINE, a resinous crystalline body obtained from some kinds of turf.

XYLOTILE, a fine fibrous chrysolite found in the Tyrol.

XYRIDACEÆ, a natural order of Endogenous plants, chiefly tropical, of which *Xyris* is the typical genus. They have a rush-like or sedge-like form and character.

Y

YACCA WOOD, the ornamental cabinet wood of *Podocarpus coriacea*.

YARURI, the elastic timber of *Aspidosperma excelsum* or paddle wood.

YEAST PLANTS, a variety of moulds or fungi, which promote or cause the fermenting action of what is called yeast, and develop it by their remarkably rapid germination. Among these *Mucor* and *Penicillium* occupy a prominent place.

YELLOWBERRIES, the berries of *Rhamnus infectorius*, used for dyes.

YELLOW COPPER ORE, another name for copper pyrites.

YELLOW LEAD ORE, Wulfenite.

YELLOW ORPIMENT, sulphuretted oxide of zinc, or yellow arsenic.

YONI, the emblem or special attribute of Vishnu. It is the female power in nature, of Hindu mythology, shown in the form of a vesica.

YUG or YOGUE, a Hindu era. There are four Yugs in all, comprehending millions of years.

YULAN, the *Magnolia Yulan*, a beautiful Chinese flowering tree.

Z

ZACHUN, an expressed fixed oil obtained from the seeds of *Balanites Egyptiaca*.

ZAKKOU, the oil of *Elaeagnus hortensis* *Angustifolia*.

ZAMBARONE, the fibre of the *Agave*, from which Sicilian mats and cordage are made.

ZAMIA, a genus of palm and fern-like trees, belonging to the *Cycadeaceae*.

ZASMIDIUM, a genus of fungi, typified by the species *Z. Cellare*, the cellar fungus.

ZAVALITE, a native hydrocarbonate of nickel.

ZEBRA WOOD, the fine cabinet wood of the *Demerara* tree, *Omphalobium Lambertii*; also the wood of the *Eugenia fragrans* of the West Indies.

ZENANA or ZANANA, the apartments set apart by the Orientals for the use of the female members of the family.

ZENDIKS, an Arabic sect of some an-

stiquity, said to be atheists, and to deny the resurrection of mankind.

ZEODARY, certain species of *Curcuma* possessing aromatic properties similar to ginger.

ZEUGITE, a native phosphate of lime found in certain guanos.

ZEUGLON, a gigantic genus of *Cetacea*, found in the miocene of America and some parts of Europe.

ZEUXITE, a ferro-silicate of alumina, or iron tourmaline, from Huel, Cornwall.

ZEYSOUM, the flowers of *Santolina fragrantissima*, used instead of camomile.

ZIEGA, the separation of additional curd from milk, occasioned by the addition of acetic acid after rennet, called also *serai*.

ZIERIA, a genus of Australian plants belonging to the *Rutaceae*, consisting of small shrubs and trees.

ZILLAH, the district or province of a Circuit Judge or Commissioner in India.

ZINC BLOOM, a compound of carbonate of zinc and hydrous oxide, or hydrated carbonate of zinc.

ZINC WHITE, a white powder produced from the combustion of zinc in air. It has been tried as a pigment on account of its apparent purity instead of white lead; but it darkens in use, and is unworthy of trust for fine-art purposes.

ZINCAMIDE, a solid white body, produced by replacing one-third of the hydrogen in ammonia with zinc.

ZINCETHYL, a product of the heating of zinc under pressure with iodide of ethyl.

ZINCITE, the native oxide of zinc.

ZINKENITE, a sulphantimonite of lead, found native in the Harz, and containing 60 per cent. of sulphide of antimony, and 40 of sulphide of lead.

ZINNWALDITE, a *Lithia-mica* found at Zinnwald.

ZINZEYD, the fruit of *Elæagnus Orientalis*, used as a Persian dessert.

ZIPPEITE, the native sulphate of uranium.

ZIRCONITE, a variety of zircon.

ZOOID, a term applied to the *Spermatozoa*, from their being like animals, (not like plants,) though not animals, (from *ζωοειδής*, "like an animal").

ZOOLATRY, the worship of animals, as exemplified in the religion of ancient Egypt.

ZOOTOCA, (*ζωοτοκος*, "viviparous,") Aristotle's name for the class of animals called *Mammalia*.

ZORGITE, Clausthalite, in which copper and cobalt partially replace lead.

ZOROASTRIAN SYSTEM, the system of the Bactrian prophet and legislator, Zoroaster, son of Oromases, which is expressed in the Zend Avesta.

ZOUAVES, a class of French soldiers, or light infantry, formed first in Algeria from the natives there incorporated with the French army.

ZUINGLIANS, the followers of the Reformer Zuinglius, one of the most enlightened and liberal of the leaders of the Protestant Reformation.

ZURLITE, a mellilite found in rectangular prisms at Vesuvius.

ZWIESELITE, a phosphate and fluoride of iron and manganese, from Zwiesel, Bavaria, forming a variety of iron apatite.

ZYGADITE, a silicate of alumina and lithia, found in the Harz.

ZYGENOCEPHALUS, a West African species of bat, related to the *Pteropus*.

COMPLETE CATALOGUE

OF

BOHN'S LIBRARIES,

CONTAINING

STANDARD WORKS OF EUROPEAN LITERATURE IN THE ENGLISH LANGUAGE, ON HISTORY, BIOGRAPHY, TOPOGRAPHY, ARCHÆOLOGY, THEOLOGY, ANTIQUITIES, SCIENCE, PHILOSOPHY, NATURAL HISTORY, POETRY, ART, FICTION, WITH DICTIONARIES, AND OTHER BOOKS OF REFERENCE.
